Notice on Confidentiality, Intellectual Property Rights and Disclaimers (“Notice”)

Confidentiality. This document and any information, data, representations, materials, recommendations, exhibits, appendices or glossaries contained herein or attached hereto (collectively, the “Material”) is proprietary and confidential to Visa. The Material is furnished to you solely in your capacity as a client and/or potential client of Visa and/or a participant in the Visa payments system. You agree to keep the Material confidential and not to use or disclose the Material for any purpose other than in such capacity. By accepting the Material, you agree that the Material is intended for use by you solely subject to the confidentiality restrictions in (i) the Visa Charter Documents (as applicable), (ii) the Visa Core Rules and Visa Product and Service Rules, the Visa Payment System Operating Regulations – Russia, Visa International Travelers Cheque Operating Regulations, V PAY Core Rules and V PAY Product and Service Rules and Visa Supplemental Requirements (collectively, the “Visa Rules”) (as applicable), (iii) for VisaNet Processors, an executed and valid VisaNet Letter of Agreement on file with Visa, and (iv) for other third parties, a current participation agreement that includes applicable confidentiality provisions, other non-disclosure agreement with Visa that covers disclosure and use of the Material, and/or other confidentiality agreements that limit your use and disclosure of the Material. The Material may only be disseminated within your organization on a need-to-know basis to enable your participation in the product, service and/or program described herein and/or in the Visa payments system.

Please be advised that the Material may constitute material non-public information under U.S. federal securities laws and that purchasing or selling securities of Visa Inc. while being aware of material non-public information would constitute a violation of applicable U.S. federal securities laws.

Intellectual Property Rights. The Material is protected by copyright. The Material and/or any part of the Material must not be duplicated, reproduced, published, distributed or disclosed, in whole or in part, in any form by any means without Visa’s prior written authorization, including to any third party. Visa owns the trademarks, logos, trade names and service marks, whether registered or unregistered, contained in the Material. Third-party trademarks not attributed to Visa are the property of their respective owners, are used for identification purposes only, and do not necessarily imply product endorsement or affiliation with Visa.

Disclaimers. THE MATERIAL HEREIN IS PROVIDED ON AN “AS IS,” “WHERE IS,” BASIS, “WITH ALL FAULTS” KNOWN AND UNKNOWN. THE MATERIAL HEREIN IS INTENDED FOR INFORMATIONAL PURPOSES ONLY AND SHOULD NOT BE RELIED UPON FOR OPERATIONAL, MARKETING, LEGAL, REGULATORY, TECHNICAL, TAX, FINANCIAL OR OTHER ADVICE. TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, VISA EXPLICITLY DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, REGARDING THE MATERIAL HEREIN, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT (INCLUDING, BUT NOT LIMITED TO, NON-INFRINGEMENT OF THIRD-PARTY INTELLECTUAL PROPERTY RIGHTS). VISA DOES NOT MAKE ANY WARRANTIES, REPRESENTATIONS, GUARANTEES OR INDEMNITIES AS TO THE COMPLETENESS, ACCURACY AUTHENTICITY, USEFULNESS, TIMELINESS, RELIABILITY OR APPROPRIATENESS OF THE MATERIAL HEREIN OR OF THE INFORMATION OR MATERIALS REFERENCED HEREIN. VISA IS NOT LIABLE OR RESPONSIBLE FOR YOUR USE OR DISCLOSURE OF OR RELIANCE ON THE MATERIAL HEREIN, INCLUDING ERRORS OF ANY KIND, CONTAINED IN THE MATERIAL. NOTHING IN THIS NOTICE OR THE MATERIAL HEREIN SHALL BE DEEMED TO EXCLUDE OR LIMIT LIABILITY THAT CANNOT BE EXCLUDED OR LIMITED AS A MATTER OF LAW.

USE OF THE MATERIAL HEREIN IS AT YOUR OWN RISK. THE MATERIAL HEREIN SHOULD BE INDEPENDENTLY EVALUATED IN LIGHT OF YOUR SPECIFIC BUSINESS NEEDS AND ANY APPLICABLE LAWS AND REGULATIONS. THE

MATERIAL HEREIN IS NOT INTENDED AS INVESTMENT OR LEGAL ADVICE, AND READERS AND RECIPIENTS OF THE MATERIAL ARE ENCOURAGED TO SEEK THE ADVICE OF A COMPETENT PROFESSIONAL WHERE SUCH ADVICE IS REQUIRED.

THE MATERIAL HEREIN MAY CONTAIN DEPICTIONS AND DESCRIPTIONS OF A PRODUCT, SERVICE AND/OR PROGRAM CURRENTLY IN THE PROCESS OF DEVELOPMENT AND DEPLOYMENT, AND SHOULD BE UNDERSTOOD AS A REPRESENTATION OF THE POTENTIAL FEATURES OF THE FULLY-DEPLOYED PRODUCT, SERVICE AND/OR PROGRAM. ANY FINAL VERSION OF SUCH PRODUCT, SERVICE AND/OR PROGRAM MAY NOT CONTAIN ALL OF THE FEATURES DESCRIBED IN THE MATERIAL. WHERE POTENTIAL FUTURE FUNCTIONALITY IS HIGHLIGHTED, VISA DOES NOT PROVIDE ANY WARRANTY ON WHETHER SUCH FUNCTIONALITY WILL BE AVAILABLE OR IF IT WILL BE DELIVERED IN ANY PARTICULAR MANNER OR MARKET. PARTICIPATION IN PRODUCTS, SERVICES AND/OR PROGRAMS, IF AND WHEN OFFERED, MAY BE SUBJECT TO VISA'S TERMS AND CONDITIONS.

THE MATERIAL HEREIN COULD INCLUDE TECHNICAL INACCURACIES OR TYPOGRAPHICAL ERRORS. CHANGES MAY BE PERIODICALLY MADE TO THE MATERIAL. SUCH CHANGES WILL BE INCORPORATED IN NEW EDITIONS OF THE MATERIAL. VISA MAY MAKE IMPROVEMENTS AND/OR CHANGES IN OR TO THE PRODUCT(S), SERVICE(S) AND/OR PROGRAM(S) DESCRIBED IN THE MATERIAL HEREIN AT ANY TIME AT VISA'S SOLE DISCRETION. VISA MAY MODIFY, REPLACE OR RECALL THE MATERIAL HEREIN AT ANY TIME WITHOUT NOTICE TO ANY PARTY AND AT VISA'S SOLE DISCRETION.

Forward-Looking Statements. The Material contains forward-looking statements within the meaning of the U.S. Private Securities Litigation Reform Act of 1995 that relate to, among other things, Visa's future operations, prospects, developments, strategies, business growth and financial outlook. Forward-looking statements generally are identified by words such as "believes," "estimates," "expects," "intends," "may," "projects," "could," "should," "will," "continue" and other similar expressions. All statements other than statements of historical fact could be forward-looking statements, which speak only as of the date they are made, are not guarantees of future performance and are subject to certain risks, uncertainties and other factors, many of which are beyond our control and are difficult to predict. Visa describes risks and uncertainties that could cause actual results to differ materially from those expressed in, or implied by, any of these forward-looking statements in Visa's filings with the SEC. Except as required by law, Visa does not intend to update or revise any forward-looking statements as a result of new information, future events or otherwise.

Reservation of Rights. Any Visa features, functionality(ies), implementation(s), and/or branding, may be amended, updated or canceled at Visa's discretion. The timing of availability of programs and functionality described herein is subject to a number of factors outside Visa's control, including but not limited to overall levels of anticipated participation and deployment of necessary infrastructure by issuers, acquirers, and other system participants. Participation in programs and services, if and when offered, will be subject to Visa's terms and conditions.

Additional disclaimers and/or notifications may be found in the "Additional Notices" section of this document and/or in the Material herein.

Relationship to the Visa Rules. The Material is not part of the Visa Rules. In the event of any conflict between the Material, any document referenced herein or any communications concerning the Material, and any content in the Visa Rules, the Visa Rules shall govern and control.

Definitions. Capitalized terms not otherwise defined herein have the meanings given to them in the Visa Core Rules and Visa Product and Service Rules.

As used in this Notice, the terms "you" or "your" refer to (i) the person using the Material in any way, (ii) your organization and/or (iii) your or your organization's Sponsor.

"Visa" refers to the relevant Visa entity that has entered into an agreement with you governing the subject matter of the Material, being only *one* of the following Visa entities, and any of its current and former affiliates, employees, successors or assigns:

- Visa Canada Corporation;
- Visa do Brasil Empreendimentos Ltda.;
- Visa Europe Limited;
- Visa International Service Association;
- Visa International Servicios de Pagos Espana, S.R.L.U.;
- Visa U.S.A. Inc.;
- Visa Worldwide Pte Limited; OR
- Another Visa entity that is an affiliate of any of the foregoing entities.

Glossary

Chapter 1

Account Funding Transaction (AFT) Overview

The Account Funding Transaction (AFT) is a transaction in which funds are pulled from a Visa account and are subsequently used to fund another Visa or non-Visa account.

The AFT must be processed with the Account Funding Transaction indicator and the correct Business Application Identifier (BAI) in the authorization and clearing record.

When used independently to fund another Visa or non-Visa account, AFTs must only be used to fund an account belonging to the same individual or entity holding the Visa account. The transaction must use the appropriate BAI coding to identify me-to-me (AA) or me-to-you (PP) funding and engage the cardholder funding the transaction.

Important: An AFT is not intended for payment of goods and services, funding a merchant account, or for debt repayment. An AFT can be used to fund the Original Credit Transaction (OCT) in a Scan to Pay purchase.

Note: Use of Visa Direct **Funds Transfer APIs** is not permitted for AFTs intended to fund corresponding OCTs in a Scan to Pay purchase. Contact your Visa representative for additional information and requirements to support Scan to Pay purchase programs.

These are requirements for all acquirers supporting merchant programs:

- An AFT must be used to load or top-up Prepaid card account where the funding accounts belongs to the same individual or entity holding the Visa account being funded.
- An AFT is the required pull transaction to be used to fund these scenarios in a card not present environment:
 - Disbursement of funds from Visa Corporate cards, Visa Business Debit cards, or Visa Business Check cards (for example, payroll)
 - Funding a person-to-person account (P2P) Money Transfer via a subsequent transaction (for example, funding an OCT, bank transfer, and so on.)
 - Moving funds from one account to another (A2A) (for example, funding a checking account, savings deposit, or retirement account) where the funding account belongs to the same individual or entity holding the wallet account.
 - Prefund a consumer's digital wallet* (except single-merchant digital wallet) to subsequently be used for purchases or money transfers where the funding account belongs to the same individual or entity holding the wallet account.
 - Prepaid card load/reload.
 - Purchase of Liquid and Cryptocurrency Assets **(effective 20 January 2024)**.

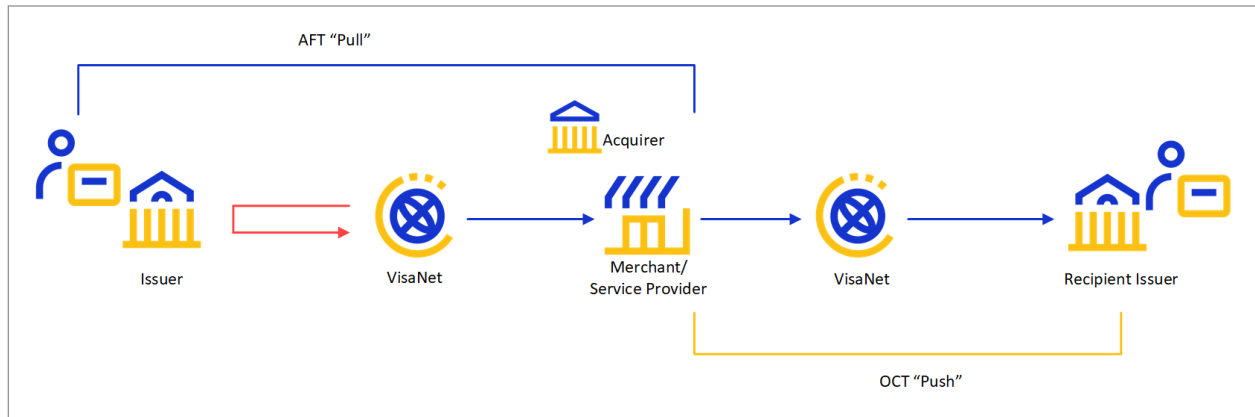

*When a Visa card is used to fund a registered Staged Digital Wallet, an AFT with a BAI of Wallet Transfer (WT) must be used. BAI = WT is used only for Staged Digital Wallets, under these circumstances:

- In AFTs when funding a digital wallet before the cardholder makes a purchase
- To fund a purchase when initiated by the digital wallet provider and corresponding to, or otherwise directly connected to, a specific purchase (also called Back-to-Back funding purchase or live-load/real-time). In this scenario, the transaction must be processed as a purchase transaction, with a BAI value = WT

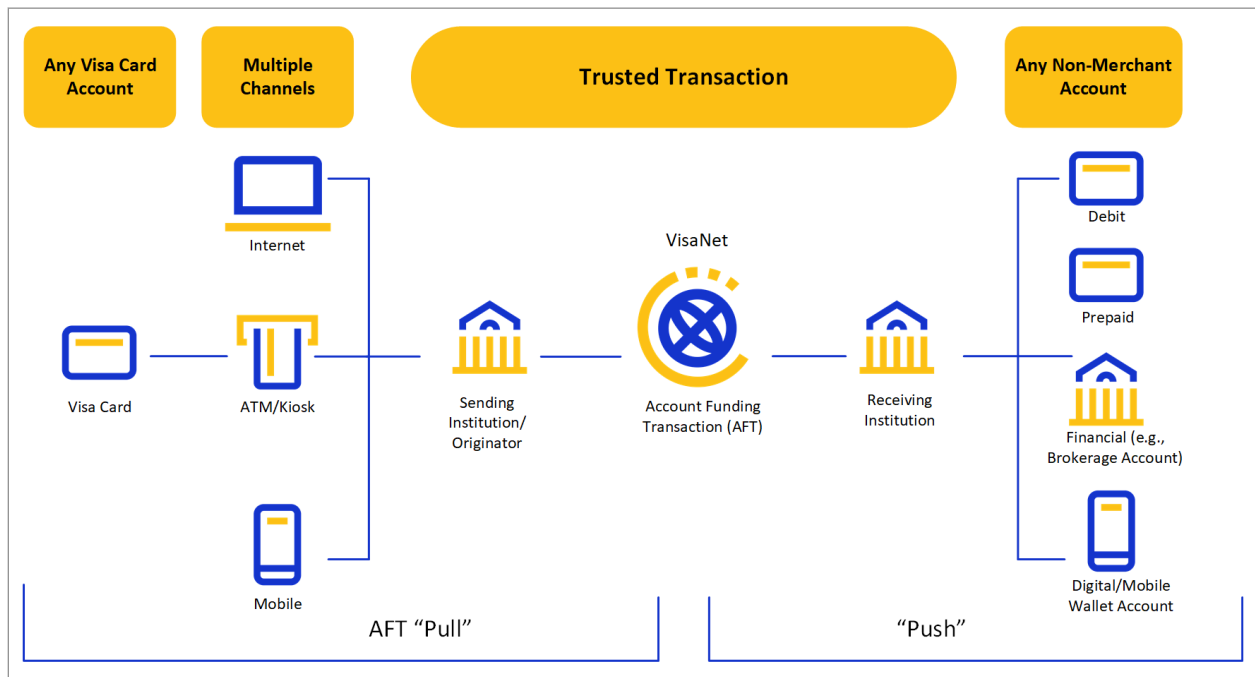

Note: Contact your Visa representative for additional information and requirements on digital wallets. For further information on the requirements that apply to digital wallet transactions, visit the Staged Digital Wallet Operators (SDWO) section at Visa Access.

As shown in the figure, a cardholder uses an existing access channel (ATM, mobile app, etc.) to initiate a transaction through an acquirer, service provider, or merchant. The acquirer, service provider, or merchant sends the AFT message to VisaNet. Once the AFT is authorized and executed, the funds are available and can be pulled from the sender's account and pushed to a specified receiving account, such as another Visa card, another network payment card, or other non-merchant account, a wallet, or a prepaid card.

AFT "Pull" Transaction with Subsequent "Push" Transaction

AFT "Pull" Transaction for Wallets/Account

In the case of a person-to-person or account-to-account Money Transfer, the AFT can be paired with an OCT that pushes funds to an eligible Visa card account. For more information about the OCT, refer to the *Visa Direct Original Credit Transaction: Global Implementation Guide*.

Appropriate processing of AFTs is critical to ensuring cardholders are able to perform the transactions they expect with their Visa cards.

About This Guide

The Account Funding Transaction (AFT) is a transaction in which funds are pulled from a Visa account and are subsequently used to fund another Visa or non-Visa account.

When an AFT is used independently to fund another Visa or non-Visa account, AFTs may be used to fund an account belonging to the same or another individual or entity holding a Visa account. For example, AFTs can be used for loading or topping up prepaid card accounts, moving funds into another financial account (such as a savings account), acting as a funding source for person-to-person (P2P) Money Transfers or loading third-party digital wallets. The transaction must use the appropriate BAI coding to identify me-to-me (AA) or me-to-you (PP) funding and involve the cardholder funding the transaction.

This document provides:

- An overview of the AFT
- AFT requirements and guidelines for acquirers
- Program considerations for acquirers, service providers, and merchants
- Processing guidelines and best practices for issuers

Summary of Changes

This version of the *Account Funding Transaction (AFT): Processing Guide* contains updates for these topics. Changes include minor edits and modifications for clarity and accuracy of rules. Principal changes are highlighted in the guide with change bars.

Table 1: Version 1.16 Summary of Changes (1 of 3)

Chapter	Description
Chapter 1 – Account Funding Transaction (AFT) Overview	Account Funding Transaction (AFT) Overview - Clarification on the use of the appropriate BAI when an AFT is used to fund another Visa or non-Visa account. About this Guide - Clarification on the use of the appropriate BAI when an AFT is used to fund another Visa or non-Visa account.
Chapter 2 – Requirements and Considerations for AFT Origination	Transaction Usage - AFTs can be used to fund third-party-hosted funds disbursement programs. Requirements for Submitting a PIF - Merchant orientation program - A note has been added for PIF bulk submission for Liquid Assets (where cryptocurrency is not supported).
2	Business Application Identifier Table – AFT Categories – Money Transfer BAI PP – Usage requirements have been clarified.
2	Me-to-You Account Funding - A new use case has been added. Merchant-Initiated Transactions/Recurring Transactions MITs and Partial Authorization – MIT AFTs may support Partial Authorization.
2	Partial Authorization A note has been added on when Partial Authorization can be allowed for Merchant Initiated Transactions (MIT) recurring payments.
2	Transaction Monitoring and Screening Visa requires clients to screen against the OFAC list.
2	Push Payments Tokenization Visa now supports Payment Card Industry (PCI) Tokens for AFTs.

Table 1: Version 1.16 Summary of Changes (2 of 3)

Chapter	Description
3 – Issuer Requirements and Considerations	Receiving and Processing AFTs The Democratic Republic of Congo (DRC) has been added to the list of countries that must not charge additional service fee or funds transfer fees.
Appendix A – AFT Data Elements and Processing Rules	AFT Key Data Elements Updated these fields: Field 56, DSID 03, Tag 9F22 – Values have been added to the Date of Birth format. Field 56, DSID 05, Tags 80, 83, 84, 85, 86, 87, 88, 89, 8A, 8B, and 8E – The Note has been updated to indicate these tags are optional for domestic transactions in Ukraine. Field 56, DSID 05, Tag 86 – The effective date has been added for this field to be populated for cross-border AFTs sent to issuers in Australia, New Zealand, and South Pacific. Field 60.4 – The position for entering the value for cryptocurrency has been added. Field 63.6 – The value that identifies cryptocurrency has been added. Field 104, DSID 57, Tag 82 – The effective date for this field has been added for Saudi Arabia. Field 104, DSID 5F, Tag 03 – - The effective date has been added for VisaNet transaction declines if the tag is not sent for cross-border non-money transfer AFTs. - A note has been added to use Field 56, DSID 05, if additional space is required to enter data. Field 104, DSID 5F, Tags 04, 05, 07 – The effective date has been added for VisaNet transaction declines if these tags are not sent in cross-border non-money transfer AFTs. Field 104, DSID 5F, Tag 0A – A note has been added to use Field 56, DSID 05, if additional space is required to enter data.
Appendix A	AFT Key Data Elements A new field and the associated tags have been added: Field 104, DSID 6E, Usage 2, Tags 01, 02, and 03.
Appendix E – Visa Direct Account Lookup File	Visa Direct Account Lookup File - The ACNL delivery time has been added. - A sample ACNL file has been added.

Table 1: Version 1.16 Summary of Changes (3 of 3)

Chapter	Description
Appendix F – Transaction Flows	Transaction Flows Two new flows have been added: • AFT Flow – SMS Originating Entity to SMS Issuer (Acquirer Online Clearing) • AFT Flow – SMS Originating Entity to Dual Message/BASE II Issuer (Acquirer Online Clearing)
Appendix G – BAI Acronyms	Table – Business Application Identifier (BAI) Acronyms • The MI – Merchant Initiated Faster Refund acronym has been added.
Appendix H – Visa Core Rules and Visa Product and Service Rules – Reference	Table – Visa Rules • A new Rule ID 0031126 has been added.

Audience and Scope

The *Account Funding Transaction (AFT): Processing Guide* is intended for use by Visa financial institutions and financial institution partners (such as third-party agents sponsored by a Visa client financial institution) involved with originating or receiving AFTs.

This document provides Visa acquirers, service providers, and merchants with technical requirements, guidelines, and considerations to support the origination of AFTs, including data element requirements.

Note: In this document, entities originating AFTs are referred to as acquirers, merchants, or service providers, while Visa financial institutions receiving AFTs are referred to as issuers. The term originating entities refers to acquirers, merchants, and service providers, as applicable, throughout the guide.

It provides Visa issuers with technical guidelines, Visa reporting requirements, and best practices to support the processing and authorization of AFTs.

This document includes some information related to the use of funds transfer programs; however, full details about implementing a funds transfer program combining AFTs and Original Credit Transactions (OCTs) are outside the scope of this document. For more information about Visa Direct and OCT-based programs, see the *Visa Direct Original Credit Transaction: Global Implementation Guide*.

Acronyms

This table contains a list of AFT-related acronyms.

Table 2: Acronyms (1 of 2)

Acronyms	Meaning
3DS	3-D Secure
AA	Account-to-Account or me-to-me (Money Transfer BAI)
ACNL	Account Lookup
AFT	Account Funding Transaction
API	Application Programming Interface
AVS	Address Verification Service
BAI	Business Application Identifier
BI	Bank Initiated P2P (Money Transfer BAI)
BIN	Bank Identification Number
CAVV	Card Account Verification Value
CNP	Card Not Present
CVV2	Card Verification Value 2
DAF	Digital Authentication Framework
DEX	Direct Exchange
DPP	Digital Payment Platform
ECI	Electronic Commerce Indicator
EEA	European Economic Area
EVV	Enabler Verification Value
FRS	Fraud Reporting Service
FT	Funds Transfer (Stored Value Digital Wallet)
IREET	Issuer Requirement to Evaluate Each Transaction
LA	Liquid Assets
MCC	Merchant Category Code
MP	Merchant Payment
MVV	Merchant Verification Value
OCT	Original Credit Transaction
PAN	Primary Account Number
PCI DSS	Payment Card Industry Data Security Standard
PIF	Program Information Form

Table 2: Acronyms (2 of 2)

Acronyms	Meaning
PP	Person-to-Person or Peer-to-Peer
PPGS	Push Payment Gateway Service
P2P	Same as PP
SDW	Staged Digital Wallet
SDWO	Staged Digital Wallet Operators
SMS	Single Message System (part of VisaNet V.I.P.)
SVDW	Stored Value Digital Wallet
TAVV	Token Authentication Verification Value
TCQ	Transaction Code Qualifier
TU	Top-Up (Prepaid Load)
VAA	Visa Advanced Authorization
VAU	Visa Account Updater
VCMS	VisaNet Certification Management Service
VRM	Visa Risk Manager
VSS	VisaNet Settlement Service
WT	Wallet Transfer (Staged Digital Wallets only)
WTMO	Wire Transfer Money Orders

Chapter 2

Requirements and Considerations for AFT Origination

The entity that offers a service using an AFT may be a Visa acquirer, merchant, or service provider sponsored by a Visa acquirer. These are the requirements and considerations that acquirers, service providers, or merchants should take into account when planning an AFT program.

AFT Program Business Requirements

These requirements apply to AFT programs.

Acquiring Relationship

AFT origination programs require a relationship with a Visa acquirer. A Visa client with a Visa license must act as the originating entity or must sponsor a Third Party Agent that acts as the originating entity. The Visa acquirer must take all liability and responsibility for AFT origination programs operated using their Visa acquiring identifier.

Licensing and Registration

Acquirers and their agents must ensure all necessary licenses, registrations, notifications, authorizations, and approvals necessary to engage in AFT programs are obtained from the appropriate authorities in the originating entity's jurisdiction.

Third-Party Agent Registration

Acquirers partnering with a third party for AFT origination services must register the third party as an agent with Visa if it performs any of these activities:

- Stores, processes, or transmits cardholder information
- Manages or has access to funds related to the AFT origination services
- Solicits other entities (for example, service provider, merchants, corporate clients, government entities, other businesses, and so on.) for AFT origination programs or services

Review the *Third Party Agent Registration Program* page on www.visa.com to better understand the TPA program.

Contact your Visa representative for more information.

Note: Acquirers that contract with Third Party Agents are fully responsible for activities associated with the Visa programs.

Transaction Usage

AFTs cannot be used for the purchase of goods, services, or with the intention of transferring funds to a merchant account.

AFTs are the required transaction to load or top-up prepaid cards in all regions. An AFT is the required pull transaction to be used for P2P (me-to-you) or me-to-me transactions, and prefunding a consumer's digital wallet in a card-not-present environment. AFT can be used to fund third-party-hosted funds disbursement programs such as payroll or insurance payments.

When used independently to fund another Visa or non-Visa account, AFTs can be used to fund an account belonging to the same or another individual or entity holding a Visa account. The transaction must use the appropriate BAI coding to identify me-to-me (AA) or me-to-you (PP) funding and involve the cardholder funding the transaction by requesting their participation.

Usage Monitoring – Origination

Monitoring must be in place to ensure AFTs are not used for the purchase of goods and services. Acquirers, service providers, and merchants can accomplish this by monitoring a variety of factors, including:

- Transaction size
- Transaction frequency
- Number/variety of senders to a single receiving account

Fraud Reporting

As with all purchase transactions, reporting AFT fraud to the Visa Fraud Reporting System (FRS), as specified in the *Fraud Reporting System (FRS) User's Guide*, is required.

Disputes

AFTs have the same dispute rights (outlined in the *Visa Core Rules and Visa Product and Service Rules*) as purchase transactions outlined in the *Visa Core Rules and Visa Product and Service Rules*.

Visa Direct Program Approval

All Visa Direct AFT origination programs must be approved by Visa before program launch. Acquirers must obtain approval by completing the *Visa Direct – Program Information Form (PIF)*. A PIF is required for new Visa Direct programs and for any updates or changes to existing Visa Direct programs (for example, change in acquirer, acquiring identifier, participants, or program types).

Refer to *Visa Direct Program Approval Process* on Visa Access for more information on the approval process and accessing Program Request Management (PRM).

For domestic-only AFT programs without OCT enabled, the acquirer must register the program with Visa by using the Domestic AFT Registration form, as found in Program Request Management (PRM) tool.

Refer to *Visa Direct Program Approval* for registration requirements for domestic AFT programs without OCT enabled.

Requirements for Submitting a PIF

A new PIF must be submitted in these situations:

- For AFT-only programs where the OCT is not enabled as the push payment transaction.
Note: For domestic AFT-only programs without OCT enabled, use the **Domestic AFT Registration** form as found in Program Request Management (PRM) tool.
- Initiating a new Visa Direct program type or BAIs not indicated in a prior PIF.
 - A program is defined as a product or service offered by an acquirer, service provider, or merchant. Visa-defined Program Types are listed in the table in the *Business Application Identifier (BAI)* section of this chapter
 - A single PIF submission may only request BAIs within one BAI category (that is, Money Transfer or Funds Disbursement (non-Money Transfer). If a proposed program requires BAIs from both categories, then two PIFs must be submitted.
- Any updates or changes to existing Visa Direct programs that were previously approved, including adding or changing acquiring identifiers, program types, use cases, or addition of cross-border countries.

- When a client needs to change or add a Third Party Agent.
- For Funds Disbursement/non-Money Transfer services, an acquirer, service provider, or merchant offering multiple Visa Direct program types is not required to submit a separate PIF for each new merchant onboarded to the service, as long as all other information in the PIF is consistent between service offerings.

Note: Online Gambling (OG) and Gambling Payouts (GP) are excluded from this category and are not funded using an AFT.

- For Money Transfer programs, such as Account-to-Account (AA), Person-to-Person (PP), Funds Transfer (FT), Liquid Assets (LA), and Wallet Transfer (WT), a new PIF is required for every new merchant origination program.

Note: For Liquid Assets (LA), where cryptocurrency is not supported, a bulk submission can be performed with a list of merchants appended to the PIF.

- For high-risk programs, such as cryptocurrency wallet programs (FT), a new PIF is required for every new merchant origination program.

AFT Processing Requirements and Considerations

This section outlines the transaction processing and AFT message format requirements for originating entities.

AFT Processing and Message Format

Since the AFT is a type of purchase transaction with a different processing code, the message requirements for a purchase transaction also apply (for example, an AFT used in an e-commerce environment follows the requirements for an e-commerce transaction).

Key data elements for the AFT message are detailed in the appendix [AFT Data Elements and Processing Rules](#).

Originating entities can use a unique or existing acquiring identifier for AFTs. AFTs must be processed as purchase transactions using the unique AFT processing code 10. They must be cleared for the same amount approved in the authorization.

Note: Cross-border AFTs are supported if enabled by the acquirer and issuer.

AFTs can be processed in dual or single message formats.

Alternate Processing

Issuers must be aware that Visa has implemented changes to convert domestic AFTs with the processing code **10** (Account Funding) to a purchase transaction with the processing code **00**

(Goods/Service purchase–debit) before sending the transaction to issuers not enabled to receive, or have opted not to process, the AFT processing code (applicable to domestic and intra-EEA transactions in the Europe Region only). AFTs converted to purchase will include a Business Application Identifier in Field 104 based on Core configuration. Refer to the appendix [AFT Data Elements and Processing Rules](#), AFT Key Data Elements for more information on the data elements for Field 104.

Identifying Domestic and Cross-border AFTs

An AFT is considered domestic when the merchant, acquirer, and issuer are in the same country. The AFT is cross-border when the issuer is in a different country than the merchant and acquirer. For the purpose of data requirements, cross-border transactions require additional data points not required for domestic transactions. As such, a transaction is considered cross-border when merchant country does not equal issuer country.

Treatment of AFTs in the European Economic Area, U.K., and Gibraltar

In the European Economic Area (EEA), U.K., and Gibraltar, for the purposes of Visa internal risk controls and data requirements on AFTs, Visa employs definitions of domestic vs cross-border that differ from countries outside EEA. These definitions are used for Visa internal risk control purposes only and should not be interpreted as legal advice. Acquirers and Issuers are required to take their own legal advice on their legal and regulatory obligations.

This table shows the AFT jurisdiction based on the location of the issuer, acquirer, and merchant. When the jurisdiction is specified as cross-border, the additional data requirements must be included in the AFT transaction.

Table 3: AFT Jurisdiction for the EEA, U.K., and Gibraltar

Description	Location	AFT Jurisdiction
The issuer, acquirer, and merchant are in the same country	Domestic	Domestic
The issuer, acquirer, or merchant are in different countries within the EEA, U.K., or Gibraltar	Intra-EEA, including the U.K. and Gibraltar	Cross-border
The issuer, acquirer, or merchant is outside the EEA, U.K., or Gibraltar	International	Cross-border

Note: European Economic Area (EEA), which includes the member states of the European Union, Iceland, Liechtenstein, and Norway. Member states include Austria, Belgium, Bulgaria, Croatia, Republic of Cyprus, Czech Republic, Denmark, Estonia, Finland, France (including French Guiana, Guadeloupe, Martinique, Mayotte, Reunion, Saint-Martin, and Saint-Barthelemy), Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden.

In Visa processing logic and risk controls, intra-EEA AFTs are treated like domestic AFTs for these purposes:

- Visa default velocity limits
- Issuer blocking configuration
- Conversion of domestic AFTs to purchase for issuers who are not enabled to accept domestic AFTs

However, for the purposes of determining data requirements, intra-EEA transactions are treated like cross-border transactions, that is, cross-border data requirements apply.

For more details on Visa data requirements, see [Appendix A](#).

Business Application Identifier (BAI)

The Business Application Identifier (BAI) is a data element used to identify the category of the AFT.

The BAI helps the issuer of the sender's Visa account understand the purpose of the funds, enabling better risk assessment, authorization decisions, and accurate accrual of any cardholder rewards or loyalty point. The BAI is specified in Field 104, Usage 2, Dataset Value Hex 57 (see the appendix [AFT Data Elements and Processing Rules](#)).

All acquirers, service providers, and merchants in all regions are required to submit a valid BAI value in AFTs. Refer to the table in appendix [Business Application Identifier \(BAI\) Acronyms](#) of this guide. In addition, full AFT specifications can be found in the *VisaNet Authorization-Only Online Messages - Technical Specifications* and *Full Service POS Online Messages - Technical Specifications*.

This table summarizes AFT categories, their BAIs, corresponding MCCs, and regional usage requirements.

Table 4: AFT Categories – Money Transfer (1 of 4)

BAI	AFT Category	Merchant Category Code (MCC)	BAI Usage Requirements
AA	Account-to-account Money Transfer (funding of the cardholder's own account at the same or a different financial institution) Note: Use TU if funding a prepaid account.	• 4829 Non-Financial Institution Wire Transfer Money Orders (Not applicable in the U.S. with BAI AA) • 6012 Financial Institutions – Merchandise and Services • 6211 Security Brokers/Dealers	Used in a me-to-me Money Transfer transaction, both accounts are owned by the same cardholder.
BI	Financial Institution-offered Bank-Initiated P2P Money Transfer Important: BAI BI is used for very specific scenarios and is enabled only in limited markets. Contact your Visa representative for information on the availability of BAI BI in your market, and applicability of BAI BI to your program.	6012 Financial Institutions – Merchandise and Services	P2P Money Transfer is initiated from an online banking system, making it a bank-initiated transaction. Note: BAI BI should only be used in combination with MCC 6012. Note: Domestic AFT from a bank/financial institution can use BAI=BI for me-to-me, person-to-person transactions (for example, AA, PP type of use cases).

Table 4: AFT Categories – Money Transfer (2 of 4)

BAI	AFT Category	Merchant Category Code (MCC)	BAI Usage Requirements
FT	Funds Transfer	• 4829 Non-Financial Institution Wire Transfer Money Orders (WTMOs) • 6012 Financial Institutions – Merchandise and Services • 6540 Non-Financial Institutions – Stored Value Card Purchase/ Load • If the funds will be used for a high-brand risk transaction, the applicable high-brand risk MCC must be used. • If the general purpose wallet is used to purchase Liquid and Cryptocurrency assets (for example, Cryptocurrency), the applicable special condition indicator (Field 60.4) = 7 must be used. Note: The term Non-Fiat Currency has been replaced with Liquid and Cryptocurrency Assets. • MCC 6211 Security Brokers/ Dealers	Adding funds to or cashing out a Stored Value Digital Wallet (SVDW) account. Funding a Money Transfer where the OCT is not enabled as the push mechanism to the recipient. Note: Wallet providers must use BAI LA instead of FT for cashing out funds if it is a general-purpose wallet, and 50% or more of their annual sales volume comes from Liquid or Cryptocurrency assets.

Table 4: AFT Categories – Money Transfer (3 of 4)

BAI	AFT Category	Merchant Category Code (MCC)	BAI Usage Requirements
LA Effective 19 October 2024	Liquid Assets A new BAI for Visa Direct transactions involving wallet prefunding or the direct purchase of liquid and cryptocurrency assets. Note: In Canada and the U.S., the new BAI value will not apply to originating domestic AFTs. Issuers and issuer processors must be prepared to receive the new BAI value of LA for cross-border AFTs originating outside of Canada and the U.S.	• 6012—Financial Institutions—Merchandise, Services, and Debt Repayment. • 6051—Non-Financial Institutions – Foreign Currency, Liquid, and Cryptocurrency Assets (for example: Cryptocurrency), Money Orders (Not Money Transfer), Account Funding (not Stored Value Load), Travelers Cheques, and Debt Repayment—must identify Visa Direct transactions under the BAI value of LA. Note: An AFT is not intended for debt repayment. • 6211—Security Brokers/Dealers (if greater than 50% of client annual sales volume, measured in the client’s local fiat currency comes from non-cryptocurrency (for example, stocks, bonds, and so on)—will be required to identify AFTs under the BAI value of LA. Additionally, any originating entity identified as a foreign currency exchange or cryptocurrency merchant, broker or platform.	The client is acquiring a liquid asset or cryptocurrency in a transaction (direct acquisition) The client is loading a cryptocurrency wallet or exchange account with Fiat currency The client is loading a general-purpose wallet with many uses (for example, investing, prepaid balance, cryptocurrency, with fiat currency from a non-credit card (if primary business/revenue is related to liquid and/or cryptocurrency assets)). See Liquid and Cryptocurrency Assets – Use Case for additional details.

Table 4: AFT Categories – Money Transfer (4 of 4)

BAI	AFT Category	Merchant Category Code (MCC)	BAI Usage Requirements
PP	Person-to-person (P2P) Money Transfer (transferring funds to another individual's non-merchant account)	• 4829 Non-Financial Institution Wire Transfer Money Orders • 6012 Financial Institutions – Merchandise and Services	This is applicable for services that support AFT and OCT. If using the AFT independently to fund another Visa or non-Visa account, AFTs can be used to fund an account belonging to the same or another individual or entity holding a Visa account. The transaction must use the appropriate BAI coding to identify me-to-you (PP) funding and involve the cardholder funding the transaction by requesting their participation.
WT	Staged Digital Wallet (SDW) transfer (adding value to a digital wallet with a proprietary merchant acceptance network)	• 6051 Non-Financial Institutions – Foreign Currency, Liquid and Cryptocurrency Assets (for example Cryptocurrency), Money Orders (not Money Transfer), Account Funding (not Stored Value Load), Travelers Cheques, and Debt Repayment Note: An AFT is not intended for debt repayment. • If the funds will be used for a high-brand risk transaction, the applicable high-brand risk MCC must be used. • If the funds are used for a gambling transaction, the applicable gambling MCC must be used. • If the wallet is used to purchase Liquid and Cryptocurrency Assets (for example, Cryptocurrency), the applicable special condition indicator must be used.	Note: When a Visa card is used to fund a Staged Digital Wallet before the cardholder makes a purchase, an AFT with a BAI of WT must be used. WT must be used only by registered Staged Digital Wallet Operators (SDWO). For additional information on Staged Digital Wallet transactions, visit the Staged Digital Wallet Operators section at Visa Access. Contact your Visa representative for additional information and requirements for digital wallets. Note: Effective October 2024: Field 104 – Sender Data and Recipient Name will be required to support cross-border AFT. V.I.P. will reject AFTs with the existing reject code 0494 (when Field or data is missing or invalid).

Table 5: AFT Categories – Funds Disbursement/Non-Money Transfer

BAI	AFT Category	Merchant Category Code	BAI Usage Requirements
FD	Funds Disbursement	Any MCC associated to the merchant	Insurance payouts where a third party uses an AFT to fund the disbursement of OCT on behalf of the insurance company. Other examples include but are not limited to—shared economy, small business lending, healthcare, GIG worker payouts, corporate expense disbursement and so on.
PD	Payroll Disbursement	8931 Accounting, Auditing, and Bookkeeping services including Payroll	When a payroll provider is disbursing payroll on behalf of the small business who funds the transactions.
TU Note: applied limits are money transfer rates.	Prepaid card load or top-up (adding value to an eligible reloadable prepaid card or funding the cardholder's own prepaid account)	• 6012 Financial Institutions – Merchandise and Services • 6051 Non-Financial Institutions – Foreign Currency, Liquid and Cryptocurrency Assets (for example, Cryptocurrency), Money Orders (not Money Transfer), Travelers Check, and Debt Repayment • 6540 Non-Financial Institutions – Stored Value Card Purchase/ Load	Note: Merchants that sell other goods and services in addition to stored value cards and offer prepaid card load capability can use the MCC associated with the merchant's primary business in accordance with the Visa Merchant Data Standards Manual.

P2P Digital Payment Platform (DPP) Framework

Person-to-Person Digital Payment Platforms are digital payment solutions that enable payments to merchants for goods/services purchased through the wallet. They also facilitate the movement of funds between the sender's accounts, or from the sender to another individual's account.

The **BAI and MCC usage for P2P and Digital Wallet Programs – Digital Payment Platform Model** table maps out the different P2P digital payment business models and provides guidance to acquirers and merchants on the proper use of transaction type, MCC, and BAI coding to facilitate the movement of funds.

To clearly distinguish types of Money Transfers in the P2P DPP Framework, accurate BAI coding is critical. This helps ensure:

- Implementing the right economics
- Managing risks: arbitrage, fraud, money laundering, etc.
- Maintaining compliance and transparency across all parties in the payments chain
- Taking into account a variety of emerging and evolving digital payment platform business models

Note: Single merchant wallets (where stored funds cannot be used outside the single merchant's environment) are not included in SDW and SVDW.

Table 6: BAI and MCC usage for P2P and Digital Wallet Programs – Digital Payment Platform Model

	Straight-through P2P	Financial Institution	Stored-value wallet	Staged wallet
MCCs	• 4829 • 6012 (if bank-offered)	• 6012 • 6211 • 6051 (nonfinancial institution moving funds on behalf of financial institutions)	• 4829 • 6540 • 6012 (if bank-offered) • Merchant's MCC if High-Risk If the wallet is able to be used to purchase Liquid and Cryptocurrency Assets (for example, cryptocurrency), the applicable transaction indicator must be used.	• 6051 • Merchant's MCC if High-Risk or otherwise Back-to-Back funding If the wallet is able to be used to purchase Liquid and Cryptocurrency Assets (for example, cryptocurrency), the applicable transaction indicator must be used.

Table 7: Digital Payment Platform Model – Use Cases (1 of 2)

	Straight-Through P2P	Financial Institution	Stored-Value Wallet	Staged Wallet
Me-to-me funding/adding cash	N/A	AFT (AA)	AFT (FT)	AFT (WT)
Me-to-me withdrawal/Cash out	N/A	OCT (AA)	OCT (FT)	OCT (WT)

Table 7: Digital Payment Platform Model – Use Cases (2 of 2)

	Straight-Through P2P	Financial Institution	Stored-Value Wallet	Staged Wallet
Send funds to someone else:	AFT (PP or BI)	AFT (PP or BI)	AFT (PP or BI)	AFT (PP or BI)
Receive funds from someone else:	OCT (PP or BI)	OCT (PP or BI)	OCT (PP or BI)	OCT (PP or BI)

Note:

- AFTs with BAI = WT should only be used by registered Staged Digital Wallet Operators (SDWO).
- To ensure the correct BAI is applied, the acquirer should confirm with the merchant if OCT will be enabled through another means. This information should also be included in the program description if submitting an AFT-only PIF.

Table 8: Digital Wallets Comparison (1 of 2)

	Stored Value Digital Wallet (SVDW)	Staged Digital Wallet (SDW)
Definition	Stored Value Digital Wallets are offered with P2P or merchant payment capability. The user can add and store funds in the digital account (wallet) that will be used to send funds to others or cash out to an unaffiliated account. Stored Value Digital Wallets must limit usage to the available balance in the wallet and must not facilitate Back-to-Back Funding. SVDW may have a general-purpose payment network card/account at the “front” of the wallet. It is not primarily used to pay a merchant.	A Staged Digital Wallet is provided by a Staged Digital Wallet Operator (SDWO). The SDWO assigns a separate account to the customer, which the customer uses to initiate “back-to-back funding” - also known as a “live-load” or “real-time load” - permitting the customer to complete transactions with sellers on the digital wallet’s platform, when there may not be sufficient funds in the digital wallet-assigned account (which may include a “zero balance”). SDWs are not permitted to assign a Visa or other general-purpose payment network product (for example, a prepaid credential) to the “front” of the digital wallet account to make purchases, cash withdrawals or P2P transfers by using the back-to-back (live load) functionality.
Add/Store funds	Yes	Yes
Pull funds to complete a purchase	No	Yes (Back-to-Back Funding)

Table 8: Digital Wallets Comparison (2 of 2)

	Stored Value Digital Wallet (SVDW)	Staged Digital Wallet (SDW)
Usage of funds in the wallet	- To send funds to other users - To cash out to an unaffiliated account - Send payments at multiple merchants under the operator's brand mark - Send payments at multiple merchants under the general-purpose payment network's brand mark - Can support cryptocurrency	- To send to other wallet users on the platform (P2P) - Send payments at multiple merchants under the operator's brand mark - To cash out to an unaffiliated account - Can support cryptocurrency
Stored funds to pay merchants	Stored funds may be used to pay merchants. Payments to merchants include: - Face-to-face SVDW-brand or general-purpose payment network acceptance mark at a physical POS, a proprietary payment outside the Visa network. - E-commerce SVDW-brand or general-purpose payment network acceptance mark, a proprietary payment outside the Visa network. Note: A wallet evolving to support a Back-to-Back funding for real-time purchases (that is, where the funding transaction occurs simultaneous with the purchase) will be classified as a Staged Digital Wallet. The wallet may no longer have a general-purpose payment network card/account at the "front" of the wallet using back-to-back funding, which means it is now a Staged Digital Wallet.	Payments to merchants include: - Face-to-face SDW brand acceptance mark at a physical POS - E-commerce SDW brand acceptance mark - Merchant wallets where users instruct buyers to send money to a merchant's digital wallet - Back-to-Back Funding purchase transaction
Digital Wallet as a prepaid account	Stored Value Digital Wallet may be structured as a prepaid account or offer a general-purpose payment network prepaid card as a physical access tool to the funds in the digital wallet. This scenario does not alter the transaction or BAI coding.	The Staged Digital Wallet may be structured as a prepaid account but must not offer or attach a general-purpose payment network card as a physical access tool to the funds in the digital wallet using a back-to-back transaction. This scenario does not alter the transaction or BAI coding.

Bank-Initiated P2P Money Transfer – Use Case

To better service customer needs, banks are developing easy-to-use, real-time interbank P2P payment services.

To enable banks to fully leverage the benefits of the Visa Direct platform, Visa is enabling processing and a unique pricing fee schedule for bank-initiated P2P programs. Programs defined under this category must meet these requirements:

- The AFT must be offered in parity with a compliant OCT
- The bank initiating the AFT must comply with the Fast Funds mandate for receiving OCTs on all eligible Visa debit and reloadable prepaid card accounts
- AFTs must be submitted with a BAI of “BI”
- AFTs with a BAI of BI may only be used for domestic P2P payments offered by banks through bank channels. Direct-to-consumer services provided by third-party service providers (including client-sponsored third-parties) are not eligible

Important: BAI BI is used for very specific scenarios and is enabled only in limited markets.

Contact your Visa Representative for information on:

- the availability of BAI BI in your market, and
- applicability of BAI BI to your program

In addition, service providers that enable bank P2P Money Transfer platforms on behalf of banks must ensure Fast Funds compliance of all the banks participating in their service before enabling bank P2P services on behalf of the bank and its customers. The processes for ensuring participating banks are compliant with the Fast Funds requirement, as well as the status of all participating banks must be made available to Visa upon request.

Contact your account representative for more details on bank-initiated P2P programs.

Liquid and Cryptocurrency Assets – Use Case

Effective 20 January 2024 – Visa implemented a new rule requiring the use of an Account Funding Transaction (AFT) for the acquisition of Liquid and Cryptocurrency Assets (for example, stocks, shares, foreign currency exchange, or cryptocurrency) in a card-not-present environment.

Issuers and acquirers are required to update their processes to comply with the AFT requirements' new rule.

Effective 20 January 2024 - Canada, CEMEA, and U.S. Regions and effective 20 January 2025 - AP, Europe, and LAC Regions: Merchants must be set up to support AFTs for the purchase of Liquid and Cryptocurrency Assets in a card-not-present environment and use Special Condition Code **7**, to identify cryptocurrency.

Issuers must be prepared to accommodate additional data requirements sent by acquirers in transactions using AFTs for the acquisition of liquid assets (for example, stocks, shares, foreign currency, and cryptocurrency).

In a card present environment, an AFT can be used for the purchase of Liquid and Cryptocurrency Assets.

A cryptocurrency wallet may be prefunded using an AFT and the funds are later used to purchase cryptocurrency. Stored Value Digital Wallet and Staged Digital Wallet models can support cryptocurrency wallets.

The AFT must include these data requirements:

- **Effective 19 October 2024, BAI LA** (Liquid Assets) must be used for direct acquisition of Liquid and Cryptocurrency assets or to prefund a wallet primarily used for Liquid and Cryptocurrency assets.

Note: In Canada and the U.S., the new BAI value will not apply to originating domestic AFTs. Issuers and issuer processors must be prepared to receive the new BAI value of LA for cross-border AFTs originating outside of Canada and the U.S.

- General-purpose wallets can continue to use BAI **FT** or **WT** if Liquid/Cryptocurrency assets are not the main source of business/revenue, this means 50% or less of the client annual sales revenue comes from liquid or cryptocurrency assets.
- Applicable Merchant Category Codes include:
 - **6051:** Non-Financial Institutions – Foreign Currency, Liquid, and Cryptocurrency assets (for example, cryptocurrency), Money Orders (Not Money Transfer), Account Funding (not Stored Value Load), Travelers Checks, and Debt Repayment.

Note: An AFT is not intended for debt repayment.
 - **6211:** Security Brokers/Dealers
Brokerage (if greater than 50% of client annual sales volume, measured in the client's local Fiat currency comes from non-cryptocurrency related transactions (for example, shares, stocks, bonds, and so on.)
 - **6012:** Financial Institution (if client holds a U.S. bank charter)
- Special Condition indicator (Field 60.4) must be **7** to identify when the AFT this pull transaction is for a cryptocurrency-related program.

Acquirers must follow the Visa high-integrity risk program registration process for their cryptocurrency merchants and obtain PIF approval before launching any new programs.

Refer to *Visa Direct Program Approval* for registration requirements for domestic AFT programs without OCT enabled.

Me-to-You Account Funding

When used independently to fund another Visa or non-Visa account, Account Funding Transactions (AFTs) can be used to fund an account belonging to the same or another individual or entity holding a Visa account. The transaction must use the appropriate BAI coding to identify me-to-me (AA) or me-to-you (PP) funding and engage the cardholder funding the transaction by requesting their participation. This can also apply to funding wallets where a person chooses to fund another person's wallet.

When supporting a me-to-you account funding use case, the cardholder funding the account must agree and participate in the transaction. They must authenticate and verify themselves and provide their account number if they choose to fund the account. The originating entity can use a request-to-pay model or cardholder verification methods such as tokenization or Visa Secure to initiate the engagement. The solution must ensure the cardholder is aware and agrees to fund the account.

Merchant-Initiated Transactions/Recurring Transactions

Account Funding Transactions (AFTs) are permitted for use as Merchant-initiated Transactions/Recurring Transactions. The transactions must be coded as described here:

For Merchant-Initiated Transactions (MIT), the first time a card is used and being added to the wallet/profile, an AFT must be coded with Field 22 = 01. After the card has been committed to the database of the wallet/profile, the AFT must be coded with Field 22 = 10 (stored credential).

When configuring a Recurring Transaction, the Transaction ID received in the initial transaction must be included in the Recurring Transaction record.

Note: Not all MITs are relevant for AFTs (for example, Installments and No Show).

Examples of MITs relevant to AFTs are:

- Recurring: Reload \$50 every week into digital wallet or move \$500 every month from bank account #1 to bank account #2.
- Unscheduled Card-on-File: When digital wallet balance hits \$10, automatically reload \$50.

MITs with an AFT must use this transaction coding:

Initial AFT (existing authentication requirements apply):

- MCC 6012 (if bank led), if not bank led, MCC must represent the appropriate merchant for the pull.
- Field 60.8 = 05 (ECI)
As applicable per region and highly recommended¹
- Field 22 = 0100 or 1000²
- Field 25 = 59

¹ For Interlink AFTs, Field 60.8 does not apply. Full financial (and Interlink) 0200 AFT messages use Field 63.6 position 4 for the ECI. Authorization 0100 AFT messages use F60.8 for the ECI.

² These values do not apply for Interlink AFTs.

- Field 126.9 = CAVV (non-tokenized) or TAVV (tokenized)
For non-tokenized AFTs, 3DS authentication requirements as applicable per region and highly recommended.
- Field 126.13 = C or R
 - **C**, if being captured for the first time. C is used for unscheduled payment using a Card-on-File.
 - **R**, if using in the first of a recurring payment and card is already on file.

Recurring AFT:

- MCC 6012
- Field 22 = 1000²
- Field 25 = 59
- Field 60.8 = 07 (ECI)¹
- Field 126.13 = C or R
 - R, if being captured for use in a recurring payment.
 - C, is used for unscheduled use of a Card-on-File if the payment is not a recurring transaction, but initiated by the merchant based on standing instructions.
- Field 62.2 or Field 125, DS 03, Tag 03 = original transaction ID from the initial AFT must be provided.

MITs and Partial Authorization

Merchant-Initiated AFTs may support Partial Authorization.

Partial authorization for merchant-initiated AFTs for recurring payments is allowed if the cardholder requested it when setting up the recurring payment. For more information on partial authorization, refer to [Partial Authorization](#) section in this guide.

Cross-Border AFTs

AFTs are available and required to be supported for domestic and cross-border transactions in all regions. AFTs must be enabled for acquirers and issuers to participate.

Acquirers must have an approved PIF that specifically includes cross-border AFTs. As with all domestic AFTs, for cross-border AFTs, Visa requires that acquirers and their agents must ensure that all necessary licenses, registrations, notifications, authorizations, and approvals necessary to engage in AFT programs are obtained from the appropriate authorities in the originating

² These values do not apply for Interlink AFTs.

¹ For Interlink AFTs, Field 60.8 does not apply. Full financial (and Interlink) 0200 AFT messages use Field 63.6 position 4 for the ECI. Authorization 0100 AFT messages use F60.8 for the ECI.

entity's jurisdiction. Cross-border AFTs must be processed using the unique AFT processing code **10**.

Cross-border AFTs are available globally for merchants and acquirers, except in the U.S. U.S. acquirers will not be allowed to originate cross-border AFTs. U.S. issuers can continue to receive cross-border AFTs and must fulfill requirements for additional data elements. All cross-border AFTs will require sender/recipient data, will be screened, and not converted to purchase for issuers not enabled for AFT. Visa will not forward them to issuers unless the issuers have enabled AFT acceptance.

Important: Due to the specific regulatory environment in the U.S., Visa Direct does not presently support U.S. (to the 50 states) inbound, cross-border payments. This applies to funding of accounts within the 50 U.S. states through cross-border AFTs. Please contact your Visa representative for more information.

Transaction Coding Must Comply With Visa Rules

An originating entity must submit to its acquirer AFT transaction data from the merchant originating country to be processed in accordance with the Visa Rule *Assignment of Merchant Outlet Location* (Rule ID: 0029455). Data in the authorization and clearing messages must be consistent according to *Complete and Valid Transaction Data* (Rule ID: 0008752), and *Assignment of Merchant Outlet Location* (Rule ID: 0029455).

For example: If the AFT transaction is pulled from country A and directed to a PAN issued in country B, the transaction must retain the originating country information throughout the transaction life cycle, and no transaction information should be added or deleted during the routing.

Acquirers must route international/cross-border transactions in compliance with *Authorization, Clearing, and Settlement of Transactions* through VisaNet (Rule ID: 0007788) and must not route such transactions through other networks or treat them as On-Us Transactions.

Partial Authorization

Partial Authorization is a service intended to address insufficient funds declines, with the goal of enhancing the cardholder and merchant experience.

Visa Direct supports Partial Authorization only for consumer-initiated AFTs using eligible debit and prepaid card products (LAC only, must include accompanying credit products).

Note: For merchant-initiated transaction (MIT) recurring payments, partial authorization is allowed if the cardholder requested it when setting up the recurring payment in their wallet.

Partial authorization support is mandated:

- **Effective April 2024:** CEMEA, LAC, and U.S. Regions
- **Effective 12 April 2025:** Canada Region.

Participating Acquirer/Merchant Requirements and Considerations

Participating acquirers must include code **1** in Field 60.10–Partial Authorization Indicator, for AFTs. Partial authorization requirements and considerations include:

- Acquirers/acquirer processors and merchants must ensure that they are able to receive Field 54, containing the original amount, in the partially approved AFT response.
- Acquirers/acquirer processors and merchants must ensure that the partially approved amount returned in Field 4 is the amount to be submitted for clearing and settlement, not the original amount contained in the authorization request message.
- Merchants should be aware that any amount less than the requested amount can be returned in a partial authorization response with a response code **10** in Field 39–Response Code.
- Acquirers/acquirer processors and merchants must treat a partial authorization response with an amount of zero in the same manner as a decline.
- If a cardholder chooses not to accept the partial authorization for an AFT, the Merchant must reverse the AFT.
- Acquirers/acquirer processors and merchants must support partial authorization reversals in the event that the cardholder does not complete the AFT or when a transaction is subsequently voided or canceled.

For more information, refer to the *Visa Partial Authorization Service Description and Implementation Guide, Visa Supplemental Requirements, Version 3.1*.

Participating Issuers Requirements

Where applicable, issuers/issuer processors that support Partial Authorization, check for the Partial Authorization Indicator and, if present, respond with a partial approval for an amount less than the requested amount.

For more information, refer to the *Visa Partial Authorization Service Description and Implementation Guide, Visa Supplemental Requirements, Version 3.1*.

Considerations for Cardholder Agreements

Visa recommends that issuers participating in Partial Authorization consult with their legal counsel regarding the disclosures necessary for their cardholder agreements and/or other disclosures regarding Partial Authorization transactions.

Note: This is only an example of possible considerations for cardholder agreements and/or other disclosures. This example should not be considered, and is not legal advice or opinion with respect to the compliance of the exemplar text with any applicable legal requirement. Issuers are solely responsible for compliance of all aspects of their participation in the Partial Authorization service, including their disclosure of Partial Authorization to their cardholders, with all federal and state laws, regulations, bank regulatory supervisory guidance, and other legal requirements.

Table 9: Consideration for Cardholder Agreement – Example

Current Disclosure	Possible Modification
Transactions will be declined if the card balance is less than the transaction amount.	For transactions at some merchants, if the available card balance is not sufficient to complete the full transaction amount, a partial approval in the amount of the remaining available balance may be provided to the merchant. Note: The option to complete an AFT using the remaining available balance on your card may be insufficient for the merchant. Some merchants may decline the transaction if the card balance is less than the transaction amount.

For more information, refer to the *Visa Core Rules and Visa Product and Service Rules, Partial Authorization Service Description and Implementation Guide, Visa Supplemental Requirements, Version 3.1*.

Reversal Processing Requirements

Reversal processing for participants is described here:

Table 10: Reversal Processing

Participating Entity	Reversal Processing Requirements
Merchant/Acquirer	If the cardholder elects not to complete the transaction and subsequently voided or canceled the transaction, the merchant/acquirer must generate a 0400/0420 reversal message with the partially approved amount from the 0110/0210 response message, not the original transaction amount from the 0100/0200 request message.
Issuer/Issuer Processor	Issuers/Issuer Processors must apply the reversal to the cardholder's available card balance within one business day from receipt to ensure that the cardholder does not encounter subsequent declines based on an authorization hold for a transaction that was not completed. Note: This requirement does not apply if the issuer determines that the transaction or account involves suspicious or unusual activity.

Participants must test and/or certify support for the values in VisaNet authorization request/response messages for Partial Authorization transactions. Visa Certification Management Service test scripts are available. Please contact your Visa representative for more information.

For more information, refer to the *Visa Core Rules and Visa Product and Service Rules, Partial Authorization Service Description and Implementation Guide, Visa Supplemental Requirements, Version 3.1*.

Authorization Request and Response Messages

This section summarizes the Partial Authorization processing requirements for participants.

Authorization Request Messages

This table outlines the requirements for each participating entity:

Table 11: Entity Partial Authorization Indicator Processing

Participating Entity	Processing Requirements
Acquirer/Merchant	After a participating merchant has certified support for Partial Authorizations with Visa, the Partial Authorization Indicator is set with a value of 1 in all Visa AFT authorization request messages.
Issuer/Issuer Processor	Participating issuers/issuer processors authorization processing includes checking for the presence of the Partial Authorization Indicator (value of 1 in Field 60.10) when a cardholder has insufficient available funds to approve the full transaction amount. Refer to Field 60.10 in AFT Key Data Elements .

Authorization Response Messages

Upon receipt of the authorization request message indicating support for Partial Authorizations, issuers are able to partially approve the transaction. Formatting a Partial Authorization response (0110 or 0210 messages) impacts these fields:

Table 12: Existing Key Fields and Values for Partial Authorization (1 of 2)

Key Field	Value
Field 4–Amount, Transaction	In the request message, this field will contain the transaction amount. For Partial Authorization transactions, this field returns the approved amount, only if an issuer has approved in full or a reduced amount if an issuer has partially approved. For multicurrency transactions in the response message, this field will contain the original amount in the transaction currency from Field 49–Currency Code, Transaction of the request message.
Field 6–Amount, Cardholder Billing	Issuers participating in multicurrency transactions must send the partially approved amount in Field 6—Amount, Cardholder Billing. Field 54 contains the original amount, not the approved amount.
Field 39–Response Code	This field will contain the partial authorization response code 10 (Partial approval).
Field 54–Additional Amounts, positions 1–2, Account Type	This field will contain the type of account that is being used (00 = not applicable or specified).
Field 54–Additional Amounts, positions 3–4, Amount Type	This field will contain the required value of 57 (Original amount).
Field 54–Additional Amounts, positions 5–7, Currency Code	This field will contain the currency code of the transaction. Must contain the same currency code value as in Field 49–Currency Code Transaction

Table 12: Existing Key Fields and Values for Partial Authorization (2 of 2)

Key Field	Value
Field 54–Additional Amounts, position 8	This field will contain the value of C (Positive balance).
Field 54–Additional Amounts, positions 9–20, Amount	This field will contain the original amount from Field 4 of the request, regardless of issuer being multicurrency or not.
Field 60.10–Additional Authorization Indicators	This field will contain the value of 1 (Terminal accepts partial authorization responses) to indicate that terminals are able to support a partial amount approval.
Field 104, Usage 2–Transaction Specific Data in TLV Format, Dataset ID 71-Free Form Description Data (Client-to-Client Data)	This field will be required for all domestic transactions in Argentina, Bolivia, Brazil, Chile, Colombia, Mexico, Paraguay, Peru, Uruguay, and Venezuela and will contain the partially approved amount in the real cardholder billing currency.
Field 48, Usage 2–Unformatted Text in Authorization/ Reversal Messages	This field will be required for all domestic transactions in Central America and Caribbean countries and will contain the partially approved amount in the real cardholder billing currency.

For more information on each field, refer to the *Partial Authorization Service Description and Implementation Guide, Visa Supplemental Requirements, Version 3.1*.

For Partial Authorization API field name and type (request/response), refer to Appendix [ISO Fields – API Field Mapping](#). For more information on API specifications, refer to *Visa Developer Center*.

Key AFT Data Elements

An AFT transaction is a type of purchase that has specific data requirements that are different from the purchase of goods and services.

Refer to the appendix [AFT Data Elements and Processing Rules](#) for the data elements and message requirements unique to AFTs. The appendix *AFT Data Elements and Processing Rules* includes new data fields and requirements for sender and receiver data. Full requirements for purchase transaction messages can be found in the technical specifications *VisaNet Authorization-Only Online Messages – Technical Specifications and Full Service POS Online Messages – Technical Specifications*.

Custom Payment Service (CPS) (U.S. Only)

AFTs can participate in the Custom Payment Service (CPS) in the U.S.

The objective of CPS is to decrease member operating costs, decrease fraud losses and operating expenses associated with each transaction, improve risk management techniques, and increase member revenues through increased card usage.

Issuers are able to match the authorization and clearing messages, allowing proper management of the cardholder's spending capability.

For AFTs, the CPS program is called the CPS/Account Funding Program and has specific data requirements.

For transaction details and CPS Qualification criteria, see the CPS/Account Funding Programs section in the *U.S. Interchange Reimbursement Fee Rate Qualification Guide*. The key AFT Data Elements are included in the appendix [AFT Data Elements and Processing Rules](#).

Acquirer, Service Provider, and Merchant Network Routing Options

This section outlines the available routing configurations.

Acquirers, service providers, and merchants have several options for routing AFTs to VisaNet, including traditional VisaNet connectivity using ISO messaging and by using the Visa Direct APIs.

VisaNet Connectivity Using ISO Messaging

Visa provides flexible, reliable, and secure access to Visa's payment systems using one of two single-pipe connections.

- Visa Direct Exchange (DEX) is a closed, private, TCP/IP-based connection to VisaNet. DEX provides secure access to VisaNet core processing, as well as the ability to receive reports through file exchange.
- The Extended Access Server, available outside the U.S., provides secure connectivity to VisaNet and performs authorization routing, file staging, and delivery services. It incorporates open standards with powerful IP technologies.

For more information, refer to the *Visa Processing Services* section on Visa Access or contact your Visa representative.

Application Programming Interfaces (APIs)

Visa offers a series of application programming interfaces (APIs) that acquirers, service providers, and merchants can use to initiate transactions and support value-added services related to AFT processing.

Some originating entities may find these web services APIs simpler to implement than traditional ISO 8583-based V.I.P. messaging.

These APIs are applicable to AFTs. Acquirers, service providers, and merchants may choose to use all or some of the available APIs.

- **Funds Transfer:** The financial API used to initiate an AFT and its associated reversal
- **Payment Account Validation:** Allows the acquirers, service providers, and merchants to perform address verification and/or CVV2 validation on the sender's account
- **Funds Transfer Attributes Inquiry:** Allows the acquirers, service providers, and merchants to determine whether the sender's or recipient's non-Visa account is eligible for domestic AFTs. The Funds Transfer Attributes Inquiry (FTAI) API is often used with AFTs to determine key characteristics of a recipient card before initiating the transfer like country, card-type, block status, etc. Refer to the Visa Developer Center at <https://developer.visa.com/products/paai> for additional information on this API.

Note: Visa recommends using the latest ACNL file.

- **Foreign Exchange Rate:** Foreign exchange rate lookup and conversion

Note: Acquirers, service providers, and merchants must obtain a unique acquiring identifier if using the Funds Transfer APIs. A unique acquiring identifier is not required for the Funds Transfer Attributes Inquiry, Payment Account Validation, or Foreign Exchange Rate APIs.

Funds Transfer APIs

- Create Multi Push Funds Transaction POST
- Create Push Funds Transaction POST
- Read Multi Pull Funds Transaction GET
- Create Pull Funds Transaction POST
- Read Reverse Funds Transaction GET
- Read Multi Reverse Funds Transaction GET
- Create Reverse Funds Transaction POST
- Create Multi Reverse Funds Transaction POST
- Read Multi Push Funds Transaction GET
- Read Push Funds Transaction GET
- Read Pull Funds Transaction GET
- Create Multi Pull Funds Transaction POST

For more information on the Visa Direct APIs and their availability in your region, contact your Visa representative. In addition, refer to the Visa Developer Center at https://developer.visa.com/capabilities/visa_direct. Also refer to the *Original Credit Transaction (OCT) – Global Implementation Guide* for OCT-related APIs.

API Terms of Use

Below are the terms of use for Visa Developer Center APIs.

If acquirers or their VisaNet processor(s), service provider(s), third-party agent(s), or any other third-parties involved in the acquirer's program access any APIs through the Visa Developer Center in connection with the program, the Visa Developer Terms of Use (<https://developer.visa.com/terms>) and the Visa Developer Security Terms (<https://developer.visa.com/pages/security-terms>) apply. The acquirer must comply and be responsible for all third-parties' compliance with such terms in connection with its program.

Push Payment Gateway Service

The Visa Push Payment Gateway Service (PPGS) allows acquirers, service providers, and merchants to send AFTs to Visa for routing to multiple debit networks.

The service provides authorization, clearing, settlement, reporting, and exception processing support for the Maestro, NYCE, PULSE, and STAR networks.

Acquirers, service providers, and merchants can use PPGS to send AFTs to VisaNet using the Funds Transfer API or Visa's standard V.I.P. ISO message format. VisaNet translates and reformats the messages into the correct network formats rather than the originating entities having to develop and maintain transaction formats for each debit network.

Additional information on the PPGS can be found in the *Push Payment Gateway Client Implementation Guide* available on Visa Access or through your Visa account representative.

AFTs for Proprietary Card Products

As of April 2020, acquirers and issuers in Canada may optionally support AFTs for domestic processing of eligible proprietary card products.

Acquirers on Network 0002 (Visa) can send AFTs to issuers enabled on Network 0004 (PLUS network) for select proprietary card products.

Support for AFTs on Non-Visa Branded Interlink Products

Effective 13 October 2023: Visa will implement changes to support Account Funding Transactions (AFTs) on the Interlink network for U.S.-issued, including applicable U.S. territories, non-Visa branded card not present (CNP) PINless Interlink Debit and Prepaid products.

Acquirers can continue to process AFTs on network 0002 (Visa) or choose to process them on network 0003 (Interlink). However, AFTs, any related reversal, or exception transactions

destined to issuers on network 0003 must be originated as 0200 full financial transactions. Acquirers may also choose to originate 0200 AFTs on network 0003 or use priority routing (and update their routing priority, as applicable).

Important: AFTs originated as 0100 authorization only messages cannot be processed on network 0003. V.I.P. will reject 0100 AFTs containing the value of 0003 (Interlink) in **Field 63.1** – Network Identification Code with the existing reject code **0599** – The message type is invalid for the card program.

Transaction Coding at Remote Channels (CEMEA)

This section covers the rules for transaction coding at remote channels for the CEMEA Region.

Where the AFT service is offered to consumers over a remote channel, an AFT must be coded as an electronic commerce transaction with these coding: Field 3 (processing code) = 10, Field 18 = 6012, Field 22 = 0100, Field 25 = 59. The AFTs must be fully authenticated with ECI Field 63.6, value 5. For recurring scenarios, refer to the section Merchant-Initiated Transactions/Recurring Transactions.

The exception allowing for the use of other ECI values for the CISSEE subregion will cease, effective **30 September 2023**. The ECI Field 63.6 could contain these ECI values that represent the result of the Visa Secure authentication:

- **05** Fully authenticated e-commerce transaction
- **06** Merchant attempted to authenticate the cardholder
- **07** Nonauthenticated e-commerce transaction

After **30 September 2023**, e-commerce transactions of participating merchants or token requestors will be deemed eligible for DAF following successful cryptogram validation by Visa. These transactions will be allocated the ECI value of **05** and be covered by fraud and dispute-related rules, as set forth by Visa's operating rules limited to the merchant liability framework.

Note: Any exception to the use of other ECI values must be approved before coding. Please contact your regional Visa representative.

To enhance the Money Transfer OCT service security, the merchant must include CVV2 Field 126.10 into the authorization request and must expect to receive CVV2 results in Field 44.10 (as per standard CVV2 processing).

AFT Program Customer Requirements and Considerations

Acquirers, service providers, and merchants developing AFT programs and services must plan for all customer-facing requirements relating to purchase transactions.

In some cases, these considerations may be mandated by Visa Rules or local regulation. Acquirers must ensure that AFT origination programs comply with *Visa Core Rules and Visa Product and Service Rules*, applicable Visa regional operating regulations, and applicable laws.

Customer considerations include:

- **Disclosures:** The program's user interface should include all appropriate disclosures and communications to cardholders.
- **Description of fees:** Acquirers, service providers, and merchants must provide senders with information related to any fees and other material terms in connection with an AFT. The sender must be given an opportunity to agree to the fees and proceed or cancel the transaction.
- **Confirmation of transaction details:** Acquirers, service providers, and merchants should provide senders a process to review and confirm the transfer amount and other applicable details before submitting the transaction.
- **Transaction receipt:** Acquirers, service providers, and merchants must comply with the applicable requirements for transaction receipts in the *Visa Core Rules and Visa Product and Service Rules*, their applicable Visa regional operating regulations, and local law.
- **Transaction notifications:** Acquirers, service providers, and merchants should consider providing notifications via email and/or SMS text messages to inform senders about the status of their submitted AFTs. This is particularly important for web and mobile channels. Acquirers, service providers, and merchants can ask senders if they want notifications. If so, capture the sender's email address or mobile phone number.

AFT Risk Requirements and Considerations

This section summarizes risk requirements and considerations for AFT origination programs.

For more information about the Visa risk services available to AFT acquirers, service providers, and merchants, contact your Visa representative.

Risk Management – General Considerations

Before setting up an AFT origination program, acquirers, service providers, or merchants should carry out a comprehensive risk assessment covering their business policies and practices, fraud prevention and detection techniques, anti-money laundering program, and other risk controls.

In addition to the recommended fraud prevention tools, acquirers and service providers should ensure adequate practices are in place to minimize fraud losses and excessive customer service inquiries.

Acquirers, service providers, and merchants must comply with the *Visa Core Rules and Visa Product and Service Rules*, applicable regulations, applicable sanctions, and “Know Your Customer” (KYC), anti-money laundering, and anti-terrorist financing laws. If an acquirer uses a third-party agent to support any aspect of their AFT origination program (for example, risk management, customer service, and so on.), the acquirer must ensure that the third-party agent complies with all rules and laws.

Cardholder Data Authentication Requirements

When an AFT is used to fund a Money Transfer transaction, the acquirer, service provider, or merchant is responsible for ensuring that data about the sender is collected, verified, and screened against relevant watchlists in accordance with local laws and regulations for the purposes of risk management, sanctions enforcement, and anti-money laundering and anti-terrorist financing control.

Acquirers, service providers, and merchants should develop a method to collect and verify sender data. The sender authentication method should be appropriate to the access channel and should follow regulatory and industry standards, as well as best practices. Examples are the use of government-issued photo identification, PIN, Visa Secure, internet banking identification/password, and telephone banking PIN/password or CDCVM. The acquirer’s, service provider’s, and merchant’s risk and compliance teams should review sender data collection and authentication methods to ensure they follow internal requirements, applicable KYC procedures, and applicable local laws and regulations.

Acquirers, merchants, and service providers are responsible for establishing processes to verify that AFTs used on their own to fund another Visa or non-Visa account are only used to fund an account belonging to the same individual or entity holding the Visa card account.

Note: If a prepaid cardholder’s information has not been collected and verified, an issuer must block an AFT on prepaid cards to ensure the funds are not transferred using Visa Direct OCT to a Visa credit, debit, or reloadable prepaid card with cash access.

Strong Customer Authentication (SCA)

Strong Customer Authentication (SCA) is a European regulatory requirement under Payment Services Directive2 (PSD2). The PSD2 regulation issued in Europe is intended to drive a more integrated and efficient European payments market. SCA balances consumers concerns for security and convenience. Refer to *PSD2 SCA for Remote Electronic Transactions Implementation Guide, Version 4.0* for more details.

Visa has implemented these changes:

- to add new values and simplify the usage and processing of SCA exemption indicators
- in the processing rules of non-3-D Secure (3DS) token-based transactions with delegated authentication

Additionally, Visa requires issuers to indicate in the response message if the requested SCA exemption, or delegated authentication sent by the acquirer, was honored or not honored.

There are four exemption categories that can be applied by the acquirer or issuer:

- **Transaction Risk Analysis (TRA):** The TRA exemption applies to all transactions deemed low risk, based on a TRA assessment.
- **Low Value Transactions:** Where TRA is not possible, it may be possible for the merchant or acquirer within certain cumulative limits to apply a low value exemption.
- **Trusted Beneficiaries:** Customers can add merchants to a trusted list, where SCA is generally only required on the initial transaction. Visa facilitates this through Visa Trusted Listing.
- **Secure Corporate Payments:** The secure corporate payment exemption can be applied to all non-personal transactions that have been initiated from secure corporate environments on eligible cards.

The exemptions are detailed in the *PSD2 SCA for Remote Electronic Transactions Implementation Guide, Version 4.0*, **Section 2.2 – Exemptions**.

Acquirers in the Europe Region must support the new values and processing rules for SCA exemption indicators.

Acquirers that support Visa delegated authentication for non-3DS, token-based transactions must support the processing rule changes and acquirers that subscribe to the SMS Raw Data V22226 record must be aware of the new and changed values.

Acquirers can request SCA exemption via indicators in **Field 34, Dataset ID 4A**. See [AFT Key Data Elements](#). Testing is required to implement this enhancement.

Digital Authentication Framework

Visa has expanded its authentication rules and processing requirements to support the introduction of the Digital Authentication Framework (DAF) that will apply to Primary Account Number (PAN) and Visa Payment Token e-commerce transactions using Visa Secure or Visa Token Service.

Transactions of participating merchants or token requestors (TRs) are deemed eligible for DAF following successful cryptogram validation by Visa. These transactions will be allocated the ECI (Electronic Commerce Indicator) value of **05** and be covered by fraud and dispute-related rules, as set forth by Visa's operating rules limited to the merchant liability framework.

Under this new framework, a new DAF indicator may be sent to issuers to identify qualifying authorization transactions that include Cardholder Account Verification Value (CAVV), Token Authentication Verification Value (TAVV), or both CAVV and TAVV. When issuers are activated to receive the enhancement data tags in authenticated transactions, the tags included in the message are dependent on the type of validation data present in the transaction, and whether the enhanced data is available for sending to the issuer.

Purchase transactions (PAN and Token) and AFTs with PAN are eligible for merchant liability protection.

Note:

- AFTs containing a valid token cryptogram are included in the type of transactions that can be processed as a secure e-commerce transaction and assigned the ECI value of **5**.
- AFTs are eligible for merchant liability protection for DAF (Host Card Emulation (HCE) tokens, e-commerce (ECOM), Card-on-File (COF) etc.) and non-DAF (e.g., secure element tokens).
- Acquirers that send e-commerce AFTs with a payment token must support the changes to cryptogram validation and ECI processing.
- Issuers in the AP (except Bangladesh, India, Nepal and Japan), CEMEA, Europe, and LAC regions that participate in the Visa Token Service must support changes to e-commerce AFT cryptogram validation and ECI processing.

Note: Participating acquirers in Japan must support receiving a DAF indicator on eligible e-commerce transactions.

Note: Issuers in the U.S., Japan, and Canada that participate in the Visa Token Service must support changes to e-commerce AFT cryptogram validation and ECI processing.

Transaction Monitoring and Screening

Acquirers and service providers of AFT programs must implement transaction monitoring and screening procedures to flag high-risk transactions for review before submission.

These should include limits (such as count, amount, and rolling limits) to reduce the risk associated with such transactions, Modulus-10 checks, and other checks to determine whether the sender is on any applicable government or client-specific blocked lists.

Note: Visa requires clients to screen against the Office of Foreign Assets Control (OFAC) list.

In addition, acquirers, service providers, and merchants must have processes in place to identify transaction activity for any signs of fraud or misuse, including money laundering and terrorist financing. Acquirers should consult their appropriate fraud, risk, and compliance teams to ensure their programs meet their institution's monitoring requirements.

Acquirers, service providers, and merchants that initiate AFTs are required to monitor programs and transactions to ensure that they are not inappropriately being used for merchant payments of goods and services (for example, by checking for a high number or variety of senders to a single receiving account).

Fraud Detection and Prevention

Effective fraud tools will minimize risks to the acquirer, service provider, or merchant.

The acquirer, service provider, or merchant has little recourse with the issuer if an AFT proves fraudulent. Risk-management tools should be built into processing systems to detect and prevent fraud, errors, sanctions violations, money laundering, and terrorist financing.

Such tools include PIN or CDCVM, internet or telephone banking identification and password, Visa Risk Manager (VRM), Visa Advanced Authorization (VAA), CVV2 verification, Visa Secure, Address Verification Service (AVS), modulus-10 check digit verification, negative files and screening, and systems control tools to identify processing errors and suspicious activity.

Note:

- AVS is available in the U.S., Canada, UK, and Ireland. Check with your regional Visa representative for availability of verification tools.
- CVV2 and/or AVS checking associated with the AFT can be accomplished using the Visa Direct APIs. Refer to [Application Programming Interfaces \(APIs\)](#) for more information.

These risk management reference materials can be found on Visa Access or obtained from your Visa representative:

- *Global Visa Acquirer Risk Quick Reference Guide*: Provides acquirers with best practices for managing card-absent acceptance risk
- *Global Visa Acquirer Fraud Control Manual*: Covers the merchant lifecycle, from underwriting through monitoring and termination, and provides information and resources for reducing and preventing fraud losses
- Fraud and dispute risk information, including:
 - **Fraud Reporting Service (FRS)**: AFT origination entities are required to report fraudulent AFTs to the FRS
 - **Address Verification Service (AVS)**: Verifies a cardholder's billing statement address when processing card-not-present or key-entered transactions
 - **Card Verification Value 2 (CVV2)**: The three-digit code printed on the signature panel of all Visa cards

In the **Europe Region**, refer to these risk materials:

- *Acquirer Risk Monitoring and Detection*
- *Issuer Fraud Monitoring and Detection*
- *Merchant and Cardholder Lifecycle Risks – Best Practice Guide*
- *Managing Fraud in the card-not-present Environment*
- *Payment Services Directive 2 (PSD2) Strong Customer Authentication (SCA) Guide*

These documents are available on Visa Access. You may also contact your Fraud Manager for a copy of the documents. For more information on PSD2 SCA applicability to Visa Direct, refer to *Payment Services Directive 2 (PSD2)* on Visa Access.

For additional information about the Visa risk services available to AFT acquirers, service providers, and merchants, contact your Visa representative.

Push Payments Tokenization

A Payment Token is an “alternate identifier” that can be used in place of a Primary Account Numbers (PAN) to initiate a payment transaction.

Push Payments tokenization enables Visa Direct service providers that submit Account Funding Transactions (AFTs) and Original Credit Transactions (OCTs) with PANs to process with tokens.

Visa supports Visa Token Service for AFTs and OCTs for available token types.

- AFTs and OCTs submitted for token processing must comply with the existing processing rules for AFTs and OCTs
- Token requestors, or entities that act on behalf of the token requestors, must adhere to the tokenization rules for push payments token transactions. AFT and OCT token transactions only work with tokens assigned to token requestors enabled for Visa Direct. Please contact your tokenization service provider for details.
- Acquirers, service providers, and merchants who integrate with the token requestors and submit an AFT and OCT token transaction must follow the tokenization specifications. An AFT token transaction requires an AFT-specific cryptogram. Please contact your tokenization service provider for details.
- Acquirers, service providers, and merchants that submit AFTs and OCTs for token processing may only send these transactions to recipient issuers that support AFTs, OCTs, and Visa Token Service
- In the U.S. region, OCTs with a token are eligible to be sent and received on Network 0002 (Visa), Network 0003 (Interlink), and Network 0004 (PLUS)

For more information on the impacted token types for AFTs and OCTs, contact your regional client support representative.

For more information on Tokens, refer to *Visa Token Service*.

Visa also supports Payment Card Industry (PCI) tokens for AFTs and OCTs. PCI tokens created from the Token Management Service provide a robust solution for safeguarding sensitive payment information. This ensures compliance with the Payment Card Industry Data Security Standard (PCI DSS) without compromising efficiency. For more information on PCI tokens, refer to *Visa Token Management Service*.

Real Time Visa Account Updater (VAU)

This section presents an overview of the Real-Time VAU service that integrates the VAU updates into the VisaNet authorization process.

Visa Account Updater (VAU) (available to Europe in May 2021) is a key service to support payment continuity in recurring billing and Credential-on-File segments. Real-Time VAU is a feature that integrates the VAU updates into the VisaNet authorization process for merchant-initiated transactions and enables real-time updates. Real-Time VAU eliminates the multistep process to update account information.

Acquirers, merchants, and service providers that participate in Real-Time VAU have the option to request account information replacement when originating AFTs and OCTs.

Note: Acquirers, merchants, and service providers that request account information replacement in AFTs and OCTs must support Field 127—PAN File Maintenance.

Account Verification and Related Services

Account Verification, Address Verification, and CVV2 Verification are existing services that Visa Direct merchants can leverage through their acquirers and acquirer processors to verify a card account at the time of cardholder onboarding and before sending a Visa Direct AFT. This can help merchants ensure the account is in good standing, help mitigate fraud, and improve authorization approval rates.

The Account Name Inquiry (ANI) functionality was introduced in April 2022 as a mechanism for card not present merchants and cash payout originators to validate the identity of the customer before initiating a financial transaction. To perform ANI, the merchant collects the full legal name of the cardholder and sends it in a zero-amount account verification message. In response to the ANI request, the merchant will receive an ANI result code that indicates whether the cardholder name matched, partially matched, or did not match the cardholder's legal name associated with the payment account in the issuer's systems. If the issuer does not participate in ANI, the merchant will receive a result code indicating that the cardholder name was not verified.

Effective 14 October 2023

Visa Direct acquirers must be able to send and receive ANI fields and values for their merchants that choose to use ANI. Acquirers that choose to support ANI through 0100 Account Verification messages must:

- Be able to send cardholder name data in the 0100 message.
- Be able to receive the name verification result in the 0110 response message.
- Establish participation through their Visa representative.

Acquirers that choose to support ANI through Visa's Payment Account Validation (PAV) API must be able to send and receive ANI fields. For more information on this API, please visit [Visa Developer Center](#).

Acquirers are currently able to test and activate ANI through either ISO or API.

Refer to this page on Visa Access for additional information on Account Name Inquiry, Account Verification and Address Verification: <https://secure.visaonline.com/SitePages/Content.aspx?pageid=3.1.9.10.0>.

Data Security – PCI Compliance

Acquirers, service providers, and merchants must ensure that the data contained in AFTs, and any other data about the cardholder collected during the transaction, is handled in compliance with the Payment Card Industry Data Security Standard (PCI DSS) and applicable law.

Cardholder information must be stored and transmitted securely, with regular reviews of data security policies to ensure that criminals, hackers, or other unauthorized people cannot break into the data warehouses or intercept data during transmission. In addition, acquirers, service

providers, and merchants should follow standard practices to identify and prevent phishing, account takeovers, and hacker attacks.

Sound data security practices reduce fraud risk and foster customer confidence in the secure handling of personal information.

Acquirers, service providers, and merchants should:

- Implement procedures to control employee access to customer account data and ensure that customer service screens and customer receipts do not display full payment credentials.
- Collect and store personal and financial information about customers involved in funds transfers according to set standards of security and accountability (as required by legislation in most countries).

For more information about the PCI DSS, refer to the PCI Security Standards Council web site at https://www.pcisecuritystandards.org/pci_security/.

AFT Refund Use Case

When a cardholder attempts to send funds to a recipient, an AFT is used to pull the funds from the cardholder's account.

If the recipient has rejected the funds, declined the transfer, or the transfer expires, the service provider must return the funds to the original cardholder. This can be accomplished using an AFT reversal or AFT credit adjustment advice. AFT reversals are full-financial transactions (0420) requests and AFT credit adjustments are advice (0220) requests.

Considerations for which transaction to use depends on the acquirer's connection type to Visa (Single Message or Dual Message) and the amount of time after the authorization when the reversal of funds will be initiated.

The general guidance on the timeframe for when to use an AFT reversal or an AFT credit adjustment should be based on whether the transaction was already cleared and settled in Visa's end-of-day settlement and reconciliation process.

To provide a better experience for cardholders and standardize timeframes for processing AFT credit adjustment advice, issuers are required to process and post AFT credit adjustment advice within these timeframes:

- In the AP, CEMEA, LAC, and North American (Canada, U.S.) regions: Within two business days after receipt of the acquirer's AFT credit adjustment advice.
- In the Europe region: The next business day after receipt of the acquirer's AFT credit adjustment advice.

For all credit adjustment advices, an acquirer must originate the credit adjustment containing the original AFT transaction ID. It must also be originated in 30 calendar days or less of the original transaction and cannot be originated if the original transaction is over 30 days old.

This table provides an overview of the reversal and credit adjustment advice and associated processing considerations.

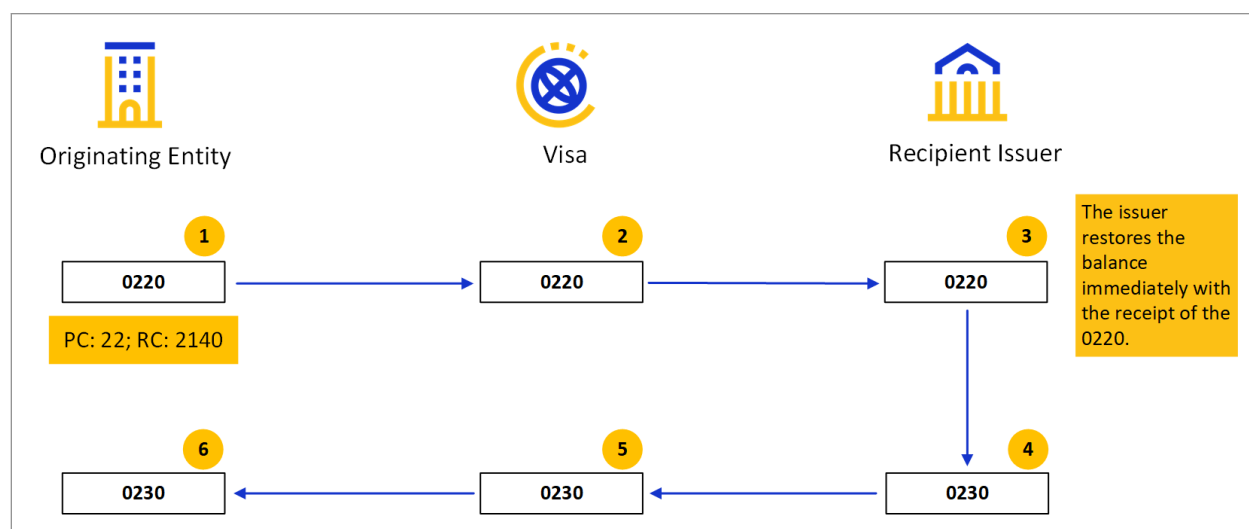

Table 13: Reversal and Adjustment Transactions Overview

Acquirer Connection Type	Reversal	Adjustment
SMS processing clients	A full-financial AFT reversal (0420) must be used to refund within the first 24 hours of the original transaction time, but before the settlement of the transaction.	- A credit adjustment transaction (0220) with processing code 22 (Adjustment-Credit) and reason code 2140 (Account funding transaction: credit adjustment) must be used to process refunds to the sender's card. - These refunds can be applied before and after the settlement cut-off window. Note: Issuers may manage AFT credit adjustments as a back-office process instead of posting the transaction directly into the cardholder's account. Therefore, the timeframe for when the cardholder should expect the refund will vary by issuer.
Dual Message Processing clients	- Originating clients using Dual Message Processing can use an authorization reversal (0400) as a way to refund. This can only be used before the original AFT has been cleared and settled. Note: - Visa rules presently require clearing to be performed within seven (7) days of the original authorization. However, as a best practice, Visa recommends clearing the original AFT within three (3) days to ensure better cardholder experience. - Clients should not be submitting a clearing once the authorization reversal has been processed. They should be deleted from the batch. - Clients also have the option of processing a reversal transaction in the clearing (such as TC25, TCQ-1) if the original transaction has been cleared. - This is processed as a batch clearing transaction and can be performed up to 30 days from the original transaction.	An adjustment transaction (TC25 with TCQ1) can also be used to process refunds to the sender's card after the original AFT has been cleared. - These get processed as batch clearing transactions - Transaction ID of the original AFT should be included to make it easier for issuers to reconcile the adjustment with the original transaction.

Important: If the service provider is attempting to process an AFT Refund request that is missing the transaction ID of the original AFT, this may result in issuers being unable to process the refund quickly. This can be an unpleasant experience for the cardholder as they wait for the funds to be deposited to their card. It is a best practice to include the original AFT transaction ID in the OCT transactions and also in the refund request to enable faster reconciliation and return of funds when needed.

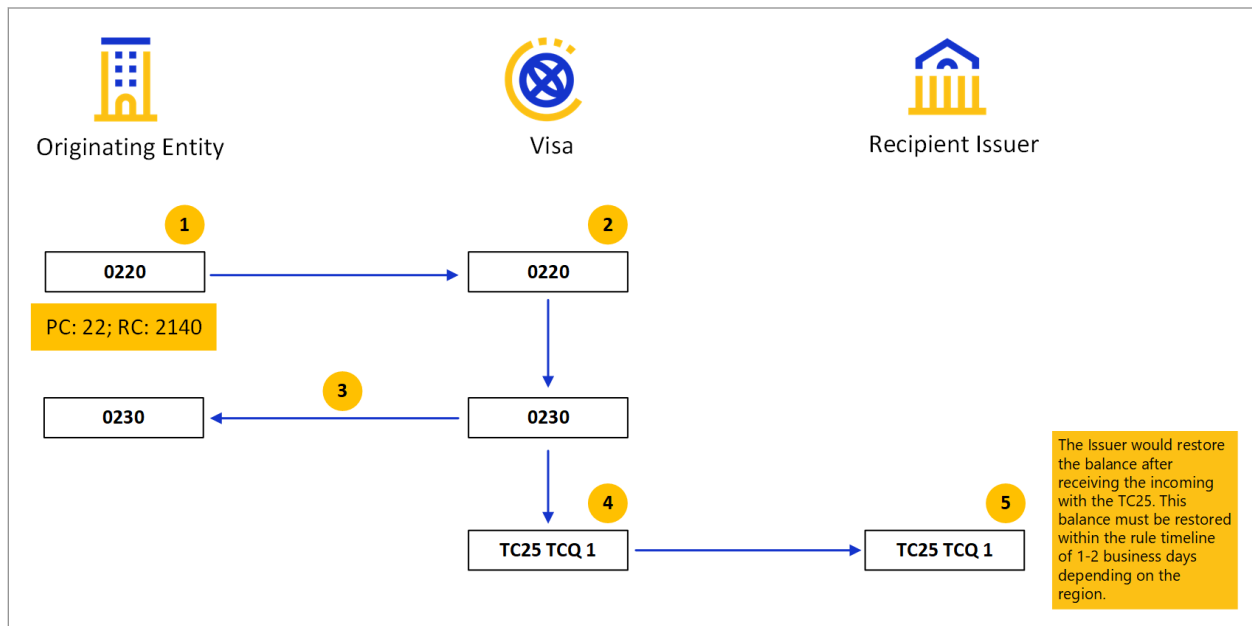

The flows presented here are used to give a more detailed understanding of how the AFT credit adjustment advice and the AFT reversal work from the origination of the adjustment through to the issuer processing of the adjustment, based on the originating entity and issuer connections to Visa.

Credit Adjustment Flow – SMS Originating Entity to SMS Recipient Issuer

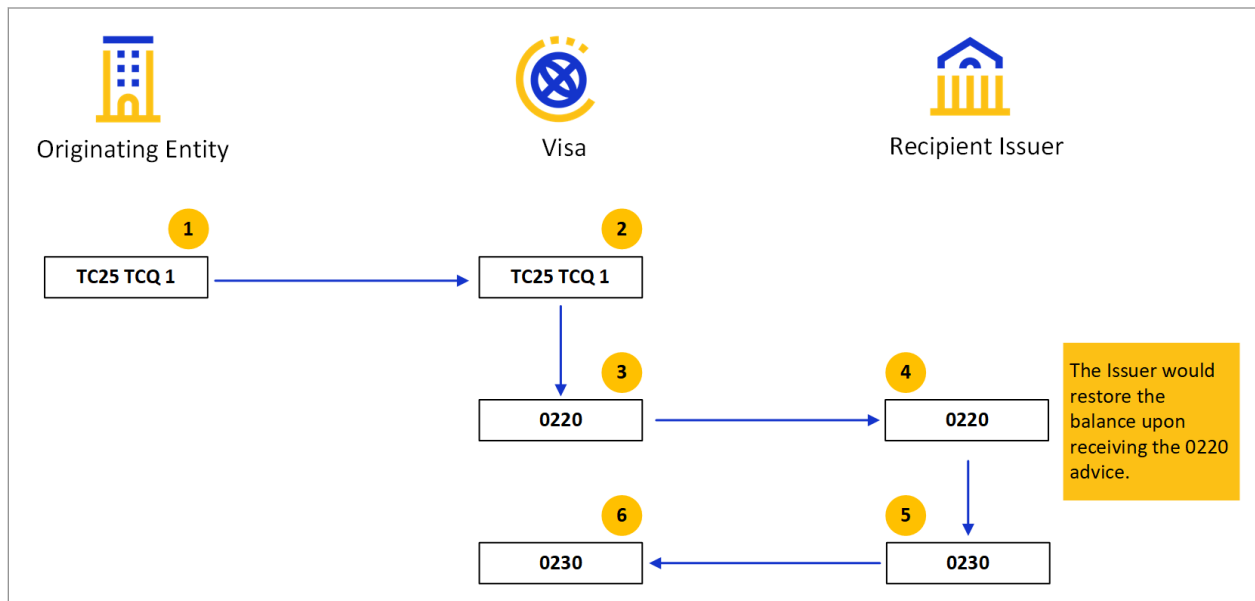

1. Originating entity submits 0220 advice message to Visa to request refund of money to sender's account.
2. Visa sends 0220 authorization message to issuer.
3. Issuer uses the 0220 message to restore balance to the Cardholder's account.
4. Issuer responds with 0230.
5. Visa receives 0230 message.
6. Visa sends 0230 confirmation back to originating entity to confirm success of submission.

Credit Adjustment Flow – SMS Originating Entity to Dual Message/BASE II Recipient Issuer

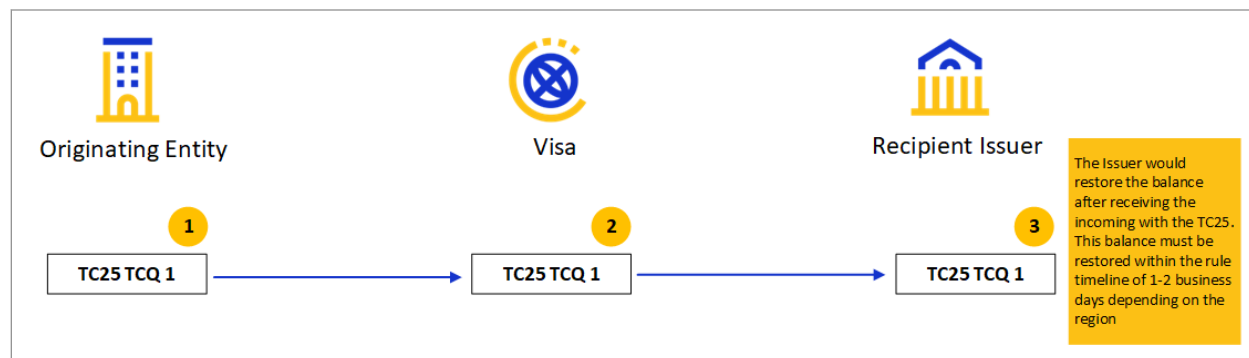

1. Originating entity submits a 0220 advice message to Visa to request refund of money to sender's account.
2. Visa receives 0220 advice message to issuer.
3. Visa creates 0230 STIP advice and returns to originating entity to confirm.
4. Visa creates TC25 TCQ1 and sends to issuer for processing.
5. The issuer receives the TC25 and restores the balance to the Cardholder. The balance must be restored within the rule timeline of one business day for Europe and two business days for all other regions.

Credit Adjustment Flow – Dual Message Originating Entity to SMS Recipient Issuer

1. Originating entity raises TC25 to Visa to request refund of money to sender's account.
2. Visa receives TC25 in incoming files.
3. Visa creates 0220 advice and forwards to SMS recipient issuer.
4. SMS issuer receives 0220 and creates 0230 message.
5. SMS issuer creates 0230 response and sends to Visa.
6. Visa receives the 0230 response confirming receipt and processing of 0220 advice.

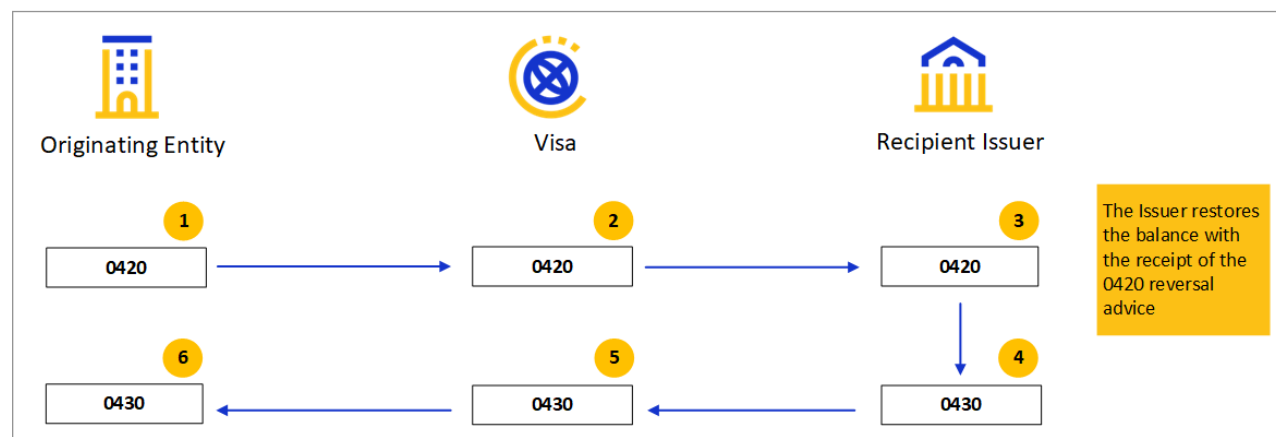

Credit Adjustment Flow – Dual Message Originating Entity to Dual Message/BASE II Recipient Issuer

1. Originating entity submits a TC25 outgoing to Visa to request refund of money to sender's account.
2. Visa receives TC25 and forwards to issuer for processing.
3. Issuer processes TC25 and restores balance to Cardholder's account. This balance must be restored within the rule timeline of one business day for Europe and two business days for all other regions.

AFT Reversals

AFT Reversal Flow – SMS Originating Entity to SMS Recipient Issuer

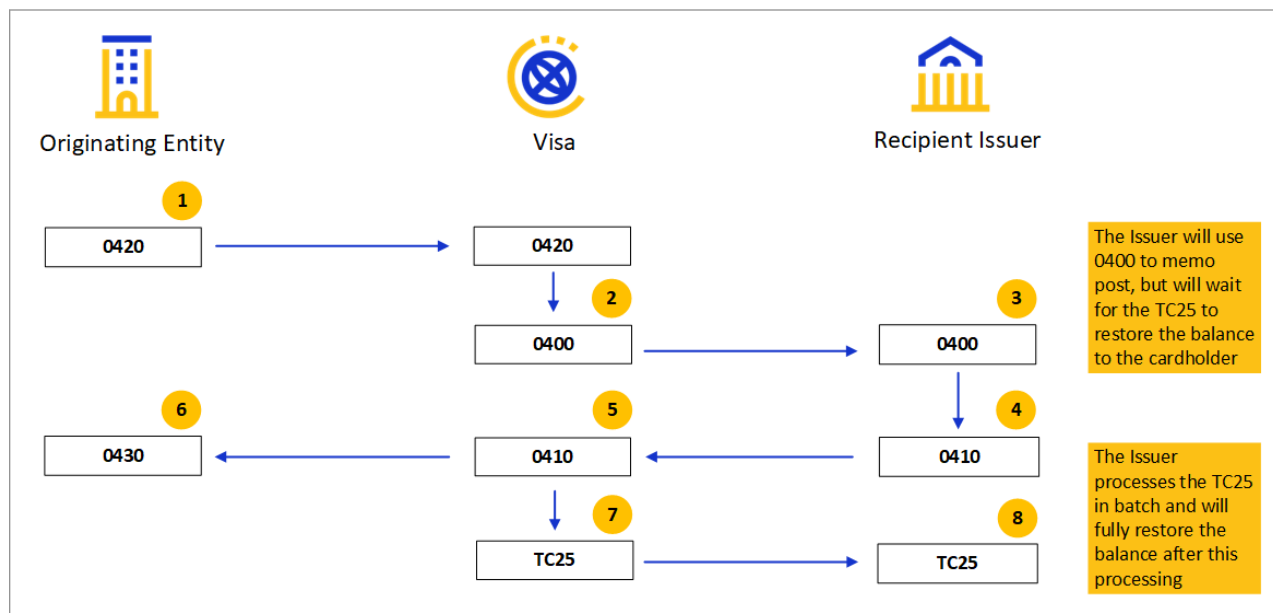

1. Originating entity submits 0420 advice message to Visa to initiate refund of money to sender's account.
2. Visa sends 0420 authorization message to issuer.
3. Issuer uses the 0420 advice message to restore balance to cardholder's account.
4. Issuer responds with 0430 advice message, which must be an approval.

Note: If an issuer were to decline a 0420 message, V.I.P. will reject that decline response from the issuer and respond in STIP with a 0430 approval to the originating entity).

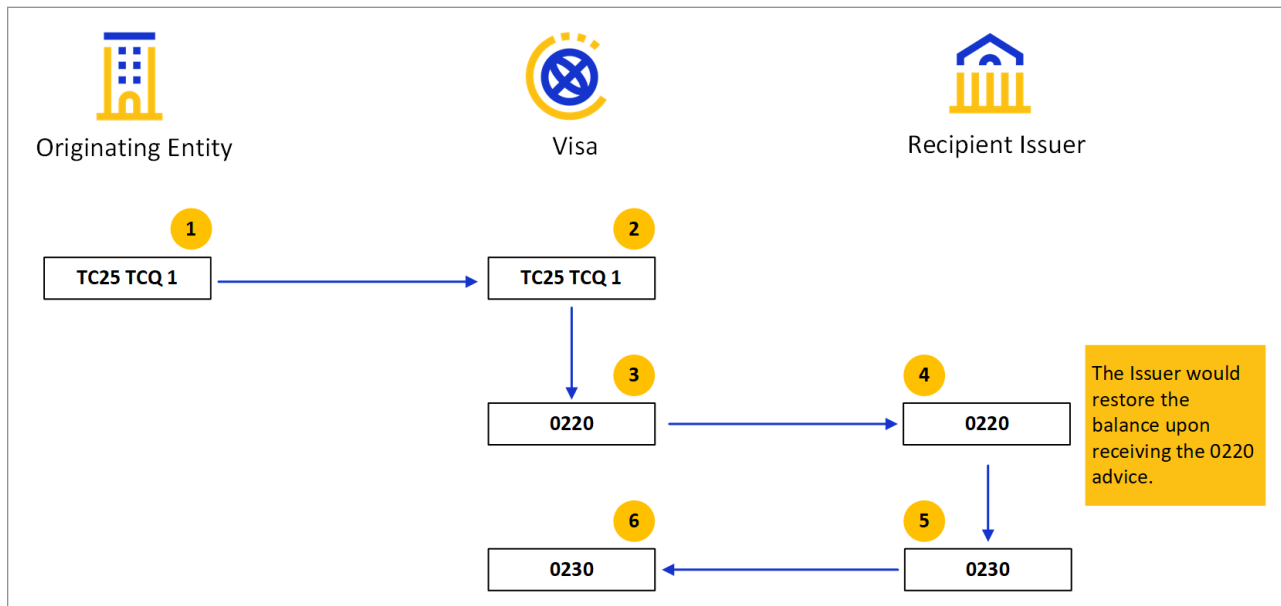

5. Visa receives 0430 advice message.
6. Visa sends 0430 confirmation back to originating entity to confirm reversal advice submitted to issuer.

AFT Reversal Flow – SMS Originating entity to Dual Messaging/BASE II Recipient Issuer

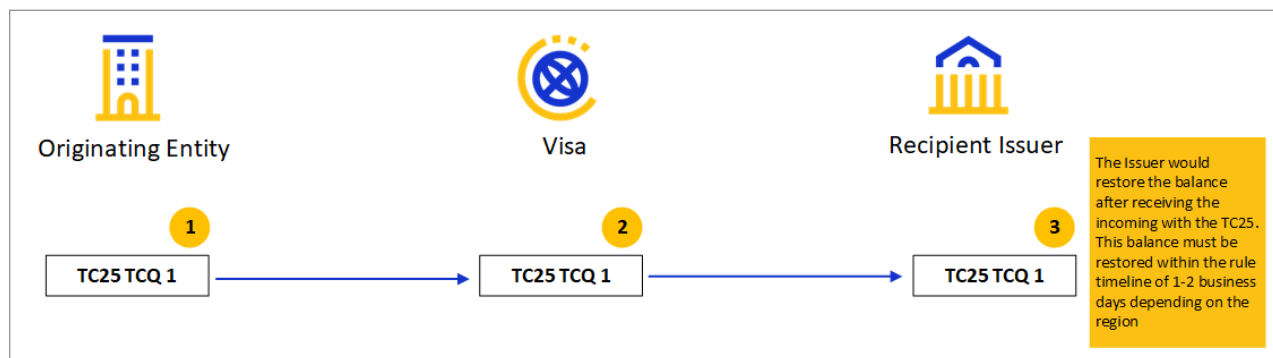

1. Originating entity submits 0420 advice message to Visa to request refund of money to sender's account.
2. Visa receives 0420 advice and converts it to a 0400 reversal request.
3. Visa sends 0400 reversal request to the recipient issuer. The issuer should use this 0400 reversal request to memo post the balance to the Cardholders' account using the "Open to Buy" parameters.
4. Issuer receives 0400 reversal request and responds with a 0410 reversal response to Visa.
5. Visa receives 0410 reversal response.
6. Visa forwards 0430 confirmation advice to the SMS Originating entity.
7. Visa creates a TC25 outgoing to the issuer.
8. The issuer receives the TC25 from Visa and uses this to complete processing of refund back to Cardholders' account.

AFT Reversal Flow – Dual Message Originating Entity to SMS Recipient Issuer

1. Originating entity raises TC25 to Visa to request refund of money to sender's account.
2. Visa receives TC25 in incoming files.
3. Visa creates 0220 advice and forwards to SMS recipient issuer.
4. SMS issuer receives 0220 and creates 0230 message.
5. SMS issuer creates 0230 response and sends to Visa.
6. Visa receives the 0230 response confirming receipt and processing of 0220 advice.

AFT Reversal Flow – Dual Message Originating entity to Dual Message/BASE II Recipient Issuer

1. Originating entity submits a TC25 outgoing to Visa to request refund of money to sender's account.
2. Visa receives TC25 and forwards to issuer for processing.
3. Issuer processes TC25 and restores balance to Cardholder's account. This balance must be restored within the rule timeline of one business day for Europe and two business days for all other regions.

For dispute information, see *Issuers - Dispute Resolutions*.

AFT Reporting Requirements for Originating Entities

AFTs are included on existing VisaNet reports along with other purchase transactions. However, AFTs are not reported separately on VisaNet Settlement Service (VSS) reports. They are reported under the "PURCHASE" fee descriptor.

AFT Certification Requirements

For acquirers/processors that do not yet support AFTs, completion of VisaNet testing using the VisaNet Certification Management Service (VCMS) is required to ensure they meet all requirements before submitting AFTs.

Chapter 3

Issuer Requirements and Considerations

This section includes information for issuers to support the processing and authorization of AFTs for their cardholders.

Issuers must comply with the *Visa Core Rules and Visa Product and Service Rules*, their applicable Visa regional operating regulations, and local law.

Note: AFT support is mandated for issuers globally, all AFT-enabled issuers must be able to receive and process AFTs.

Visa has processing logic to convert domestic AFTs with the processing code **10** (Account Funding) to a purchase transaction with the processing code **00** (Goods/Service purchase-debit) before sending the transaction to issuers that are not enabled, or have not opted in, to receive the AFT processing code **10** (in the Europe Region only, this is applicable to domestic and intra-EEA transactions). AFTs converted to a purchase transaction contain a BAI in Field 104 that issuers must be able to receive and process.

Receiving and Processing AFTs

To ensure a positive cardholder experience, and to comply with Visa Rules, issuers that support or receive AFTs must implement these points in their AFT handling processes:

- Confirm AFTs are approved at a rate in line with approval rates of e-commerce purchase transactions
 - Consider transactions that participate in 3-D Secure (3DS) or tokenization for risk management
 - Validate that processor and Visa parameters are not configured to decline all AFTs
 - Ensure that the use of AFT processing code 10 does not interfere with the ability to process and authorize AFTs
 - Verify that AFTs:
 - Are processed similar to an e-commerce purchase transaction (i.e., not as an ATM withdrawal)
 - Use appropriate statement messaging
 - Do not generate unexpected cardholder fees
- Note:** Issuers in the Democratic Republic of Congo (DRC) and these Southeast Europe (SEE) countries – Albania, Bosnia and Herzegovina, Kosovo, Montenegro, North Macedonia, and Serbia, must not charge additional service fee or funds transfer fees for AFT received on debit and prepaid payment credential
- Have reasonable transaction limits in accordance with an e-commerce purchase transaction
 - Are processed with a BAI
- Be aware that account information replacement may occur for issuers who participate in the Real Time VAU service. Issuers that participate in Real Time VAU service must notify Visa of each VAU primary account number (PAN) update when the cardholder has opted out of account information replacement during authorization processing.

Because the AFT is a type of purchase transaction, the message requirements for a purchase transaction also apply. Full requirements for purchase transaction messages can be found in the technical specifications *VisaNet Authorization-Only Online Messages – Technical Specifications* and *Full Service POS Online Messages – Technical Specifications*. This guide describes the message requirements that are unique to an AFT. Key data elements for the AFT message are detailed in the appendix [*AFT Data Elements and Processing Rules*](#).

Minimum Issuer Monthly Approval Rates

Effective 1 May 2025, an issuer must maintain the minimum approval rates for the Account Funding Transactions as specified in the Visa Rules.

See *Visa Business News (VBN) AI 14278* for additional details.

Stand-In Processing for AFT

Stand-in processing (STIP) is a critical function of any authorization platform when the issuer is unable to respond. STIP serves to ensure that every network request receives an authorization response within defined response minimums.

Visa requires issuers to process all Money Transfer 0100 or 0200 messages for Account Funding Transactions (AFTs) online; that is, no stand-in processing (STIP) approvals must be allowed on AFTs. VisaNet, issuers, and issuer processors should be configured to STIP decline an AFT request with the response code **91**.

The setting of STIP approval parameters must not be allowed for AFTs due to the high fraud risk to the subsequent push payment and Fast Funds processing requirement. The push payment is a good funds model meaning the fund availability is confirmed.

Strong Consumer Authentication (SCA) Exemption

Strong Customer Authentication (SCA) is a European regulatory requirement under Payment Services Directive 2 (PSD2). The PSD2 regulation issued in Europe intends to drive a more integrated and efficient European payments market. SCA balances client concerns for security and convenience. Under PSD2, select criteria, acquirers, and originating entities are allowed exemption from two factor authentication. These criteria are detailed in the *PSD2 SCA for Remote Electronic Transactions Implementation Guide, Version 4.0* (**Section 2.2** – Exemptions and **Section 2.3** – Out of scope transactions).

Visa implemented changes to enhance SCA exemption and delegated authentication indicators, that apply to Account Funding Transactions (AFTs), so that issuers could indicate in the response message if a requested SCA exemption or delegated authentication sent by the acquirer was honored or not honored.

Visa requires issuers in the Europe Region to respond to acquirer's request for exemption and delegated authentication with an honored or not honored response in authorization messages.

Mandate for Interlink Issuers to Process AFTs on Non-Visa Branded Interlink Products

Effective 13 October 2023: Visa will implement changes to support AFTs on the Interlink network for U.S.-issued, including applicable U.S. territories, non-Visa -branded, Card Not Present (CNP) PINless Interlink debit and prepaid products.

Interlink AFTs support is mandated for issuers in the AP, LAC, and U.S. Regions. Interlink issuers must support CNP PINless AFTs on Network 0003 (Interlink) for U.S.-issued, including applicable U.S. territories, non-Visa- branded debit and prepaid products.

Risk and Disputes for Issuers

Issuers should monitor their AFT transactions for suspicious activity and potential fraud. Risk and fraud monitoring is similar to how the issuer monitors typical purchase transactions for risk and fraud.

Standard fraud mitigation tools should be used, such as using VAA, CVV2, and the Address Verification Service (AVS) on the account and the cardholder initiating the AFT. As with all transactions, AFT fraud is required to be reported to the Visa Fraud Reporting System (FRS) as specified in the *Fraud Reporting System (FRS) User's Guide* that can be found on Visa Access.

Using Visa Velocity Limit Checking to Mitigate Risk

To help reduce the risk of fraud and money laundering, Visa has set amount limits and velocity limits.

The limits apply to all AFTs. If a transaction exceeds a Visa-defined/enforced 1-day, 7-day, or 30-day amount limit, VIP declines the transaction with RC **61** (Amount Limit/PAN Limit).

In the U.S., issuers, and issuer processors, are required to differentiate their daily spend limits by AFT and purchase transactions. AFTs can be differentiated from a purchase transaction by a unique Processing Code: AFT = 10, Purchase = 00 in ISO Field 3.1.

AFT Velocity Limits

Table 14: AFT Velocity Limits

AFT Transaction Type	One-Day Time Period	Seven-Day Time Period	Thirty-Day Time Period
Domestic Money Transfer	USD 100,000	USD 250,000	USD 500,000
Cross-Border Money Transfer	USD 50,000	USD 100,000	USD 200,000
Domestic Non-Money Transfer	USD 100,000	USD 250,000	USD 500,000
Cross-Border Non-Money Transfer	USD 50,000	USD 100,000	USD 200,000

Note: In the Europe Region only, domestic limits apply to Intra-EEA transactions.

Note: Per Issuer Requirement to Evaluate Each Transaction (IREET) rule, issuers must not systematically decline all transactions based solely on transaction amount and, instead, must approve or decline transactions on multiple factors. Issuers can still choose to decline an AFT, irrespective of the transaction amount, if it does not meet the issuer's approval criteria.

In the U.S., if issuers apply internal limits, it is recommended that issuers and issuer processors set AFT spend limits to a minimum of \$5,000 to drive adoption of new higher-ticket use cases, such as brokerage and small-business payroll accounts. Visa also recommends issuers review AFT limits proactively on a periodic basis based on cardholder and merchant risk profiles, cardholder tenure (for example, raise limit after 30 days, raise limit again after 60 days, and so on.), and based on history of accounts that have previously received a velocity limit decline.

AFT Maximum Transaction Amounts

The Maximum Transaction Amounts for AFT are:

- **Domestic AFT:** Velocity limit for one-day is applied, currently USD 100,000
- **Non-Money Transfer AFT:** USD 50,000
- **Cross-border Money Transfer AFT:** USD 25,000

Note: In the Europe Region only, domestic limits apply to Intra-EEA transactions.

Issuers – Dispute Resolution

AFTs have the same dispute rights as all other purchase transactions outlined in the *Visa Core Rules and Visa Product and Service Rules*.

Refer to the Dispute Resolution section in the *Visa Core Rules and Visa Product and Service Rules* to efficiently resolve disputed transactions. For VROL information, visit <https://secure.visaonline.com/SitePages/Section.aspx?pageid=2.1.1.0.0>.

Table 15: Examples of AFT Dispute Situations

Condition Code	Dispute Situations
10.4—Fraud Category	This dispute may be used when the cardholder did not authorize or participate in a transaction conducted in a Card Not Present environment.
11.2—Declined Authorization	This dispute may be used when an Authorization Request received a Decline Response or a Pickup Response and the merchant completed the transaction.
11.3—No Authorization	The dispute may be used when Authorization was required but was not obtained on the date. Refer to the Approval Response Validity Timeframes section in the <i>Visa Core Rules and Visa Product and Service Rules</i>
12.1—Late Presentment	This dispute applies only if the transaction was not processed within the required time limit. Refer to the Acquirer Processing Timeframes section in the <i>Visa Core Rules and Visa Product and Service Rules</i>
12.4—Incorrect Account Number	This dispute applies when the transaction was processed using an incorrect payment credential and for which either an Imprint or an Authorization was not obtained.
12.5—Incorrect Amount	This dispute may be used for these situations: • Transaction Amount is incorrect • An addition or transposition error occurred
12.6—Duplicate Processing	This dispute may be used when a duplicate AFT was submitted.
13.1—Merchandise/ Services Not Received	This dispute may be used for either of these situations: • Serviced not rendered by the expected date • Merchandise was not received on the expected date/agreed location • If the customer participated in the AFT but the funding never completed.
13.8—Original Credit Transaction Not Accepted	This dispute may be used for either of these situations: • Legal restrictions prevent accepting the credit • Recipient refuses the credit

AFT Refund – Processing Considerations

In the event of an AFT reversal or credit adjustment advice, issuers must be aware of the considerations for processing a reversal or adjustment.

An issuer must post an AFT credit adjustment advice within two business days. In Europe, the AFT credit adjustment advice must be posted in the next business day upon receipt of the AFT credit adjustment advice from the acquirer. Issuers that are not compliant may be subject to noncompliance assessments.

Note: The AFT credit adjustment advice must also be originated in 30 calendar days or less of the original transaction and cannot be originated if the original transaction is over 30 days old.

Refer to the table [Reversal and Adjustment Transactions Overview](#) in *AFT Refund Use Case* for more information on the reversal and adjustment transactions and associated processing considerations.

Issuer Reporting Requirements

AFTs must be reported on the Quarterly Operating Certificates with the issuer's purchasing volume.

Note:

- In the U.S. Region, AFTs generated as part of a financial institution-offered P2P Money Transfer service do not have to be reported on the Quarterly Operating Certificate.
- In Europe, Canada, CEMEA, and AP, acquirers are no longer required to submit Visa Direct transactions manually. A new Global Operating Certificate (GOC) tool¹ was introduced in Visa Access and each client is required to submit Visa Direct volumes through the Visa Access platform. Each reporting client has access to the GOC tool under "My Services" in Visa Access.

Issuer Certification Requirements

The issuers and issuer processors ready to support AFTs without downgrading to a purchase transaction should test in VCMS if they meet all transaction requirements to receive AFTs.

Once the issuer meets the certification requirements, the issuing identifier flags will be enabled to receive AFT processing code (10).

¹ Available to LAC in April 2021, and U.S. in October 2021.

Appendix A

AFT Data Elements and Processing Rules

This appendix provides the data elements and message requirements unique to AFTs.

AFT Key Data Elements

Field Format can be:

- A (alpha, EBCDIC)
- AN (alphanumeric, EBCDIC)
- ANS (alphanumeric/special characters, EBCDIC)
- B (binary value)
- BCD (numeric, 4-bit = unsigned packed)
- Bit string
- N (numeric, 1 byte per character)

Table 16: AFT Key Data Elements (1 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 2 Length: variable Format: 1 byte binary + up to 19 N, 4-bit BCD (unsigned packed); maximum 11 bytes Primary Account Number	Account Number TCR 0, . Positions: 5– 20 Length: 16 Format: UN	Sender's Visa payment credential.	This field contains the sender's primary account number (PAN). Mandatory for Domestic and Cross-Border Money and Non- Money Transfer AFTs.
Field 3 Length: 3 Format: 6 BCD Processing Code	Transaction Code Qualifier TCR 0, Position: 3 Length: 1 Format: UN	Must contain a value of 10 (positions 1-2). When processing an adjustment for an AFT the processing code should be: 02 (Adjustment-debit) 22 (Adjustment-credit) Note: Positions 3-6 contain 0000 for all countries but Brazil. Brazil: Position 3-4 contains a default value of 20 for a combo card. Position 5-6 contain 00 . For BASE II: This field must contain this value: 1 = Account Funding	Note: • All Canada, CEMEA, Europe, LAC, and U.S. issuers are required to support AFTs with Processing Code 10. • Acquirers must not send cross-border AFTs to issuers not enabled to receive Processing Code 10. If an AFT is sent to an issuer that is not set up, or has not opted in, to receive Processing Code 10, V.I.P. converts Processing Code 10 to purchase Processing Code of 00 (Goods/Service purchase- debit). Brazil: Some issuers in Brazil issue "Combo Cards" that have a checking/prepaid account, as well as a credit line, linked to the same card. For such cards, it is important to send "20" in position 3-4 so that the AFT pulls funds from the checking/prepaid account. If the acquirer does not send the value of 20, the system will default position 3-4 to 20 if the card range is identified as a Combo Card.

Table 16: AFT Key Data Elements (2 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 4 Length: 6 Format: 12 BCD Amount, Transaction	Source Amount TCR 0, Positions: 77– 88 Length: 12 Format: UN	If acquirers, service providers, or merchants use Field 28 Transaction Fee Amount/AFT Service Fee or Field 54 Additional Amount/AFT Foreign Exchange Markup Fee, they must include those amounts in Field 4. When an issuer receives an 0100 or 0200 message that contains the purchase amount in Field 4—Amount, Transaction and a value of 1 (Terminal accepts partial authorization responses) in Field 60.10—Additional Authorization Indicators, position 12, the issuer may process the request and respond with response code 10 (Partial approval) in Field 39—Response Code.	The total amount of the AFT including all fees. <i>Conceptual Example:</i> Transaction Amount: 50.00 AFT Service Fee: 2.00 AFT Foreign Exchange Markup Fee: 2% of 50.00 = 1.00 (not applicable to prepaid load) Field 4 contains: 50.00 + 2.00 + 1.00 = 53.00 Field 28 contains: 2.00 Field 54 contains: 1.00 Note: - In this example, only the AFT Service Fee and AFT Foreign Exchange Fee are applicable to the transaction. Any additional applicable fees would increase the amount in Field 4. - In the V.I.P. manual, this field is called "Transaction Fee Amount".

Table 16: AFT Key Data Elements (3 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 18 (Row 1 of 2) Length: 2 Format: 4 BCD Merchant Type	Merchant Category Code TCR 0, Positions: 133–136 Length: 4 Format: UN	Value depends on value of BAI (Field 104) and the type of merchant performing the transaction: Merchant Category Code (MCC): For AA , use 4829, 6012 , or 6211 (In the U.S, MCC 4829 is not applicable with BAI AA) For BI , use 6012 For FD , use any MCC associated to the merchant For LA , use 6012, 6051 , or 6211 For PD , use 8931 For PP , use 4829 or 6012 For TU , use 6012, 6051 or 6540 For WT , use 6051 Note: If the funds will be used for a high-brand risk transaction, use the applicable high-brand risk MCC. For FT , use 4829, 6540 or 6012 Note: If the funds will be used for a high-brand risk transaction, use the applicable high-brand risk MCC.	For AA , use 4829, 6012 , or 6211 4829 – Non-Financial Institution Wire Transfer Money Orders (WTMOs) (Not applicable in the U.S. with BAI AA) 6012 – Financial Institution - Merchandise Services 6211 – Brokerage For FD , use any MCC associated to the merchant For PD , use 8931 Accounting, Auditing, and Bookkeeping services including Payroll For PP , use 4829 or 6012 4829 – Non-Financial Institution Wire Transfer Money Orders (WTMOs) 6012 – Financial Institutions - Merchandise and Services For BI , use 6012 - Bank-Initiated P2P Money Transfer (BI) Note: For Money Transfer AFTs, BASE II will return the transaction with the return reason code 23. For TU , use 6012, 6051 , or 6540 6012 Financial Institutions – Merchandise and Services 6051 Non-Financial Institutions-Foreign Currency, Liquid and Cryptocurrency Assets (example, Crypto- currency), Money Orders (not Money Transfer), Travelers Cheques, and Debt Repayment 6540 Non-Financial Institutions – Stored Value Card Purchase/Load

Table 16: AFT Key Data Elements (4 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 18 (Row 2 of 2) Length: 2 Format: 4 BCD Merchant Type			For WT, use 6051 • 6051 – Non-Financial Foreign Currency, Liquid and Cryptocurrency Assets (example, Cryptocurrency), Money Orders (not Money Transfer), Travelers Cheques, and Debt Repayment For FT, use 4289, 6540, or 6012 • 4829 – Non-Financial Institution Wire Transfer Money Orders (WTMOs) • 6540 – Non-Financial Institutions –Stored Value Card Purchase/Load • 6012 – Financial Institutions – Merchandise and Services • If the stored value wallet is a Cryptocurrency wallet the MCC must be 6051 – Non-Financial Foreign Currency, Liquid and Cryptocurrency Assets (example, Cryptocurrency), Money Orders (not Money Transfer), Travelers Cheques, and Debt Repayment Mandatory for Domestic and Cross-border (Money and Non-Money Transfer) AFTs.

Table 16: AFT Key Data Elements (5 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 22 Fixed Length: 3 N, 4-bit BCD POS Entry Mode Code	POS Entry Mode TCR 0, Positions: 162–163 Length: 2 Format: AN	Valid values include: • 01 Manual (key entry) • 02 Magnetic stripe read • 05 Integrated chip card read Note: For Field 22, value 05 should be used only in countries in CEMEA and for Transferencias 3.0 transactions in Argentina. • 07 Contactless device-read-originated using qVSDC chip data rules • 10 Credential-on-File: Merchant initiates transaction for cardholder using credentials stored on file • 90 Magnetic stripe read Note: Acquirers must select the appropriate value for card present or card not present transactions. If the transaction data is not accurate, Visa will charge Data Integrity Fees on the acquirer.	This field indicates: • The method used to enter the payment credential and card expiration date, • If an electronic terminal is used, and, • The capability of the terminal to capture online PINs for transactions processed through VisaNet. Note: • Any transaction that uses stored credentials should use POS Entry Mode Code = 10. • Merchants use POS Entry Mode Code = 10 based on the payment credentials they have associated with the cardholder profile or wallet. For all valid values and for complete details on these fields, refer to the V.I.P. manuals.
Field 25 Length: 2 Format: 2 BCD POS Condition Code	Not applicable	Examples of valid values include: 59 indicates an e-commerce transaction 01 indicates a cardholder not present transaction 05 indicates a cardholder present, card not present transaction Note: Acquirers must select the appropriate value for card present or card not present transactions. If the transaction data is not accurate, Visa will charge Data Integrity Fees on the acquirer.	Contains the POS Condition Code applicable to the access channel. Note: The value 05 should not be used for online merchants, including online gambling. Note: For CPS qualification, a value 59 is required. For all valid values and complete details on this field, refer to the V.I.P. manuals.

Table 16: AFT Key Data Elements (6 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 28 Length: 9 Format: AN AFT Service Fee	AFT Service Fee TCR 4, Supplemental Financial Data Positions: 51–58 Length: 8 Format: UN	Acquirers, service providers, or merchants supporting Field 28 and charging senders a fee for the AFT may provide the fee in this field. When present, this field contains the sender's AFT Service Fee as assessed by the originating entity. For V.I.P: Position 1: Prefix—Must be populated with a value of D (Debit to cardholder). Note: The 0220 Deferred Clearing Advice will contain a value of C (Credit to cardholder) even though this is actually a debit. Positions 2-9: AFT Service Fee—Contains the AFT service fee assessed by the originating entity (if applicable). Must be right-justified with leading zeros and include an implied decimal relative to the currency code specified in Field 49. The amount in this subfield must be in the same currency as Field 49. Important: Originating entity must include the amount in this field in the total amount in Field 4.	Values in this field must be in the same currency and format as the currency code outlined in Field 49/TCR 0. This field is not present in response messages. Refer to Field 4 for an example. Important: The Prefix value (position 1) is for informational purposes only. Clients should not use the prefix for settlement purposes. Instead, they should look at the message type and Processing Code to determine if the amount is a credit or a debit. Note: Field is not sent unless the issuer opts in.
Field 32 Length: Variable and up to 11 digits Format: 4-Bit BCD Acquiring Institution Identification Code	Not applicable	A valid number provided by Visa.	This code identifies the financial institution acting as the acquirer of the AFT. Field 32 reject codes are: 0020 = Invalid length 0021 = Invalid value 0287 = Field missing 0531 = Non-domestic transaction Mandatory for Domestic and Cross-border (Money and Non-Money Transfer) AFTs.

Table 16: AFT Key Data Elements (7 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 34 Dataset ID: 01 Tag: C0 Authentication Program Length: 2 Format: AN	Not Applicable	Contains value of 01 (DAF indicator)	This field is Tag-Length-Value (TLV). Testing and activation are required to implement this field for the first time. Acquirers and issuers in the AP (except for Bangladesh, India, Japan, and Nepal), Canada, CEMEA, Europe, LAC, and U.S. regions that support receiving Field 34 will receive the Authentication Program tag in AFT request and response messages to identify transactions that are authenticated as part of the Digital Authentication Framework.

Table 16: AFT Key Data Elements (8 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 34 Dataset ID: 02 Acquirer and Merchant Information	Not Applicable		This field is Tag-Length-Value (TLV). This field has these new tags added to Dataset ID 02 that will contain merchant and acquirer information: • C0: Merchant Address Street • C1: Acquirer Name • C2: Acquirer Street Address • C3: Acquirer City Name • C4: Acquirer State/Province Code • C5: Acquirer Postal Code • C6: Acquirer Country Code Note: Effective 29 May 2023, for cross-border AFTs destined to issuers in Australia or Canada, Visa will insert the acquirer address data in this field in these tags C1–C6 into the message before forwarding it to the issuer. These tags are presently used for Mastercard transactions only: • C7: Acceptor URL Address • C8: Acceptor Customer Service • C9: Acceptor Phone Number • CA: Acceptor Additional Contact Information • CB: Acceptor Tax ID • CC: Partner ID Code • CD: Service Location City Name • CE: Service Location State/Province • CF: Service Location Country Code • D0: Service Location Postal Code

Table 16: AFT Key Data Elements (9 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 34 Dataset ID: 02 Tag: C0 Length: 99 Format: ANS, EBCDIC Acceptor Street Address	Not Applicable		This field will contain the merchant street address. Effective October 2023: Cross-border AFTs sent to issuers in Australia and Canada must contain the merchant's street address in this field. V.I.P. will reject transactions with the reject code 0494 if the field or data is missing, or invalid.
Field 34 Dataset ID: 02 Tag: C1 Length: 25 Format: ANS, EBCDIC Acquirer Name	Not Applicable		This field will contain the acquirer name. Effective October 2023: Cross-border AFTs sent to issuers in Australia and Canada must contain the acquirer's name in this field. V.I.P. will reject transactions with the reject code 0494 if the field or data is missing, or invalid. Note: Acquirers and merchants are not required to populate this field in cross-border AFTs. This information will be populated by Visa for all cross-border Money Transfer AFTs.
Field 34 Dataset ID: 02 Tag: C2 Length: 99 Format: ANS, EBCDIC Acquirer Street Address	Not Applicable		This field will contain the acquirer street address. Effective October 2023: Cross-border AFTs sent to issuers in Australia and Canada must contain the acquirer's street address this field. V.I.P. will reject transactions with the reject code 0494 if the field or data is missing, or invalid. Note: Acquirers and merchants are not required to populate this field in cross-border AFTs. This information will be populated by Visa for all cross-border Money Transfer AFTs.

This field is Tag-Length-Value (TLV). Note: If the TRA exemption does not apply to the transaction, the value of 0 is optional and the tag may be omitted entirely. The issuer will receive 0 or 1 with the requested Strong Customer Authentication (SCA) exemption type and must respond with either 2 or 3 . The issuer response will be shared with acquirers.
Field 34 Dataset ID: 04A Tag: 8A Length: 1 Format: AN Delegated Authentication Indicator	Not applicable	0 – Delegation authentication not claimed/requested. 1 – Delegation authentication claimed/requested. 2 – Delegation authentication request validated/honored. 3 – Delegation authentication request failed validation/not honored.	This field is Tag-Length-Value (TLV). Note: If delegated authentication is not claimed/requested for a transaction, the value of 0 is optional and the tag may be omitted entirely.
Field 42 Length: 15 Format: ANS, EBCDIC, 15 bytes Card Acceptor Identification Code	Card Acceptor ID TCR 1, Additional Data Positions: 81–95 Length: 15 Format: AN	Must contain a unique identifier for the originating entity.	The unique CAID from the original transaction message is required in any subsequent messages, including reversals, disputes, and representments. V.I.P. Edit: This field must contain a non-zero value. Mandatory for Domestic and Cross-border (Money and Non-Money Transfer) AFTs.

Table 16: AFT Key Data Elements (18 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 43 (Row 1 of 2) Positions: 1–40 Length: 40 Format: 40 ANS, EBCDIC Card Acceptor Name/Location	Merchant Name, Merchant City, and Merchant Country Code TCR 0, Positions: 92-132 Length: 40 Format: AN	Merchant Name position 1-25 Merchant City Name position 26-38 Merchant Country Code position 39-40 (two-character country code) Transaction Type: Money Transfer (BAI = AA, BI, FT, PP, WT) This field must contain merchant or service provider information (name, city, and country code). For an AFT that is used to fund a Money Transfer transaction, this field may also contain the name of the recipient of the funds. All regions: Must contain Money Transfer provider's name or abbreviation. Inclusion of recipient name is optional but recommended. If recipient name is included, the field will contain an asterisk (*) in position 5, followed by the recipient's name.	Mandatory for Domestic and Cross-border (Money and Non- Money Transfer) AFTs. Money Transfer Field Format The Card Acceptor Name field must contain the "Doing Business As" name or abbreviation of the merchant (1-4 characters) and be the name most recognizable to the cardholder in addition to the recipient's name. The Merchant Name field must contain the full Merchant Name or conform to this format when including a recipient name: Format Field Position Data Pos. 1-4: Merchant Name (abbreviated) Pos. 5: Asterisk (*) Pos. 6-25: Recipient Name (optional, but recommended) Examples: Example #1: AFT for a P2P payment (BAI – PP) MTMT*MarySmith MTMT = <i>generic example of a Money Transfer Merchant Transaction</i> Mary Smith = Recipient Name Example #2: Bank-Initiated P2P (BAI = BI) FNBA*Mary Smith FNBA = abbreviated name of bank initiating the AFT Mary Smith = Recipient Name This information will appear on the card statement to help the cardholder identify the transaction. Including the recipient's name can prevent unnecessary calls from cardholders to their issuers.

Table 16: AFT Key Data Elements (19 of 82)

Field 43 (Row 2 of 2) Positions: 1–40 Length: 40 Format: 40 ANS, EBCDIC Card Acceptor Name/Location			Note: - Pos. 26-38: Merchant City Name – Do not use the value of "Visa Direct" in the merchant city name subfield for cross-border AFTs destined to Australia or Canada, and always populate the actual merchant city name. Effective October 2023: Cross-border AFTs sent to issuers in Australia and Canada must contain the merchant city name/location in this field. V.I.P. will reject transactions with these reject codes 0169 (invalid value) if the field value is Visa Direct or 0312 (field missing). Note: Refer to the V.I.P. and BASE II manuals for normal processing instructions.
Field 44.13 Length: Fixed Format: 1 ANS, EBCDIC; 1 byte CAVV Results Code	Not applicable		Contains the Cardholder Authentication Verification Value (CAVV) results code that identifies the outcome of CAVV validation. Refer to the Full Service POS Technical Specifications for complete details about this field.

Table 16: AFT Key Data Elements (20 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 48 Usage 2 Length: Variable maximum 256 bytes Format: ANS, EBCDIC Unformatted Text in Authorization/Reversal Messages	Member Message Text TCR 1, Additional Data Positions: 24–73, Length: 50 Format: AN	Position 1, Field Identifier: This is a 1-position code, *(asterisk). This code indicates that this field contains unformatted, user-determined text for the destination acquirer or issuer. Positions 2-255, Text: In authorization or reversal requests, the input consists of acquirer comments for the issuer. In authorization or reversal request responses, the input consists of issuer comments for the acquirer, such as a referral telephone number.	Data will be available in V22255 (Financial Transaction Record/Fee Collections/Funds Disbursement Text Message Record) in the SMS raw data report to include this data Visa Direct API Field name: member Comments
Field 49 Length: 3 Format: 4 BCD Currency Code, Transaction	Source Currency Code TCR 0, Positions: 89–91 Length: 3 Format: AN	This field contains a 3-digit code that identifies the currency of transaction amount.	If AFT Service Fee (Field 28/TCR 4) and/or AFT Foreign Exchange Markup Fee (Field 54/TCR4) is present in the message, the fees in those fields must be in the same currency and format as the currency listed in this field. Note: Refer to the V.I.P. and BASE II manuals for normal processing instructions.
Field 54 (Row 1 of 2) Length: 20 Format: 1 byte binary + 20 ANS Additional Amounts	Money Transfer Foreign Exchange Fee TCR 4, Supplemental Financial Data Positions: 112–119 Length: 8 Format: UN	Note: There are two conditions when Field 54 is used. In a request message where the transaction is cross-border, it may contain a Foreign Exchange Markup Fee. In a Partial Authorization response message, this field contains the original authorization requested amount. Acquirers, service providers, or merchants that support Field 54 and charge senders a Foreign Exchange Markup Fee on cross-border AFTs may provide the foreign exchange fee in this field.	When present, this field contains the sender's AFT Foreign Exchange Markup Fee as assessed by the originating entity. Values in this field must be in the same currency and format as the currency code outlined in Field 49/TCR 0. This field is not present in response messages related to the Foreign Exchange Markup. Refer to Field 4 for an example. Note: Field is not sent unless the issuer opts in to the use for Foreign Exchange Markup.

Table 16: AFT Key Data Elements (21 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 54 (Row 2 of 2) Length: 20 Format: 1 byte binary + 20 ANS Additional Amounts	Money Transfer Foreign Exchange Fee TCR 4, Supplemental Financial Data Positions: 112–119 Length: 8 Format: UN	The V.I.P. format of this field is: Positions 1-2: Account Type—Must contain a value of 00 (Not applicable or not specified). Positions 3-4: Amount Type—Must contain a value of 95 (VMT). Positions 5-7: Currency Code—Must contain the same currency code value as in Field 49 Currency Code, Transaction. Position 8: Amount, Sign—Must contain a value of D (Negative balance). Note: While C (Positive balance) is a valid value in this field, it is not applicable to this usage. Positions 9-20: Amount—Contains the sender's AFT Foreign Exchange Markup Fee as assessed by the acquirer, service provider, or merchant (if applicable). This subfield must be right-justified with leading zeros, and include an implied decimal relative to the currency code specified in Field 49. The amount in this subfield must be in the same currency as Field 49. Note: Acquirers, service providers, or merchants must include the Foreign Exchange Markup amount in this field in the total amount in Field 4.	V.I.P. Edit: If the Currency Code (positions 5-7) is not the same currency code as in Field 49, V.I.P. will decline the request message with the response code value of 12 (Invalid transaction). Important: The Amount, Sign (position 8) is for informational purposes only. Clients should not use the sign for settlement purposes. Instead, they should look at the message type and Processing Code to determine if the amount is a credit or a debit. Note: Refer to the V.I.P. manuals for complete details on the length and format of this field. V.I.P. Edit: If the Amount (positions 9-20) is not correctly formatted according to the currency code outlined in Field 49, V.I.P. will decline the request message with the response code 12 (Invalid transaction). When an issuer receives an 0100 message that contains the purchase amount in field 4 and a value of 1 in field 60.10, position 12, the issuer may process the request and respond with a partially approved amount indicated by a response code of 10 in Field 39. When the AFT response is for a partially approved amount, this field contains originally requested authorization amount in the 0110/0210 message.

This field is Tag-Length-Value (TLV). This tag denotes whether the tax ID pertains to a business or individual, when Tag 9F20 contains the value of TXIN (Tax identification). This tag is mandatory for domestic transactions in Colombia. Note: • This tag is mandatory for domestic and cross-border transactions in Nicaragua. • Effective 1 January 2025: Mandatory for domestic transactions in Ukraine. Acquirers and issuers must send and receive this field to process domestic AFTs and OCTs.
Field: 56 Dataset ID: 03 Tag: 9F22 Length: 35 Format: ANS Identification Value	Identification Value TCR D, Original Credit Additional Data Position: 122–156 Length: 35 Format: AN	When Tag 9F20 contains the value of BTHD (Date of birth), this tag must contain a date of birth in ccyyymmdd format where: • cc = century (01-99) • yy = year (00-99) • mm = month (01-12) • dd = day (01-31)	This field is Tag-Length-Value (TLV). This tag will contain an acquirer-populated value associated with the Identification Type Code provided in Tag 9F20. Note: • This tag is mandatory for domestic transactions in Colombia. • This tag is mandatory for domestic and cross-border transactions in Nicaragua. • Effective 1 January 2025: Mandatory for domestic transactions in Ukraine. Acquirers and issuers must send and receive this field to process domestic AFTs and OCTs.

Table 16: AFT Key Data Elements (28 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field: 56 Dataset ID: 03 Tag: 9F24 Length: 3 Format: N Identification Issuing Country	Identification Issuing Country Code TCR D, Original Credit Additional Data Position: 157–159 Length: 3 Format: AN	This tag will contain the 3-digit ISO country code of the issuing country when Tag 9F20 contains an applicable value.	This field is Tag-Length-Value (TLV).
Field: 56 Dataset ID: 05 Usage 2 Length: Various Format: ANS Account Owner Data	Not applicable	Required for cross-border and domestic money transfer and non-money transfer out of and within South Africa. In Canada, cross-border transactions into and out of Canada must include the address of the person or entity receiving the funds from the AFT.	This field is Tag-Length-Value (TLV). Required for transactions out of and within South Africa, optional for all other countries. The field is defined with these tags: • Tag C0: Entity Type • Tag 80: Account Reference Number • Tag 83: Account Owner Name, Given • Tag 84: Account Owner Name, Middle • Tag 85: Account Owner Name, Last
Field 56 Dataset ID: 05 Tag: C0 Length: 2 Format: ANS Entity Type	Not applicable	This tag contains values to identify if the entity belongs to a business or individual. Must contain either: • 0B (Business) • 0I (Individual) Note: The value of 0B is 0 (Zero) and an uppercase letter b, and the new value of 0I is 0 (Zero) and an uppercase letter i.	This field is mandatory for domestic transactions in Colombia. For API originating entities in Colombia, refer to the section Changes to Support Domestic Account Funding Transactions and Original Credit Transactions in Colombia in <i>Visa Direct Client Release Notes – Release 23.09, September 2023</i> .

Table 16: AFT Key Data Elements (29 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 56 (Row 1 of 2) Dataset ID: 05 Tag: 80 Length: 02 Format: N Account Reference Code	Not applicable	Required for cross-border money and non-money transfer transactions out of South Africa. Sender Name and/or Recipient Name is mandatory. This tag is mandatory for domestic transactions in Colombia.	This tag identifies to which account or entity the name data belongs. If this tag is present, it must contain one of these values: • 05 (Sender Name) Sender: From where the funds are pulled. • 06 (Recipient Name) Recipient: To whom the funds are sent. The originating entity can use code 05 to share additional validation performed on the Sender at the time of processing the AFT. Note: • Field 56 should not contain more than one Account Reference code 05 (Sender Name) and one Account Reference code 06 (Recipient Name). • The tags are mandatory in certain markets for them to follow the instructions as defined in the detail for each tag. In the markets it is not listed as mandatory, it is considered optional. For API originating entities in Colombia, refer to the section Changes to Support Domestic Account Funding Transactions and Original Credit Transactions in Colombia in <i>Visa Direct Client Release Notes – Release 23.09, September 2023</i>.

Field 60.2 Length: 1 Format: 1 N Terminal Entry Capability	POS Terminal Capability TCR 0, Position 158 Length: 1 Format: AN	Valid values for Terminal Entry Capability are: • 1 Terminal not used Note: For card not present transactions, use this value. • 2 Magnetic stripe read capability • 3 QR Code • 5 Contact chip, magnetic stripe, or proximity-capable terminal, indicating that the terminal can read the chip and the magnetic stripe on the card. If contact chip is supported, value 5 should be used regardless of whether Visa contactless is also supported. • 8 Proximity-read-capable. For Visa contactless, an 8 should be used only if Visa contactless is supported and contact chip is not. • 9 Terminal does not read card data Note: Acquirers must select the appropriate value for card present or card not present transactions. If the transactions data is not accurate, Visa will charge Data Integrity Fees on the acquirer.	Refer to <i>Full Service POS Online Messages – Technical Specifications</i> for a complete list of valid values and for the details of this field.
Field 60.4 Special Condition Indicator Conditional For 0100 messages		Position 4: • 7 – Purchase of Cryptocurrency	• If the AFT is prefunding a wallet that will be used to purchase cryptocurrency, this field must contain a value of 7.

Table 16: AFT Key Data Elements (44 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 60.8 (BASE I only) Length: 1 Format: 2N, 4-bit BCD Mail/Phone/ Electronic Commerce Payment Indicator	Mail/Telephone or Electronic Commerce Indicator TCR 1—Additional Data Position: 116 Field Length: 1 Format: AN	Examples of valid values for e-commerce transactions include 5–8 . • 05 Fully authenticated e-commerce transaction • 06 Merchant attempted to authenticate the cardholder • 07 Non-authenticated e-commerce transaction • 08 Non-secure e-commerce transaction	Refer to existing BASE I manuals for a complete list of valid values and for the details of this field. For Europe, also refer to 3DS manual.
Field 60.10 Length: 1 Format: 1 N Additional Authorization Indicators Position: 12 (Partial Authorization)	Not Applicable	Value: 1	• Effective April 2024: mandated for CEMEA Region, LAC Region, and U.S. Region • Acquirers sending AFTs in the CEMEA, LAC, and U.S. Regions must support partial authorization on domestic and cross-border AFTs. Acquirers sending AFTs in the CEMEA, LAC, and U.S. Regions must be able to send the value of 1 (Terminal accepts partial authorization responses) on domestic and cross-border AFTs. Acquirers participating in partial authorization must be able to receive Field 54—Additional Amounts in the AFT response message. • Effective 12 April 2025 mandated for Canada Region Indicates that the Merchant accepts partial authorization responses. Participating acquirers must include the value 1 in this field. For more information, refer to <i>Visa Partial Authorization Service Description and Implementation Guide, Visa Supplemental Requirements, Version 3.1</i>.

Table 16: AFT Key Data Elements (45 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 62.1 Length: Fixed Format: 1 AN, EBCDIC; 1 byte Authorizations Characteristics Indicator	Authorization Characteristics Indicator TCR 0, Positions: 151 Length: 1 Format: AN For dual message, include the Authori- zation Character- istics Indicator that was sent in the authorization message.	Y – Request a CPS Qualification check	For U.S. only: Send a value of Y to check transaction for CPS qualification.
Field 62.2 Length: 8 Format: 15 BCD Transaction ID	Transaction Identifier TCR 5, Payment Service Data Positions: 5–19 Length: 15 Format: UN		Acquirers, service providers, merchants, and recipient issuers must be prepared to receive this field. Note: If an AFT has a corresponding OCT, originating entities are required to take the Transaction ID from the AFT, and populate it into the OCT to link the two transactions together.
Field 62.20 Length: Fixed Format: 10 hexadecimal digits, 5 bytes Merchant Verification Value (MVV)	Merchant Verifi- cation Value TCR 5, Payment Service Data Positions: 82–91 Length: 10 Format: AN	Visa assigns the first six positions and assists the acquirer in assigning the last four.	MVV is used to identify merchants that participate in a variety of programs. The MVV is unique to the merchant. V.I.P. edits: If the MVV is not valid, V.I.P. rejects the transaction with reject code 0720.
Field 62.23 Length: Fixed Format: 2 AN, EBCDIC, 2 bytes Product ID	Product ID TCR 5, Payment Service Data Positions: 136–137 Length: 2 Format: AN	The applicable Product IDs for AFTs on network 0003 (Interlink) are: • DI – Discover • E – Proprietary ATM • M – Mastercard • R – Proprietary	Account Funding Source: • D - Debit • P - Prepaid Note: For the entire list of Product ID values supported in this field, refer to <i>Full Service POS Online Messages - Technical Specifications</i> .

Table 16: AFT Key Data Elements (46 of 82)

Field: 104 Usage 2 Dataset ID: 56 Tag: 82 Length: 25 Format: ANS Payment Facilitator Name	Payment Facilitator Name TCR D, Position: 89– 113 Length: 25 Format: AN	Contains the Full Payment Facilitator Name	This field is Tag-Length-Value (TLV). Full Payment Facilitator Name is required to assist issuer screening. Required when the AFT transaction is related to facili- tating payments such as funds disbursements.
Field 104 Usage 2 Dataset Value Hex 57 Tag: 01 Length: 2 Format: AN Business Application Identifier (BAI)	Business Application Identifier (BAI) TCR 3, Position: 19– 20 Length: 2 Format: AN	AA (Account-to-account Money Transfer) BI (Financial institution-offered P2P Money Transfer) FD (Funds Disbursement) FT (Funds Transfer) LA (Liquid Assets) PD (Payroll Disbursement) PP (Person-to-person Money Transfer) TU (Prepaid top-up/reload) WT (Wallet Transfer)	Inclusion of a valid BAI is required for AFTs as specified in the table <i>AFT Categories</i> . Important: A valid BAI is required for all AFTs globally. Effective 19 October 2024 a new BAI LA (Liquid Assets) must be used for Visa Direct transactions involving wallet prefunding or the direct purchase of liquid and crypto- currency assets. Note: In Canada and the U.S., the new BAI value LA will not apply to originating domestic AFTs. Issuers and issuer processors must be prepared to receive the new BAI value of LA for cross-border AFTs originating outside of Canada and the U.S. Note: V.I.P. will reject any AFT transaction without a valid BAI with reject code 0494 (Field or data missing or invalid).

Table 16: AFT Key Data Elements (50 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 104 Usage 2 Dataset Value Hex 57 Tag: 80 Length: 2 Format: AN Service Processing Type	Industry Specific Data - Business Application Data TCR 3, Positions 5–6 Length: 2 Format: AN	0B (Back-to-Back)	Value 0B identifies back-to-back funding transactions containing existing business application identifier of AA (Account-to-Account) in Europe domestic and intra-EEA AFTs. 0B is number 0 (zero) and letter B.
Field: 104 (Row 1 of 2) Usage 2 Dataset ID: 57 Tag: 82 Length: 12 Format: AN Purpose of Payment	Purpose of Payment TCR D, Position: 37– 48 Length: 12 Format: AN	Contains acquirer-populated purpose of payment code that varies by country.	This field is Tag-Length-Value (TLV). Optional for Domestic Money Transfer and Non-Money Transfer AFTs. This field must contain a code reflecting the purpose of payment to classify and report the nature and purpose of the Transaction. The acquirer must submit the correct purpose of payment code for the recipient issuer's jurisdiction and restrict clients to a predetermined list of purpose of payment codes. The only valid values for this field include regulatory published/recognized codes or a code from the Visa Standardized Purpose of Payment list. See Appendix <u>Purpose of Payment – Standardized Codes List</u>. Note: This field will be available to all regions. This field is mandatory for outbound transactions sent into India, Bangladesh, Argentina, and Egypt.

Table 16: AFT Key Data Elements (51 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field: 104 (Row 2 of 2) Usage 2 Dataset ID: 57 Tag: 82 Length: 12 Format: AN Purpose of Payment	Purpose of Payment TCR D, Position: 37– 48 Length: 12 Format: AN		Note: This field is mandatory for outbound, cross-border AFTs sent to Argentina, Bangladesh, Chile, Colombia, Egypt, India, and Mexico. V.I.P edits: When a cross-border 0200 AFT is sent to Argentina, Bangladesh, Chile, Colombia, Egypt, or India, and Purpose of Payment is not present or contains all spaces, V.I.P. will reject the message with reject code 0494. Effective January 2026: This field is mandatory for outbound, cross-border AFTs sent to Saudi Arabia.
Field 104 Usage 2 Dataset Value Hex 5B Tag: 01 Risk Score Length: 2 Format: N Visa Risk Assessment Data	Not applicable	Values are 00-99	Contains the risk score for the Visa transaction. Advisor E-Commerce Scoring Service. It indicates the degree of risk associated with a transaction. There is PCR-level participation to receive this score in the response. A valid MVV is also required. Note: Tag 01—Risk Score is always present in Field 104, Usage 2, Dataset ID 5B.
Field 104 Usage 2 Dataset Value Hex 5B Tag: 02 Length: 2 Format: N Risk Condition Code	Not applicable	Values are 00-10	Contains the risk potential for fraud to occur on the card account over the next 30 days. Note: Tag 02—Risk Condition Code may not be present in all transactions.

Table 16: AFT Key Data Elements (52 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 104 (Row 1 of 3) Usage 2 Dataset ID: 5F Sender Data	Not applicable		Field 104, Dataset ID 5F is a Tag-Length-Value (TLV) encoded field that is currently defined with eight different tags (Tag 01–Tag 08.) Important: All tags are conditional or optional based on the specific type of AFT (that is, BAI), region, and the transaction specifics (for example, domestic vs. cross-border). Following basic TLV coding principles, issuer systems need to be flexible enough to accommodate these variations and flexible enough to accommodate new tags in this field as they are introduced. If you are not familiar with how to code your system to support TLV fields, please contact your regional Visa representative for support. • Acquirers, service providers, and merchants must not format tags as right-justified with leading spaces. • Acquirers, service providers, and merchants should not pad tags to their maximum length with spaces or binary zeros.

Table 16: AFT Key Data Elements (53 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 104 (Row 2 of 3) Usage 2 Dataset ID: 5F Sender Data	Not applicable		V.I.P. Edit: This field should not be present in responses (authorization or full-financial) and, if present, it will be dropped from the message by V.I.P. If the acquirer, service provider, or merchant does not provide a given tag in this dataset, the tag must be omitted from the message. If any of Tags 01 to 07 are included and filled with all spaces or all zeros, V.I.P. will decline the transaction with the response code value of 64 (Transaction does not fulfill AML requirements). V.I.P. Edit (Money Transfers): On Money Transfer transactions (Processing Code 10 and BAI of AA/PP, or BI), if the issuer PCR is not set up in the VisaNet system to support Field 104 in TLV format, V.I.P. will decline the transaction with the response code value of 57 (Transaction not permitted to cardholder).

Table 16: AFT Key Data Elements (54 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 104 (Row 3 of 3) Usage 2 Dataset Value Hex 5F Sender Data	Not applicable		This field is Tag-Length-Value (TLV). V.I.P. Edit (All AFTs Other Than Money Transfer): If the issuer PCR is not set up in the VisaNet system to support Field 104 in TLV format and this field is present in the message, Visa drops Field 104 from the message and forwards the transaction to the issuer. V.I.P. Edit (All AFTs): If the issuer PCR is not set up to support Processing Code 10, VIP will convert the AFT to a purchase (processing code 00) and drop Field 104, Dataset Value Hex 5F Sender Data V.I.P. Edit (All AFTs): V.I.P. rejects AFTs with the existing reject code 0494 (Field or data missing or invalid) for which any of the following tags in Field 104 Dataset ID 5F exceeds its maximum length: Tags 01–07 and 0A. V.I.P. Edit: Effective October 2023, V.I.P. rejects AFTs with the existing reject code 0494 (Field or data missing or invalid) if this field is not populated for cross-border AFTs.
Field: 104 Usage 2 Dataset ID: 5F Tag: 01 Length: 16 Format: ANS Sender Reference Number	Sender Reference Number TCR 3, Business Application Data Positions: 24–39 Length: 16 Format: AN	A numeric identifier provided to uniquely identify the recipient of the AFT funds. Could represent an invoice number, other account identifier, or specific transaction reference number.	This field is Tag-Length-Value (TLV). This field is optional for Domestic and Cross-Border Money and Non-Money Transfer AFTs.

Table 16: AFT Key Data Elements (55 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field: 104 Usage 2 Dataset ID: 5F Tag: 02 Length: 34 Format: ANS Sender Account number	Sender Account Number TCR 3, Business Application Data Positions: 40–73 Length: 34 Format: AN	Cross-border: Account number of the recipient account being funded by the AFT, is mandatory in cross-border Money Transfer AFTs. Domestic: Optional in domestic AFTs. Europe Domestic and intra-EEA cross-border: Account number of the recipient account being funded is mandatory in domestic and intra-EEA Money Transfer AFTs.	In an AFT, this field contains the account number of the Recipient Account being funded by the AFT.

Table 16: AFT Key Data Elements (56 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 104 Usage 2 Dataset Value Hex 5F Tag: 03 Length: 30 Format: ANS Sender Name	Sender Name TCR 3, Business Application Data Positions: 74–103 Length: 30 Format: AN	Cross-border: Must contain sender's name. Europe intra-EEA cross border: Must contain sender's name. Domestic: May contain sender's name; if not applicable, do not include the tag. Note: Sender's name must be populated using the Latin (that is, English) character set and be an actual person's name. Use of a phone number, email address or alias is not permitted. Note: Effective 17 October 2025, transactions will be declined by VisaNet if the sender name is not populated in cross-border Non-Money Transfer AFTs.	This field contains the valid legal name of the person or entity funding the AFT. Sender Name Example: The Sender Name can be up to thirty characters long and must be the sender's legal name. If the sender's name is greater than thirty (30) characters, use only the first thirty characters of the name. The required format for the Sender Name field is: • Last Name/Family Surname 1 plus space • Last Name/Family Surname 2 (optional) plus space • First Name plus space • Middle Initial or Middle Name (optional) plus space Note: This field must not contain these: • ? (Question mark) • All numeric • Only one character • Fictitious name or nicknames • Incomplete names (missing first name or last name) <i>Examples:</i> • Doe Jane A. • Vellaichary Jabachardinat Savi Optional for Domestic Money and Non-Money Transfer AFTs, except in: • Europe Note: For additional space to enter relevant data, use appropriate tags in Field 56, Dataset ID 05. Mandatory for Cross-border Money and Non-Money Transfer AFTs.

Table 16: AFT Key Data Elements (57 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 104 Usage 2 Dataset Value Hex 5F Tag: 04 Length: 35 Format: ANS Sender Address	Sender Address TCR 3, Business Application Data Positions: 104–138 Length: 35 Format: AN	Cross-border (including Europe intra-EEA): Must contain sender's address. Domestic: May contain sender's address; if not required, do not include this tag.	Contains address of person funding transaction. Should include the details that the originating entity has collected from their customer and should ideally reflect the details registered by the sender with the sender's issuer to whom the AFT request is made. Note: Must be the sender's primary residential address and not a P.O. Box Address. Optional for Domestic Money and Non-Money Transfer AFTs. Mandatory for Cross-border Money and Non-Money Transfer AFTs. Note: Effective 17 October 2025, transactions will be declined by VisaNet if the sender address is not populated in cross-border Non-Money Transfer AFTs.

Table 16: AFT Key Data Elements (58 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 104 Usage 2 Dataset Value Hex 5F Tag: 05 Length: 25 Format: ANS Sender City	Sender City TCR 3, Business Application Data Positions: 139–163 Length: 25 Format: AN	Cross-Border (including Europe intra-EEA): Must contain sender's city. Domestic: May contain sender's city; if not required, do not include this tag.	Contains city of person funding transaction. Should include the details that the originating entity has collected from their customer and should ideally reflect the details registered by the sender with the sender's issuer to whom the AFT request is made. • Optional for Domestic Money and Non-Money Transfer AFTs. • Mandatory for Cross-Border Money and Non-Money Transfer AFTs. Note: Effective 17 October 2025, transactions will be declined by VisaNet if the sender city is not populated in cross-border Non-Money Transfer AFTs.
Field 104 Usage 2 Dataset Value Hex 5F Tag: 06 Length: 2 Format: AN Sender State/ Province	Sender State TCR 3, Business Application Data Positions: 164–165 Length: 2 Format: AN	Cross-Border: U.S. or Canada: Must contain sender's state/province in this field on cross-border transactions when Sender Country (Tag 07) contains the value of 840 (U.S.) or 124 (Canada). Other Domestic and Cross-Border: May contain sender's state/province; if not required, do not include this tag.	The geographical state or province associated with the sender's primary residential address. • Optional for Domestic Money and Non-Money Transfer AFTs. • Mandatory for Cross-Border Money and Non-Money Transfer AFTs.

Table 16: AFT Key Data Elements (59 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 104 Usage 2 Dataset Value Hex 5F Tag: 07 Length: 3 Format: AN Sender Country	Sender Country TCR 3, Business Application Data Positions: 166–168 Length: 3 Format: AN	Cross-Border: Must contain sender's country. Note: Sender country must be the sender's country based on the primary residential address. Other Domestic: May contain sender's country; if not required, do not include this tag. This is the 3-digit ISO numeric country code.	Contains the country of the person funding the transaction. Domestic: - Optional for Domestic Money and Non-Money Transfer AFTs. - Mandatory for Cross-Border Money and Non-Money Transfer AFTs. Note: Effective 17 October 2025 , transactions will be declined by VisaNet if the sender country is not populated in cross-border Non-Money Transfer AFTs.
Field 104 Usage 2 Dataset ID Hex 5F Tag: 08 Length: 2 Format: AN Source of Funds			Indicates the method used by the sender to fund an AFT. This tag is optional in cross-border money transfer AFTs. Values are: 01 = Visa credit 02 = Visa debit 03 = Visa prepaid 04 = Cash 05 = Debit/deposit access accounts other than those linked to a Visa card (includes checking/savings accounts and proprietary debit/ Automated Teller Machine (ATM) cards) 06 = Credit accounts other than those linked to a Visa card (includes credit cards and proprietary credit lines)

Field 104 Usage 2 Dataset ID Hex 5F Tag: 09 Length: 20 Format: AN Claim Code			Visa Mobile Prepaid (VMP) Transaction: Tag contains the third-party request reference number. VMP transactions are supported for certain countries in the AP, CEMEA, and LAC Regions only. For a given transaction, the issuer, acquirer, and merchant must be within the same country.
Field 104 Usage 2 Dataset ID Hex 5F Tag: 10 Length: 5–10 Format: AN Sender Postal Code			Contains the postal code of the entity funding the transaction.

Table 16: AFT Key Data Elements (61 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 104, (Row 1 of 2) Usage 2, Dataset Value Hex 5F Tag: 0A Length: 30 Format: AN Recipient Name	Recipient Name TCR D, Original Credit Additional Data Positions: 7–36 Length: 30 Format: AN See Note.	Cross-Border: Recipient name is mandatory in cross-border Money Transfer AFTs. U.S. Domestic: Optional in domestic AFTs. Europe Domestic and Europe intra-EEA cross border: Recipient name is mandatory in domestic and intra-EEA Money Transfer AFTs.	This field contains the name of the individual or entity that is the intended recipient of the funds. Recipient name is mandatory for cross-border money transfer AFTs. Issuers must be prepared to receive Tag 0A/Recipient Name in any AFT. The maximum length of the recipient name is 30 characters. Recipient Name Example: The Recipient Name can be up to thirty characters long and must be the recipient individual or entity's legal name. If the recipient's name is greater than thirty (30) characters, use only the first thirty characters of the name. The suggested format for the Recipient Name field for individual recipient is: • Last Name/Family Surname 1 plus space • Last Name/Family Surname 2 (optional) plus space • First Name plus space • Middle Initial or Middle Name (optional) plus space Note: Only a valid and legal recipient name should be populated in this field. Note: For additional space to enter relevant data, use appropriate tags in Field 56, Dataset ID 05.

Table 16: AFT Key Data Elements (76 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 123 (Row 2 of 2) Usage 2 Dataset ID: 68 Tag 84 Length: 1 Format: Binary Token Authentication Factor B		• 50 = Possession only. No user verification. • 51 = With user verification (biometric) • 52 = With user verification (passcode/password) • 60 = SE based token: cryptogram generated from a SE device for a device-bound token was provided, establishes possession factor. • 61 = Device bound token: device-bound token (token reference) was provided by token requestor along with proof of device used for binding token, establishes possession factor. In Europe, token user identifier may be used to support dynamic linking requirements of PSD2/RTS.	
Field 123 Usage 2 Dataset ID: 68 Tag: 85 Length: 3 Format: Binary Token Authentication Amount	Not applicable		Contains the payment amount made visible by the token requestor to consumer at time of purchase. Applicable for e-commerce transactions (device and card-on-file token types). In Europe, token user identifier may be used to support dynamic linking requirements of PSD2/RTS. This amount is seven right-most digit of payable amount excluding minor units, converted from decimal to binary. Minor units excluded specified by country code in Field 49-Currency Code, Transaction.

Table 16: AFT Key Data Elements (77 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 125 Usage 2 Dataset ID: 01 Length: Variable; 1 byte, binary + 255 binary Format: ANS, EBCIDIC; maximum 256 bytes Token Device	Not applicable		This field is Supporting Information, Tag-Length-Value (TLV). Testing and activation are required to implement TLV Field 125 for the first time. This field is defined with valid values in these tags: • Tag 03: Device ID • Tag 04: Device Number • Tag 06: Device Location • Tag 07: IP Address
Field 125 Usage 2 Dataset ID: 01 Tag: 03 Length: 48 Format: ANS Device ID	Not applicable		This tag contains the Device ID.
Field 125 Usage 2 Dataset ID: 01 Tag: 04 Length: 15 Format: N Device Number	Not applicable		This tag contains the full phone number or partial phone number when available.
Field 125 Usage 2 Dataset ID: 01 Tag: 06 Length: 25 Format: ANS Device Location	Not applicable		This tag contains the obfuscated geographic location of the device or the coarse location of the device. Location is latitude/longitude with 4 digits of precision, for instance, +37.7799/-122.4290. Precision is rounded off to a less granular level, for instance, +37/-122 or +37.78/-122.43.

Table 16: AFT Key Data Elements (78 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 125 Usage 2 Dataset ID: 01 Tag: 07 Length: 15 Format: ANS IP Address	Not applicable	The value will be in the format: 255.255.255.255 . Each octet (255) may be 1–3 digits in length.	This tag contains the IP address of the device at the time of the provisioning request.
Field 125 Usage 2 Dataset ID: 02 Tag: 0A (Wallet Account E-mail Address) Length: 32 Format: Hexadecimal Wallet Provider	Not applicable		This field is Supporting Information, Tag-Length-Value (TLV). This tag contains the Wallet Account E-mail Address. Testing and activation are required to implement TLV Field 125 for the first time.
Field 126.8 Length: 20 bytes, fixed Format: Binary Transaction ID (XID)	Not applicable	For 3DS and token transactions, the acquirer can: • Populate Field 126.8 with the TAVV • Populate Field 126.9 with the CAVV For transaction with Visa tokeni- zation only (acquirer not using 3DS), the acquirer should: • Populate Field 126.8 with the TAVV There is no CAVV here.	3-D Secure TAVV, Version, and Authentication Action for payment tokens and token cryptograms present in e- commerce POS authorization and full-financial messages, is used in conjunction with Field 126.9 for 3-D Secure (3DS) and non-3DS token transactions. Testing and activation are required to implement Field 126.8 for the first time.
Field 126.9 Length: 20 bytes, fixed Format: Binary CAVV Data	Not applicable	For transactions with 3DS authen- tication and authorization only (not including tokenization), the acquirer should populate this field with the CAVV.	This field may be present in an AFT. Refer to the Full Service POS Technical Specifications for information about this field.

Table 16: AFT Key Data Elements (79 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 126.18 Position: 7–11 Length: 5 Format: AN, EBDIC Agent Unique Account Result	Enabler Verification Value TCR 4 Positions: 5–9 Length: 5 Format: AN		All regions: are required to support the Visa Direct Strategic Program. Issuers must be prepared to receive the Enabler Verification Value (EVV) in domestic transactions.
Field 127 Dataset ID: 41 Tag: 01 Length: 13-19 Format: N, BCD Replacement PAN	Not applicable		Field 127 is a requirement when participating in Real Time Visa Account Updater (VAU). Required when the Primary Account Number (PAN) contained in Field 2—Primary Account Number is being replaced with a new PAN.
Field 127 Dataset ID: 41 Tag 02 Length: 4 Format: N, BCD Replacement PAN Expiration Date	Not applicable		Contains the expiration date of the new PAN in Tag 01 or the updated expiration date of the existing PAN. Format = yymm.
Field 127 Dataset ID: 41 Tag: 04 Length: 1 Format: AN, EBCDIC Account Status	Not applicable	• A (Account number change (the account number or account number and expiration date are being updated)) • C (Closed account advice) • E (Expiration date change) • Q (Contact cardholder advice (the merchant should contact the cardholder for additional information on the account))	Indicates the account status.

Table 16: AFT Key Data Elements (80 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 127 Dataset ID: 41 Tag: 07 Length: 1 Format: AN, EBCDIC Request from Merchant for Updated Account	Not applicable	Valid values are: • Y (Requesting for replacement PAN details) • Y (Replacement occurred) • N (No replacement)	This field indicates if replacement occurred in the response message sent to the originating entity.

Table 16: AFT Key Data Elements (81 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Field 127 Dataset ID: 41 Tag: 09 Length: 6 Error Reason Code	Not applicable	• VAU001 (Transaction did not qualify for Real Time Visa Account Updater (VAU) because the transaction contains token) • VAU002 (Real Time VAU is supported only for Visa-branded PAN) • VAU003 (Real Time VAU is not supported for the network) • VAU004 (Transaction is not original purchase, bill payment, account funding, or original credit) • VAU005 (Transaction contains CVV2) • VAU006 (Transaction is not a qualifying recurring or installment transaction type) • VAU007 (Real Time VAU is not supported for this MCC) • VAU008 (Acquirer of processor is not activated for Real Time VAU) • VAU009 (Issuer does not support Real Time VAU) • VAU010 (Issuer or Visa blocked the merchant) • VAU011 (PPCS has a stop payment order for this transaction) • VAU012 (Credentials in the authorization request is the latest VAU data) • VAU013 (Expiry date in the authorization request is later than VAU data) • VAU014 (PAN has been opted out of VAU) • VAU015 (Transaction is a face-to-face transaction type) • VAU016 (PAN has stop advice set up)	Indicates the reason a transaction did not qualify for account information replacement.

Table 16: AFT Key Data Elements (82 of 82)

V.I.P. (0100/0200) Field Name	BASE II (TC05) Field Name	Value	Notes/VisaNet Edits/ Requirements
Not applicable	All TCRs, Position. 3 Transaction Code Qualifier (TCQ) Length: 1 Format: AN	Value = 1	Note: TCQ value of 1 must be present in all AFTs.
Not Applicable	Business Format Code (AI) Positions: 17–18 Length: 2 Format: AN	Value = CR	Code indicating the type of business that is applicable to this transaction. This field must contain CR (for Business Application Data).

Appendix B

Purpose of Payment – Standardized Codes List

The Purpose of Payment code list is required to classify and report the nature and purpose of the payment.

Note: This is a standardized list and not all codes may be applicable to an AFT. The acquirer must submit the correct purpose of payment code for the recipient issuer's jurisdiction and restrict clients to a predetermined list.

Important: An AFT is not intended for:

- payment of goods and services
- funding of a merchant account
- debt repayment

Table 17: Code List (1 of 4)

Code	Code Description
ISACCT	Account management
ISAIRB	Air transport related business
ISALLW	Transaction is the payment of allowance
ISANNI	Settlement of annuity

Table 17: Code List (2 of 4)

Code	Code Description
ISBENE	Unemployment disability benefit
ISBEXP	Business expenses
ISBONU	Bonus payment
ISBUSB	Bus transport related business
ISCASH	Cash management transfer
ISCBTV	Payment of cable TV bill
ISCCHD	Government institute issued related to cash compensation, helplessness, disability
ISCCRD	Credit card payment
ISCDBL	Payment of credit card bill
ISCHAR	Payment for charity reasons
ISCOLL	Collection payment
ISCOMC	Commercial payment
ISCOMM	Commission
ISCOMP	Compensation relating to interest loss/value date adjustment and can include fees
ISCPYR	Payment of copyright
ISDCRD	Related to a debit card payment
ISDEPT	Payment of a deposit
ISDIVD	Payment of dividend
ISEDUC	Payment of study/tuition fees
ISELEC	Payment of electricity bill
ISENRG	Energies
ISFEES	General fees
ISFERB	Payment for ferry related business
ISFREX	Foreign exchange
ISGASB	Payment of gas bill
ISGFRP	Compensation to unemployed persons during insolvency procedures
ISGOVT	Government payment
ISHLTI	Health insurance
ISICCP	Reimbursement of credit card payment
ISIDCP	Reimbursement of debit card payment
ISINPC	Payment of car insurance premium

Table 17: Code List (3 of 4)

Code	Code Description
ISINSC	Transaction is related to the payment of an insurance claim
ISINSM	Installment
ISINSU	Insurance premium
ISINVS	Payment of mutual funds, investment products and shares
ISINTC	Intra company payment
ISINTE	Interest
ISINTX	Income tax
ISINVS	Investment
ISLBRI	Labor insurance
ISLICF	License fee
ISLIFI	Life insurance
ISLOAN	Loan
ISMDCS	Medical services
ISMP2B	Mobile P2B payment
ISMP2P	Mobile P2P payment
ISMTUP	Mobile top up
ISNOWS	Not otherwise specified
ISOTHR	Other
ISOTLC	Transaction is related to a payment of other telecom related bill
ISPAYR	Payroll
ISPEFC	Contribution to pension fund
ISPENS	Pension payment
ISPHON	Payment of telephone bill
ISPPTI	Property insurance
ISRELG	Transaction is for general rental/lease
ISRENT	The payment of rent
ISRLWY	Payment for railway transport related business
ISROYA	Royalties
ISSALA	Salary payment
ISSAVG	Payment to savings/retirement account
ISSECU	Securities

Table 17: Code List (4 of 4)

Code	Code Description
ISSSBE	Social security benefit
ISSTDY	Study
ISSUBS	Subscription
ISSUPP	Supplier payment
ISTAXR	Refund of a tax payment or obligation
ISTAXS	Tax payment
ISTBIL	Transaction is related to a payment of telecommunications related bill
ISTRAD	Trade services operation
ISTREA	Treasury payment
ISTRPT	Payment for travel
ISUBIL	Utility bill payment
ISVATX	Value added tax payment
ISWHLN	Withholding
ISWTER	Payment of water bill

Appendix C

Visa Direct Simplified Transaction Reconciliation Report

The Visa Direct Simplified Transaction Reconciliation Report (Simplified TRR) is available to originating entities on Visa File Exchange Service (VFES).

This is an enhanced and simplified version of the existing Visa Direct Transaction Reconciliation Report (TRR). The Visa Direct Simplified TRR provides a subset of information available in full SMS raw data report. This report provides the key data elements that may be needed by originating entities to reconcile their Visa Direct transactions. The Visa Direct Simplified TRR is currently delivered via VFES and, in the future, will be delivered through API and Visa Access. The existing TRR will be phased out gradually and the Simplified TRR will be the only report used.

Note:

- This report has a more enriched dataset than the TRR and provides information on AFT transactions.
- This report will contain certain data fields applicable only to acquirers and, therefore, will not appear on the report for the originating entities that do not perform actual settlement activity with Visa.

For more information on VFES, or to initiate a VFES implementation project, refer to the Visa File Exchange Service (VFES) Implementation Guide or contact your Visa representative.

File Data Elements

Table 18: Data Elements (1 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
1	Processing Data	The effective date of the conversion rate used to convert the transaction amount to the settlement amount.	DATE	YYYY-MM-DD	F16 – Conversion Date
2	Acquiring BIN	The Bank Identification Number (BIN) used to clear and settle the transaction within Visa and the country in which it is licensed for use.	NUMERIC	6	F32 – Acquirer Institution ID
3	Transaction Identifier	A right-justified, Visa-generated Transaction Identifier (TID) unique to each original authorization and financial request. The identifier links original messages to subsequent messages, such as those for exception item processing and clearing records.	NUMERIC	15	F62.2 – Transaction Identifier

Table 18: Data Elements (2 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
4	Message Reason Code	An explanation describing the reason for the message. Possible reasons could be: • An acquirer-generated advice, reversal, cancellation, adjustment. • Dispute financial, dispute financial reversal, dispute response financial, dispute response financial reversal, and their corresponding status advises.	VARCHAR2	60	F63.3 – Message Reason Code

Table 18: Data Elements (3 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
5	Card Acceptor Id	An acquirer-assigned, alphanumeric code that identifies the card acceptor for the transactions. Depending on the acquirer/merchant billing and reporting requirements, the code can represent a merchant, a merchant location, or a merchant location terminal.	VARCHAR2	15	F42 – Card Acceptor Identification Code
6	Card Acceptor Name	Name of the merchant that is associated with the card acceptor ID.	VARCHAR2	25	F43 – Card Acceptor Name/Location
7	System Trace Audit Number	A number assigned by the message initiator that uniquely identifies a cardholder transaction and all related message types.	VARCHAR2	6	F11 – System Trace Audit Number

Table 18: Data Elements (4 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
8	Recipient Account Number	For Visa Direct for Card transactions – The first 6 digits of the PAN are masked. For Push to Account – No data is available. Note: This field would remain empty for a Returned Payout.	VARCHAR2	28	F44.15 – Primary Account Number, Last Four Digits for Receipt
9	Transmission Date Time	The date and time the request or advice was submitted to VisaNet by the acquirer.	DATE and TIME	YYYY-MM-DDTHH:MM:SSZ	F7 – Transmission Date and Time
10	Transaction Amount	Transaction amount in the currency specified by the currency code.	NUMERIC	(14,2)	F4 – Amount, Transaction
11	Transaction Currency	Currency code associated with the transaction amount.	NUMERIC	(14,2)	F49 – ISO Transaction Currency Code
12	Authorization Code	The authorization code provided by the issuer when a transaction is approved or a “no reason to decline” code is provided for successful verifications.	CHAR	6	F38 – Authorization Identification Response

Table 18: Data Elements (5 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
13	Retrieval Reference Number	The Retrieval Reference Number is used with other key data elements to identify and track all messages related to a given cardholder transaction. It is usually assigned by the acquirer, but it may be assigned by a merchant or individual electronic terminal. Note: Once assigned, this remains consistent throughout the transaction life cycle across the acquirer, VisaNet, and issuer.	NUMERIC	12	F37 – Retrieval Reference Number
14	Fee Program Indicator	An interchange reimbursement fee program indicator (FPI), used when assessing the fee amount.	VARCHAR2	3	F63.19 – Fee Program Indicator
15	Settlement Date Time	The date and time for which this message becomes part of a transaction's SMS settlement between the acquirer and issuer.	DATE and TIME	YYYY-MM-DDTHH:MM:SSZ	F15 Settlement Date

Table 18: Data Elements (6 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
16	Acquirer Settlement Amount Note: Field availability depends on originating entity setup and configuration for Visa Direct program.	The net settlement position of the acquirer reported on VSS reports for funds transfer purposes.	NUMERIC	(14,2)	F97 – Amount, Net Settlement Field availability depends on originating entity setup and configuration for Visa Direct program
17	Acquirer Settlement Currency Note: Field availability depends on originating entity setup and configuration for Visa Direct program.	Currency code associated with the acquirer settlement amount.	VARCHAR2	3	Not applicable
18	Interchange Reimbursement Fee Note: Field availability depends on originating entity setup and configuration for Visa Direct program.	Interchange Reimbursement Fees (IRFs) are non-interchange amounts paid by one member to another member.	NUMERIC	(16,6)	F119 – Settlement Service Data (Usage 1: Member-Calculated IRF)
19	Interchange Reimbursement Fee Settlement Currency Note: Field availability depends on originating entity setup and configuration for Visa Direct program.	The acquirer interchange reimbursement fee in the settlement currency amount.	NUMERIC	(16,6)	Not applicable

Table 18: Data Elements (7 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
20	Business Application Identifier	A two-character code that identifies the intended use of a push or pull payment. It determines the data carried in the message, the limits and economics that may apply to the transaction, and may be used by the sending and/or receiving issuer to make an authorization decision.	VARCHAR	2	F104, Usage 2 – Transaction-Specific Data; Dataset Value Hex 57
21	Message Type Indicator	A code used to indicate the transaction type. Possible values: • 0200 Original Financial (AFT/OCT) • 0210 VIP Reject • 0220 STIP Decline Advice • 0220 Representment • 0220 Adjustment • 0400/0420 Reversal • 0422 Chargeback	VARCHAR2	4	Not applicable

Table 18: Data Elements (8 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
22	Sender Reference Number	A transaction reference number provided by the originator or acquirer and can be used to uniquely identify the entity funding the transaction.	VARCHAR2	16	F104, Usage 2 – Transaction-Specific Data; Dataset Value Hex 5F
23	DCC Indicator	Dynamic Currency Conversion (DCC) is an optional, non-Visa service offered by merchants at the point-of-sale and by ATM acquirers at their ATM terminals. The service involves offering the cardholder the option to pay for goods or services and withdraw cash in their own billing currency or in the merchant's own local currency. DCC occurs when a merchant or ATM acquirer performs currency conversion locally and submits the transaction in the cardholder's billing currency.	VARCHAR2	1	F126.19 – Dynamic Currency Conversion Indicator

Table 18: Data Elements (9 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
24 (Row 1 of 2)	Transaction Integrity Fee	The transaction integrity fee (TIF) is different from the Acquirer Interchange Fee. TIF is part of the VisaNet Acquirer Services Processing Charges and is a fee applied to the Acquirer for transactions that do not meet the qualification standards of U.S. Custom Payment Service.	NUMERIC	(18,6)	F28 – Amount, Transaction Fee

Table 18: Data Elements (10 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
(Row 2 of 2)		Additional information: 1. TIF is only charged on U.S. domestic transactions failing to qualify for U.S. Custom Payment Service. This includes AFTs, but OCTs are excluded. 2. TIF is calculated in USD not in the settlement currency or SSBC (Settlement Service Balance Currency). 3. TIF will always be a debit to the Acquirer, hence the Dr/Cr indicator tag/field would be Dr.			
25	Processing Code	A code that identifies the customer transaction type and customer account types affected by the transaction. Possible values: • AFT = 10 • OCT = 26 • Return = 29	VARCHAR2	2	F3 – Processing Codes

Table 18: Data Elements (11 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
26	Chargeback Reference Number	This is a 6-digit control number assigned by issuers to disputes in compliance with the Visa Rules. If present, the acquirer must include it in all subsequent dispute response financials for the disputed transaction (plus corresponding dispute financial from the issuer), and on mailed documentation. If this subfield is not applicable, it must be zero-filled.	NUMERIC	6	F48 – Dispute Documentation Indicators; Positions 4–9
27	Chargeback Message Type	A code used to indicate the chargeback type.	VARCHAR2	4	F90 – Original Message Type
28	Chargeback Trace Number	A number assigned by Visa that uniquely identifies a chargeback instance.	NUMERIC	10	F90 – Original Trace Number
29	Chargeback Transmission Date Time	The date and time the chargeback message was submitted to VisaNet by the acquirer or issuer.	DATE and TIME	YYYY-MM-DDTHH:MM:SSZ	F90 – Original Transmission Date and Time

Table 18: Data Elements (12 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
30	Chargeback Usage Code	A code used for chargeback processing purposes. Possible values: 9 = Dispute financial	VARCHAR2	1	F48 – Usage Code
31	Acquirer Funds Transfer SRE Note: Field availability depends on originating entity setup and configuration for Visa Direct program.	The Settlement Reporting Entity (SRE) at which Funds Transfer (FT) takes place.	NUMERIC	10	Not applicable
32	Settlement Service Indicator	The type of settlement service associated with the Settlement Reporting Entity (SRE)–international, national net, or area net.	VARCHAR	4	Not applicable
33	Additional Token Response Info	An indicator used for Secure Credential Framework (SCF) purposes. Possible values: 1 = Token program	VARCHAR2	1	Not applicable

Table 18: Data Elements (13 of 13)

Flag	Data Element	Description	Data Type	Data Format/ Length	ISO Mapping
34	Service Processing Type Note: - Field availability depends on originating entity setup and configuration for Visa Direct program. - This field is presently not available for AFTs.	The Service Processing Type (SPT) identifies the type of service for transaction processing. Possible values: 00 = Normal transaction 01 = Originator hold 02 = Visa deferred OCT hold, default interval 03 = Visa deferred OCT hold, user-defined interval	VARCHAR2	2	F104, Usage 2 – Dataset ID 57, Tags 80 and 81
35	Payment Credential Reference Type	The Payment Credential Reference Types identifies the type of payment instrument that is an alternative to PAN or network token (for example, PCI Token Reference ID).	STRING	36	Not applicable
36	Payment Credential Reference ID	Value of the payment credential reference.	STRING	75	Not applicable

Visa Direct Consolidated Transaction Data Report

The Consolidated Transaction Data Report (CTDR) is a report that is designed to facilitate the collection of various elements of transaction data.

Effective June 2024, Visa implemented changes to the CTDR CSV format to include new fields. The report in the CSV format captures acquirer details and includes money-transfer and non-money transfer BAIs (Business Application IDs) for domestic and cross-border Original Credit Transactions (OCTs) and Account Funding Transactions (AFTs). This report will only contain transaction details of approved authorizations.

- Issuers that choose to receive the CTDR in CSV format should contact their regional client support representatives to subscribe.
- This report must not be used for reconciliation or settlement.

For more information, see *Consolidated Transaction Data Report – CSV Format*.

Issuers may receive the Consolidated Transaction Data Report (CTDR) in CSV format as generic files delivered to the Extended Access Server (EAS). See *Extended Access Server – Distributed (EAS-D) Endpoint Guide* and the *Visa Extended Access Server – Centralized (EAS-C), Client Implementation Guide* for information on EA Server, Extended Access File Services (EFS) application, Generic File processing through the EFS application.

Issuers can generate this report daily, weekly, twice a month, or monthly.

Appendix D

API Formats

ISO Fields – API Field Mapping

This section lists the ISO field and its corresponding API field name.

Acquirers, service providers, and merchants can use this table to interpret the API information in the Visa Developer Center (VDC).

Table 19: ISO – API Field Mapping (1 of 19)

V.I.P. (0100/0200) Field Name	API Field Name	API Type
Field 2 – Primary Account Number Length: Variable Format: 1-byte binary and up to 19 N, 4-bit BCD (unsigned packed); maximum 11 bytes	senderPrimaryAccountNumber	AFT Request AFT Reversal Request
Field 3 – Processing Code Position 3-4. Account Type Length: 3 Format: 6 BCD (unsigned packed); 3 bytes	accountType	AFT Request AFT Reversal Request
Field 4 – Amount, Transaction Length: 6 Format: 12 BCD	amount	AFT Request AFT Reversal Request
Field 7 – Transmission Date and Time Fixed length 10 N, 4-bit BCD (unsigned packed); 5 bytes Format: MMDDhhmmss	transmissionDateTime	AFT Response AFT Reversal Response
Field 9 – Settlement Flags Contains various settlement related flags (currently all in VIP Header Field 9)	settlementFlags	AFT Response
Field 9 – Settlement Flags	givPreviouslyUpdatedFlag	AFT Response
Field 9 – Settlement Flags	settlementResponsibilityFlag	AFT Response
Field 9 – Settlement Flags	settlementServiceFlag	AFT Response
Field 11 – System Trace Audit Number Fixed length 6 N, 4-bit BCD (unsigned packed); 3 bytes	systemsTraceAuditNumber	AFT Request AFT Reversal Request
Field 12 – Time, Local Transaction Fixed length 6 N, 4-bit BCD (unsigned packed); 3 bytes Format: hhmmss	localTransactionDateTime	AFT Request AFT Reversal Request

Table 19: ISO – API Field Mapping (2 of 19)

V.I.P. (0100/0200) Field Name	API Field Name	API Type

Appendix E

Visa Direct Account Lookup File

The Visa Direct Account Lookup (ACNL) file provides acquirers, service providers, and merchants with information about Visa accounts, including issuer country code and billing currency, account type, Fast Funds participation status, and whether the issuer can receive OCT and AFTs. Acquirers, service providers, and merchants can receive this file from the Visa File Exchange Service (VFES), Open File Delivery (OFD), or Visa File Gateway (VFG) connection.

Note: Clients using OFD are required to migrate to VFG. See *Visa Business News (VBN) A112092*.

This file is available to all acquirers, service providers, and merchants. Acquirers, service providers, and merchants should contact their Visa representative to request receipt of the account lookup file and discuss available delivery methods and frequency.

Note: The information provided in this file can be obtained by sending the Visa Direct Account Lookup API to Visa.

Accessing the data directly from a flat file results in poor performance. Visa recommends that the acquirer, service provider, or merchant transfer the data from the Visa Direct Account Lookup File into a database.

These elements provide information about the Visa Direct ACNL file:

- **File Name:** Unique name for each ACNL file versions.
- **Record Length:** 746 for versions V7 and V8.

Note: ACNL file version 7 contains both real PAN and token ranges. Version 8 contains only real PAN ranges.

- 1

The data elements are presented in the **Visa Direct Account Lookup File Data Elements** table.

Flag	Data Element	Description	Data Type/Format/Example
1	Account Range Min	The lower-boundary of the payment credential range.	Length: 21; Format: CHAR, contains numeric Example: 4XXXXXXXXX000000000000 Note: Replace X with real payment credential.
2	Account Range Max	The upper-boundary of the payment credential range. Note: AFT and Fast Funds enablement may differ between account ranges under a single Issuing ISO BIN. Therefore, it is critical that acquirers, service providers, or merchants (entity initiating AFTs) look at the account range min and max to determine AFT and Fast Funds eligibility and NOT just at the Issuing ISO BIN level.	Length: 21; Format: CHAR, contains numeric Example: 4XXXXXXXXX999999999999 Note: Replace X with real payment credential.

Table 20: Visa Direct Account Lookup File Data Elements (2 of 6)

Flag	Data Element	Description	Data Type/Format/Example
3	Country Code	Numeric ISO country code of the recipient issuer's country	Length: 3; Format: Numeric Example: 608
4	Country Name	Name of the recipient issuer's country.	Length: 25; Format: CHAR Example: Philippines
5	Issuer Name	Name of the recipient issuer.	Length: 120; Format: CHAR
6	Issuer Billing Currency Code	Recipient issuer's billing currency code. Note: If the billing currency is all zeros, it indicates that the account range is not active; the information for this account can be ignored.	Length: 3; Format: Numeric Example: 840
7	Account Billing Currency Code	Recipient's account billing currency code. It will only have a valid value if it is different from the issuer billing currency. If the billing currency is all zeros, it indicates one of these: • The account range is not active; the information for this account can be ignored. • The issuer has not provided the account billing currency to Visa	Length: 3; Format: Numeric Example: 840
8	Card Product Type Code	Specifies the type of the card:	Length: 1; Format: CHAR; Valid values are: • C = Credit • D = Debit • H = Charge • P = Prepaid • R = Deferred Debit
9	Card Platform Code	This data element is a two-character alphabetic code that defines the card platform.	Length: 2; Format: CHAR; Valid values are: • BZ (Business) • CN (Consumer) • CO (Commercial) • GV (Government)

Table 20: Visa Direct Account Lookup File Data Elements (3 of 6)

Flag	Data Element	Description	Data Type/Format/Example
10	Prepaid Funding Code	This data element is a single-digit alphabetic code that defines the type of a prepaid card.	Length: 1; Format: CHAR; Valid values are: • R (Reloadable) • N (Non-reloadable) • Space (Not prepaid)
11	Token Range	This data element indicates whether the account range is a token account range.	Length: 1; Format: CHAR; Valid values are: • Y (The account range are for tokens) • N (The account ranges are PANs)
12	LAC Combo Card Range	This data element indicates the type of combo card.	Length: 1; Format: CHAR; Valid values are: • 0 (Not a combo card) • 2 (Combo card)
13	Non-Money Transfer OCTs Domestic	This data element indicates if domestic Non-Money Transfer OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts Domestic Non-Money Transfer OCTs) • N (Does not accept Domestic Non-Money Transfer OCTs)
14	Non-Money Transfer OCTs Cross-Border	This data element indicates if cross-border Non-Money Transfer OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts cross-border Non-Money Transfer OCTs) • N (Does not accept cross-border Non-Money Transfer OCTs)
15	Online Gambling OCTs Domestic	This data element indicates if domestic online gambling OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts domestic online gambling OCTs) • N (Does not accept domestic online gambling OCTs)

Table 20: Visa Direct Account Lookup File Data Elements (4 of 6)

Flag	Data Element	Description	Data Type/Format/Example
16	Online Gambling OCTs Cross-Border	This data element indicates if cross-border online gambling OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts cross-border online gambling OCTs) • N (Does not accept cross-border online gambling OCTs)
17	Money Transfer OCTs Domestic	This data element indicates if domestic Money Transfer OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts domestic Money Transfer OCTs) • N (Does not accept domestic Money Transfer OCTs)
18	Money Transfer OCTs Cross-Border	This data element indicates if cross-border Money Transfer OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts cross-border Money Transfer OCTs) • N (Does not accept cross-border Money Transfer OCTs)
19	Fast Funds Domestic Money Transfer	This data element indicates if fast funds is supported for domestic Money Transfer OCTs.	Length: 1; Format: CHAR; Valid values are: • Y (Fast funds supported for domestic Money Transfer OCTs) • N (Fast funds not supported for domestic Money Transfer OCTs)
20	Fast Funds Domestic Non-Money Transfer	This data element indicates if fast funds is supported for domestic Non-Money Transfer OCTs.	Length: 1; Format: CHAR; Valid values are: • Y (Fast funds supported for domestic Non-Money Transfer OCTs) • N (Fast funds not supported for domestic Non-Money Transfer OCTs)
21	Fast Funds Domestic Gambling	This data element indicates if fast funds is supported for domestic gambling OCTs.	Length: 1; Format: CHAR; Valid values are: • Y (Fast funds supported for domestic gambling OCTs) • N (Fast funds not supported for domestic gambling OCTs)

Table 20: Visa Direct Account Lookup File Data Elements (5 of 6)

26	Pull Funds Domestic	Indicates whether domestic pull funds are enabled.	Length: 1; Format: CHAR; Valid values are: • Y Domestic Pull Funds AFTs are enabled. • N Domestic Pull Funds AFTs are disabled.
27	Cross-Border OCT Auth Approval Rate Indicator	Indicator that represents cross-border OCT auth approval rate of the issuer account range. This is based on an average taken using all cross-border OCTs attempted over three months for the account range. The indicator is updated once a month.	Length: 1; Format: Numeric; Valid values are: • 0 No Data • 1 Optimized • 2 Being Optimized • 3 Not Optimized

Appendix F

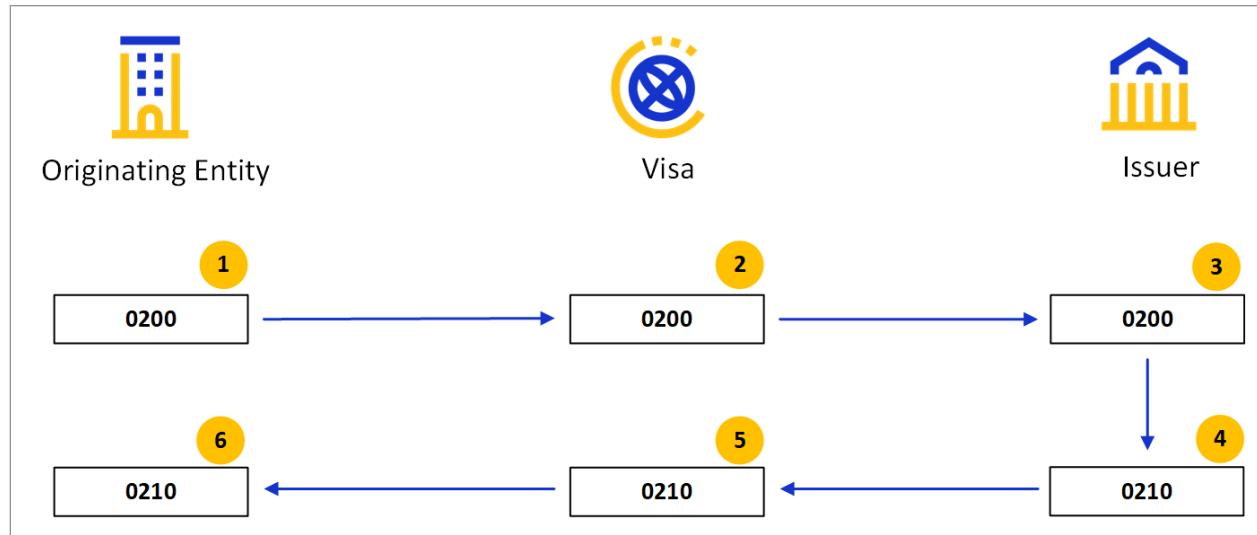

Transaction Flows

This appendix provides AFT-related transaction flows as outlined in the table.

The actor in the diagram enabled as Originating Entity could be a merchant, acquirer, or service provider.

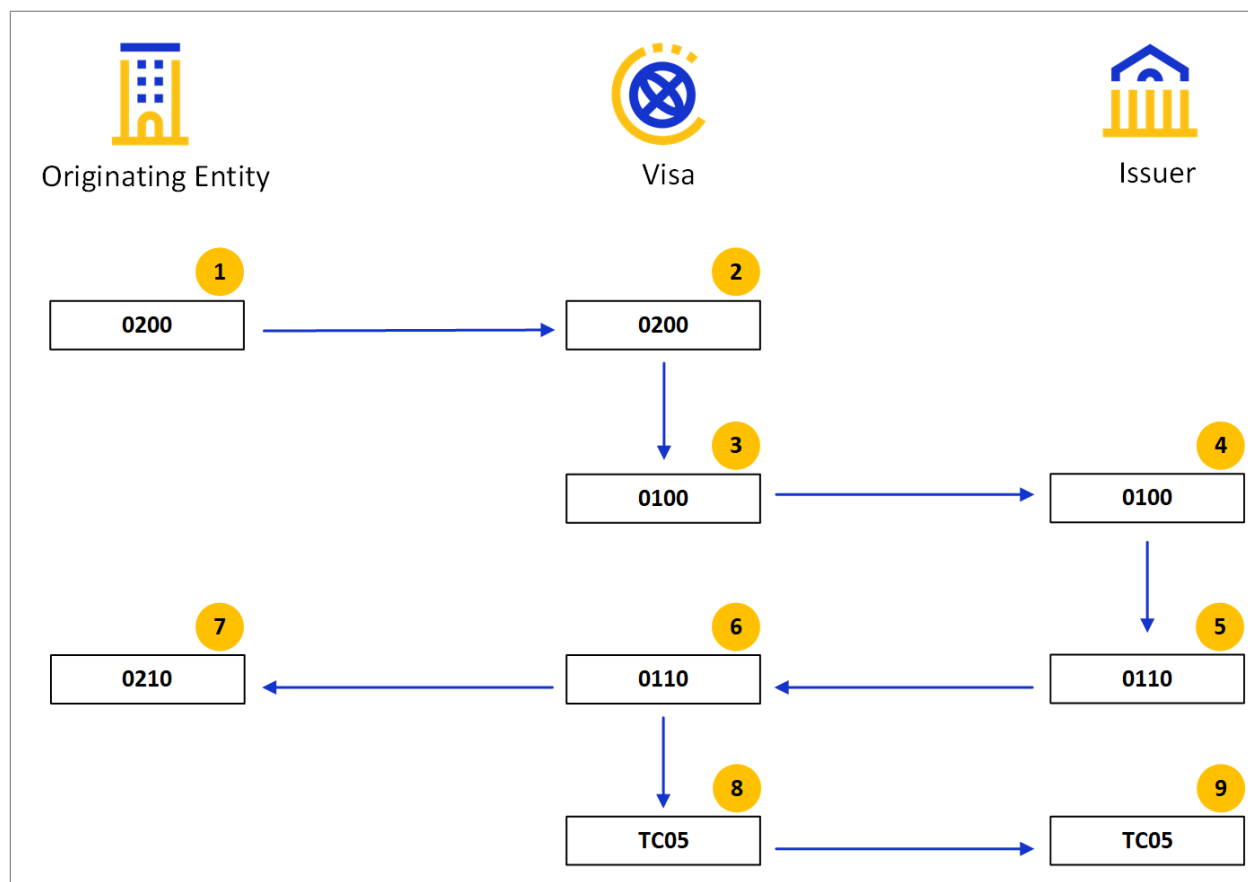

Note: These flows are for informational purposes only; check the *Full Service POS Online Messages Technical Specifications* on Visa Access for the most recent requirements.

AFT Flow – SMS Originating Entity to SMS Issuer (Approval/Decline)

1. Originating entity submits 0200 message to VisaNet.
2. VisaNet forwards the 0200 message to issuer.
3. Issuer receives 0200 message, processes, and responds with an approval or decline.
4. The issuer creates the 0210 response and sends it back to VisaNet.
5. VisaNet sends the 0210 message to the originating entity.
6. The originating entity receives the 0210 message.

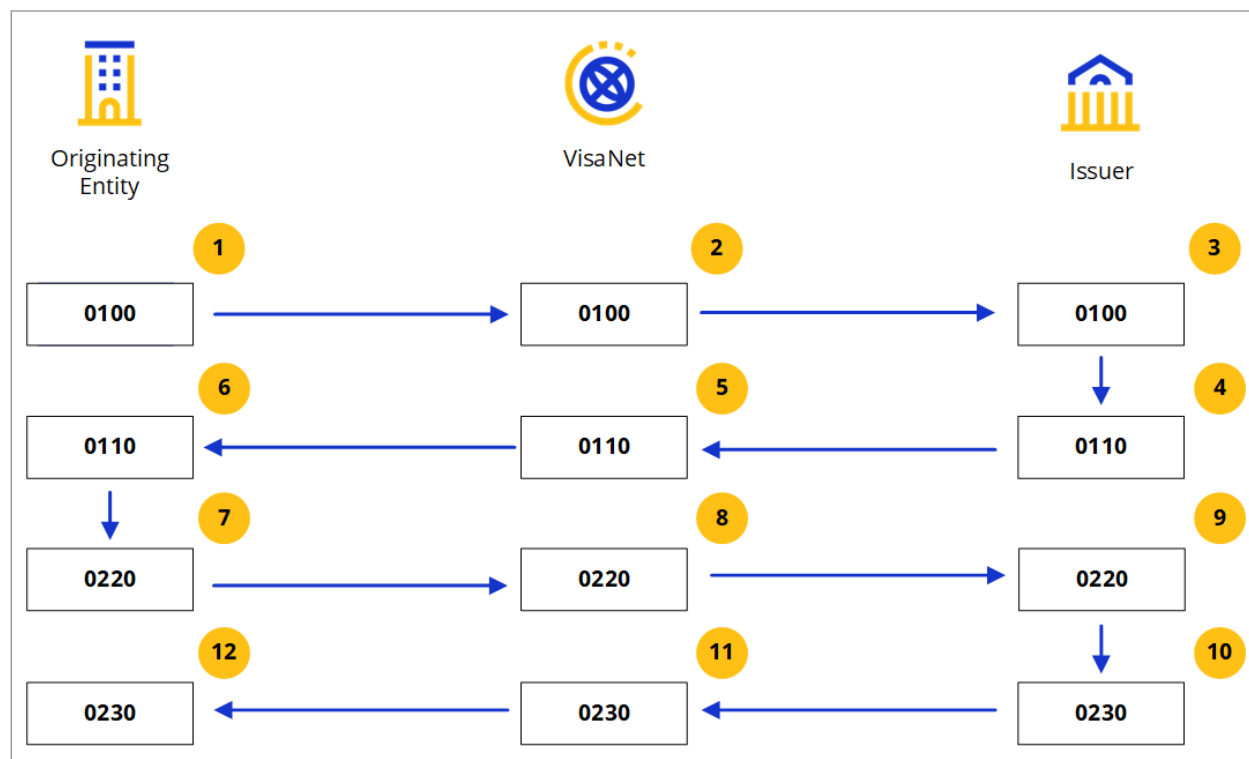

AFT Flow – SMS Originating Entity to Dual Message/BASE II Issuer (Approval/Decline)

1. Originating entity submits 0200 message to VisaNet.
2. VisaNet receives the 0200 message from originating entity.
3. VisaNet converts 0200 message into a 0100 message and sends it to the issuer.
4. Issuer receives 0100 message, processes, and responds with an approval or decline.
5. The issuer sends 0110 response to VisaNet.
6. VisaNet receives 0110 response and converts it to a 0210 response and forwards it to the originating entity.
7. The originating entity receives 0210 response and completes the transaction.
8. VisaNet creates a TC05 message and sends it to the issuer.
9. The issuer receives the TC05.

Note: If the transaction is declined, steps 8 and 9 are not executed.

AFT Flow – SMS Originating Entity to SMS Issuer (Acquirer Online Clearing)

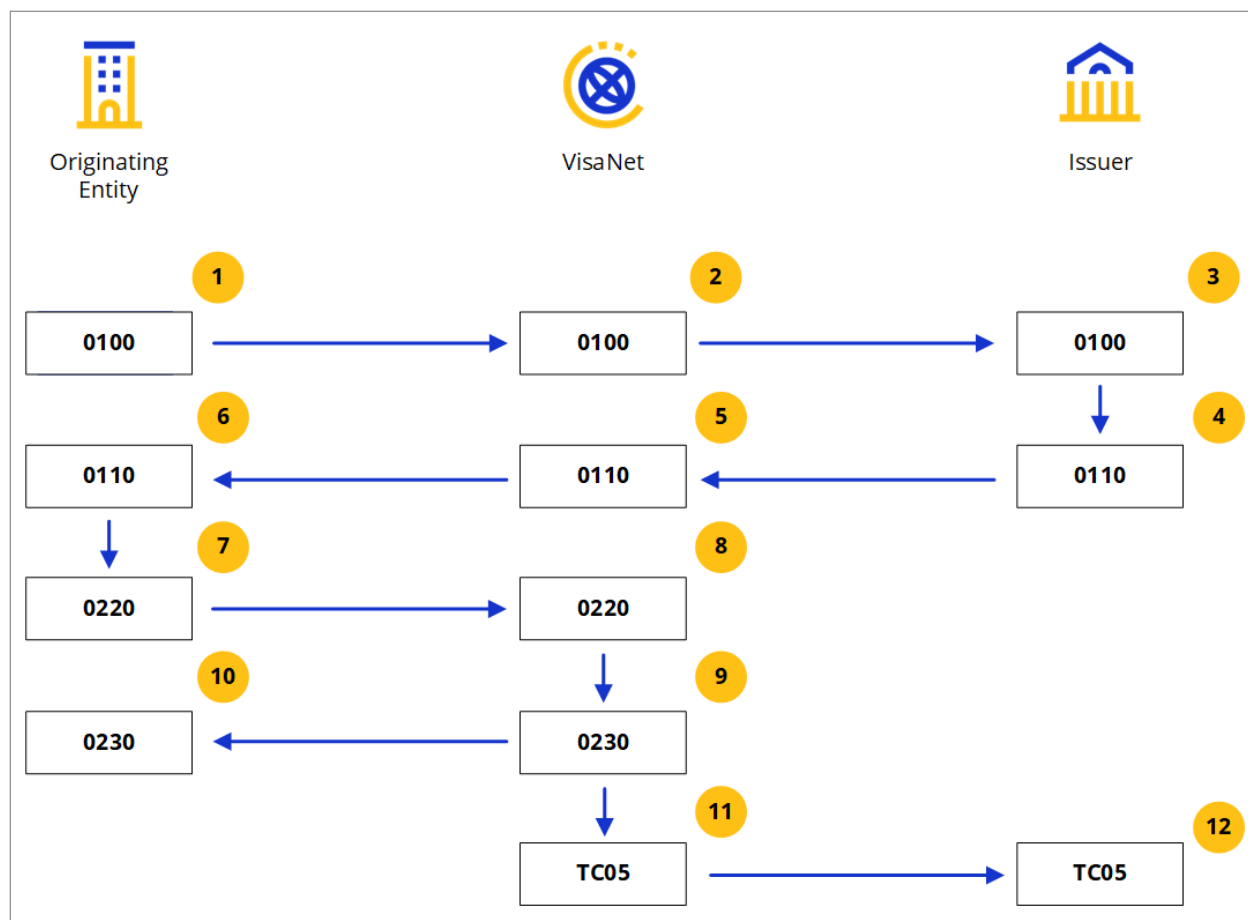

1. Originating entity submits 0100 message to VisaNet.
2. VisaNet receives the 0100 message from the originating entity.
3. VisaNet sends the 0100 message to the issuer and processes the transaction for approval or decline.
4. The issuer sends 0110 response to VisaNet.
5. VisaNet receives 0110 response and forwards it to the originating entity.
6. The originating entity receives 0110 response, and this completes the authorization transaction cycle.
7. Originating entity submits 0220 acquirer-generated advice with Field 63.3 (message reason code) = 2105 (clearing of an authorized transaction).
8. VisaNet receives the 0220 message from the originating entity.

9. VisaNet sends the 0220 message to the issuer and issuer acknowledges receipt of 0220 clearing advice from Visa. Acquirer-generated 0220 clearing advice should be treated in the same manner by SMS issuer as 0220 forced post clearing advice generated by VisaNet Integrated Payment System (V.I.P.) upon receiving TC05 clearing draft from a dual acquirer. Upon receiving acquirer-generated clearing advice, issuer should post billing amount on the cardholder account.
10. Issuer returns 0230 response to VisaNet.
11. VisaNet receives 0230 response and forwards it to the originating entity.
12. The originating entity receives 0230 response, and this completes the online clearing transaction cycle.

Note:

- When a transaction is declined, steps 7–12 are not applicable.
- Message reason code 2103 (below-floor-limit transaction), 2104 (online authorization was not performed), and 2106 (clearing of an unauthorized transaction) are not applicable and must not be used. AFTs must be authorized by an issuer.

AFT Flow – SMS Originating Entity to Dual Message/BASE II Issuer (Acquirer Online Clearing)

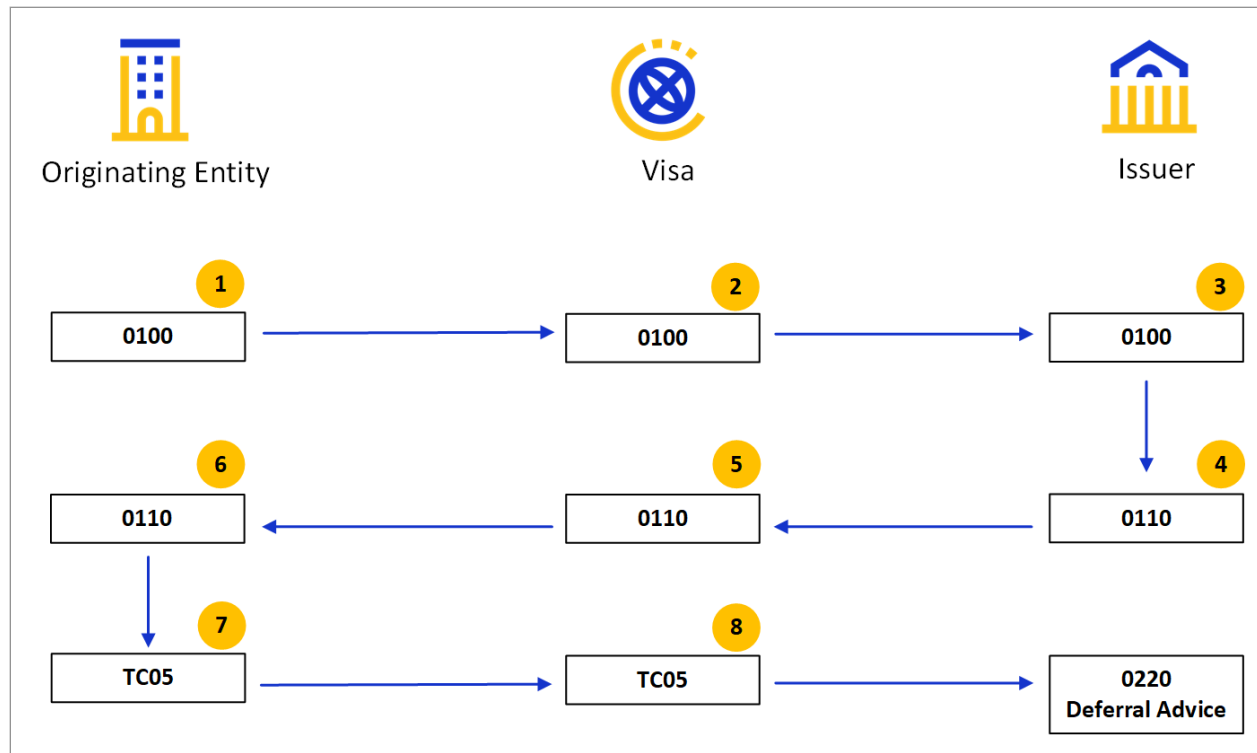

1. Originating entity submits 0100 message to VisaNet.
2. VisaNet receives the 0100 message from the originating entity.
3. VisaNet sends the 0100 message to the issuer and processes the transaction for approval or decline.
4. The issuer sends 0110 response to VisaNet.
5. VisaNet receives 0110 response and forwards it to the originating entity.
6. The originating entity receives 0110 response, and this completes the authorization transaction cycle.
7. Originating entity submits 0220 acquirer-generated advice with Field 63.3 (message reason code) = 2105 (clearing of an authorized transaction).
8. VisaNet receives the 0220 message from the originating entity.

9. VisaNet sends the 0230 acknowledgment response to the originating entity.
10. The originating entity receives 0230 response, and this completes the online clearing transaction cycle from the originating entity standpoint.
11. BASE II generates TC05 clearing sales draft against 0220 acquirer-generated clearing advice and delivers the message to the issuer.
12. Dual message issuer receives the TC05 clearing record and posts billing amount to the cardholder account.

Note:

- When a transaction is declined, steps 7–12 are not applicable.
- Message reason codes 2103 (below-floor-limit transaction), 2104 (online authorization was not performed), and 2106 (clearing of an unauthorized transaction) are not applicable and must not be used. AFTs must be authorized by an issuer.

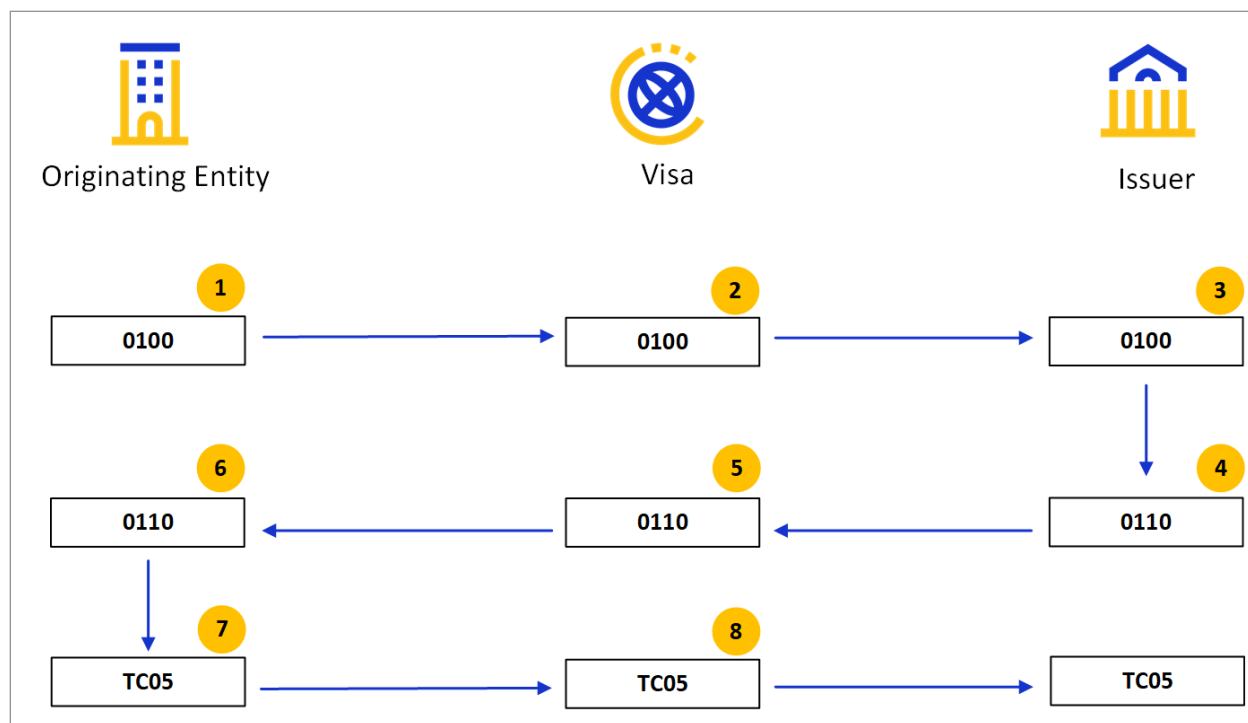

AFT Flow – Dual Message Originating Entity to SMS Issuer (Approval/Decline)

1. Originating entity submits 0100 message to VisaNet.
2. VisaNet receives the 0100 message from originating entity.
3. VisaNet sends the 0100 message to the issuer.
4. Issuer receives 0100 message, processes, and responds with an approval or decline.
5. The issuer sends 0110 response to VisaNet.
6. VisaNet receives 0110 response and forwards it to the originating entity.
7. The originating entity creates a TC05 and sends it to VisaNet.
8. VisaNet sends the 0220 deferral advice to the issuer.

Note: If the transaction is declined, steps 7 and 8 are not executed.

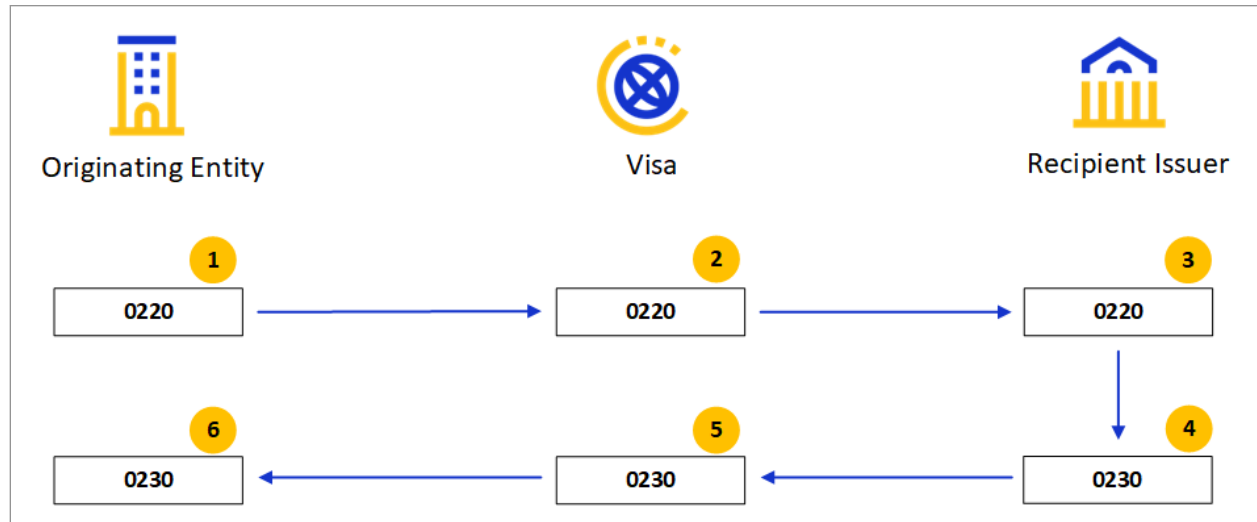

AFT Flow – Dual Message Originating Entity to Dual Message/ BASE II Issuer (Approval/Decline)

1. Originating entity submits 0100 message to VisaNet.
2. VisaNet receives the 0100 message from originating entity.
3. VisaNet sends the 0100 to the issuer, and the issuer responds with an approval or decline.
4. The issuer sends 0110 response to VisaNet.
5. VisaNet receives 0110 response and forwards it to the originating entity.
6. The originating entity receives 0110 response and completes the transaction.
7. The originating entity creates a TC05 message and sends it to VisaNet.
8. VisaNet sends the TC05 to the issuer.

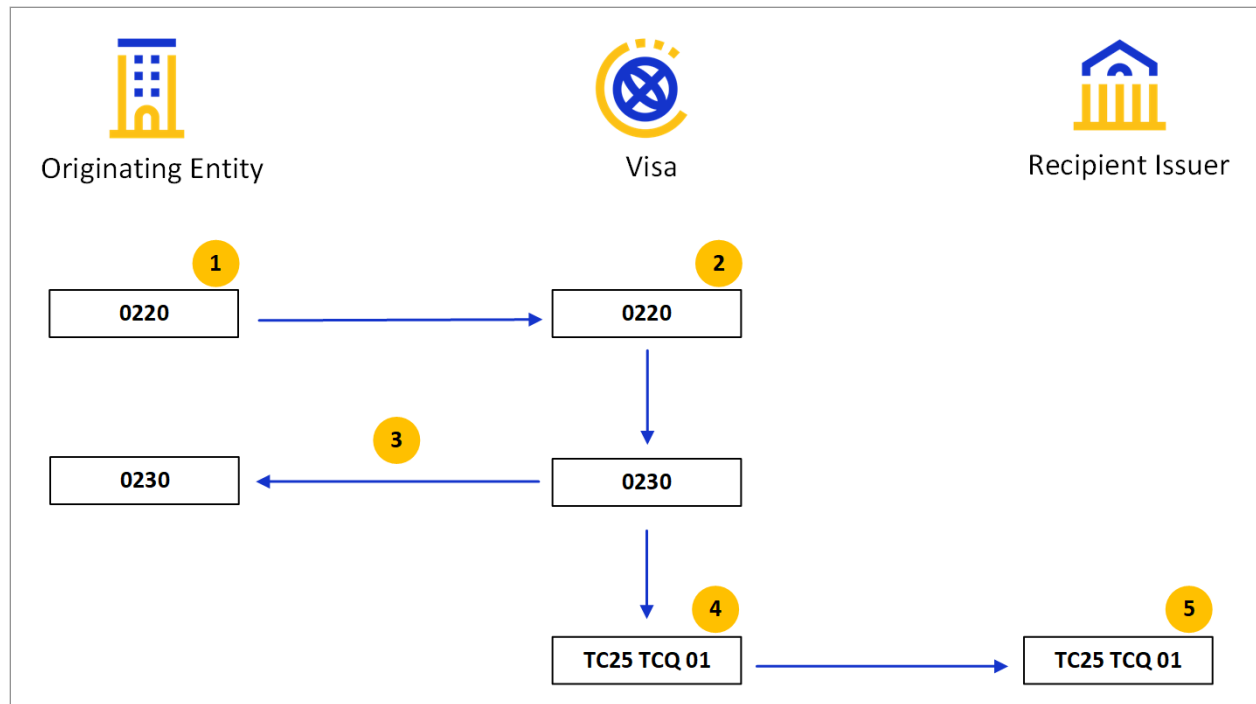

Note: If the transaction is declined, steps 7 and 8 are not executed.

Credit Adjustment: SMS Originating Entity to SMS Recipient Issuer

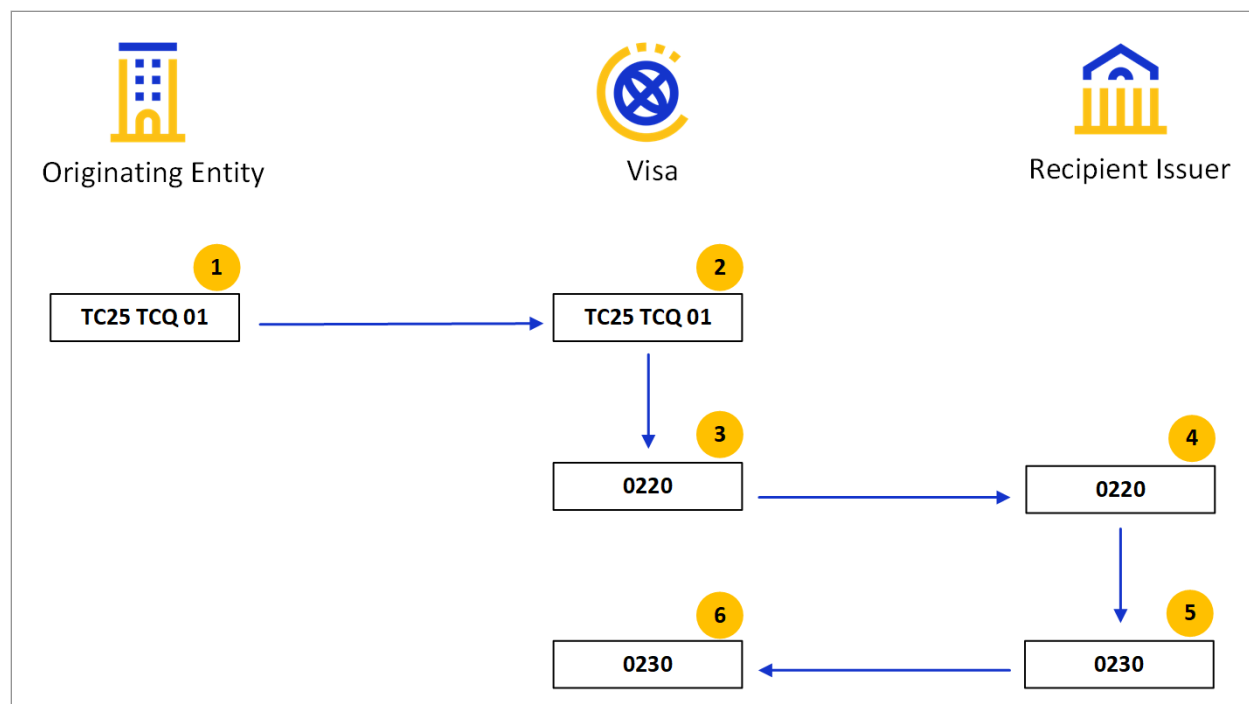

1. Originating entity submits 0220 advice message to Visa to request refund of money to sender's account.
2. Visa sends 0220 auth message to recipient issuer.
3. Recipient issuer uses the 0220 message to restore balance to the cardholder's account.
4. Recipient issuer responds with 0230.
5. Visa receives the 0230.
6. Visa sends the 0230 confirmation back to originating entity to confirm success of submission.

Credit Adjustment: SMS Originating Entity to Dual Message/BASE II Recipient Issuer

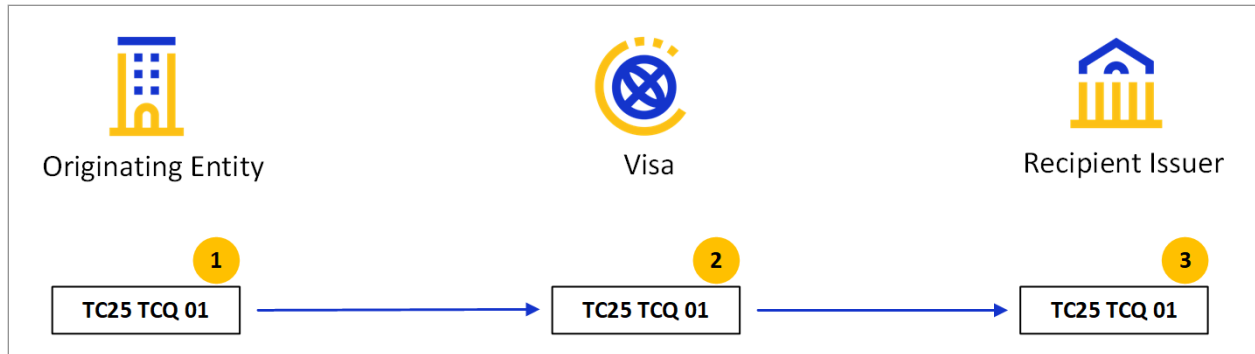

1. Originating entity submits 0220 advice message to Visa to request refund of money to sender's account.
2. Visa receives the 0220 advice message.
3. Visa creates 0230 STIP advice and returns to originating entity to confirm.
4. Visa creates TC25 TCQ01 and sends to recipient issuer for processing.
5. The recipient issuer receives the TC25 TCQ01 and restores the balance to the cardholder.

Credit Adjustment: Dual Message Originating Entity to SMS Recipient Issuer

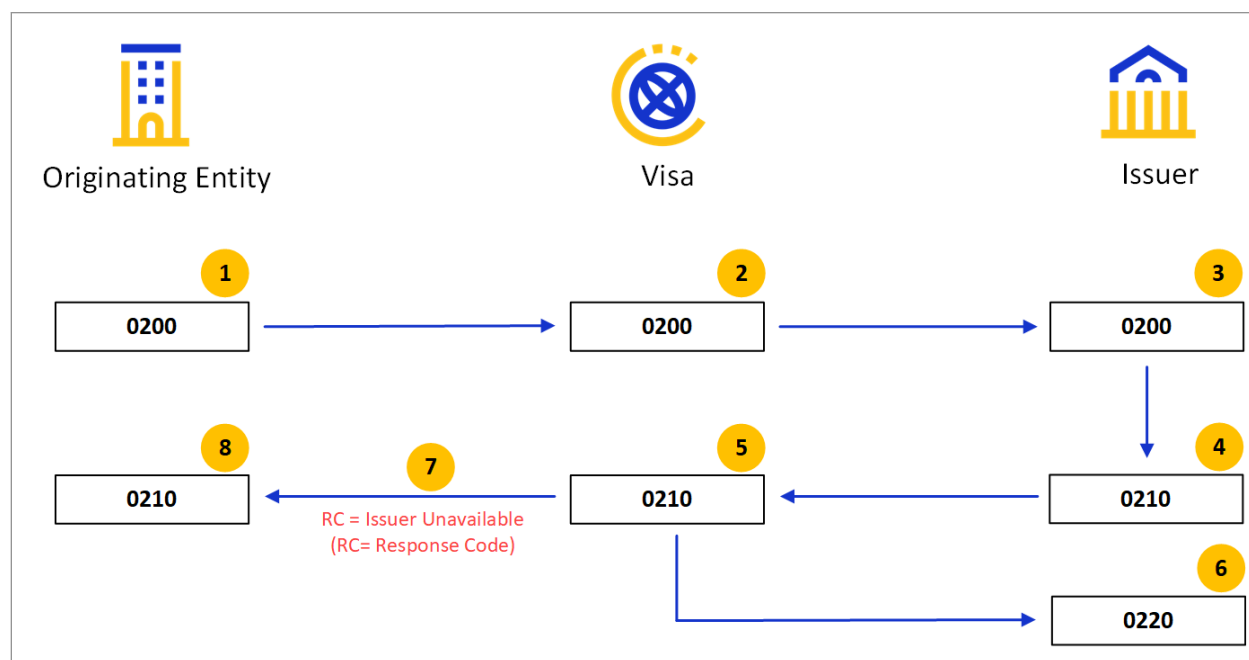

1. Originating entity raises TC25 TCQ 01 to Visa to request refund of money to senders account.
2. Visa receives the TC25 TCQ01 incoming files.
3. Visa creates 0220 advice and forwards to recipient issuer.
4. Recipient issuer receives 0220 advice and creates 0230 message.
5. Recipient issuer creates 0230 response and sends to Visa.
6. Visa receives the 0230 response confirming receipt and processing of 0230 advice.

Credit Adjustment: Dual Message Originating Entity to Dual Message/ BASE II Recipient Issuer

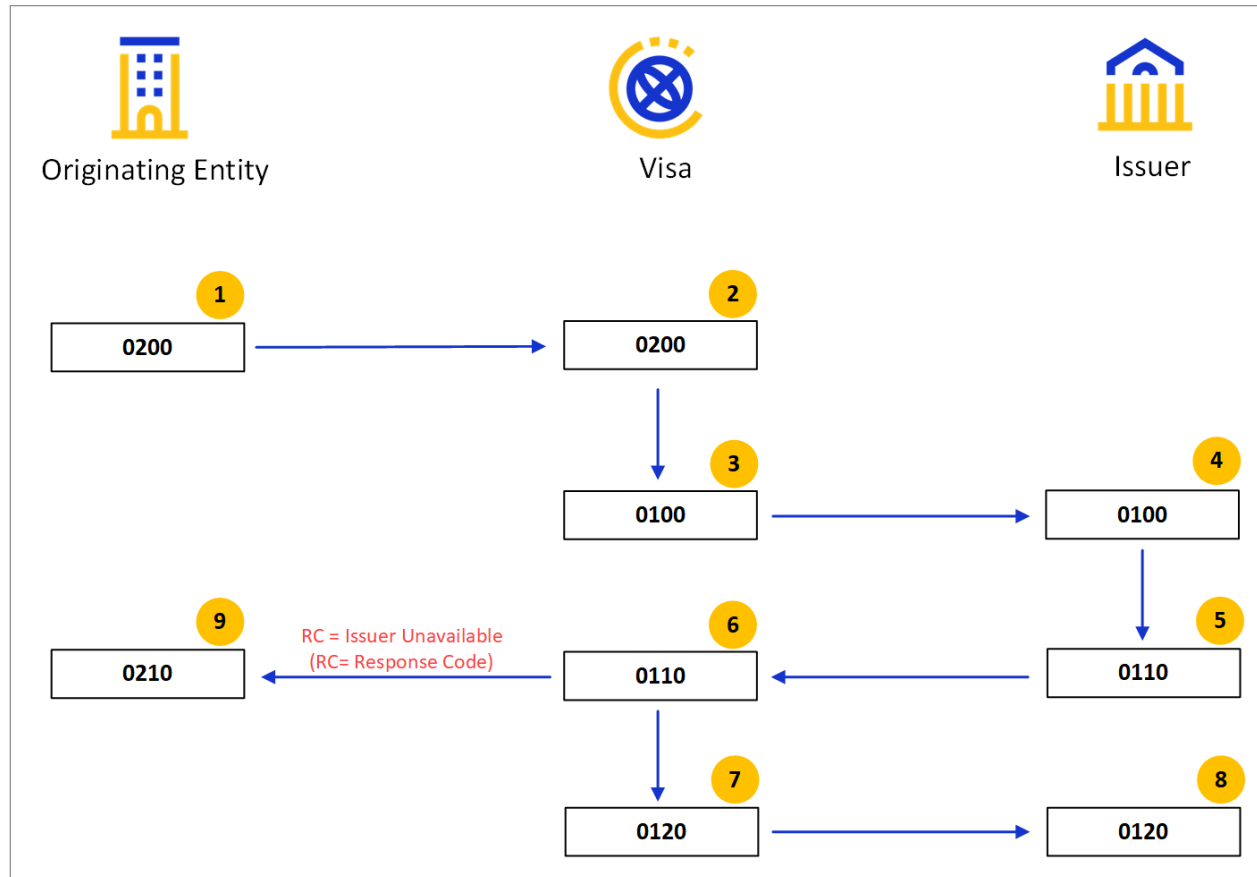

1. Originating entity submits TC025 TCQ01 outgoing to Visa to request refund of money to sender's account.
2. Visa receives the TC25 TCQ01 and forwards to the recipient issuer for processing.
3. Recipient issuer processes the TC25 TCQ 01 and restores balance to cardholder's account.

Issuer Response Delay – SMS Originating Entity to SMS Issuer (Results in Decline)

1. Originating entity submits 0200 message to VisaNet.
2. VisaNet forwards the 0200 message to issuer.
3. Issuer receives 0200 message, processes, and approves it.
4. The issuer creates the 0210 response and sends it back to VisaNet.
5. VisaNet receives the 0210 response from the issuer, but the response took too long. VisaNet sends the issuer a timeout advice and sends the issuer a reject.
6. The issuer receives the 0220 advice and reject message.
7. VisaNet sends a 0210 response to the originating entity with a response code (RC) value that indicates that the recipient issuer is unavailable (response code 91).
8. The originating entity receives 0210 response and is notified that the transaction **cannot be successfully completed** (Declined).

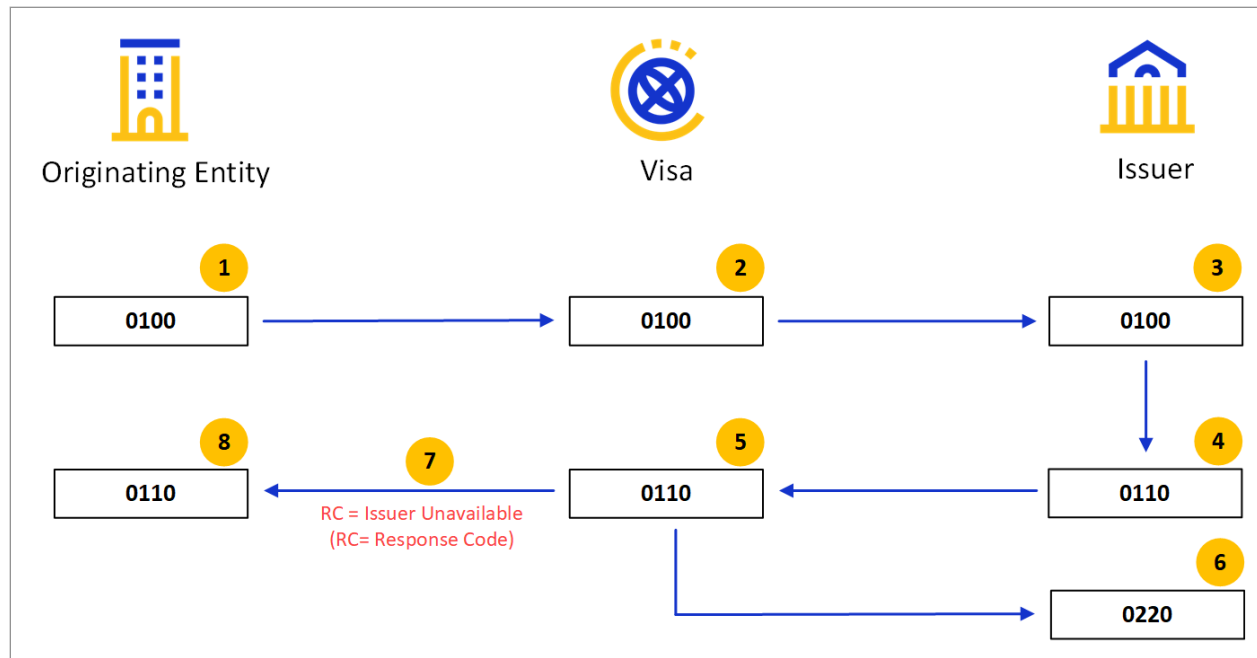

Issuer Response Delay – SMS Originating Entity to Dual Message/ BASE II Issuer (Results in Decline)

1. Originating entity submits 0200 message to VisaNet.
2. VisaNet receives the 0200 message from originating entity.
3. VisaNet converts 0200 message into a 0100 message and sends it to the issuer.
4. Issuer receives 0100 message, processes, and approves it.
5. The issuer creates a 0110 response and sends to VisaNet.
6. VisaNet receives a 0110 response, but the response took too long.
7. VisaNet sends the issuer a 0120 timeout advice indicating that the response was received outside of the response window.

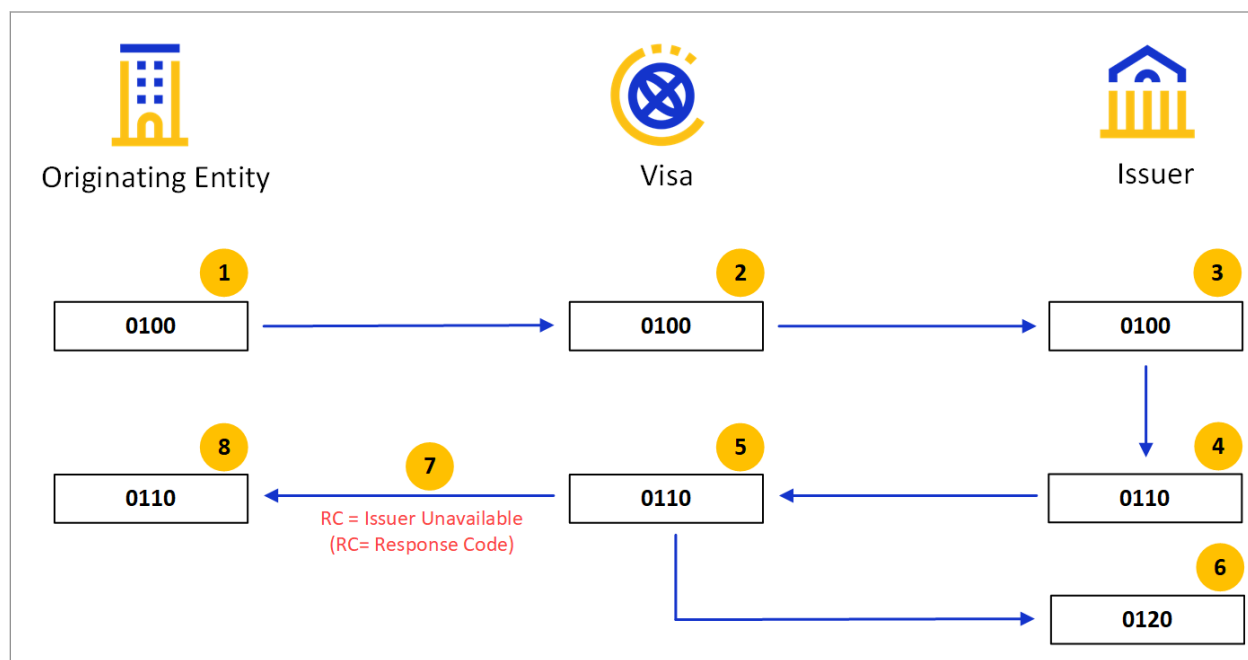

8. Issuer receives the advice.
9. VisaNet creates a 0210 response, includes a response code indicating that the issuer is unavailable (response code 91) and forwards it to the originating entity. The originating entity receives 0210 response and is notified that the transaction **cannot be successfully completed** (Declined).

Issuer Response Delay – Dual Message Originating Entity to SMS Issuer (Results in Decline)

1. Originating entity submits 0100 message to VisaNet.
2. VisaNet forwards the 0100 message to issuer.
3. issuer receives 0100 message, processes, and approves it.
4. The issuer creates the 0110 response and sends it back to VisaNet.
5. VisaNet receives the 0110 response from the issuer, but the response took too long. VisaNet sends the issuer a timeout advice and sends the issuer a reject.
6. The issuer receives the 0220 advice and reject.
7. VisaNet sends a 0110 response to the originating entity with a response code (RC) value indicating that the issuer is unavailable (response code 91).
8. The originating entity receives 0110 response and is notified that the transaction **cannot be successfully completed** (Declined).

Issuer Response Delay – Dual Message Originating Entity to Dual Message/BASE II Issuer (Results in Decline)

1. Originating entity submits 0100 message to VisaNet.
2. VisaNet forwards the 0100 message to issuer.
3. issuer receives 0100 message, processes, and approves it.
4. The issuer creates the 0110 response and sends it back to VisaNet.
5. VisaNet receives the 0110 response from the issuer, but the response took too long. VisaNet sends the issuer a timeout advice and sends the issuer a reject.
6. The issuer receives the 0120 advice and reject message.
7. VisaNet sends the 0110 response to the originating entity with a response code (RC) value that indicates that the issuer is unavailable (response code 91).
8. The originating entity receives 0110 response and is notified that the transaction **cannot be successfully completed** (Declined).

Appendix G

BAI Acronyms

This appendix contains a list of BAI acronyms.

Business Application Identifier (BAI) Acronyms

This table lists acronyms related to the Business Application Identifier.

Table 21: Business Application Identifier (BAI) Acronyms (Permitted BAIs for AFTs in Bold) (1 of 2)

Acronyms	Meaning
AA	Account-to-Account
BB	Supplier Payments
BI	Bank-Initiated P2P Money Transfer
BP	Non-Card Bill Pay/Bill Pay
CD	Cash Deposit
CP	Credit card Bill Payment

**Table 21: Business Application Identifier (BAI) Acronyms (Permitted BAIs for AFTs in Bold)
(2 of 2)**

Acronyms	Meaning
FD	Funds Disbursement
FT	Funds Transfer
GD	Government Disbursement
GP	Gambling payout (non-online gambling)
LA	Liquid Assets
LO	Loyalty credits and rebates
MD	Merchant Settlement
MI	Merchant Initiated Faster Refund
OG	Online Gambling Payout
PD	Payroll and pension disbursement
PP	Person-to-Person or Peer-to-Peer
TU	Top-Up (Prepaid Load)
WT	Wallet Transfer (for Staged Digital Wallets – wallets with a proprietary merchant acceptance network)

Appendix H

Visa Core Rules and Visa Product and Service Rules – Reference

This appendix provides a reference table of Visa Rules and Requirements that apply to the Account Funding Transaction (AFT) types. Use the table as a quick reference to understand the various Visa Rules and Requirements referenced or implied in this guide that apply to AFT and OCT transaction types. This is not a complete list of the rules. For access to the full rule set, refer to the Visa Rules, *Visa Core Rules and Visa Product and Service Rules*.

Important: In the event of any conflict between the material (this appendix), any document referenced herein, or any communications concerning the material, and any content in the Visa Rules, the **Visa Rules shall govern and control**. Visa may amend, modify, delete, or otherwise change the Visa Rules in its sole discretion at any time. Changes will be reflected in the next edition of this appendix.

Note: The section or table headings that are referred to in this appendix are as they appear in the last published version of the Visa Rules document or any other cited reference document. If any changes are made to the section and table headings in the Visa Rules or the reference document, the changes will be reflected in the next edition of this appendix. See *Visa Core Rules and Visa Product and Service Rules* on Visa Access (www.visaonline.com).

Table 22: Visa Rules (1 of 8)

Rule ID#	Rule
0031126	Compliance with Sanctions Screening In addition to the requirements set out in Section Compliance with Laws and Regulations, each Member must screen each of its Cardholders and Merchants that access or utilize the Visa network, or use Visa products and services, against the OFAC Specially Designated Nationals and Blocked Persons List (SDN List), as well as all other applicable sanctions lists. Each Member must perform sanctions screening at the time of onboarding, issuance or contracting, and on a regular, ongoing basis thereafter. Upon identification of a true match against the OFAC SDN List or other applicable sanctions list, a Member must do all of the following: • Take appropriate and timely measures to disable the Cardholder's or Merchant's use of the Visa network and access to Visa's products and services • Notify Visa in a timely manner of all such matches against the OFAC SDN List • Provide to Visa the detailed remediation measures taken by the Member against each Cardholder or Merchant following the identification of such matches A Member must not issue, acquire, or conduct any activity involving the use of the Visa network or Visa's products or services in any geography in which its government is subject to applicable comprehensive sanctions, including those identified by OFAC, nor must a Member issue to or acquire from entities that are owned or controlled by a government that has been targeted as part of the OFAC SDN List.
0002890	An Account Funding Transaction must be used for: • Reloading Prepaid Cards, as specified in Section, Prepaid Card Purchase and Reload Processing Requirements. • In the Card-Absent Environment¹, all of the following: – Funding person-to-person money transfers, including account-to-account money transfers – Funding disbursements of funds from Visa Corporate Cards, Visa Business Debit Cards, or Visa Business Check Cards (for example: payroll) – Funding Stored Value Digital Wallets, and Staged Digital Wallets where the Transaction is not Back-to-Back Funding – Purchase of Liquid and Cryptocurrency Assets An Account Funding Transaction must do all of the following: • Be processed with an Account Funding Transaction indicator and the correct business application identifier (BAI) in the Authorization Request and Clearing Record. • Not represent any of the following: – Payment for goods or services (except Visa Scan to Pay program Transactions) – Funding of a Merchant account – Debt repayment • Comply with the Visa Direct Account Funding Transaction (AFT) Processing Guide. ¹ In the Europe Region: For all Merchants.

Table 22: Visa Rules (2 of 8)

Rule ID#	Rule
0030883 (Row 1 of 2)	Effective through 11 April 2025 For a Transaction involving cryptocurrency, an Acquirer must include the following in the Authorization Request and Clearing Record: • For the purchase of cryptocurrency in a Card-Absent Environment with an Account Funding Transaction: MCC 4829, 6012, 6540, or 6051 (as applicable), and special condition indicator 7 in the Authorization Request and Clearing Record. • For the purchase of cryptocurrency in a Card-Present Environment use the Quasi-Cash purchase indicator and with the appropriate MCC and the special condition indicator 7 in the Authorization Request and Clearing Record. • For the purchase of goods or services that involves a conversion from fiat currency to cryptocurrency accepted by the Merchant or retailer (including via Back-to-Back Funding): the MCC that describes the primary business of the Merchant/retailer and special condition indicator 7. • For an Original Credit Transaction used to disburse funds from a Staged Digital Wallet or Stored Value Digital Wallet after the sale or conversion of cryptocurrency: MCC 4829, special condition indicator 7, and the applicable business application identifier (BAI). Effective 12 April 2025 For a Transaction involving non-fiat currency (for example: cryptocurrency) or non-fungible tokens (NFT), an Acquirer must include the following in the Authorization Request and Clearing Record as specified in Table, Non-Fiat Currency and Non-Fungible Token (NFT) Transaction Coding.
0030883 (Row 2 of 2)	Effective 12 April 2025 For the purpose of the Visa Rules, Visa defines non-fiat currencies (for example: cryptocurrency) as follows: • Central bank digital currency (CBDC): digital currency issued by a central bank, reserve bank or other national monetary authority. • Tokenized deposit: equivalent to existing deposits, held by a licensed depository institution, recorded on a blockchain. • Stablecoin (fiat-backed): digital assets that maintain financial reserves in a fiat currency in the form of cash, government securities, repurchase agreements that are collateralized fully with government securities, and/or other very liquid recognized liabilities of a central bank or reserve bank, held by a licensed financial institution, recorded on a blockchain. • Blockchain native token/coin: a digital currency inherent on a blockchain required for performing on-chain transactions such as for payment of fees, that is neither CBDC, a tokenized deposit or stablecoin (fiat-backed). Effective 12 April 2025 Any other type of non-fiat currency must be identified with the special condition indicator 7. Effective 12 April 2025 For the purpose of the Visa Rules, Visa defines a non-fungible token (NFT) as a unique digital identifier that is recorded on a blockchain, and is used to certify ownership and authenticity of an asset. It cannot be copied, substituted, or subdivided. The ownership of an NFT is recorded in the blockchain and can be transferred by the owner, allowing NFTs to be sold and traded.

Table 22: Visa Rules (3 of 8)

Rule ID#	Rule
0030906	An Issuer must post an Account Funding Transaction credit adjustment, as follows: • In the AP Region, Canada Region, CEMEA Region, LAC Region, US Region: Within 2 business days after receipt of the Acquirer credit adjustment advice. • In the Europe Region: The next business day after receipt of the Acquirer credit adjustment advice.
0030973	In the Canada Region, Europe Region^{1, 2} US Region:, an Acquirer of a Card-Absent Environment Transaction, an Account Funding Transaction, or an Original Credit Transaction whose Merchant chooses to use Account Name Inquiry (ANI) must do all of the following: • Send and receive ANI fields and values • Process all ANI response codes correctly • Support ANI itself, or use VisaNet APIs • Not refuse a Cardholder based solely on the absence of an ANI result for Card products where ANI is not supported ¹ In the Europe Region (United Kingdom), effective 19 October 2024 Europe Region (Austria, Belgium, Denmark, Estonia, Finland, France, Germany, Iceland, Israel, Latvia, Liechtenstein, Lithuania, Luxembourg, Monaco, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Türkiye), and effective 12 April 2025 Europe Region (Andorra, Bulgaria, Croatia, Cyprus, Czech Republic, Greece, Hungary, Republic of Ireland, Italy, Malta, Poland, Romania, San Marino, Slovakia, Slovenia, Vatican City). ² In the Europe Region (Bear Island, Channel Islands, Faroe Islands, Gibraltar, Greenland, Isle of Man): This does not apply.

Table 22: Visa Rules (4 of 8)

Rule ID#	Rule
0003356	An Acquirer must have a Merchant Agreement with each of its Merchants to accept Visa Cards and, if applicable, Visa Electron Cards. A Payment Facilitator must have a Merchant Agreement with each of its Sponsored Merchants. The Merchant Agreement must include language that requires the Merchant to do all of the following: • Perform its obligations under the Merchant Agreement in compliance with applicable laws and regulations. • Comply with the Visa Rules regarding use of the Visa-Owned Marks, Visa acceptance, risk management, Transaction processing, and any Visa products, programs, or services in which the Merchant is required to, or chooses to, participate. • Not knowingly submit any Transaction that is illegal or that the Merchant should have known was illegal. • Include the right of Visa to limit or terminate the Acquirer's agreement with the Merchant or the Payment Facilitator's agreement with the Sponsored Merchant. • Include the provisions specified in Section 3.1.1 of the <i>Visa Integrity Risk Program Guide</i>, if the Merchant is an adult content provider assigned with MCC 5967 (Adult Content and Services). An Acquirer and a Payment Facilitator may accept Transactions only from an entity with which it has a valid Merchant Agreement.
0000385	Each Member must comply with all applicable laws, regulations, and other legal requirements including, but not limited to, laws and regulations regarding banking, financial institutions, payment systems, foreign currency exchange, money transmission, anti-money laundering, anti-terrorist financing, sanctions (such as those administered by the US Department of the Treasury's Office of Foreign Assets Control or the Australian Government's Department of Foreign Affairs and Trade), privacy and security, consumer protection, and trademarks and copyright for each country in which the Member operates. Each Member is also responsible for ensuring that any of its affiliates, subsidiaries, parent companies, third-party agents, Merchants, and any other of its appointed agents participating in Visa's system comply with all applicable laws, regulations, and other legal requirements applicable to each country in which its affiliates, subsidiaries, parent companies, third party agents, Merchants, and other appointed agents operate. Each Member is encouraged to consult with its own legal counsel to ensure that it is in full compliance with all applicable laws, regulations, and other legal requirements in each country in which the Member operates. A Transaction must be legal in both the Cardholder's jurisdiction and the Merchant Outlet's jurisdiction. In the event of any conflict between the Visa Rules and any applicable laws or regulations, the requirements of the laws or regulations govern.

Table 22: Visa Rules (5 of 8)

Rule ID#	Rule
0026435 (Row 1 of 2)	If an Acquirer contracts with a Payment Facilitator, it must comply with all of the following: • Be in good standing in all Visa risk management programs • Be financially sound (as determined by Visa) • Ensure that its registration of its Payment Facilitator, including the attestation of due diligence review, is confirmed by Visa before submitting Transactions on behalf of the Payment Facilitator or its Sponsored Merchant. If the Payment Facilitator is considered to be high-integrity risk, it must be registered as a High-Integrity Risk Payment Facilitator even if that Payment Facilitator has previously been registered with Visa. • All of the following: – Obtain from Visa a unique Payment Facilitator identifier¹ that must be assigned by the Acquirer to each Payment Facilitator to use in Transaction processing – Ensure the Payment Facilitator determines and assigns a unique identifier¹ to each Sponsored Merchant – Ensure that every Transaction contains the Payment Facilitator identifier¹ and the Sponsored Merchant identifier, as follows: — In an Authorization record, both the Payment Facilitator identifier and the Sponsored Merchant identifier — In a Clearing Record, only the Payment Facilitator identifier • Effective 20 July 2024 through 31 August 2024 Assign to each Payment Facilitator when processing Card-Absent Environment Transactions, a unique Card acceptor identification (CAID) number, as specified in Section, Acquirer Assignment of Unique Card Acceptor Identification (CAID) Number . 1: In the LAC Region (Brazil): An Acquirer must either send the tax identification and Merchant legal name or the Payment Facilitator identifier and the Sponsored Merchant identifier.

Table 22: Visa Rules (6 of 8)

Rule ID#	Rule
0026435 (Row 2 of 2)	• If the Acquirer settles the proceeds of Transactions submitted by the Payment Facilitator on behalf of its Sponsored Merchants, pay the proceeds into a bank account that is in the jurisdiction of the Acquirer. • Not allow its Payment Facilitator to provide payment services to outbound telemarketers². • Upon Visa request, submit to Visa activity reporting on its Payment Facilitator's Sponsored Merchants that includes all of the following for each Sponsored Merchant: – Sponsored Merchant name as it appears in the Merchant name field – Sponsored Merchant DBA name – Payment Facilitator name – Monthly Transaction count and amount – Monthly Dispute count and amount • Ensure that its Sponsored Merchants and the Sponsored Merchants of its Payment Facilitator follow all Merchant-related rules. • Ensure that its Payment Facilitators provide customer service directly or through its Sponsored Merchants. • Ensure that its Payment Facilitators have access to the results of any positive matches on the Visa Merchant Screening Service (VMSS). • In addition, all of the following: – Include in its contract with the Payment Facilitator a clear statement of both the jurisdiction within which the Payment Facilitator may contract with Sponsored Merchants and the category (or categories) of Sponsored Merchants with which it may contract. – When a Cardholder can access a Payment Facilitator's website and/or application directly, ensure that its Payment Facilitator both: — Provides customer service and after-sales support, either directly or via its Sponsored Merchants, in all languages in which services are offered. — Clearly display customer service contact information or trading office contact information on its website and/or application. – Ensure that its Payment Facilitator reports Sponsored Merchant and Transaction Information to the Acquirer and, upon request, to Visa. – Ensure that its Payment Facilitator uses the appropriate MCC for each Sponsored Merchant and other required indicators to identify Merchant or Transaction type. In the CEMEA Region: Ensure and obtain confirmation from Visa that its Payment Facilitator entered into an agreement with Visa and is approved by Visa, as specified in the <i>Payment Facilitator Certification Guide</i>. 2: In the LAC Region (Brazil): This does not apply.

Table 22: Visa Rules (7 of 8)

Rule ID#	Rule
0002228	A Member must: • Maintain all materials or records in any form that contains account or Transaction Information in a safe and secure manner with access limited to authorized personnel, as specified in the <i>Payment Card Industry Data Security Standard (PCI DSS)</i>. • Ensure that agreements and contracts with agents and Merchants clearly establish their responsibilities to meet Visa standards, the liabilities for failure to meet the standards, and the requirement to allow for inspections by the Member or Visa. • Ensure that all agents and Merchants with access to account or Transaction Information comply with the <i>Payment Card Industry Data Security Standard (PCI DSS)</i>. • Ensure that all agents and Merchants do not store any of the following subsequent to Authorization: – Full contents of any data taken from the Magnetic Stripe (on a Card, in a Chip, or elsewhere) – Card Verification Value 2 – PIN or the encrypted PIN block – Token Authentication Verification Value (TAVV) – Dynamic Token Verification Value (DTVV) – Visa Secure Cardholder Authentication Verification Value (CAVV) • Comply with, and ensure that all agents and Merchants use Payment Applications that comply with, the <i>Payment Card Industry (PCI) Software Security Framework (SSF) Standards</i> • Upon request, certify to Visa that agents and Merchants are in compliance with the <i>Payment Card Industry Data Security Standard (PCI DSS)</i>. • Comply with, and ensure that its Merchants, agents, and other third parties with access to account or Transaction Information comply with, the requirements of the Account Information Security Program. The Member must also ensure that its Merchants both: – Implement and maintain all Account Information Security Program requirements. – If using a Third Party Agent, ensure that the Third Party Agent implements and maintains all of the security requirements specified in the Account Information Security Program.

Table 22: Visa Rules (8 of 8)

Rule ID#	Rule
0030622	In the Europe Region: A Member must comply with the Visa Delegated Authentication Implementation Guide and the SCA Related Requirements for Electronic Commerce Transactions – European Economic Area, United Kingdom and CEMEA Countries Subject to SCA Requirements. A Member acknowledges that, regardless of any participation in the Delegated Authentication Program, all applicable regulatory obligations relating to the provision of strong customer authentication remain with that Member. In the Europe Region: A Member must ensure that Electronic Commerce Transactions initiated on Cards issued in the European Economic Area (EEA) and United Kingdom are subject to strong customer authentication in line with the Payment Services Directive 2 (EU) 2015/2366.
0029560	Unless otherwise specified in the Visa Rules or agreed in a separate written agreement, Visa has no obligation to provide replacements, updates, upgrades, modifications, or any other support and maintenance for any Visa products or services. In the event any updates are made available to Members or if Visa requires a Member to make system changes, the Member must do all of the following: • Respond to and implement, as specified by Visa, the updates or system changes required by Visa. • Ensure that its agreements with Cardholders, Merchants, Visa-approved manufacturers, Third-Party Personalizers, and agents allow for the implementation of updates or system changes required by Visa. • Include in its agreements with Cardholders, Merchants, Visa-approved manufacturers, Third-Party Personalizers, and agents the Member's obligation to inform the contracted entity, in a timely manner, of any major updates or system changes implemented by Visa or the Member. The updates shall be deemed part of the Visa products or services and subject to the applicable terms and conditions under the Visa Rules.
0024568	A Domestic Transaction is A Transaction where the Issuer of the Card used is located in the Transaction Country.

Table 23: AFT Requirements (1 of 2)

AFT ID#	Requirement
001	When an AFT is used independently to fund another Visa or non-Visa account, AFTs must only be used to fund an account belonging to the same individual or entity holding the Visa account from which the funds have been pulled.
002	Acquirers, service providers, and merchants must use an appropriate Business Application Identifier (BAI) and a Merchant Category Code (MCC) in the OCT authorization request message and clearing and settlement message to correctly identify the type of OCT and merchant or business entity originating the transaction. Both the BAI and the MCC enable the issuer to recognize the underlying business use of the OCT. The MCC should represent the merchant, acquirer, or service provider/payment facilitator of the OCT transaction. Acquirers are instructed at the time of program approval which BAI they are required to use for their OCTs. Note: Effective 16 April 2023, Visa will require the merchant name field in a stand-alone tipping transaction, which must contain the word, "tip" as a requirement for tipping use-cases. See Table: BAI and MCC Usage for requirements.
003	Acquirers should also be aware that VisaNet implements maximum velocity limits for OCTs by count and amount. These are the maximum number or dollar amounts of OCTs that a single recipient can receive in any 1, 7, or 30-day period. Any OCTs in excess of these amounts will be declined by VisaNet. Acquirers, service providers, and merchants should ensure that they are not allowing senders to send OCTs to single recipient accounts in excess of the VisaNet limits. When recipient issuers have opted for VisaNet to forward them the OCT when a velocity limit has been exceeded, they must be prepared to receive the OCT with Field 48, Usage 37, position 11, and provide the appropriate approval or decline. When the velocity limit exceeds the VisaNet Maximum Velocity Limits it must be decline. This field contains velocity-limit-related information that issuers can use in making authorization decisions, including: • 1 = 1-day count or amount exceeded • 2 = 7-day count or amount exceeded • 3 = 30-day count or amount exceeded
004	Where the AFT service is offered to consumers over the Internet banking a remote channel, an AFT must be coded as an electronic commerce transaction with the following coding: Field 3 (processing code) = 10, Field 18 = 6012, Field 22 = 0100, Field 25 = 59. The AFTs must be fully authenticated with ECI Field 63.6, value 5.
005	Visa Brand Requirements – Acquirers, service providers, and merchants are required to comply with the Visa Direct: User Experience Brand Requirements for the usage of the Visa brand into the user experience for online and mobile applications supporting push payment services. The requirements are available on Visa Access.

Table 23: AFT Requirements (2 of 2)

AFT ID#	Requirement
006	All Visa Direct programs must be approved by Visa prior to program launch. Financial institutions must obtain approval by completing the Visa Direct Program Information Form (PIF).
007	Acquirers and their agents must obtain all appropriate licenses, registrations, notifications, authorizations, and approvals necessary to engage in Visa Direct services, including, but not limited to, those required to engage in high-risk programs, foreign exchange, and cross-border transactions. For Visa Direct programs, there must be a properly licensed Visa client with RIGHTS TO ACQUIRE. Each Region needs to be aware of the requirements in their markets related to Visa Acquiring rights. Note: For specific information on Visa Direct licensing requirements in CEMEA, refer to CEMEA-Specific requirements for Money Transfer.
008	When issuers set up to receive and process 0100 or 0200 OCTs online are not available at the time of the transaction, VisaNet will decline the OCTs on their behalf (VisaNet never approves the OCT on the issuer's behalf). Stand-in processing (STIP) approvals are not allowed on OCTs. Issuers and Issuer Processors must be configured to STIP decline an OCT request with the response code 91. In Europe, when issuers are not set up to receive and process the 0100 or 0200 OCTs online, issuers must request Visa to process the OCT on their behalf. This is not applicable to Fast Funds transactions.

Glossary

3-D Secure (3DS)	3-D Secure is the name of a security protocol used for online credit and debit card transactions. The name refers to the three domains governed by the protocol: the merchant/acquirer domain, the issuer domain, and the interoperability domain. The interoperability domain refers to the underlying infrastructure that supports the payment card or scheme.
Access Channel	A channel, such as an ATM or a mobile app, provided by an originating entity to offer AFT program services to its customers.
Account Funding Transaction (AFT)	A Transaction where funds are pulled from a Visa account and are subsequently used to fund another Visa or non-Visa account. Required when loading a prepaid card account, moving funds into another financial account, funding a person-to-person Money Transfer, funding payroll disbursements, or adding value to a digital wallet. An AFT is not intended for: • payment of goods and services • funding of a merchant account • debt repayment
Account Name Inquiry (ANI)	Account Name Inquiry (ANI) is a functionality offered by Visa that enables an account cardholder's name to be checked against the name held by their issuing bank. The check is carried out by Visa or the issuing bank in advance of a transaction at the time of customer onboarding, just before a transaction, periodically, or on an ad hoc basis. Verifying the name provided by a cardholder can help reduce exposure to fraud and scams in many types of payment flows, such as Card-Not-Present transactions, but in particular in push and pull transactions (OCTs/AFTs).
Account-to-Account (AA)	An AFT in which the funds will be transferred to another of the cardholder's own accounts at the same or a different financial institution (Me-to-Me money transfer transaction).
Acquirer	In relation to AFTs, a licensed Visa client that originates transactions or that sponsors a third-party agent to originate transactions. Acquirers are responsible and liable for all AFT programs that they operate or sponsor.

Account Verification	A message sent by an acquirer to the issuer, using a currency unit of zero, for confirmation that a transaction can be completed using the Card.
Address Verification Service (AVS)	A VisaNet service through which a merchant verifies a cardholder's billing address. This service is available in the U.S., Canada, and Europe regions only.
AFT Program	The AFT services and access channels that an originating entity offers to its Visa cardholders.
Agent	See <i>Third-Party Agent</i> .
Application Programming Interface (API)	See <i>Visa Direct Application Programming Interfaces (APIs)</i> .
Authorization	Approving or declining a sales transaction before a purchase is finalized or cash is disbursed. Issuers (or third-party processors acting on their behalf), or VisaNet, when standing in for issuers, perform authorization.
Back-to-Back Funding	A payment flow that automatically transfers value via a funding transaction or transaction that is directly connected to a specific purchase. In Back-to-Back Funding: • Two separate accounts are involved. One account is used to make the purchase, and the other automatically funds or reimburses that account. • Both accounts are held by the same person or corporate entity, and at least one account is a Visa account. In Back-to-Back Funding, either: • The funding or reimbursement amount exactly matches the amount of the purchase. • The purchase is partially funded by an existing balance, and the funding or reimbursement transaction or transaction amount equals the remainder of the purchase amount. Back-to-Back Funding does not include: • An Unscheduled Credential-on-File transaction for a fixed amount to reload the account. • The funding of a card that accesses funds on deposit at an organization other than that of the issuer of the card ("decoupled debit").

Business Application Identifier (BAI)	A data element in the AFT message that identifies the business application for which funds are being pulled from a Visa account. Values are: • AA (Account-to-Account Money Transfer) • BI (Financial institution-offered P2P Money Transfer) • FT (Funds Transfer) • LA (Liquid Assets Money Transfer) • MP (Merchant Payment for Scan to Pay programs only) • PP (Person-to-Person Money Transfer) • TU (Prepaid Card top-up) • WT (Adding value to a Staged Digital Wallet)
Card-on-File (COF)	This is most applicable to merchants who store user credentials, including the PAN.
Cardholder-Initiated Transactions	A Cardholder-Initiated Transaction is any transaction where the cardholder actively participates in the transaction. This can originate from a terminal in-store or through an online checkout experience, and the transaction can be actively validated through cardholder verification or authentication methods.
Card Not Present	An environment in which a transaction is completed under both of these conditions: • Cardholder is not present • Card is not present
Card Present	An environment in which a transaction is completed under all of these conditions: • Card is present • Cardholder is present at the merchant outlet • Transaction is completed by either: – A representative of the merchant or acquirer – The cardholder directly at an unattended cardholder-activated terminal
Cardholder Account Verification Value (CAVV)	The Cardholder Authentication Verification Value (CAVV) is a cryptographic value the issuer or V.I.P. generates and sends to the merchant during the authentication process in a Visa Secure transaction.
Card Verification Method (CVM)	Instructions encoded within a chip that define how the authenticity of a cardholder's identity is to be verified.
Card Verification Value 2 (CVV2)	A card verification tool used by issuers to validate that a genuine payment card is present at the cardholder location during a transaction.
Consumer Device Cardholder Verification Method (CDCVM)	A verification method, which enables cardholders performing a contactless transaction to verify themselves using their mobile phone or other consumer devices.

Conversion Affiliate	An entity for which Visa Payment Services are provided by a Ramp Provider to convert AFT based transactions from a fiat currency to a non-fiat currency. For information on Ramp Provider program requirements, contact your local Visa representative.
Digital Authentication Framework (DAF)	DAF builds upon Visa Secure for authentication and Visa Token Service for network tokenization. This framework is designed to elevate the performance of merchants' for Card Not Present transactions. Merchants and token requestors that meet the DAF criteria (as set by Visa) will be allocated ECI value of 05 on qualified authenticated transactions and will receive fraud dispute protection (as per Visa rules) on those transactions.
Digital Wallet	An electronic device that allows an individual to make electronic commerce transactions, such as purchasing an item online with a computer or using a smartphone to purchase something at a store.
E-Commerce (ECOM)	A platform that allows sales and purchases of goods and services over an electronic network – typically the internet.
Electronic Commerce Indicator (ECI)	Numeric code specifying the type of mail order, phone order, or electronic commerce transaction.
European Economic Area (EEA)	European Economic Area (EEA), which includes the member states of the European Union, and Iceland, Liechtenstein, and Norway. Countries/member states include Austria, Belgium, Bulgaria, Croatia, Republic of Cyprus, Czech Republic, Denmark, Estonia, Finland, France (including French Guiana, Guadeloupe, Martinique, Mayotte, Reunion, Saint-Martin, and Saint-Barthelemy), Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, in addition to Iceland, Liechtenstein, and Norway.
Facilitator	See <i>third-party agent</i>.
Fast Funds	A service that requires a participating recipient issuer to make funds available to a cardholder within 30 minutes of receipt and approval of an incoming Original Credit Transaction initiated as an Online Financial Transaction.
Financial Institution–Offered P2P Money Transfer	A P2P Money Transfer offered by a financial institution through their own mobile or online banking application.
Foreign Exchange Rate API	An API that allows the originating entity to look up the current day's foreign exchange rate using Visa rates and, using this rate, to convert the amount in the originating entity's currency to the amount in the recipient's currency.
Funds Transfer API	The financial API used to initiate an AFT and its associated reversal.

Host Card Emulation (HCE)	HCE enables mobile applications running on supported operating systems with the ability to offer payment card and access card solutions independently of third parties while leveraging cryptographic processes traditionally used by hardware-based secure elements without the need for a physical secure element.
ISO 8583 Message	International Organization for Standardization financial transaction card-originated message specifications for systems that exchange electronic transactions made by cardholders using payment cards. Basis of Visa's V.I.P. message format (BASE I and SMS).
Issuer	The Visa client financial institution that has entered into a contractual relationship with a cardholder for the issuance of one or more Visa card products. Issuers receive authorization requests for AFTs and debit the cardholder's account accordingly.
Liquid and Cryptocurrency Assets	Items purchased in a card-not-present environment that are considered convertible to cash, such as: • Cryptocurrency • Foreign currency
Merchant	A merchant is defined as an entity that enters into an agreement with an acquirer for the acceptance of cards for purposes of originating payment transactions under the Visa-Owned Marks. In the context of an AFT four-party model, a merchant is an entity requesting the initiation of AFTs only for themselves and their customers. Merchants must be sponsored directly by an acquirer or on boarded through an acquirer-sponsored service provider.
Merchant Category Code (MCC)	A code designating the principal trade, profession, or line of business in which a merchant is engaged.
Merchant-Initiated Transaction	A transaction related to a previous Cardholder-Initiated Transaction but conducted without the cardholder's active participation. As a result, the merchant cannot perform any active cardholder authentication, nor can the issuers expect authentication to occur.
Money Transfer	The ability for an individual to send funds from their Visa account to a different, non-merchant account.
Non-Merchant Account	A financial account that is eligible to receive a funds transfer initiated by an AFT.
On-Us Transaction	A Domestic Transaction where an individual Member, represented by one Visa Business ID (BID), both: • Holds an issuing license and has issued the card used in the transaction • Holds an acquiring license and acquired the corresponding volume

Original Credit Transaction (OCT)	A VisaNet transaction that can be used to send funds to an eligible Visa account. Visa acquirers can use the OCT to enable services such as Money Transfers, funds disbursements, prepaid loads, and credit card bill payments.
Origination Program	See <i>AFT program</i> .
Originator	Term no longer used. Replaced with acquirer, service provider, merchant and/or originating entity as applicable. <i>Formerly: An entity (a Visa acquirer or a sponsored third-party agent) that generates AFTs as a service to its customers.</i>
Primary Account Number (PAN)	The 16 to 19-digit number assigned to the payment account. Also known as the Card Number.
Partial Authorization	An approval response for an amount less than the amount requested by a merchant for a transaction.
Payment Account Attributes Inquiry API	An API that allows the merchant, service provider or acquirer to obtain information about the sender's account and to determine whether domestic and cross-border AFT eligibility is available for the sender's or recipient's non-Visa accounts.
Payment Account Validation (PAV) API	An API that allows the merchant, service provider or acquirer to perform CVV2 and/or address verification on the sender's account.
Person-to-Person (PP)	Money Transfer in which AFT funds will be sent to another individual's non-merchant account.
Prepaid Load (TU)	An AFT in which the funds will be used to add value to a prepaid card.
Purchase Transaction	A VisaNet transaction using Transaction Code (TC) 05 or Processing code of 00.
Push Payment Gateway Service (PPGS)	(U.S. region only) Allows originating entities in the U.S. to send AFTs to Visa for routing to multiple U.S. debit networks.
Ramp Provider	An acquirer sponsored third-party agent that enables AFT-based cryptocurrency conversion services from a fiat currency to a non-fiat currency on behalf of an acquirer. For information on Ramp Provider program requirements, contact your local Visa representative.
Real Time Visa Account Updater (VAU)	Visa Account Updater (VAU) is a service that facilitates exchanging updated account information between participating merchants and Visa card issuers and thus encouraging customer satisfaction, retention, and loyalty. Real Time VAU is a feature that eliminates the multi-step process to update account information.

Receiving Account	The account that will receive the funds that have been pulled by an AFT.
Recipient	The person who owns the account that receives the funds pulled by an AFT.
Recipient Issuer	The issuer of the card account that receives the funds pulled by an AFT.
Recurring Transaction	Effective 12 April 2025: A Transaction, in a series of Transactions that use a Stored Credential and that are processed at fixed, regular intervals (not to exceed one year between Transactions), representing Cardholder agreement for the Merchant to initiate future Transactions for the purchase of goods or services or for Account Funding Transactions, provided at regular intervals.
Sender	A customer of the merchant or service provider (consumer or business) who initiates the transfer of funds (pull) from their Visa card account to fund a different, non-merchant account.
Sender's Issuer	The Visa client financial institution that issued the Visa card used to fund an AFT. The issuer authorizes the transaction and debits the sender's Visa account.
Service Provider	An acquirer sponsored third-party entity that enables AFT-based services on behalf of an acquirer or offers AFT-based services to merchants.
Staged Digital Wallet (SDW)	A wallet where funds can be added and stored to a digital account with a proprietary merchant acceptance network. The funds can be used to: • send to other wallet users • to make payments at multiple merchants under the operator's proprietary brand mark • Cashed out to an unaffiliated account Staged Digital Wallets are permitted to facilitate Back-to-Back Funding transactions, but must not have a general-purpose payment network card/account at the "front" of the wallet.
Standard Purchase Transaction	A transaction that pulls funds from a Visa account for the purpose of purchasing goods and services or otherwise funding a merchant account.
Stored Value Digital Wallet	A wallet where funds can be added and stored to a non-Staged Digital Wallet account. The funds can be used to send to other users, make payments to multiple merchants, or to cash out to an unaffiliated account. Stored Value Digital Wallets must limit usage to the available balance in the wallet and must not facilitate real-time or live-load Back-to-Back Funding. SVDW may have a general-purpose payment network card/account at the "front" of the wallet.

Token Authentication Verification Value (TAVV)	E-commerce token transactions require the use of a token authentication verification value (TAVV) with the token as part of the capabilities provided by the Visa Token Service.
Third-Party Agent	An entity, not defined as a VisaNet Processor, that provides payment-related services to a client and/or that stores, transmits, or processes cardholder data. In the context of AFT programs, any third-party entity or service provider that manages or facilitates AFT programs; for example, payment facilitators, load partners, etc.
Token	Substitute values that replace the cardholder primary account number in payment transactions during transaction processing.
Token Requestor (TR)	A token requestor - token service provider is a third-party, Visa-compliant business entity that provides products and services to participating token requestors under and subject to the Visa Digital Enablement Program Token Service Provider Program. Token requestor-token service providers are directly connected to the Visa Token Service and enable token requestors to develop consumer digital payment solutions powered by the Visa Token Service. The token requestor-token service provider will be the integration partner facilitating the provisioning, cryptogram request, and lifecycle management of Visa payment tokens to the token requestor.
Top-Up (TU)	See <i>prepaid load</i> .
Visa Account Updater (VAU)	Is a key service to support payment continuity in recurring billing and credential-on-file segments. Real Time VAU is a feature that eliminates the multi-step process to update account information.
Visa Developer Center	A website (https://developer.visa.com) (Visa Direct: https://developer.visa.com/capabilities/visa_direct/) that provides developers with information and resources for their Visa Direct API development activities. Developers can access functional codes, documentation, SDKs, and sandboxes.
Visa Direct	The Visa product platform that provides funds transfer capabilities using AFTs and OCTs.
Visa Direct Account Lookup File	The Visa Direct Account Lookup File provides merchants with information about Visa accounts including issuer country code, billing currency, account type, Fast Funds participation status, and whether the recipient issuer can receive AFTs. Merchants can receive this file via the Visa File Exchange Service (VFES) (Formerly, the <i>Visa Personal Payments (VPP) Account Lookup File</i>).
Visa Direct Application Programming Interfaces (APIs)	Web services-based request and response messages that originating entities can use to communicate with Visa to initiate AFTs and to support related value-added services.

VisaNet	The systems and services, including the V.I.P. System, and BASE II, through which Visa delivers online financial processing, authorization, clearing, and settlement services to clients.
VisaNet Integrated Payment (V.I.P.) System	The online component of VisaNet that provides routing and processing of authorizations and financial messages.
Visa Payment Token	A Payment Token is an “alternate identifier” that can be used in place of a PAN to initiate a payment transaction.
Visa Secure	A Visa-approved authentication method based on the 3-D Secure Specification.
Visa Token Service	The Visa Token Service (VTS) replaces Primary Account Numbers (PANs) with Payment Tokens that can be used as payment credentials during payment transaction processing. VTS stores the Payment Tokens and performs PAN mapping to enable functions like detokenization and life-cycle management.
Wallet Transfer (WT)	An AFT in which the funds will be used to add value to a digital wallet with a non-general-purpose payment network brand acceptance mark. BAI = WT is used only for Staged Digital Wallets in these circumstances: • In AFTs when funding a Staged Digital Wallet before the cardholder makes a purchase. • To fund a purchase when initiated by the Staged Digital Wallet provider and corresponding to, or otherwise directly connected to a specific purchase (also called Back-to-Back Funding live-load or real-time funding). In this scenario, the transaction must be processed as a purchase transaction, with a BAI value = WT. When a transaction is performed to give back to a cardholder, funds that were held in a Staged Digital Wallet, this cash out transaction must be processed as an Original Credit Transaction (OCT) with a BAI = WT.
