|-------------------------------------------------------------------------------|-----|
| Mastercard Network Processing Dual Message Authorization System Guide.....    | 41  |
| Chapter 1: How to use this guide .....                                        | 52  |
| Chapter 2: High-level overview.....                                           | 53  |
| Introduction to Mastercard switches for processing .....                      | 55  |
| Introduction to Mastercard Dual Message Authorization System processing ..... | 56  |
| Dual Message Authorization System features.....                               | 56  |
| Participants in Mastercard Network processing.....                            | 57  |
| Dual Message Authorization System basics.....                                 | 59  |
| Chapter 3: Introduction to messages.....                                      | 61  |
| Mastercard message classifications.....                                       | 66  |
| List of Dual Message Authorization System MTIs .....                          | 66  |
| About message definitions.....                                                | 69  |
| Authorization/01xx messages.....                                              | 69  |
| Issuer File Update/03xx messages.....                                         | 72  |
| Reversal/04xx messages.....                                                   | 73  |
| Administrative/06xx messages.....                                             | 75  |
| Network Management/08xx messages.....                                         | 77  |
| Message flows.....                                                            | 79  |
| Standard flow.....                                                            | 79  |
| Failure scenarios: communication-related flows .....                          | 81  |
| Request Failure from acquirer host to acquirer MIP.....                       | 82  |
| Request Failure from acquirer MIP to Mastercard Network.....                  | 83  |
| Request Failure from Mastercard Network to issuer MIP.....                    | 84  |
| Request Failure from issuer MIP to issuer host.....                           | 86  |
| Response Failure from issuer host to issuer MIP.....                          | 88  |
| Response Failure from issuer MIP to Mastercard Network.....                   | 91  |
| Response Failure from Mastercard Network to acquirer MIP.....                 | 93  |
| Response Failure from acquirer MIP to acquirer host.....                      | 95  |
| Failure scenarios: issuer response contains errors or late response flow..... | 96  |
| Response from issuer contains errors.....                                     | 96  |
| Issuer response received late (after time limit).....                         | 99  |
| Failure scenarios: alternate issuer host configuration flows.....             | 100 |
| Communication Failure or primary issuer not signed in.....                    | 100 |
| Primary issuer times out.....                                                 | 102 |

|                                                                                           |     |
|-------------------------------------------------------------------------------------------|-----|
| Primary issuer responds after time limit and primary issuer response received first.....  | 104 |
| Failure scenarios: no alternate processing allowed.....                                   | 105 |
| No alternate processing, issuer late response or not in time limit.....                   | 106 |
| No alternate processing, issuer response contains errors .....                            | 108 |
| Authorization Advice messages.....                                                        | 109 |
| Acquirer-generated Authorization Advice message.....                                      | 110 |
| Acquirer-generated Advice message, issuer not available.....                              | 111 |
| System-generated Authorization Advice message.....                                        | 112 |
| Reversal Request and Advice messages.....                                                 | 113 |
| Standard Reversal Request.....                                                            | 114 |
| Reversal Response message failed at acquirer .....                                        | 115 |
| Reversal Request not delivered to issuer or issuer signed out.....                        | 116 |
| Reversal Request no response from issuer or not within time limit.....                    | 117 |
| Reversal Request late response from issuer.....                                           | 118 |
| Reversal Request response from issuer contains errors.....                                | 120 |
| System-generated Reversal Advice.....                                                     | 121 |
| Non-financial transaction function flows.....                                             | 122 |
| Authorization Request: Account Status Inquiry.....                                        | 123 |
| Authorization Request: Mastercard Digital Enablement Service (MDES) pre-digitization..... | 124 |
| Authorization Request: Chip-PIN Management.....                                           | 124 |
| Standard Chip-PIN Management request.....                                                 | 125 |
| Chip-PIN Management Request failure from acquirer .....                                   | 126 |
| Chip-PIN Management Response cannot be delivered to the acquirer.....                     | 127 |
| Chip-PIN Management Update cannot be transmitted or applied to chip card.....             | 129 |
| Chip-PIN Management Request unable to connect to issuer.....                              | 131 |
| PIN-management Response not received from issuer.....                                     | 132 |
| Authorization Response Acknowledgment/0180 .....                                          | 133 |
| Supporting transaction function flows.....                                                | 135 |
| Issuer File Update Requests .....                                                         | 136 |
| Administrative Request messages .....                                                     | 137 |
| Standard Administrative Request.....                                                      | 137 |
| Acquirer-edit Failure.....                                                                | 138 |
| Communication Failure at issuer.....                                                      | 140 |
| Communication Failure at acquirer.....                                                    | 141 |
| Late or no issuer response .....                                                          | 142 |
| Issuer-edit Failure.....                                                                  | 143 |
| Administrative Advice messages .....                                                      | 144 |
| Standard Administrative Advice.....                                                       | 145 |
| Failure scenario: Administrative Advice for invalid message.....                          | 146 |
| MDES-notification advice.....                                                             | 146 |
| Network management requests.....                                                          | 147 |

|                                                                                                      |                |
|------------------------------------------------------------------------------------------------------|----------------|
| Network sign-on or sign-off.....                                                                     | 148            |
| Request for issuer-generated or solicited SAF.....                                                   | 149            |
| Unsolicited SAF after sign-on.....                                                                   | 150            |
| Network-connection status request: customer-generated.....                                           | 151            |
| Network-connection status request: system-generated.....                                             | 152            |
| Host activation or deactivation.....                                                                 | 154            |
| PIN Encryption Key exchange request: customer generated.....                                         | 154            |
| PEK-exchange request: system generated.....                                                          | 157            |

# Mastercard Network Processing Dual Message Authorization System Guide

This document contains technical information and specifications for customers to understand the system functionality and to process transactions through the [Dual Message Authorization System](#). System specifications are based on Mastercard's adoption of the [International Organization for Standardization \(ISO\) 8583:1987](#) message formats.

## Audience

This document is intended for parties using the [Mastercard Network](#) to process transactions through the [Dual Message Authorization System](#). This includes acquirers, issuers, processors, and Network Enablement Partners.

This guide replaces the *Customer Interface Specification* and *Authorization Manual*.

## Product

The Mastercard Dual Message Authorization System is a global real-time message processing system and is a component of the Mastercard Network. The Mastercard Network supports real-time authorization processing followed by batch clearing processing, leading to the settlement of funds between acquirers and issuers.

# Chapter 1 How to use this guide

This guide navigates users through the foundation of the *Dual Message Authorization System*, its functions, applicable messages, and their intended use.

## Structure of the guide

The material presents each topic with a high-level overview followed by additional details as the document progresses.

The initial chapters provide guidance for implementation of the *Dual Message Authorization System* specifications to support Mastercard account operations. The guide then describes the details of Mastercard's implementation of the *ISO 8583:1987* messaging standards. This guide also includes Mastercard data validations and supplemental reports.

The appendices provide supporting information to the chapters, including a glossary and basic information about Mastercard products and services available to customers.

This document provides the acronym phrase or word definition when the user hovers their mouse over a highlighted word. Links within the document allow the user to navigate directly to a related section, which provides supporting information for that topic.

**NOTE:** Link and hover features are available in select formats only.

## Fundamentals of Mastercard processing

Mastercard processing supports the four-party model (cardholders, acceptors [merchant, sponsored merchant, *Automated Teller Machine (ATM)* owner, or other party], cardholder's bank and acceptor's bank). This process is explained by three main functions and the subsequent flow diagram.

- **Authorization:** Real-time communication between *acquirers* and *issuers* to approve or decline the use of a Mastercard card, access device, or account to conduct a transaction. Approval from the *issuer* creates a financial obligation from the *issuer* to the *acquirer* (for a transaction that debits funds from a cardholder's account) or from the *acquirer* to the *issuer* (for a transaction that credits funds to a cardholder's account).
- **Clearing:** Processing of multiple clearing batch processes per day (that is, clearing cycles) determine and calculate processing costs, resulting in one net amount per *acquirer* and *issuer* per clearing cycle.
- **Settlement:** Aggregation of financial positions from all clearing settlement information into one overall daily net settlement amount for each *acquirer* and *issuer*. Advisements (notifications) are created and distributed to *acquirer* and *issuer* along with Transfer Funds Orders to settlement banks for amounts to be transferred to or collected from *acquirer* and *issuer*.

### Authorization, Clearing, and Settlement flows

Process flow displaying the three main functions.

## Introduction to Mastercard switches for processing

Mastercard leverages its *Dual Message Switch* and *Single Message Switch* for the global processing of transaction data over the *Mastercard Network*.

The *Dual Message Switch* completes processing for *Authorization*, *Clearing*, and *Settlement* functions using both online and batch systems. *Authorization* processes as a real-time message, while *Clearing* and *Settlement* functions are achieved through a batch process.

The *Single Message Switch* completes processing for *Authorization*, *Clearing*, and *Settlement* functions leveraging a single online message. *Authorization* processes as a real-time message and automatically enables *Clearing* and *Settlement* functions through an internal batch process.

## Introduction to Mastercard Dual Message Authorization System processing

The Mastercard *Dual Message Authorization System* is a global real-time message processing system and is a component of the *Mastercard Network*. The *Mastercard Network* supports real-time *authorization* processing followed by batch clearing processing, leading to the *settlement* of funds between acquirers and issuers.

The *Dual Message Authorization System* processing is integrated with the *acquirer* and *issuer* processing systems. It communicates in real time to process *authorization* data to obtain an *issuer* decision.

Mastercard acquirers and issuers leverage the *Dual Message Authorization System* to exchange financial transaction data captured at the *point-of-interaction* device to obtain an *authorization* decision.

The *Dual Message Authorization System* consists of both hardware and software components. The physical computing infrastructure includes servers, routers, switches, and cabling. This hardware is configured with Mastercard's proprietary technology, which makes it a *Mastercard interface processor (MIP)*. It is physically set up and connected with an *acquirer* or *issuer* processing system in their data centers.

For more information on system access, refer to *System access information*.

## Dual Message Authorization System features

The *Dual Message Authorization System* provides many features, including but not limited to the following.

- Access for all acquirers and issuers 24 hours a day, 7 days a week.  
The *Mastercard Network* operates on a continuous basis, ensuring that cardholders can use Mastercard-branded cards and access devices anytime and that acquirers, issuers, and acceptors always have access to Mastercard authorization processing capabilities.
- Real-time authorization processing.  
The design of the *Mastercard Network* enhances processing by routing transactions along the shortest communication path to the destination. The network's design consists of many paths guaranteeing that there are always two or more paths to a given destination. If part of the network is unavailable, the multi-routing capability ensures that transactions continue toward their destinations following the shortest possible path, minimizing network congestion.
- Support for alternate routing and authorizing paths.  
At times, acquirers or issuers may experience internal communication problems, scheduled down times, or network problems. The system provides backup authorization alternatives to ensure that an authorization response occurs for every transaction.
- Security and fraud management services.

The *Dual Message Authorization System* provides services that make Mastercard transactions safe and secure.

- Currency conversion capabilities.

The *Dual Message Authorization System* provides currency conversion to acquirers and issuers to enable processing of online transaction messages in the *acquirer* or *issuer's* preferred currency.

- Supplemental reports.

Mastercard produces various authorization-related reports that display *acquirer* and *issuer* authorization activity and help acquirers and issuers to manage their back-office processes.

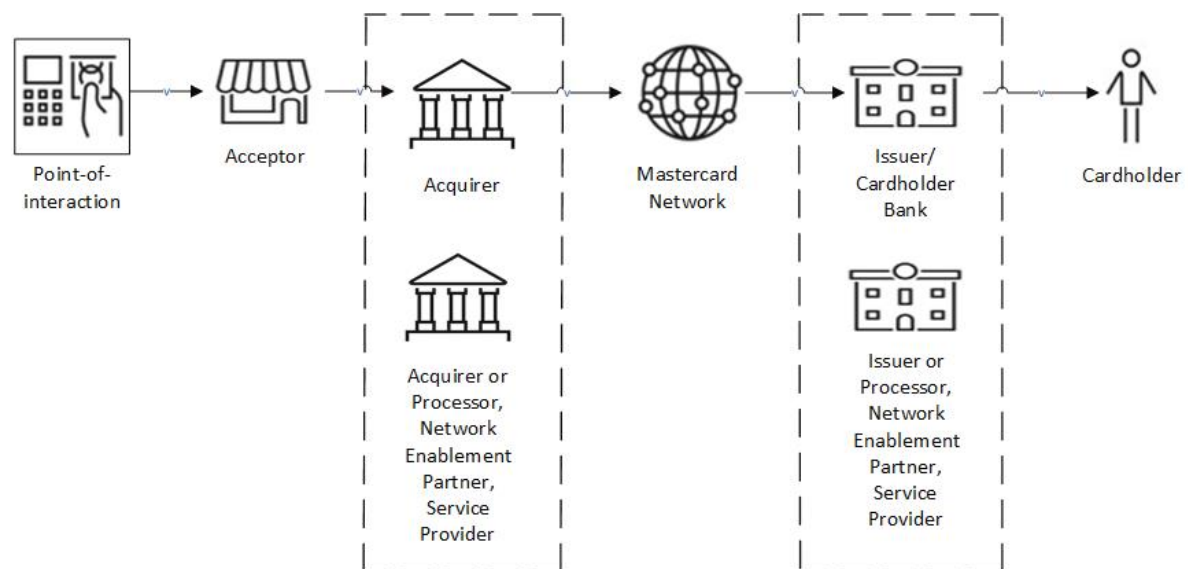

- Brand-agnostic processing capabilities

The *Dual Message Authorization System* also supports interfaces to enable non-Mastercard account processing.

## Participants in Mastercard Network processing

*Mastercard Network* processing involves various functions and types of participants. This list includes the most common participants involved in processing, along with simplified descriptions.

## Participants and definitions

| Term                       | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Acceptor                   | A person or party that agrees to accept payment cards or devices bearing a particular brand or in respect to an agreement with the issuer. Also referred to as a merchant, <a href="#">ATM</a> , bank, merchant ATM, or other party authorized to accept brand transactions.                                                                                                                                                                                                        |
| Acquirer                   | An acquirer is a licensed Mastercard customer that acquires the data relating to a transaction from the acceptor and submits that data for authorization. The acquirer also supports clearing and settlement functions to exchange funds between the issuer and the acceptor. Also referred to as an acquiring bank, acquirer bank, merchant bank, or acquiring financial institution.                                                                                              |
| Cardholder                 | A cardholder is an authorized person or party to whom an account, card, or access device has been issued for the purpose of conducting transactions that access funds through a financial account. Also referred to as a consumer or account holder.                                                                                                                                                                                                                                |
| Customer                   | A financial institution or other entity that has been approved for participation in the payment scheme.                                                                                                                                                                                                                                                                                                                                                                             |
| Issuer                     | An issuer is a licensed Mastercard customer that issues cards or accounts and is responsible for approving or declining <a href="#">authorization</a> requests. The issuer also bills cardholders and supports <a href="#">clearing</a> and <a href="#">settlement</a> functions to exchange funds between the cardholder's account and the acquirer. Also referred to as an issuing bank, issuer bank, cardholder bank, issuing financial institution, or non-bank issuing entity. |
| Network Enablement Partner | A service provider that has a direct agreement with Mastercard and performs certain functions on behalf of one or more customers.                                                                                                                                                                                                                                                                                                                                                   |
| Processor                  | A service provider that provides authorization, clearing, or settlement services on behalf of a customer. Also referred to as a third-party processor or payment processor.                                                                                                                                                                                                                                                                                                         |

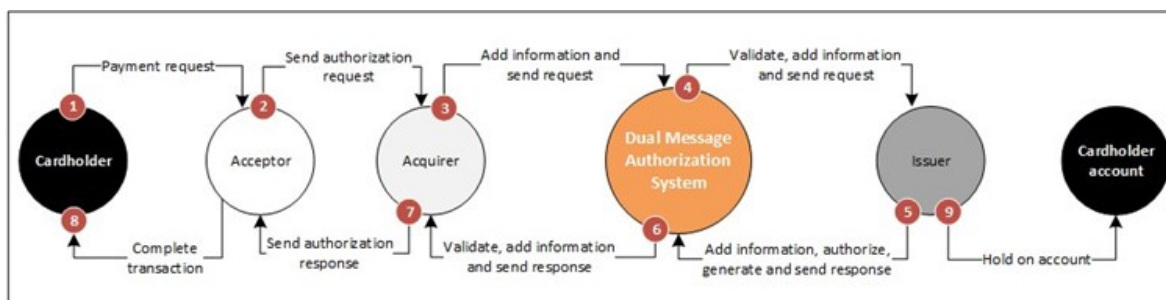

| Term             | Definition                                                                                                                                      |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Service provider | A person or party that is registered with Mastercard by a customer to perform services related to the customer's acquiring or issuing activity. |

**NOTE:** Throughout this guide, functional references to acquirer and issuer also refer to others acting as authorized agents for acquirers and issuers. Mastercard customers are responsible for the acts and omissions of their agents, including those with respect to Mastercard rules, regulations, policies, and procedures.

## Dual Message Authorization System basics

The following diagram illustrates the basic *Dual Message Authorization System* flow.

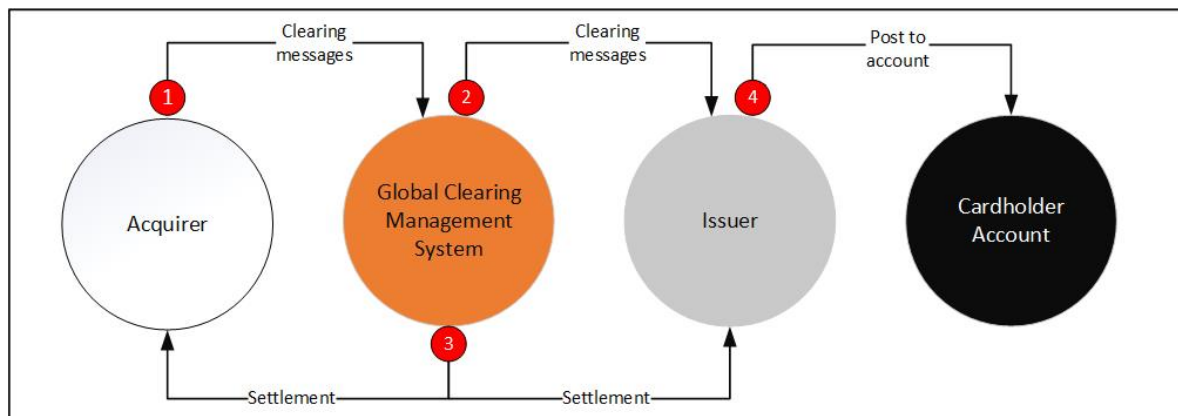

### Basic Dual Message Authorization System flow

1. The *cardholder* presents a Mastercard card to the *acceptor* to pay for goods or services.
2. The *acceptor* collects card and transaction data (for example, the *cardholder* may dip or tap the card at a terminal, enter the card data into a website payment page, place an order by phone or mail, or authorize the *acceptor* to use previously stored card data). A request for an authorization decision is sent from the *acceptor* to the *acquirer*.
3. The *acquirer* receives the request, appends additional data as needed, and sends the *authorization request* message to the Mastercard *Dual Message Authorization System*.
4. The *Dual Message Authorization System* receives the *authorization request* message and validates the format and content. Mastercard includes additional data as needed and sends the request message to the *issuer*.
5. The *issuer* receives the *authorization request* message and evaluates the transaction data and the account itself before making an authorization decision. The *issuer* generates an *authorization request response message* indicating its decision and sends the *response message* to Mastercard.
6. Mastercard receives the *authorization request response message* and validates the format and content. Mastercard includes additional data as needed and sends the *authorization request response message* to the acquirer.

7. The *acquirer* receives the *authorization request response message* and notifies the *acceptor* of the decision.
8. The *acceptor* receives the response to the decision and completes the transaction with the *cardholder*.
9. The *issuer* places a hold for the transaction amount against the *cardholder's* account or open-to-buy. The transaction will post when clearing occurs.

### Clearing and settlement process flow

*Clearing* and *settlement* will occur through a separate process. This diagram outlines this process at a high level.

1. The *acquirer* submits batched clearing messages containing the data for the completed transactions from their acceptors.
2. The Mastercard Dual Message Clearing System will forward the appropriate transaction data to each *issuer* through *batch processing*.
3. The Mastercard Dual Message Clearing System processes the messages and forwards them to the *Settlement* System. The *Settlement* System generates reporting and settles with the *acquirer* and *issuer*.
4. The *issuer* uses the clearing data received to post the transaction to the *cardholder's* account.

**NOTE: Mastercard reserves the right to record, store, and use all data transmitted by the Mastercard Dual Message Authorization System in online electronic transactions, subject to Mastercard privacy and security compliance policies and applicable laws and regulations, without further notice.**

## Chapter 3 Introduction to messages

*This section provides message definitions of all message types the [Dual Message Authorization System](#) uses followed by the detailed message flow diagrams that illustrate both the standard and exception (error condition) message processing.*

| Standard Chip-PIN Management request.....                                                 | 125 |
| Chip-PIN Management Request failure from acquirer .....                                   | 126 |
| Chip-PIN Management Response cannot be delivered to the acquirer.....                     | 127 |
| Chip-PIN Management Update cannot be transmitted or applied to chip card.....             | 129 |
| Chip-PIN Management Request unable to connect to issuer.....                              | 131 |
| PIN-management Response not received from issuer.....                                     | 132 |
| Authorization Response Acknowledgment/0180 .....                                          | 133 |
| Supporting transaction function flows.....                                                | 135 |
| Issuer File Update Requests .....                                                         | 136 |
| Administrative Request messages .....                                                     | 137 |
| Standard Administrative Request.....                                                      | 137 |
| Acquirer-edit Failure.....                                                                | 138 |
| Communication Failure at issuer.....                                                      | 140 |
| Communication Failure at acquirer.....                                                    | 141 |
| Late or no issuer response .....                                                          | 142 |
| Issuer-edit Failure.....                                                                  | 143 |
| Administrative Advice messages .....                                                      | 144 |
| Standard Administrative Advice.....                                                       | 145 |
| Failure scenario: Administrative Advice for invalid message.....                          | 146 |
| MDES-notification advice.....                                                             | 146 |
| Network management requests.....                                                          | 147 |
| Network sign-on or sign-off.....                                                          | 148 |
| Request for issuer-generated or solicited SAF.....                                        | 149 |
| Unsolicited SAF after sign-on.....                                                        | 150 |
| Network-connection status request: customer-generated.....                                | 151 |
| Network-connection status request: system-generated.....                                  | 152 |

|                                                              |     |
|--------------------------------------------------------------|-----|
| Host activation or deactivation.....                         | 154 |
| PIN Encryption Key exchange request: customer generated..... | 154 |
| PEK-exchange request: system generated.....                  | 157 |

## Overview

The *Dual Message Authorization System* format is based on the *ISO 8583:1987* international message standard, which is comprised of code values, *data elements*, and message types. The *ISO 8583* protocol is used by systems for the electronic exchange of transaction data for the purchase of goods or services.

The *ISO* standard defines the purpose of the message and origination through the *message type indicator (MTI)*. *MTIs* are defined below.

### ISO-defined MTI codes and related usage

| Code | Meaning                                          | Usage                                                                                                                                                                                                        |
|------|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 00xx | Reserved by ISO                                  | N/A                                                                                                                                                                                                          |
| 01xx | Authorization messages                           | Authorization messages are used by the <i>acquirer</i> to obtain approval or guarantee funds from the <i>issuer</i> . These messages are not intended for use in posting to the <i>cardholder's</i> account. |
| 02xx | Financial messages                               | Financial messages are used by the <i>acquirer</i> to obtain approval or guarantee funds from the <i>issuer</i> . These messages allow the approved transaction to post to the <i>cardholder's</i> account.  |
| 03xx | File action messages                             | File action messages are used to add, change, delete, or inquire into a file or record (for example, to report lost or stolen cards).                                                                        |
| 04xx | Reversal messages                                | Reversal messages are used to partially or completely negate the effects of a previous financial or authorization transaction.                                                                               |
| 05xx | Reconciliation messages (not used by Mastercard) | Reconciliation messages provide financial totals between an <i>acquirer</i> and an <i>issuer</i> .                                                                                                           |
| 06xx | Administrative messages                          | Administrative messages are used for the exchange of non-financial information between network participants.                                                                                                 |
| 07xx | Reserved by ISO                                  | N/A                                                                                                                                                                                                          |
| 08xx | Network management messages                      | Network management messages are used to control the system security and operating condition of a network and may be initiated by any network participant.                                                    |
| 09xx | Reserved by ISO                                  | N/A                                                                                                                                                                                                          |

## ISO MTI position definitions

| Position 1: Version          | Position 2: Message class | Position 3: Message function | Position 4: Message originator* |
|------------------------------|---------------------------|------------------------------|---------------------------------|

\* This position of the [MTI](#) does not indicate which party originated the specific message. This position of the [MTI](#) indicates which party originally initiated the transaction (the request and response message pair).

This guide documents the Mastercard implementation of the [ISO](#) standard for processing on Mastercard's [Dual Message Authorization System](#). The messages used by the [Dual Message Authorization System](#) are a subset of the [ISO](#)-defined messages. In some cases, Mastercard's adoption of these messages differs from [ISO](#) definitions. These are the message types supported by the [Dual Message Authorization System](#). Additional details on the use of these [MTIs](#) are included in this chapter.

## Mastercard-defined MTI codes and related usage

| Code | Meaning                                          |
|------|--------------------------------------------------|
| 01xx | <a href="#">Authorization/01xx messages</a>      |
| 03xx | <a href="#">Issuer File Update/03xx messages</a> |
| 04xx | <a href="#">Reversal/04xx messages</a>           |
| 06xx | <a href="#">Administrative/06xx messages</a>     |

| Code | Meaning                                          |
|------|--------------------------------------------------|
| 08xx | <a href="#">Network Management/08xx messages</a> |

## Mastercard message classifications

The [Mastercard Network](#) allows for the exchange of electronic data that may or may not contain account holder information or result in a financial transaction. The remaining message types are used to support administrative functions.

The message types adopted for use by the Mastercard [Dual Message Authorization System](#), as a broad classification, fall into three functional categories.

### Message type functional categories

|                                |                                                                                                                                                                                                |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Financial message function     | This message type function results in a financial impact to a <a href="#">cardholder</a> account. It includes instructions or data related to payments, transfers, debits, or credits.         |
| Non-financial message function | This message type function allows customers to validate account information prior to the submission of a financial message without financial impact to an account.                             |
| Supporting message function    | This message type function allows acquirers and issuers connected to the <a href="#">Mastercard Network</a> to complete administrative functions, such as file updates and network management. |

## List of Dual Message Authorization System MTIs

The following tables list the message types the [Dual Message Authorization System](#) supports and indicates the originating parties for each message type. The [Dual Message Authorization System](#) may not support all message types for each Mastercard product or service.

Acquirers and issuers are responsible for ensuring correct usage of the message types as described in the table and may be liable for the impacts of transmitting erroneous messages.

### Authorization/01xx messages

| MTI  | Description                                                                                | Acquirer | Issuer | Mastercard Network |
|------|--------------------------------------------------------------------------------------------|----------|--------|--------------------|
| 0100 | Authorization Request                                                                      | X        |        |                    |
| 0110 | Authorization Request Response                                                             |          | X      | X                  |
| 0120 | Authorization Advice: acquirer-generated                                                   | X        |        |                    |
| 0120 | Authorization Advice: system-generated                                                     |          |        | X                  |

## About message definitions

This section provides details on message definitions.

### Authorization/01xx messages

Authorization/01xx messages transmit authorization-related information. [Authorization](#) is the process of verifying if a [cardholder](#) is allowed to perform a requested action or service. All Authorization/01xx messages assume that follow-up information (for example, electronic clearing transactions) is used to complete [settlement](#) and [cardholder](#) account posting.

The [Mastercard Network](#) uses Authorization/01xx messages for:

- Authorization Request
- Authorization Request Response
- Authorization Advice
- Authorization Advice Response
- Authorization Response Acknowledgment

#### Authorization Request/0100

|          |                                                                                                                                                                                                                      |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing  | <ul style="list-style-type: none"> <li>• From an <a href="#">acquirer</a> to the <a href="#">Mastercard Network</a>.</li> <li>• From the <a href="#">Mastercard Network</a> to an <a href="#">issuer</a>.</li> </ul> |
| Purpose  | Requires issuer decisioning specific to funds availability and account status resulting in an approval or a decline.                                                                                                 |
| Response | An Authorization Request Response/0110 message is required.                                                                                                                                                          |

## Authorization Request Response/0110

|          |                                                                                                                                                                                                                                                 |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing  | <ul style="list-style-type: none"> <li>From an <a href="#">issuer</a> to the <a href="#">Mastercard Network</a>.</li> <li>From the <a href="#">Mastercard Network</a> to an <a href="#">acquirer</a>.</li> </ul>                                |
| Purpose  | To acknowledge an Authorization Request/0100 message informing the <a href="#">acquirer</a> of the issuer's decision.                                                                                                                           |
| Response | Acquirers may elect to acknowledge receipt of the Authorization Request/0110 message back to Mastercard through the Authorization Response Acknowledgment/0180 message. The <a href="#">acquirer</a> must be configured to perform this action. |

## About Authorization Advice messages

The [Mastercard Network](#) guarantees the delivery of all advice messages transmitted through the network. When an [advice message](#) is processed by the [Dual Message Authorization System](#), the system acknowledges receipt of the [advice message](#) to the initiator with an advice response message and forwards the advice message to the intended recipient.

If the Dual Message Authorization System cannot deliver an advice message immediately (for example, due to a system or communication failure at the receiving destination), the Dual Message Authorization System will store the message within the [store-and-forward \(SAF\)](#) queue. [SAF](#) processing automatically delivers the message to the destination when communication is restored.

The receiver of an advice message must acknowledge receipt with an [advice response message](#). When the Dual Message Authorization System receives the advice response message, Mastercard considers advice delivery complete and removes the message from SAF processing queues.

The following message types are supported by the guaranteed advice messages delivery concept:

- Authorization Advice/0120: acquirer-generated
- Authorization Advice/0120: system-generated
- Authorization Advice Response/0130: issuer-generated (responding to an acquirer-generated 0120)
- Authorization Advice Response/0130: issuer-generated (responding to a system-generated 0120)

[Address Verification Service \(AVS\)](#) is a [fraud](#) deterrent service that provides greater security to merchants and cardholders. It helps to protect against fraudulent use of cards by verifying the cardholder's billing address. This functionality is supported during the process of obtaining authorization for a transaction. For more information on this service, please refer to [System functionality and services](#).

### Authorization Advice/0120: acquirer-generated

|          |                                                                                                                                                                                                                                       |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing  | <ul style="list-style-type: none"><li>From the <a href="#">acquirer</a> to the <a href="#">Mastercard Network</a>.</li><li>From the Mastercard Network to the <a href="#">issuer</a>.</li></ul>                                       |
| Purpose  | Advises the <a href="#">issuer</a> of an authorization approved by the acquirer <a href="#">host</a> when unable to communicate with the Mastercard Network or advises the issuer of a change to a previously approved authorization. |
| Response | An Authorization Advice Response/0130: issuer-generated message is required.                                                                                                                                                          |

### Authorization Advice/0120: system-generated

|          |                                                                              |
|----------|------------------------------------------------------------------------------|
| Routing  | From the Mastercard Network to an issuer.                                    |
| Purpose  | Advises the issuer of an authorization decision made on their behalf.        |
| Response | An Authorization Advice Response/0130: issuer-generated message is required. |

### Authorization Advice Response/0130: issuer-generated (responding to an acquirer-generated 0120)

|          |                                                                                                                                                                                                                               |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing  | When responding to the Authorization Advice/0120: acquirer-generated message: <ul style="list-style-type: none"><li>From the issuer to the Mastercard Network.</li><li>From the Mastercard Network to the acquirer.</li></ul> |
| Purpose  | Acknowledges receipt of an Authorization Advice/0120: acquirer-generated message.                                                                                                                                             |
| Response | None                                                                                                                                                                                                                          |

### Authorization Advice Response/0130: issuer-generated (responding to a system-generated 0120)

|          |                                                                                 |
|----------|---------------------------------------------------------------------------------|
| Routing  | From the issuer to the Mastercard Network.                                      |
| Purpose  | Acknowledges receipt of an Authorization Advice/0120: system-generated message. |
| Response | None                                                                            |

## About Authorization Response Acknowledgment messages

For acquirers, the Dual Message Authorization System supports optional response acknowledgment messages, which indicates receipt of an Authorization Request Response/0110 message. The [acquirer](#) must be configured to perform this action.

The Dual Message Authorization System sends an Authorization Response Negative Acknowledgment/0190 message in response to a late or invalid Authorization Request Response/0110 or Reversal Request Response/0410 message from an issuer. This informs the issuer that the Dual Message Authorization System either timed out or rejected the message and initiated *Stand-In Authorization* or alternate authorization services on the issuer's behalf if applicable.

Authorization Response Acknowledgment messages include:

- Authorization Response Acknowledgment/0180
- Authorization Response Negative Acknowledgment/0190

### Authorization Response Acknowledgment/0180

|          |                                                                          |
|----------|--------------------------------------------------------------------------|
| Routing  | From the acquirer to the Mastercard Network.                             |
| Purpose  | Acknowledges receipt of the Authorization Request Response/0110 message. |
| Response | None                                                                     |

### Authorization Response Negative Acknowledgment/0190

|          |                                                                                                                      |
|----------|----------------------------------------------------------------------------------------------------------------------|
| Routing  | From the Mastercard Network to the issuer.                                                                           |
| Purpose  | Advises issuer of a late or erroneous Authorization Request Response/0110 or Reversal Request Response/0410 message. |
| Response | None                                                                                                                 |

## Issuer File Update/03xx messages

Issuers use Issuer File Update/03xx messages to update individual data files or system parameter tables that the [Mastercard Network](#) uses to control the functionality of various Mastercard programs and services available to customers.

**NOTE:** For more information on data files and system parameter tables, refer to the [Account Management System User Manual](#).

The Issuer File Update messages include:

- Issuer File Update Request/0302
- Issuer File Update Request Response/0312

### Issuer File Update Request/0302

|          |                                                                                                 |
|----------|-------------------------------------------------------------------------------------------------|
| Routing  | From an <i>issuer</i> to the <i>Mastercard Network</i> .                                        |
| Purpose  | Requests an Issuer File Update or inquiry action to be initiated on the <i>issuer's</i> behalf. |
| Response | An Issuer File Update Request Response/0312 message is required.                                |

### Issuer File Update Request Response/0312

|          |                                                                      |
|----------|----------------------------------------------------------------------|
| Routing  | From the <i>Mastercard Network</i> to an <i>issuer</i> .             |
| Purpose  | Indicates the result of the Issuer File Update Request/0302 message. |
| Response | None                                                                 |

## Reversal/04xx messages

Acquirers generate a Reversal Request/0400 message when the *acquirer* is unable to deliver an issuer's approved response to an acceptor. Acceptors may also request their acquirers send a Reversal Request/0400 message to cancel the full or partial amount of the original authorization amount.

The *Mastercard Network* will not attempt to match contents of the Reversal Request/0400 message with the contents of the original Authorization Request/0100 message.

The *acquirer* must send a Reversal Request/0400 message when there is an acquirer time-out. When this occurs, it is possible that an *issuer* will receive two reversals for the same *authorization request*. Issuers must decline subsequent reversal messages with the appropriate response code.

The Reversal Advice/0420 message fully reverses a previous Authorization Request/0100 message. It advises an *issuer* of a Reversal Request/0400 message responded to by the *Dual Message Authorization System*. The *Dual Message Authorization System* may generate this message on detection of an exception condition while processing an Authorization Request Response/0110 message or when an *issuer* is unavailable to respond a Reversal Request/0400 message or is delayed in providing a Reversal Request Response/0410 message.

If the *Dual Message Authorization System* cannot deliver an advice message immediately (for example, due to a system or communication failure at the receiving destination), the *Dual*

*Message Authorization System* will store the message within the *SAF* queue. *SAF* processing automatically delivers the message to the destination when communication is restored.

The receiver of an advice message must acknowledge receipt with an advice response message. When the *Dual Message Authorization System* receives the advice *response message*, Mastercard considers advice delivery complete and removes the message from *SAF* processing queues.

Reversal/04xx messages include:

- Reversal Request/0400
- Reversal Request Response/0410
- Reversal Advice/0420
- Reversal Advice Response/0430

### Reversal Request/0400

|          |                                                                                                                                                                    |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing  | <ul style="list-style-type: none"> <li>• From <i>acquirer</i> to <i>Mastercard Network</i>.</li> <li>• From <i>Mastercard Network</i> to <i>issuer</i>.</li> </ul> |
| Purpose  | Reverses an earlier authorization request either fully or partially.                                                                                               |
| Response | A Reversal Request Response/0410 message is required.                                                                                                              |

### Reversal Request Response/0410

|          |                                                                                                                                                                    |

## Administrative/06xx messages

Administrative/06xx messages are used to convey various types of business or technical operations information between any parties connected to the *Mastercard Network*. Depending on the context, the information may be formatted as structured or free-form text data. Information present in administrative messages can be used by the receiver to:

- Manage various Mastercard products, services, or processing arrangement
- Identify and resolve erroneously constructed messages
- Obtain proprietary or *Mastercard Network* related text messages

Administrative messages include:

- Administrative Request/0600
- Administrative Request Response/0610
- Administrative Advice/0620: system-generated
- Administrative Advice/0620: customer-generated
- Administrative Advice Response/0630

The *Dual Message Authorization System* routes messages from an originator to a receiver and, in general, does not distinguish whether the originator or receiver is an *issuer* or an *acquirer*.

The Administrative/06xx messages used by the *Dual Message Authorization System* fall under the general category of advice messages, and are subject to the Guaranteed Advice Delivery procedures.

Administrative Advice/0620: system-generated messages advise a message originator that the [Dual Message Authorization System](#) was unable to parse or successfully process an indecipherable message. The message will contain the appropriate error condition code and indicate at which point the system terminated parsing or processing. In general, messages returned in Administrative Advice/0620 messages will have improperly coded or garbled MTIs or improperly coded bit maps.

Administrative Advice/0620: customer-generated messages transmit administrative (free format) textual messages between two parties participating on the Mastercard Network.

### Administrative Request/0600

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing  | <ul style="list-style-type: none"> <li>• <a href="#">Acquirer</a> to <a href="#">Mastercard Network</a>.</li> <li>• <a href="#">Mastercard Network</a> to <a href="#">issuer</a>.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Purpose  | Contains customer data in <a href="#">DE 113-118 (Reserved for National Use)</a> and the type of usage in <a href="#">DE 60 (Advice Reason Code)</a> . Any eligible Administrative Request/0600 message is routed to the <a href="#">issuer</a> associated to the account range within <a href="#">DE 2 (Primary Account Number [PAN])</a> and the appropriate response timer is set for the <a href="#">issuer</a> Administrative Request Response/0610 message. The response timer is configured by each <a href="#">DE 60</a> usage type and initially will be set at a default of 30 seconds for each usage type. |
| Response | An Administrative Request Response/0610 message is required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

### Administrative Request Response/0610

|          |                                                                                                                                                                                                   |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Type     | Interactive                                                                                                                                                                                       |
| Routing  | <ul style="list-style-type: none"> <li>• From <a href="#">issuer</a> to <a href="#">Mastercard Network</a>.</li> <li>• <a href="#">Mastercard Network</a> to <a href="#">acquirer</a>.</li> </ul> |
| Purpose  | Contains the issuer's response data to the Administrative Request/0600 request message.                                                                                                           |
| Response | None                                                                                                                                                                                              |

### Administrative Advice/0620: system-generated

|         |                                                                                                                                                                                                           |
|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing | <ul style="list-style-type: none"> <li>• Between any two parties participating on the <a href="#">Mastercard Network</a>.</li> <li>• <a href="#">Mastercard Network</a> to message originator.</li> </ul> |
| Purpose | Used by the Mastercard Network to indicate errors or an invalid message received from the customer.                                                                                                       |

|          |                                                             |
|----------|-------------------------------------------------------------|
| Response | An Administrative Advice Response/0630 message is required. |
|----------|-------------------------------------------------------------|

### Administrative Advice/0620: customer-generated

|          |                                                                                                                                                                                                    |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing  | <ul style="list-style-type: none"><li>Between any two parties participating on the <a href="#">Mastercard Network</a>.</li><li><a href="#">Mastercard Network</a> to message originator.</li></ul> |
| Purpose  | Used by two parties participating in a Mastercard program or service offering. Advises message originator of any issue with the original message.                                                  |
| Response | An Administrative Advice Response/0630 message is required.                                                                                                                                        |

### Administrative Advice Response/0630

|          |                                                                                        |
|----------|----------------------------------------------------------------------------------------|
| Routing  | From the receiver to the originator of the related Administrative Advice/0620 message. |
| Purpose  | Acknowledges positive receipt of an Administrative Advice/0620 advice message.         |
| Response | None                                                                                   |

## Network Management/08xx messages

Network Management/08xx messages coordinate network events or tasks and can also be used to communicate network status conditions.

These messages are used by participants on the [Dual Message Authorization System](#) and the system itself.

Network Management/08xx messages include:

- Network Management Request/0800
- Network Management Request Response/0810
- Network Management Advice/0820

Typical uses of Network Management/08xx messages include:

- Sign-on/sign-off from the [Mastercard Network](#)
- Perform a Network Connection Status to Mastercard
- Perform Host Session Activation or Deactivation
- Perform [encryption](#) key management
- [SAF](#) requests
- Advise of [SAF End of file \(EOF\)](#) conditions

The *Dual Message Authorization System* routes Network Management/08xx messages from an originator to a receiver and, in general, does not distinguish whether the originator or receiver is an *acquirer* or an *issuer*.

### Network Management Request/0800

|          |                                                                                                                                       |
|----------|---------------------------------------------------------------------------------------------------------------------------------------|
| Routing  | Between the <i>Mastercard Network</i> and any other participant on the <i>Mastercard Network</i> .<br>May be originated by any party. |
| Purpose  | Controls the <i>Mastercard Network</i> by communicating or coordinating system condition or security.                                 |
| Response | A Network Management Request Response/0810 message is required.                                                                       |

### Network Management Request Response/0810

|          |                                                                             |
|----------|-----------------------------------------------------------------------------|
| Routing  | From receiver to originator of the related Network Management Request/0800. |
| Purpose  | Acknowledges receipt of the Network Management Request/0800 message.        |
| Response | None                                                                        |

### Network Management Advice/0820

|          |                                                                                                                                                                       |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing  | From the <i>Mastercard Network</i> to any other participant on the <i>Mastercard Network</i> .<br><b>NOTE: May originate only from the <i>Mastercard Network</i>.</b> |
| Purpose  | Advises of a previous Network Management Request/0800 message.                                                                                                        |
| Response | None                                                                                                                                                                  |

## Message flows

This section provides details on the message flows.

### Financial transaction function flows

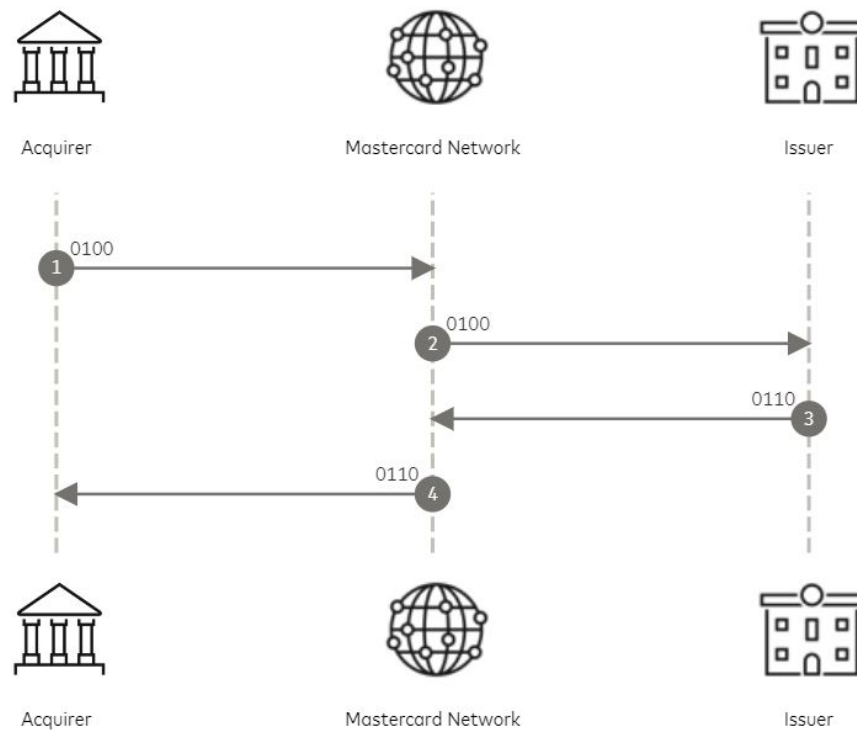

| Flow type                                                                | Description                                                                                                                                                |
|--------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Standard flow                                                            | Successful completion of Authorization Request/0100 and Authorization Request Response/0110 message pair                                                   |
| Failure scenarios: communication-related flows                           | Exception occurrences which may be due to communication or problems at the <i>acquirer</i> or <i>issuer</i> system                                         |
| Failure scenarios: issuer response contains errors or late response flow | Messages contain invalid data or the response message was received after the time limit                                                                    |
| Failure scenarios: alternate issuer host configuration flows             | Europe Region: An <i>issuer</i> may designate an <i>alternate issuer host</i> for alternate processing instead of Mastercard <i>Stand-In Authorization</i> |
| Failure scenarios: no alternate processing allowed                       | Transactions for which <i>Stand-In Authorization</i> , <i>alternate issuer host</i> , or <i>X-Code</i> is not permitted                                    |
| Authorization Advice messages                                            | Provides the <i>issuer</i> information on changes to a previous authorization or action taken on their behalf for a transaction                            |
| Reversal Request and Advice messages                                     | Provides information to partially or fully reverse a previously approved transaction                                                                       |

## Standard flow

### Standard flow

This message flow describes the standard authorization transaction process.

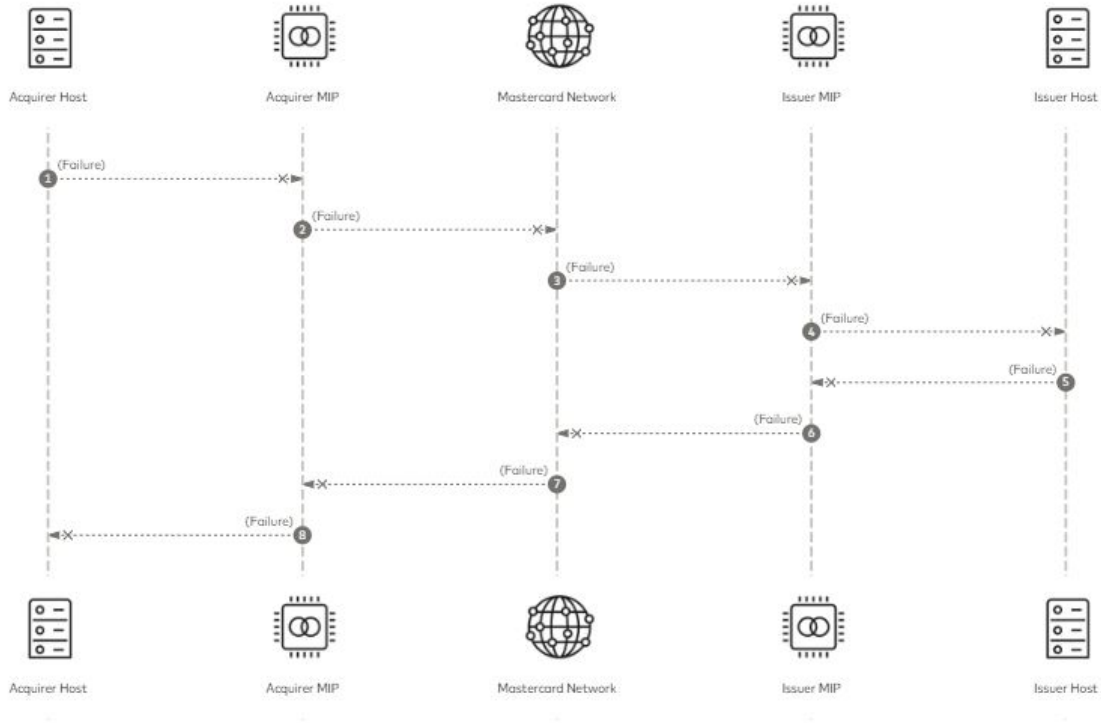

## Standard flow

1. The *acquirer* initiates an Authorization Request/0100 message and sends it to the *Mastercard Network*.
2. The *Mastercard Network* forwards the Authorization Request/0100 message to the *issuer*.
3. The *issuer* generates an Authorization Request Response/0110 message and sends it to the *Mastercard Network*.
4. The *Mastercard Network* forwards the Authorization Request Response/0110 message to the *acquirer*.

## Failure scenarios: communication-related flows

### Failure flow

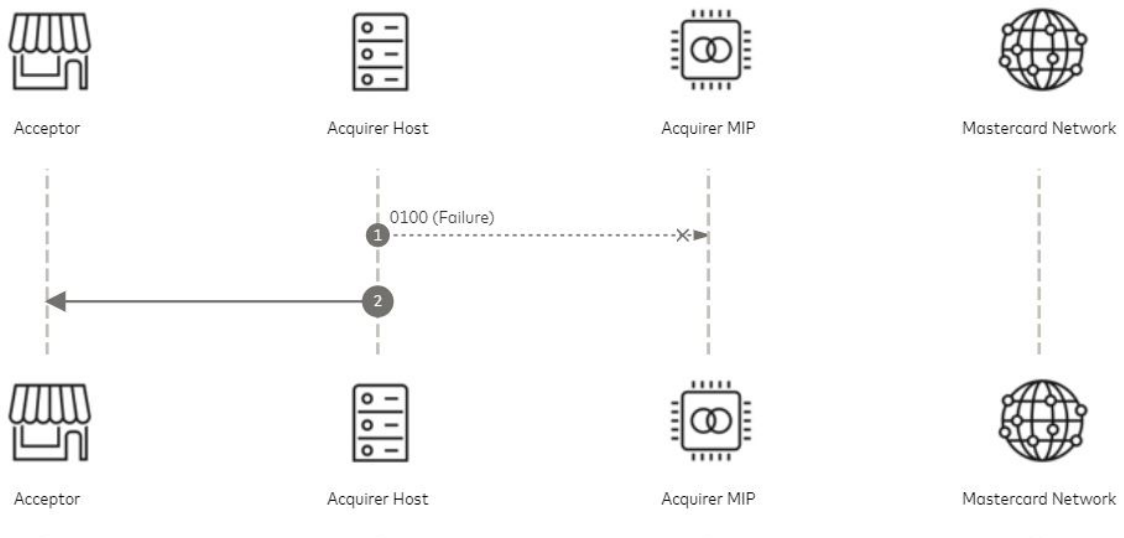

List of communication-related failure scenarios:

1. Request Failure from acquirer host to acquirer MIP
2. Request Failure from acquirer MIP to Mastercard Network
3. Request Failure from Mastercard Network to issuer MIP
4. Request Failure from issuer MIP to issuer host
5. Response Failure from issuer host to issuer MIP
6. Response Failure from issuer MIP to Mastercard Network
7. Response Failure from Mastercard Network to acquirer MIP
8. Response Failure from acquirer MIP to acquirer host

## Request Failure from acquirer host to acquirer MIP

This flow describes a failure scenario that occurs when the *acquirer host* cannot reach the *acquirer MIP* to send the transaction.

### Request failure from acquirer host to acquirer MIP flow

1. The *acquirer* initiates an Authorization Request/0100 message and sends it to the Mastercard Network. The *request* message is not received at the *acquirer MIP* due to a communication issue.
2. The *acquirer* completes the transaction at the point of interaction. In most cases, the *acquirer* simply denies the transaction. However, the *acquirer* may elect to approve the transaction for completion for various reasons. This approval process is known as Acquirer Host X-Code.

There are specific guidelines an *acquirer* must follow if they choose to approve the transaction on their *host*. These can be found in [System functionality and services](#) of this guide.

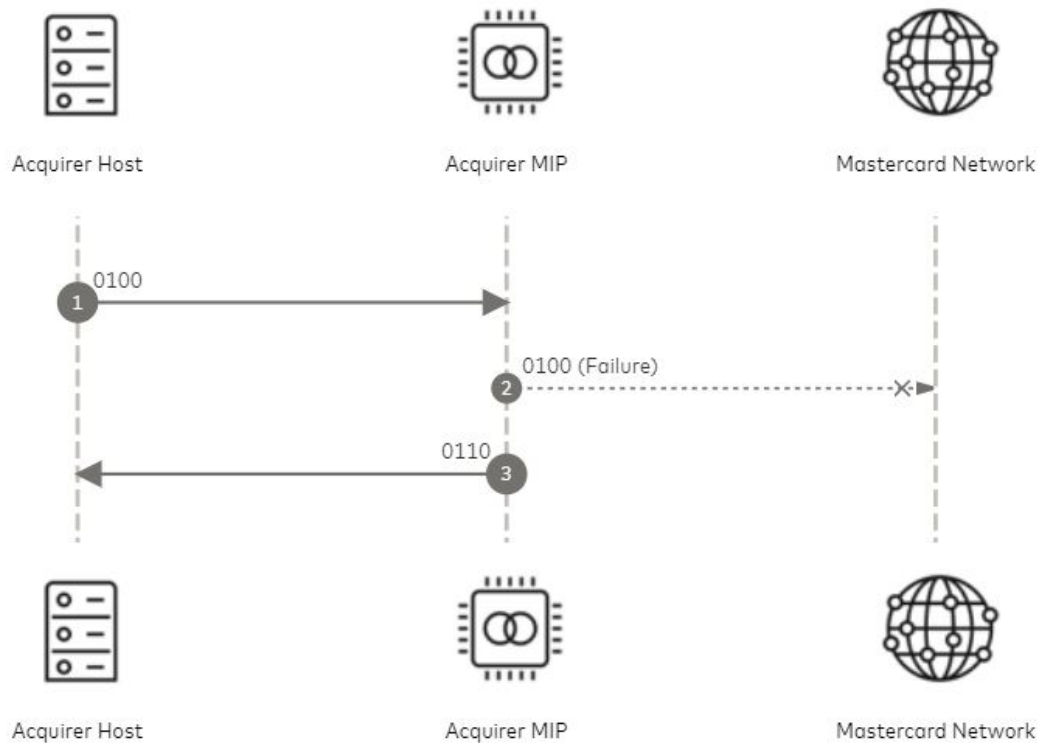

When this occurs, Mastercard recommends that the *acquirer* generate an Authorization Advice/0120: acquirer-generated message to advise the *issuer* that they approved the transaction. This allows the *issuer* to appropriately update the *cardholder's* account.

For more information on liability related to *X-Code*, refer to *Transaction Processing Rules* or *Mastercard Rules*.

## Request Failure from acquirer MIP to Mastercard Network

This flow describes a failure scenario when the [authorization request](#) has been received at the [acquirer MIP](#) but cannot be sent beyond that to the [Mastercard Network](#).

### Request failure from acquirer MIP to Mastercard Network flow

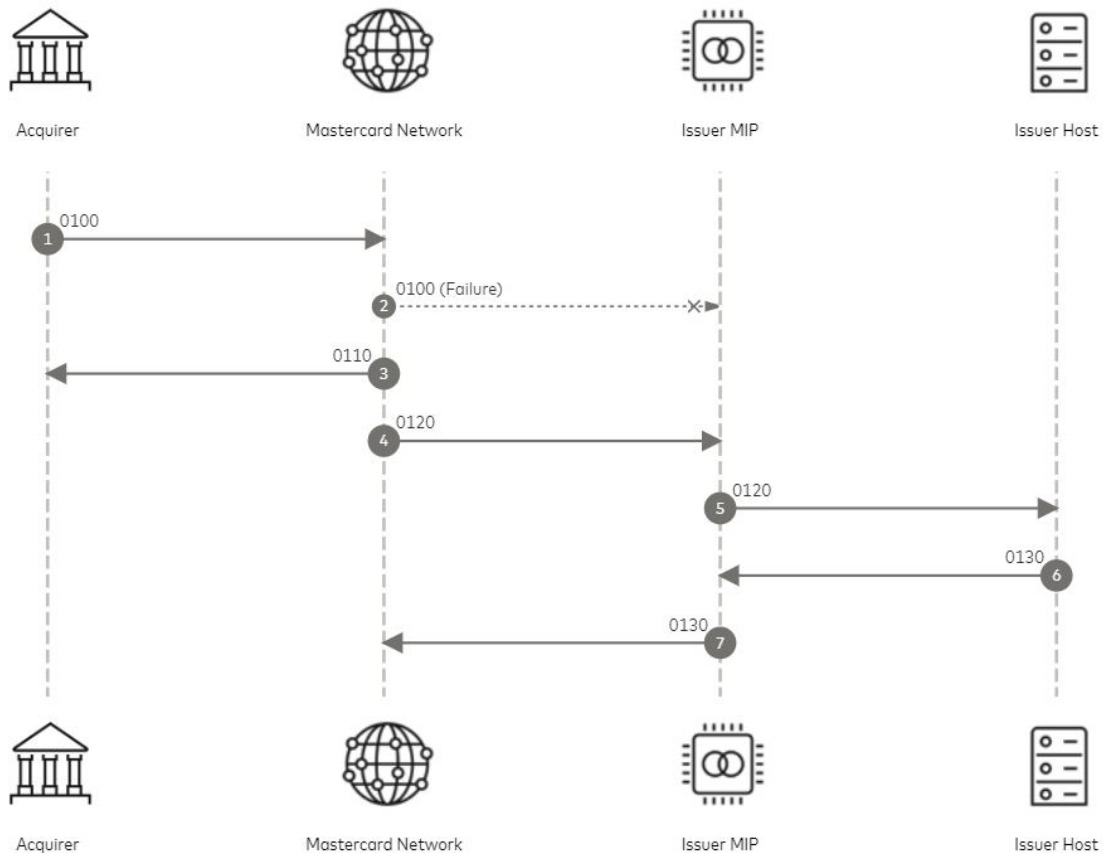

1. The [acquirer](#) initiates an Authorization Request/0100 message and sends it to the [Mastercard Network](#). The [request](#) message is received at the [acquirer MIP](#).
2. The [acquirer MIP](#) is unable to connect to the rest of the [Mastercard Network](#) due to a communication failure and cannot transmit the [request](#) message.
3. If [acquirer MIP X-Code Processing](#) is eligible for this transaction, this processing will occur and provide a decision for the transaction to the [acquirer](#) in the Authorization Request Response/0110 message.

For more information on liability related to [X-Code processing](#), refer to *Transaction Processing Rules* or *Mastercard Rules*.

## Request Failure from Mastercard Network to issuer MIP

This message flow describes when the *Mastercard Network* is unable to transmit an *authorization request* to the *issuer MIP* due to a communication failure.

### Request failure from Mastercard Network to issuer MIP flow

1. The *acquirer* initiates an Authorization Request/0100 message and sends it to the *Mastercard Network*.
2. The Mastercard Network attempts to forward the Authorization Request/0100 message to the *issuer*. The delivery of the message to the *issuer MIP* fails due to a communication failure.
3. The *Mastercard Network* detects the non-delivery of the request and if the *issuer* permits *Stand-In Authorization* or an alternate authorization process, the *Mastercard Network* sends the 0100 request message to *Stand-In Authorization*. *Stand-In Authorization* generates an Authorization Request Response/0110 message on the *issuer's* behalf based on the *issuer's* established parameters and sends it to the *acquirer*. It also generates an Authorization Advice/0120 message and forwards it to the *Mastercard Network SAF* queue for later transmission to the *issuer*.

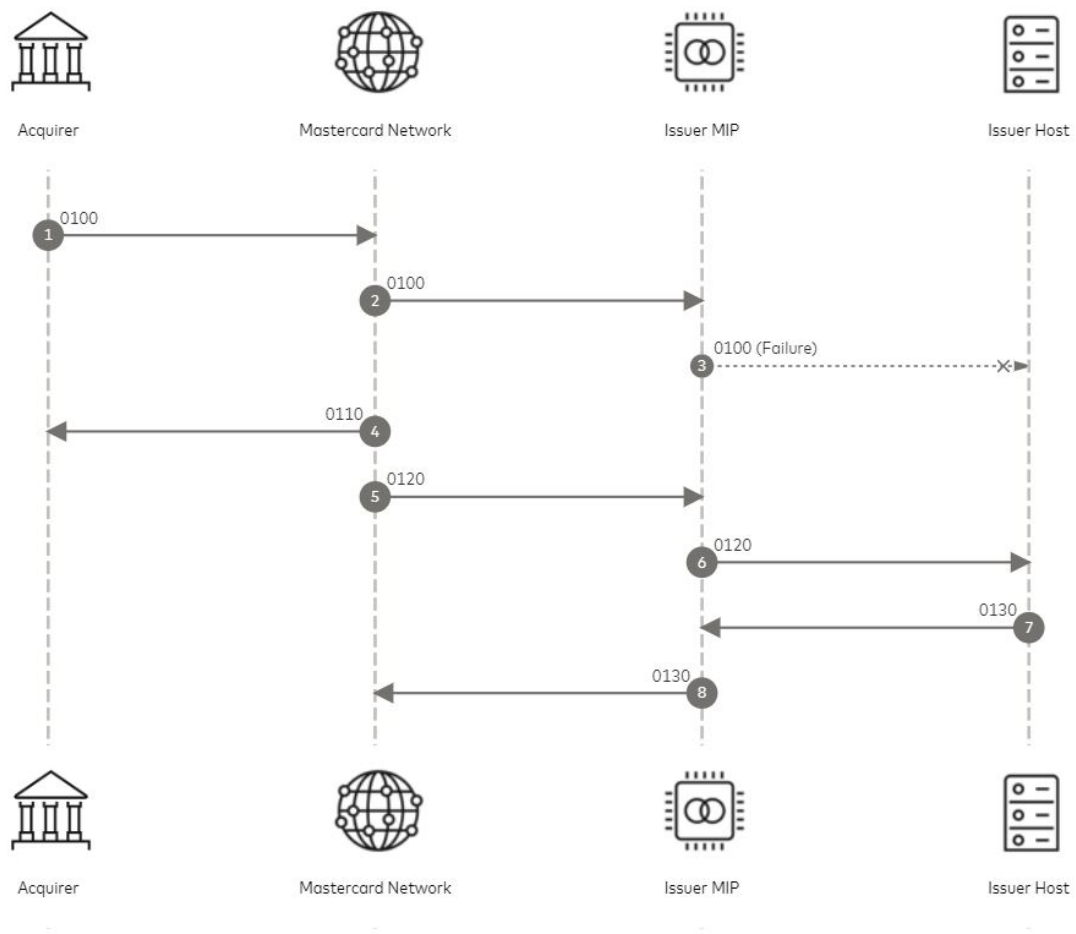

4. When communication is restored, the *Mastercard Network* will send an Authorization Advice/0120 message indicating the *Stand-In Authorization* result to the *issuer* during the *SAF* process. This message is successfully received at the *issuer MIP*.
5. The *issuer MIP* forwards the Authorization Advice/0120 *advice message* to the *issuer host*. The *issuer* uses this information to update the *cardholder* account. This action allows the *issuer* to update its *cardholder* open-to-buy and velocity data files in a timely manner.
6. The *issuer* must reply with an Authorization Advice Response/0130 Message to acknowledge receipt of the *advice message* and sends this from the *issuer host* to the *issuer MIP*.
7. The *issuer MIP* sends the *advice response message* to the *Mastercard Network* which completes this message flow.

## Request Failure from issuer MIP to issuer host

This message flow describes when the *issuer MIP* fails to transmit an *authorization request* to the *issuer host* due to a communication failure.

### Request failure from issuer MIP to issuer host flow

1. The *acquirer* initiates an Authorization Request/0100 message and sends it to the *Mastercard Network*.
2. The *Mastercard Network* successfully transmits the Authorization Request/0100 message to the *issuer MIP*.
3. The *issuer MIP* attempts to send the Authorization Request/0100 request message to the *issuer host*. The message cannot be delivered due to a communication failure.
4. The *Mastercard Network* detects the non-delivery of the request and if the *issuer* permits *Stand-In Authorization* or an alternate authorization process, the *Mastercard Network* sends the Authorization Request/0100 request message to *Stand-In Authorization*. *Stand-In Authorization* generates an Authorization Request Response/0110 message on the *issuer's*

behalf based on the *issuer's* established parameters and sends it to the *acquirer*. It also generates an Authorization Advice/0120 message and forwards it to the *Mastercard Network SAF* queue for later transmission to the *issuer*.

5. When communication is restored, the *Mastercard Network* will send the Authorization Advice/0120 message indicating the *Stand-In Authorization* result to the *issuer* during the *SAF* process. The network transmits the *advice message* to the *issuer MIP*.
6. The *issuer MIP* passes this *advice message* to the *issuer host*. This action allows the *issuer* to update its *cardholder* open-to-buy and velocity data files in a timely manner.
7. The *issuer* must reply with an Authorization Advice Response/0130 Message to acknowledge receipt of the *advice message*. This message is sent from the *issuer host* to the *issuer MIP*.

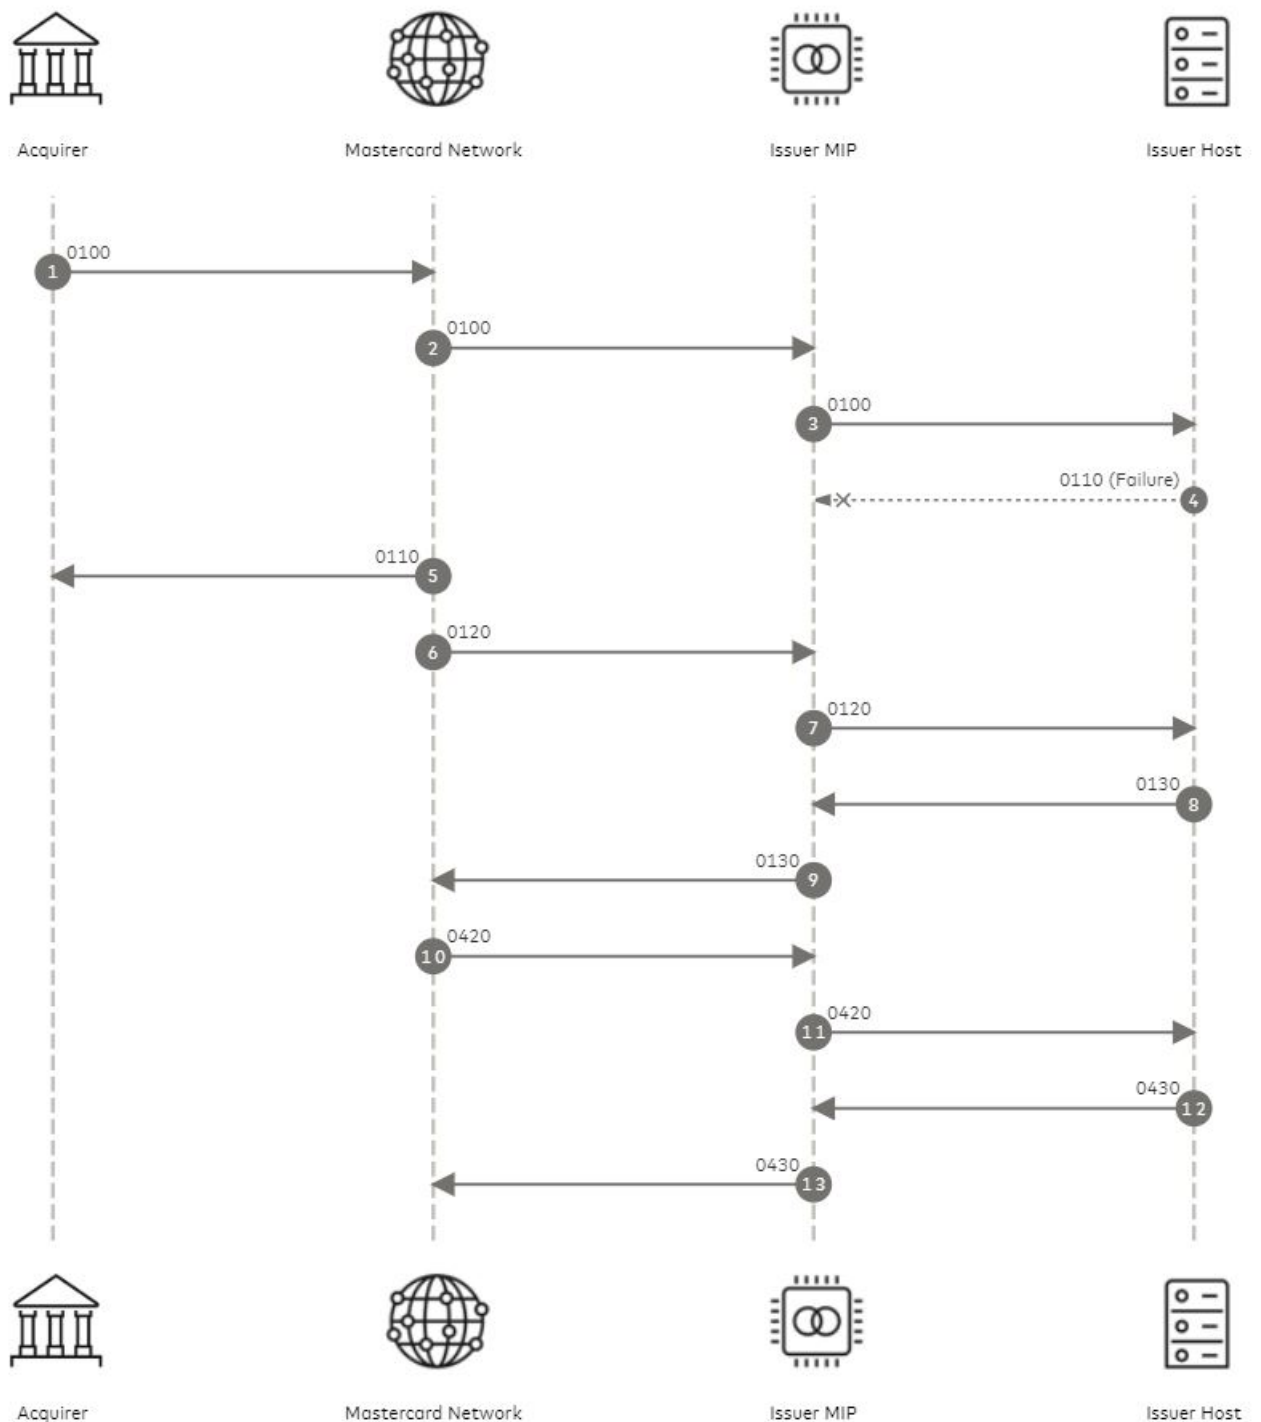

**NOTE:** Each time the *SAF* process receives an Authorization Advice Response/0130 message, it sends the next Authorization Advice/0120 message when there are multiple messages in the queue. This process repeats until there are no more advice messages. If the Mastercard Network does not receive an Authorization Advice Response/0130 message, it assumes the *issuer* did not receive the previous Authorization Advice/0120 message and ceases the *SAF* session.

8. Upon receipt of the message, the *issuer MIP* will transmit the Authorization Advice Response/0130 advice response to the *Mastercard Network* to complete the message flow.

## Response Failure from issuer host to issuer MIP

This message flow describes *exception processing* when communication fails between the *issuer host* and the *issuer MIP* during an Authorization Request Response/0110 message.

### Response failure from issuer host to issuer MIP flow

1. The *acquirer* initiates an Authorization Request/0100 message.

2. The *Mastercard Network* forwards the Authorization Request/0100 message to the *issuer*. The message is received at the *issuer MIP*.
3. The *issuer MIP* sends the Authorization Request/0100 authorization request to the *issuer host*.
4. The *issuer* cannot transmit the Authorization Request Response/0110 message from the *issuer host* to the *issuer MIP* because of a communication failure. The *Mastercard Network* detects a time-out condition from the *issuer* on the Authorization Request Response/0110 message. If the *issuer* permits *Stand-In Authorization* or an alternate authorization process, the *Mastercard Network* sends an Authorization Request Response/0100 request message to *Stand-In Authorization*.
5. *Stand-In Authorization* generates an Authorization Request Response/0110 message on the *issuer's* behalf and forwards it to the *acquirer*. It also generates an Authorization Advice/0120 message and forwards it to the *Mastercard Network* SAF queue for later transmission to the *issuer*.

**NOTE: *Stand-In Authorization* generates and forwards Authorization Advice/0120 messages for both approved and declined Authorization Request/0100 messages.**

6. When communication re-establishes with the *issuer*, the *SAF* process transmits the Authorization Advice/0120 message to the *issuer MIP*. This *advice message* is delivered to the *issuer MIP*.
7. The *issuer MIP* transmits the Authorization Advice/0120 *advice message* to the *issuer host*. This action allows the *issuer* to update its *cardholder* open-to-buy and velocity data files in a timely manner.
8. The *issuer*, on receiving the Authorization Advice/0120 message, returns an Authorization Advice Response/0130 message from the *issuer host* to the *issuer MIP* to acknowledge receipt of the Authorization Advice/0120 *advice message*.
9. The Authorization Advice Response/0130 authorization *advice message* is transmitted from the *issuer MIP* to the *Mastercard Network*.

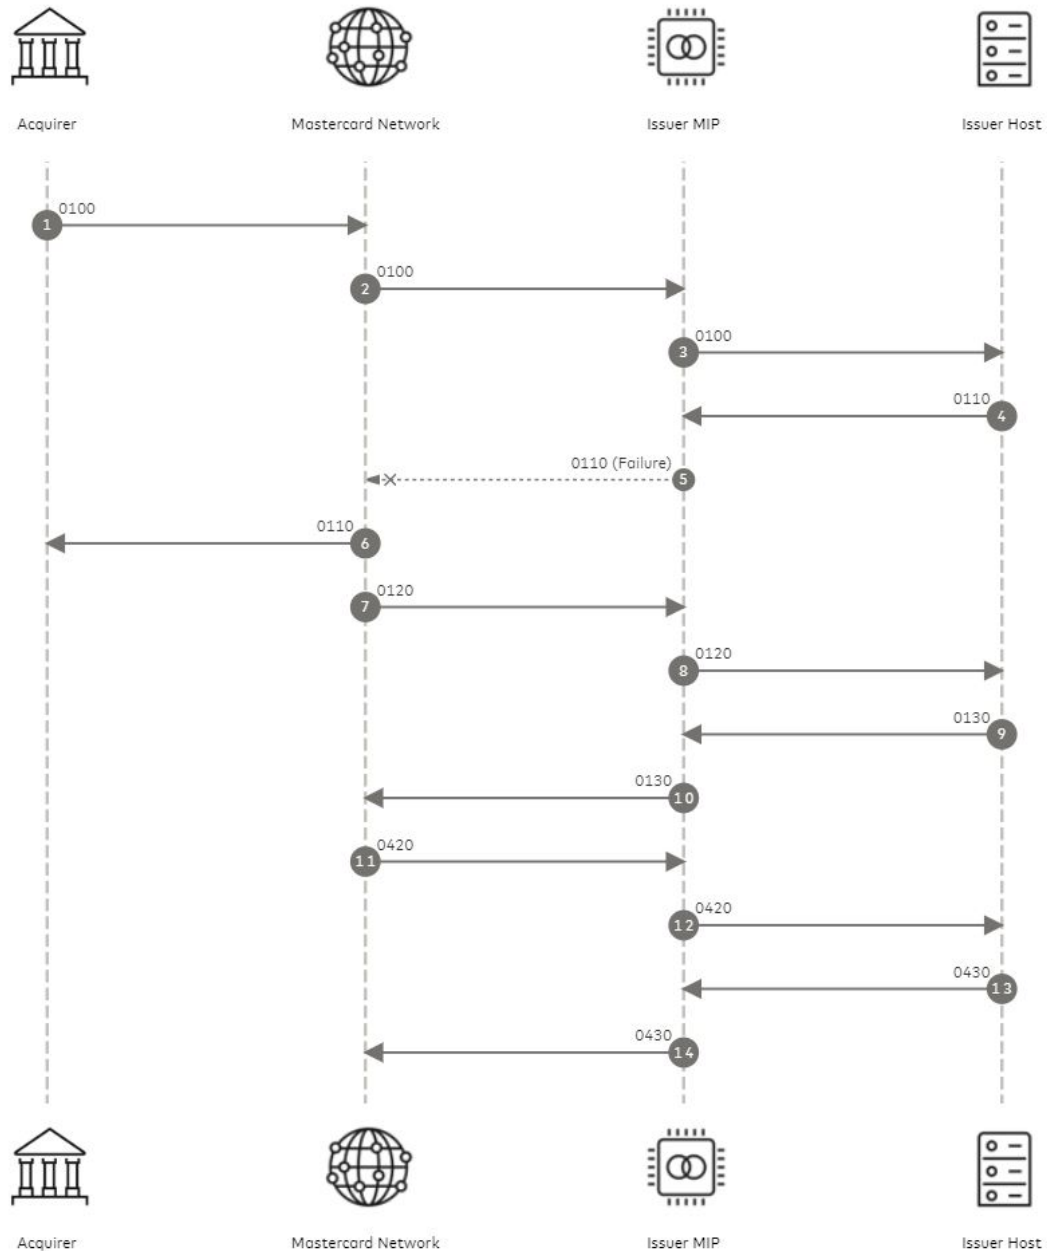

**NOTE: Each time the *SAF* process receives an Authorization Advice Response/0130 message, it sends the next Authorization Advice/0120 message when there are multiple messages in the queue. This process repeats until there are no more advice messages. If the *Mastercard Network* does not receive an Authorization Advice Response/0130 message, it assumes the *issuer* did not receive the previous Authorization Advice/0120 message and ceases the *SAF* session.**

10. The *Mastercard Network* sends a Reversal Advice/0420 message containing data indicating that the *issuer's* response timed out. This message is delivered to the *issuer MIP*.
11. The *issuer MIP* sends the Reversal Advice/0420 *advice message* to the *issuer host*.
12. When the *issuer* receives the Reversal Advice/0420 message, it must generate a Reversal Advice Response/0430 message. This message is sent from the *issuer host* to the *issuer MIP*.
13. The *issuer MIP* transmits the Reversal Advice Response/0430 message to the *Mastercard Network*.

## Response Failure from issuer MIP to Mastercard Network

This message flow describes exception processing when communication fails between the *issuer* MIP and the *Mastercard Network* during an Authorization Request Response/0110 message.

### Response failure from issuer MIP to Mastercard Network flow

1. The *acquirer* initiates an Authorization Request/0100 message.

2. The *Mastercard Network* forwards the Authorization Request/0100 message to the *issuer*. The message is received at the *issuer MIP*.
3. The *issuer MIP* sends the Authorization Request/0100 authorization request to the *issuer host*.
4. The *issuer* evaluates the request and sends an Authorization Request Response/0110 message from the *issuer host* to the *issuer MIP*.
5. The Authorization Request Response/0110 message cannot be transmitted from the *issuer MIP* to the *Mastercard Network* because of a communications failure.
6. The *Mastercard Network* detects a time-out condition from the *issuer* on the Authorization Request Response/0110 message. If the *issuer* permits *Stand-In Authorization*, the *Mastercard Network* sends an Authorization Request/0100 message to *Stand-In Authorization*.  
*Stand-In Authorization* generates an appropriate Authorization Request Response/0110 message on the *issuer's* behalf and forwards it to the *acquirer*. It also generates an Authorization Advice/0120 message and forwards it to the *Mastercard Network SAF* queue for later transmission to the *issuer*.
7. When communication re-establishes with the *issuer*, the *SAF* process transmits the Authorization Advice/0120 message to the *issuer MIP*. This *advice message* is delivered to the *issuer MIP*.
8. The *issuer MIP* transmits the Authorization Advice/0120 *advice message* to the *issuer host*. This action allows the *issuer* to update its *cardholder* open-to-buy and velocity data files in a timely manner.
9. The *issuer*, on receiving the Authorization Advice/0120 message, returns an Authorization Advice Response/0130 message from the *issuer host* to the *issuer MIP* to acknowledge receipt of the Authorization Advice/0120 *advice message*.
10. The Authorization Advice Response/0130 authorization advice message is transmitted from the *issuer MIP* to the *Mastercard Network*.

**NOTE: Each time the *SAF* process receives an Authorization Advice Response/0130 message, it sends the next Authorization Advice/0120 message when there are multiple messages in the queue. This process repeats until there are no more *advice messages*. If the *Mastercard Network* does not receive an Authorization Advice Response/0130 message, it assumes the *issuer* did not receive the previous Authorization Advice/0120 message and ceases the *SAF* session.**

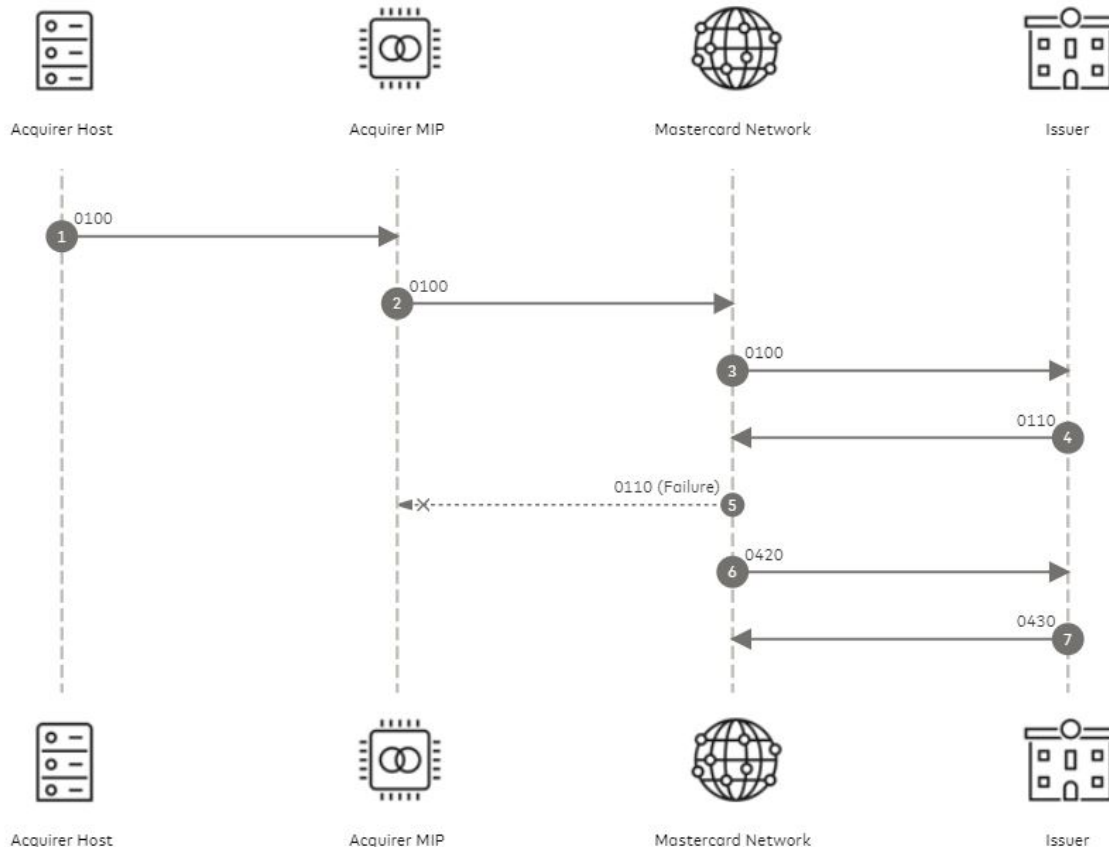

11. The *Mastercard Network* sends a Reversal Advice/0420 message containing data indicating that the *issuer's* response timed out. This message is delivered to the *issuer MIP*.
12. The *issuer* must reverse any effect to its *cardholder* or velocity files that took place during the *issuer's* approval of the initial *authorization request*.
13. When the *issuer* receives the Reversal Advice/0420 message, it must generate a Reversal Advice Response/0430 message. This message is sent from the *issuer host* to the *issuer MIP*.
14. The *issuer MIP* transmits the Reversal Advice Response/0430 message to the *Mastercard Network*.

## Response Failure from Mastercard Network to acquirer MIP

This message flow describes exception processing when communication fails between the *Mastercard Network* and the *acquirer MIP* during an Authorization Request Response/0110 message.

### Response failure from Mastercard Network to acquirer MIP flow

1. The *acquirer* initiates an Authorization Request/0100 message and sends it to the *Mastercard Network*. The request message is received at the *acquirer MIP*.
2. The *acquirer MIP* sends the authorization request to the *Mastercard Network*.
3. The *Mastercard Network* forwards the Authorization Request/0100 message to the *issuer*.
4. The *issuer* generates an Authorization Request Response/0110 message providing the transaction decision and sends it to the *Mastercard Network*.
5. The *Mastercard Network* attempts to forward the Authorization Request Response/0110 message to the *acquirer MIP* but is unable to deliver the message.

6. Since the *response message* cannot be delivered, the *Mastercard Network* will create a Reversal Advice/0420 message back to the *issuer* if the Authorization Request Response/0110 message indicates an approval.  
The purpose of this advice is to let the *issuer* know that its Authorization Request Response/0110 message was not delivered, and the *issuer* should reverse or otherwise adjust its *cardholder* authorization files as necessary to reflect that the transaction could not be completed.

**NOTE: If the Authorization Request Response/0110 message indicates a decline from the *issuer*, no reversal advice is required since there is no hold against the *cardholder* account.**

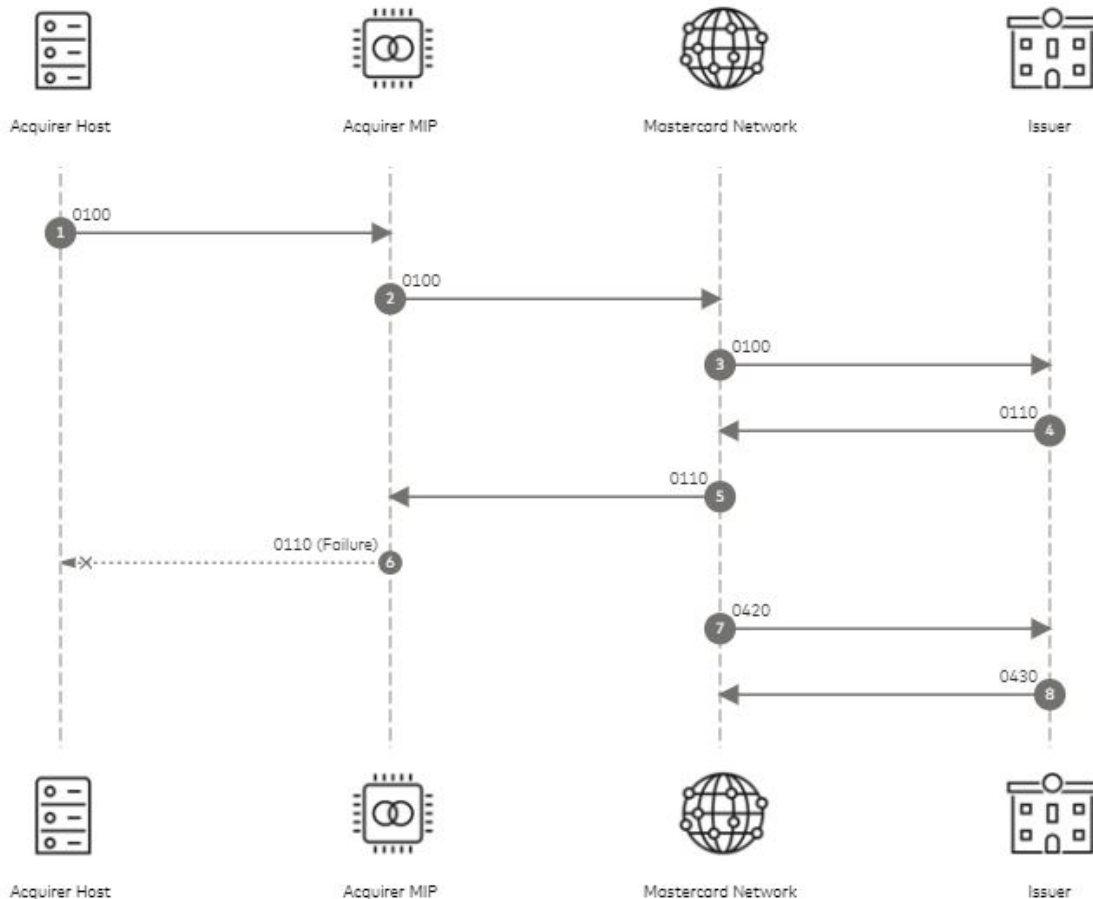

7. The *issuer* responds back to the *Mastercard Network* with a Reversal Advice Response/0430 message to acknowledge positive receipt of the Reversal Advice/0420 message.  
Meanwhile, if the *acquirer* is still operating, it detects a time-out condition on the Authorization Request Response/0110 message. When the time-out occurs, the *acquirer* must make a decision whether to authorize the transaction at the point of interaction. If the *acquirer* denies the transaction, the message flow terminates at this point.

**NOTE: Does not apply in the case of a Mastercard Hosted Mobile Phone Top-up request. If the *issuer* approves the Mastercard Hosted Mobile Phone Top-up transaction, the *Mastercard Network* will complete the Mastercard Hosted Mobile Phone Top-up request. The *acquirer* should provide the *cardholder* with notification at the ATM that the top-up request will be complete within 15 minutes.**

## Response Failure from acquirer MIP to acquirer host

This message flow describes exception processing when communication fails between the *acquirer MIP* and the *acquirer host* during an Authorization Request Response/0110 message.

### Response failure from acquirer MIP to acquirer host flow

1. The *acquirer* initiates an Authorization Request/0100 message and sends it to the *Mastercard Network*. The request message is received at the *acquirer MIP*.
2. The *acquirer MIP* sends the authorization request to the *Mastercard Network*.
3. The *Mastercard Network* forwards the Authorization Request/0100 message to the *issuer*.
4. The *issuer* generates an Authorization Request Response/0110 message providing the transaction decision and sends it to the *Mastercard Network*.
5. The *Mastercard Network* delivers the Authorization Request Response/0110 response message to the *acquirer MIP*.

6. The *acquirer MIP* attempts to forward the Authorization Request Response/0110 message to the *acquirer host* and is unable to because of a communications failure.
7. The *Mastercard Network* detects the non-delivery of the *response message* and creates a Reversal Advice/0420 message back to the *issuer* if the Authorization Request Response/0110 message indicates an approval.  
The purpose of this advice is to let the issuer know that its Authorization Request Response/0110 message was not delivered, and the *issuer* should reverse or otherwise adjust its *cardholder* authorization files as necessary to reflect that the transaction could not be completed.

**NOTE: If the Authorization Request Response/0110 message indicates a decline from the *issuer*, no reversal advice is required since there is no hold against the *cardholder* account.**

8. The *issuer* responds back to the *Mastercard Network* with a Reversal Advice Response/0430 message to acknowledge receipt of the Reversal Advice/0420 message.  
Meanwhile, if the *acquirer* is still operating, it detects a time-out condition on the Authorization Request Response/0110 message. When the time-out occurs, the *acquirer* must make a decision whether to authorize the transaction at the point of interaction. If the *acquirer* denies the transaction, the message flow terminates at this point.

**NOTE: Does not apply in the case of a Mastercard Hosted Mobile Phone Top-up request. If the *issuer* approves the Mastercard Hosted Mobile Phone Top-up transaction, the *Mastercard Network* will complete the Mastercard Hosted Mobile Phone Top-up request. The *acquirer* should provide the *cardholder* with notification at the ATM that the top-up request will be complete within 15 minutes.**

## Failure scenarios: issuer response contains errors or late response flow

List of *issuer* responses that contains errors or late response failure scenarios:

- *Response from issuer contains errors*
- *Issuer response received late (after time limit)*

### Response from issuer contains errors

This message flow describes exception processing when an invalid *issuer* Authorization Request Response/0110 message is received and *Stand-In Authorization* is allowed.

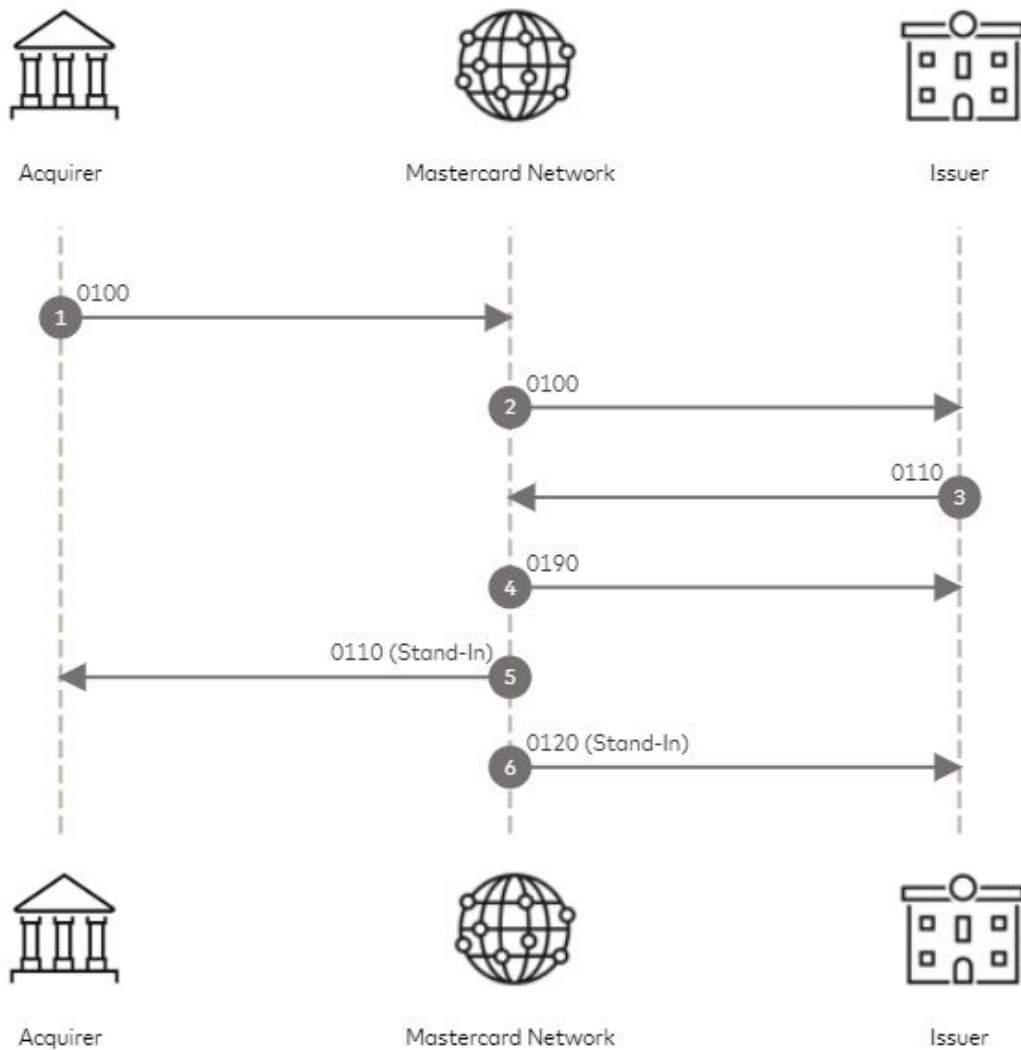

Mastercard will provide the *issuer's* response to the Authorization Request/0110 message whenever possible. If the *issuer* returns an Authorization Request Response/0110 message, Mastercard evaluates the *authorization response* to determine if the transaction can be parsed and if *DE 39 (Response Code)* can be read. If Mastercard can read *DE 39* and the *issuer* has approved the transaction, inclusive of the following *response codes*, Mastercard uses this message flow and sends the request to *Stand-In Authorization*:

- 00 Approved or completed successfully

- 10 Partial Approval
- 87 Purchase Amount Only, No Cash Back Allowed
- 91 Authorization System or issuer system inoperative
- 92 Unable to route transaction
- 96 System error (inclusive of Response Codes)

If the [response code](#) is any other than those previously listed, Mastercard replaces or removes the data responsible for the format error and forwards the remainder of the message to the [acquirer](#). Mastercard continues to log information relevant to the format error for reference purposes.

#### Response from issuer contains errors flow

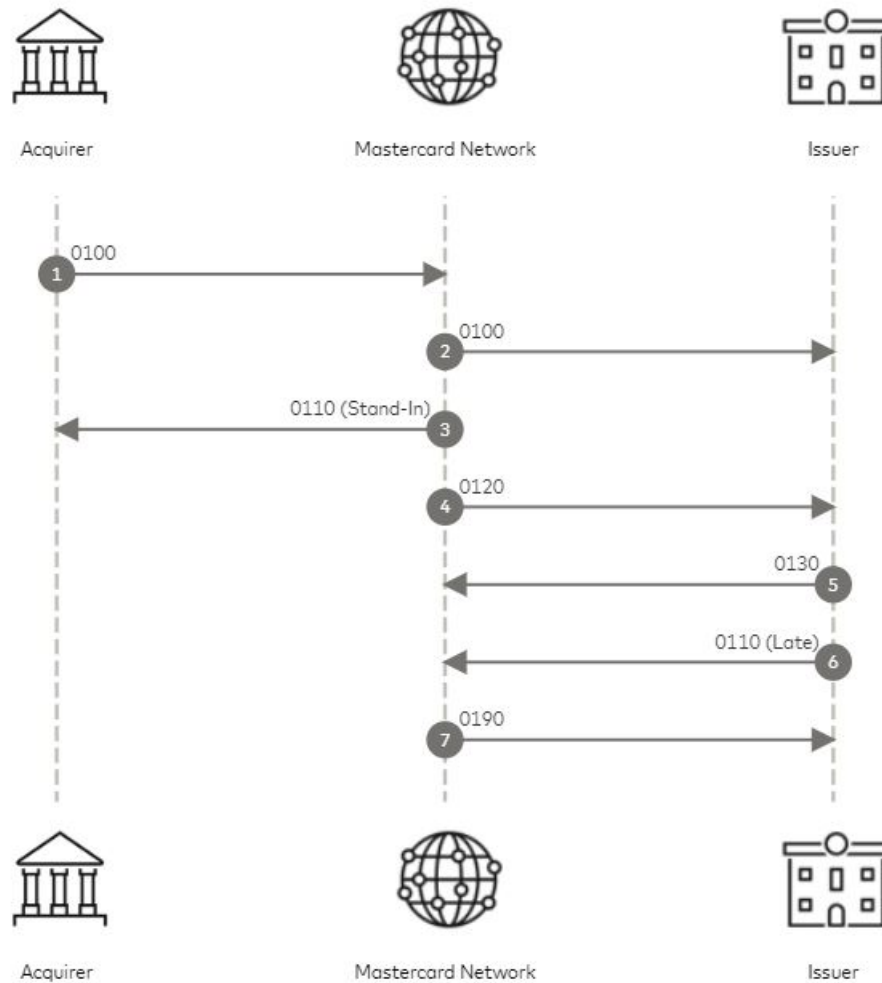

1. The *acquirer* initiates an Authorization Request/0100 message and sends it to the *Mastercard Network*.
2. The *Mastercard Network* forwards the Authorization Request/0100 message to the *issuer*.
3. The *issuer* returns an Authorization Request Response/0110 which contains invalid data. Depending on the response code provided, the transaction may route to *Stand-In Authorization*.
4. The *Mastercard Network* sends an Authorization Response Negative Acknowledgment/0190 message to the *issuer*.
5. The *Mastercard Network* sends the Authorization Request/0100 message to *Stand-In Authorization*. *Stand-In Authorization* generates an Authorization Request Response/0110 message and the *Mastercard Network* forwards it to the *acquirer*.
6. The *Stand-In Authorization* also generates an Authorization Advice/0120 message which is added to the *SAF* queue for the *issuer*. Once the *issuer* is available, the *advice message* is sent.

**NOTE:** There is no response necessary from the *issuer* after the *Mastercard Network* sends an Authorization Response Negative Acknowledgment/0190 message.

## Issuer response received late (after time limit)

This message flow describes exception processing when an Authorization Request Response/0110 message is received after the time limit and *Stand-In Authorization* is allowed.

### Issuer response received late (after time limit) flow

1. The [acquirer](#) initiates an Authorization Request/0100 message and sends it to the [Mastercard Network](#).
2. The [Mastercard Network](#) forwards the Authorization Request/0100 message to the [issuer](#).
3. The [Mastercard Network](#) detects a time-out condition from the [issuer](#) on the Authorization Request Response/0110 message. If the [issuer](#) permits *Stand-In Authorization*, the [Mastercard Network](#) sends an Authorization Request/0100 message to *Stand-In Authorization*.

*Stand-In Authorization* generates an appropriate Authorization Request Response/0110 message on the *issuer's* behalf and forwards it to the *acquirer*. It also generates an Authorization Advice/0120 message and forwards it to the *Mastercard Network SAF* queue for later transmission to the *issuer*.

4. When communication re-establishes with the *issuer*, the *SAF* process transmits the Authorization Advice/0120 message to the *issuer*.
5. The *issuer*, on receiving the Authorization Advice/0120 message, transmits an Authorization Advice Response/0130 message to the *Mastercard Network*.
6. The *issuer* sends an Authorization Request Response/0110 message after the time limit to the *Mastercard Network*.
7. The *Mastercard Network* sends an Authorization Response Negative Acknowledgment/0190 message to the *issuer*, indicating it has no record of a corresponding Authorization Request/0100 message.

**NOTE:** There is no response necessary from the *issuer* after the *Mastercard Network* sends an Authorization Response Negative Acknowledgment/0190 message.

## Failure scenarios: alternate issuer host configuration flows

List of *alternate issuer host* configuration failure scenarios:

- *Communication Failure or primary issuer not signed in*
- *Primary issuer times out*
- *Primary issuer responds after time limit and primary issuer response received first*

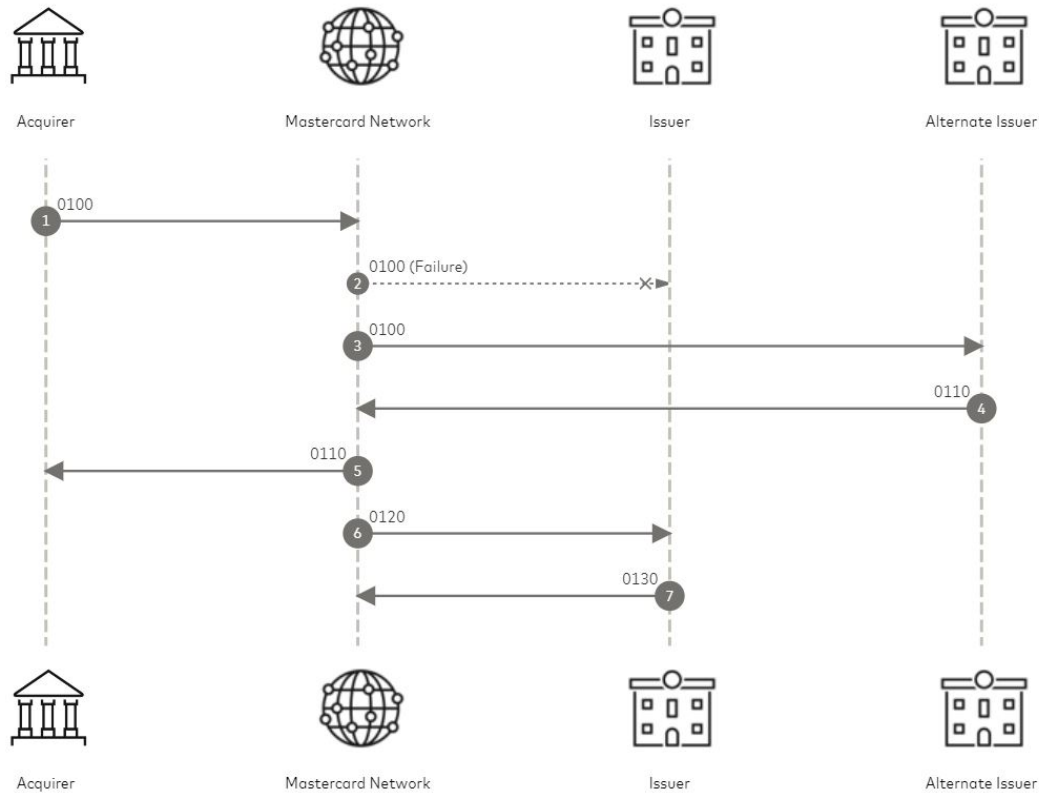

### Communication Failure or primary issuer not signed in

This message flow describes *exception processing* when the *primary issuer* is not signed in, the transaction could not be delivered to the *primary issuer*, or when the *primary issuer* does not

respond with an Authorization Request Response/0110 message within the time limit defined for the *acceptance brand*.

### Communication failure or primary issuer not signed in flow

1. The *acquirer* initiates an Authorization Request/0100 message and sends it to the *Mastercard Network*.
2. The *Mastercard Network* attempts to forward the Authorization Request/0100 message to the *primary issuer* but is unable to complete the message transmission because of a communication link failure, *issuer* failure or the *issuer* is not signed on to the *network*.
3. The *Mastercard Network* immediately sends the Authorization Request/0100 message to the *alternate issuer*.
4. The *alternate issuer* generates an Authorization Request Response/0110 message on the *primary issuer*'s behalf.
5. The *Mastercard Network* forwards the Authorization Request Response/0110 message from the *alternate issuer* to the *acquirer*.
6. The *Mastercard Network* generates an Authorization Advice/0120 message and forwards it to the *Mastercard Network SAF* process for later transmission to the *primary issuer*. This advises the *primary issuer* of the decision from the *alternate issuer*. This advises the primary

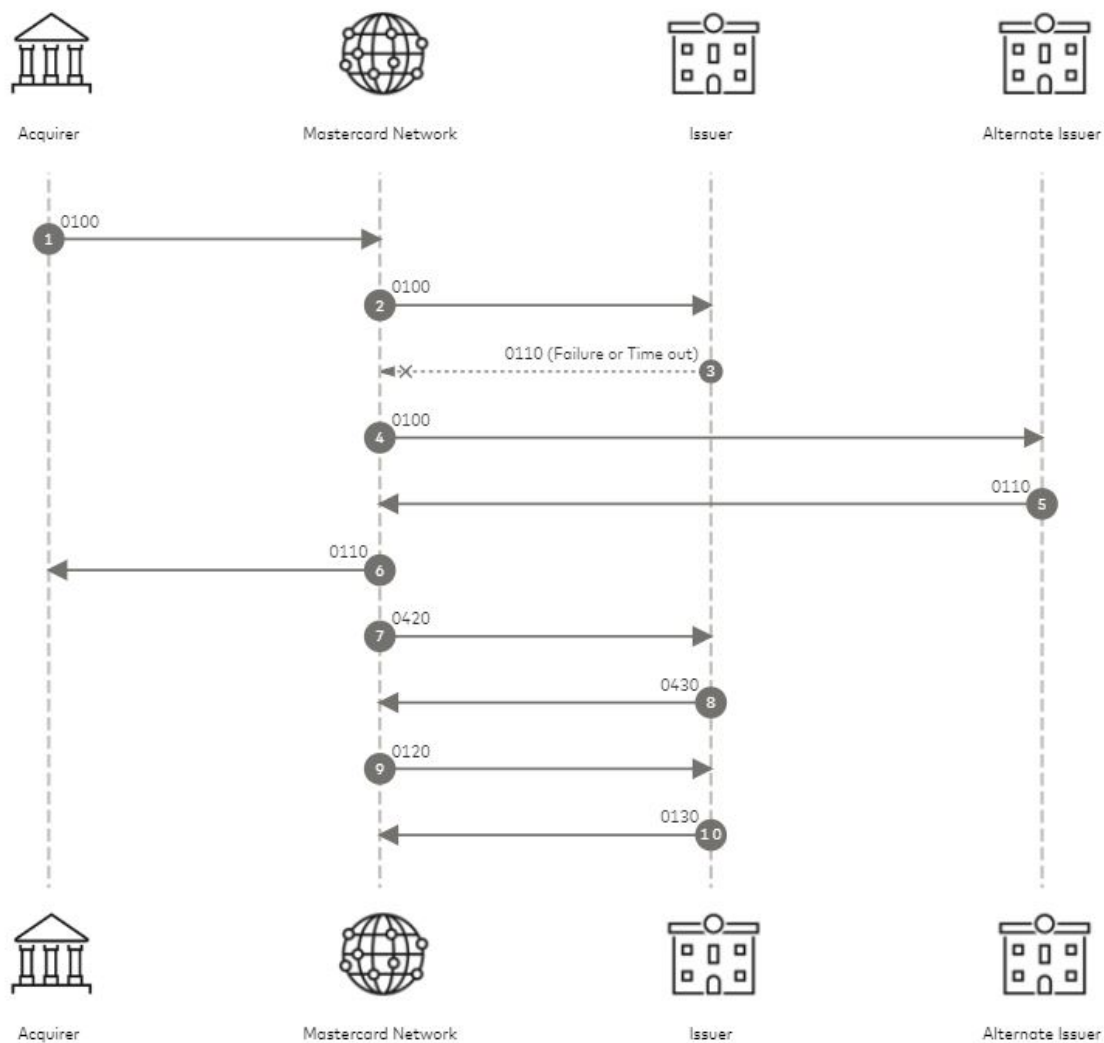

issuer of approval from the alternate issuer. No authorization advice/0120 message is sent if the transaction is declined.

- The *issuer* responds to the Authorization Advice/0120 message with an Authorization Advice Response/0130 message back to the *Mastercard Network*.

## Primary issuer times out

This message flow describes *exception processing* when no *issuer* Authorization Request Response/0110 message is received within the time limit after receipt of the Authorization Request/0100 message for transactions that are allowed to be processed by the *alternate issuer host*.

### Primary issuer times out flow

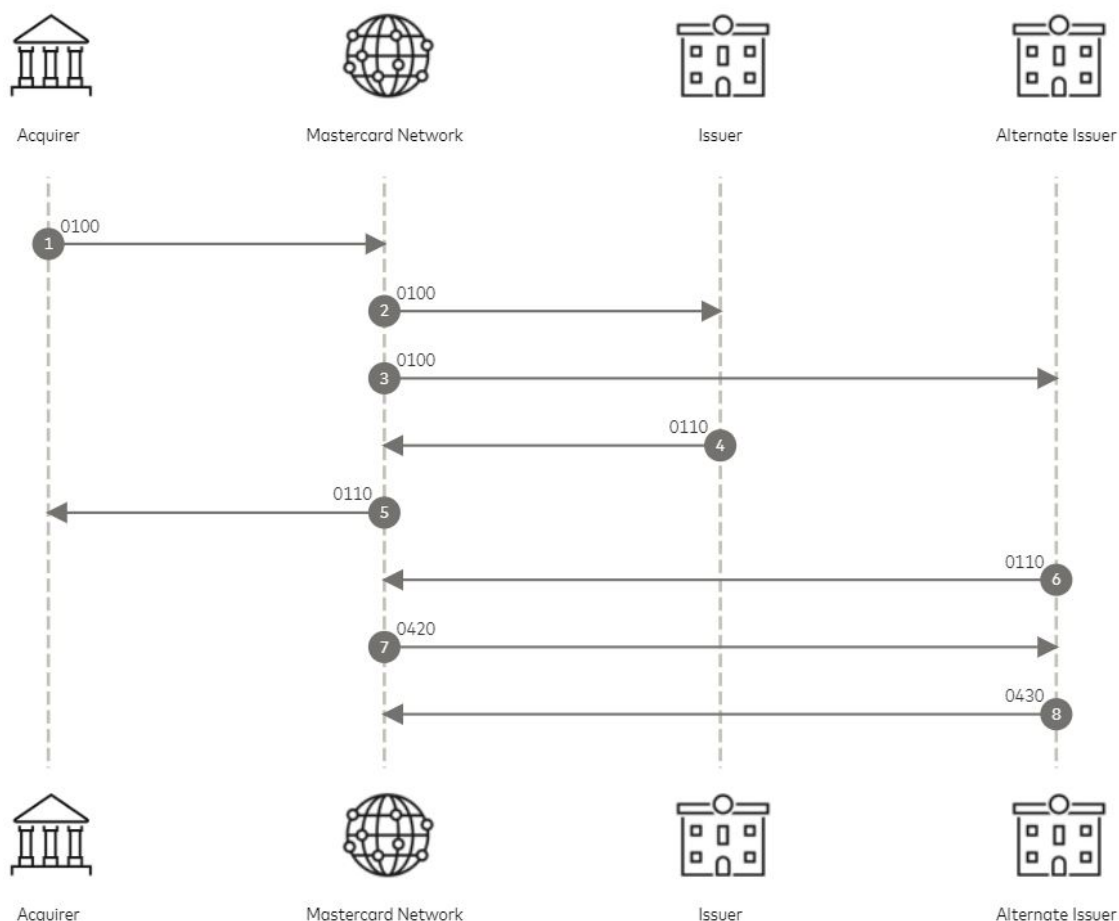

1. The *acquirer* initiates an Authorization Request/0100 message and sends it to the *Mastercard Network*.
2. The *Mastercard Network* forwards the Authorization Request/0100 message to the *primary issuer*.
3. The *Mastercard Network* does not receive the Authorization Request Response/0110 message from the *primary issuer* within the time limit.
4. The *Mastercard Network* sends the Authorization Request/0100 message to the *alternate issuer*.
5. The *alternate issuer* generates and sends the Authorization Request Response/0110 message to the *Mastercard Network*.
6. The *Mastercard Network* forwards to the *acquirer* the Authorization Request Response/0110 message received from the *alternate issuer*.
7. The *Mastercard Network* creates an Authorization Advice/0120 message and stores it in the *SAF* queue for guaranteed delivery to the *primary issuer*.
8. Upon *receipt*, the *issuer* must respond to the *SAF advice message* with an Authorization Advice Response/0130 message.
9. Since the response was not received within the time limit, the *Mastercard Network* will send an Authorization Advice/0120 message to the *primary issuer* to advise that they timed out on the Authorization Request. Even though no response was received from the *primary issuer*, this *advice message* indicates to the *primary issuer* to release any funds they may have held for the transaction.
10. When the *primary issuer* receives the Authorization Advice/0120 message, it must generate an Authorization Advice Response/0130 message to acknowledge *receipt* of the Authorization Advice/0120 message.

## Primary issuer responds after time limit and primary issuer response received first

This message flow describes *exception processing* when the Authorization Request/0100 message has already been forwarded to the *alternate issuer*, but the *primary issuer's* authorization response is received before the *alternate issuer's* response.

### Primary issuer responds after time limit and primary issuer response received first flow

1. The *acquirer* sends the Authorization Request/0100 message to the *Mastercard Network*.
2. The *Mastercard Network* forwards the Authorization Request/0100 message to the *primary issuer*.
3. If the *Mastercard Network* does not receive the Authorization Request Response/0110 message within the time limit from the *primary issuer*, the *Mastercard Network* forwards the Authorization Request/0100 message to the *alternate issuer*.
4. The *primary issuer* sends the Authorization Request Response/0110 message to the *Mastercard Network*.

5. The *Mastercard Network* receives the *primary issuer's* Authorization Request Response/0110 message before the *alternate issuer's* response and sends the *primary issuer's* Authorization Request Response/0110 message to the *acquirer*.
6. The *alternate issuer* sends the Authorization Request Response/0110 message to the *Mastercard Network*.
7. The *Mastercard Network* generates a Reversal Advice/0420 message to the *alternate issuer* to reverse the *alternate issuer's* response that was not used.
8. When the *alternate issuer* receives the Reversal Advice/0420 message, it must generate a Reversal Advice Response/0430 message to acknowledge *receipt* of the Reversal Advice/0420 message.

## Failure scenarios: no alternate processing allowed

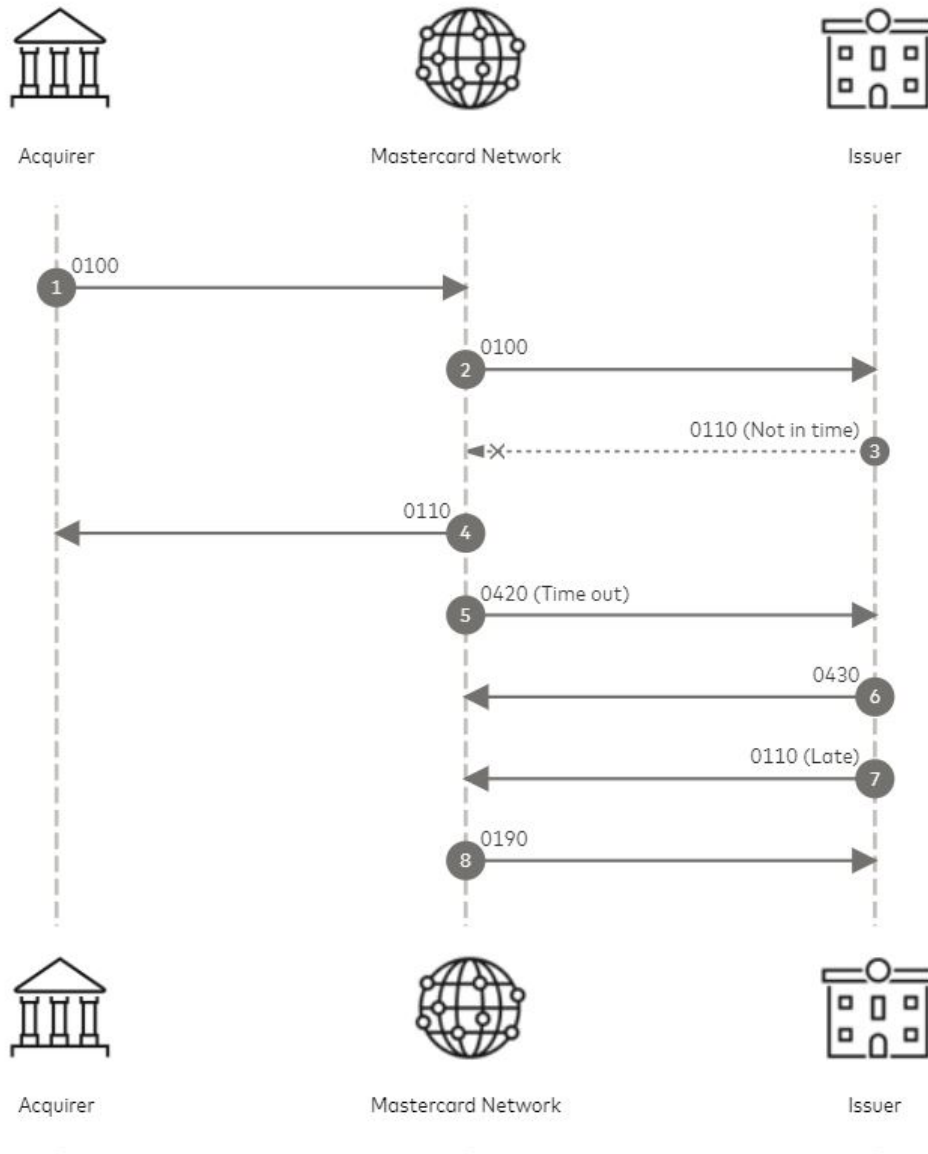

List of no alternate processing allowed failure scenarios:

- No alternate processing, issuer late response or not in time limit
- No alternate processing, issuer response contains errors

## No alternate processing, issuer late response or not in time limit

This message flow describes *exception processing* when the *issuer's* Authorization Request Response/0110 message is not received within the allowed *issuer* response time limit after *receipt* of the Authorization Request/0100 message.

### No alternate processing, issuer late response or not in time limit flow

1. The *acquirer* sends the Authorization Request/0100 message to the *Mastercard Network*.

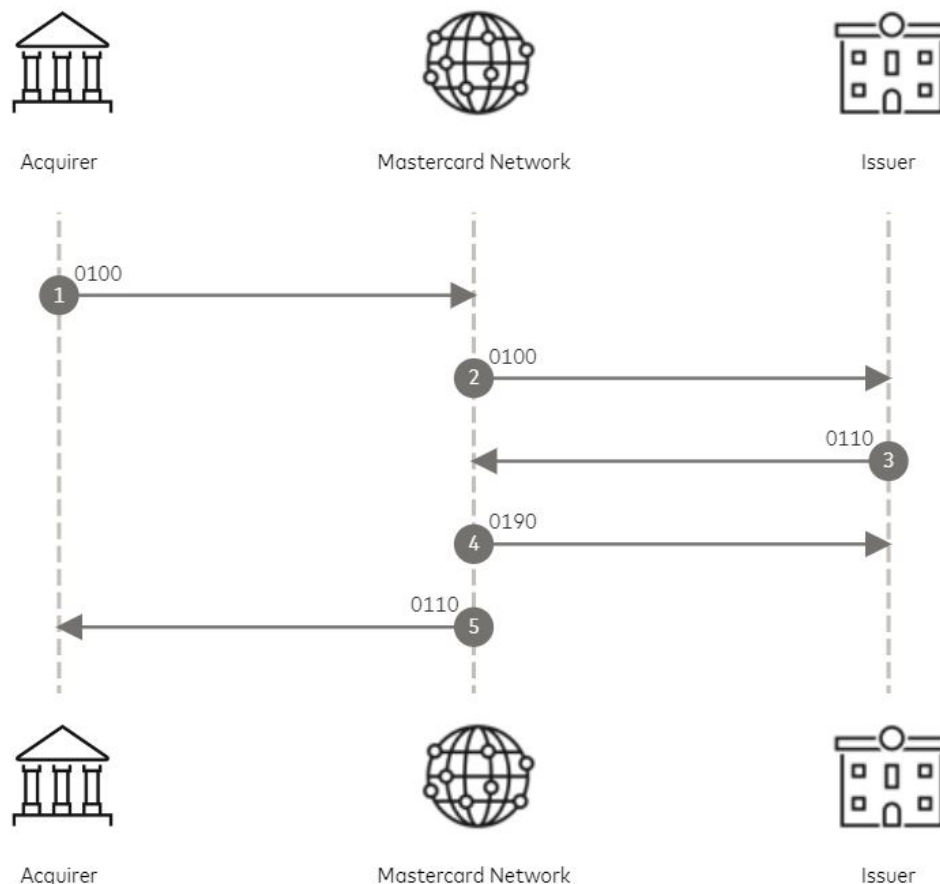

2. The *Mastercard Network* forwards the Authorization Request/0100 message to the *issuer*.
3. The *Mastercard Network* does not receive the *issuer's* Authorization Request Response/0110 within the response time allowed for the *issuer*.
4. The *acquirer* is sent an Authorization Request Response/0110 message indicating that the *issuer* could not be reached, and the transaction is declined.
5. A Reversal Advice/0420 message is sent to the *issuer* to advise the *Mastercard Network* did not receive the *issuer's* Authorization Request Response/0110 message within the allowed response time. Even though no response was received from the *issuer*, this *advice message* indicates to the *issuer* to release any funds they may have held for the transaction.
6. When the *issuer* receives the Reversal Advice/0420 message, it must generate a Reversal Advice Response/0430 message to acknowledge *receipt* of the Reversal Advice/0420 message.  
In case of a late response from the *issuer* the following two steps would occur.
7. The late Authorization Request Response/0110 message is received from the *issuer*.
8. The *Mastercard Network* creates an Authorization Response Negative Acknowledgment/0190 message which is sent to the *issuer*.

**NOTE:** There is no response necessary from the *issuer* after the *Mastercard Network* sends an Authorization Response Negative Acknowledgment/0190 message.

## No alternate processing, issuer response contains errors

This message flow describes *exception processing* when the *issuer's* Authorization Request Response/0110 message contains errors, and no alternate processing is allowed.

### No alternate processing, issuer response contains errors flow

1. The *acquirer* initiates an Authorization Request/0100 message and sends it to the *Mastercard Network*.
2. The *Mastercard Network* forwards the Authorization Request/0100 message to the *issuer*.
3. The *issuer* returns an Authorization Request Response/0110 which contains invalid data.
4. The *Mastercard Network* sends an Authorization Response Negative Acknowledgment/0190 message to the *issuer*.
5. The *Mastercard Network* sends the *acquirer* an Authorization Request Response/0110 message indicating that the *issuer* was not available and could not provide a response.

**NOTE:** There is no response necessary from the *issuer* after the *Mastercard Network* sends an Authorization Response Negative Acknowledgment/0190 message.

## Authorization Advice messages

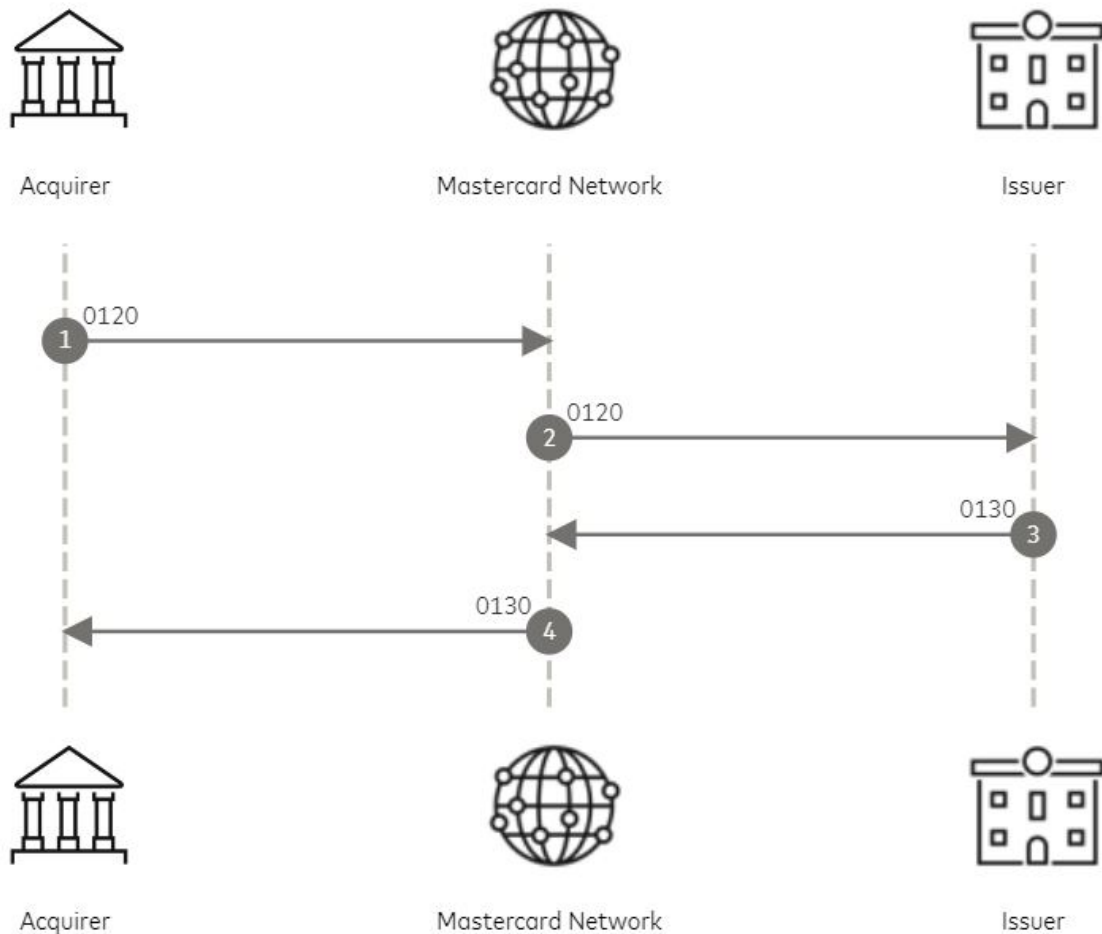

List of authorization *advice messages*:

- Acquirer-generated Authorization Advice message
- Acquirer-generated Advice message, issuer not available
- System-generated Authorization Advice message

## Acquirer-generated Authorization Advice message

This message flow describes the transaction process of the Authorization Advice/0120: acquirer-generated and Authorization Advice Response/0130: issuer-generated message when the *issuer* is available.

### Acquirer-generated authorization advice message standard flow

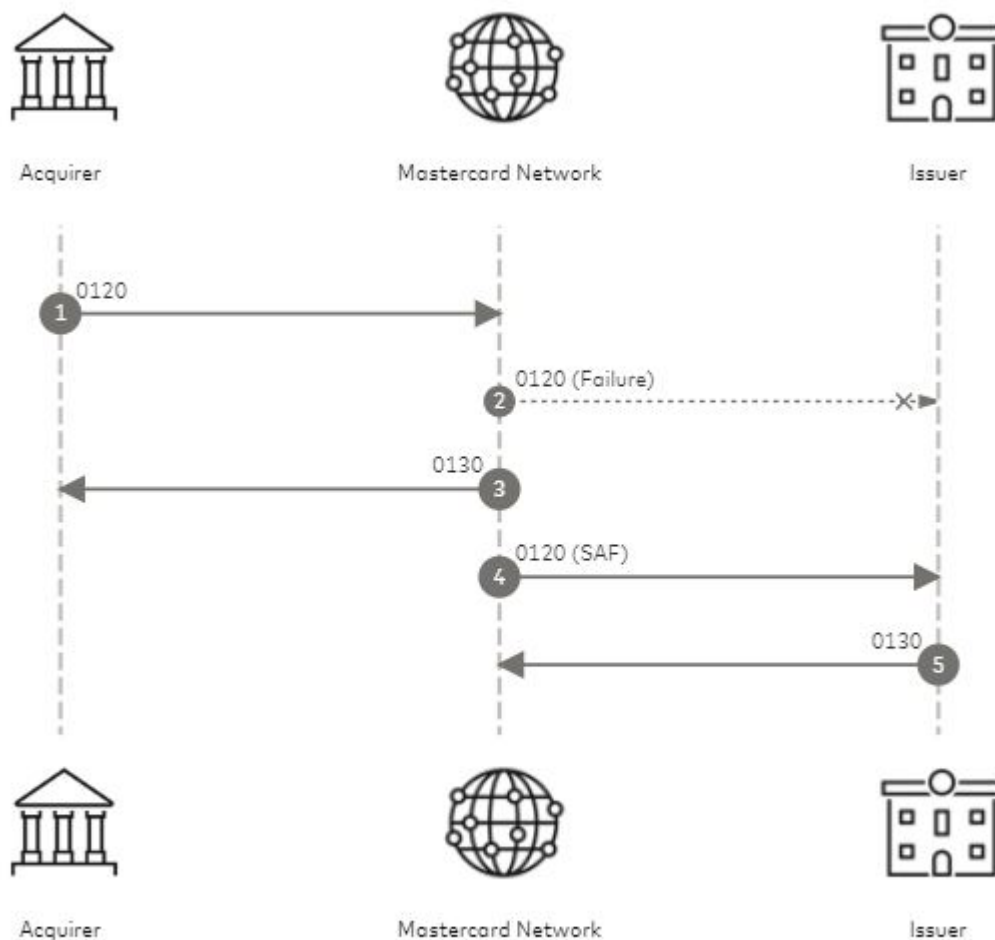

1. The *acquirer* initiates an Authorization Advice/0120: acquirer-generated message and passes the 0120 message to the *Mastercard Network*.
2. The Mastercard Network inserts DE 48, subelement 15 (Authorization System Advice Date and Time) into the message and forwards the Authorization Advice/0120: acquirer-generated message to the *issuer*.
3. The issuer returns an Authorization Advice Response/0130: issuer-generated message to the Mastercard Network to indicate positive *receipt* of the Authorization Advice/0120: acquirer-generated message. The issuer's advice *response message* will contain DE 48, subelement 15 (Authorization System Advice Date and Time).

4. The Mastercard Network forwards the issuer's Authorization Advice Response/0130 message to the acquirer.

### Acquirer-generated Advice message, issuer not available

This message flow describes the transaction process of the Authorization Advice/0120: acquirer-generated and Authorization Advice Response/0130: system-generated message when the issuer is unavailable or there is no issuer response.

#### Acquirer-generated advice message, issuer not available flow

1. The acquirer initiates an Authorization Advice/0120: acquirer-generated message and forwards the 0120 message to the Mastercard Network.
2. The Mastercard Network determines that the Authorization Advice/0120: acquirer-generated message cannot be delivered to the issuer host. The Mastercard Network routes

the Authorization Advice/0120: acquirer-generated message to the Stand-In Authorization to add to the issuer SAF queue.

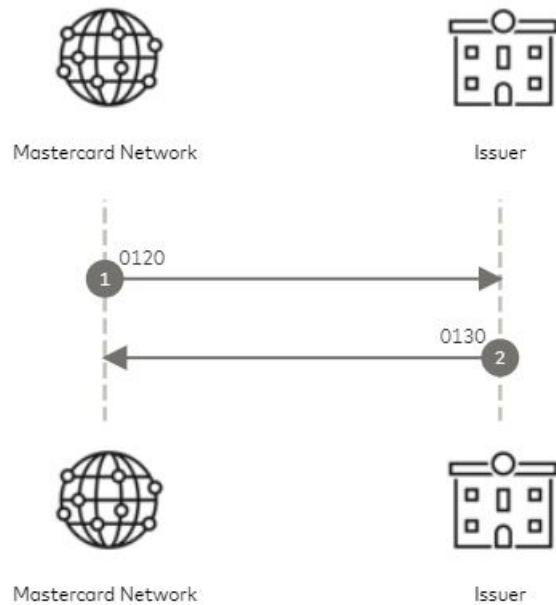

3. The Stand-In Authorization places the Authorization Advice/0120: acquirer-generated message into the SAF queue for guaranteed delivery to the issuer. The Stand-In Authorization responds to the acquirer with an Authorization Advice Response/0130: System-generated message containing DE 48, subelement 15 (Authorization System Advice Date and Time).
4. The Mastercard Network delivers the Authorization Advice/0120: acquirer-generated message to the issuer once the issuer is available.
5. The issuer will respond with an Authorization Advice Response/0130: issuer-generated message.

**NOTE: Customers in the Europe region that route to an alternate issuer host for alternate processing instead of the Stand-In Authorization will still receive an Authorization Advice/0120: acquirer-generated as described here. Alternate issuer host processing does not send Reversal Request/0400 or Authorization Advice/0120 messages to the alternate host.**

## System-generated Authorization Advice message

When Mastercard responds to an Authorization Request/0100 message on behalf of the issuer, the Mastercard Network generates an authorization response based on the issuer's parameters. The Mastercard Network also generates an Authorization Advice/0120: system-generated message and stores it in a Store-and-Forward (SAF) queue. SAF messages are forwarded to the issuer when they are available.

### System-generated authorization advice message flow

1. Stand-In Authorization generates an Authorization Advice/0120: system-generated message and sends it to the issuer.
2. The issuer returns an Authorization Advice Response/0130: issuer-generated message to the Mastercard Network to acknowledge receipt of the system-generated advice message.

### Reversal Request and Advice messages

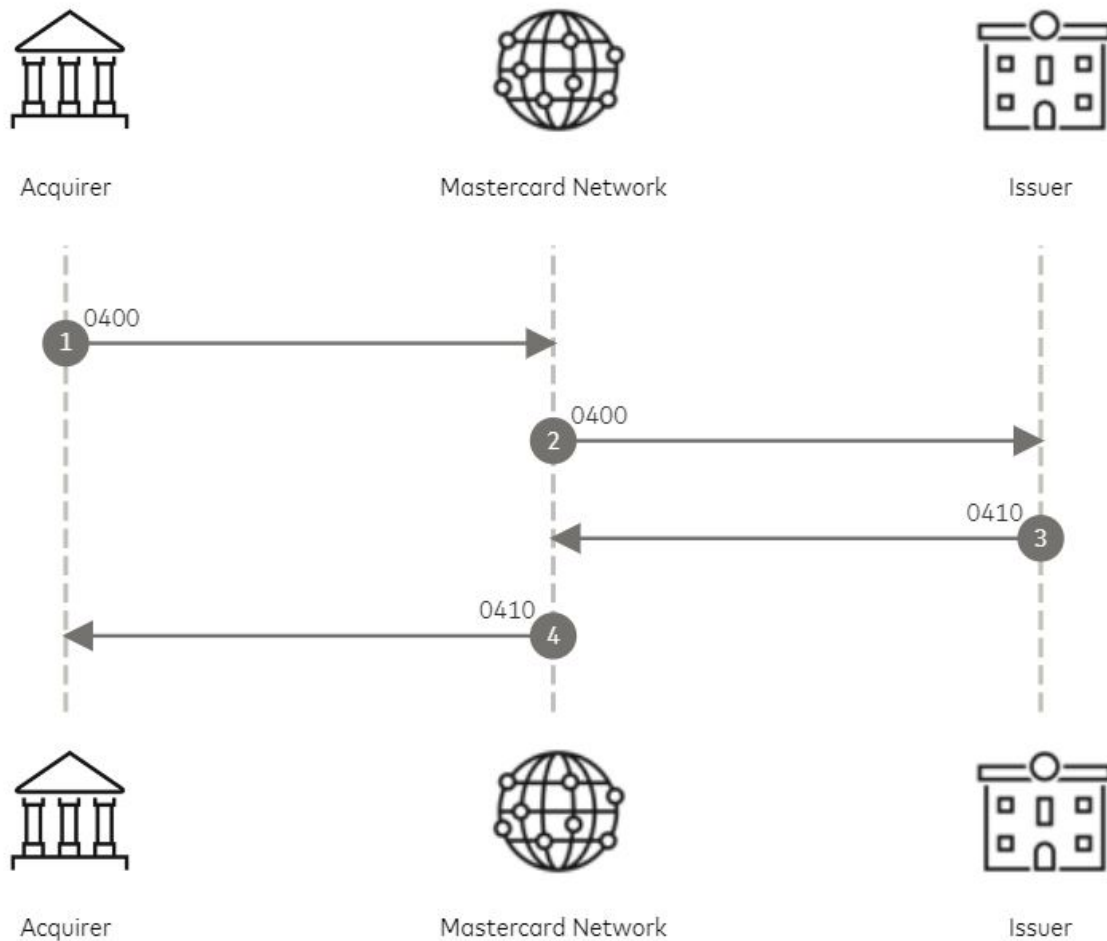

List of reversal request and advice messages flows:

- [Standard Reversal Request](#)
- [Reversal Response message failed at acquirer](#)
- [Reversal Request not delivered to issuer or issuer signed out](#)
- [Reversal Request no response from issuer or not within time limit](#)
- [Reversal Request late response from issuer](#)
- [Reversal Request response from issuer contains errors](#)
- [System-generated Reversal Advice](#)

## Standard Reversal Request

This message flow describes transaction processing of the Reversal Request/0400 and Reversal Request Response/0410 messages.

### Standard Reversal Request flow

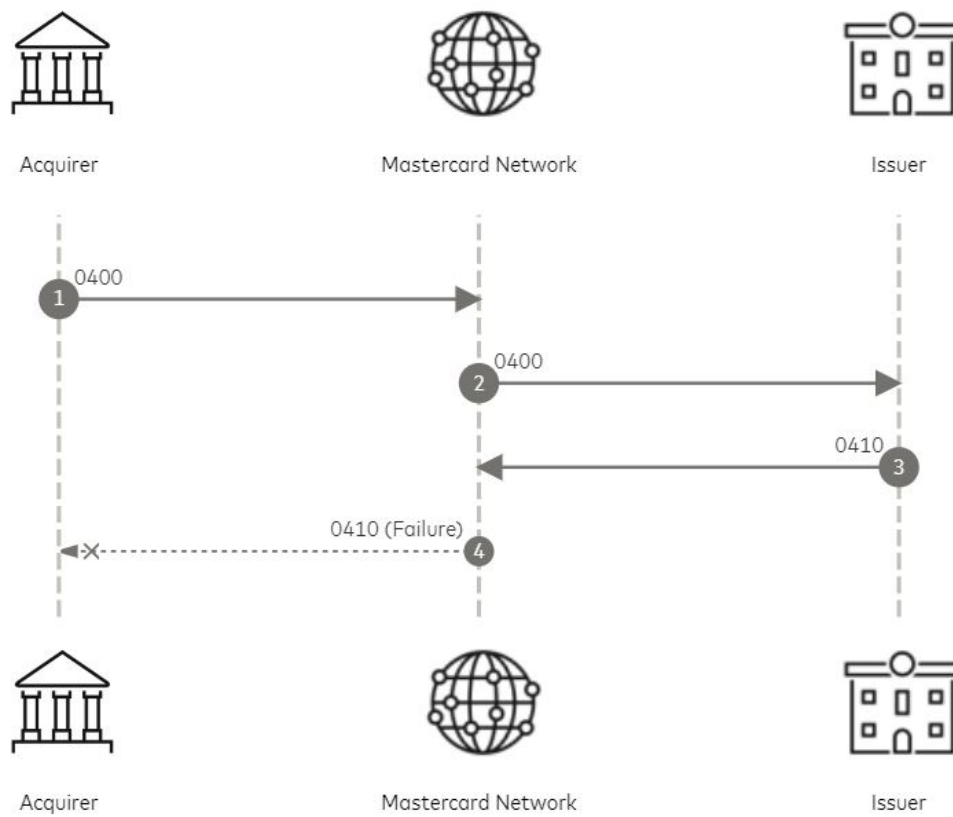

1. The acquirer initiates a Reversal Request/0400 message and sends it to the Mastercard Network.
2. The Mastercard Network forwards the Reversal Request/0400 message to the issuer.
3. The issuer generates a Reversal Request Response/0410 message and sends it to the Mastercard Network.
4. The Mastercard Network forwards the Reversal Request Response/0410 message to the acquirer.

## Reversal Response message failed at acquirer

This message flow describes transaction processing when the Reversal Request Response/0410 message cannot be delivered to the acquirer.

### Reversal response message failed at acquirer flow

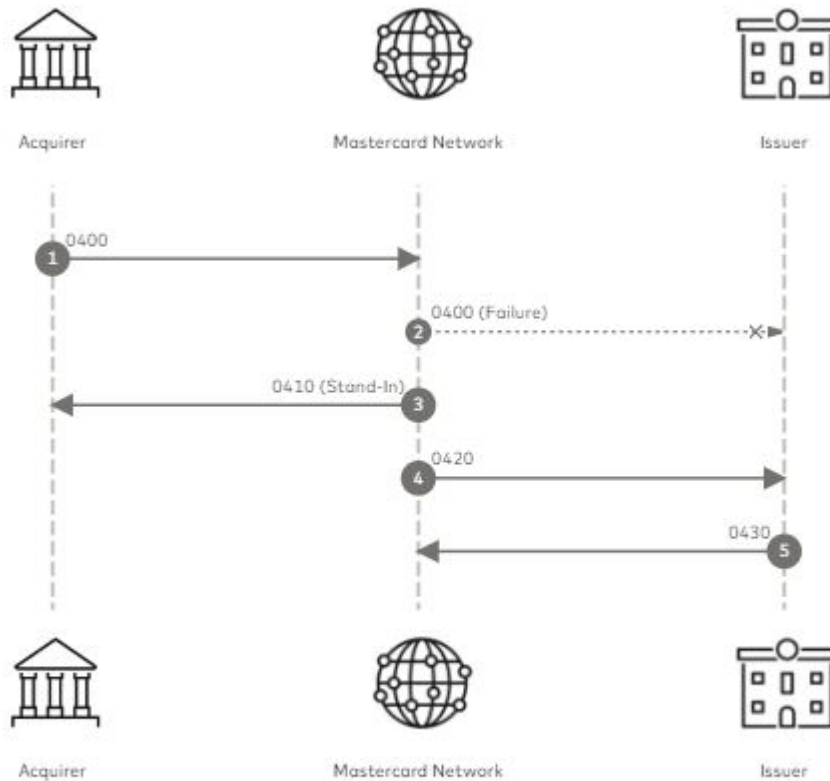

1. The acquirer sends the Reversal Request/0400 message to the Mastercard Network.
2. The Mastercard Network forwards the Reversal Request/0400 message to the issuer.
3. The issuer responds with a Reversal Request Response/0410 message to the Mastercard Network.
4. The Reversal Request Response/0410 message cannot be delivered to the acquirer's system. The Mastercard Network will store the Reversal Request/0400 and the Reversal Request Response/0410 message pair and take no further action.

## Reversal Request not delivered to issuer or issuer signed out

This message flow describes transaction processing when the issuer does not receive the Reversal Request/0400 message.

### Reversal request not delivered to issuer or issuer signed out flow

1. The acquirer sends the Reversal Request/0400 message to the Mastercard Network.
2. The Mastercard Network attempts to forward the Reversal Request/0400 message to the issuer. If the issuer is signed out, there is no attempt to route the request to the issuer.
3. The Mastercard Network will send the Reversal Request/0400 message to the Stand-In Authorization. The Stand-In Authorization will generate the Reversal Request Response/0410 message and send it to the acquirer.
4. The Mastercard Network will create a Reversal Advice/0420 message and put it into a SAF queue for guaranteed delivery for the issuer. This advice will indicate if the issuer was signed out or if the request message could not be delivered. When the issuer is available to receive the advice message, the 0420 message will be delivered to the issuer.

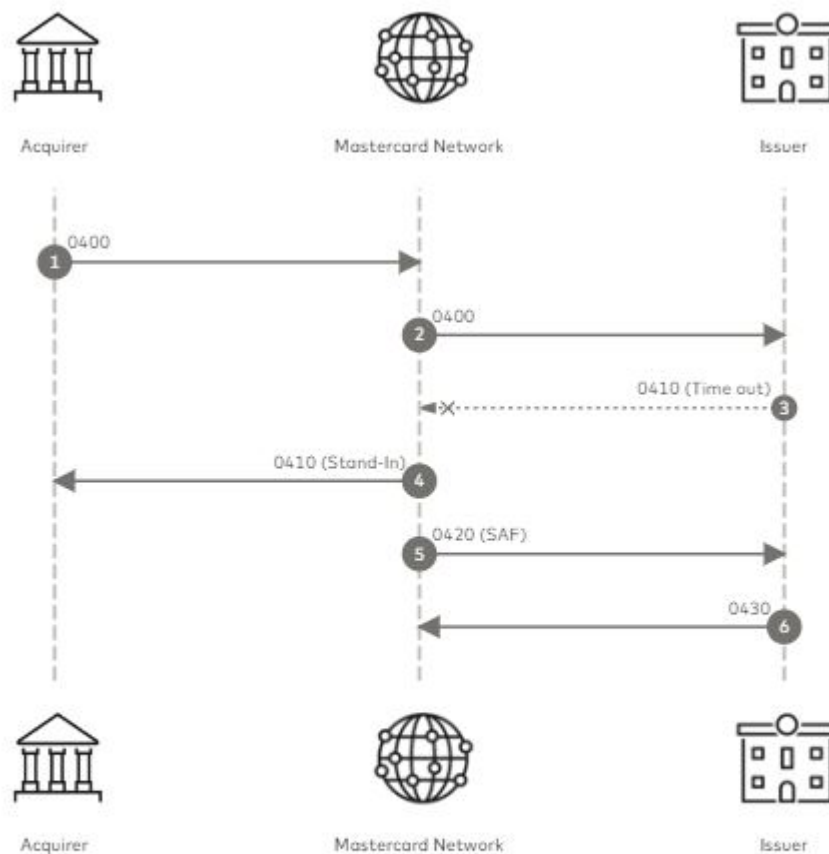

5. The issuer must reply with a Reversal Advice Response/0430 message to acknowledge receipt of the advice message.

### Reversal Request no response from issuer or not within time limit

This message flow describes transaction processing of the Reversal Request/0400 message when the issuer response is not received within the time limit.

#### Reversal request no response from issuer or not within time limit flow

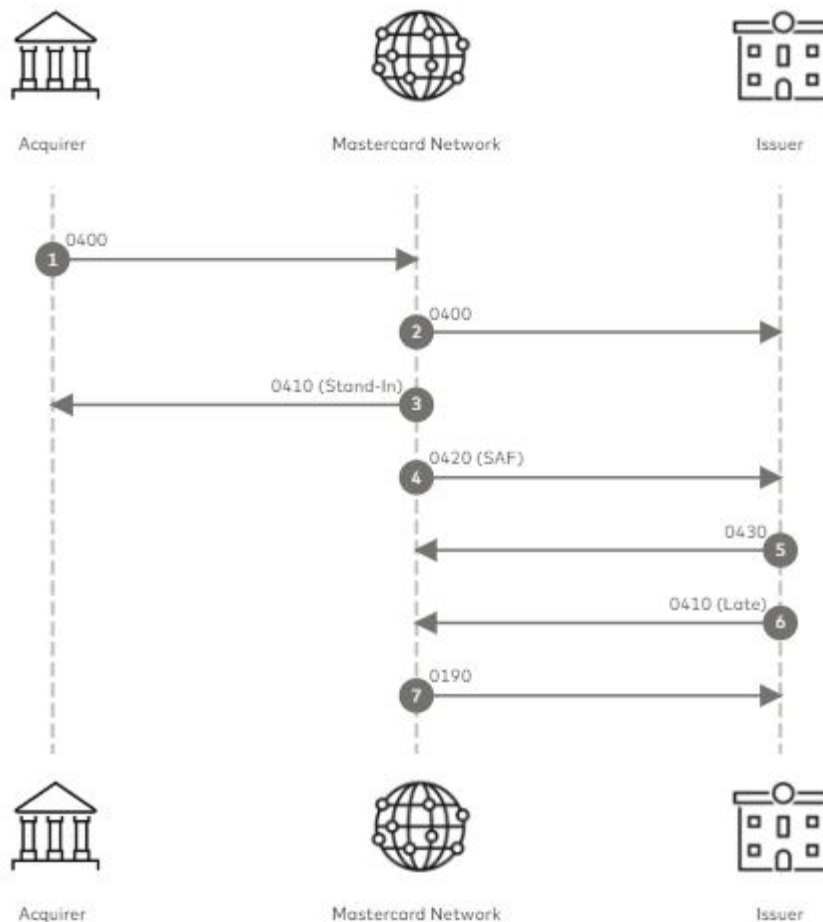

1. The acquirer sends the Reversal Request/0400 message to the Mastercard Network.
2. The Mastercard Network forwards the Reversal Request/0400 message to the issuer.
3. The Mastercard Network does not receive the issuer's Reversal Request Response/0410 message within the time limit and the Mastercard Network sends the Reversal Request/0400 message to the Stand-In Authorization.

4. The Stand-In Authorization generates the Reversal Request Response/0410 message which is then sent to the acquirer.
5. The Stand-In Authorization creates a Reversal Advice/0420 message and stores it in a SAF queue for guaranteed delivery to the issuer. When the issuer is available to receive the advice message, the Reversal Advice/0420 message will be delivered to the issuer. The message will indicate that the issuer timed out.
6. The issuer must reply with a Reversal Advice Response/0430 to acknowledge receipt of the advice message.

## Reversal Request late response from issuer

This message flow describes transaction processing when the issuer responds to the Reversal Request/0400 message after the time limit.

### Reversal request late response from issuer flow

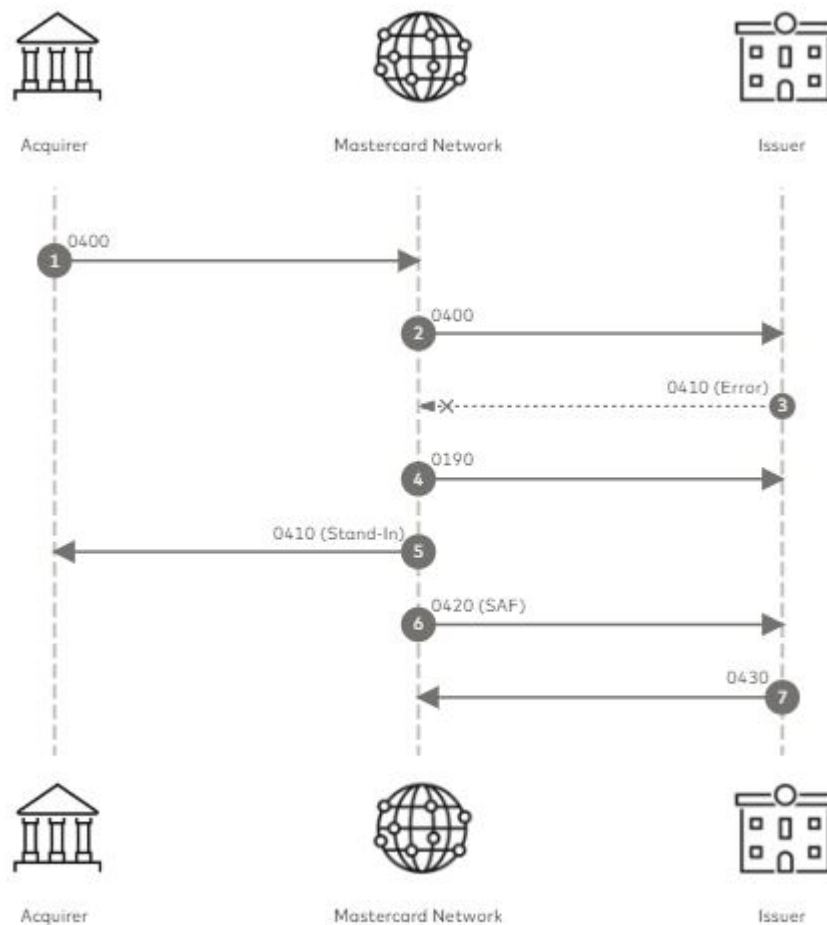

1. The acquirer sends the Reversal Request/0400 message to the Mastercard Network.
2. The Mastercard Network forwards the Reversal Request/0400 message to the issuer.
3. The Mastercard Network does not receive the Reversal Response message from the issuer within the time limit. The Reversal Request/0400 message is sent to the Stand-In Authorization. The Stand-In Authorization will generate the Reversal Request Response/0410 which is then sent to the acquirer.
4. The Stand-In Authorization generates a Reversal Advice/0420 message indicating a time-out condition and places it into the SAF queue for the issuer. When the issuer is available to receive the advice message, the 0420 message will be delivered to the issuer.
5. The issuer must reply with a Reversal Advice Response/0430 message to acknowledge receipt of the advice message.
6. The Mastercard Network receives the late Reversal Request Response/0410 message from the issuer.
7. The Mastercard Network sends the issuer an Authorization Response Negative Acknowledgment/0190 message indicating that the network cannot match the response to a pending Reversal Request message.

**NOTE: There is no response necessary from the issuer after the Mastercard Network sends an Authorization Response Negative Acknowledgment/0190 message.**

## Reversal Request response from issuer contains errors

This message flow describes transaction processing when the issuer's response message contains errors.

### Reversal request response from issuer contains errors flow

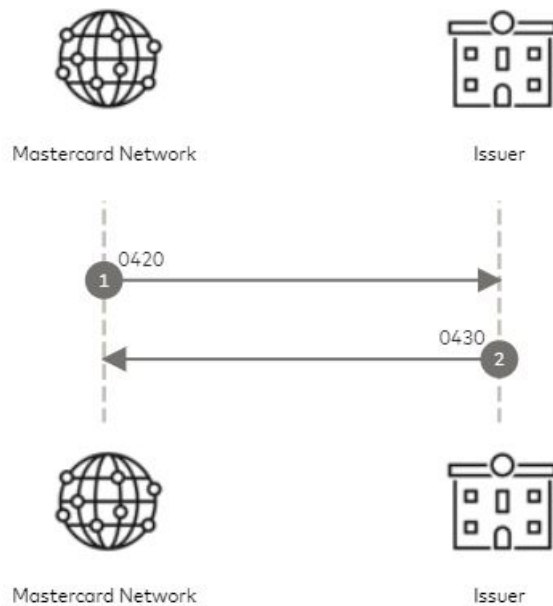

1. The acquirer sends the Reversal Request/0400 message to the Mastercard Network.
2. The Mastercard Network forwards the Reversal Request/0400 message to the issuer.
3. The issuer responds with a Reversal Request Response/0410 message to the Mastercard Network; however, the message contains errors.
4. The Mastercard Network generates an Authorization Response Negative Acknowledgment/0190 message advising the issuer of the error condition in their response.
5. The Mastercard Network will send the Reversal Request/0400 message to the Stand-In Authorization. The Stand-In Authorization will generate a Reversal Request Response/0410 message which is then sent to the acquirer.

6. The Mastercard Network will create a Reversal Advice/0420 message indicating a format error and put it into the SAF queue for the issuer. When the issuer is available to receive the advice message, the advice message will be delivered to the issuer.
7. The issuer must reply with a Reversal Advice Response/0430 message to acknowledge receipt of the advice message.

## System-generated Reversal Advice

This message flow describes transaction processing of Reversal Advice/0420 and the Reversal Advice/0430 messages.

### System-generated Reversal Advice flow

1. The Mastercard Network generates a Reversal Advice/0420: System-generated message and sends it to the issuer.
2. The issuer responds with a Reversal Advice Response/0430: Issuer-generated message to the Mastercard Network to acknowledge receipt of the system-generated advice message.

## Non-financial transaction function flows

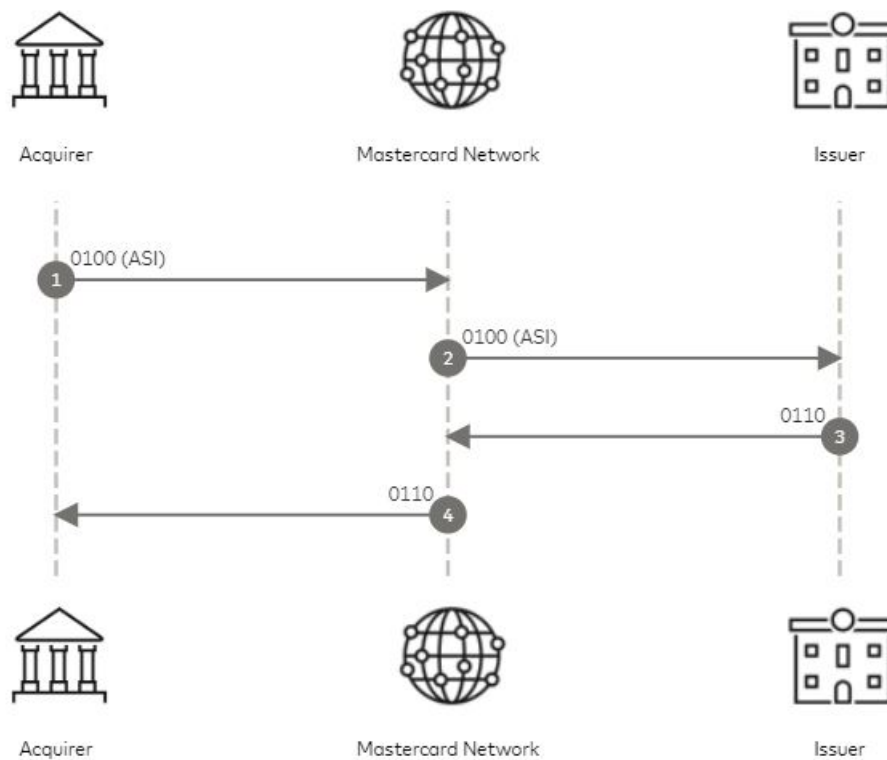

### Non-financial transaction function flows

| Flow Type                                                                                            | Description                                                                                                                                                                                                                                     |
|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <a href="#">Authorization Request: Account Status Inquiry</a>                                        | This shows the standard flow of request/response messages when used to submit Account Status Inquiry (ASI) requests. For more information on ASI transactions, please refer to <a href="#">System functionality and services</a> of this guide. |
| <a href="#">Authorization Request: Mastercard Digital Enablement Service (MDES) pre-digitization</a> | <p>This exchange of messages between Mastercard and issuer supports the tokenization of Primary Account Numbers (PANs) through network messages.</p> <p>For more information on MDES, refer to the <i>MDES Issuer Implementation Guide</i>.</p> |
| <a href="#">Authorization Request: Chip-PIN Management</a>                                           | Messages enable cardholders to request PIN changes or PIN unblock on Chip cards. This will show successful and failure scenarios for this function.                                                                                             |
| <a href="#">Authorization Response Acknowledgment/0180</a>                                           | Optional acknowledgment message available to acquirers to respond to an Authorization Request Response/0110 message.                                                                                                                            |

## Authorization Request: Account Status Inquiry

Acquirers send Account Status Inquiry (ASI) messages to validate aspects of a cardholder account prior to sending transaction requests for authorization decisions.

### Authorization Request: Account Status Inquiry flow

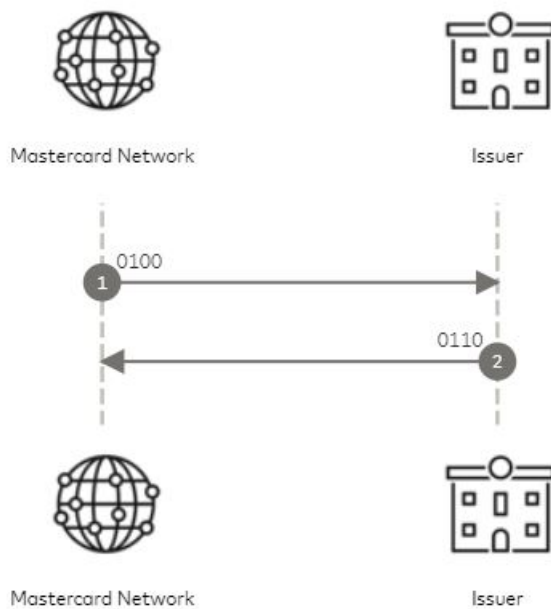

1. The acquirer initiates an Authorization Request/0100 message and sends it to the Mastercard Network. The data in the request message indicates that this is an ASI request and not requesting authorization for purchase of goods or services.
2. The Mastercard Network forwards the Authorization Request/0100 message to the issuer.
3. The issuer generates an Authorization Request Response/0110 message providing their response to the ASI and sends it to the Mastercard Network.
4. The Mastercard Network forwards the Authorization Request Response/0110 message to the acquirer.

## Authorization Request: Mastercard Digital Enablement Service (MDES) pre-digitization

The Mastercard Network sends real-time Mastercard token authorization request messages to support provisioning of a token on a cardholder's device.

For more information on MDES, refer to the [MDES Issuer Implementation Guide](#).

### Authorization Request: MDES Pre-digitization flow

1. The Mastercard Network generates an Authorization Request/0100 message as part of the pre-digitization process. The request message may also advise the MDES issuer of a status change related to the token.
2. The issuer responds with an Authorization Request Response/0110 message to the Mastercard Network to provide feedback regarding the request to tokenize the PAN.

## Authorization Request: Chip-PIN Management

List of Authorization Request: Chip PIN Management flows:

- [Standard Chip-PIN Management request](#)
- [Chip-PIN Management Request failure from acquirer](#)
- [Chip-PIN Management Response cannot be delivered to the acquirer](#)
- [Chip-PIN Management Update cannot be transmitted or applied to chip card](#)

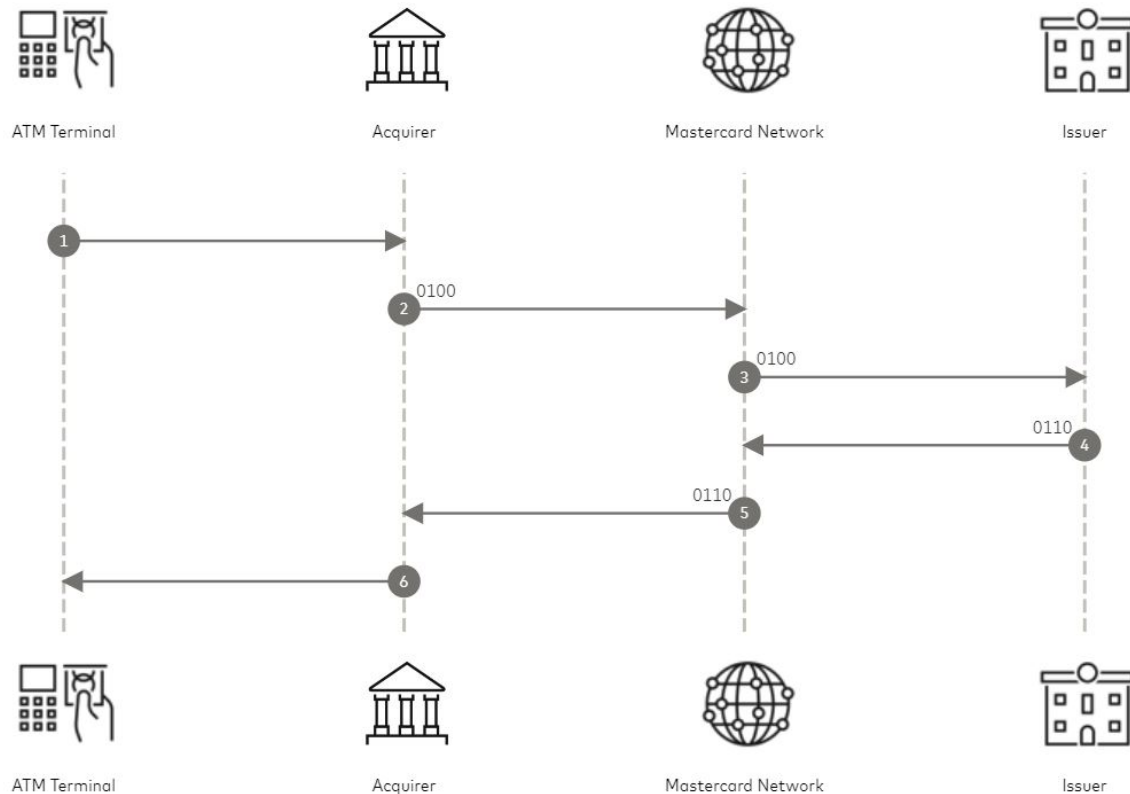

- Chip-PIN Management Request unable to connect to issuer
- PIN-management Response not received from issuer

## Standard Chip-PIN Management request

This message flow describes standard transaction processing when changing or unblocking a PIN on a chip card.

### Standard Chip-PIN Management request flow

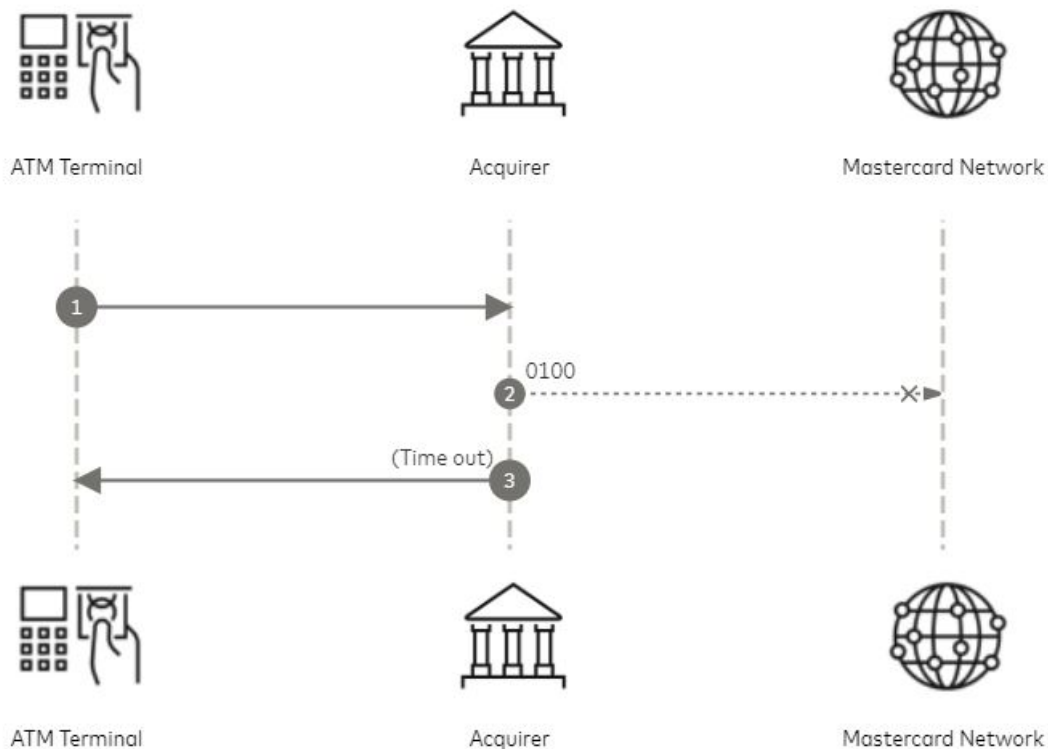

1. The cardholder initiates a PIN management request (PIN change or PIN unblock) at an ATM. The ATM requests data from the chip card and forwards the data in the request to the acquirer.
2. The acquirer sends an Authorization Request/0100 message containing the appropriate values to indicate a Chip PIN Management request to the Mastercard Network.
3. The Mastercard Network forwards the Authorization Request/0100 message to the issuer.
4. The issuer sends an Authorization Request Response/0110 message to the Mastercard Network approving or declining the request. The issuer will make updates within the issuer host system to reflect the PIN change or PIN unblock.
5. The Mastercard Network forwards the Authorization Request Response/0110 message to the acquirer.

6. The acquirer will send the response to the ATM. A script is sent from the ATM to the card to update the chip. After the script is applied, the chip provides the result to the ATM to complete the transaction.

### Chip-PIN Management Request failure from acquirer

This message flow describes the transaction process when there is a network failure at the acquirer.

#### Chip-PIN Management Request failure from acquirer flow

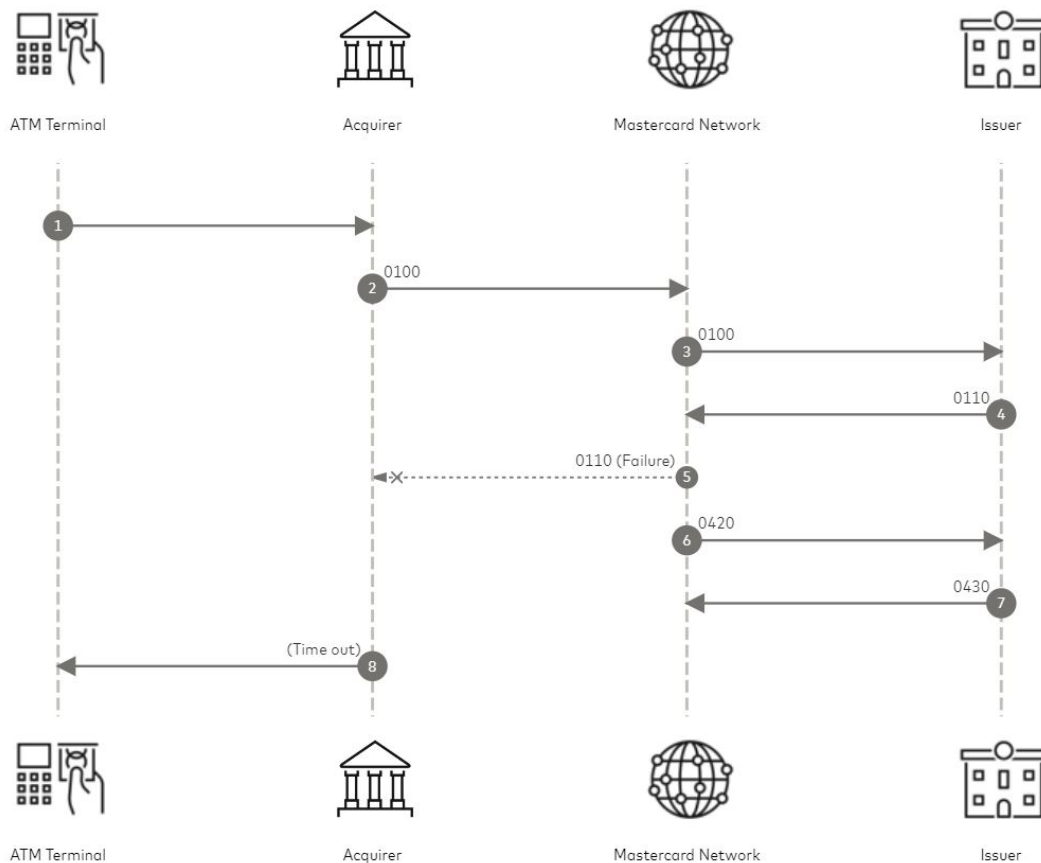

1. The cardholder initiates a PIN management request (PIN change or PIN unblock) at an ATM. The ATM requests data from the chip card and forwards the data in the request to the acquirer.
2. The acquirer sends an Authorization Request/0100 message containing the appropriate values to indicate a Chip PIN Management request to the Mastercard Network. However, the request message does not reach the Mastercard Network.
3. The acquirer sends a message to the ATM advising that the service could not be completed.

## Chip-PIN Management Response cannot be delivered to the acquirer

This message flow describes the transaction process when the Mastercard Network is unable to successfully deliver the issuer's response message to the acquirer.

### Chip-PIN Management Response cannot be delivered to the acquirer flow

1. The cardholder initiates a PIN management request (PIN change or PIN unblock) at an ATM. The ATM requests data from the chip card and forwards the data in the request to the acquirer.
2. The acquirer sends an Authorization Request/0100 message containing the appropriate values to indicate a Chip PIN Management request to the Mastercard Network.
3. The Mastercard Network forwards the Authorization Request/0100 message to the issuer.
4. The issuer sends an Authorization Request Response/0110 message to the Mastercard Network approving or declining the request. The issuer will make updates within the issuer host system to reflect the PIN change or PIN unblock.
5. The Mastercard Network fails to deliver the Authorization Request Response/0110 message to the acquirer.
6. The Mastercard Network generates a Reversal Advice/0420 message to the issuer.

7. The issuer sends a Reversal Advice Response/0430 message to the Mastercard Network acknowledging receipt of the Reversal Advice/0420 message. The issuer must also reverse the PIN change or PIN unblock applied to their system based on the Reversal Advice.

**NOTE: The Mastercard Network will only generate a Reversal Advice/0420 message if the issuer approved the original PIN management request.**

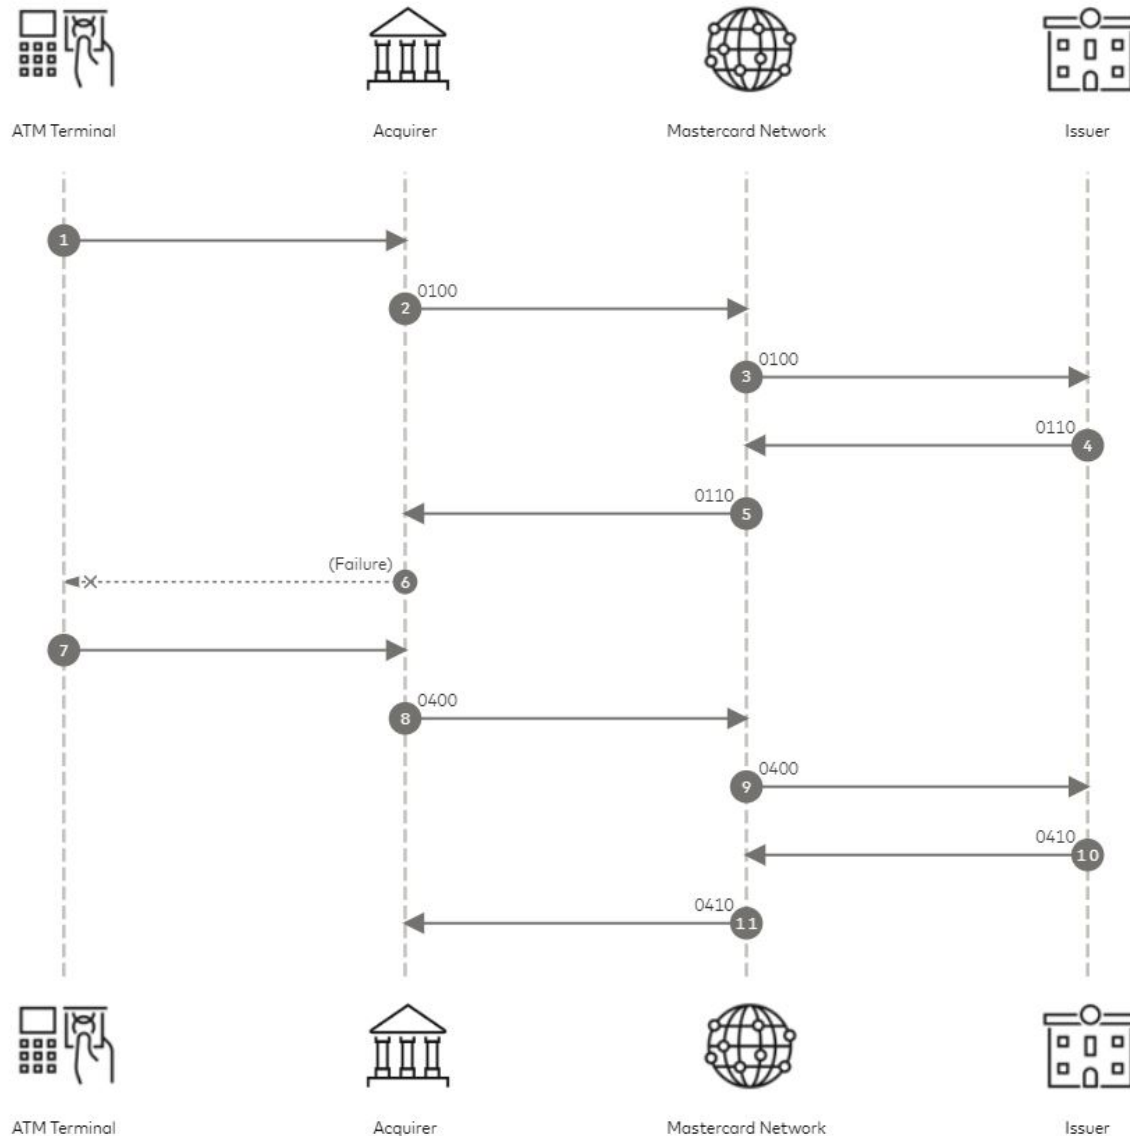

8. The request times out at the acquirer and the acquirer sends a message to the ATM advising that the service is unavailable.

**NOTE: The issuer may receive two reversals: one from the Mastercard Network to identify the undelivered response and a second from the acquirer as a result of a system timeout.**

## Chip-PIN Management Update cannot be transmitted or applied to chip card

This message flow describes the transaction process when there is a failure in transmitting the script to the chip card, or a failure in applying the script to the chip card.

### Chip-PIN Management Update cannot be transmitted or applied to chip card flow

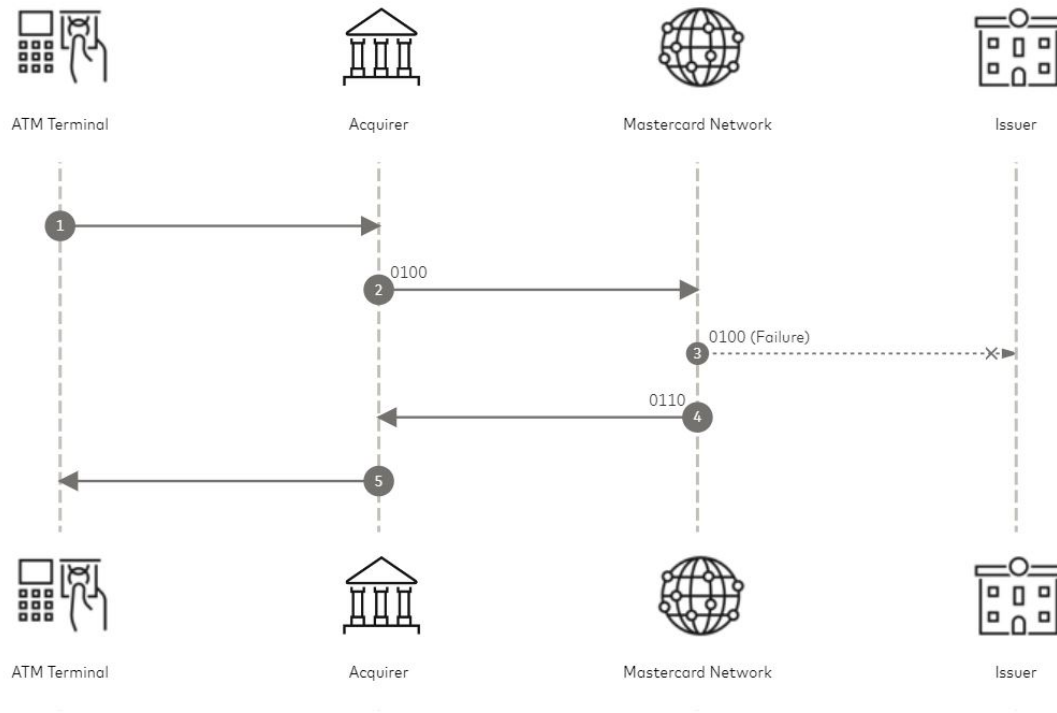

1. The cardholder initiates a Chip PIN management request (PIN change or PIN unblock) at an ATM. The ATM requests data from the chip card and forwards the data in the request to the acquirer.

2. The acquirer sends an Authorization Request/0100 message containing the appropriate values to indicate a Chip PIN Management request to the Mastercard Network.
3. The Mastercard Network forwards the Authorization Request/0100 to the issuer.
4. The issuer sends an Authorization Request Response/0110 message to the Mastercard Network approving or declining the request. The issuer will make updates within the issuer host system to reflect the PIN change or PIN unblock.
5. The Mastercard Network forwards the Authorization Request Response/0110 message to the acquirer.
6. A failure occurs for one of the following reasons:
  - The acquirer cannot send the script in DE 55 to the ATM.
  - The ATM cannot transmit the script to the chip card.
  - The chip card cannot process the script.
7. The ATM sends the processing result to the acquirer indicating the failure.
8. The acquirer generates a Reversal Request/0400 message to the Mastercard Network.
9. The Mastercard Network forwards the Reversal Request/0400 message to the issuer.
10. The issuer sends a Reversal Request Response/0410 message to the Mastercard Network. The issuer must also reverse the PIN change or PIN unblock applied to their system based on the Reversal Request.
11. The Mastercard Network forwards the Reversal Request Response/0410 message to the acquirer.

## Chip-PIN Management Request unable to connect to issuer

This message flow describes the transaction process when there is a network failure at the issuer.

### Chip-PIN Management Request unable to connect to issuer flow

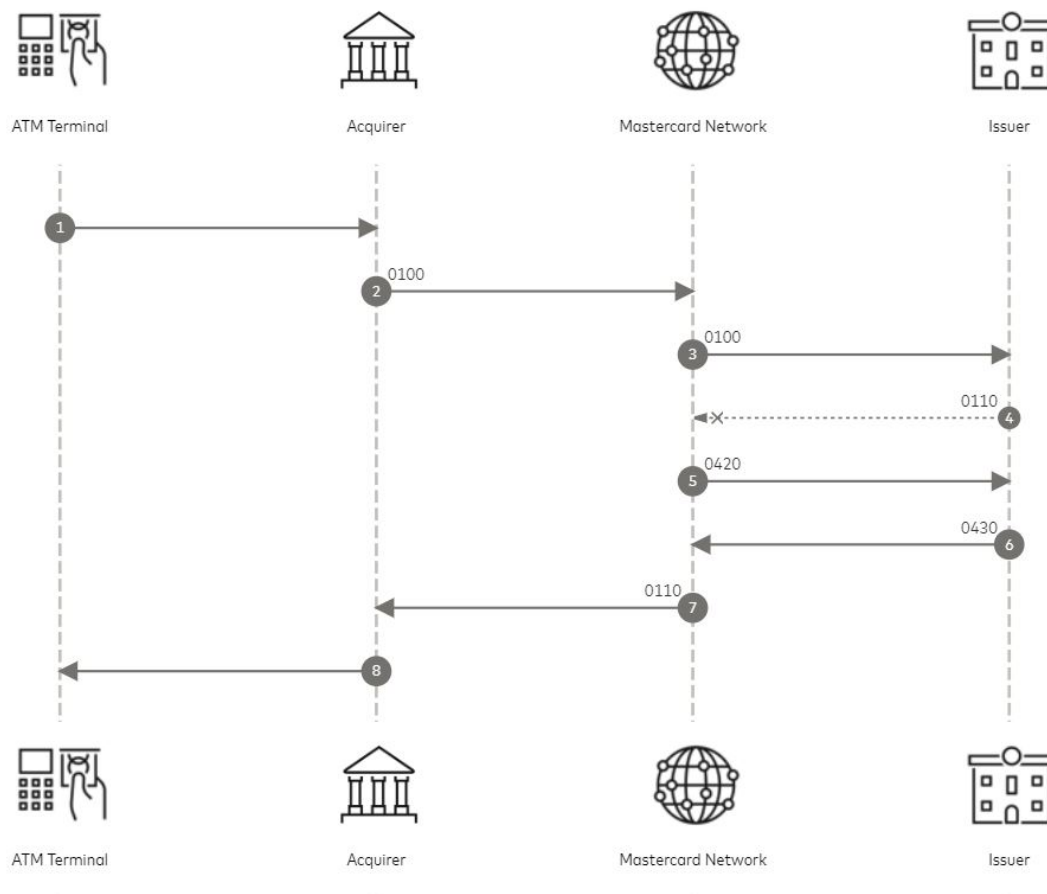

1. The cardholder initiates a Chip PIN management request (PIN change or PIN unblock) at an ATM. The ATM requests data from the chip card and forwards the data in the request to the acquirer.
2. The acquirer sends an Authorization Request/0100 message containing the appropriate values to indicate a Chip PIN Management request to the Mastercard Network.
3. The Mastercard Network attempts to forward the Authorization Request/0100 to the issuer. However the request message does not reach the issuer which results in a time-out for the request.
4. The Mastercard Network sends an Authorization Request Response/0110 message to the acquirer indicating the request could not be delivered.
5. The acquirer sends a message to the ATM advising that the service could not be completed.

## PIN-management Response not received from issuer

This message flow describes the transaction process when the issuer response is not delivered to the Mastercard Network or is delivered to late.

### PIN-management Response not received from issuer flow

1. The cardholder initiates a PIN management request (PIN change or PIN unblock) at an ATM. The ATM requests data from the chip card and forwards the data in the request to the acquirer.
2. The acquirer sends an Authorization Request/0100 message containing the appropriate values to indicate a Chip PIN Management request to the Mastercard Network.
3. The Mastercard Network forwards the Authorization Request/0100 to the issuer.
4. The issuer fails to send the Authorization Request Response/0110 message to the Mastercard Network in time.
5. The Mastercard Network sends a Reversal Advice/0420 message to the issuer indicating the time-out condition.

**NOTE: If a response is received from the issuer after the allowed response time limit for ATM transactions for Mastercard and Debit Mastercard only, the Mastercard Network will send the issuer an Authorization Response Negative Acknowledgment/0190 message advising the response was late (not illustrated).**

6. The issuer sends a Reversal Advice Response/0430 message to the Mastercard Network acknowledging receipt of the Reversal Advice/0420 message. If the original transaction was a PIN change, the issuer restores the old online PIN in their host system.
7. The Mastercard Network sends the acquirer an Authorization Request Response/0110 message indicating the request was not able to be delivered.
8. The acquirer sends a message to the ATM, indicating that the service is unavailable.

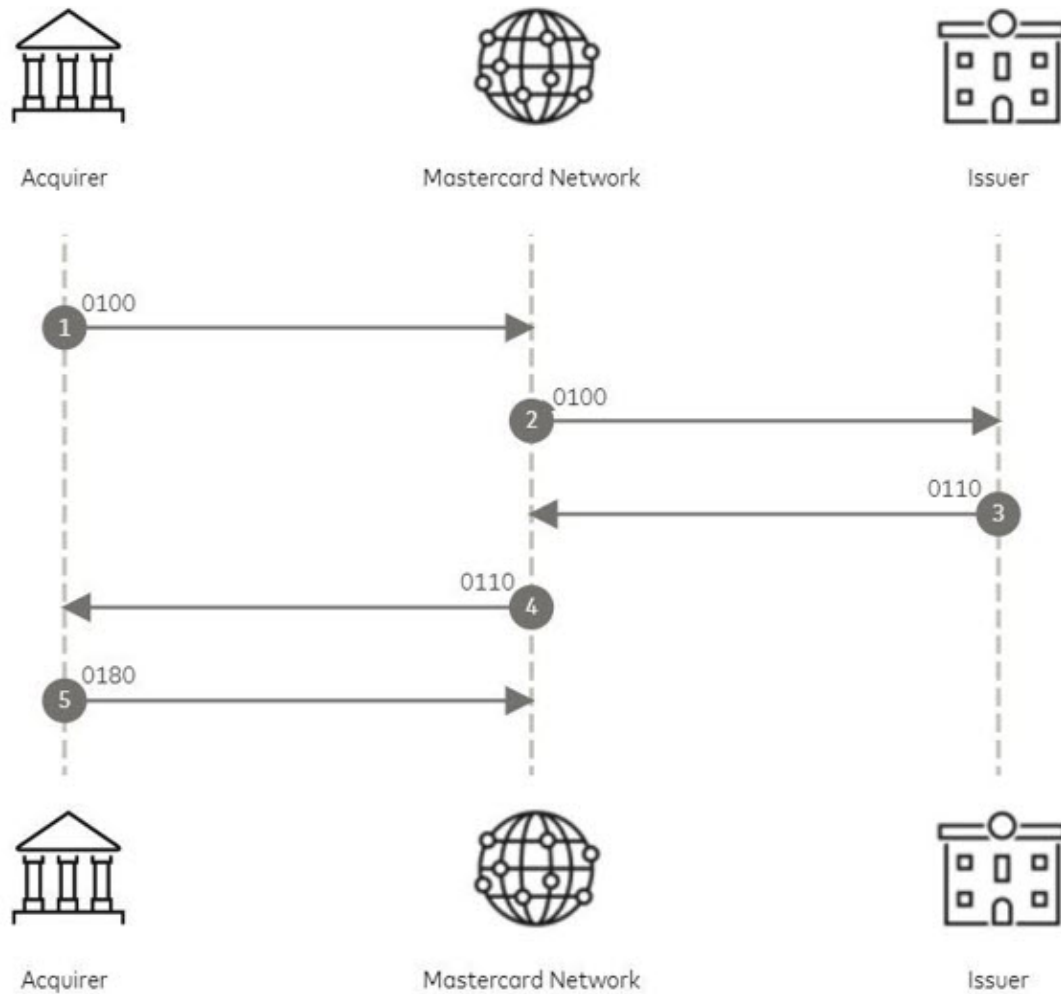

## Authorization Response Acknowledgment/0180

The Mastercard Network allows acquirers to optionally acknowledge Authorization Request Response/0110 messages. This process is accomplished using Authorization Response Acknowledgment/0180 messages.

Use of this acknowledgment can provide additional assurance that authorization responses have been delivered to the acquirer or acceptor's device. This may protect the issuer from erroneous debits against cardholder accounts due to incomplete or unsuccessful transactions.

Acquirers are not required to support Authorization Response Acknowledgment/0180, but Mastercard encourages acquirers to select this option and support these messages. Acquirers may select this option at network configuration time.

### Acquirer Response Acknowledgment flow

1. The acquirer initiates an Authorization Request/0100 message and sends it to the Mastercard Network.
2. The Mastercard Network forwards the Authorization Request/0100 message to the issuer.
3. The issuer creates the Authorization Request Response/0110 message and sends it to the Mastercard Network.
4. The Mastercard Network forwards the Authorization Request Response/0110 message to the acquirer.
5. The acquirer sends an Authorization Response Acknowledgment/0180 message back to the Mastercard Network, indicating the acquirer successfully received the preceding Authorization Request Response/0110 message at the application level.

In most cases, the acquirer should send the Authorization Response Acknowledgment/0180 message to the Mastercard Network:

- Immediately after it secures, successfully receives, and logs the Authorization Request Response/0110 message
- Before the transaction is completed at the point of interaction

An Authorization Response Acknowledgment/0180 message does not necessarily indicate that the transaction was successfully completed at the point of interaction.

## Supporting transaction function flows

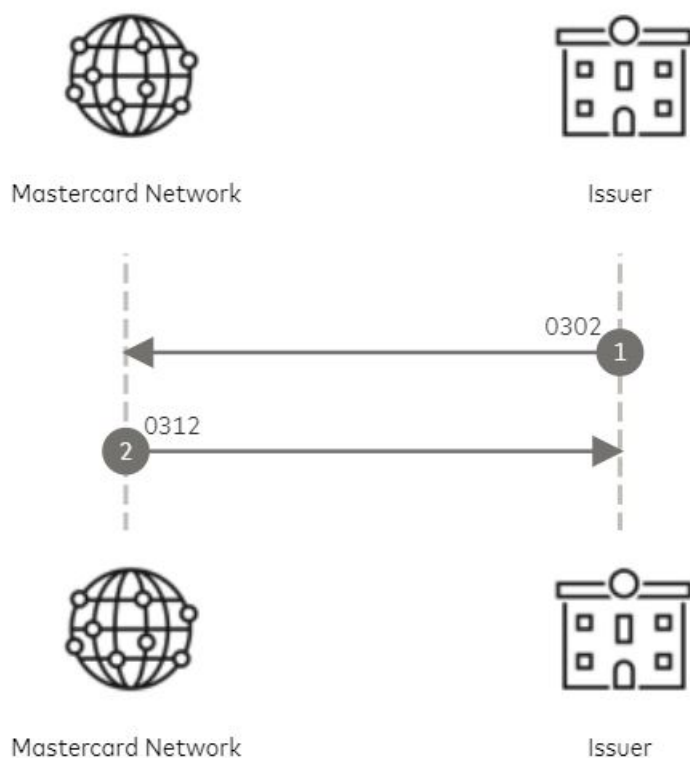

### Supporting transaction function flows

| Flow Type                       | Description                                                                                                                               |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| Issuer File Update Requests     | The exchange of messages between issuers and Mastercard to update files used during authorization processing.                             |
| Administrative Request messages | Messages to transmit customer data between acquirers and issuers for specific programs. Successful and failure scenarios are represented. |
| Administrative Advice messages  | Messages exchanging free-format data between network participants or to advise originators of invalid messages.                           |
| Network management requests     | Messages coordinating system or network tasks, events or network status updates.                                                          |

## Issuer File Update Requests

This message flow describes transaction processing of the Issuer File Update Request/0302 message.

### Issuer file update requests flow

1. Issuer submits the Issuer File Update Request/0302 message to the Mastercard Network. The type of update being requested is specified by the format of the 0302 message. For more details regarding the various request layouts, refer to the *Account Management System User Manual*.
2. The Mastercard Network performs the requested issuer file update task and responds with an Issuer File Update Request Response/0312 message back to the issuer. The Response Code returned in the Issuer File Update Request Response/0312 message indicates whether the issuer file update was successfully completed.

**NOTE: The error-condition message process for Issuer File Update/03xx messages is not illustrated. If an issuer unsuccessfully forwards an Issuer File Update Request/0302 message to the Dual Message Authorization System, the issuer should retransmit the message.**

## Administrative Request messages

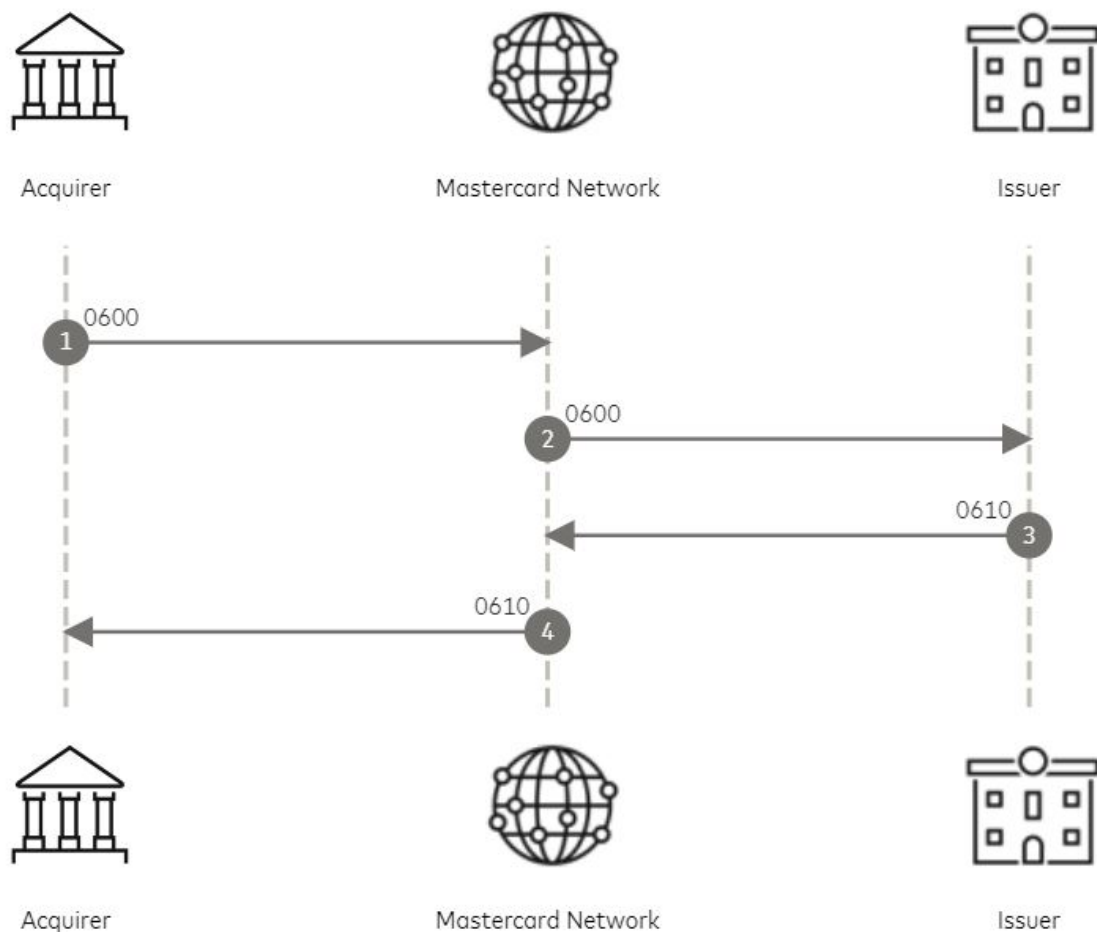

List of administrative request messages flows:

- [Standard Administrative Request](#)
- [Acquirer-edit Failure](#)
- [Communication Failure at issuer](#)
- [Communication Failure at acquirer](#)
- [Late or no issuer response](#)
- [Issuer-edit Failure](#)

### Standard Administrative Request

This message flow describes transaction processing of the Administrative Request/0600 and Administrative Request Response/0610 messages.

#### Standard Administrative request flow

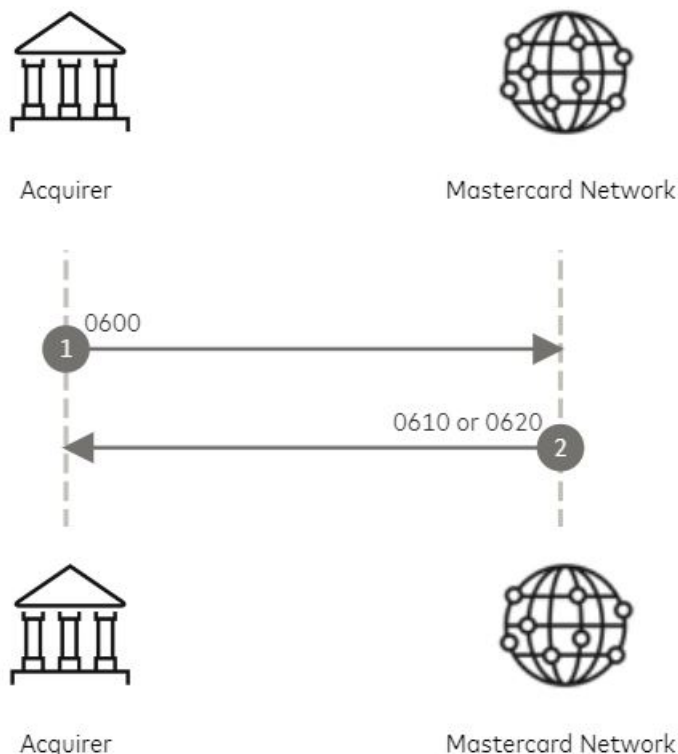

1. The acquirer initiates an Administrative Request/0600 message and sends it to the Mastercard Network.
2. The Mastercard Network forwards the Administrative Request/0600 message to the issuer based on the account range of the Primary Account Number (PAN).
3. The issuer responds with an Administrative Request Response/0610 message to the Mastercard Network.
4. The Mastercard Network forwards the Administrative Request Response/0610 message to the acquirer.

### Acquirer-edit Failure

This message flow describes exception processing when the Mastercard Network determines an acquirer edit failure during processing an Administrative Request/0600 message.

#### Acquirer-edit Failure flow

1. The acquirer initiates an Administrative Request/0600 message and sends it to the Mastercard Network.
2. The Mastercard Network edits the Administrative Request/0600 message and detects an acquirer edit failure. As a result, the Mastercard Network will send the acquirer either an

Administrative Request Response/0610 message or an Administrative Advice/0620 message depending on the edit errors.

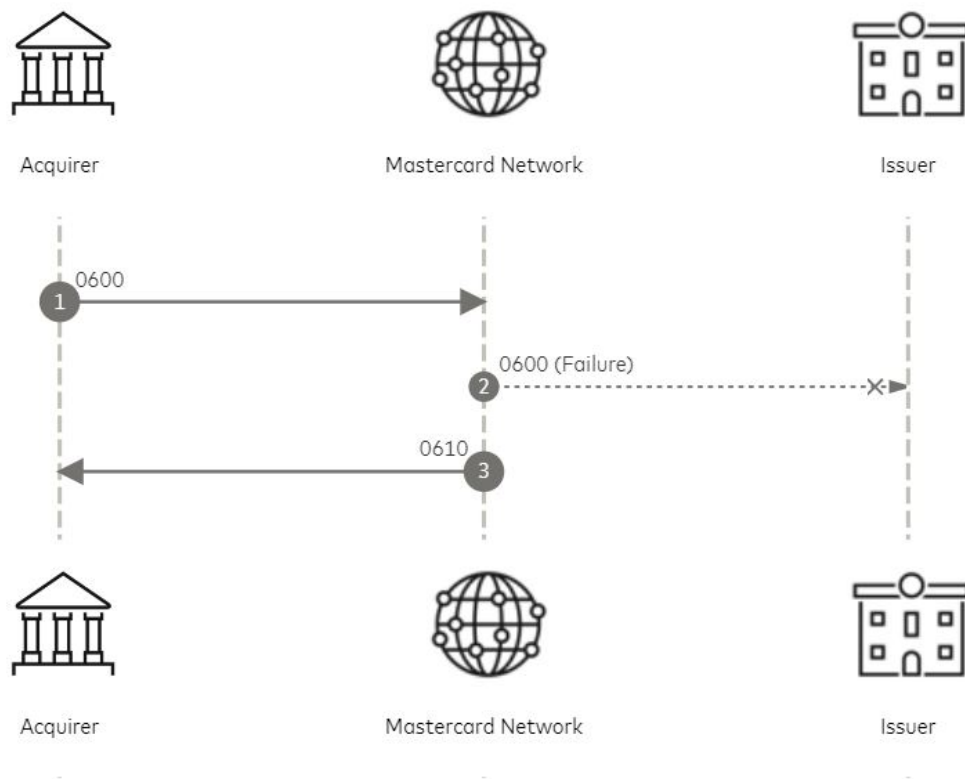

### Message types and error conditions for response messages

| Message type sent                    | Conditions for the response message                                                                                                                                                                                                           |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Administrative Request Response/0610 | <ul style="list-style-type: none"> <li>– Is missing mandatory data element</li> <li>– Contains data attribute error or invalid data value</li> <li>– Is from ineligible acquirer/processor</li> <li>– Is sent to ineligible issuer</li> </ul> |
| Administrative Advice/0620           | <ul style="list-style-type: none"> <li>– Cannot be parsed</li> <li>– Exceeds the maximum message length of 8k bytes</li> </ul>                                                                                                                |

## Communication Failure at issuer

This message flow describes exception processing when communication fails between the issuer and the Mastercard Network during an Administrative Request/0600 message.

### Communication Failure at issuer flow

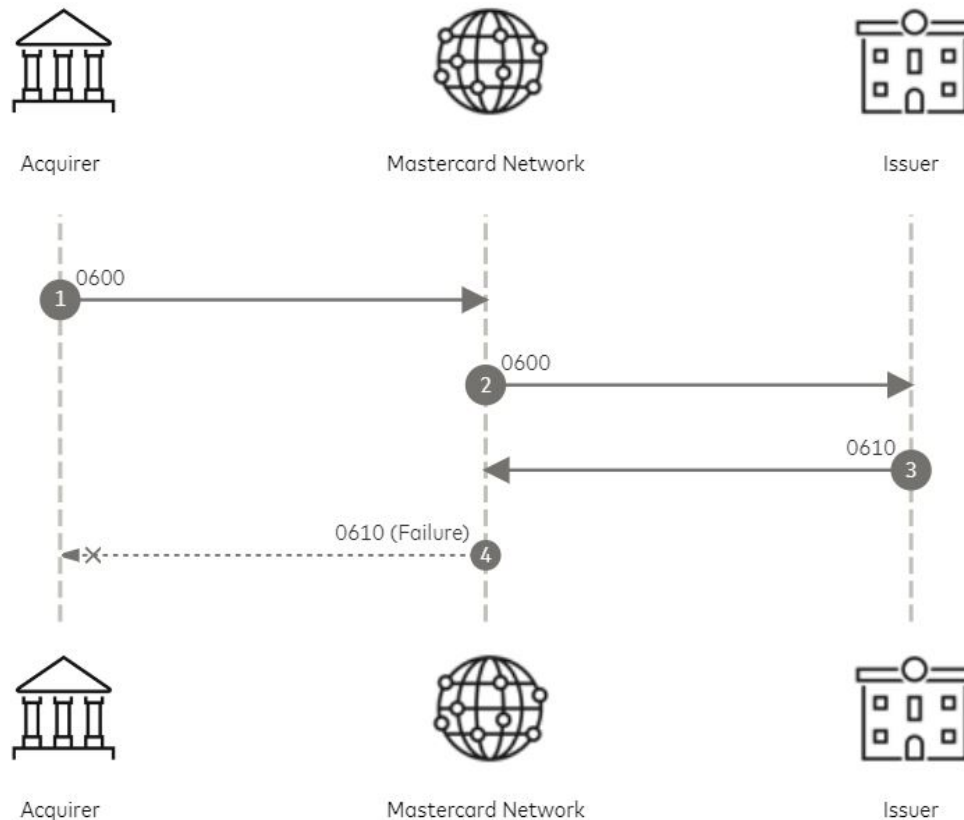

1. The acquirer initiates an Administrative Request/0600 message and sends it to the Mastercard Network.
2. The Mastercard Network attempts to forward the Administrative Request/0600 message to the issuer and is unsuccessful due to a communication failure.
3. The Mastercard Network sends the acquirer an Administrative Request Response/0610 message indicating the request could not be delivered.

## Communication Failure at acquirer

This message flow describes exception processing when communication fails between the Mastercard Network and the acquirer during an Administrative Request Response/0610 message.

### Communication Failure at acquirer flow

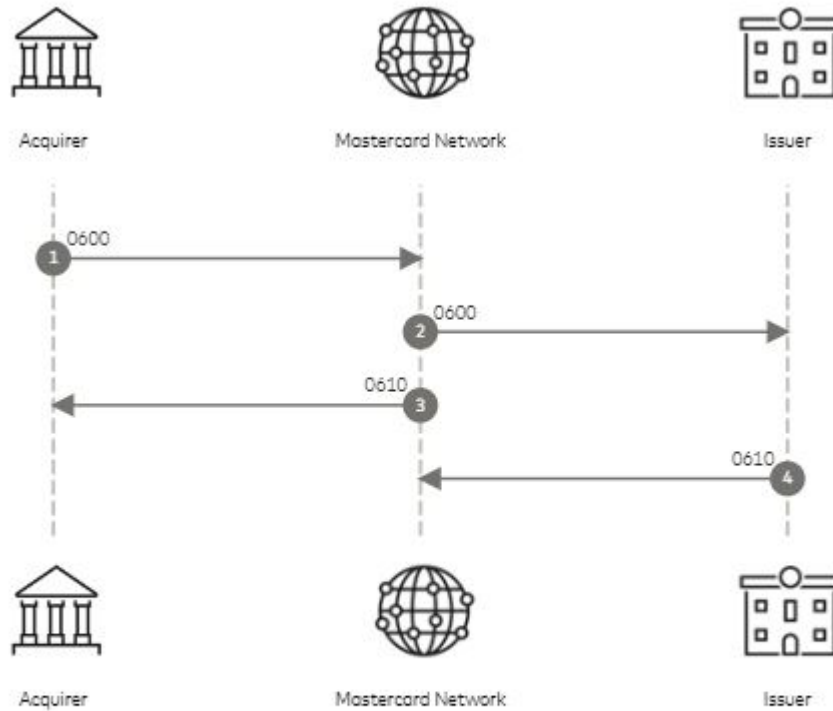

1. The acquirer initiates an Administrative Request/0600 message and sends it to the Mastercard Network.
2. The Mastercard Network forwards the Administrative Request/0600 message to the issuer based upon the account range in the Primary Account Number (PAN).
3. The issuer sends an Administrative Request Response/0610 message to the Mastercard Network.
4. The Mastercard Network attempts to forward the Administrative Request Response/0610 message to the acquirer and is unsuccessful because of a communication link failure or acquirer failure. The Mastercard Network logs the undelivered 0610 message and takes no further action. The acquirer host will time out the 0600 message and resend, if appropriate.

## Late or no issuer response

This message flow describes exception processing when the Mastercard Network either does not receive an Administrative Request Response/0610 message from the issuer or receives a late response.

### Late or no issuer response flow

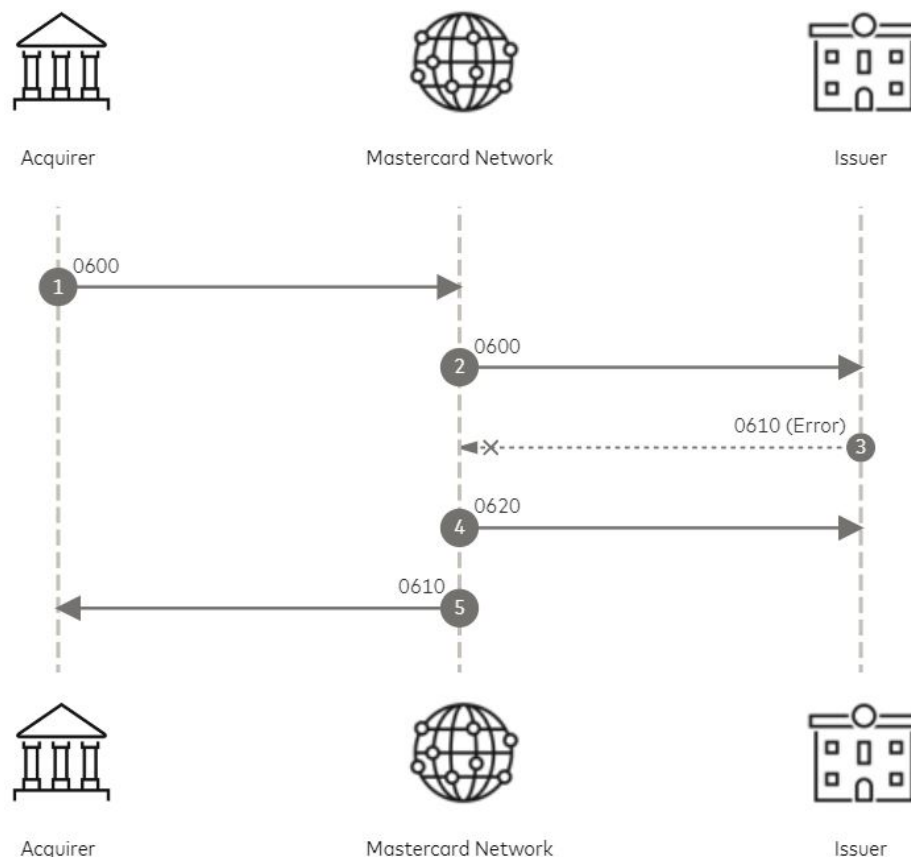

1. The acquirer initiates an Administrative Request/0600 message and sends it to the Mastercard Network.
2. The Mastercard Network forwards the Administrative Request/0600 message to the issuer based upon the account range contained in the PAN.
3. If the Mastercard Network receives no response from the issuer within the time limits, the Mastercard Network sends the acquirer an Administrative Request Response/0610 message indicating the administrative request message could not be delivered.
4. If the Mastercard Network receives the issuer's response after the time limit expired, the Mastercard Network logs the late issuer 0610 message and takes no further action.

## Issuer-edit Failure

This message flow describes exception processing when the Mastercard Network receives an Administrative Request Response/0610 message that contains an edit failure from the issuer.

### Issuer-edit Failure flow

1. The acquirer initiates an Administrative Request/0600 message and sends it to the Mastercard Network.
2. The Mastercard Network forwards the Administrative Request/0600 message to the issuer based upon the account range contained in the PAN.
3. The issuer sends an Administrative Request Response/0610 message to the Mastercard Network. During validation, the Mastercard Network detects edit errors in the response message.
4. The Mastercard Network will generate an Administrative Advice/0620 message to the issuer indicating the following has occurred:
  - Cannot be parsed
  - Exceeds the maximum message length of 8k bytes

- Is missing mandatory data element
  - Contains a data attribute error or invalid data value
5. The Mastercard Network sends the acquirer an Administrative Request Response/0610 message indicating the administrative request was unsuccessful.

## Administrative Advice messages

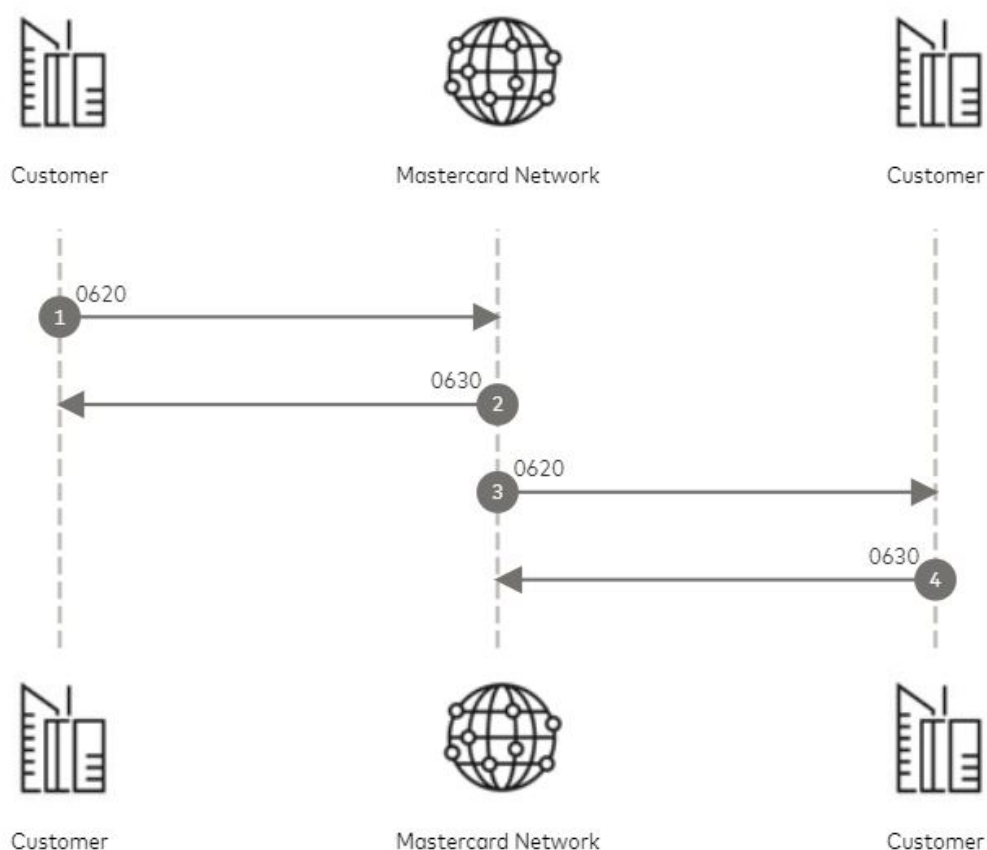

List of administrative advice message flows:

- [Standard Administrative Advice](#)
- [Failure scenario: Administrative Advice for invalid message](#)
- [MDES-notification advice](#)

## Standard Administrative Advice

This message flow describes the standard Administrative Advice/06xx message process between customers. Acquirers or issuers can originate or receive these messages.

### Standard Administrative Advice flow

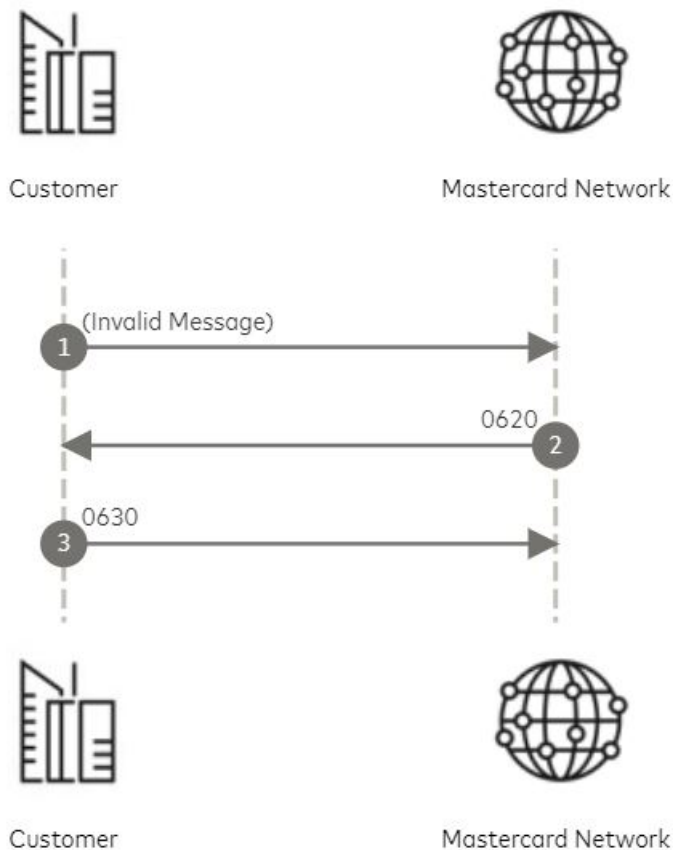

1. The originating customer generates an Administrative Advice/0620 message to the Mastercard Network destined for another customer.
2. The Mastercard Network acknowledges receipt of the Administrative Advice/0620 message by returning an Administrative Advice Response/0630 message to the originating customer.
3. The Mastercard Network forwards the Administrative Advice/0620 message to the intended receiving customer.
4. The receiving customer responds with an Administrative Advice Response/0630 to the Mastercard Network to acknowledge receipt of the advice message.

## Failure scenario: Administrative Advice for invalid message

This message flow describes when an invalid message is received and an Administrative Advice/0620: system-generated is sent.

### Failure scenario: Administrative Advice for invalid message flow

1. The originating customer sends an unidentifiable or invalid message to the Mastercard Network.
2. The Mastercard Network generates an Administrative Advice/0620 message to the originator advising where the failure occurred while parsing or processing the message.
3. The customer acknowledges receipt of the Administrative Advice/0620 message and returns an Administrative Advice Response/0630 message to the Mastercard Network.

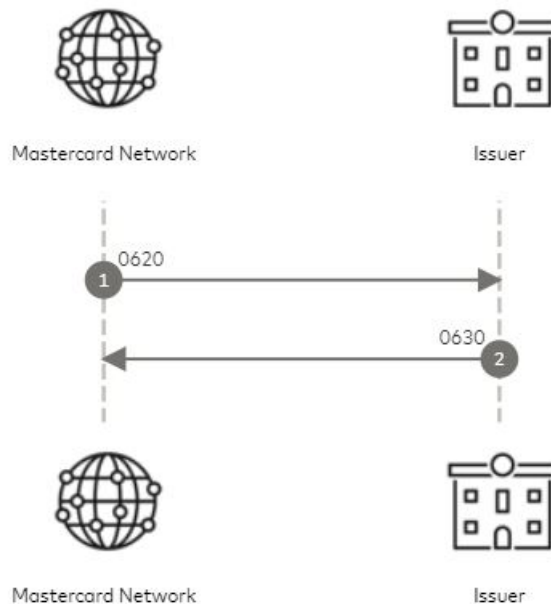

## MDES-notification advice

Mastercard supports layouts for Administrative Advice/0620 messages to communicate activation codes or issues with activation codes to MDES issuers in support of token issuance,

and to notify issuers that Mastercard has assigned a token on their behalf and of updates to a token's status.

For more information on MDES, refer to the [MDES Issuer Implementation Guide](#).

### MDES-notification advice flow

1. The Mastercard Network generates an Administrative Advice/0620 message as part of the tokenization process. Data within the message indicates that it is a MDES advice to the issuer.
2. The issuer responds with an Administrative Advice Response/0630 message to the Mastercard Network to acknowledge the receipt of the MDES related 0620 advice message.

## Network management requests

List of network management request flows:

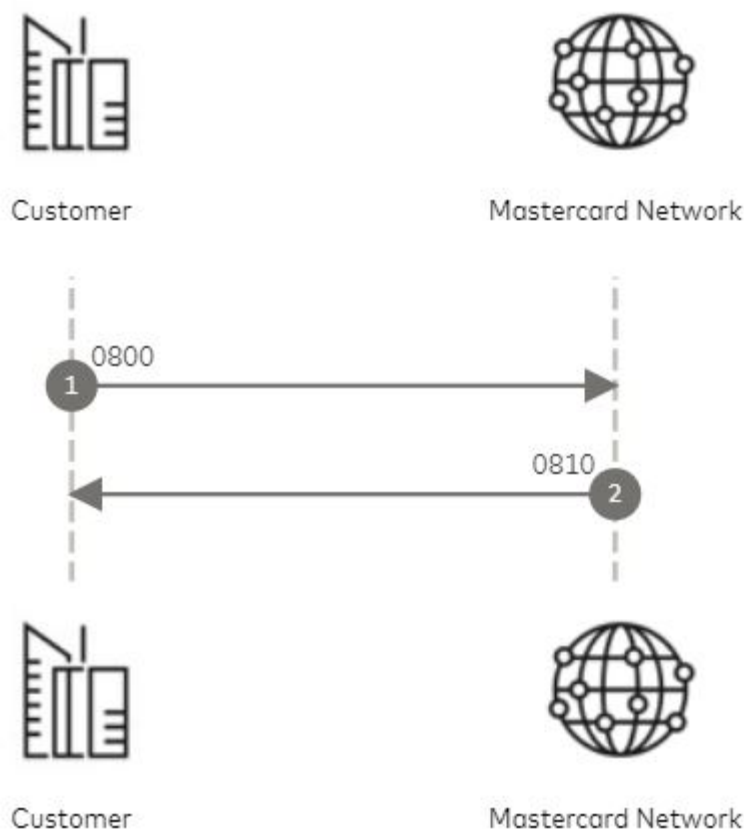

- [Network sign-on or sign-off](#)
- [Request for issuer-generated or solicited SAF](#)
- [Unsolicited SAF after sign-on](#)
- [Network-connection status request: customer-generated](#)
- [Network-connection status request: system-generated](#)
- [Host activation or deactivation](#)

- PIN Encryption Key exchange request: customer generated
- PEK-exchange request: system generated

## Network sign-on or sign-off

This message flow describes the standard Network Management Request/0800 message: sign-on/sign-off message to sign on to or sign off from the Mastercard Network. The originator of these request messages can be either an acquirer or an issuer.

### Network sign-on or sign-off flow

1. The customer creates a Network Management Request/0800: sign-on/sign-off message and sends it to the Mastercard Network.
2. After receiving the Network Management Request/0800: sign-on/sign-off message, the Mastercard Network creates a Network Management Request Response/0810: sign-on/sign-off message and sends it to the customer.

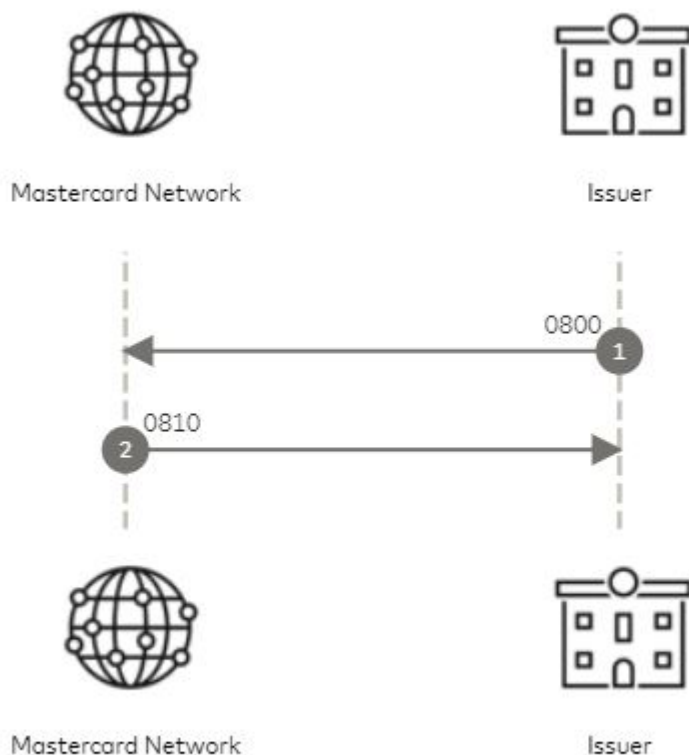

**NOTE:** Customers are reminded that they should use any one or a combination of the network connectivity management options described in this guide. Mastercard recommends using the varying levels of probes or echo tests to verify host connectivity to the Mastercard Network instead of using the sign-on request message.

## Request for issuer-generated or solicited SAF

This message flow describes the issuer-generated (solicited) SAF session using a Network Management Request/0800: SAF Request message.

When an issuer has a large number of SAF records (for example, because of an extended outage), Mastercard can deliver SAF records to the issuer through alternate methods.

### Request for issuer-generated or solicited SAF flow

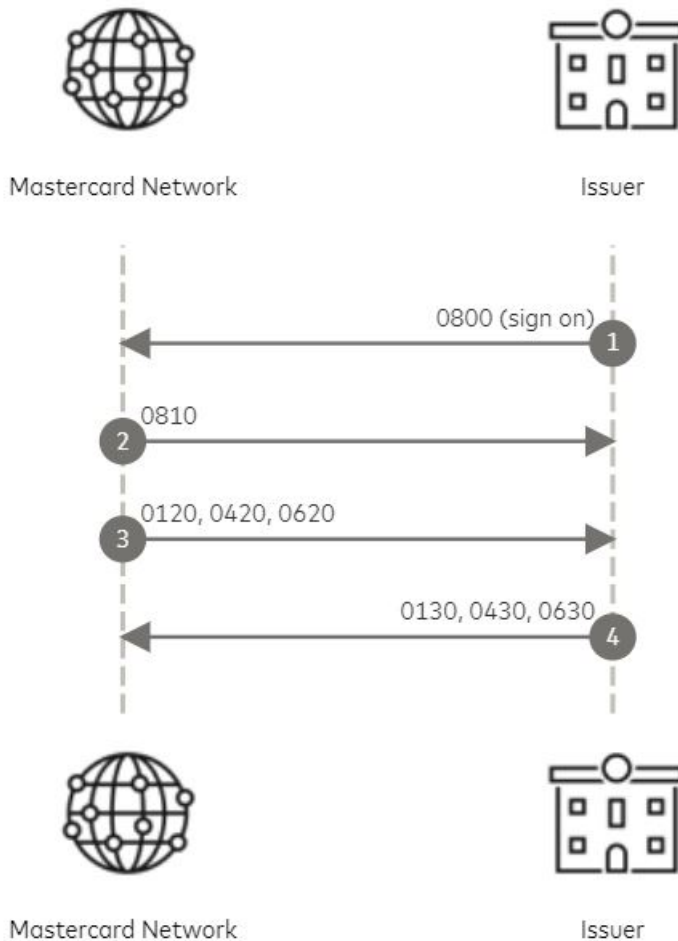

1. The issuer sends a Network Management Request/0800: SAF Request message requesting a SAF session. The request is acknowledged; however, it will not affect SAF processing.
2. The Mastercard Network generates the Network Management Request Response/0810 acknowledgment message. After the Mastercard Network responds to the issuer SAF

request message, no further processing of the issuer's request is performed. All SAF messages are processed unsolicited.

## Unsolicited SAF after sign-on

This message flow describes the unsolicited SAF session with the issuer after signing on to the Mastercard Network using a Network Management Request/0800: sign-on/sign-off message.

### Unsolicited SAF after sign-on flow

1. The issuer sends a Network Management Request/0800: sign-on/sign-off message to sign on to the Mastercard Network.
2. The Mastercard Network sends a Network Management Request Response/0810 message acknowledging the issuer's sign-on request.

3. The Stand-In Authorization checks for SAF messages in the queue and initiates a SAF session. The SAF process forwards an Authorization Advice/0120, Reversal Advice/0420, or Administrative Advice/0620 message to the issuer. The Stand-In Authorization continues to check for SAF messages periodically as long as the issuer is signed in, and forwards messages if there are any available.
4. The issuer generates an Authorization Advice Response/0130, Reversal Advice Response/0430, or Administrative Advice Response/0630 message. These response messages advise the Mastercard Network that the issuer received the previous Authorization Advice/0120, Reversal Advice/0420, or Administrative Advice/0620 message and prompt transmission of the next Authorization Advice/0120, Reversal Advice/0420, or Administrative Advice/0620 message.

**NOTE: Issuers receive SAF messages intermixed with authorization and reversal request messages.**

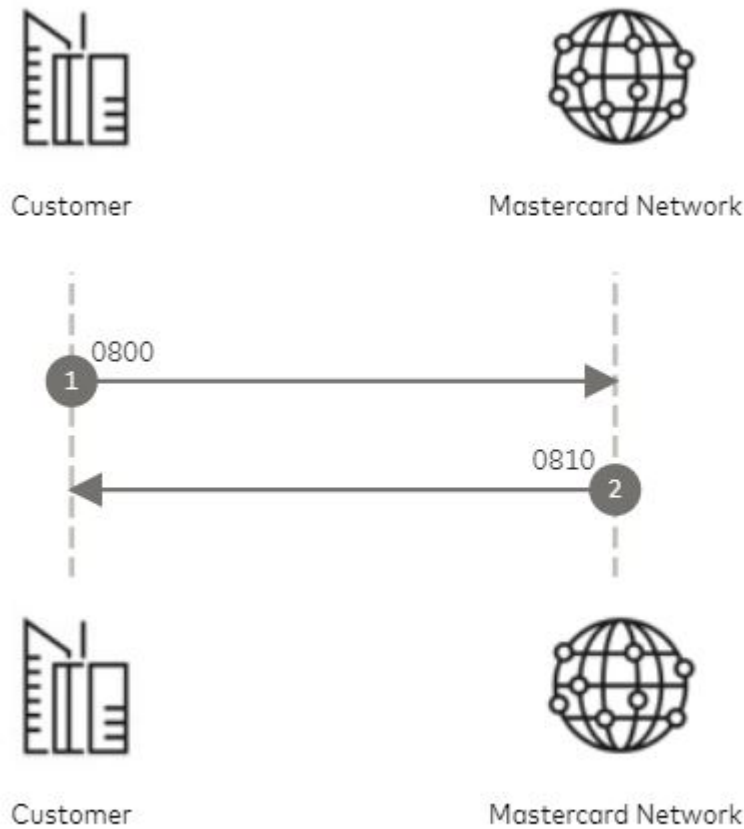

### Network-connection status request: customer-generated

This message flow describes transaction processing of the Network Management Request/0800: network connection status: customer-generated message.

Customers should send the Network Management Request Network Connection Status: echo test when they want to verify the status of their connection to the Mastercard Network instead of using a sign-on message.

Customers may not receive a Network Management Request Response/0810 message in the event Mastercard is experiencing an internal network or system issue which impacts the ability to process network management messages. When this occurs, the Mastercard customer must continue to process all financial messages. The customer must report the lack of a Network Management Request Response/0810 message to Mission Control and Operations with details about this scenario and Mastercard will investigate.

**Network-connection status request: customer-generated flow**

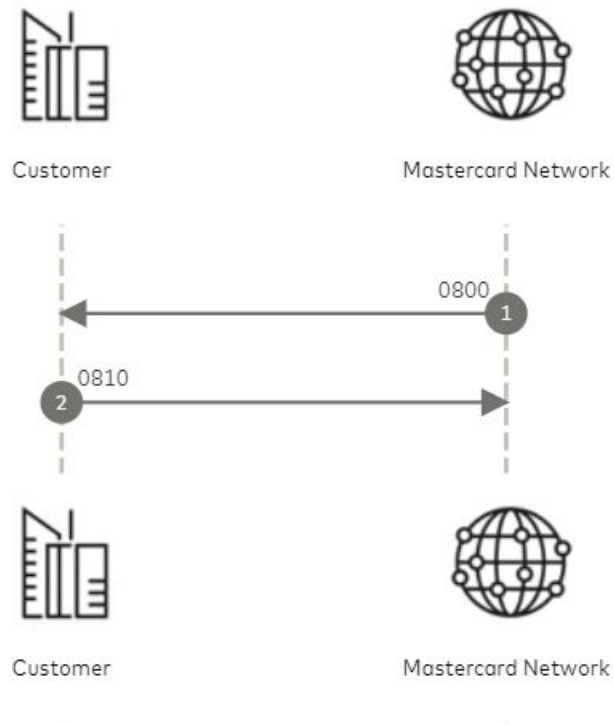

1. The customer sends a Network Management Request/0800: network connection status, customer-generated message indicating an echo test to the Mastercard Network to verify the customer's connection.
2. The Mastercard Network responds with a Network Management Request Response/0810: network connection status, system-generated message to confirm the connection is active.

**Network-connection status request: system-generated**

This message flow describes transaction processing of the Network Management Request/0800: network connection status: system-generated message.

Customers that request Mastercard to periodically check their connection status to the Mastercard Network will receive the Network Management Request/0800 message from Mastercard.

**Network-connection status: system-generated flow**

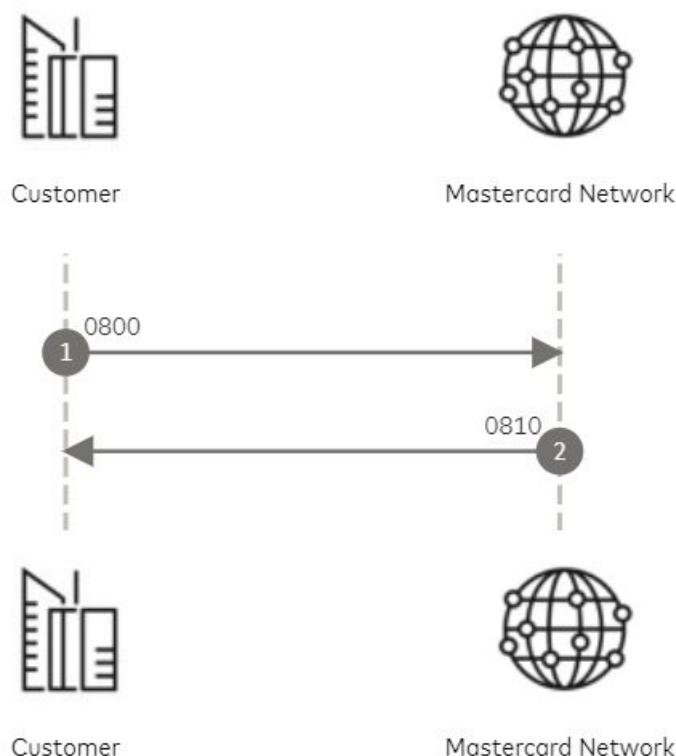

1. The Mastercard Network sends a Network Management Request/0800: network connection status: system-generated message identifying the message as an echo test to the customer to verify the customer's connection.
2. The customer responds with a Network Management Request Response/0810: network connection status: customer-generated message to confirm that the connection is active.

## Host activation or deactivation

This message flow describes transaction processing of the Network Management Request/0800: host session activation/deactivation message.

### Host activation or deactivation flow

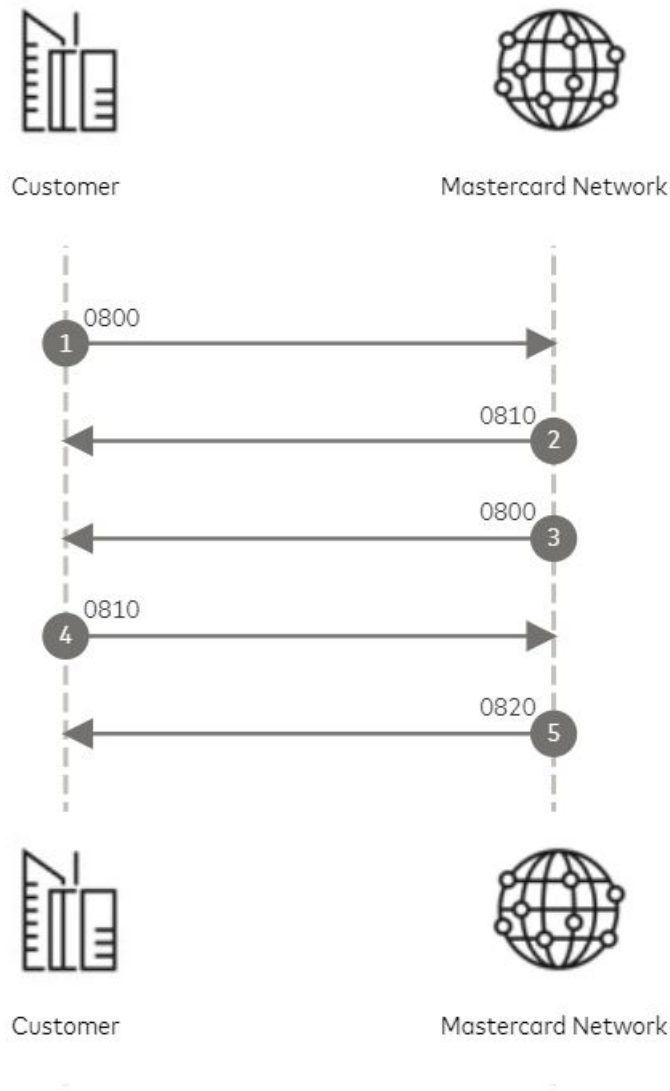

1. The customer sends a Network Management Request/0800: Host Session Activation/Deactivation message to identify session activation or session deactivation, through the value supplied in DE 70, to the Mastercard Network.
2. The Mastercard Network responds with a Network Management Request Response/0810: Host Session Activation/Deactivation message indicating successful completion.

### PIN Encryption Key exchange request: customer generated

Customers must be capable of sending a Network Management Request/0800: PEK exchange customer-generated message to the Mastercard Network requesting a new PEK. The Mastercard Network immediately initiates a PEK exchange with the customer identified in DE 33 (Forwarding Institution Identification Code) of the Network Management Request/0800: PEK exchange On Demand message. Customers should use this feature when systems problems

occur and a re-synchronization of the PEK is necessary. Mastercard exchanges PEKs with customers every 24 hours.

**PEK exchange request: customer-generated flow**

1. The customer determines there is a problem with its PEK and sends a Network Management Request/0800: PEK exchange On Demand message to the Mastercard Network requesting a new PEK.
2. The Mastercard Network responds with a Network Management Request Response/0810: PEK exchange On Demand message. The Mastercard Network uses the Key Encryption Key (KEK) to encrypt the new PEK.

3. The Mastercard Network sends a Network Management Request/0800: PEK exchange message containing the new PEK. The message contains the new PEK and the associated ID of the customer, identified in DE 2 (Primary Account Number [PAN]).  
The customer stores the new PEK and will use it for PIN encryption in subsequent Authorization Request/0100 messages.
4. The customer sends a Network Management Request Response/0810: PEK exchange message to the Mastercard Network acknowledging receipt of the Network Management Request/0800: PEK exchange message exchanging the PEK.
5. The Mastercard Network sends a Network Management Advice/0820: PEK exchange message to the customer notifying it that the new PEK is active and operational or advising of the failure. If the Network Management Advice/0820: PEK exchange message indicated that the PEK is active and operational, then subsequent Authorization Request/0100 messages must use the new PEK to translate the PIN data.

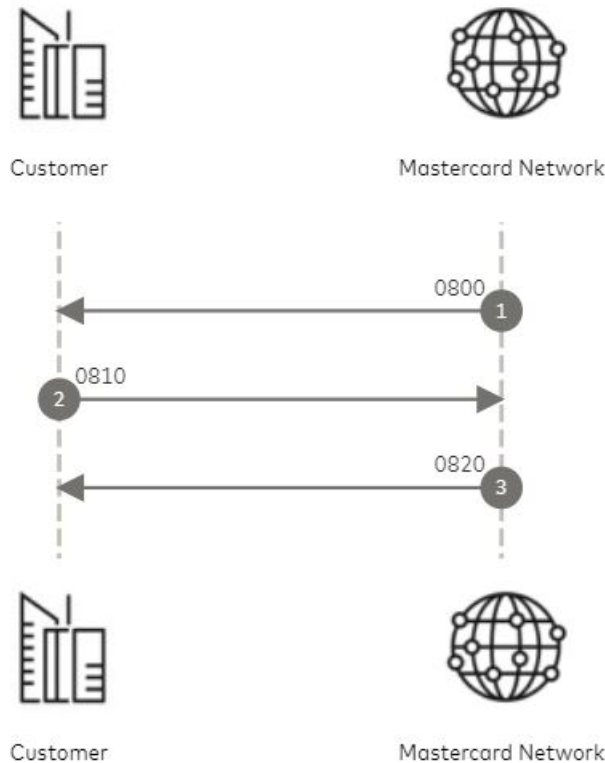

**NOTE: Error-condition message flows for Network Management/08xx messages are not illustrated. If an acquirer or issuer unsuccessfully forwards a Network Management/08xx message to the Mastercard Network, the acquirer or issuer should retransmit the message.**

## PEK-exchange request: system generated

This message flow describes transaction processing as it exchanges new PEKs with the customer every 24 hours.

### PEK exchange request: system-generated flow

1. The predetermined time has passed for exchanging a new PEK. The Mastercard Network uses the Key Encryption Key (KEK) to encrypt the new PEK. The Mastercard Network sends a Network Management Request/0800: PEK exchange message containing the PEK. The message contains the new PEK (encrypted using the KEK) in DE 48 (Additional Data: Private Use) or DE 110 (Additional Data 2) and the customer ID in DE 2 (Primary Account Number [PAN]).
2. The customer stores the new PEK. The customer sends a Network Management Request Response/0810: PEK exchange message to the Mastercard Network acknowledging receipt of the Network Management Request message exchanging the PEK.
3. The Mastercard Network sends a Network Management Advice/0820: PEK exchange message to notify the customer that the new PEK is active and operational or to advise of the failure. If the Network Management Advice/0820: PEK exchange message indicated

that the PEK is active and operational, then subsequent Authorization Request/0100 messages must use the new PEK to translate the PIN data.

## Chapter 4 General message layout information

*This section describes how the data attributes and notations are documented for use in the Dual Message Authorization System. This information provides details necessary to build or receive the messages supported by the system as described in [Data element definitions and details](#).*

| Network Management Advice/0820: PEK exchange.....                                          | 236 |

Overview

This describes how the data attributes and notations are documented for use in the Mastercard Network's Dual Message System. This information provides details necessary to build or receive the messages supported by the system as described in Data element definitions and details. The notations used to describe the data elements and message formats are:

- Data representation
- Data length
- Data field
- Justification
- Date and time attribute notations
- Entity descriptions
- Presence notations
- Program and service category notations
- Presence requirement notations

Data representation

Data representation notations indicate how data is transmitted, processed, and stored.

Data representation notations

| Notation | Description                                                                                                                                                                                                                                                                                                 |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| a        | alphabetic characters A-Z and a-z (Note that Country and Country Subdivision must be capitalized)                                                                                                                                                                                                           |
| an       | alphabetic (A-Z and a-z) and numeric (digits 0-9) characters                                                                                                                                                                                                                                                |
| ans      | alphabetic (A-Z and a-z), numeric (digits 0-9) and special characters (including spaces)                                                                                                                                                                                                                    |
| as       | alphabetic (A-Z and a-z) and special characters (including spaces)                                                                                                                                                                                                                                          |
| b        | binary<br><br>All binary data elements are constructed of bit-strings that have lengths that are an integral number of eight-bit bytes. No binary data element has a length of less than eight bits (one byte).<br><br>b-8 indicates a fixed-length binary field of eight characters (eight bytes, 64 bits) |
| n        | numeric digits 0-9                                                                                                                                                                                                                                                                                          |
| ns       | numeric digits 0-9 and special characters (including spaces)                                                                                                                                                                                                                                                |

| Notation | Description                                                                                                                                     |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| s        | special characters<br><br>Special characters are any non-numeric or non-alphabetic characters (for example, @, #, &, and \$), including spaces. |

The data encoding conventions have been adapted for all Mastercard Network messages as follows:

- The system aligns all message data element fields on byte boundaries; for example, a data field cannot begin with the low order nibble or any bit other than the high-order bit of any byte.
- All data types listed in the data representation table are encoded for transmission between the Mastercard Network and processor systems using EBCDIC display character representation.
- The ASCII to EBCDIC character set table indicates alpha, numeric, and special characters sent to the Mastercard Network. When received, the Mastercard Network passes these characters through as they are received. The Extended ASCII Character Sets table presents the mapping of decimal to hexadecimal character sets when received by the Mastercard Network. Any characters not shown in the tables are mapped as a space.
- All numeric (attribute n) data elements are right-justified with leading zeros unless otherwise specified in the individual data element definitions. All other data elements are left-justified with trailing blanks unless otherwise specified.
- All Track-2 or Track-3 (attribute ans) data elements are encoded as EBCDIC representations of the hexadecimal data specified in ISO specification 7811 and 7812. Thus, a hex D (binary 1101) is encoded as an EBCDIC character D, and so on. The LLVAR or LLLVAR length specification of each data element specifies the field length in number of bytes.
- The system encodes all length subfields as numeric EBCDIC, right-justified with leading zeros unless otherwise specified.

## Data length

Data length notations define the characteristics of the data length field.

### Data length notations

| Notation  | Description                                                                                                                                                                    |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| -digit(s) | Fixed length in number of positions.<br><br>Example: n-3 indicates a 3-position numeric data element.<br><br>Example: an-10 indicates a 10-position alphanumeric data element. |

| Notation              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ...digit(s)           | <p>Variable length field, with maximum number of positions specified.</p> <p>Example: n...11 indicates a variable-length numeric data element of 1 to 11 digits.</p> <p>Example: an...25 indicates a variable-length alphanumeric data element of 1 to 25 positions.</p>                                                                                                                                                                                                                                                           |
| LLVAR                 | <p>Present with a variable-length data element attribute, indicates that the data element contains these two fields:</p> <ul style="list-style-type: none"> <li>• LL is the length field and represents the number of positions in the variable-length data field that follows. The length field contains a value in the range of 01 to 99.</li> <li>• VAR is the variable-length data field.</li> </ul> <p>Example: an...25; LLVAR represents a variable-length alphanumeric data element with a length of 1 to 25 positions.</p> |
| LLLVAR                | <p>Present with a variable-length data element attribute, indicates that the data element contains two fields:</p> <ul style="list-style-type: none"> <li>• LLL is the length field and represents the number of positions in the variable-length data field that follows. The length field contains a value in the range 001–999.</li> <li>• VAR is the variable-length data field.</li> </ul> <p>Example: an...500; LLLVAR indicates a variable-length alphanumeric data element having a length of 1–500 positions.</p>         |
| TAGLL or TAGLLL       | <p>Integrated Product Messages (IPM) private data subelement (PDS) use only. Unique tag value assigned to the PDS followed by the fixed length value.</p>                                                                                                                                                                                                                                                                                                                                                                          |
| TAGLLVAR or TAGLLLVAR | <p>IPM PDS use only. Unique tag value assigned to the PDS followed by the variable length value.</p>                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Data field

### Data field notations

| Notation              | Description                                                                         |
|-----------------------|-------------------------------------------------------------------------------------|
| Contents of subfields | <p>Subfield number or number range</p> <p>Example: Contents of subfields 1 to 8</p> |

| Notation                | Description                                                              |
|-------------------------|--------------------------------------------------------------------------|
| Contents of position(s) | Position number or number range<br>Example: Contents of positions 1 to 8 |
| N/A                     | Not applicable                                                           |

## Justification

Data justification indicates the position of the data in the data element. A justification of not applicable (N/A) indicates that the values contained within those fields or subfields take up all positions allowed.

### Justification notations

| Notation      | Description                                                                                                                |
|---------------|----------------------------------------------------------------------------------------------------------------------------|
| Left          | Data is left-justified                                                                                                     |
| Right         | Data is right-justified                                                                                                    |
| See subfields | Data justification is defined in the subfield description indicating the subfield justification may vary between subfields |
| N/A           | Not applicable                                                                                                             |

Right-justified data fields and subfields that do not contain a value that fills the entire field must contain leading zeros. Most numeric (attribute n) data elements are right-justified; for example, amounts always have this right justification with leading zeros.

Left-justified fields and subfields that do not use the entire field with a value must have trailing spaces.

## Date and time attribute notations

Date and time notations indicate the format of the data that represents date and time.

### Date and time notations

| Notation | Description               |
|----------|---------------------------|
| MM       | Month (two digits, 01–12) |

| Notation | Description                                    |
|----------|------------------------------------------------|
| DD       | Day (two digits, 01–31)                        |
| YY       | Year (last two digits of calendar year, 00–99) |
| hh       | Hour (two digits, 00–23)                       |
| mm       | Minute (two digits, 00–59)                     |
| ss       | Second (two digits, 00–59)                     |

## Entity descriptions

Several entities may insert or modify data elements in a message as it flows from the message origin to the Mastercard Network and from the Mastercard Network to the message destination.

These entities typically include the acquirer or issuer at the origin, the Mastercard Network, and the acquirer or issuer at the destination.

### Entity description

| Notation | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Org      | <p>Originator requirements. The message originator must satisfy this data element's requirements.</p> <p>Examples of originators include:</p> <ul style="list-style-type: none"> <li>• Authorization Request/0100 message from an acquirer</li> <li>• Financial Transaction Request/0200 message from an acquirer</li> <li>• First Presentment/1240 message from an acquirer</li> </ul>                                                                                                    |
| Sys      | <p>Mastercard Network requirements. The system may insert, correct, modify, delete, or echo this data element while, for example, routing a message from the originator to the destination. The system may overwrite the data element and, as a result, overwrite any previous content.</p>                                                                                                                                                                                                |
| Dst      | <p>Destination requirements. The message destination must expect this data element (read it) and accept this data element (process it) if the originator requirements are satisfied.</p> <p>Examples of destinations include:</p> <ul style="list-style-type: none"> <li>• Authorization Request/0100 message received by an issuer</li> <li>• Financial Transaction Request/0200 message received by an issuer</li> <li>• First Presentment/1240 message received by an issuer</li> </ul> |

## Presence notations

Presence notations indicate if and how data is present. These notations appear in the originator (Org), Mastercard Network (Sys), and destination (Dst).

Mastercard uses these notation codes to indicate how message senders and receivers must understand the use of data in a message.

### Codes used by the originator or destination

| Notation | Description                                                                                                                                                                                                     |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| M        | Mandatory. The data element is required in the message.                                                                                                                                                         |
| C        | Conditional. The data element is required in the message if conditions described in the accompanying text apply.                                                                                                |
| O        | Optional. The data element is not required, but may be included in the message at the message initiator's option.                                                                                               |
| ME       | Mandatory Echo. The data element is required in a response message and must contain the same value (echoed) from the original request or advice message.                                                        |
| CE       | Conditional Echo. The data element is required in a response message if it was present in the original request or advice message, and it must contain the same value (echoed) from the original message.        |
| OE       | Optional Echo. The data element is not required in a response message if it was present in the original request or advice message, but the same value (echoed) may be included from the original message.       |
| •        | Not Required or Not Applicable. The data element is not required or is not applicable. The transaction originator should not include this data element if this code/symbol is present in the Org or Dst column. |

**NOTE: The echo notations do not apply to the Dual Message Clearing System.**

Mastercard uses these notation codes to indicate how message receivers must interpret the presence or absence of data managed by the Mastercard Network.

### Codes used by the Mastercard Network

| Notation | Description                                                                                                                                                                          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| X        | System Interaction. The Mastercard Network may (or will) insert or overwrite the data element, depending on specific support services provided for individual programs and services. |

| Notation | Description                                                                                                          |
|----------|----------------------------------------------------------------------------------------------------------------------|
| XE       | System Echo. The Mastercard Network will contain the value from the original request or advice (echoed), if present. |
| • or P   | Pass-through. The data element is forwarded by the Mastercard Network to the destination (unmodified).               |

## Program and service category notations

Program and service category notations identify the various programs and services.

### Program and service category notations

| Notation | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MC       | Mastercard, including Debit Mastercard, activity processed on the Mastercard Network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| MS       | Maestro activity processed on the Mastercard Network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CI       | Cirrus activity processed on the Mastercard Network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| NP       | <p>Network processing services activities (often referred to as private label activity) are the Mastercard Network processes that do not fall into one of the following categories: Mastercard (MC), Visa (VI), or Travel and Entertainment (TE).</p> <p>This specification indicates the most general application data element requirements for private label activity.</p> <p>Processors that support all these general data element specifications are able to access or participate in any Dual Message Authorization System credit card or debit card gateways. For detailed information on specific gateways, refer to the appropriate program or service user guide.</p> |
| VI       | <p>Visa activity transmitted through the Mastercard Network.</p> <p>This specification includes application requirements for accepting Visa activity.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| TE       | <p>Travel and Entertainment (T&amp;E) card activity transmitted through the Mastercard Network that does not fall into one of the following categories: Mastercard (MC), network processing services activity (NP), or Visa (VI).</p> <p>This specification includes application interface requirements for Travel and Entertainment (T&amp;E) card activity, including American Express, and Diners Club.</p>                                                                                                                                                                                                                                                                  |

## Presence requirement notations

Presence requirement notations describe the possible presence or usage requirements. An entity presence requirement is the three combined values in the originator (Org), Mastercard Network (Sys), and destination (Dst).

### Presence requirement notations

| Org | Sys | Dst | Description                                                                                                               |
|-----|-----|-----|---------------------------------------------------------------------------------------------------------------------------|
| M   | .   | M   | Mandatory; originator must provide the data element, and the destination must receive the data element.                   |
| M   | X   | M   | Mandatory; originator must provide the data element; Mastercard Network adjusts/appends data.                             |
| C   | P   | C   | Conditionally required; conditions are described in Comments column for originators and destinations to send and receive. |
| C   | X   | C   | Conditionally required; Mastercard Network adjusts/appends data.                                                          |
| .   | X   | C   | Mastercard Network provides the data element conditionally.                                                               |
| .   | X   | M   | Mastercard Network always provides the data element.                                                                      |
| O   | X   | C   | Optional; originator may provide the data element; Mastercard Network adjusts/appends data.                               |
| M   | X   | .   | Mandatory; originator must provide the data element; Mastercard Network does not forward data.                            |
| C   | X   | .   | Conditionally required; Mastercard Network does not forward data.                                                         |
| O   | X   | .   | Optional; Mastercard Network does not forward data.                                                                       |
| .   | X   | .   | Mastercard use only.                                                                                                      |

## Message types

## Bit map information

All Mastercard Network messages are variable-length, with a bit map scheme used as the first data elements of the message following the Message Type Identifier (MTI) to indicate the presence or absence of additional data elements in the message.

Each bit map is a 64-bit string contained within an eight-byte data element.

The Mastercard switching systems use a maximum of two-bit maps: a Primary and a Secondary Bit Map. Bits set to 1 or 0 in the Primary Bit Map indicate the presence or absence of DE 2 (Primary Account Number [PAN]) through DE 64 (Message Authentication Code [MAC]). Bits set to 1 or 0 in the Secondary Bit Map indicate the presence or absence of DE 66 (Settlement Code) through DE 128 (Message Authentication Code [MAC]).

All bit positions are interpreted from left to right within each bit map. For example, within the Primary Bit Map the left-most bit is bit number 1 and the right-most bit is bit number 64. The first bit in each bit map is 1 or 0 to indicate the presence or absence of another (immediately following) bit map data element.

Bit number 1 in the Primary Bit Map and bit number 65 in the Secondary Bit Map (that is, the first bit in each bit map) have no corresponding data elements; these bits indicate the presence or absence of additional bit map data elements in the message. If bit number 1 is 1, it indicates that the Secondary Bit Map is present and that selected data elements in the range DE 65 (Bit Map, Extended) through DE 128 (Message Authentication Code [MAC]) also are present in the message as indicated by bit positions in the Secondary Bit Map. Mastercard currently uses a maximum of two-bit maps (Primary and Secondary) in Mastercard Network messages, with a maximum number of message data elements ranging from DE 1 (Bit Map, Secondary) through DE 128 (Message Authentication Code [MAC]). Consequently, DE 65 (Bit Map, Extended) (the first bit in the Secondary Bit Map) must always be 0.

Each message must contain the Primary Bit Map. The Secondary Bit Map must be included in a message only when data elements in the range DE 65 (Bit Map, Extended) through DE 128 (Message Authentication Code [MAC]) are present in the message.

## Authorization Request/0100

This is the message layout for the Authorization Request/0100 message.

### Message data element layout

| DE ID | Data Element Name             | Org | Sys | Dst | Comments                               |
|-------|-------------------------------|-----|-----|-----|----------------------------------------|
| -     | Message Type Identifier (MTI) | M   | P   | M   | Constant: 0100 (Authorization Request) |
| -     | Bit Map, Primary              | M   | X   | M   | Mandatory for all messages             |

| DE ID | Data Element Name                   | Org | Sys | Dst | Comments                                                                                                                                                                                                               |
|-------|-------------------------------------|-----|-----|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | Bit Map, Secondary                  | C   | X   | C   | Required data element if any DE 65 (Bit Map, Extended) through DE 128 (Message Authentication Code [MAC]) are present in the message                                                                                   |
| 2     | Primary Account Number (PAN)        | M   | X   | M   | Contains cardholder's Primary Account Number (PAN)                                                                                                                                                                     |
| 3     | Processing Code                     | M   | P   | M   | Indicates type of transaction and the affected cardholder To or From Account Type                                                                                                                                      |
| 4     | Amount, Transaction                 | M   | P   | M   | Transaction amount in the currency of the acquirer's acceptor. DE 49 (Currency Code, Transaction) also must be present with this data element to identify the transaction currency.                                    |
| 5     | Amount, Settlement                  | •   | X   | C   | Transaction amount in the settlement currency in DE 50 (Currency Code, Settlement). The Dual Message Authorization System provides DE 05 to issuers if they choose to receive settlement amount related data elements. |
| 6     | Amount, Cardholder Billing          | •   | X   | M   | Transaction amount in the issuer currency. The Dual Message Authorization System provides this data element. DE 51 (Currency Code, Cardholder Billing) will also be present to identify the currency for this amount.  |
| 7     | Transmission Date and Time          | M   | P   | M   | Transaction time stamp; <i>Universal Time (UTC)</i> date and time that the originator initiates the message.                                                                                                           |
| 9     | Conversion Rate, Settlement         | •   | X   | C   | The Dual Message Authorization System provides DE 9 if the issuer chooses to receive settlement amount-related data elements.                                                                                          |
| 10    | Conversion Rate, Cardholder Billing | •   | X   | M   | The Dual Message Authorization System provides DE 10 with the rate used to convert the transaction currency to the cardholder billing currency.                                                                        |
| 11    | Systems Trace Audit Number (STAN)   | M   | P   | M   | Number assigned by the message initiator to uniquely identify a transaction.                                                                                                                                           |

| DE ID | Data Element Name                                            | Org | Sys | Dst | Comments                                                                                                                                                      |
|-------|--------------------------------------------------------------|-----|-----|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12    | Time, Local Transaction                                      | C   | P   | C   | Used in all customer-related reports and statements, if available.                                                                                            |
| 13    | Date, Local Transaction                                      | C   | P   | C   | Used in all customer-related reports and statements, if available.                                                                                            |
| 14    | Date, Expiration                                             | C   | X   | C   | Specifies the year and month a PAN is considered expired by the issuer.                                                                                       |
| 15    | Date, Settlement                                             | •   | X   | M   | The acquirer omits this data element, and the Mastercard Network inserts it and forwards it to the issuer.                                                    |
| 16    | Date, Conversion                                             | •   | X   | M   | Currency conversion rate file effective date. The Mastercard Network provides this data element.                                                              |
| 18    | Merchant Type                                                | M   | P   | M   | Refer to the <i>Quick Reference Booklet</i> for a listing of MCCs.                                                                                            |
| 19    | Acquiring Institution Country Code                           | •   | X   | C   | Based on Mastercard franchise data information.                                                                                                               |
| 20    | Primary Account Number (PAN) Country Code                    | C   | X   | C   | Required for messages when the PAN begins with 59.                                                                                                            |
| 22    | Point-of-Service (POS) Entry Mode                            | M   | X   | M   | Used to indicate the method used for PAN data entry to initiate a transaction.                                                                                |
| 23    | Card Sequence Number                                         | C   | X   | C   | Must be present for transactions that include DE 55 (ICC system-related data) and where the ICC provides the application PAN sequence number to the terminal. |
| 26    | Point-of-Service (POS) Personal ID Number (PIN) Capture Code | C   | P   | C   | Required when PIN data is present and the terminal PIN capture capability is other than 12 characters.                                                        |
| 28    | Amount, Transaction Fee                                      | C   | P   | C   | Must contain fee amount, if applied.                                                                                                                          |
| 32    | Acquiring Institution ID Code                                | M   | P   | M   | Contains acquirer's identification information.                                                                                                               |
| 33    | Forwarding Institution ID Code                               | C   | P   | C   | Contains the processor ID number forwarding this message to the Mastercard Network.                                                                           |

| DE ID | Data Element Name                 | Org | Sys | Dst | Comments                                                                                                                                                                                                                                      |
|-------|-----------------------------------|-----|-----|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35    | Track 2 Data                      | C   | X   | C   | Required if the transaction entry point captured Track 2 data. Required for ATM transactions. For Maestro transactions, such as e-commerce, the Dual Message Authorization System creates Track 2 data if it is not provided by the acquirer. |
| 37    | Retrieval Reference Number        | C   | P   | C   | Required for ATM, Chip and POS card-read transactions.                                                                                                                                                                                        |
| 41    | Acceptor Terminal ID              | C   | P   | C   | Required for all ATM and card-read POS transactions.                                                                                                                                                                                          |
| 42    | Acceptor ID                       | C   | P   | C   | Mandatory for POS transaction types containing DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), values 00 (Purchase), 09 (Purchase with Cash Back), and 28 (Payment Transaction).                                       |
| 43    | Acceptor Name and Location        | C   | P   | C   | Required for Chip and POS card-read transactions.<br><br>Required for Mastercard Hosted Mobile Phone Top-up transactions.                                                                                                                     |

| 11    | Systems Trace Audit Number (STAN)   | •   | X   | M   | Transaction trace number; must be unique value for all messages associated with a given transaction within each UTC day.                                                 |
| 33    | Forwarding Institution ID Code      | •   | X   | M   | Constant: 002202; identifies the Dual Message Authorization System.                                                                                                      |
| 48    | Additional Data: Private Use        | •   | X   | C   | Key Exchange Data Block for key exchange function; the communication key is used to encrypt the working key.                                                             |
| 63    | Network Data                        | •   | X   | M   | Mastercard Network provides this data element; which includes a Banknet Reference Number for this transaction.                                                           |
| 70    | Network Management Information Code | •   | X   | M   | Indicates the specific purpose of this message. Must be the same value as in the original Network Management Request/0800 message.                                       |

| DE ID | Data Element Name | Org | Sys | Dst | Comments                                 |
|-------|-------------------|-----|-----|-----|------------------------------------------|
| 110   | Encryption Data   | •   | X   | C   | Includes key management encryption data. |

## Chapter 5 Data element definitions and details

---

|                                                        |     |

## Data element layout

This section contains the data element structure for describing data elements. This section omits values and application note information from the data element attributes of those data elements not currently used in the Mastercard Network messages.

### Attributes

| Attribute           | Description                                              |
|---------------------|----------------------------------------------------------|
| Data Representation | Annotation and data length (fixed or variable in length) |
| Data Length         | 2 or 3 positions, if variable in length                  |
| Data Field          | Contents of subelement, subfields, or N/A                |
| Subfields           | Indicates the number of subelements, subfields, or N/A   |
| Justification       | Left, Right, or N/A                                      |

Following is the usage of DE xx (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                                                          | Org | Sys | Dst |
|----------------------------------------------------------------------------------|-----|-----|-----|
| Applicable message types                                                         | .   | .   | .   |
| Refer to <a href="#">General message layout information</a> for the usage codes. |     |     |     |

## Values

Valid values and name of each value listed.

## Application notes

Specific application notes, conditions, and cross-edits where applicable.

## Subelement layout

This is the subelement structure for describing data element subelements.

### Attributes

| Attribute              | Description                                              |
|------------------------|----------------------------------------------------------|
| Subelement ID          | Subelement identifier                                    |
| Subelement Data Length | 2 or 3 positions, if variable in length                  |
| Data Representation    | Annotation and data length (fixed or variable in length) |
| Data Field             | Contents of subfields                                    |
| Subfields              | Indicates the number of subfields                        |
| Justification          | See subfields (may be subfield-specific)                 |

Following is the usage of subelement XX (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                                          | Org | Sys | Dst |
|------------------------------------------------------------------|-----|-----|-----|
| Applicable message types                                         | .   | .   | .   |
| Refer to General message layout information for the usage codes. |     |     |     |

### Values

The list of subelement values or see subfields.

## Subfield layout

This is the subfield structure for describing data element and subelement subfields. This section omits Subfield ID and Subfield Length from the subfield attributes when not including subfield ID and length in the data.

### Attributes

| Attribute            | Description                                                                         |
|----------------------|-------------------------------------------------------------------------------------|
| Subfield ID          | Subfield identifier (omitted if not part of the data)                               |
| Subfield Data Length | 2 or 3 positions, if variable in length                                             |
| Data Representation  | Annotation and data length (fixed or variable in length)                            |
| Data Field           | Contents of positions                                                               |
| Justification        | Left, Right, or N/A, when not using justification to describe subelement subfields) |

### Values

Valid values and name of each value listed.

## Position layout

This is the position structure for describing subelement and subfield positions.

### Position layout

|                     |                                                          |
|---------------------|----------------------------------------------------------|
| Data Representation | Annotation and data length (fixed or variable in length) |
| Data Field          | Description of data                                      |
| Values              | List of values                                           |

## Primary Bit Map

The Primary Bit Map must always be present in a message. The most frequently used data elements are indexed from [DE 1 \(Bit Map, Secondary\)](#) through [DE 64 \(Message Authentication Code \[MAC\]\)](#). Infrequently used data elements are indexed from the [DE 66 \(Settlement Code\)](#)

through [DE 128 \(Message Authentication Code \[MAC\]\)](#) message only when data elements in the range [DE 66 \(Settlement Code\)](#) through [DE 128 \(Message Authentication Code \[MAC\]\)](#) are present in the message.

### Attributes

| Attribute           | Description                             |
|---------------------|-----------------------------------------|
| Data Representation | b-64                                    |
| Data Length         | N/A                                     |
| Data Field          | Fixed length 8 bytes (for each bit map) |
| Subfields           | N/A                                     |
| Justification       | N/A                                     |

**NOTE: If both bit maps are present, the total length of the bit map data element is 16 bytes.**

### Usage

Following is the usage of the Primary Bit Map (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

## Values

Bits corresponding to mandatory data elements for a specific MTI must have a value of 1 to indicate the presence of the data element in the message. Otherwise, the Dual Message

Authorization System rejects the message and returns it to the message originator using an Administrative Advice/0620, with the reject reason indicated in [DE 60 \(Advice Reason Code\)](#).

### Application notes

This data element is defined and used identically within all Mastercard programs and services.

## DE 1 (Bit Map, Secondary)

[DE 1 \(Bit Map, Secondary\)](#) is a series of 64 bits that identifies the presence (1) or absence (0) of each data element in the second segment of a message. This would include [DE 65 \(Bit Map, Extended\)](#) through [DE 128 \(Message Authentication Code \[MAC\]\)](#).

### Attributes

| Attribute           | Description                                               |
|---------------------|-----------------------------------------------------------|
| Data Representation | b-8                                                       |
| Data Length         | N/A                                                       |
| Data Field          | Indicates the presence or absence of data elements 65–128 |
| Subfields           | N/A                                                       |

## Values

Bits corresponding to mandatory data elements for a specific MTI must have a value of 1 to indicate the presence of the data element in the message. Otherwise, the Dual Message Authorization System rejects the message and returns it to the message initiator using an Administrative Advice/0620, with the reject reason indicated in [DE 60 \(Advice Reason Code\)](#).

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

# DE 2 (Primary Account Number [PAN])

[DE 2 \(Primary Account Number \[PAN\]\)](#) is a series of digits used to identify a customer account or relationship.

## Values

Mastercard customer ID numbers, when used in this data element, must be valid values that Mastercard assigns.

DE 2 must be at least 11 digits and contain the variable-length prefix assigned to the specific Issuer ID Number (IIN) for Administrative Request/0600 messages.

Network Management Request/0800 messages may contain the Mastercard Group Sign-on ID only, the card prefix only, or both the Mastercard Group Sign-on ID followed by the card prefix in DE 2.

### Application notes

This data element is defined and used identically within all Mastercard programs and services.

## About Primary Account Number

[DE 2 \(Primary Account Number \[PAN\]\)](#) is a series of digits used to identify a customer account or relationship.

### Primary Account Number

This data element is used for all numeric PANs up to 19 digits long when PAN is in Authorization/01xx messages, Reversal Advice/04xx messages, and Administrative Advice/06xx messages (when required). [DE 2](#) may contain a subset of this data within Network Management/08xx messages.

This data element data consists of three primary components:

- Issuing Institution Information (IIN)
- Individual Account ID Number
- PAN check digit

When [DE 2](#) contains a 59 BIN, [DE 20 \(Primary Account Number Country Code\)](#) also must be included in the message to uniquely identify the PAN. Note that 59 numbers are not guaranteed to be unique without an accompanying Country Code.

Specific requirements for PAN composition are described in the ISO 7812 and 7813 specifications. All PANs used in Dual Message Authorization System messages must conform to the ISO PAN encoding requirements, as specified in those specifications.

The Individual Account ID Number encoded or embossed on a card may be a cardholder ID number or a "master account number" related to one or more of the cardholder's accounts.

A card issuer may return the actual number of the cardholder account(s) affected by a transaction in an appropriate response message by using [DE 102 \(Account ID-1\)](#), [DE 103 \(Account ID-2\)](#), or both. However, the PAN used in the original Request message must then remain in [DE 2](#) for all subsequent messages related to the original request (such as Responses, Advices, Reversals, Chargebacks, Retrieval Requests, and Retrieval Fulfillments).

### Issuing Institution Information

PAN may contain Issuing Institution Information (IIN) when required in Authorization/01xx, Issuer File Update/03xx, and Network Management/08xx messages. IIN may consist of either a Mastercard customer ID number, a variable-length issuer card prefix sequence, or a Mastercard

assigned Group Sign-on ID as required by a specific message. Where card prefix information is required, the Dual Message Authorization System accommodates variable-length prefix sequences from one to 11 digits.

Where a Group Sign-on ID is required, the Dual Message Authorization System accommodates the five-digit Member Group ID, which Mastercard uses to identify a grouping of issuer account ranges that use the same transaction criteria for routing to the same destination route. More than one Group Sign-on ID value may be defined for an account range if an issuer chooses to route authorization traffic to different destinations according to transaction criteria.

## DE 3 (Processing Code)

*DE 3 (Processing Code)* describes the effect of a transaction on the customer account and the type of accounts affected.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-6                       |
| Data Length         | N/A                       |
| Data Field          | Contents of subfields 1–3 |
| Subfields           | 3                         |
| Justification       | See subfields             |

### Usage

Following is the usage of *DE 3* (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Subfield 1 (Cardholder Transaction Type Code)

[DE 3](#), subfield 1 (Cardholder Transaction Type Code) describes the specific transaction type.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | n-2         |

| Attribute     | Description               |
|---------------|---------------------------|
| Data Field    | Contents of positions 1–2 |
| Justification | N/A                       |

## Values

### Cardholder Account Debits

| Value | Description                | MC | NP | VI | TE | MS | CI |
|-------|----------------------------|----|----|----|----|----|----|
| 00    | Purchase                   | √  | √  | √  | √  | √  | √  |
| 01    | Withdrawal                 | √  | √  | √  | √  | √  | √  |
| 02    | Debit Adjustment           |    | √  |    |    |    |    |
| 09    | Purchase with Cash Back    | √  | √  |    |    | √  |    |
| 10    | Visa Only. Account Funding |    |    | √  |    |    |    |
| 17    | Cash Disbursement          | √  | √  | √  | √  |    |    |
| 18    | Scrip Issue                |    | √  |    |    |    |    |

### Cardholder Account Credits

| Value | Description            | MC | NP | VI | TE | MS | CI |
|-------|------------------------|----|----|----|----|----|----|
| 20    | Purchase Return/Refund | √  | √  | √  |    | √  |    |
| 21    | Deposit                |    | √  |    |    |    |    |
| 22    | Credit Adjustment      |    | √  |    |    |    |    |
| 28    | Payment Transaction    | √  | √  | √  |    | √  | √  |

### Cardholder Account Inquiries

| Value | Description     | MC | NP | VI | TE | MS | CI |
|-------|-----------------|----|----|----|----|----|----|
| 30    | Balance Inquiry | √  | √  | √  |    | √  | √  |

### Cardholder Account Transfers

| Value | Description      | MC | NP | VI | TE | MS | CI |
|-------|------------------|----|----|----|----|----|----|
| 40    | Account Transfer | √  | √  |    |    |    |    |

### Reserved Values

| Value | Description             | MC | NP | VI | TE | MS | CI |
|-------|-------------------------|----|----|----|----|----|----|
| 90    | Reserved for Future Use | √  |    |    |    |    |    |

### PIN Management Transactions

| Value | Description | MC | NP | VI | TE | MS | CI |
|-------|-------------|----|----|----|----|----|----|
| 91    | PIN Unblock | √  | √  |    |    | √  | √  |
| 92    | PIN Change  | √  | √  |    |    | √  | √  |

### Application notes

Value 20 is allowed for MDES related Authorization Request/0100 messages even if the account status is suspended or delete pending.

Value 20 is allowed for Visa gateway transactions to support the authorization of returns or refunds.

Value 20 is allowed for Mastercard and Debit Mastercard transactions and must be supported by Mastercard and Debit Mastercard issuers, to support the authorization of returns or refunds.

Effective with Release 20.Q2, value 20 must be supported by acquirers of Mastercard and Debit Mastercard transactions (support is optional for merchants).

Mastercard requires that issuers receive and respond to refund transactions involving a Mastercard, Debit Mastercard, or Maestro card.

Values 21–24 are not currently supported for use on the Dual Message Authorization System.

Value 30 is only applicable to eligible issuers.

Values 91 and 92 are only applicable to eligible acquirers and issuers.

## Subfield 2 (Cardholder From Account Type Code)

[DE 3](#), subfield 2 (Cardholder From Account Type Code) describes the cardholder account type affected for cardholder account debits and inquiries and the from account type for cardholder account transfer transactions.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 3–4 |
| Justification       | N/A                       |

### Values

Subfield 2 must be one of the following values.

### Cardholder From Account type code

| Value | Description                                       | MC | NP | VI | TE | MS | CI |
|-------|---------------------------------------------------|----|----|----|----|----|----|
| 00    | Default Account (not specified or not applicable) | √  | √  | √  | √  | √  | √  |

| 90    | Revolving Loan Account                            |    | √  |    |    |    |    |

## Subfield 3 (Cardholder To Account Type Code)

[DE 3](#), subfield 3 (Cardholder To Account Type Code) describes the cardholder account type affected for cardholder account credits and the To Account Type for cardholder account transfer transactions.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 5–6 |
| Justification       | N/A                       |

### Values

Subfield 3 must be one of the following values.

### Cardholder To Account type code

| Value | Description                                       | MC | NP | VI | TE | MS | CI |
|-------|---------------------------------------------------|----|----|----|----|----|----|
| 00    | Default Account (not specified or not applicable) | √  | √  | √  | √  | √  | √  |
| 10    | Savings Account                                   |    | √  |    |    | √  | √  |
| 20    | Checking Account                                  |    | √  |    |    | √  | √  |
| 30    | Credit Card Account                               | √  | √  | √  |    |    |    |
| 38    | Credit Line Account                               |    | √  |    |    |    |    |
| 40    | Universal Account                                 |    | √  |    |    |    |    |
| 50    | Money Market Investment Account                   |    | √  |    |    |    |    |
| 58    | IRA Investment Account                            |    | √  |    |    |    |    |
| 90    | Revolving Loan Account                            |    | √  |    |    |    |    |
| 91    | Installment Loan Account                          |    | √  |    |    |    |    |
| 92    | Real Estate Loan Account                          |    | √  |    |    |    |    |

## DE 4 (Amount, Transaction)

*DE 4 (Amount, Transaction)* is the amount of funds the cardholder requested in the local currency of the acquirer or source location of the transaction.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-12                       |
| Data Length         | N/A                        |
| Data Field          | Contents of positions 1–12 |
| Subfields           | N/A                        |
| Justification       | Right with leading zeros   |

### Usage

Following is the usage of *DE 4* (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

## Values

Valid numeric data must be present in this data element.

The value must be zero for:

- Authorization Request/0100 and Reversal Request/0400: Balance Inquiry, except where ATM transaction fees are allowed
- Authorization Request/0100: Chargeback Period Extension Request
- Authorization Request/0100 and Reversal Request/0400: PIN Management (PIN Unblock and PIN Change), except where ATM transaction fees are allowed
- Authorization Request/0100: Card Activation Request at POS
- Authorization Request/0100: Account Status Inquiry with Authentication Indicator

[DE 28 \(Amount, Transaction Fee\)](#) must be included in DE 4 when DE 28 is present in the message.

## Application notes

[DE 4](#) cannot exceed the region or country Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payment Transaction limit.

## For Automated Fuel Dispenser (AFD) Transactions

The contents of [DE 4](#) may equal zero when the Authorization Advice/0120 message is sent by a Europe region acquirer for an AFD transaction in Europe and contains [DE 18 \(Merchant Type\)](#) = 5542 (Fuel Dispenser, Automated) and [DE 60 \(Advice Reason Code\)](#) = 191 (Acquirer Completed Authorization Transaction).

Issuers should be prepared to receive zero amount AFD completion advices (canceling a previously approved authorization) from any acquirer as there is no Dual Message Authorization System edit restricting such advices from Europe region acquirers.

## For Authorization Chargeback Protection Period Extension Requests

## DE 5 (Amount, Settlement)

[DE 5 \(Amount, Settlement\)](#) is the amount of funds to be transferred between the acquirer and the issuer equal to [DE 4 \(Amount, Transaction\)](#) in the settlement currency. Mastercard programs and services use U.S. dollars as the currency of settlement.

## Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-12                       |
| Data Length         | N/A                        |
| Data Field          | Contents of positions 1–12 |
| Subfields           | N/A                        |
| Justification       | Right with leading zeros   |

## Usage

Following is the usage of [DE 5](#) (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Values

This data element must contain valid numeric data.

## Application notes

All settlement amounts are specified in U.S. dollars. The settlement amount in authorization messages should be interpreted as Amount, Reporting because settlement of funds (for example, accounting posting or memo-posting) does not currently occur online for authorization messages.

The Dual Message Authorization System will provide this data element if the customer chooses to receive settlement amount-related data elements.

When the issuer responds with [DE 39 \(Response Code\)](#), value 10 (Partial approval) or value 87 (Purchase amount only, no cash back allowed), the issuer is not required to echo [DE 5](#) if it was present in the Authorization Request/0100 message to the issuer. The Dual Message Authorization System will provide the partial approval amount in DE 5 of the Authorization Request Response/0110 to the acquirer if the acquirer chooses to receive settlement amount-related data elements.

The issuer may receive a Reversal Request/0400 message containing a different value in DE 5 than was present in DE 5 of the original Authorization Request/0100 message. This difference occurs when the currency conversion rate used by the Dual Message Authorization System changed between the time the Dual Message Authorization System processed the original Authorization Request/0100 and the time the Dual Message Authorization System processes the Reversal Request/0400 message.

If [DE 4](#) converts to an amount that is more than 12 digits long in the settlement currency in DE 5, the Dual Message Authorization System rejects the transaction with a format error in DE 4. When a customer receives this error code, it should verify that the transaction amount is correct.

This data will be present, as defined, except when the Dual Message Authorization System has declined an Authorization Request/0100 message and was unable to complete currency conversion processing.

## DE 6 (Amount, Cardholder Billing)

[DE 6 \(Amount, Cardholder Billing\)](#) indicates the transaction amount in the issuer's currency. It is the amount billed to the cardholder in the cardholder account currency, excluding cardholder billing fees.

| Reversal Request/0400                                                                           | .   | X   | M   |
| Reversal Request Response/0410                                                                  | CE  | X   | C   |
| Reversal Advice/0420                                                                            | .   | X   | M   |
| Reversal Advice Response/0430                                                                   | CE  | XE  | .   |

## Values

This data element must contain valid numeric data.

## Application notes

The Dual Message Authorization System inserts this data element into all authorization and reversal messages. The Dual Message Authorization System also will insert the following data elements to indicate the:

- Conversion factor used: [DE 10 \(Conversion Rate, Cardholder Billing\)](#)
- Conversion date: [DE 16 \(Date, Conversion\)](#)
- Issuer's currency: [DE 51 \(Currency Code, Cardholder Billing\)](#)

Issuers must adhere to the following when providing a partial approval Authorization Request/0110 message:

- If [DE 39](#) is 87 (Purchase Amount Only, No Cash Back Allowed), DE 6 must be less than the requested amount.
- If DE 39 is 10 (Partial Approval) and transaction is Automated Fuel Dispenser, DE 6 can be less, equal, or greater than requested amount.

Where a minor unit of currency applies, amounts are expressed in the minor unit of currency without a decimal separator (example, value 100 represents USD 1.00).

This data element is defined as a mandatory echo in Authorization Request Response/0110 messages except when the issuer responds with [DE 39 \(Response Code\)](#), value 10 (Partial approval) or value 87 (Purchase amount only, no cash back allowed).

The Dual Message Authorization System forwards the partial approval amount in DE 6 of the Authorization Request Response/0110 to the acquirer.

The issuer may receive a Reversal Request/0400 message containing a different value in DE 6 than was present in DE 6 of the original Authorization Request/0100 message. This difference occurs when the currency conversion rate used by the Dual Message Authorization System changed between the time the Dual Message Authorization System processed the original Authorization Request/0100 and the time the Dual Message Authorization System processes the Reversal Request/0400 message.

The issuer may also receive DE 6 with a supplemental cardholder fee added for participants in the Issuer Currency Conversion Rate (ICCR) Service or Cross Border Fee Manager (CBFM) Service.

If [DE 4](#) converts to an amount that is more than 12 digits long in the settlement currency in [DE 5](#), the Dual Message Authorization System rejects the transaction with a format error in DE 4. When a customer receives this error code, it should verify that the transaction amount is correct.

This data will be present, as defined, except when the Dual Message Authorization System has declined an Authorization Request/0100 message and was unable to complete currency conversion processing.

## DE 7 (Transmission Date and Time)

[DE 7 \(Transmission Date and Time\)](#) is the date and time that a message is entered into the Mastercard Network. Date and time must be expressed in Coordinated Universal Time (UTC).

### Attributes

| Attribute           | Description |

## Values

See subfields.

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

DE 7 must remain unchanged for all messages associated with a given system transaction, which includes all responses and acknowledgments related to an original request message (such as authorization, file update, administrative, network management). For example, the same DE 7 is used in an Authorization Request/0100 and any related Authorization Request Response/0110, Authorization Advice/0120: acquirer-generated, Authorization Advice/0120: system-generated, or Reversal Advice/0420: system-generated message.

The Reversal Request/0400 message is the exception to this rule. Reversal Request/0400 messages are treated as an originating request and must have a unique DE 7 value assigned. The DE 7 value from the original 0100 request is included in [DE 90 \(Original Data Elements\)](#) for transaction matching purposes.

Each message initiator must assign a DE 7 to each originating request message. The transmission time provided in DE 7 must be within three minutes of the current time recorded by the Mastercard Network.

The combination of a message originator's [DE 11 \(Systems Trace Audit Number \[STAN\]\)](#) and DE 7 must uniquely identify any system transaction the message originator initiates on any given UTC day. These data elements together may be used as key data elements to identify and locate transaction records at some later time for the purpose of error resolution, settlement reconciliation, and retrieval requests.

## Subfield 1 (Date)

[DE 7](#), subfield 1 (Date) describes the valid date.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4                       |
| Data Field          | Contents of positions 1–4 |
| Justification       | N/A                       |

### Values

This subfield must contain a valid date in MMDD format.

## Subfield 2 (Time)

[DE 7](#), subfield 2 (Time) describes the valid time.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-6                        |
| Data Field          | Contents of positions 5–10 |
| Justification       | N/A                        |

## Values

Time must contain a valid time in hhmmss format.

## DE 8 (Amount, Cardholder Billing Fee)

*DE 8 (Amount, Cardholder Billing Fee)* is the fee the issuer bills to the cardholder in the same currency as *DE 6 (Amount, Cardholder Billing)*.

**NOTE:** The Dual Message Authorization System currently does not use this data element.

## DE 9 (Conversion Rate, Settlement)

*DE 9 (Conversion Rate, Settlement)* is the factor used in the conversion from transaction to settlement amount. *DE 4 (Amount, Transaction)* is multiplied by DE 9 to determine *DE 5 (Amount, Settlement)*.

### Attributes

| Attribute           | Description                                                             |
|---------------------|-------------------------------------------------------------------------|
| Data Representation | n-8                                                                     |
| Data Length         | N/A                                                                     |
| Data Field          | Contents of subfields 1–2                                               |
| Subfields           | 2                                                                       |
| Justification       | Right, excluding the decimal indicator that must be the leftmost digit. |

## Usage

Following is the usage of DE 9 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | •   | X   | C   |
| Authorization Request Response/0110           | CE  | X   | C   |
| Authorization Advice/0120: acquirer-generated | •   | X   | C   |

| Message                                                                                         | Org | Sys | Dst |
|-------------------------------------------------------------------------------------------------|-----|-----|-----|
| Authorization Advice/0120: system-generated                                                     | .   | X   | C   |
| Authorization Advice Response/0130: issuer-generated (responding to a system-generated 0120)    | CE  | XE  | .   |
| Authorization Advice Response/0130: issuer-generated (responding to an acquirer-generated 0120) | CE  | X   | C   |
| Authorization Advice Response/0130: system-generated (responding to an acquirer-generated 0120) | .   | X   | C   |
| Reversal Request/0400                                                                           | .   | X   | C   |
| Reversal Request Response/0410                                                                  | CE  | X   | C   |
| Reversal Advice/0420                                                                            | .   | X   | C   |
| Reversal Advice Response/0430                                                                   | CE  | XE  | .   |

## Values

The leftmost digit must be in the range 0–7 and denotes the number of positions that the decimal point shall be moved from the right. Example: For a value of "69972522," conversion rate is 9.972522.

## Application notes

The Dual Message Authorization System will insert this data element into a message if the customer chooses to receive settlement amount-related data elements. If the value in DE 5 (Amount, Settlement) is equal to the value in DE 4 (Amount, Transaction), the settlement conversion rate is 61000000.

When used in Authorization/01xx messages, this data element should be interpreted as Conversion Rate, Reporting because settlement (for example, account posting or memo posting) of funds does not occur online with Authorization/01xx messages and Reversal Advice/04xx messages.

Note that when this data element is present in a message, DE 5 (Amount, Settlement) and [DE 50 \(Currency Code, Settlement\)](#) also are present.

The issuer may receive a Reversal Request/0400 message containing a different value in DE 9 than was present in [DE 9](#) of the original Authorization Request/0100 message. This difference occurs when the currency conversion rate used by the Dual Message Authorization System changed between the time the Dual Message Authorization System processed the original Authorization Request/0100 and the time the Dual Message Authorization System processes the Reversal Request/0400 message.

This data will be present, as defined, except when the Dual Message Authorization System has declined an Authorization Request/0100 or Reversal Request/0400 message and was unable to complete currency conversion processing.

## Subfield 1 (Decimal Indicator)

*DE 9*, subfield 1 (Decimal Indicator) indicates the number of positions the decimal point should be moved from the right.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

### Values

Must be in the range of 0–7.

## Subfield 2 (Conversion Rate)

*DE 9*, subfield 2 (Conversion Rate) indicates the conversion rate.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-7                       |
| Data Field          | Contents of positions 2–8 |
| Justification       | N/A                       |

### Values

Must be a valid conversion rate.

## DE 10 (Conversion Rate, Cardholder Billing)

*DE 10 (Conversion Rate, Cardholder Billing)* is the factor used in the conversion from transaction to cardholder billing amount. DE 4 (Amount, Transaction) is multiplied by DE 10 to determine *DE 6 (Amount, Cardholder Billing)*.

### Attributes

| Attribute           | Description                                                             |
|---------------------|-------------------------------------------------------------------------|
| Data Representation | n-8                                                                     |
| Data Length         | N/A                                                                     |
| Data Field          | Contents of subfields 1–2                                               |
| Subfields           | 2                                                                       |
| Justification       | Right, excluding the decimal indicator that must be the leftmost digit. |

### Usage

Following is the usage of *DE 10* (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                                                                         | Org | Sys | Dst |

| Reversal Advice Response/0430 | CE  | XE  | .   |

## Values

Fixed length 8 positions; the leftmost decimal indicator denotes the number of positions that the decimal point shall be moved from the right. Example: For data element value "69972522," conversion rate is 9.972522. The leftmost digit must be in the range 0–7.

## Application notes

The Dual Message Authorization System inserts this data element into all authorization, advice, and reversal messages. If the value in [DE 6 \(Amount, Cardholder Billing\)](#) is equal to the value in [DE 4 \(Amount, Transaction\)](#), the cardholder billing conversion rate is 61000000.

Note that [DE 6 \(Amount, Cardholder Billing\)](#) and [DE 51 \(Currency Code, Cardholder Billing\)](#) also are present.

The issuer may receive a Reversal Request/0400 message containing a different value in DE 10 than was present in DE 10 of the original Authorization Request/0100 message. This occurs when the currency conversion rate used by the Dual Message Authorization System changed between the time the Dual Message Authorization System processed the original Authorization Request/0100 and the time the Dual Message Authorization System processes the Reversal Request/0400 message.

This data will be present, as defined, except when the Dual Message Authorization System has declined an Authorization Request/0100 or Reversal Request/0400 message and was unable to complete currency conversion processing.

## Subfield 1 (Decimal Indicator)

[DE 10](#), subfield 1 (Decimal Indicator) indicates the number of positions the decimal point should be moved from the right.

## Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

## Values

Must be in the range of 0 through 7.

## Subfield 2 (Cardholder Billing Conversion Rate)

[DE 10](#), subfield 2 (Cardholder Billing Conversion Rate) indicates the cardholder billing conversion rate.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-7                       |
| Data Field          | Contents of positions 2–8 |
| Justification       | N/A                       |

### Values

Must be a valid conversion rate.

## DE 11 (System Trace Audit Number [STAN])

DE 11 (Systems Trace Audit Number [STAN]) is a number a message initiator assigns to uniquely identify a transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-6                       |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1–6 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

### Usage

Following is the usage of DE 11 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

## Values

This data element must not be all zeros or blanks.

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

DE 11 must remain unchanged for all messages associated with a given system transaction, which includes all responses and acknowledgments related to an original request message (such as authorization, file update, administrative, and network management). For example, the same [DE 11](#) is used in an Authorization Request/0100 and any related Authorization Request Response/0110, Authorization Advice/0120: acquirer-generated, Authorization Advice/0120: system-generated, or Reversal Advice/0420: system-generated message.

The Reversal Request/0400 message is the exception to this rule. Reversal Request/0400 messages are treated as an originating request and must have a unique DE 11 value assigned. The DE 11 value from the original 0100 request is included in [DE 90 \(Original Data Elements\)](#) for transaction matching purposes.

Each message initiator must assign DE 11 to each originating request message.

The combination of a message originator's DE 11 and [DE 7 \(Transmission Date and Time\)](#) must uniquely identify any system transaction the message originator initiates on any given UTC day. These data elements together may be used as key data elements to identify and locate transaction records at some later time for the purpose of error resolution, settlement reconciliation, and retrieval requests.

Acquirers that process more than 999,999 transactions within a UTC day may repeat the same number.

## DE 12 (Time, Local Transaction)

*DE 12 (Time, Local Transaction)* is the local time at which the transaction takes place at the point of acceptor location.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-6                       |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1–6 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

### Usage

Following is the usage of DE 12 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |
| Reversal Request/0400                         | C   | P   | C   |

### Values

DE 12 must contain the local time the transaction occurred at the point of interaction, represented in the local time zone and not UTC, in hhmmss format. For reversals and advices, the value must match the original transaction.

If the transaction time is not known at the time of authorization (for example, in the case of a preauthorization request), the acquirer must use the authorization time in this field.

### Application notes

This data element is defined and used identically within all Mastercard programs and services.

DE 12 is mandatory for all chip transactions. (If missing, the Dual Message Authorization System will not reject the message; however, a data integrity error will be reported.)

DE 12 is mandatory for all ATM transactions.

DE 12 is mandatory for all other card read transactions. (If missing, the Dual Message Authorization System will not reject the message.)

DE 12 is mandatory for Mastercard Hosted Mobile Phone Top-up transactions.

DE 12 is not required for MDES pre-digitization messages.

For more information, refer to the *MDES Technical Specifications for Dual and Single Message Systems*.

## DE 13 (Date, Local Transaction)

*DE 13 (Date, Local Transaction)* is the local month and day on which the transaction takes place at the point of acceptor location.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4                       |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1–4 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

### Usage

Following is the usage of DE 13 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |

| Message               | Org | Sys | Dst |
|-----------------------|-----|-----|-----|
| Reversal Request/0400 | C   | P   | C   |
| Reversal Advice/0420  | .   | X   | C   |

## Values

Date must contain a valid date in MMDD format. This date must be specified in local time zone units, not in UTC units. The original value of this data element must not be changed. If there is a delay between the date that a transaction was initiated or completed at a point of interaction and the date that the transaction was subsequently entered into the Authorization Platform, DE 13 must remain set to the local date that the transaction was initiated at the acceptor location.

If the transaction date is not known at the time of authorization (for example, in the case of a preauthorization request), the acquirer must use the authorization date in this field.

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

DE 13 is mandatory for all chip transactions (If missing, the Dual Message Authorization System will not reject the message; however, a data integrity error will be reported.)

DE 13 is mandatory for all ATM transactions.

DE 13 is mandatory for all other card read transactions. (If missing, the Dual Message Authorization System will not reject the message.)

DE 13 is mandatory for Mastercard Hosted Mobile Phone Top-up transactions.

DE 13 is not required for MDES pre-digitization messages.

For more information, refer to the *MDES Technical Specifications for Dual and Single Message Systems*.

## DE 14 (Date, Expiration)

[DE 14 \(Date, Expiration\)](#) specifies the year and month after which an issuer designates a cardholder's card to be expired.

## Attributes

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | n-4         |
| Data Length         | N/A         |

| Attribute     | Description               |
|---------------|---------------------------|
| Data Field    | Contents of positions 1–4 |
| Subfields     | N/A                       |
| Justification | N/A                       |

## Usage

Following is the usage of DE 14 (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |
| Reversal Request/0400                         | C   | X   | C   |

## Values

This data element must consist of a year and a month in YYMM format.

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

## DE 14 edits

| IF...                                                                                                                                                | THEN...               |

## Values

This data element must consist of a month and day in MMDD format.

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

For Authorization/01xx and Reversal Advice/04xx messages (in which there is no concurrent online settlement of funds), this data element is a date of network reporting. For example, the Dual Message Authorization System provides program- or service-specific financial network business date to inform acquirers and issuers of the reporting date to which a transaction applies. It should be interpreted as Date, Reporting.

In all cases the Dual Message Authorization System determines and inserts DE 15 in all originating Authorization/01xx and Reversal Advice/04xx messages.

The Dual Message Authorization System provides this date. Therefore, this data element must not be present in any originating request or advice messages. Any customer processing system or intermediate network facility (INF) must not change this date in any subsequent response message.

## DE 16 (Date, Conversion)

*DE 16 (Date, Conversion)* indicates the effective date of *DE 9 (Conversion Rate, Settlement)* and also *DE 10 (Conversion Rate, Cardholder Billing)* whenever these data elements are present within a message.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4                       |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1–4 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

### Usage

Following is the usage of *DE 16* (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

|-------------------------------|-----|-----|-----|
| Reversal Advice Response/0430 | CE  | XE  | .   |

### Values

This data element must consist of a month and day in MMDD format.

### Application notes

This data element is defined and used identically within all Mastercard programs and services.

This data will be present, as defined, except when the Dual Message Authorization System has declined an Authorization Request/0100 message and was unable to complete currency conversion processing.

## DE 17 (Date, Capture)

[DE 17 \(Date, Capture\)](#) is the month and day the acquirer processed the transaction data.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 18 (Merchant Type)

[DE 18 \(Merchant Type\)](#) is the classification (acceptor business code/merchant category code [MCC]) of the merchant's type of business or service.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4                       |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1–4 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

### Usage

Following is the usage of DE 18 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | M   | P   | M   |
| Authorization Advice/0120: acquirer-generated | M   | P   | M   |
| Authorization Advice/0120: system-generated   | .   | X   | M   |
| Reversal Request/0400                         | M   | P   | M   |

### Values

This data element must contain a valid MCC. Refer to the *Quick Reference Booklet* for valid codes.

## DE 20 (Primary Account Number [PAN] Country Code)

*DE 20 (Primary Account Number [PAN] Country Code)* is a code identifying the country where the card issuer is located.

### Usage

DE 20 is defined by and used for internal Mastercard processing and will not be present in Dual Message Authorization System messages sent to customers.

## DE 21 (Forwarding Institution Country Code)

*DE 21 (Forwarding Institution Country Code)* is the code of the country where the forwarding institution is located.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 22 (Point-of-Service [POS] Entry Mode)

*DE 22 (Point-of-Service [POS] Entry Mode)* indicates the method used for PAN entry to initiate a transaction and the PIN entry capabilities.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | n-3         |
| Data Length         | N/A         |

| Attribute     | Description               |
|---------------|---------------------------|
| Data Field    | Contents of subfields 1–2 |
| Subfields     | 2                         |
| Justification | See subfields             |

## Usage

Following is the usage of DE 22 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                       | Org | Sys | Dst |

| Reversal Advice/0420                          | •   | X   | M   |

## Values

See subfields.

## Application notes

Following DE 22, subfield details are the [Dual Message Authorization System edits](#) that describe transaction-specific program and service edits for this data element.

### PIN Management Transactions

Chip PIN Management: Only subfield 1, value 05 (PAN auto entry via chip) and subfield 2, value 1 (Terminal has PIN entry capability) are valid.

Magnetic Stripe PIN Management: subfield 1, values 02 and 90 are valid for magnetic stripe PIN change

### All ATM Transactions

DE 22, subfield 2, must be value 1 (Terminal has PIN entry capability).

Short Message Service (SMS) Balance Inquiry Service

Issuers participating in the Short Message Service (SMS) Balance Inquiry service will receive DE 22, subfield 1 (POS Terminal PAN Entry Mode), value 81 (PAN entry via electronic commerce, including chip).

Subfield 1 (POS Terminal PAN Entry Mode)

[DE 22](#), subfield 1 (POS Terminal PAN Entry Mode) indicates the method used for PAN entry to initiate a transaction.

Attributes

| Attribute           | Description               |

|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 79    | <p>A hybrid terminal with an online connection to the acquirer failed in sending a chip fallback transaction (in which <a href="#">DE 22</a>, subfield 1 = 80) to the issuer.</p> <p>or</p> <p>A hybrid terminal with no online connection to the acquirer failed to read the chip card. The merchant is prompted to read the magnetic stripe from the card, the magstripe is successfully read and indicates a service code 2XX (or 6XX if card is domestic).</p> <p>To complete the transaction in both cases, a voice transaction takes place during which the merchant communicates the PAN and the expiry date originating from the magstripe track 2 data to the acquirer. The acquirer then sends an online transaction to the issuer in which the value of <a href="#">DE 22</a>, subfield 1 = 79 and in which <a href="#">DE 61</a> subfield 11 indicate that the terminal is chip capable.</p> <p>Refer to the <a href="#">M/Chip Requirements</a> for additional information.</p> |
| 80    | Chip card at chip-capable terminal was unable to process transaction using data on the chip; therefore, the terminal defaulted to the magnetic stripe-read PAN. The full track data has been read from the data encoded on the card and transmitted within the Authorization Request/0100 in DE 45 (Track 1 Data) or <a href="#">DE 35</a> (Track 2 Data) without alteration or truncation. To use this value, the acquirer must be qualified to use value 90.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Subfield 2 (POS Terminal PIN Entry Mode)

[DE 22](#) (Point-of-Service [POS] Entry Mode), subfield 2 (POS Terminal PIN Entry Mode) describes the capability of the terminal device to support/accept PIN entry.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 3 |
| Justification       | N/A                    |

### Values

| Value | Description                                                              |
|-------|--------------------------------------------------------------------------|
| 0     | Unspecified or unknown                                                   |
| 1     | Terminal has PIN entry capability                                        |
| 2     | Terminal does not have PIN entry capability                              |
| 3     | mPOS Software-based PIN entry capability                                 |
| 8     | Terminal has PIN entry capability but PIN pad is not currently operative |

## Dual Message Authorization System edits

The Dual Message Authorization System performs edits on specific programs and services.

Edits are performed on the following programs and services:

- Electronic Commerce Transactions
- Mastercard Consumer Presented QR Transactions
- Chip Transactions
- Magnetic Stripe or Chip-Read Transactions for Mastercard Electronic Card
- Contactless Magnetic Stripe Transactions
- Credential on File Transactions

### Electronic commerce transactions

The Dual Message Authorization System performs a cross-edit between DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode) and DE48 (Additional

Data: Private Use), subelement 42 (Electronic Commerce Indicators), subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection Indicator), position 3 (UCAF Collection Indicator) and DE 61 (Point-of-Service [POS] Data).

### Authorization Request/0100 message

| WHEN....                                                                                                     | THEN the Dual Message Authorization System...          |
|--------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| <a href="#">DE 22</a> , subfield 1 contains the value 81 (PAN entry via electronic commerce, including chip) | <a href="#">DE 48</a> , subelement 42 must be present. |

## Mastercard Consumer Presented QR Transactions

The Dual Message Authorization System performs the following system edits to help ensure that acquirers supporting merchants that choose to submit tokenized Mastercard Consumer Presented QR transactions are properly using value 03 (PAN auto-entry via barcode reader) in [DE 22 \(Point-of-Service \[POS\] Entry Mode\)](#), subfield 1 (POS Terminal PAN Entry Mode) in Authorization Request/0100 messages.

### Authorization Request/0100 message

## Chip transactions

If Mastercard determines through its Internal Chip Monitoring process that improperly formatted chip transactions are being submitted from acquirers not certified to send chip transactions, Mastercard will notify each acquirer before activating an edit.

For more information, refer to the *M/Chip Processing Services Service Description Guide*.

## DE 23 (Card Sequence Number)

[DE 23 \(Card Sequence Number\)](#) distinguishes among separate cards having the same DE 2 (Primary Account Number [PAN]) or DE 34 (Primary Account Number [PAN] Extended). Issuers may encode chip cards with Card Sequence Numbers. Acquirers with chip-reading capability may pass this information encoded on the chip in DE 23 of Authorization Request/0100 messages.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1–3 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

## Usage

Following is the usage of DE 23 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                                                                         | Org | Sys | Dst |
|-------------------------------------------------------------------------------------------------|-----|-----|-----|
| Authorization Request/0100                                                                      | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated                                                   | C   | X   | C   |
| Authorization Advice/0120: system-generated                                                     | .   | X   | C   |
| Authorization Advice Response/0130: issuer-generated (responding to an acquirer-generated 0120) | CE  | XE  | CE  |
| Authorization Advice Response/0130: issuer-generated (responding to a system-generated 0120)    | CE  | XE  | .   |
| Authorization Advice Response/0130: system-generated (responding to an acquirer-generated 0120) | .   | XE  | CE  |
| Reversal Request/0400                                                                           | C   | X   | C   |

## Values

Acquirers:

DE 23 must be three positions in the numeric range 000–099. For contact chip or contactless chip transactions where DE 22 subfield 1 is 05 or 07 respectively, DE 23 must contain the value of the Application PAN Sequence Number (EMV tag 5F34) as personalized on the chip. Considering that the Application PAN Sequence Number (EMV tag 5F34) is defined as a one-byte numeric value in the EMV specification, the terminal or the acquirer software must convert this one-byte numeric value to a three-byte value with leading zeros in DE 23. For example, if the value of EMV tag 5F34 on the chip card is 2, then the value of DE 23 is 002. For chip or contactless chip transactions, if EMV tag 5F34 is not personalized (not present) on the chip, DE 23 cannot be present in the authorization message.

When DE 23 (Card Sequence Number) is present in an Authorization Request/0100 message and the value is not in the range of 000–099, then the Dual Message Authorization System forwards the Authorization Request Response/0110 where DE 39 = 30 (Format Error) and DE 44 (Additional Response Data) = 023.

If the account range is registered for the Authentication Indicator Type 1 Service, then DE 23 should be present.

Issuers:

The Dual Message Authorization System does not cross-edit the presence or absence of DE 23 and the value in DE 22 (Point-of-Service [POS] Entry Mode) in Authorization Request/0100

messages. However, if DE 22 has a value 05 (PAN auto-entry via chip) or 07 (PAN auto-entry via contactless M/Chip) and if DE 23 is present in the Authorization Request/0100, DE 23 contains the card sequence number from the chip. If DE 22 has a value other than 05 or 07 and DE 23 is present, then [DE 23](#) may contain erroneous information unrelated to the chip transaction.

Because of the potential for DE 23 to be present in Authorization/01xx messages, chip issuers must be prepared to receive store-and-forward (SAF) records containing DE 23.

Issuers must not return DE 23 in an Authorization Request Response/0110. If an issuer does so, Mastercard will delete DE 23 before passing the Authorization Request Response/0110 to the acquirer.

### **Brazil-issued account ranges with Flex Card Service enabled in Brazil, for acquirers**

The third position in [DE 23](#) will determine the routing of a Flex Card service enabled Point of Sale (POS) transaction acquired outside of Brazil, as follows:

- Values 0-4 indicates that the cardholder has selected the credit option. The transaction will be routed and processed as credit.
- Values 5-9 indicates that the cardholder has selected the debit option for processing; debit or credit interchange may apply to the transaction. Acquirers may be required to submit the corresponding interchange if Debit is selected and differentiated from credit for processing and interchange:
  - C = Credit Transaction if DE 3, subfield 2 is not equal to 10 or 20.
  - D = Debit Transaction if DE 3, subfield 2 is equal to 10 or 20.

### **Application notes**

**NOTE: The following feature only applies to tokens that use a secure element or cloud token type.**

DE 23 is not provided unless the issuer opts to receive it.

For more information, refer to the *Mastercard Digital Enablement Service Issuer Implementation Guide*.

## **DE 24 (Network International ID)**

[DE 24 \(Network International ID\)](#) identifies a single international network of card issuers.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 25 (Point-of-Service [POS] Condition Code)

[DE 25 \(Point-of-Service \[POS\] Condition Code\)](#) is an ID of the condition under which the transaction takes place at the point of interaction.

**NOTE:** The Dual Message Authorization System currently does not use this data element.

## DE 26 (Point-of-Service (POS) Personal ID Number [PIN] Capture Code)

DE 26 (Point-of-Service [POS] Personal ID Number [PIN] Capture Code) indicates the technique, maximum number, or both of PIN characters that can be accepted by the POS terminal used to construct the PIN data.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1–2 |
| Subfields           | N/A                       |
| Justification       | Right                     |

### Usage

Following is the usage of DE 26 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|

| Authorization Advice/0120: system-generated | .   | X   | C   |

## Values

### Applicable values

| Values | Description                                                                 |
|--------|-----------------------------------------------------------------------------|
| 00–03  | Invalid                                                                     |
| 04–12  | Indicates the maximum number of PIN characters that the terminal can accept |
| 13–99  | Reserved                                                                    |

### Application notes

This data element is defined and used identically within all Mastercard programs and services.

DE 26 must be used to indicate the maximum number of PIN characters that the acquiring terminal device (for example; ATM and POS terminal) is capable of accepting.

The Dual Message Authorization System requires that this data element be included in an Authorization Request/0100 message only when DE 52 (Personal ID Number [PIN] Data) or DE 110 (Encryption Data), Dataset 01 (PIN Encryption) is present and the maximum PIN character acceptance capability of the terminal is known to be other than 12 digits.

**NOTE: This data element is not used to specify the number of PIN characters actually accepted by a POS terminal device.**

## DE 27 (Authorization ID Response Length)

[DE 27 \(Authorization ID Response Length\)](#) is the maximum length of the authorization response that the acquirer can accommodate. The issuer or its agent is expected to limit response to this length.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

ISO and Mastercard defines [DE 38 \(Authorization ID Response\)](#) to be a six-character data element. All acquirers and issuers are expected to be able to accommodate and use the six-character data element for all authorization ID response codes.

## DE 28 (Amount, Transaction Fee)

*DE 28 (Amount, Transaction Fee)* is the fee charged (for example, by the acquirer) for transaction activity in the currency of DE 4 (Amount, Transaction).

### Attributes

## Values

This data element may be present in a message whenever an online transaction fee is permitted by the operating rules of a bank card product.

The credit or debit indicator (the first position of the data element) applies to the message recipient. Within acquirer-generated message types, a D (debit) fee amount indicates that the fee is to be applied as a debit to the message recipient, the issuer, (and therefore as a credit to the message originator, the acquirer).

## Application notes

The Dual Message Authorization System does not support real-time settlement of transaction fees or processing fees concurrently with each individual transaction. All such fees for each financial network are calculated and settled daily, upon completion of each financial network business day, for all customers.

**NOTE: For acquirers that are approved to levy transaction fees, DE 28 must contain the transaction fee amount, and this amount also must be added to the requested amount contained in DE 4 (Amount, Transaction).**

## Edits

| WHEN...                                                                                                                                                                      | THEN the Dual Message Authorization System...                                                                                                                   |

## Subfield 2 (Amount)

*DE 28*, subfield 2 (Amount) indicates the fee amount in the currency of *DE 4 (Amount, Transaction)*.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-8                       |
| Data Field          | Contents of positions 2–9 |
| Justification       | Right with leading zeros  |

### Values

The fee amount must not contain all zeros or be greater than *DE 4 (Amount, Transaction)*.

## DE 29 (Amount, Settlement Fee)

*DE 29 (Amount, Settlement Fee)* is the fee to be transferred between the acquirer and the issuer equal to *DE 28 (Amount, Transaction Fee)* in the currency of *DE 5 (Amount, Settlement)*.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

The Dual Message Authorization System does not support real-time settlement of transaction fees or processing fees concurrently with each individual transaction. All such fees for each financial network are calculated and settled daily, upon completion of each financial network's business day, for all customers.

## DE 30 (Amount, Transaction Processing Fee)

*DE 30 (Amount, Transaction Processing Fee)* is the fee charged (for example, by the acquirer, issuer, or INF) for the handling and routing of messages in the currency of *DE 4 (Amount, Transaction)*.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

The Dual Message Authorization System does not support real-time settlement of transaction fees or processing fees concurrently with each individual transaction. All such fees for each financial network are calculated and settled daily, upon completion of each financial network's business day, for all customers.

## DE 31 (Amount, Settlement Processing Fee)

*DE 31 (Amount, Settlement Processing Fee)* is the fee charged (for example, by the acquirer, issuer, or INF) for the handling and routing of messages in the currency of *DE 5 (Amount, Settlement)*.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

The Dual Message Authorization System does not support real-time settlement of transaction fees or processing fees concurrently with each individual transaction. All such fees for each financial network are calculated and settled daily, upon completion of each financial network's business day, for all customers.

## DE 32 (Acquiring Institution ID Code)

*DE 32 (Acquiring Institution ID Code)* identifies the acquiring institution (for example, merchant bank) or its agent.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-6                       |
| Data Length         | 2 positions               |
| Data Field          | Contents of positions 1–6 |

## Values

A Mastercard customer ID number that Mastercard assigned to the entity acting as the acquiring institution for a transaction.

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

DE 32 must contain a six-digit customer ID number assigned by Mastercard that identifies the institution acting as the "acquiring bank" or "merchant bank" for a transaction.

When an institution acts as the customer or intermediate network facility (INF) for an acquirer, the institution must:

- Provide the acquirer's Mastercard-assigned six-digit customer ID in DE 32
- Provide its Mastercard-assigned six-digit customer ID in DE 33 (Forwarding Institution ID Code)

The Mastercard customer ID number must be set up in the Dual Message Authorization System for participants to process Administrative Request/06xx messages.

## Errors

| IF...                                                                                                                                          | THEN the Dual Message Authorization System...                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| in a Mastercard transaction, the acquirer submits a transaction with a value of 90 in DE 22 (Point-of-Service [POS] Entry Mode)                | DE 45 (Track 1 Data) or DE 35 (Track 2 Data) must be present, and DE 32 must contain the proper Mastercard customer ID number.                                                       |
| the Authorization Request/0100, Authorization Advice/0120, or Reversal Request/0400 message contains DE 32 and DE 32 is not 6 digits in length | forwards the acquirer an Authorization Request Response/0110, Authorization Advice Response/0130, or Reversal Request Response/0410 where DE 39 = 30 (Format Error) and DE 44 = 032. |

For bridged transactions acquired on the Single Message System, issuers will receive the 6-digit customer ID number assigned by Mastercard that identifies the institution acting as the "acquiring bank" or "merchant bank" for a transaction in DE 32 (Acquiring Institution Identification Code) of the authorization message instead of a Mastercard-assigned internal ICA.

**NOTE: Transactions that have passed between platforms (Single Message System to Dual Message Authorization System, Dual Message Authorization System to Single Message System) are referred to as bridged transactions.**

## Visa Transactions

Acquirers must use their Mastercard-assigned customer ID in DE 32 of Visa-branded authorizations, and must also provide their Visa-assigned acquirer BIN to the Global Customer Service team.

## DE 33 (Forwarding Institution ID Code)

[DE 33 \(Forwarding Institution ID Code\)](#) identifies the institution forwarding a Request or Advice message in an interchange system if it is not the same institution as specified in DE 32 (Acquiring Institution ID Code). DE 33 is used within a message to contain the Mastercard six-digit customer ID number of the customer or INF responsible for directly routing that message to the Dual Message Authorization System.

## Attributes

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | n-6         |
| Data Length         | 2 positions |

| Attribute     | Description               |

## Values

This data element, when used, must contain a valid Mastercard customer ID number.

## Application notes

DE 33 must be present in messages together with DE 32 whenever the Mastercard customer ID number of a customer or INF is different than the Mastercard customer ID number of the actual acquiring institution.

Automated Referral Service (ARS) store-and-forward transactions are included with other Stand-In processing transactions and are identified with a 003850 in DE 33 of the Authorization Advice/0120 message.

The Mastercard customer ID number must be set up in the Dual Message Authorization System for participants to process Administrative Request/06xx messages.

If an Authorization Request/0100, Authorization Advice/0120, or Reversal Request/0400 message contains DE 33 and DE 33 is not 6 digits in length, then the Dual Message Authorization System will forward to the acquirer an Authorization Request Response/0110,

Authorization Advice Response/0130, or Reversal Request Response/0410 where DE 39 = 30 (Format Error) and DE 44 = 033.

## DE 34 (Primary Account Number [PAN], Extended)

*DE 34 (Primary Account Number [PAN], Extended)* identifies a customer account or relationship, and is used only when PAN begins with a 59 BIN.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 35 (Track 2 Data)

*DE 35 (Track 2 Data)* is the information encoded on track 2 of the card magnetic stripe as defined in the ISO 7813 specification, including data element separators but excluding beginning and ending sentinels and longitudinal redundancy check (LRC) characters as defined therein.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans...37; LLVAR            |
| Data Length         | 2 positions                |
| Data Field          | Contents of positions 1–37 |
| Subfields           | N/A                        |
| Justification       | N/A                        |

### Usage

Following is the usage of DE 35 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | O   | X   | O   |

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Advice/0120: system-generated | .   | X   | C   |

## Values

Whenever DE 35 is captured automatically at the point of interaction, DE 35 must contain whatever is encoded on the magnetic stripe (track 2) of the card, regardless of whether the card has been properly encoded with information in accordance with ISO specifications. The ISO 7810, 7811, 7812, and 7813 specifications document the international standards for encoding information on magnetic stripe cards.

For chip transactions, DE 35 carries data read from the chip as EMV tag 57 (Track 2 Equivalent Data). All ICCs issued by Mastercard customers must support EMV tag 57 (Track 2 Equivalent Data). Since January 2008, the value of the CVC in EMV tag 57 (Track 2 Equivalent Data) on the chip and the CVC value on the physical magnetic stripe must be different.

DE 35 must contain the hexadecimal digits 0 through 9 and D or = (the equal sign).

## Application notes

The account number in DE 2 (Primary Account Number [PAN]) or [DE 34 \(Primary Account Number \[PAN\], Extended\)](#) must match the account number in DE 35.

This data element is defined and used identically within all Mastercard programs and services.

DE 35 is mandatory for all chip transactions (if missing, the Dual Message Authorization System will not reject the message; however, a data integrity error will be reported).

DE 35 is mandatory for all ATM transactions. For Maestro transactions, such as e-commerce, the Dual Message Authorization System creates track 2 data if it is not provided by the acquirer.

DE 35 is optional for 0120 AFD completion advice. Refer to [Automated Fuel Dispenser Completion](#) for more detail.

For MDES tokenized transactions, issuers may opt in through MDES Manager to receive track data in DE 35 (Track 2 Data) on Dual Message Authorization System or Single Message System transactions to issuers.

The field separator character (binary 1101) is represented as the EBCDIC character D. However, because many ATM and POS devices perform nonstandard character translation while reading binary coded decimal (BCD) encoded magnetic stripe data, the EBCDIC character "=" may also be used to represent the field separator character in magnetic stripe data.

Following is Track 2 information content and format for Mastercard transactions.

### Track 2 information content and format for Mastercard transactions

| Field ID | Field name                                                                                                     | F (Fixed), V (Variable) | Maximum length                                                                 |
|----------|----------------------------------------------------------------------------------------------------------------|-------------------------|--------------------------------------------------------------------------------|
| 1        | Start Sentinel<br>These fields are encoded on the card but must be omitted within Track 2 data.                | F                       | n-1                                                                            |
| 2        | Primary Account Number                                                                                         | V                       | n...19                                                                         |
| 3        | Separator (binary)                                                                                             | F                       | ans-1                                                                          |
| 4        | Expiration Date                                                                                                | F                       | ans-4                                                                          |
| 5        | Extended Service Code                                                                                          | F                       | ans-3                                                                          |
| 6        | Discretionary Data (must include CVC 1)                                                                        | V                       | Balance of available digits not to exceed total track length of 40 characters. |
| 7        | End Sentinel<br>These fields are encoded on the card but must be omitted within Track 2 data.                  | F                       | n-1                                                                            |
| 8        | Longitudinal Redundancy Check<br>These fields are encoded on the card but must be omitted within Track 2 data. | F                       | n-1                                                                            |

Refer to the *Security Rules and Procedures* for additional Track 2 data information.

## DE 36 (Track 3 Data)

*DE 36 (Track 3 Data)* is the information encoded on track 3 of the card magnetic stripe as defined in the ISO 4909:1986 specification, including data element separators but excluding beginning and ending sentinels and LRC characters as defined therein.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 37 (Retrieval Reference Number)

*DE 37 (Retrieval Reference Number)* is a document reference number supplied by the system retaining the original source document of the transaction and assists in locating that source document or a copy thereof. DE 37 is made available for use by automated merchant POS systems that may be interconnected into the interchange system. Merchant POS systems may assign a unique receipt or sales document ID to be used to satisfy regulatory or legal requirements when the merchant performs source document capture and truncation. DE 37 may be used to relay source document reference numbers to the issuer at the time each transaction is processed.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans-12                     |
| Data Length         | 2 positions                |
| Data Field          | Contents of positions 1–12 |
| Subfields           | 2 (for chip transactions)  |
| Justification       | See subfields              |

### Usage

Following is the usage of DE 37 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                                                                         | Org | Sys | Dst |

## Values

Number assigned by the acquirer.

When present, DE 37 must contain a value other than all zeros or all spaces.

DE 37 can have trailing spaces if the transaction is not a Visa or EMV chip transaction.

## Application notes

The Authorization System will pass DE 37, unaltered, to the receiving entity. The receiving entity must return this data element within any corresponding response.

DE 37 is mandatory for all chip transactions (DE 22 = 05x or 07x), chip fallback transactions (DE 22 = 80x), as well as contactless magnetic stripe transactions (DE 22 = 91x). If DE 37 is not present, the Dual Message Authorization System will not reject the message.

DE 37 is mandatory for all ATM transactions.

DE 37 is mandatory for all other card read transactions. (If missing, the Dual Message Authorization System will not reject the message.)

Visa transactions: Acquirers that use the Mastercard Network must populate CIS DE 37 with a 12-position, all numeric value containing a valid Julian date, in Visa Authorization Request/0100, Authorization Advice/0120 and Reversal Request/0400 messages.

The format for CIS DE 37 on Visa transactions is (ydddhnnnnnnn):

- yddd (positions 1–4) is the year and day of year, equivalent of the value from DE 7 (Transmission Date and Time), y=0–9, ddd=001–366
- hh (positions 5 and 6) is the hours value from the time in DE 7 (Transmission Date and Time)
- nnnnnn (positions 7–12) is the value from DE 11 (Systems Trace Audit Number)

Visa will only edit positions 1–4. To avoid problems with system edits that may detect and reject duplicate and reused CIS DE 37 values, Visa recommends that endpoints construct CIS DE 37, positions 5–12 from the data in CIS DE 7 and CIS DE 11.

Acquirers may construct DE 37 in the same manner for Mastercard, as is indicated above for Visa messages.

## Subfield 1 (Transaction Date and Initiator Discretionary Data)

DE 37, subfield 1 (Transaction Date and Initiator Discretionary Data) is used to pass chip data. The value information is specific to chip transactions.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-7                     |
| Data Field          | Contents of positions 1–7 |
| Justification       | Left                      |

### Values

The date (MMDD) the transaction is captured at the point-of-service terminal.

If no discretionary data is included, the remaining three positions of this subfield should be zero-filled.

This subfield is left-justified with trailing zeros.

## Subfield 2 (Terminal Transaction Number)

DE 37, subfield 2 (Terminal Transaction Number) is a unique number that identifies the transaction with a specific POS terminal within a specific 24 hour time period. The value information is specific to chip transactions.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans-5                      |
| Data Field          | Contents of positions 8–12 |
| Justification       | Right                      |

### Values

The Terminal Transaction Number: A sequential number, per terminal. Only numeric data may be present in this subfield. This subfield must contain a unique number that identifies the transaction with a specific POS terminal within a specific 24 hour time period.

Mastercard recommends that this subfield contain the value of the Transaction Sequence Counter (EMV tag 9F41), if available.

This subfield is right-justified with leading zeros.

## DE 38 (Authorization ID Response)

*DE 38 (Authorization ID Response)* is a transaction response ID code that the authorizing institution assigns. DE 38 is used to transmit a card issuer's authorization code for Authorization transactions.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-6                     |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1–6 |
| Subfields           | N/A                       |
| Justification       | Left                      |

### Usage

Following is the usage of DE 38 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request Response/0110           | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |
| Reversal Request/0400                         | C   | P   | C   |
| Reversal Advice/0420                          | .   | X   | C   |

### Values

When present, DE 38 must be left-justified and cannot contain all spaces, embedded spaces, all low values, all high values, or all zeros.

## Application notes

In general, the authorization code used in DE 38 may be any combination of alphanumeric characters. However, the following table identifies the standard conventions the major brands use.

### Authorization codes format

| Card type        | Length | Authorization ID response code format     |
|------------------|--------|-------------------------------------------|
| Mastercard       | 6      | alphanumeric, with no special characters. |
| Visa             | 6      | alphanumeric, with no special characters. |
| American Express | 6      | alphanumeric, trailing space(s).          |
| Diners Club      | 6      | numeric, trailing space(s).               |
| Discover         | 6      | numeric, trailing space(s).               |

DE 38 is mandatory in the Authorization Request Response/0110 message when DE 39 (Response Code) contains the value 00 (approved), 08 (Honor with ID), 10 (Partial Approval), 85 (Not Declined), or 87 (Purchase amount only, no cash back allowed). If the transaction is approved by Stand-In processing, a six-digit authorization approval code beginning with "8" appears in this field.

DE 38, position 6 (Account Category Code) may contain an Account Level Management account category code when the account range is participating in an Account Level Management service. For a complete valid value listing, refer to the *Account Level Management Manual*.

### Issuer instructions for ALM

If DE 48, subelement 38 is present in the Authorization Request/0100 message and the issuer approves the request, then the Authorization Request Response/0110 message, DE 38, position 6 should contain the same value as received in DE 48, subelement 38.

Failure to include the category code in DE 38, position 6 on the approved authorization will cause the authorization request to be routed to and processed by the Stand-In System.

### Acquirer instructions for ALM

Acquirers should use DE 38, position 6 if the Authorization Request Response/0110 message was approved (DE 39 = 00, 08, 10, 85, or 87). Acquirers should use this value in their clearing process as indicated by IPM Clearing Member Parameter Extract (MPE). If the issuer provides DE 38 in an Authorization Request Response/0110 message and DE 39 is not an approval (00, 08, 10, 85, or 87), the Dual Message Authorization System removes the DE 38 value from the response to the acquirer.

## DE 39 (Response Code)

*DE 39 (Response Code)* defines the disposition of a previous message or an action taken as a result of receipt of a previous message. Response codes also are used to indicate approval or decline of a transaction. In the event an authorization is declined, the response code indicates the reason for rejection and may indicate an action to be taken at the acceptor (for example, capture card).

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-2                      |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1–2 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

### Usage

Following is the usage of DE 39 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

## Values

Valid values are listed by message type.

Must contain value 32 for a partial reversal. For a full reversal, must contain value 06, 17, 34, or 68 as applicable, or if no other value applies, may contain the same value as in the original Authorization Request Response/0110 message.

## Application notes

DE 39 must be present in all Request Response, Advice Response, and Acknowledgment messages. In addition, it is also present in Authorization Advice/0120 Stand-In messages to indicate the response code used in the Authorization Request Response/0110 to the original Authorization Request/0100.

The following information applies to purchase only, no cash back allowed responses from an issuer.

| 65    | Exceeds withdrawal count limit OR Identity Check Soft-Decline of EMV 3DS Authentication (merchant should resubmit authentication for ACS fully authenticated response or due to failed AAV Validation- OBS 05 service)<br>Issuers may also use this response code for transaction types other than ATM transactions. Issuers that opt to decline a contactless or card-not-present transaction and obtain a cardholder verification through a second transaction may use this response code. Refer to <a href="#">M/Chip Requirements for Contact and Contactless</a> for more details on contactless transactions and how to use response code 65. E-commerce merchants should trigger an authentication using Mastercard Identity Check following an authorization decline with response code 65. This could be due to an authentication not completed through an ACS function or due to a failed AAV Validation and a new authentication with new AAV & DS Transaction ID is necessary for the authorization to successfully complete AAV Validation (Dynamic Linking). | Decline     | √  | √  | √  | √  | √  | √  |
| 70    | Contact Card Issuer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Call Issuer | √  | √  |    |    | √  | √  |

| <p>Note to the issuer: When a response code of 91, 92, or 96 is received from an issuer, Mastercard will attempt to perform alternate authorization processing (Alternate Issuer, Stand-In or X-Code Processing) according to the rules associated to the Mastercard brand and product.</p> <p>Note to the acquirer: When a response code of 91, 92, or 96 is returned to the acquirer, the transaction should be declined.</p> |              |          |    |    |    |    |    |    |

## Best practices for DE 39 values in Authorization Request Response/0110 response codes

### For Approvals

| Response Code Value | Description                        | Recommended Usage                                                                                                                                                                                                                                                                                                          |
|---------------------|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 00                  | APPROVED OR COMPLETED SUCCESSFULLY | To be used for approved transactions.                                                                                                                                                                                                                                                                                      |
| 08                  | HONOR WITH ID                      | <p>To be used when issuer needs to verify the identity of a cardholder for certain types of transactions, such as manual cash disbursements.</p> <p>This response should not be returned for ATM transactions or cardholder-activated (unattended) terminal transactions.</p>                                              |
| 10                  | PARTIAL APPROVAL                   | To be used for approvals of an amount that is less than requested. Must be used only when partial approval service is supported by merchant. Unless the transaction is identified with Processing Code 00 and MCC 5542 (Fuel Dispenser, Automated), the amount in DE 6 must be less than or equal to the requested amount. |
| 85                  | NOT DECLINED                       | To be used for account status inquiry (ASI) transactions and other non-financial zero amount transactions.                                                                                                                                                                                                                 |

| Response Code Value | Description                                | Recommended Usage                                                                                                                      |
|---------------------|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| 87                  | PURCHASE AMOUNT ONLY, NO CASH BACK ALLOWED | To be used for the purchase-only approval of a purchase with cash back transaction (Processing Code 09) when cash back is not allowed. |

### For Referral Responses

| Response Code Value | Description          | Recommended Usage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01                  | REFER TO CARD ISSUER | <p>To be used only for referral transactions/services, where the merchant/acquirer is required to call the issuer to complete the transaction:</p> <ul style="list-style-type: none"> <li>When DE 39 = 01, then DE 44 contains the phone number for "call issuer."</li> <li>Not allowed for ecommerce, Mail Order/Telephone Order (MO/TO), MCC 6011 (Automated Cash Disbursements—Customer Financial Institution), cardholder-activated terminal (CAT) transactions including MCC 5542 (Fuel Dispenser, Automated), fast food restaurant transactions (MCC 5814), or direct marketing transactions (MCCs 5960–5969). If necessary, use response code 57 (Transaction not permitted to issuer/cardholder).</li> <li>Referral transactions are rarely used as the probability of the merchant calling the issuer is very low.</li> </ul> |

### For Technical/Validation Declines

| Response Code Value | Description         | Recommended Usage                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12                  | INVALID TRANSACTION | <p>To be used in the following situations:</p> <ul style="list-style-type: none"> <li>Number of installments is not allowed.</li> <li>Type of transaction not allowed (To be used to indicate that the service attempted or type of transaction is not configured by or for issuer).</li> <li>For fallback transaction declines, use response code 58 (Transaction not permitted to acquirer/terminal).</li> </ul> |

| Response Code Value | Description                                       | Recommended Usage                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------|---------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30                  | FORMAT ERROR                                      | To be used when the information in one or more data elements is not consistent or there is a failure in validation among data elements and applicable subelements. In this case, DE 44 also must be populated indicating in which data element or subelement is the problem. (For example, if the error is in one of the subelements of DE 48, 048 will be shown in DE 44 as well as the three digit subelement number causing the format error).                              |
| 71                  | PIN NOT CHANGED                                   | To be used when PIN change request was not successfully completed.                                                                                                                                                                                                                                                                                                                                                                                                             |
| 86                  | PIN VALIDATION NOT POSSIBLE                       | To be used in case of PIN transactions where the issuer system is unable to perform PIN validation.                                                                                                                                                                                                                                                                                                                                                                            |
| 88                  | CRYPTOGRAPHIC FAILURE                             | To be used anytime cryptogram validation or related key processing is unsuccessful.                                                                                                                                                                                                                                                                                                                                                                                            |
| 91                  | AUTHORIZATION SYSTEM OR ISSUER SYSTEM INOPERATIVE | <p>To be used in the following situations:</p> <ul style="list-style-type: none"> <li>• System unavailability</li> <li>• System timeout</li> </ul> <p>In this case, Mastercard automatically invokes Stand-In processing or "X-Code processing (if allowed for card product)." The Stand-In System processes the transaction according to issuer-specified parameters that generate the issuer-specified response (for example, approve, decline, refer, or capture card).</p> |
| 92                  | UNABLE TO ROUTE THE TRANSACTION                   | To be used when transaction not able to be routed to authorizer. In this case, Mastercard automatically invokes Stand-In processing or "X-Code processing." The Stand-In System processes the transaction according to issuer-specified parameters that generate the issuer-specified response (for example, approve, decline, refer, or capture card).                                                                                                                        |
| 94                  | DUPLICATE TRANSMISSION DETECTED                   | To be used when the same transaction is submitted more than once, such as when multiple authorization requests are received for the same recurring payment transaction.                                                                                                                                                                                                                                                                                                        |
| 96                  | SYSTEM ERROR                                      | To be used for general system failures. In this case, Mastercard automatically invokes Stand-In processing or "X-Code processing." The Stand-In System processes the transaction according to issuer-specified parameters that generate the issuer-specified response (for example, approve, decline, refer, or capture card).                                                                                                                                                 |

### Fraud/Security-related Declines

| Response Code Value                                                                          | Description        | Recommended Usage                                                                                                                                                                                                                                                        |
|----------------------------------------------------------------------------------------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 04                                                                                           | CAPTURE CARD       | To be used in case of: <ul style="list-style-type: none"> <li>Blocked/cancelled cards due to confirmed previous fraudulent situation (other than lost stolen).</li> <li>Fraudulent activities at account level (such as identity theft or Account Take Over).</li> </ul> |
| 41                                                                                           | LOST CARD          | To be used in case of blocked/cancelled cards previous confirmed as a "lost card" by the cardholder.                                                                                                                                                                     |
| 43                                                                                           | STOLEN CARD        | To be used in case of blocked/cancelled cards previous confirmed as a "stolen card" by the cardholder.                                                                                                                                                                   |
| 55                                                                                           | INVALID PIN        | To be used in case of PIN required transactions with failure in PIN validation (wrong PIN) or missing PIN.                                                                                                                                                               |
| 63                                                                                           | SECURITY VIOLATION | To be used in case of suspected fraudulent transactions. It must be used as response code for fraud prevention real-time declines or for accounts/cards temporally blocked due to suspected fraudulent use. Should not be used where card is reported lost or stolen.    |
| <b>NOTE: For ATM, use response code 57 (Transaction not permitted to issuer/cardholder).</b> |                    |                                                                                                                                                                                                                                                                          |

### For Credit-related Declines

| Response Code Value | Description                          | Recommended Usage                                                                                                                                                                                                                                   |
|---------------------|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 51                  | INSUFFICIENT FUNDS/OVER CREDIT LIMIT | To be used if the account has reached or exceeded its credit limit or the available balance is insufficient. This code must also be used in case of a temporary delinquency situation (cards not definitively blocked—in early delinquency period). |

### For Policy Declines

| Response Code Value | Description                                    | Recommended Usage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 65    | Exceeds withdrawal count limit<br>Issuers may also use this response code for transaction types other than ATM transactions. Issuers that opt to decline a contactless or card-not-present transaction and obtain a cardholder verification through a second transaction may use this response code. Refer to <a href="#">M/Chip Requirements for Contact and Contactless</a> for more details on contactless transactions and how to use response code 65. E-commerce merchants should trigger an authentication using Mastercard Identity Check following an authorization decline with response code 65. | Decline     | √  | √  | √  | √  | √  | √  |

## DE 40 (Service Restriction Code)

[DE 40 \(Service Restriction Code\)](#) identifies geographic or service availability.

**NOTE:** The Dual Message Authorization System currently does not use this data element.

## DE 41 (Acceptor Terminal ID)

*DE 41 (Acceptor Terminal ID)* is the identifier assigned by the acceptor or the acquirer to the terminal, payment gateway, or other acceptance device used to capture account data to affect a transaction at the acceptor location.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-8                     |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1–8 |
| Subfields           | N/A                       |
| Justification       | Left with trailing spaces |

### Usage

Following is the usage of DE 41 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Processing rules

The Acceptor Terminal ID must be present in all transactions.

Acceptor Terminal ID must uniquely identify each point-of-sale terminal and ATM terminal at the acceptor location. For electronic commerce, phone/mail order, or other card-not-present environments, the value must uniquely identify each payment gateway or other device used to capture account data to affect a transaction at the acceptor location.

**NOTE: Mastercard does not apply systematic edits to this DE.**

## DE 42 (Acceptor ID)

[DE 42 \(Acceptor ID\)](#) contains the identifier assigned by the acquirer to the acceptor and its location, or to the payment facilitator.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans-15                     |
| Data Length         | N/A                        |
| Data Field          | Contents of positions 1–15 |
| Subfields           | N/A                        |
| Justification       | Left                       |

### Usage

Following is the usage of DE 42 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Processing rules

The Acceptor ID must be present in all transactions and must uniquely identify each acceptor and its location.

Payment facilitator-enabled transactions must uniquely identify the payment facilitator. The Acceptor ID of the sponsored merchant must be provided in the sponsored merchant ID data element.

The following Dual Message Authorization System edit will apply:

| DE 42 (Acceptor ID) is not present and DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type code) contains the value 00 (Purchase), 09 (Purchase with Cash Back), or 28 (Payment Transaction) in an Authorization Request/0100, Authorization Advice/0120: acquirer-generated, or a Reversal Request/0400 message | sends the acquirer an Authorization Request Response/0110, Authorization Advice Response/0130, or a Reversal Request Response/0410 message where: <ul style="list-style-type: none"> <li>DE 39 (Response Code) = 30 (Format Error)</li> <li>DE 44 (Additional Response Data) = 042 (which identifies DE 42 as the source of the error)</li> </ul> |

### American Express Authorizations

An American Express merchant ID consists of the 10-digit numeric value (referred to as "SE number" by American Express) or two-character alphanumeric IATA airline code (which may be followed by the IATA travel agent ID, T + 5-8 digits, separated by a space). Since DE 42 is defined as ans-15, an American Express 10-digit SE number in character format should be left-justified and followed by trailing spaces. This 10-digit number also should pass the Modulus 9 check digit routine.

## DE 43 (Acceptor Name and Location)

*DE 43 (Acceptor Name and Location)* contains the name and location of the acceptor point of interaction.

### Attributes

| Attribute           | Description                               |

| Administrative Request Response/0610          | CE  | XE  | CE  |

### Values

The data element subfields are dependent on the type of message type sent.

## Application notes

This data element is required for all Authorization Request/0100 messages for Mastercard and Visa programs and services.

For Authorization Request/0100, use of DE 43 is conditional (C) based on the program or service being processed. If the program is Mastercard or Visa, use of DE 43 is mandatory (M). Its usage is optional if the transaction involves Private Label, Travel and Entertainment, or other programs.

This data element satisfies "Regulation-E" requirements. It also is required when the DE 22 (Point-of-Service [POS] Entry Mode) is 05 (PAN auto-entry via integrated circuit card).

As ISO specifies, this data element is an alphanumeric text string of 40 characters. Mastercard requires standardized formatting of this data element as specified in the following table to meet uniform standards for printing this information on customer account statements and billing statements.

This data element is required for all Mastercard programs and services.

DE 43 is required for Mastercard Hosted Mobile Phone Top-up transactions.

## Subfield 1 (Acceptor Name)

*DE 43 (Acceptor Name and Location)*, subfield 1 (Acceptor Name) contains the name of the acceptor that should be recognizable by the cardholder and may include other descriptors, such as a store number.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans-22                     |
| Data Field          | Contents of positions 1–22 |
| Justification       | Left                       |

## Processing rules

The Acceptor Name must be present for all transactions and contain a valid merchant/ATM owner/entity name that is most recognizable to the cardholder.

Unique identifiers, invoice numbers, or additional descriptors must be placed after the merchant/ATM owner/entity name.

When a merchant is a part of a chain or franchise, the name most recognizable to the cardholder must be provided at the beginning of the field, followed by a store number or other unique identifier for each location. For a chain or franchise that has been issued a Mastercard Assigned ID, all submitted transactions must contain the Mastercard Assigned ID data element.

For any MCC in the 3000-3350 range (Airlines), the Abbreviated Airline listed in Chapter 3 of the *Quick Reference Booklet* must be provided in positions 1-9 of the field followed by the Airline Ticket Number.

For any MCC in the 3351-3500 range (Automobile/Vehicle Rentals), the first nine characters of the Description listed in Chapter 3 of the *Quick Reference Booklet* must be provided in positions 1-9 of the field and then followed by a unique identifier for each location.

For any MCC in the 3501-3999 range (Hotels and Motels), the first nine characters of the Description listed in Chapter 3 of the *Quick Reference Booklet* must be provided in positions 1-9 of the field and then followed by a unique identifier for each location.

The (ISO)/IEC 8859-1:1998 (Latin Alphabet No. 1) character set must be used.

### Program rules

Payment facilitator-enabled transactions: The sponsored merchant name must be provided. The Payment Facilitator Name or abbreviated name must be provided, followed by an asterisk (\*) and the sponsored merchant name. All submitted transactions must contain the Payment Facilitator ID submitted in the Payment Facilitator ID data element.

Staged digital wallet operator: The staged digital wallet operator name must be provided. If issuer authorization for the transaction is occurring at the time of the consumer's purchase of products or services, then the staged digital wallet operator name must be provided, followed by an asterisk (\*) and the retailer name. If the retailer is identified with an MCC in the 3000-3999 range, then the appropriate industry MCC value, rather than individual retailer MCC, if assigned, must be provided.

Mastercard® rePower™ transactions must have the value MC repower following the merchant/ATM owner/entity name providing the service.

Payment Transactions must contain the name of the payment provider. Payee information must be provided in the Additional Transaction Reference Data and Mastercard Send Receiver Data data elements.

### Country rules

Mexico-acquired transactions must contain only

- uppercase alpha characters (A-Z) (cannot contain accent characters)
- numeric characters (0-9)
- ampersand (&)
- asterisk (\*)
- space (cannot be the first character or contain more than one space between words)

## Subfield 2 (Space)

*DE 43 (Acceptor Name and Location)*, subfield 2 (Space) indicates a space character.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | ans-1                   |
| Data Field          | Contents of position 23 |
| Justification       | N/A                     |

### Value

Delimiter (space).

## Subfield 3 (Acceptor City)

*DE 43 (Acceptor Name and Location)*, subfield 3 (Acceptor City) indicates the city of the merchant.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans-13                      |
| Data Field          | Contents of positions 24–36 |
| Justification       | Left                        |

### Values

Acceptor City Name must contain the name of the city, town, or village as defined by country postal standards.

For U.S. region transactions, Acceptor City Name must match the U.S. Postal Service list of acceptable cities and spellings by postal code.

### Processing rules

The Acceptor City Name must be present for all transactions and contain a valid location for the acceptor. The location of the acceptor will generally be the physical location where the transaction occurred or the business/operations location for transactions that occur virtually.

### Program rules

Payment facilitator-enabled transactions: The sponsored merchant city name must be provided.

## Subfield 4 (Space)

[DE 43 \(Acceptor Name and Location\)](#), subfield 4 (Space) indicates a space character.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | ans-1                   |
| Data Field          | Contents of position 37 |
| Justification       | N/A                     |

### Value

Delimiter (space).

## Subfield 5 (Acceptor Country Code)

[DE 43 \(Acceptor Name and Location\)](#), subfield 5 (Acceptor Country Code) contains the country code of the acceptor.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | a-3                         |
| Data Field          | Contents of positions 38-40 |
| Justification       | Left                        |

### Values

Acceptor Country Code must contain a valid three-character alphabetic code as defined in Chapter 2 of the *Quick Reference Booklet*. When territories have a defined country code in the *Quick Reference Booklet*, that country code must be used.

### Processing rules

The Acceptor Country Code must be present for all transactions.

## Program rules

Payment facilitator-enabled transactions: The sponsored merchant country code must be provided.

## DE 43, subfield 5 Dual Message Authorization System edits

The Dual Message Authorization System will perform the following system edits.

## DE 44 (Additional Response Data)

[DE 44 \(Additional Response Data\)](#) provides other supplemental data that may be required in response to an authorization or other type of transaction request. This data element may also be present in any response message when DE 39 (Response Code) contains the value 30, indicating that a Format Error condition was detected in the preceding message. In this case, DE 44 will contain either a three- or six-digit value that indicates the data element number (three digits) only or the data element plus subelement numbers (six digits) in which the format error occurred. If the format error occurred in a data element that does not have subelements, DE 44 will contain a three-digit numeric value.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans...25; LLVAR            |

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>an Authorization Request/0100, Authorization Advice/0120: acquirer-generated, or Reversal Request/0400 message contains one or both of the following:</p> <ul style="list-style-type: none"><li>• <i>DE 48 (Additional Data: Private Use), DE 104 (Digital Payment Data), DE 105 (Multi-Use Transaction Identification Data), DE 106 (Fleet Service Data), DE 108 (Additional Transaction Reference Data), DE 112 (Additional Data [National Use]), DE 119 (Additional Data: Private Use 2), or DE 122 (Additional Record Data)</i> with subelements that have incorrect length and/or incorrect format (Data Representations)</li><li>• A subelement ID appears more than once within the same data element</li></ul> | <p>sends the acquirer an Authorization Request Response/0110, Authorization Advice Response/0130, or Reversal Request Response/0410 message where <i>DE 44</i> is 6 positions for subelement format errors:</p> <ul style="list-style-type: none"><li>• <i>DE 39 (Response Code)</i> = 30</li><li>• <i>DE 44 (Additional Response Data)</i> = 0480nn or 1080nn (where nn is the subelement number) or 104nnn, 105nnn, 106nnn, 112nnn, 119nnn, or 122nnn (where nnn is the subelement number)</li></ul> <p>(<i>DE 44</i> is three positions for Dual Message System (Authorization) if no subelements are present, for example, for DE 22 format error: DE 44 = 022)</p> |

### Examples

- When an edit error occurs on *DE 48*, the *DE 44* data will be populated as these examples below:
  - Error on *DE 48* subelement 42, subfield 1: 048042 (no subfield information is provided)
  - Error on *DE 48* subelement 61: 048061
- *DE 48* TCC format error will be responded with *DE 44* = 048000.

For all data elements which do not contain subelements, DE 44 identifies the data element alone. For example, a format error in DE 22 is represented with a DE 44 value of 022.

## DE 45 (Track 1 Data)

*DE 45 (Track 1 Data)* is the information encoded on track 1 of the card's magnetic stripe as defined in the ISO 7813 specification, including data element separators but excluding beginning and ending sentinels and LRC characters as defined in this data element definition.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans...76; LLVAR            |
| Data Length         | 2 positions                |
| Data Field          | Contents of positions 1–76 |
| Subfields           | N/A                        |
| Justification       | N/A                        |

### Usage

Following is the usage of DE 45 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | O   | X   | O   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |

### Values

Whenever DE 45 is captured automatically at the point of interaction, this data element must contain whatever is encoded on the magnetic stripe (track 1) of the card, regardless of whether the card has been properly encoded with information in accordance with ISO specifications.

The ISO 7810, 7811, 7812, and 7813 specifications document the international standards for encoding information on magnetic stripe cards.

Length subelement must not be greater than 76 bytes.

The account number in DE 2 (Primary Account Number) or DE 34 (Primary Account Number [PAN], Extended) must match the account number in DE 45.

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

For MDES tokenized transactions, issuers may opt in through MDES Manager to receive track data in DE 45 (Track 1 Data) on Dual Message Authorization System or Single Message System transactions to issuers.

[DE 45](#) is optional for 0120 AFD completion advice.

## Fields in DE 45

| Field ID | Field Name                                                                                                     | F = Fixed    |                                                                                |
|----------|----------------------------------------------------------------------------------------------------------------|--------------|--------------------------------------------------------------------------------|
|          |                                                                                                                | V = Variable | Maximum Length                                                                 |
| 1        | Start Sentinel<br>These fields are encoded on the card but must be omitted within Track 2 data.                | F            | n-1                                                                            |
| 2        | Format Code-B (encode character B)                                                                             | F            | an-1                                                                           |

Refer to the *Security Rules and Procedures* for additional Track 1 Data information.

## DE 46 (Expanded Additional Amounts)

*DE 46 (Additional Data: ISO Use)* provides data supplemental to that already conveyed in the specific data elements in the message.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 47 (Additional Data: National Use)

*DE 47 (Additional Data—National Use)* is reserved for national organizations to define data unique to country applications.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

This data element should not be present in any Dual Message Authorization System messages. However, if encountered in Dual Message Authorization System messages routed between customers of the same country, it is passed unaltered through the network. The Dual Message Authorization System performs no editing or processing functions on this data element.

## DE 48 (Additional Data: Private Use)

DE 48 (Additional Data: Private Use) contains data associated with various Mastercard programs, products, and services. DE 48 is used to convey data that is not related to any other ISO-defined data elements. It is a variable-length data element used for multiple purposes.

### Attributes

| Subelements         | 99                                                                                                                                                                                                                                                                                              |

| Attribute     | Description     |
|---------------|-----------------|
| Justification | See subelements |

## Usage

The following applies to DE 48 usage:

- Subelements do not need to be in any particular order or sequence within DE 48.
- Subelements may contain multiple occurrences of program or service data, up to the maximum limit specified for that subelement. However, the same subelement ID cannot be present within DE 48 more than once. Messages submitted to Mastercard containing multiple occurrences of a subelement within DE 48 will be rejected.
- Message originators and receivers must be able to send and receive any subelement applicable to their business or as mandated by Mastercard.
- Message originators must not use a subelement ID that is not defined by Mastercard. A message containing a subelement not defined by Mastercard will not be rejected by Mastercard. However, the undefined subelement will be removed before being set to the message receiver. The content of such subelements will not be recognized by Mastercard or used in any Mastercard processing.
- For subelements defined with a CE (conditional echo) presence notation for an Org (originator) entity Mastercard will not reject a message from the message originator if the original subelement data is not returned as defined in a response message. Based on the presence notation for the Dst (destination) entity Mastercard will forward the subelement data as received from the message originator if it is present in a response message.

Following is the overall usage of DE 48 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                                                                         | Org | Sys | Dst |

| Network Management Advice/0820: PEK exchange           | .   | X   | C   |

### Values

The length field must be in the range 001–999. Subelements are identified by valid subelement ID and length.

### Application notes

Mastercard may occasionally introduce new DE 48 subelements and subfields between releases to facilitate special processing within a country, region, or among pilot participants. Mastercard requires customers to be able to successfully process various online messages that may contain new unannounced DE 48 subelements and subfields.

DE 48 and DE 119 contain different subelement definitions. Subelements defined for DE 48 must be sent in DE 48, not DE 119.

This data element's content may vary by program and service. Additional or supplemental information that may be required in a transaction message is specified in Dual Message Authorization System edits for this data element.

For information on other uses of this data element, refer to General message layout.

## DE 48 Transaction Category Code

In Authorization/01XX and Reversal/04XX messages, the format is "LLLt," where "t" is the transaction category code (TCC). The message must contain an appropriate TCC as the first byte of data after the length within [DE 48](#). The TCC classifies major categories of transactions, such as "Retail Sale," "Cash Disbursement," and "Mail Order."

### Valid values

| TCC   | Description                                                                                                 | MC | NP | VI | TE | MS | CI |
|-------|-------------------------------------------------------------------------------------------------------------|----|----|----|----|----|----|
| Space | A value of space in place of a valid TCC requests that the Authorization System perform the TCC assignment. | √  | √  | √  | √  | √  | √  |
| A     | Auto/Vehicle Rental                                                                                         | √  | √  | √  | √  | √  |    |

| TCC | Description                               | MC | NP | VI | TE | MS | CI |
|-----|-------------------------------------------|----|----|----|----|----|----|
| C   | Cash Disbursement                         | ✓  | ✓  | ✓  | ✓  | ✓  | ✓  |
| F   | Restaurant                                | ✓  | ✓  | ✓  | ✓  | ✓  |    |
| H   | Hotel/Motel                               | ✓  | ✓  | ✓  | ✓  | ✓  |    |
| O   | Hospitalization, College                  | ✓  | ✓  | ✓  | ✓  | ✓  |    |
| P   | Payment Transaction                       | ✓  | ✓  |    |    | ✓  | ✓  |
| R   | Retail Sale                               | ✓  | ✓  | ✓  | ✓  | ✓  | ✓  |
| T   | Phone, Mail, or Electronic Commerce Order | ✓  | ✓  | ✓  | ✓  | ✓  | ✓  |
| U   | Unique                                    | ✓  | ✓  | ✓  | ✓  | ✓  | ✓  |
| X   | Airline and Other Transportation Services | ✓  | ✓  | ✓  | ✓  | ✓  |    |
| Z   | ATM Cash Disbursement                     | ✓  | ✓  | ✓  | ✓  | ✓  | ✓  |

**NOTE:** Mastercard will optionally assign the Transaction Category Code (TCC) in [DE 48 \(Additional Data: Private Use\)](#) of authorization messages on behalf of an acquirer. All acquirers processing through the Mastercard Network may choose to have the Authorization System assign the TCC in authorization messages on their behalf, if TCC is submitted with a <space> value. Refer to the *Quick Reference Booklet* for a complete definition of all TCC values.

## DE 48 Subelement Encoding Scheme

The following table identifies the structure of the DE 48 subelement encoding scheme.

The DE 48 subelement encoding scheme covers these Authorization, Advice, Reversal, and Reversal Advice message types:

Authorization Request/0100

Authorization Request Response/0110

Authorization Advice/0120: acquirer-generated

Authorization Advice/0120: system-generated

Authorization Advice Response/0130: issuer-generated (responding to an acquirer-generated 0120)

Authorization Advice Response/0130: system-generated (responding to an acquirer-generated 0120)

Reversal Request/0400

Reversal Request Response/0410

Reversal Advice/0420

## Values

| LLL      "VAR": 999 maximum bytes (TCC+ Subelement Data) |        |                                                 |           |                         |                                                 |           |                         |
|----------------------------------------------------------|--------|-------------------------------------------------|-----------|-------------------------|-------------------------------------------------|-----------|-------------------------|

## DE 48 Subelement Encoding Scheme in Network Management Messages

The following table identifies the structure of the [DE 48](#) subelement encoding scheme in Network Management messages.

## Values

| LLL "VAR": 999 maximum bytes (Subelement Data) |         |         |            |         |         |            |
|------------------------------------------------|---------|---------|------------|---------|---------|------------|
| 3 bytes                                        | 2 bytes | 2 bytes | 1-96 bytes | 2 bytes | 2 bytes | 1-96 bytes |

| LLL                                        | "VAR": 999 maximum bytes (Subelement Data) |           |                         |                             |           |                         |
|--------------------------------------------|--------------------------------------------|-----------|-------------------------|-----------------------------|-----------|-------------------------|
| Total Data Element Length                  | First Subelement (SE) Data                 |           |                         | Second Subelement (SE) Data |           |                         |
|                                            | SE ID                                      | SE Length | SE Variable Length Data | SE ID                       | SE Length | SE Variable Length data |
| 1002 maximum bytes (LLL + Subelement Data) |                                            |           |                         |                             |           |                         |

### Values

| Number of Bytes | Attribute                       | Description                 |
|-----------------|---------------------------------|-----------------------------|
| 3               | Total Data Element Length       | The "LLL" portion of LLLVAR |
| 2               | Subelement ID                   | In the range 00–99          |
| 2               | Subelement Length               | In the range of 01–96       |
| 1...96          | Subelement Variable Length Data | Contains valid values.      |

## List of DE 48 subelements

*DE 48* subelements are listed in numeric order. Subelements that are specific to a brand service or program are clearly indicated in the subelement title or description or both.

### Values

| Subelement ID | Subelement name                                  | Data representation |
|---------------|--------------------------------------------------|---------------------|
| 02            | Special Acceptance Conditions Data               | ans...99; LLVAR     |
| 03            | Additional Visa Request Data (Visa Only)         | an-14               |
| 04            | Acceptance Environment Response Data (Visa Only) | ans...80; LLVAR     |
| 05            | Additional Visa Response Data (Visa Only)        | ans...41; LLVAR     |
| 06            | Advanced Digital Transaction Data 1              | ans...84; LLVAR     |
| 07            | Advanced Digital Transaction Data 2              | ans...73; LLVAR     |
| 08            | Advanced Digital Transaction Data 3              | ans...98; LLVAR     |
| 09            | Virtual Card Number                              | an...99; LLVAR      |
| 11            | Key Exchange Block Data (Double-length Keys)     | an-54               |
| 11            | Key Exchange Block Data (Triple-length Keys)     | an-70               |

| <b>Subelement ID</b> | <b>Subelement name</b>                                                        | <b>Data representation</b> |
|----------------------|-------------------------------------------------------------------------------|----------------------------|
| 12                   | Routing Indicator                                                             | a-1                        |

## Subelement 02 (Special Acceptance Conditions Data)

DE 48, subelement 02 (Special Acceptance Conditions Data) allows an acquirer to provide additional information about the transaction, the acceptor, etc. not elsewhere provided, that is relevant to the way Mastercard processes the transaction.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Subelement ID       | 02                      |
| Subelement length   | 2 positions             |
| Data representation | ans...99; LLVAR         |
| Data field          | Contents of subfield 01 |
| Subfields           | 1                       |
| Justification       | See subfields           |

### Usage

Following is the usage of DE 48, subelement 02 (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Advice/0120:system-generated    | •   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |
| Reversal Request/0400                         | C   | X   | C   |
| Reversal Advice/0420: system-generated        | •   | X   | C   |

### Application notes

Mastercard will introduce additional DE 48, subelement 02 subfields in the future. Acquirers must provide only subfields that are relevant to the transaction. For example, in the future if six subfields exist and only subfield 05 is relevant for a given transaction, then an acquirer must provide only subfield 05. Subfields 01 to 04 and 06 must not be provided.

For example, to provide subfield 01 with a value of C, the acquirer would submit 0101C where:

- 01 = subfield 1
- 01 = length of subfield 1
- C = value of subfield 1

## Subfield 01 (Mastercard One Credential Exclusion Indicator)

DE 48, subelement 02 (Special Acceptance Conditions Data), subfield 01 (Mastercard One Credential Exclusion Indicator) allows an acquirer to instruct Mastercard to limit the conditions in which the Mastercard One Credential service will apply to qualified transactions.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 01                     |
| Subfield data length | 2 positions            |
| Data representation  | an-1                   |
| Data field           | Contents of position 1 |
| Justification        | N/A                    |

## Values

| Value | Description                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------|
| C     | Do not assign a Mastercard One Credential funding PAN containing the Mastercard Credit Acceptance Brand for this transaction |
| D     | Do not assign a Mastercard One Credential funding PAN containing the Debit Mastercard Acceptance Brand for this transaction  |
| M     | Do not assign a Mastercard One Credential funding PAN containing the Maestro Acceptance Brand for this transaction           |

## Edits

Mastercard will perform the following edits.

## Edits

| When the Authorization Request/0100 message contains...                                                 | Then the Dual Message Authorization System...                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DE 48, subelement 02, subfield 01 (Mastercard One Credential Exclusion Indicator) with an invalid value | will reject the transaction and send an Authorization Response/0110 message to the acquirer with: <ul style="list-style-type: none"><li>• DE 39 = 30 (Format Error)</li><li>• DE 44 = 048002</li></ul> |

## Application notes

The Dual Message Authorization System will remove DE 48, subelement 02, subfield 01 (Mastercard One Credential Exclusion Indicator) from the message if the issuer does not participate in the Mastercard One Credential service.

## Subelement 03 (Additional Visa Request Data [Visa Only])

DE 48, subelement 03 (Additional Visa Request Data [Visa Only]) will contain additional request data when provided by the acquirer.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 03                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | an-14                 |
| Data Field             | Contents of subfields |
| Subfields              | 1                     |
| Justification          | See subfields         |

### Usage

Usage shows whether the field is mandatory, conditional, optional, or system-provided in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request /0100         | C   | P   | C   |
| Authorization Request Response/0110 | OE  | XE  | CE  |
| Reversal Request/0400               | C   | P   | C   |
| Reversal Request Response/0410      | CE  | XE  | CE  |

### Values

See subfields.

## Subfield 01 (Plan Registration System Identifier)

DE 48, subelement 03, subfield 01 (Plan Registration System Identifier) provides a plan identifier for Visa Installment Solutions transactions.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Subfield ID          | 01                         |
| Subfield Data Length | 2 positions                |
| Data Representation  | an-10                      |
| Data Field           | Contents of positions 1–10 |
| Justification        | N/A                        |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

## Subelement 04 (Acceptance Environment Response Data [Visa Only])

DE 48, subelement 04 (Acceptance Environment Response Data[Visa Only]) contains the reasons that PSD2 exemptions were not accepted for Visa-branded transactions.

### Attributes

| Attributes          | Description                |
|---------------------|----------------------------|
| Subelement ID       | 04                         |
| Subelement Length   | 2                          |
| Data Representation | ans...80; LLVAR            |
| Data Field          | Contents of positions 1–80 |
| Subfields           | N/A                        |
| Justification       | N/A                        |

### Usage

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | X   | C   |
| Authorization Advice Response/0130  | C   | X   | C   |

### Values

Refer to Visa's *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

## Subelement 05 (Additional Visa Response Data [Visa Only])

[DE 48](#), subelement 05 (Additional Visa Response Data [Visa Only]) will contain additional response data when provided by Visa.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 05                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans...41; LLVAR       |
| Data Field             | Contents of subfields |
| Subfields              | 7                     |
| Justification          | See subfields         |

### Usage

Whether use is mandatory, conditional, optional, or not required is noted for each applicable message.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | X   | C   |
| Authorization Advice Response/0130  | C   | X   | C   |

| Message                        | Org | Sys | Dst |
|--------------------------------|-----|-----|-----|
| Reversal Request Response/0410 | C   | X   | C   |

### Values

See subfields.

## Subfield 01 (Commercial Choice Program Data, Agreement ID)

[DE 48](#), subelement 05, subfield 01 (Commercial Choice Program Data, Agreement ID) contains the Commercial Choice Program data agreement ID as received from Visa.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...4; LLVAR          |
| Data Field           | Contents of subfield 01 |
| Justification        | N/A                     |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

## Subfield 02 (Digital Authentication Program)

[DE 48](#), subelement 05, subfield 02 (Digital Authentication Program) contains the value to indicate when a transaction qualifies for the Digital Authentication Program as received from Visa.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...2; LLVAR          |
| Data Field           | Contents of subfield 02 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

Contains Authentication Program 01 (DAF indicator). Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

## Subfield 03 (Authorization Response Source Reason Code)

[DE 48](#), subelement 05, subfield 03 (Authorization Response Source Reason Code) contains the authorization response reason code as received from Visa.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 03                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans-1                   |
| Data Field           | Contents of subfield 03 |
| Justification        | N/A                     |

### Values

Contains the response source reason code that identifies the source of the Visa Field 39 response decision. Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

## Subfield 04 (Account Funding Source)

DE 48, subelement 05, subfield 04 (Account Funding Source) contains the Account Funding Source product code value received from Visa.

### Attributes

| Attribute       | Description |
|-----------------|-------------|
| Subfield ID     | 04          |
| Subfield Length | 2 positions |

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | an-1                    |
| Data Field          | Contents of subfield 04 |
| Justification       | N/A                     |

## Subfield 05 (Applied Product Platform Code)

DE 48, subelement 05, subfield 05 (Applied Product Platform Code) contains the Applied Product Platform Code value received from Visa.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Subfield ID         | 05                      |
| Subfield Length     | 2 positions             |
| Data Representation | an-2                    |
| Data Field          | Contents of subfield 05 |
| Justification       | N/A                     |

## Subfield 06 (Applied Cardholder ID Method)

DE 48, subelement 05, subfield 06 (Applied Cardholder ID Method) contains the Cardholder ID Method Indicator value received from Visa.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Subfield ID         | 06                      |
| Subfield Length     | 2 positions             |
| Data Representation | an-1                    |
| Data Field          | Contents of subfield 06 |
| Justification       | N/A                     |

## Subfield 07 (Applied E-Commerce Payment Indicator/ECI Only)

DE 48, subelement 05, subfield 07 (Applied E-Commerce Payment Indicator/ECI Only) contains the Applied ECommerce Payment Indicator/ECI Only code value received from Visa.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Subfield ID         | 07                      |
| Subfield Length     | 2 positions             |
| Data Representation | n-2                     |

## Subelement 06 (Advanced Digital Transaction Data 1)

[DE 48](#), subelement 06 (Advanced Digital Transaction Data 1) provides transaction-related data captured during checkout to the issuer.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 06                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans...84; LLVAR       |
| Data Field             | Contents of subfields |
| Subfields              | 3                     |
| Justification          | See subfields         |

### Usage

Usage shows whether the field is mandatory, conditional, optional, or system-provided in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | .   | X   | C   |

### Application notes

The Dual Message System inserts this subelement into Authorization Request/0100 messages when the issuer has opted-in to receive it.

### Subfield 01 (Binding ID)

[DE 48](#), subelement 06, subfield 01 (Binding ID) helps to uniquely identify the component of data that is bound to the credential used in the transaction.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...48; LLVAR         |
| Data Field           | Contents of subfield 01 |
| Justification        | Left                    |

### Values

The unique and fixed identifier to a component of data bound to the credential.

## Application notes

| When DE 104 (Digital Payment Data), subelement 005 (Digital Authentication Data), subfield 001 (Cardholder Verification) indicates a value of...                                                                                                                                 | Then...                                                                                                                                                                                                                                                                                                                                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 (Transaction authenticated with a Mastercard-qualified multi-factor authentication [MFA] method) in position 1<br><br><b>NOTE: In Europe region: Transaction authenticated with a Mastercard-qualified MFA method used as Strong Customer Authentication [SCA] delegation.</b> | the component of data is an identifier demonstrating the possession of a consumer device that is bound to the token. Multiple identifiers may be created for the same consumer device bound to the token. It will help establish a pattern of device possession that further confirms the authenticity of the consumer who initiated the transaction. |
| 2 (Transaction authenticated with a Mastercard-operated authentication method) in position 1                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                       |
| 4 (Device wallet transaction authenticated with a Consumer Device Cardholder Verification Method [CDCVM]) in position 1<br><br><b>NOTE: This value may not be present in current device wallet implementations.</b>                                                              | the component of data is a unique identifier to the consumer device that is bound to the token. It will help establish a pattern of device usage that further confirms the authenticity of the consumer who initiated the transaction.                                                                                                                |

## Subfield 02 (Phone Number)

[DE 48](#), subelement 06, subfield 02 (Phone Number) contains the phone number that was used to authenticate the consumer during checkout, or the consumer's preferred phone number. The presence of the phone number helps establish the consumer's authenticity when matching the phone number provided during checkout to a list of known phone numbers for the consumer.

## Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n...15; LLVAR           |
| Data Field           | Contents of subfield 02 |
| Justification        | Left                    |

Values

The full phone number or partial phone number of the consumer used during checkout.

Subfield 03 (Device Location)

DE 48, subelement 06, subfield 03 (Device Location) contains the latitude and longitude of the device used when the cardholder was authenticated during checkout. This field helps to determine if the transaction was initiated from an unexpected location.

Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 03                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans-9                   |
| Data Field           | Contents of subfield 03 |
| Justification        | N/A                     |

Values

Latitude and longitude where the device of the consumer is attempting to check out is located.

Device location latitude an-4, hexadecimal encoded degrees with two decimal places.

Device location longitude an-4, hexadecimal encoded degrees with two decimal places.

Device location lat/long Sector n-1, one of the following values:

Device location lat/long Sector n-1 values

| Value | Latitude | Longitude |
|-------|----------|-----------|
| 1     | N        | W         |
| 2     | N        | E         |
| 3     | S        | W         |
| 4     | S        | E         |

## Subelement 07 (Advanced Digital Transaction Data 2)

[DE 48](#), subelement 07 (Advanced Digital Transaction Data 2) provides transaction-related data captured during checkout to the issuer.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | n-2                   |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans...73; LLVAR       |
| Data Field             | Contents of subfields |
| Subfields              | 2                     |
| Justification          | See subfields         |

### Usage

Usage shows whether the field is mandatory, conditional, optional, or system-provided in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | .   | X   | C   |

### Application notes

The Dual Message System inserts this subelement into Authorization Request/0100 messages when the issuer has opted-in to receive it.

## Subfield 01 (Email Address Format)

[DE 48](#), subelement 07, subfield 01 (Email Address Format) indicates if an email address was passed in hashed or clear format during checkout.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-1                     |
| Data Field           | Contents of subfield 01 |
| Justification        | N/A                     |

### Values

| Value | Description                                  | Corresponding subfield 02...     |
|-------|----------------------------------------------|----------------------------------|
| 0     | Hashed email format received during checkout | Contains a hashed email address. |
| 1     | Clear email format received during checkout  | Contains a clear email address.  |

## Subfield 02 (Email Address)

[DE 48](#), subelement 07, subfield 02 (Email Address) contains the cardholder email address. The presence of the email address helps establish the consumer's authenticity when matching the email address provided during checkout to a list of known email addresses for the consumer.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...64; LLVAR         |
| Data Field           | Contents of subfield 02 |

| Attribute     | Description |
|---------------|-------------|
| Justification | Left        |

## Values

The clear email address or hashed email address collected during checkout.

## Application notes

Hashing helps the issuer verify the cardholder's email without the merchant or wallet provider providing the full email for privacy and security reasons.

When the merchant or wallet provider provides a hashed email address, Mastercard receives the hash email address and includes it in the data sent to the issuer. The issuer may apply the hash to an email address on file for the cardholder and attempt to match it with the hashed email address provided by the merchant or wallet provider.

When the hash computed by the issuer matches the hash of the one received from the merchant or wallet provider, the comparison with the hash value may be used by the issuer to assist in determining the transaction authorization decision.

The field contains the hash resulting from the following 'emailAddressHash' algorithm, right-padded with spaces. 'emailAddress' is the lower case UTF-8 bytes of the email address.

The following two functions define the hash algorithm:

```
public String emailAddressHash (String emailAddress) {  
    String random8Bytes = 123CCB2F30BA420B  
    return random8Bytes + leastSignificant24bytes(strongerHash(emailAddress +  
    random8Bytes))  
}  
public String strongerHash (String dataToHash) {  
    String currentHash = dataToHash;  
    for (int i = 0; i < 5000; i++) {  
        currentHash = sha256(currentHash);  
    }  
    return sha256(sha256(dataToHash) + currentHash);  
}
```

**NOTE:** String random8Bytes = 123CCB2F30BA420B is a fixed value for all merchants and wallet providers.

## Hash calculation example

| Component            | Example                                                                |
|----------------------|------------------------------------------------------------------------|
| Sample email address | cardholdername@walletprovider.com                                      |
| emailAddress         | 63617264686F6C6465726E616D654077616C6C65<br>7470726F76696465722E636F6D |

| Component                 | Example                                                              |
|---------------------------|----------------------------------------------------------------------|
| random8Bytes              | 123CCB2F30BA420B                                                     |

## Subelement 08 (Advanced Digital Transaction Data 3)

[DE 48](#), subelement 08 (Advanced Digital Transaction Data 3) provides transaction-related data captured during checkout to the issuer.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 08                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans...98; LLVAR       |
| Data Field             | Contents of subfields |
| Subfields              | 4                     |
| Justification          | See subfields         |

### Usage

Usage shows whether the field is mandatory, conditional, optional, or system-provided in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | .   | X   | C   |

### Application notes

The Dual Message System inserts this subelement into Authorization Request/0100 messages when the issuer has opted-in to receive it.

## Subfield 01 (IP Address)

DE 48, subelement 08, subfield 01 (IP Address) contains a unique string of characters that identifies a device. The presence of the IP address helps determine if the transaction was initiated from an unusual network, helping establish a pattern of safe device usage that further confirms the authenticity of the consumer who initiated the transaction.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...39; LLVAR         |
| Data Field           | Contents of subfield 01 |
| Justification        | Left                    |

### Values

The IP address collected during checkout. Mastercard supports both IPv4 and IPv6 IP address formats.

### Example values

| IP address format | Example value                           |
|-------------------|-----------------------------------------|
| IPv4              | 100.10.0.1                              |
| IPv6              | 1234:5678:9AB1:1C23:1088:5103:9012:9120 |

## Subfield 02 (Shipping Address Line 1)

[DE 48](#), subelement 08, subfield 02 (Shipping Address Line 1) helps identify the cardholder that initiated the transaction. Shipping address is one component of data that helps establish the

consumer's authenticity when matching the consumer's own billing address or set of commonly used shipping addresses.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...30; LLVAR         |
| Data Field           | Contents of subfield 02 |
| Justification        | Left                    |

### Values

The shipping address line 1 collected during checkout.

## Subfield 03 (Shipping Address Country)

[DE 48](#), subelement 08, subfield 03 (Shipping Address Country) contains the three-character alphabetic country code where the shipping address is located. Refer to the *Quick Reference Booklet* for specification format.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 03                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | a-3                     |
| Data Field           | Contents of subfield 03 |
| Justification        | N/A                     |

### Values

The shipping address country collected during checkout.

## Subfield 04 (Shipping Address Postal Code)

DE 48, subelement 08, subfield 04 (Shipping Address Postal Code) contains the postal code of the shipping address.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 04                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...10; LLVAR         |
| Data Field           | Contents of subfield 04 |
| Justification        | Left                    |

### Values

The shipping address postal code collected during checkout.

## Subelement 09 (Additional PAN Data)

DE 48, subelement 09 (Additional PAN Data) is used to provide issuers with accounts related to the PAN in DE 2 (Primary Account Number [PAN]).

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 09                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | an...99; LLVAR        |
| Data Field             | Contents of subfields |
| Subfields              | 6                     |

### Usage

Usage shows whether the field is mandatory, conditional, optional, or system-provided in applicable messages.

### Applicable messages

| Message                                                                             | Org | Sys | Dst |
|-------------------------------------------------------------------------------------|-----|-----|-----|
| Authorization Request/0100                                                          | .   | X   | C   |
| Authorization Request Response/0110:<br>tokenization authorization request response | C   | X   | C   |
| Authorization Advice/0120: system-generated                                         | .   | X   | C   |
| Authorization Advice/0120: acquirer-generated                                       | .   | X   | C   |
| Reversal Request/0400                                                               | .   | X   | C   |
| Reversal Advice/0420: system-generated                                              | .   | X   | C   |

### Application notes

Issuers may only populate this subelement in Authorization Request Response/0110: Tokenization Authorization Request Response messages when DE 2 (Primary Account Number [PAN]) contains an issuer-generated consumer VCN in the related Authorization Request/0100: Tokenization Authorization Request message. Mastercard removes this subelement before forwarding the message to the acquirer.

If applicable, Mastercard will populate subfields 11-13 with Mastercard One Credential funding credential data and send it to the issuer in request messages. Mastercard removes subfields 11-13 before forwarding the message to the acquirer.

### Subfield 01 (Additional Account Number Indicator)

DE 48, subelement 09, subfield 01 (Additional Account Number Indicator) indicates the type of account number in DE 48, subelement 09, subfield 02 (Additional Account Number).

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | an-1                    |
| Data Field           | Contents of subfield 01 |
| Justification        | N/A                     |

### Values

| Value | Description            |
|-------|------------------------|
| A     | Primary Account Number |
| V     | Virtual card number    |

## Subfield 02 (Additional Account Number)

DE 48, subelement 09, subfield 02 (Additional Account Number) contains an account number related to the PAN in DE 2.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |

| Data Representation  | n...19; LLVAR           |
| Data Field           | Contents of subfield 02 |
| Justification        | N/A                     |

## Subfield 03 (Additional Account Number Expiration Date)

DE 48, subelement 09, subfield 03 (Additional Account Number Expiration Date) contains the expiration date of the account number in DE 48, subelement 09, subfield 02 (Additional Account Number).

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 03                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-4                     |
| Data Field           | Contents of subfield 03 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

The Additional Account Number Expiration Date is given in YYMM format.

## Subfield 11 (Mastercard One Credential Account Number Indicator)

DE 48, subelement 09, subfield 11 (Mastercard One Credential Account Number Indicator) provides the Mastercard One Credential account number indicator to the issuer.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 11                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-1                   |
| Data Field           | Contents of position 1 |
| Justification        | N/A                    |

### Values

| Value | Description                           |
|-------|---------------------------------------|
| 1     | Mastercard One Credential Funding PAN |

## Subfield 12 (Mastercard One Credential Account Number)

DE 48, subelement 09, subfield 12 (Mastercard One Credential Account Number) provides the Mastercard One Credential account number (funding PAN) to the issuer.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 12          |
| Subfield Data Length | 2 positions |

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n...19; LLVAR              |
| Data Field          | Contents of positions 1-19 |
| Justification       | N/A                        |

## Subfield 13 (Mastercard One Credential Account Number Expiration Date)

DE 48, subelement 09, subfield 13 (Mastercard One Credential Account Number Expiration Date) provides the Mastercard One Credential account number expiration date to the issuer.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 13                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | n-4, format YYMM          |
| Data Field           | Contents of positions 1-4 |
| Justification        | N/A                       |

## Subelement 10 (Encrypted PIN Block Key)

[DE 48](#), subelement 10 (Encrypted PIN Block Key) contains 16 hexadecimal characters in the range 0–9 and A–F to represent the 16 bits of a PIN block key encrypted under another key. Individual network, program, or service rules define the other encryption key.

**NOTE:** The Dual Message Authorization System currently does not use this data element.

## Subelement 11 (Key Exchange Block Data [Double-Length Keys])

[DE 48](#), subelement 11 (Key Exchange Block Data [Double-Length Keys]) contains a data block specifically formatted to contain all the control data, encrypted key data, and key check values

to complete an encryption key change operation between any two processors (for example, between a customer or *Intermediate Network Facilities (INF)* and the network).

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 11                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-54                     |
| Data Field             | Contents of subfields 1–5 |
| Subfields              | 5                         |
| Justification          | N/A                       |

### Usage

Following is the usage of subelement 11 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                                | Org | Sys | Dst |
|--------------------------------------------------------|-----|-----|-----|
| Network Management Request/0800: PEK exchange          | •   | X   | C   |
| Network Management Request Response/0810: PEK exchange | C   | X   | •   |

### Values

Subelement 11 must be encoded for subfields 1–5 defined as follows.

### Subfield 1 (Key Class ID)

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-2                      |
| Data Field          | Contents of positions 1–2 |
| Values              | PK (PIN key)              |

#### Subfield 2 (Key Index Number)

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 3-4 |
| Values              | 00                        |

#### Subfield 3 (Key Cycle Number)

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 5-6 |
| Values              | 00-99 (sequential)        |

#### Subfield 4 (PIN Encryption Key [PEK])

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | an-32                      |
| Data Field          | Contents of positions 7-38 |
| Values              | hex, 0-9, A-F              |

#### Subfield 5 (Key Check Value)

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | an-16                       |
| Data Field          | Contents of positions 39-54 |
| Values              | hex, 0-9, A-F               |

### Subelement 11 (Key Exchange Block Data [Triple-Length Keys])

[DE 48](#), subelement 11 (Key Exchange Block Data [Triple-Length Keys]) contains a data block specifically formatted to contain all the control data, encrypted key data, and key check values

to complete an encryption key change operation between any two processors (for example, between a customer or *INF* and the network).

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 11                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-70                     |
| Data Field             | Contents of subfields 1–5 |
| Subfields              | 5                         |
| Justification          | N/A                       |

### Usage

Following is the usage of subelement 11 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                                | Org | Sys | Dst |
|--------------------------------------------------------|-----|-----|-----|
| Network Management Request/0800: PEK exchange          | •   | X   | C   |
| Network Management Request Response/0810: PEK exchange | C   | X   | •   |

### Values

Subelement 11 must be encoded for subfields 1–5 as defined below.

### Subfield 1 (Key Class ID)

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-2                      |
| Data Field          | Contents of positions 1–2 |
| Values              | PK (PIN key)              |

### Subfield 2 (Key Index Number)

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 3–4 |
| Values              | 00                        |

### Subfield 3 (Key Cycle Number)

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 5–6 |
| Values              | 00–99 (sequential)        |

### Subfield 4 (PIN Encryption Key [PEK])

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | an-48                      |
| Data Field          | Contents of positions 7–54 |
| Values              | hex, 0–9, A–F              |

### Subfield 5 (Key Check Value)

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | an-16                       |
| Data Field          | Contents of positions 55–70 |
| Values              | hex, 0–9, A–F               |

## Subelement 12 (Routing Indicator)

[DE 48](#), subelement 12 (Routing Indicator) is defined and derived by the Dual Message Authorization System and passed to the issuer to indicate that alternate issuer host routing has

been invoked. Subelement 12 is applicable only to issuers that use an alternate issuer host route instead of the Stand-In System.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 12                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Following is the usage of subelement 12 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | •   | X   | C   |
| Authorization Advice/0120: acquirer-generated | •   | X   | C   |
| Reversal Request/0400                         | •   | X   | C   |

### Values

| Value | Description                   |
|-------|-------------------------------|
| A     | Alternate issuer host routing |
| P     | Primary issuer host routing   |

## Subelement 13 (Mastercard Hosted Mobile Phone Top-Up Request Data)

[DE 48](#), subelement 13 (Mastercard Hosted Mobile Phone Top-up Request Data) contains the mobile phone number and mobile phone service provider name.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 13                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans-47                |
| Data Field             | Contents of subfields |
| Subfields              | 2                     |
| Justification          | See subfields         |

### Usage

Following is the usage of subelement 13 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | C   | .   | C   |
| Authorization Request Response/0110 | CE  | .   | CE  |

## Subfield 1 (Mobile Phone Number)

[DE 48](#), subelement 13, subfield 1 (Mobile Phone Number) contains the phone number of the wireless phone for which the customer is purchasing extra service.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | ans-17      |

| Attribute     | Description                |
|---------------|----------------------------|
| Data Field    | Contents of positions 1–17 |
| Justification | Left                       |

### Values

Cannot contain all spaces or all zeros.

## Subfield 2 (Mobile Phone Service Provider Name)

[DE 48](#), subelement 13, subfield 2 (Mobile Phone Service Provider Name) contains the name or other identifier of the mobile phone service provider.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans-30                      |
| Data Field          | Contents of positions 18–47 |
| Justification       | Left                        |

### Values

Cannot contain all spaces or all zeros.

## Subelement 14 (Account Type Indicator)

[DE 48](#), subelement 14 (Account Type Indicator) contains the value that identifies the cardholder's account type choice. If this subelement is not provided by the acquirer, Mastercard will derive the value. Subelement 14 must only be included on Brazil Flex Card Service-enabled transactions.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 14                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | ans-1                  |
| Data Field             | Contents of position 1 |

| Attribute     | Description |
|---------------|-------------|
| Subfields     | N/A         |
| Justification | N/A         |

## Usage

Following is the usage of subelement 14 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | C   | X   | C   |
| Authorization Request Response/0110         | CE  | XE  | CE  |
| Authorization Advice/0120                   | C   | X   | C   |
| Authorization Advice/0120: system-generated | •   | X   | C   |
| Authorization Advice Response/0130          | CE  | XE  | CE  |
| Reversal Request/0400                       | C   | X   | C   |
| Reversal Request Response/0410              | CE  | XE  | CE  |
| Reversal Advice/0420                        | •   | X   | C   |

Acquirers in Brazil must be able to receive DE 48 (Additional Data: National Use), subelement 14 (Account Type Indicator) in the following response messages only if they have sent this data element in an Authorization Request/0100, Authorization Advice/0120, or Reversal Request/0400 message:

- Authorization Request Response/0110 message
- Authorization Advice Response/0130 message
- Reversal Request Response/0410 message

## Values

C = Credit Transaction

D = Debit Transaction

## Application notes

Subelement 14 (Account Type Indicator) is used in Brazil to identify the transaction as:

- Credit: (Credit/Mastercard). The transaction will be processed by the Dual Message Authorization System with a Mastercard credit brand/product.
- Debit: (Debit/Mastercard). The transaction will be processed by the Dual Message Authorization System as a Debit Mastercard transaction with a Mastercard debit brand/product.

For Brazil issued Flex Card Service enabled POS transactions acquired outside of Brazil, Mastercard will populate [DE 48](#), subelement 14 based on the value present in DE 23, position 3.

- C = Credit Transaction (values 0, 1, 2, 3, or 4)
- D = Debit Transaction (values 5, 6, 7, 8, or 9)

For Brazil issued Flex Card Service enabled ATM transactions acquired outside of Brazil, Mastercard will populate DE 48, subelement 14 based on the value present in DE 3, subfield 2:

- C = Credit Transaction if DE 3, subfield 2 is not equal to 10 or 20.
- D = Debit Transaction if DE 3, subfield 2 is equal to 10 or 20.

For Brazil issued Flex Card Service enabled transactions acquired in Brazil, Mastercard will populate DE 48, subelement 14 based on the value present in DE 3, subfield 2:

- C = Credit Transaction if DE 3, subfield 2 is not equal to 10 or 20.
- D = Debit Transaction if DE 3, subfield 2 is equal to 10 or 20.

For Brazil issued Flex Card Service enabled card present transactions acquired outside of Brazil, if the values in DE 23 is not present then Mastercard will populate DE 48, subelement 14 with C = Credit transaction.

For Brazil issued Flex Card Service enabled card not present transactions acquired outside of Brazil, Mastercard will populate DE 48, subelement 14 with 'C' = Credit transaction.

## Subelement 15 (Authorization System Advice Date and Time)

[DE 48](#), subelement 15 (Authorization System Advice Date and Time), (in UTC units) is a transaction time stamp that the Dual Message Authorization System supplies for each Authorization Advice/0120: acquirer-generated message. It indicates the date and time that the advice is entered into the network.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 15                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | n-10                      |
| Data Field             | Contents of subfields 1–2 |
| Subfields              | 2                         |

| Attribute     | Description   |
|---------------|---------------|
| Justification | See subfields |

## Usage

Following is the usage of subelement 15 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                                                                         | Org | Sys | Dst |
|-------------------------------------------------------------------------------------------------|-----|-----|-----|
| Authorization Advice/0120: acquirer-generated                                                   | •   | X   | M   |
| Authorization Advice/0120: system generated                                                     | •   | X   | C   |
| Authorization Advice Response/0130: issuer-generated (responding to an acquirer-generated 0120) | OE  | X   | C   |

## Values

See subfields.

## Application notes

Acquirers may use the contents of subelement 15 to aid in the creation of the clearing message.

## Subfield 1 (Date)

[DE 48](#), subelement 15, subfield 1 (Date) contains the valid date of the Authorization Advice/0120: acquirer-generated message inserted by the Dual Message Authorization System.

## Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4                       |
| Data Field          | Contents of positions 1-4 |
| Justification       | N/A                       |

## Values

This subfield contains a valid date in MMDD format.

## Subfield 2 (Time)

[DE 48](#), subelement 15, subfield 2 (Time) contains the valid time of the Authorization Advice/0120: acquirer-generated message inserted by the Dual Message Authorization System.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-6                        |
| Data Field          | Contents of positions 5–10 |
| Justification       | N/A                        |

### Values

This subfield contains a valid time in hhmmss format.

## Subelement 16 (Processor Pseudo ICA)

[DE 48](#), subelement 16 (Processor Pseudo ICA) identifies the institution submitting a request or advice that is not the same as the institution provided in [DE 32 \(Acquiring Institution ID Code\)](#) or [DE 33 \(Forwarding Institution ID Code\)](#).

### Attributes

| Attribute              | Description |
|------------------------|-------------|
| Subelement ID          | 16          |
| Subelement Data Length | 2 positions |
| Data Representation    | n-7         |
| Data Field             | N/A         |
| Subfields              | N/A         |
| Justification          | N/A         |

### Usage

Following is the usage of [DE 48](#), subelement 16 (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | •   | X   | C   |
| Authorization Advice/0120: acquirer-generated | •   | X   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |

### Application notes

The Dual Message Authorization System populates this subelement based on the institution submitting the transaction and the issuer's preference for receipt of this data.

## Subelement 17 (Authentication Indicator)

[DE 48](#), subelement 17 (Authentication Indicator) is defined by the Dual Message Authorization System and is passed to the issuer to indicate that the transaction qualified for Authentication service.

### Attributes

| Attribute              | Description |
|------------------------|-------------|
| Subelement ID          | 17          |
| Subelement Data Length | 2 positions |
| Data Representation    | n-1         |
| Subfields              | N/A         |

### Usage

Following is the usage of subelement 17 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | •   | X   | C   |
| Authorization Request Response/0110           | •   | X   | C   |
| Authorization Advice/0120: acquirer-generated | •   | X   | C   |

| Message                                                                                      | Org | Sys | Dst |
|----------------------------------------------------------------------------------------------|-----|-----|-----|
| Authorization Advice/0120: system-generated                                                  | •   | X   | C   |
| Authorization Advice Response/0130: issuer-generated (responding to acquirer-generated 0120) | •   | X   | C   |

### Valid values

| Value | Description                                             |
|-------|---------------------------------------------------------|
| 1     | Transaction qualified for Authentication Service Type 1 |
| 2     | Transaction qualified for Authentication Service Type 2 |

### Application notes

#### Cardholder Authentication Service

Acquirers must support receiving subelement 17 in authorization response messages.

Issuers participating in the Cardholder Authentication Service must be prepared to receive the valid cardholder authentication result in subelement 17.

## Subelement 18 (Service Parameters)

[DE 48](#), subelement 18 (Service Parameters) defines the service parameters of the transaction.

### Attributes

| Attribute              | Value                   |
|------------------------|-------------------------|
| Subelement ID          | 18                      |
| Subelement Data Length | 2 positions             |
| Data Representation    | ans...99; LLVAR         |
| Data Field             | Contents of subfield 01 |
| Subfields              | 1                       |
| Justification          | N/A                     |

### Usage

Following is the usage of subelement 18 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | .   |

### Values

Contains the Canada Domestic Indicator value in subfield 01.

## Subfield 01 (Canada Domestic Indicator)

[DE 48](#), subelement 18, subfield 01 (Canada Domestic Indicator) indicates the merchant accepts Canada domestic Debit Mastercard cards.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 01                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-1                      |
| Data Field           | Contents of positions 1-2 |
| Justification        | N/A                       |

### Values

Y = Yes, the merchant accepts Canada domestic Debit Mastercard cards.

Example: 18050101Y—subelement 18 (Service Parameters), length 05, subfield 01 (Canada Domestic Indicator), length 01, value Y.

**NOTE:** The remaining 94 characters are reserved for future use.

## Subelement 20 (Cardholder Verification Method)

Acquirers use [DE 48](#), subelement 20 (Cardholder Verification Method) to notify Mastercard that the original transaction is signature/offline PIN-based, no CVM used, or online PIN-based for

transaction routing in Authorization Advice/0120: acquirer-generated and Reversal Request/0400 messages.

### Attributes

| Attribute              | Value                  |
|------------------------|------------------------|
| Subelement ID          | 20                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Following is the usage of subelement 20 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Advice/0120: acquirer-generated | M   | X   | •   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |
| Reversal Request/0400                         | M   | X   | •   |
| Reversal Advice/0420                          | •   | X   | C   |

### Values

| Value | Description                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| P     | Online PIN verification                                                                                                                           |
| S     | Can signify signature, "Offline PIN verification" (for chip transactions), "M-PIN" (for Mobile Device with PIN entry capability) or "No CVM used" |

If DE 48, subelement 20 is present and the value is not P or S, the transaction will be rejected with format error 30.

## Subelement 21 (Acceptance Data)

*DE 48 (Additional Data-Private Use)*, subelement 21 (Acceptance Data) indicates the merchant terminal's capability to support specific programs and services.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 21                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | n-11; LLVAR           |
| Data Field             | Contents of subfields |
| Subfields              | 2                     |
| Justification          | See subfields         |

### Usage

Following is the usage of subelement 21 (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |
| Reversal Request/0400                         | C   | X   | C   |
| Reversal Advice/0420                          | •   | X   | C   |

### Values

See subfields.

### Application notes

The subelement should be provided to indicate the merchant terminal's capabilities in supporting specific programs and services.

## Subfield 01 (mPOS Acceptance Device Type)

*DE 48 (Additional Data: Private Use)*, subelement 21 (Acceptance Data), subfield 01 (mPOS Acceptance Device Type) identifies the type of device used by the merchant as the terminal for accepting mPOS transactions. This subfield is required for all mPOS terminals.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 01                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | n-1                    |
| Data Field           | Contents of position 1 |
| Justification        | N/A                    |

### Values

| Value | Description                                                                 |
|-------|-----------------------------------------------------------------------------|
| 0     | Dedicated mPOS Terminal with PCI compliant dongle (with or without key pad) |
| 1     | Off the Shelf Mobile Device                                                 |
| 2-9   | Reserved for Future Use                                                     |

## Subfield 02 (Additional Terminal Capability Indicator)

*DE 48*, subelement 21, subfield 02 (Additional Terminal Capability Indicator) identifies Mastercard Consumer Presented QR and barcode terminal capabilities. This subfield is optional. Customers that have opted to submit or process tokenized Mastercard Consumer Presented QR transactions are expected to support this subfield.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 02          |
| Subfield Data Length | 2 positions |

| Attribute           | Description                                                        |
|---------------------|--------------------------------------------------------------------|
| Data Representation | n-2                                                                |
| Data Field          | Contents of positions 1-2                                          |
| Justification       | N/A                                                                |
| Position 1          | Mastercard Consumer Presented QR Capability Support Indicator      |
| Position 2          | Mastercard Consumer Presented Barcode Capability Support Indicator |

### Values

| Value | Description   |
|-------|---------------|
| 0     | Not Supported |
| 1     | Supported     |

### Subfield 2: Valid Position 1 and Position 2 Value Combinations

### Valid combinations

| Valid Combinations | QR Capability | Barcode Capability |
|--------------------|---------------|--------------------|
| 00                 | Not supported | Not supported      |
| 01                 | Not supported | Supported          |
| 10                 | Supported     | Not supported      |
| 11                 | Supported     | Supported          |

## Subelement 22 (Multi-Purpose Merchant Indicator)

DE 48, subelement 22 (Multi-Purpose Merchant Indicator) may be used for multiple purposes needed to identify the transaction and may contain data that is unique to programs, services, or other specifics about the transaction.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 22                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans...29; LLVAR       |
| Data Field             | Contents of subfields |
| Subfields              | 6                     |
| Justification          | See subfields         |

### Usage

Following is the usage of subelement 22 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Request Response/0110           | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | O   | X   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |
| Authorization Advice Response/0130            | C   | X   | C   |
| Reversal Request/0400                         | O   | X   | C   |
| Reversal Request Response/0410                | C   | X   | C   |
| Reversal Advice/0420                          | C   | X   | C   |

### Application notes

Dual Message Authorization System will remove [DE 48](#), subelement 22, subfields 01, 02, 03, 05, and 06 if received in an Authorization Request Response/0110 message from an issuer.

Dual Message Authorization System will remove [DE 48](#), subelement 22, subfields 01, 02, 03, 04, 05, and 06 if received in an Reversal Request Response/0410 or Advice Response/0130 message from an issuer.

Refer to the subfields contained within this subelement to obtain the identifier supporting programs, services, or other specifics about the transaction.

## Subfield 01 (Low-Risk Merchant Indicator)

DE 48, subelement 22 (Multi-Purpose Merchant Indicator), subfield 01 (Low-Risk Merchant Indicator) is used by acquirers to identify why a low-risk transaction did not use Strong Customer Authentication (SCA) to prevent an unnecessary decline by an issuer in the European Economic Area (EEA), United Kingdom (UK), and Gibraltar.

For Visa-branded transactions, [DE 48](#), subelement 22 (Multi-Purpose Merchant Indicator), subfield 01 (Low-Risk Merchant Indicator) is used to identify the transaction is from a Trusted Merchant, not needing Strong Customer Authentication (SCA) and preventing unnecessary declines by issuers in the European Economic Area (EEA), United Kingdom (UK), and Gibraltar.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | an-2                    |
| Data Field           | Contents of subfield 01 |
| Justification        | N/A                     |

### Usage

Following is the usage of subelement 22, subfield 01 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | O   | X   | C   |

## Values

| Value |   | Description                                      |
|-------|---|--------------------------------------------------|
| 01    | = | Merchant Initiated Transaction                   |
| 02    | = | Acquirer Low-Fraud and Transaction Risk Analysis |
| 03    | = | Recurring Payment                                |
| 04    | = | Low-Value Payment                                |
| 05    | = | Strong Customer Authentication (SCA) Delegation  |
| 06    | = | Secure Corporate Payment                         |
| 07    | = | Authentication Outage Exception                  |
| 08    | = | Trusted Merchant Exemption (Visa Only)           |

## Application notes

Subfield 01 values enable acquirers to provide issuers with an indicator to identify Authorization Request/0100 messages originating from merchants that use an acquirer exemption or other reasons for not applying SCA on transactions. This data will assist issuers in determining whether to approve or decline the transaction and to justify to Local Competent Authorities the reason why the issuers did not apply SCA on the transaction as required under PSD2.

Acquirers should only submit value 08 on Visa-branded transactions. The Dual Message Authorization System drops this value if received on transactions which are not Visa-branded.

## Subfield 02 (Single Tap Indicator)

[DE 48](#), subelement 22 (Multi-Purpose Merchant Indicator), subfield 02 (Single Tap Indicator) allows acquirers to indicate that the merchant's point of interaction environment is capable of supporting single tap processing.

## Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | an-1                    |
| Data Field           | Contents of Subfield 02 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

## Usage

Following is the usage of subelement 22, subfield 02 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

## Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

## Values

| Value | Description                                   |
|-------|-----------------------------------------------|
| 1 =   | Merchant POI capable of single tap processing |

## Application notes

Value 1 must be used if the POI supports the service; otherwise, the subfield is not present.

## Subfield 03 (Response to PIN Request)

[DE 48](#), subelement 22 (Multi-Purpose Merchant Indicator), subfield 03 (Response to PIN Request) allows acquirers to indicate that the transaction contains an intentionally duplicated (replayed) Application Transaction Counter (ATC) value, within the context of a single tap transaction.

## Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 03                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | an-1                    |
| Data Field           | Contents of Subfield 03 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Usage

Following is the usage of subelement 22, subfield 03 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

### Values

| Value | Description                                                            |
|-------|------------------------------------------------------------------------|
| 1     | Transaction contains an intentionally duplicated (replayed) ATC value. |

### Application notes

Value 1 must be used by acquirers only if the issuer requests a PIN in single tap mode; otherwise, the subfield is not present.

## Subfield 04 (Issuer PIN Request in a Single Tap Mode)

[DE 48 \(Additional Data: Private Use\)](#), subelement 22 (Multi-Purpose Merchant Indicator), subfield 04 (Issuer PIN Request in a Single Tap Mode) allows issuers in Europe, Middle East/Africa, Asia/Pacific, and Latin America and the Caribbean regions to request a PIN within the context of a single tap transaction scenario. Does not apply to the United States and Canada regions.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 04          |
| Subfield Data Length | 2 positions |
| Data Representation  | an-1        |

| Attribute     | Description             |
|---------------|-------------------------|
| Data Field    | Contents of Subfield 04 |
| Justification | N/A                     |

### Usage

Following is the usage of subelement 22, subfield 04 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | X   | C   |

### Valid values

| Value | Description                             |
|-------|-----------------------------------------|
| 1     | Issuer requests PIN in Single Tap mode. |

### Application notes

Value 1 must be used if the issuer requests a PIN in Single Tap mode; otherwise, the subfield is not present.

When the issuer participates in the On-Behalf Contactless Counters Service, Mastercard will populate subfield 04 in Authorization Request Response/0110 messages and forward to the acquirer when:

- The issuer supports duplicate ATC
- A card present transaction is declined with response code 65 (Decline: Exceeds withdrawal count limits)
- [DE 48](#), subelement 22, subfield 02 is value 1 (Merchant capable of single tap processing)

### Subfield 05 (Cardholder/Merchant Initiated Transaction Indicator)

[DE 48](#), subelement 22 (Multi-Purpose Merchant Indicator), subfield 05 (Cardholder/Merchant Initiated Transaction Indicator) allows acquirers to identify whether the transaction was

initiated by the cardholder or the merchant as well as providing more detail as to the type of stored credential being used for the transaction.

### Attributes

| Attribute            | Description             |

|                    | 03<br>Subscription (fixed amount and frequency) | A transaction made pursuant to an agreement between a cardholder and a merchant, whereby the cardholder authorizes the merchant to store and use the cardholder's account data for a transaction that must occur at regularly scheduled intervals for a fixed amount, as specified in the agreement. The subscription agreement may include an allowance for introductory pricing or for price changes to occur from time to time. | Monthly subscription or fixed monthly service payment.                                                                                               |
|                    | 04<br>Installment                               | A transaction in a series of transactions made pursuant to an agreement between a cardholder and a merchant, whereby the cardholder authorizes the merchant to store the cardholder's account data for use by the merchant to initiate one or more future transactions for a known amount over a specified duration based on a single purchase.                                                                                    | Purchase a television for \$1,000 USD, pay in four equal installments of \$250 USD (first transaction is CIT, remaining three transactions are MIT). |

| Indicator category                            | Indicator subcategory        | What's included in the definition                                                                                                                                       | Examples                                                                                                                       |
|-----------------------------------------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| M2<br>Merchant-Initiated<br>Industry Practice | 05<br>Partial Shipment       | Occurs when an agreed quantity of goods ordered through e-commerce are not all available for shipment at the time of purchase. Each shipment is a separate transaction. | Consumer ordered goods that ship at different times.                                                                           |
|                                               | 06<br>Related/Delayed Charge | An additional account charge after initial services have been rendered and payment has been processed.                                                                  | Hotel mini bar charge after the cardholder has checked out of hotel.                                                           |
|                                               | 07<br>No Show Charge         | A penalty charged according to the merchant's cancellation policy.                                                                                                      | Cardholder's cancellation of a reservation without providing proper advance notice to the merchant.                            |
|                                               | 08<br>Resubmission           | Previous attempt to obtain authorization for a transaction has been declined but the issuer's response does not prohibit the merchant from trying again later.          | <ul style="list-style-type: none"> <li>Insufficient funds/over credit limit response</li> <li>Transit debt recovery</li> </ul> |

## Subfield 06 (Message Format Version Code: Acquirer)

[DE 48](#), subelement 22 (Multi-Purpose Merchant Indicator), subfield 06 (Message Format Version Code: Acquirer) contains a code that identifies the transaction message standard applied in the formatting and submission of the acceptor-related data elements.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 06                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | an-1                    |
| Data Field           | Contents of Subfield 06 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

## Usage

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | M   | X   | .   |
| Authorization Advice/0120: acquirer-generated | M   | X   | .   |
| Reversal Request/0400                         | M   | X   | .   |

### Valid values

| Value | Description                  |
|-------|------------------------------|
| A     | Mastercard Pre 23Q2 Release  |
| B     | Mastercard Post 23Q2 Release |

## Application notes

The Message Format Version Code: Acquirer must be present in all transactions and contain a valid value.

*AN 6022 Introduction and Standardization of Transaction Data Elements* introduced changes to the formatting, alignment, and population criteria of acceptor (Merchant/ATM Owner) name, location and related data elements and introduced additional data elements to fully capture critical Acceptor data. As there may be varying adoption timelines for upstream acquirer, processor and Merchant/ATM Owner systems, acquirers must utilize this code to identify at the transaction level for which standard was applied. Mastercard will rely on this code to modify, realign and append data into the message format standard defined in AN 6022, allowing downstream Mastercard and customer (issuer) systems to operate consistently throughout the transition period and avoid any processing or cardholder disruption.

Value A indicates the transaction does not comply with the new standards as it contains acceptor data in the pre-23Q2 release version format.

Value B indicates the transaction does comply with the new standards as it contains acceptor data in the post-23Q2 release version format.

## Subelement 23 (Payment Initiation Channel)

[DE 48](#), subelement 23 (Payment Initiation Channel) provides information about the device type used to identify mobile-initiated (m-commerce) or other EMV Contact, Magnetic stripe Contactless, or M/Chip Contactless transactions.

### Attributes

| Attribute              | Description            |

| Reversal Advice/0420                        | •   | X   | C   |

### Values

See subfield 1.

### Application notes

Acquirers in regions where it is mandated must ensure that each newly deployed or re-deployed contactless-enabled POS terminal used by their merchants transmits the device type indicator value, if present on the card or non-card form factor, in data element [DE 48 \(Additional Data:](#)

*Private Use*, subelement 23 (Payment Initiation Channel), subfield 1 (Device Type) of authorization messages.

## Subfield 1 (Device Type)

DE 48, subelement 23, subfield 1 (Device Type) indicates the type of device used at the terminal. In the scope of chip transactions it must be populated using the device type field value of chip tag 9F6E.

**NOTE: Effective immediately, new values in DE 48, subelement 23, subfield 1 contain an indication of the form factor. Existing values from 00–19 may continue to be used, and their meanings remain unchanged; however, Mastercard will not send these values in future communication as part of DE 48, subelement 23, subfield 1. New values from 20–99 exclusively indicate the form factor only without also indicating the storage technology. Mastercard has introduced new device type values from 20–33 in anticipation of new form factors for payments, with values 34–99 reserved for future use. For information on storage technology of device types (such as Trusted Execution Environment [TEE] or Secure Element), refer to the description of DE 48, subelement 33 (PAN Mapping File Information), subfield 8 (Storage Technology).**

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-2                      |
| Data Field          | Contents of positions 1–2 |
| Justification       | N/A                       |

### Values

**NOTE: Some values from 00–19 may indicate not only the physical form factor but also other attributes such as device technology and payment app specifications.**

00 = Card

01 = Mobile Network Operator (MNO) controlled removable secure element (SIM or UICC) personalized for use with a mobile phone or smartphone

02 = Key Fob

03 = Watch using a contactless chip or a fixed (non-removable) secure element not controlled by the MNO

04 = Mobile Tag

05 = Wristband

06 = Mobile Phone Case or Sleeve

07 = Mobile phone or smartphone with a fixed (non-removable) secure element controlled by the MNO, for example, code division multiple access (CDMA)

08 = Removable secure element not controlled by the MNO, for example, memory card personalized for use with a mobile phone or smartphone

09 = Mobile Phone or smartphone with a fixed (non-removable) secure element not controlled by the MNO

10 = MNO controlled removable secure element (SIM or UICC) personalized for use with a tablet or e-book

11 = Tablet or e-book with a fixed (non-removable) secure element controlled by the MNO

12 = Removable secure element not controlled by the MNO, for example, memory card personalized for use with a tablet or e-book

13 = Tablet or e-book with fixed (non-removable) secure element not controlled by the MNO

14 = Mobile phone or smartphone with a payment application running in a host processor

15 = Tablet or e-book with a payment application running in a host processor

16 = Mobile phone or smartphone with a payment application running in the Trusted Execution Environment (TEE) of a host processor

17 = Tablet or e-book with a payment application running in the TEE of a host processor

18 = Watch with a payment application running in the TEE of a host processor

19 = Watch with a payment application running in a host processor

**NOTE: Values from 20–99 exclusively indicate the form factor only without also indicating the storage technology.**

### Values

See subfields.

### Application notes

The following subfields will be populated when applicable to the ALM program indicated by Subfield 1 (ALM Service Code):

- Subfield 2: ALM Product Graduation Plus or Registered Product Code
- Subfield 3: ALM Product Class
- Subfield 4: ALM Rate Type

Subfields that are not applicable to the designated ALM service of the registered PAN will be populated with 'XXX'. The absence of [DE 48](#), subelement 24 for opt-in customers means the account range of the PAN does not participate in ALM.

Mastercard reserves the right add new valid codes at any time. Customer must be able to accept and process any value provided within any of the sub elements for authorization and clearing processing. In the event new valid values are added, refer to the *Account Level Management Manual*.

## Subfield 1 (ALM Service Code)

DE 48, subelement 24, subfield 1 (ALM Service Code) indicates the ALM program and service.

ALM Service Code represents the Account Level Management service or combination of ALM services for which the PAN is actively registered. The ALM Service Code is assigned at the time the PAN is registered in Account Level Management and will be populated in the supported authorization messages to ensure ALM processing is applied throughout the lifecycle of the transaction.

ALM processing was not applied to the authorization message when the ALM Service Code is present with one of the following values:

- 00000 = ALM Service Unavailable
  - When the Dual Message Authorization System is unable to make a successful connection to the Account Level Management Platform for PAN registration validation, the customer will receive an ALM Service Unavailable service code value
- 00126 = PAN not registered for ALM, but the issuer's Account Range participates, transaction will process business as usual
  - When the issuer's Account Range is activated for ALM Servicing, identified as having at least one-PAN actively registered, but the PAN as provided in the authorization message is not actively registered in ALM
- All other values provided will represent an individual ALM Service or ALM Service Combinations based on the PAN's active registration

Mastercard reserves the right to add new valid values for ALM Service Code at any time. Customers must be able to accept and process any valid values provided within the authorization messages. If new valid values are added, refer to the *Account Level Management Manual*.

## Subfield 2 (ALM Product Graduation Plus or Registered Product Code)

*DE 48*, subelement 24, subfield 2 (ALM Product Graduation Plus or Registered Product Code) contains the licensed graduated product code or the registered product code for those transactions identified with a PAN registered and qualifying for Product Graduation Plus or Consumer Product Monitoring Service, or a combination of Account Level Management Services.

If the PAN is not actively registered in ALM Product Graduation Plus or Consumer Product Monitoring Service, the field will be populated as 'XXX'.

Mastercard reserves the right to add new product code valid values for eligible ALM Product Graduation Plus or the Consumer Product Monitoring Service at any time and customers must be able to accept, and process any valid values provided within the authorization messages. For new valid values, a complete product code listing, or country availability, refer to the *Account Level Management Manual*.

### Attributes

| <b>Attribute</b>     | <b>Description</b> |
|----------------------|--------------------|
| Subfield ID          | 02                 |
| Subfield Data Length | 2 positions        |

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-3                   |
| Data Field          | Contents of subfield 2 |
| Justification       | N/A                    |

### Values

For information about valid values for ALM, refer to the *Account Level Management Manual*.

### Subfield 3 (ALM Product Class)

[DE 48](#), subelement 24, subfield 3 (ALM Product Class) indicates the Product Class Override for the applicable ALM Service. Product Class provides the ability to vary interchange rates by product grouping, while maintaining common interchange structures.

If the PAN is not actively registered in ALM Product Graduation Plus, the field will be populated as 'XXX'.

Mastercard reserves the right to add new valid values for Product Class at any time and customers must be able to accept, and process any valid values provided within the authorization messages. In the event new valid values are added, refer to the *Account Level Management Manual*.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 03                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-3                   |
| Data Field           | Contents of subfield 3 |
| Justification        | N/A                    |

### Values

For information about valid values for ALM, refer to the *Account Level Management Manual*.

### Subfield 4 (ALM Rate Type)

[DE 48](#), subelement 24, subfield 4 (ALM Rate Type) indicates the Rate Type number for the applicable ALM Service. Rate Types provide the ability to vary interchange rates in the event that unique IRDs are not assigned for an applicable business service arrangement. PANs actively

registered for ALM Services that do not involve Product Graduation Plus will have an associated ALM Rate Type. Some ALM Services may combine Rate Types with Product Class Overrides (Subfield 3).

If an ALM Rate Type is not supported for the ALM service of the registered PAN, the field will be populated as 'XXX'.

Mastercard reserves the right to add new valid values for Rate Types at any time and customers must be able to accept, and process any valid values provided within the authorization messages. In the event new valid values are added, refer to the [Account Level Management Manual](#).

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 04                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-3                   |
| Data Field           | Contents of subfield 4 |
| Justification        | N/A                    |

### Values

| Rate type | Rate type description                      |
|-----------|--------------------------------------------|
| 801       | Enhanced Value Rate Adjustment             |

| 850       | World High Value Adjustment                                                                                                |
| 851       | World Consumer Shortfall Adjustment                                                                                        |
| 852       | World Elite Consumer Shortfall Adjustment                                                                                  |
| 881       | Canada World Consumer Adjustment *                                                                                         |
| 882       | Canada MPE (Mastercard® branding to be announced) *                                                                        |
| 883       | Canada World Elite Adjustment *                                                                                            |
| 884       | Canada MUSE Adjustment *                                                                                                   |
| 885       | Canada MUSE Requalified Down Adjustment *                                                                                  |
| 886       | Canada World Elite Requalified Down Adjustment *                                                                           |
| XXX       | Rate Type does not apply, or has not been configured for the ALM Service Code provided in DE 48, subelement 24, subfield 1 |

**NOTE: \*Consumer Product Monitoring Service will process using Rate Types associated with a Registered Product Code in subfield 2 (ALM Product Code).**

## Subfield 05 (Mastercard One Credential Acceptance Brand)

DE 48, subelement 24, subfield 05 (Mastercard One Credential Acceptance Brand) contains the acceptance brand of the product code present in DE 48, subelement 24, subfield 2 (ALM Product Graduation Plus or Registered Product Code).

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 05                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-3                      |
| Data Field           | Contents of positions 1-3 |
| Justification        | N/A                       |

### Values

| Value | Description      |
|-------|------------------|
| MCC   | Mastercard       |
| DMC   | Debit Mastercard |
| MSI   | Maestro          |

### Application notes

In response messages for regular authorization, advice, and reversal messages for Mastercard One Credential transactions, acquirers will only receive DE 48, subelement 24, subfields 05-07 if the Mastercard One Credential service assigns a funding PAN and the transaction will have Dynamic interchange applied.

In the following messages, acquirers will receive DE 48, subelement 24, subfields 05-07 whenever the Mastercard One Credential service assigns a funding PAN, regardless of Static or Dynamic interchange:

- Product Status Inquiry Authorization Response/0110 (Mastercard-Generated) message
- Account Status Inquiry with Product Status Inquiry Authorization Response/0110 message
- Account Status Inquiry with Approval Probability Indicator and Product Status Inquiry Authorization Response/0110 message

### Subfield 06 (Mastercard One Credential Static/Dynamic Interchange Indicator)

DE 48, subelement 24, subfield 06 (Mastercard One Credential Static/Dynamic Interchange Indicator) identifies the transaction as being subject to dynamic or static interchange.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 06                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-1                   |
| Data Field           | Contents of position 1 |
| Justification        | N/A                    |

### Values

| Value | Description                                                                                                                                   |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| D     | Dynamic Interchange: the transaction's interchange will be based on the Mastercard One Credential Funding PAN instead of the DE 2 primary PAN |
| S     | Static Interchange: the transaction's interchange will be based on the DE 2 primary PAN                                                       |

### Application notes

In response messages for regular authorization, advice, and reversal messages for Mastercard One Credential transactions, acquirers will only receive DE 48, subelement 24, subfields 05-07 if the Mastercard One Credential service assigns a funding PAN and the transaction will have Dynamic interchange applied.

In the following messages, acquirers will receive DE 48, subelement 24, subfields 05-07 whenever the Mastercard One Credential service assigns a funding PAN, regardless of Static or Dynamic interchange:

- Product Status Inquiry Authorization Response/0110 (Mastercard-Generated) message
- Account Status Inquiry with Product Status Inquiry Authorization Response/0110 message
- Account Status Inquiry with Approval Probability Indicator and Product Status Inquiry Authorization Response/0110 message

### Subfield 07 (Mastercard One Credential Issuer Account Range)

DE 48, subelement 24, subfield 07 (Mastercard One Credential Issuer Account Range) contains the Mastercard One Credential Funding PAN's issuer account range.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Subfield ID          | 07                         |
| Subfield Data Length | 2 positions                |
| Data Representation  | n...19; LLVAR              |
| Data Field           | Contents of positions 1-19 |
| Justification        | N/A                        |

## Application notes

In response messages for regular authorization, advice, and reversal messages for Mastercard One Credential transactions, acquirers will only receive DE 48, subelement 24, subfields 05-07 if the Mastercard One Credential service assigns a funding PAN and the transaction will have Dynamic interchange applied.

In the following messages, acquirers will receive DE 48, subelement 24, subfields 05-07 whenever the Mastercard One Credential service assigns a funding PAN, regardless of Static or Dynamic interchange:

- Product Status Inquiry Authorization Response/0110 (Mastercard-Generated) message
- Account Status Inquiry with Product Status Inquiry Authorization Response/0110 message
- Account Status Inquiry with Approval Probability Indicator and Product Status Inquiry Authorization Response/0110 message

## Subelement 25 (Mastercard Cash Program Data)

[DE 48](#), subelement 25 (Mastercard Cash Program Data) contains information necessary to process Mastercard Cash transactions, which includes message type identifiers.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 25                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans...14; LLVAR       |
| Data Field             | Contents of subfields |
| Subfields              | 1                     |
| Justification          | See subfields         |

### Usage

Following is the usage of subelement 25 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|

## Values

See subfields.

## Subfield 01 (Message Identifier)

[DE 48](#), subelement 25, subfield 01 (Message Identifier) indicates the type of cash transaction.

## Attributes

| Attribute            | Description                                         |
|----------------------|-----------------------------------------------------|
| Subfield ID          | 01                                                  |
| Subfield Data Length | 2 positions                                         |
| Data Representation  | ans...10; LLVAR                                     |
| Data Field           | Contents of positions 1–2, positions 3–10 undefined |
| Justification        | N/A                                                 |

## Values

| Value | Description                                                    |
|-------|----------------------------------------------------------------|
| CM    | Confirmation message                                           |
| LP    | Linked load request with a purchase                            |
| LR    | Unlinked load request, or linked load request with no purchase |
| LU    | Linked status update                                           |

## Subelement 26 (Wallet Program Data)

*DE 48 (Additional Data: Private Use)*, subelement 26 (Wallet Program Data) contains the subfield that will identify transactions submitted using wallets on the Mastercard Digital Enablement Service (MDES) or Masterpass platform.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 26                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | an-3                   |
| Data Field             | Contents of subfield 1 |
| Subfields              | 1                      |
| Justification          | N/A                    |

### Usage

Following is the usage of subelement 26 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |
| Reversal Request/0400                         | .   | X   | C   |
| Reversal Advice/0420                          | .   | X   | C   |

### Values

See subfield 1.

## Subfield 1 (Wallet Identifier)

DE 48, subelement 26, subfield 1 (Wallet Identifier) provides information about transactions initiated through the Masterpass Online platform or through the Mastercard Digital Enablement Service (MDES) and indicates who the Wallet Provider was for the transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-3                      |
| Data Field          | Contents of positions 1-3 |
| Justification       | N/A                       |

**NOTE:** The following values apply to both Masterpass and MDES transactions.

### Values

| Value | Description              |
|-------|--------------------------|
| 101   | Masterpass by Mastercard |

**NOTE:** The following values only apply to MDES transactions.

### Values

| Value | Description              |
|-------|--------------------------|
| 12A   | Sample Wallet ID         |
| 103   | Apple Pay                |
| 216   | Google Pay               |
| 217   | Samsung Pay              |
| 327   | Remote commerce programs |

### Application notes

The Wallet ID is required in Masterpass transactions submitted from certain regions or countries. The Wallet ID cannot contain all zeros, spaces, or special characters.

The Dual Message Authorization System inserts the Wallet Identifier for MDES transactions when available, which identifies the wallet that the transaction came from.

New Wallet Identifier values may be provided in this field without prior written notice.

The following tables indicate the presence of the Wallet Identifier in Masterpass and MDES transactions.

### Applicable messages

| Masterpass Messages                           | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |

**NOTE: If the card in Masterpass is an MDES token, then MDES would add the correct Wallet ID to the transaction.**

### Applicable messages

| MDES Messages                                 | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | .   | X   | C   |
| Authorization Advice/0120: acquirer-generated | .   | X   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |
| Reversal Request/0400                         | .   | X   | C   |
| Reversal Advice/0420                          | .   | X   | C   |

**NOTE: For MDES, Mastercard inserts the Wallet Identifier for the wallet that the token was supplied to.**

## Subelement 27 (Transaction Analysis)

[DE 48](#), subelement 27 (Transaction Analysis) contains information about transaction analysis.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 27                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an...97; LLVAR            |
| Data Field             | Contents of subfields 1–2 |
| Subfields              | 2                         |

### Usage

Following is the usage of subelement 27 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | •   | X   | C   |
| Authorization Advice/0120: system-generated | •   | X   | C   |

### Application notes

[DE 48](#), subelement 27 and subfields 1 and 2 are set up in Tag, Length, Value format:

27LL01LLVV02LLVVVVVVVVV...

### Example

| Subfield 1 | Subfield 2 |
|------------|------------|
| 0102CI     | 0206SNAOVP |

## Subfield 1 (Overview)

[DE 48](#), subelement 27, subfield 1 (Overview) provides issuers with a code that represents the overall disposition of the transaction based on the applicable transaction validation results and corresponding decision matrix.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 01                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-2                   |
| Data Field           | Contents of subfield 1 |
| Justification        | N/A                    |

### Values

| Value | Description                          |
|-------|--------------------------------------|
| CI    | Continue processing with information |
| CW    | Continue processing with warning     |
| DI    | Decline issuer decision              |
| DS    | Decline suspicious                   |

## Subfield 2 (Test Results)

[DE 48](#), subelement 27, subfield 2 (Test Results) provides the list of failed validations. If several failed validations generate the same test result code, the code will only be reported one time in subfield 2.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 02          |
| Subfield Data Length | 2 positions |

| Attribute           | Description                                                                                       |
|---------------------|---------------------------------------------------------------------------------------------------|
| Data Representation | an...87; LLVAR; The LL length field of LLVAR will be an integral multiple of 3, not to exceed 87. |
| Data Field          | Contents of subfield 2                                                                            |
| Justification       | N/A                                                                                               |

## Values

| Value | Description                                              |
|-------|----------------------------------------------------------|
| CAM   | Invalid Card Authentication                              |
| CCH   | Cross channel                                            |
| CRN   | Consent requirement not fulfilled                        |
| CVF   | Cardholder verification (on terminal) was not successful |
| CVU   | CVM requirements not fulfilled                           |
| CVX   | Status CVM unknown                                       |
| DAF   | ODA failed                                               |
| DAU   | ODA was not performed                                    |
| DMM   | Data mismatch                                            |
| DNC   | Data not consistent with application or product          |
| EXP   | Token expired                                            |
| FER   | Format error                                             |
| FUZ   | Fuzzing                                                  |
| ICT   | Not a valid cryptogram type                              |
| NMK   | No matching key file/KDI combination                     |
| OVE   | CDCVM retry exceeded: token suspended                    |
| OVF   | CDCVM failed                                             |
| OVP   | CDCVM (was possible but) not performed                   |
| OVU   | CDCVM not performed                                      |
| PKC   | ODA compromised                                          |
| PPP   | PIN Pad Problem                                          |
| PTB   | PIN on terminal bypass                                   |
| PWE   | Possible wedge attack                                    |

| Value | Description                                     |
|-------|-------------------------------------------------|
| REP   | ATC replay: same UN                             |
| SKC   | Key compromised                                 |
| SNA   | Request service not allowed for this product    |
| UTP   | Unable to process                               |
| WOC   | Wallet overrule of Mastercard decision on CDCVM |

## Subelement 28 (Cardless ATM Order ID)

[DE 48](#), subelement 28 (Cardless ATM Order ID) is defined by Mastercard, sent by the acquirer participating in the Cardless ATM program and passed to the issuer participating in the Cardless ATM program.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 28                         |
| Subelement Data Length | 2 positions                |
| Data Representation    | an-10                      |
| Data Field             | Contents of positions 1–10 |
| Subfields              | N/A                        |
| Justifications         | N/A                        |

### Usage

Following is the usage of subelement 28 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

### Values

Cannot contain all spaces or all zeros.

## Subelement 29 (Additional POS Terminal Locations)

[DE 48](#), subelement 29 is required when [DE 61 \(Point-of-Service \[POS\] Data\)](#), subfield 3 (POS Terminal Location) is present with the value of 8 (Additional Terminal Operating Environments).

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 29                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | an-1                   |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Following is the usage of subelement 29 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

### Values

| Value | Description                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------|
| A     | Transaction has been initiated remotely and completed at a physical terminal on premises of the acceptor facility.  |
| B     | Transaction has been initiated remotely and completed at a physical terminal off premises of the acceptor facility. |

## Subelement 30 (Token Transaction Identifier)

DE 48, subelement 30 (Token Transaction Identifier) will contain, when available, the calculated Token Transaction Identifier to identify the transaction. The Token Transaction Identifier is to be retained and used to provide the transaction details associated with an original purchase and subsequent reversal messages. The Token Transaction Identifier is only sent to issuers participating in the Mastercard Digital Enablement Service.

### Attributes

| Attribute              | Description     |
|------------------------|-----------------|
| Subelement ID          | 30              |
| Subelement Data Length | 2 positions     |
| Data Representation    | ans...64; LLVAR |
| Subfields              | N/A             |

### Usage

Following is the usage of subelement 30 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | •   | X   | C   |
| Authorization Advice/0120: acquirer-generated | •   | X   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |
| Reversal Request/0400                         | •   | X   | C   |
| Reversal Advice/0420                          | •   | X   | C   |

### Values

A 44 byte base 64 value will be sent for Mastercard BIN ranges.

A 64 byte value will be sent for Visa BIN ranges.

### Application notes

DE 48, subelement 30 will not be present when DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code) contains a value of 20 (Purchase Return/Refund).

## Subelement 32 (Mastercard Assigned ID)

DE 48, subelement 32 (Mastercard Assigned ID) contains the merchant ID assigned by Mastercard.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 32                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-6                      |
| Data Field             | Contents of positions 1–6 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Usage

Following is the usage of subelement 32 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Request Response/0110           | OE  | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |
| Reversal Request/0400                         | C   | P   | C   |
| Reversal Advice/0420                          | •   | X   | C   |

### Values

The Mastercard Assigned ID must be a value assigned by Mastercard, and is the same value in both the Authorization and Clearing Systems. Mastercard assigns one ID to the merchant regardless if the merchant is participating in multiple programs. This ID can also be assigned for transaction data integrity purposes. For all acceptors that have been issued a Mastercard Assigned ID, all submitted authorization requests, reversals, and advices must contain the Mastercard Assigned ID in DE 48, subelement 32.

This field is required when transactions are submitted for real-time substantiation. Real-time substantiation is indicated by DE 48, subelement 61, subfield 3 (Real-time Substantiation Indicator) containing a value of 1 (Merchant terminal verified the purchased items against the Inventory Information Approval System [IIAS]).

Participating merchants must submit the Mastercard Assigned ID for e-commerce transactions that are processed under the Maestro® Recurring Payments Program.

### Application notes for the Mastercard Installments Program with Merchant Participation for qualifying domestic transactions with product code GCS

Optional Echo (OE) indicates that the message initiator may provide the data element in an Authorization Request Response/0110 message. If so, the data element must contain the same value echoed from the original Authorization Request/0100 message.

The Dual Message Authorization System inserts or modifies this subelement in Authorization Request/0100 messages for qualifying installments transactions.

Issuers receive DE 48, subelement 32 in Authorization Request/0100 messages when the acquirer includes the subelement, or when Mastercard has inserted or modified the subelement in the corresponding Authorization Request/0100 message.

Acquirers receive DE 48, subelement 32 in Authorization Request Response/0110 messages when Mastercard has inserted or modified the subelement in the corresponding Authorization Request/0100 message.

## Subelement 32 (Visa Merchant Identifier [Visa Only])

*DE 48*, subelement 32 (Visa Merchant Identifier) contains the merchant ID assigned by Visa.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 32                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-8                      |
| Data Field             | Contents of positions 1–8 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Usage

Following is the usage of subelement 32 in Visa-branded transactions (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |
| Reversal Advice/0420                          | .   | X   | C   |

### Values

The Visa Merchant Identifier (Visa Only) value is assigned by Visa and is only for use with Visa-branded transactions.

### Application notes

When the acquirer provides [DE 48](#), subelement 32 with a length greater than eight positions on a Visa-branded transaction, the Authorization System rejects the transaction sending the acquirer an Authorization Request Response/0110 message where [DE 39 \(Response Code\)](#) contains the value 30 (Format error) and [DE 44 \(Additional Response Data\)](#) contains the value 048032.

## Subelement 33 (PAN Mapping File Information)

[DE 48](#), subelement 33 (PAN Mapping File Information) supports the mapping between the virtual account data and actual account data.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 33                        |
| Subelement Data Length | 2 positions               |

## Values

See subfields.

## Application notes

The Dual Message Authorization System inserts this subelement when PAN Mapping Service was performed on the transaction. Subelement 33 may be used for research or audit purposes but need not be used for processing authorization messages.

Acquirers will receive subelement 33 in contact M/Chip, contactless magnetic stripe, or contactless M/Chip transactions when the issuer is participating in the Contactless Mapping Service. Acquirers will also receive subelement 33 in contactless M/Chip, contactless magnetic stripe, magnetic stripe, or Digital Secure Remote Payment transactions when the issuer is participating in the Mastercard Digital Enablement Service. Acquirers do not receive subelement 33 for the Mastercard In Control™ Purchase Control Service or Mastercard In Control Virtual Card Spend Control Service.

Issuers that issue contactless cards or devices that provide a primary account number (PAN) within a transaction different from what is embossed on the card, must ensure that the following is provided in Authorization Request Response/0110 messages when responding to MCC 4111, 4131, 4784, 7523 transactions.

- The value E in DE 48, subelement 33, subfield 1 (Account Number Indicator)

- The embossed number in DE 48, subelement 33, subfield 2 (Account Number)
- The card expiration date of the embossed number in DE 48, subelement 33, subfield 3 (Expiration Date)

Acquirers processing transactions for merchant categories 4111, 4131, 4784, and 7523 must pass the PAN Mapping information back to the merchants.

## Subfield 1 (Account Number Indicator)

[DE 48](#), subelement 33, subfield 1 (Account Number Indicator) indicates the type of PAN mapping account.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 01                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-1                   |
| Data Field           | Contents of subfield 1 |
| Justification        | N/A                    |

### Values

| Value | Description                                                      |
|-------|------------------------------------------------------------------|
| C     | Mastercard Digital Enablement Service Secure Element Token       |
| E     | Embossed Account Number Provided by Issuer                       |
| F     | Mastercard Digital Enablement Service Static Token               |
| H     | Mastercard Digital Enablement Service Cloud-based Payments Token |
| L     | Pay with Rewards Loyalty Program Operator [LPO] Card             |
| M     | Primary Account Number                                           |
| P     | Contactless Account Number                                       |
| R     | Pay with Rewards Card                                            |
| V     | Virtual Card Number                                              |

## Subfield 2 (Account Number)

DE 48, subelement 33, subfield 2 (Account Number) indicates the PAN mapping account number.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 02                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | n...19; LLVAR          |
| Data Field           | Contents of subfield 2 |
| Justification        | N/A                    |

### Values

| Value            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Acquirer message | <p>Contains primary account number:</p> <ul style="list-style-type: none"> <li>When Mastercard performs token mapping or subfield 2 is provided when using a third party token service provider, subfield 2 contains only the last four digits of the cardholder's PAN.</li> <li>The Dual Message Authorization System will continue to send the full account number for tokenized In Control VCN transactions, and when DE 18 (Merchant Type) contains any of the following MCCs: <ul style="list-style-type: none"> <li>MCC 3246: RyanAir</li> <li>MCC 4111: Transportation-Suburban and Local Commuter Passenger, including Ferries</li> <li>MCC 4112: Passenger Railways</li> <li>MCC 4131: Bus Lines</li> <li>MCC 4511: Air Carries, Airlines- Not Else Where Classified</li> <li>MCC 4784: Bridge and Road Fees, Tolls</li> <li>MCC 7523: Automobile Parking Lots and Garages</li> </ul> </li> </ul> |
| Issuer message   | <p>Contains virtual number or token</p> <p>For Mastercard Digital Enablement Service transactions, subfield 2 is the token rather than the primary account number, if subfield 1 value is C, H, or F.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## Subfield 3 (Expiration Date)

DE 48, subelement 33, subfield 3 (Expiration Date) indicates the expiration date of the PAN mapping account.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 03                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | n-4; format YYMM       |
| Data Field           | Contents of subfield 3 |
| Justification        | N/A                    |

### Values

| Value            | Description                                                                                                                                                                                                                                                                                                                                 |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Acquirer message | <p>Will contain the expiration date when</p> <ul style="list-style-type: none"> <li>The issuer provided one for a PAN mapping record added to the MCC106 PAN Mapping File, or</li> <li>A transit transaction response contains MCC 4111, 4131, 4784, and 7523, or</li> <li>The Mastercard Digital Enablement Service was applied</li> </ul> |
| Issuer message   | <p>May contain virtual card number or token expiration date only if acquirer provided in DE 14 of the authorization message.</p> <p>For contactless transit transactions, subfield 3 is the expiration date of the embossed number rather than the virtual number, if subfield 1 value is E.</p>                                            |

## Subfield 4 (Product Code)

[DE 48](#), subelement 33, subfield 4 (Product Code) may indicate the product code for subfield 2 account number.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 04                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-3                   |
| Data Field           | Contents of subfield 4 |
| Justification        | N/A                    |

### Values

Subfield 4 may contain product code for subfield 2 account number.

## Subfield 5 (Token Assurance Method)

[DE 48](#), subelement 33, subfield 5 (Token Assurance Method) contains a value indicating the confidence level of the token to PAN/cardholder binding.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 05                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | n-2                    |
| Data Field           | Contents of subfield 5 |
| Justification        | N/A                    |

### Values

Contains a value indicating the confidence level of the token to PAN/cardholder relationship.

### Valid values

| TAM Values | TAM Name                                                             | Authentication Use Case/MA Services                                                                                                                          |
|------------|----------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10         | Card Issuer Account Verification                                     | Successful TAR, AS, ASI response with no authentication                                                                                                      |
| 11         | Card Issuer Interactive Cardholder Authentication – 1 Factor         | Token authenticated using MDES Authentication Service (OTP)                                                                                                  |
| 14         | Card Issuer Asserted Authentication                                  | Push Provisioning into without additional authentication beyond Issuer's own application                                                                     |
| 20         | Push Provisioned Token with Additional Interactive Authentication    | Push Provisioned token with MDES Authentication service following token creation                                                                             |
| 21         | Push Provisioned Token with Additional Identity Check Authentication | Push Provisioned token with Identity Check authentication following token creation                                                                           |
| 22         | Identity Check Risk-based Cardholder Authentication                  | Token authenticated via Identity Check Risk-based authentication (no cardholder challenge)                                                                   |
| 23         | Identity Check Interactive Cardholder Authentication                 | Token authenticated via Identity Check Interactive step-up (cardholder challenge)                                                                            |
| 24         | Token with device-asserted authentication                            | A Companion Cloud Token or Recurring Payment Cloud Token provisioned from an existing device token, where proof of authentication was provided and validated |

### Application notes

Subfield 5 is optional for acquirers in the Authorization Request/0100 message. Acquirers may receive the value back in an Authorization Request Response/0110 message.

### Subfield 6 (Token Requestor ID)

[DE 48](#), subelement 33, subfield 6 (Token Requestor ID) contains the ID assigned by the Token Service Provider to the Token Requestor.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 06          |
| Subfield Data Length | 2 positions |
| Data Representation  | n-11        |

| Attribute     | Description            |
|---------------|------------------------|
| Data Field    | Contents of subfield 6 |
| Justification | N/A                    |

### Values

Contains the ID assigned by the Token Service Provider to the Token Requestor. The Token Requestor ID is optional for all token types.

### Application notes

Subfield 6 is optional but should be included in messages sent to Mastercard by the acquirer if provided to the acquirer by the merchant. Acquirers may receive the value back in an Authorization Request Response/0110 message.

## Subfield 7 (Primary Account Number, Account Range)

[DE 48](#), subelement 33, subfield 7 (Primary Account Number, Account Range) carries either the first nine digits of the cardholder PAN, or the full Visa cardholder PAN in the authorization response for a transaction initiated with a Visa token.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 07                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | n...19; LLVAR          |
| Data Field           | Contents of subfield 7 |
| Justification        | N/A                    |

### Values

The first nine digits of the Visa cardholder PAN, or the full Visa cardholder PAN. Acquirers must be aware that this information must not be forwarded to their merchants.

## Subfield 8 (Storage Technology)

[DE 48](#), subelement 33, subfield 8 (Storage Technology) describes the Storage Technology of a requested or created token.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 08                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-2                   |
| Data Field           | Contents of subfield 8 |
| Justification        | N/A                    |

### Usage

Following is the usage of [DE 48](#), subelement 33, subfield 8 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

### Values

| Value | Description   |
|-------|---------------|
| 01    | Device Memory |

| Value | Description                                              |
|-------|----------------------------------------------------------|
| 02    | Device Memory protected by Trusted Platform Module (TPM) |
| 03    | Server                                                   |
| 04    | Trusted Execution Environment (TEE)                      |
| 05    | Secure Element (SE)                                      |
| 06    | Virtual Execution Environment (VEE)                      |

### Application notes

Subfield 8 is optional but should be included in messages sent to Mastercard by the acquirer if provided to the acquirer by the merchant. Acquirers may receive the value back in an Authorization Request Response/0110 message.

## Subelement 34 (ATC Information)

[DE 48](#), subelement 34 (ATC Information) supports On-behalf Services.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 34                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | an-11                 |
| Data Field             | Contents of subfields |
| Subfields              | 3                     |
| Justification          | See subfields         |

### Usage

Following is the usage of subelement 34 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | .   | X   | C   |

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Advice/0120: system-generated | .   | X   | C   |

## Values

See subfields.

## Application notes

The Dual Message Authorization System inserts this subelement when the Dynamic CVC 3 Pre-validation Service (OBS 15), Dynamic CVC 3 Validation in Stand-In Processing Service (OBS 16), M/Chip Cryptogram Pre-validation Service (OBS 02), or M/Chip Cryptogram Validation in Stand-In Processing Service (OBS 03) was performed on the transaction and the validation result was V (Valid), A (Valid AC; ATC outside allowed range), E (Valid AC; ATC Replay), T (Valid ARQC/TC and ATC; TVR/CVR invalid), or G (Application Cryptogram is valid but not an ARQC; status of TVR/CVR unknown).

## Chip Services

| Value | Description                                                                        |
|-------|------------------------------------------------------------------------------------|
| V     | Valid ARQC/TC and ATC and TVR/CVR                                                  |
| A     | Valid Application Cryptogram; ATC out of range                                     |
| E     | Valid Application Cryptogram; ATC replay                                           |
| T     | Valid ARQC/TC and ATC; TVR/CVR invalid                                             |
| G     | Application Cryptogram valid but not an ARQC; ATC valid; status of TVR/CVR unknown |

## CVC Services

| Value | Description                    |
|-------|--------------------------------|
| V     | Valid CVC3 and ATC and TVR/CVR |
| A     | Valid CVC3; ATC out of range   |
| E     | Valid CVC; ATC replay          |

These results are found in [DE 48](#), subelement 71, subfield 2 (On-behalf [OB] Result 1).

Subelement 34 should be used for processing authorization messages and maintaining the ATC values on the issuer host. Subfields 1–3 are always present.

The following ATC information will be provided in Dual Message Authorization System and Single Message System financial transaction requests and advices to issuers for MDES transactions initiated with a token, when available. ATC information will not be provided in declined advices.

- [DE 48](#), subelement 34, subfield 1 (ATC Value)
- [DE 48](#), subelement 34, subfield 2 (ATC Discrepancy Value)
- [DE 48](#), subelement 34, subfield 3 (ATC Discrepancy Indicator)

## Subfield 1 (ATC Value)

[DE 48](#), subelement 34, subfield 1 (ATC Value) contains the derived full ATC Value used in the validation.

### Attributes

| Attribute           | Description                    |
|---------------------|--------------------------------|
| Data Representation | n-5                            |
| Data Field          | Contents of positions 1-5      |
| Justification       | Right-justified, leading zeros |

## Subfield 2 (ATC Discrepancy Value)

[DE 48](#), subelement 34, subfield 2 (ATC Discrepancy Value) is the differential between the transaction ATC and the maximum value allowed by the issuer when the transaction ATC is above the previous ATC, or the differential between the transaction ATC and the minimum value allowed by the issuer when the transaction ATC is below the previous ATC. ATC Discrepancy Value will be zero when the transaction ATC is within the issuer-defined limits.

### Attributes

| Attribute           | Description                    |
|---------------------|--------------------------------|
| Data Representation | n-5                            |
| Data Field          | Contents of positions 6-10     |
| Justification       | Right-justified, leading zeros |

## Subfield 3 (ATC Discrepancy Indicator)

DE 48, subelement 34, subfield 3 (ATC Discrepancy Indicator) indicates if the ATC Discrepancy Value is above, below, or within the maximum values allowed by the issuer.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | an-1                    |
| Data Field          | Contents of position 11 |
| Justification       | N/A                     |

### Values

#### Values

| Value | Description                                                            |
|-------|------------------------------------------------------------------------|
| G     | Indicates that the ATC value is greater than the maximum value allowed |
| L     | Indicates that the ATC value is lower than the minimum value allowed   |
| W     | Indicates that the ATC value is within the issuer-defined limits       |

## Subelement 34 subfield data examples

Following are examples of how data may appear in subfield 1, subfield 2, and subfield 3.

### Example 1

Last valid ATC value processed by Mastercard was 00011.

Issuer provided a maximum allowed range of 00035.

$00011 + 00035 = 00046$ , which represents the maximum ATC value, allowed in the next transaction.

The derived value of the ATC in the next transaction is 00088.

The ATC Discrepancy Value for this transaction is 42 which represents the difference between the maximum ATC value allowed 00046 and the derived ATC value from the transaction 00088.

Subelement 34 will contain the following:

- Subfield 1 = 00088

- Subfield 2 = 00042
- Subfield 3 = G

### Example 2

Last valid ATC value processed by Mastercard was 00068.

Issuer provided a minimum allowed range of 00035.

$00068 - 00035 = 00033$ , which represents the minimum ATC value allowed in the next transaction.

The derived value of the ATC in the next transaction is 00020.

The ATC Discrepancy Value for this transaction is 13, which represents the difference between the minimum ATC value allowed 00033 and the derived ATC value from the transaction 00020.

Subelement 34 will contain the following:

- Subfield 1 = 00020
- Subfield 2 = 00013
- Subfield 3 = L

### Example 3

Last valid ATC value processed by Mastercard was 00037.

Issuer provided a maximum allowed range of 00005.

$00037 + 00005 = 00042$ , which represents the maximum ATC value allowed in the next transaction.

The derived value of the ATC in the next transaction is 00040.

The ATC Discrepancy Value for this transaction is 0 because the derived value of the ATC in the next transaction 00040 is greater than the last valid ATC value 00037 and below the maximum ATC value allowed in the next transaction 00042.

Subelement 34 will contain the following:

- Subfield 1 = 00040
- Subfield 2 = 00000
- Subfield 3 = W

## Subelement 35 (Contactless Non-Card Form Factor Request/Response)

[DE 48](#), subelement 35 (Contactless Non-Card Form Factor Request/Response) supports Contactless Mapping Service.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 35                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | an-1                   |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Following is the usage of subelement 35 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | •   | X   | C   |
| Authorization Request Response/0110 | C   | X   | •   |

### Values

The contactless issuer will receive the Authorization Request/0100 message containing [DE 48](#), subelement 35, value R (Cardholder request for device).

The contactless issuer should respond with an Authorization Request Response/0110 message containing [DE 48](#), subelement 35, value A (Approve cardholder request for device) or D (Decline cardholder request for device).

### Application notes

Issuers choosing the Contactless Mapping Service "Processing and Issuance of devices" participation option (Passive Participation) will receive an Authorization Request/0100 message

when a cardholder requests a contactless device from the issuer-branded, secure website hosted by Mastercard. The issuer may then decide if the cardholder should receive the contactless device.

The Dual Message Authorization System will use the value in [DE 48](#), subelement 35 of the Authorization Request Response/0110 message to issue the contactless device or to decline the cardholder's request.

If an issuer chooses not to support subelement 35, the issuer-branded website will evaluate the responses provided for AVS and CVC 2 and approve or decline the cardholder request based on those values.

## Subelement 36 (Additional Visa Request Data [Visa Only])

[DE 48](#), subelement 36 (Additional Visa Request Data [Visa Only]) contains additional request data to assist Visa with its processing.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 36                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans...94; LLVAR       |
| Data Field             | Contents of subfields |
| Subfields              | 5                     |
| Justification          | See subfields         |

### Usage

Following is the usage of subelement 36 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Reversal Request/0400                         | C   | P   | C   |

## Values

See subfields.

## Subfield 1 (Merchant Verification Value [MVV])

[DE 48](#), subelement 36, subfield 1 (Merchant Verification Value) contains the merchant verification value for subelement 36.

## Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 1                      |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-10                  |
| Data Field           | Contents of subfield 1 |
| Justification        | N/A                    |

## Values

0–9 and A–F

## Subfield 2 (Business Application Identifier [Visa Only])

[DE 48](#), subelement 36, subfield 2 (Business Application Identifier [Visa Only]) identifies the intended use of a Visa-branded transaction.

## Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 2                      |
| Subfield Data Length | 2 positions            |
| Data Representation  | a-2                    |
| Data Field           | Contents of subfield 2 |
| Justification        | N/A                    |

## Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

### Application notes

Subfield 2 (Business Application Identifier [Visa Only]) is only for use with Visa-branded transactions.

### Subfield 3 (Acceptor Legal Business Name [Visa Only])

[DE 48](#), subelement 36, subfield 3 (Acceptor Legal Business Name [Visa Only]) identifies the acceptor legal business name.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 3                      |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans...25; LLVAR        |
| Data Field           | Contents of subfield 3 |
| Justification        | N/A                    |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

### Application notes

Subfield 3 (Acceptor Legal Business Name [Visa Only]) is only for use with Visa-branded transactions.

### Subfield 4 (Payment Facilitator Name [Visa Only])

[DE 48](#), subelement 36, subfield 4 (Payment Facilitator Name [Visa Only]) identifies the payment facilitator name.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 4                      |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans...25; LLVAR        |
| Data Field           | Contents of subfield 4 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

### Application notes

Subfield 4 (Payment Facilitator Name [Visa Only]) is only for use with Visa-branded transactions.

## Subfield 5 (Purpose of Payment [Visa Only])

[DE 48](#), subelement 36, subfield 5 (Purpose of Payment [Visa Only]) identifies the purpose of payment.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 5                      |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans...12; LLVAR        |
| Data Field           | Contents of subfield 5 |
| Justification        | N/A                    |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

### Application notes

Subfield 5 (Purpose of Payment [Visa Only]) is only for use with Visa-branded transactions.

## Subelement 37 (Additional Merchant Data)

[DE 48](#), subelement 37 (Additional Merchant Data) contains subfields representing the ID of the participating service provider in a transaction and the sub-merchant ID when applicable. The service provider can be a payment facilitator, independent sales organization, or a merchant payment gateway. A transaction may involve more than one service provider.

## Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 37                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | ans...71; LLVAR           |
| Data Field             | Contents of subfields 1-5 |
| Subfields              | 5                         |
| Justification          | See subfields             |

## Usage

Following is the usage of subelement 37 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | .   | C   | C   |

## Values

See subfields.

## Application notes

Specific application notes, conditions, and cross-edits where applicable.

Valid Combinations of [DE 48](#), subelement 37, subfields 1, 2, and 3:

- Subfields 1 and 3 only
- Subfield 2 only
- Subfields 1, 2, and 3 (Mastercard only)

## Subfield 1 (Payment Facilitator ID)

[DE 48](#), subelement 37, subfield 1 (Payment Facilitator ID) contains the Payment Facilitator ID assigned by Mastercard or Visa.

### Attributes

| Attribute            | Description                        |
|----------------------|------------------------------------|
| Subfield ID          | 01                                 |
| Subfield Data Length | 2 positions                        |
| Data Representation  | n-11                               |
| Data Field           | Contents of subfield 1             |
| Justification        | Right-justified with leading zeros |

### Values

The Payment Facilitator ID must always be a value assigned by Mastercard and must be the same value in both the Dual Message Authorization and Dual Message Clearing Systems. This ID is the Company ID that will be assigned during the time of registration with Mastercard for a Service Provider as "Payment Facilitator."

The value must be provided by the acquirer when a registered payment facilitator is involved in a transaction and should be right-justified with leading zeros. For example, if the Company ID is 123456, [DE 48](#), SE 37, SF 1 should be 00000123456.

## Subfield 2 (Independent Sales Organization ID)

[DE 48](#), subelement 37, subfield 2 (Independent Sales Organization ID) contains the Independent Sales Organization ID assigned by Mastercard.

### Attributes

| Attribute            | Description                        |
|----------------------|------------------------------------|
| Subfield ID          | 02                                 |
| Subfield Data Length | 2 positions                        |
| Data Representation  | n-11                               |
| Data Field           | Contents of subfield 2             |
| Justification        | Right-justified with leading zeros |

## Values

The Independent Sales Organization ID must always be a value assigned by Mastercard and is the same value in both the Dual Message Authorization and Dual Message Clearing Systems. This ID is the "Company ID" that is assigned during the time of registration via Mastercard Connect of a service provider as "Independent Sales Organization."

This value must be provided by the acquirer when a registered independent sales organization is involved in a transaction and should be right-justified with leading zeros. For example, if the Company ID is 123456, [DE 48](#), subelement 37, subfield 2 should be 00000123456.

For Visa transactions, the Marketplace ID must always be a value assigned by Visa.

This value must be provided by the acquirer when a Visa-registered Marketplace ID is involved in a transaction and should be right-justified with leading zeros. For example, if the Marketplace ID is 12345678, [DE 48](#), subelement 37, subfield 2 should be 00012345678.

## Subfield 3 (Sponsored Merchant ID)

[DE 48](#), subelement 37, subfield 3 (Sponsored Merchant ID) contains the identifier assigned by the acquirer or the payment facilitator to the sponsored merchant and its location.

## Attributes

| Attribute            | Description                     |
|----------------------|---------------------------------|
| Subfield ID          | 03                              |
| Subfield Data Length | 2 positions                     |
| Data Representation  | ans-15                          |
| Data Field           | Contents of subfield 3          |
| Justification        | Left-justified, trailing spaces |

## Processing rules

The sponsored merchant ID must be present for all payment facilitator-acquired transactions and must uniquely identify each sponsored merchant and its location.

## Subfield 4 (Merchant Country of Origin)

[DE 48](#), subelement 37, subfield 4 (Merchant Country of Origin) contains the ISO numeric country code for the home country of the government that owns or controls the merchant that initiated the transaction.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 04                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | n-3                    |
| Data Field           | Contents of subfield 4 |
| Justification        | n/a                    |

### Values

If present, [DE 48](#), subelement 37, subfield 4 must contain a valid ISO numeric country code.

For example, embassies are physically located in countries that are not their "home country" (that is, the embassy of Mexico may be physically located in Singapore; however, the "home country" is Mexico).

### Requirements

[DE 48](#), subelement 37, subfield 4 must contain the location information of the government entity, not the location of the merchant.

### Usage

### Applicable messages

| Message Type Identifier    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | P   | C   |
| Authorization Advice/0120  | C   | P   | C   |

## Subfield 5 (Merchant Payment Gateway ID)

[DE 48](#), subelement 37, subfield 5 (Merchant Payment Gateway ID) identifies the registered Merchant Payment Gateway used by the merchant and is provided by the acquirer when a registered MPG service provider is involved in a transaction.

### Attributes

| Attribute           | Description                        |
|---------------------|------------------------------------|
| Subfield ID         | 05                                 |
| Subfield Length     | 2 positions                        |
| Data Representation | n-11                               |
| Data Field          | Contents of subfield 5             |
| Justification       | Right-justified with leading zeros |

### Values

The Merchant Payment Gateway ID is a value assigned by Mastercard. The Merchant Payment Gateway ID is assigned to Merchant Payment Gateway service provider at the time of their registration with Mastercard. The value must be right-justified with leading zeros. For example, if the Merchant Payment Gateway ID is 123456, then [DE 48](#), subelement 37, subfield 5 contains 00000123456.

## Subelement 38 (Account Category)

[DE 48](#), subelement 38 (Account Category) supports Account Level Management.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 38                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | an-1                   |
| Data Field             | Contents of position 1 |
| Subfields              | NA                     |
| Justification          | NA                     |

## Usage

Following is the usage of subelement 38 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | •   | X   | C   |
| Authorization Advice/0120: system-generated | •   | X   | C   |
| Reversal Advice/0420                        | •   | X   | C   |

For a complete valid values listing, refer to the *Account Level Management Manual*.

## Subelement 39 (Account Data Compromise Information)

[DE 48](#), subelement 39 (Account Data Compromise Information) contains confirmed or suspected account data compromise event information for account ranges.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 39                         |
| Subelement Data Length | 2 positions                |
| Data Representation    | ans-30                     |
| Data Field             | Contents of positions 1–30 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

## Usage

Following is the usage of subelement 39 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | .   | X   | C   |
| Authorization Advice/0120: system-generated | .   | X   | C   |

### Positions 1–3 (Reserved for Future Use)

| Data Representation | n-3                       |
| Data Field          | Contents of positions 1–3 |
| Values              | 000 = Not available       |

### Positions 4–6 (Reserved for Future Use)

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Field          | Contents of positions 4–6 |
| Values              | N/A                       |

### Positions 7–12 (Case Key Code number 1)

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans-6                       |
| Data Field          | Contents of positions 7–12  |
| Values              | Unique Key to Identify Case |

### Positions 13–18 (Case Key Code number 2)

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | ans-6       |

| Attribute  | Description                 |
|------------|-----------------------------|
| Data Field | Contents of positions 13–18 |
| Values     | Unique Key to Identify Case |

#### Positions 19–24 (Case Key Code number 3)

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans-6                       |
| Data Field          | Contents of positions 19–24 |
| Values              | Unique Key to Identify Case |

#### Position 25 (Account Number)

| Attribute           | Description                                                         |
|---------------------|---------------------------------------------------------------------|
| Data Representation | n-1                                                                 |
| Data Field          | Contents of position 25                                             |
| Values              | 0–9 = Number of events in which the account number has been exposed |

#### Position 26 (Expiration Date)

| Attribute           | Description                                                      |
|---------------------|------------------------------------------------------------------|
| Data Representation | n-1                                                              |
| Data Field          | Contents of position 26                                          |
| Values              | 0–9 = Number of events in which expiration date has been exposed |

#### Position 27 (CVC 2)

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | n-1                     |
| Data Field          | Contents of position 27 |

| Attribute | Description                                                |
|-----------|------------------------------------------------------------|
| Values    | 0–9 = Number of events in which the CVC 2 has been exposed |

#### Position 28 (PIN)

| Attribute           | Description                                              |
|---------------------|----------------------------------------------------------|
| Data Representation | n-1                                                      |
| Data Field          | Contents of position 28                                  |
| Values              | 0–9 = Number of events in which the PIN has been exposed |

#### Position 29 (Magnetic Stripe)

| Attribute           | Description                                                          |
|---------------------|----------------------------------------------------------------------|
| Data Representation | n-1                                                                  |
| Data Field          | Contents of position 29                                              |
| Values              | 0–9 = Number of events in which the Magnetic Stripe has been exposed |

#### Position 30 (Personal Information)

| Attribute           | Description                                                                            |
|---------------------|----------------------------------------------------------------------------------------|
| Data Representation | n-1                                                                                    |
| Data Field          | Contents of position 30                                                                |
| Values              | 0–9 = Number of events in which the cardholder's personal information has been exposed |

## Subelement 40 (Electronic Commerce Merchant/Cardholder Certificate Serial Number [Visa Only])

[DE 48](#), subelement 40 (Electronic Commerce Merchant/Cardholder Certificate Serial Number [Visa Only]) contains certificate information on electronic commerce transactions when applicable.

### Attributes

| Attribute              | Description                                               |
|------------------------|-----------------------------------------------------------|
| Subelement ID          | 40                                                        |
| Subelement Data Length | 2 positions                                               |
| Data Representation    | n...40 (also contains binary data. See subfields.); LLVAR |
| Data Field             | Contents of subfields                                     |
| Subfields              | 2                                                         |
| Justification          | N/A                                                       |

### Usage

Following is the usage of subelement 40 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | C   | P   | C   |
| Authorization Request Response/0110         | C   | P   | C   |
| Authorization Advice/0120: system-generated | •   | X   | C   |

### Values

Contains the contents of subfield 1 or subfield 2 or both.

## Subfield 1 (Merchant Certificate Serial Number)

[DE 48](#), subelement 40, subfield 1 (Merchant Certificate Serial Number) is the Merchant Certificate Serial Number in binary data.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 01                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | b...16; LLVAR          |
| Data Field           | Contents of subfield 1 |
| Justification        | N/A                    |

### Values

Merchant Certificate Serial Number must be binary data. Be aware that the subfield ID and subfield length fields must still be given as numeric data.

## Subfield 2 (Cardholder Certificate Serial Number)

[DE 48](#), subelement 40, subfield 2 (Cardholder Certificate Serial Number) is the cardholder certificate serial number in binary format.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 02                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | b...16; LLVAR          |
| Data Field           | Contents of subfield 2 |
| Justification        | N/A                    |

### Values

Cardholder Certificate Serial Number must be binary data. Be aware that the subfield ID and subfield length fields must still be given as numeric data.

## Subelement 41 (Electronic Commerce Certificate Qualifying Information)

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 41                    |
| Subelement Data Length | 2 positions           |

| Data Representation  | ans...26; LLVAR |
| Justification        | N/A             |

### Values

| Field Name/Positions                                  | Type         | Size | Comment                                                                                                                                                               |
|-------------------------------------------------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Recurring Payment Mandate Type (Position 1)           | Numeric      | 1    | Values are:<br>1 = fixed amount Recurring Payment<br>2 = Recurring Payment with maximum amount                                                                        |
| Recurring Payment Transaction Type (Position 2)       | Numeric      | 1    | Values are:<br>1 = registration/first transaction<br>2 = subsequent transaction                                                                                       |
| Validation Flag (Position 3)                          | Numeric      | 1    | Values are:<br>0 = not validated<br>1 = validated                                                                                                                     |
| Maximum Recurring Payment Amount (Positions 4 – 13)   | Numeric      | 10   | Maximum amount agreed to by the cardholder.<br><br>Amount will be specified in DE 49 (Currency Code, Transaction).<br>Example: 1800.00 as 180000, with leading zeros. |
| Registered Transaction Identifier (Positions 14 – 23) | Alphanumeric | 10   | Unique identifier for Recurring Payments mandate                                                                                                                      |

Data element definitions and details  
Subfield 1 (Additional Recurring Payments Information)

| Field Name/Positions                             | Type    | Size | Comment                                                                                                                                                                                                         |
|--------------------------------------------------|---------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Number of Recurring Payments (Positions 24 – 25) | Numeric | 2    | Indicates the number of recurring payment debits. With leading zeros.<br><br>Value of 99 means that recurring payments are authorized until canceled or that the Number of Recurring Payments is not indicated. |
| Recurring Payment Frequency (Position 26)        | Numeric | 1    | Identifies frequency of the Recurring Payments debit.<br><br>Values are:<br>0 – annually<br>1 – daily<br>2 – weekly<br>3 – fortnightly<br>4 – monthly<br>5 – quarterly<br>6 – twice-yearly<br>8 – ad hoc        |

### Application notes

Subfield 1 facilitates the communication of additional data related to recurring payments between acquirers and issuers. Issuers in India and acquirers globally must comply with applicable local laws and regulations issued by the Reserve Bank of India (RBI) when processing card-based transactions. Mastercard is not enforcing edits to check the presence or content of any data.

[DE 48](#), subelement 41, subfield 1 will include and echo back additional data in Authorization Request Response/0110 message enrollment and first transaction of the standing order instructions, and subsequent recurring transactions within the Authorization Request Response/0110 message.

[DE 48](#), subelement 41, subfield 1 will include and echo back additional data to the acquirer, regardless of issuer interaction.

| Subelement ID          | 42                                                                                                 |
| Subelement Data Length | 2 positions                                                                                        |
| Data Representation    | n-7 unless an Identity Check downgrade or MDES SLI modification occurs in which case n-19 applies. |

| Attribute     | Description                                                                                                                                                                               |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Data Field    | Contents of subfield 1 (except contents of subfields 1, 2, and 3 for acquirer Authorization Request Response/0110 messages if Identity Check downgrade or MDES SLI modification occurred) |
| Subfields     | 3                                                                                                                                                                                         |
| Justification | N/A                                                                                                                                                                                       |

## Usage

Subelement 42 must be present in all Authorization Request/0100 messages for electronic commerce transactions. Following is the usage of subelement 42 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Request Response/0110           | CE  | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |
| Reversal Request/0400                         | C   | X   | C   |
| Reversal Advise/0420                          | •   | X   | C   |

## Values

If Identity Check downgrade or MDES SLI modification did not occur, contains the electronic commerce security level indicator and UCAF collection indicator data in subfield 1 that consists of a valid combination of positions 1, 2, and 3.

If Identity Check downgrade or MDES SLI modification occurred, contains contents of subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection Indicator), subfield 2 (Original Electronic Commerce Security Level Indicator and UCAF Collection Indicator), and subfield 3 (Reason for UCAF Collection Indicator Downgrade) for acquirer Authorization Request Response/0110 messages.

## Application notes

A Mastercard Identity Check transaction is downgraded to a non-Identity Check transaction if an Accountholder Authentication Value (AAV) is not present or is invalid in [DE 48](#), subelement 43 (Universal Cardholder Authentication Field [UCAF]).

For transactions initiated with Mastercard Digital Enablement Service (MDES) Tokens, Mastercard provides Dual Message Authorization System edits that validate and when necessary, modify the Security Level Indicator (SLI) in [DE 48](#), subelement 42, subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection indicator) in Authorization Request/0100 messages.

Mastercard sends the correct SLI to the issuer in Authorization Request/0100 messages for MDES transactions.

Mastercard notifies acquirers when the SLI has been corrected by inserting two additional [DE 48](#), subelement 42 indicators, as follows. All acquirers must be ready to receive [DE 48](#), subelement 42, subfield 2 (Original Electronic Commerce Security Level Indicator and UCAF Collection Indicator), and subfield 3 (Reason for UCAF Collection Indicator Downgrade) in the Authorization Request Response/0110 messages.

## Subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection Indicator)

[DE 48](#), subelement 42, subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection Indicator) indicates the electronic commerce security level and UCAF collection in positions 1, 2, and 3.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 01                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | n-3                       |
| Data Field           | Contents of positions 1-3 |
| Justification        | N/A                       |

### Values

Valid combination of the security level indicators in positions 1 and 2 and the UCAF collection indicator in position 3.

## Position 1 (Security Protocol)

### Attributes

| Attribute           | Description                                      |
|---------------------|--------------------------------------------------|
| Data Representation | n-1                                              |
| Data Field          | The electronic commerce security level indicator |

### Values

| Value | Description                                              |
|-------|----------------------------------------------------------|
| 0     | Reserved for existing Mastercard Europe/Visa definitions |
| 1     | Reserved for future use                                  |
| 2     | Channel                                                  |
| 3–8   | Reserved for future use                                  |

## Position 2 (Cardholder Authentication)

### Attributes

| Attribute           | Description                             |
|---------------------|-----------------------------------------|
| Data Representation | n-1                                     |
| Data Field          | The cardholder authentication indicator |

### Values

| Value | Description                |
|-------|----------------------------|
| 0     | Reserved for future use    |
| 1     | eCommerce / Identity Check |
| 3     | Reserved for future use    |
| 4     | Tokenized payment          |
| 5–9   | Reserved for future use    |

### Valid Combinations of Position 1 and Position 2

| Value | Description                                                                                                       |
|-------|-------------------------------------------------------------------------------------------------------------------|
| 21    | Channel encryption; cardholder certificate not used (this is the preferred value for Mastercard® Identity Check™) |
| 24    | Tokenized Payment                                                                                                 |

### Position 3 (UCAF Collection Indicator)

#### Attributes

| Attribute           | Description                   |
|---------------------|-------------------------------|
| Data Representation | n-1                           |
| Data Field          | The UCAF collection indicator |

#### Values

| Value | Description                                                                                                                                                                                                                                                                                                             |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0     | Non-authenticated payment, Identity Check transaction with failed authentication, or Tokenized Payment with Dynamic Token Verification Code (DTVC).                                                                                                                                                                     |
| 1     | UCAF data collection is supported by the merchant, and UCAF data must be present ( <a href="#">DE 48</a> , subelement 43 must be present and contain an attempt AAV for Mastercard Identity Check)                                                                                                                      |
| 2     | UCAF data collection is supported by the merchant, and UCAF data must be present ( <a href="#">DE 48</a> , subelement 43 must contain a fully authenticated AAV, and DSRP cryptogram shall be optionally present for tokenized transactions). This includes cardholder-initiated transactions (CIT) for authentication. |
| 3     | UCAF data collection is supported by the merchant, and UCAF (Mastercard assigned Static Accountholder Authentication Value) data must be present.                                                                                                                                                                       |

**NOTE:** [DE 48](#), subelements 32 and 43 are required for Static AAV transactions.

Identifies participation in one of the following programs:

- Maestro Recurring Payments Program
- Mastercard Utility Payment Program
- Maestro Low Risk Merchant Program
- Maestro Static AAV for Masterpass

| Value | Description                                                                                                                                                                                                      |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4     | Merchant has chosen to share authentication data within authorization; UCAF data collection must be present ( <a href="#">DE 48</a> , subelement 43 must contain an Insights AAV for Mastercard Identity Check). |
| 5     | Reserved for future use                                                                                                                                                                                          |
| 6     | Merchant Risk Based Decisioning                                                                                                                                                                                  |
| 7     | Merchant-initiated transactions ( <a href="#">DE 48</a> , subelement 43 only required for Identity Check).                                                                                                       |
| 8–9   | Reserved for future use                                                                                                                                                                                          |

### Valid Combinations of Position 1, Position 2 and Position 3

| Value | Description                                                                                                                                                                                                                                                                               |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 210   | Present in unauthenticated transactions, or in transactions where an Identity Check merchant has chosen not to undertake Identity Check, or where Identity Check failed authentication and the merchant desires to proceed with the transaction. Also present in transactions with a DTVC |
| 211   | Mastercard Identity Check transaction. UCAF data contains either an Attempts AAV or a Non-Low Risk AAV for Mastercard Identity Check from Smart Authentication                                                                                                                            |
| 212   | Mastercard Identity Check transaction. UCAF data contains a fully authenticated AAV for Mastercard Identity Check or a Low-Risk AAV for Mastercard Identity Check from Smart Authentication                                                                                               |
| 214   | Mastercard Identity Check where merchant has chosen to share data to generate insights within the authorization (used in Identity Check™ Insights or Ekata transactions). Insights or Ekata scores are provided to the Issuer in <a href="#">DE 48</a> , subelement 56                    |
| 216   | Mastercard Identity Check transaction. Merchant Risk Based Decisioning. This includes European PSD2 Acquirer Exemption transactions                                                                                                                                                       |

| Value | Description                                                                                                                                                                                                                |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 217   | Mastercard Identity Check transaction. Merchant Initiated Transactions<br><br><b>NOTE: Mastercard Identity Check split shipments should be managed as 1 authentication, 1 authorization and multiple clearing records.</b> |
| 242   | Authenticated tokenized transaction with DSRP cryptogram. Transaction is not eligible for fraud-related chargeback by the issuer                                                                                           |
| 246   | Tokenized transaction with DSRP cryptogram                                                                                                                                                                                 |
| 247   | Tokenized Merchant Initiated Transaction                                                                                                                                                                                   |

### Application Notes

For Visa Gateway 3-D Secure transactions the following mapping applies:

- Position 3 "0" maps to Field 60 SLI = 07 (Not Authenticated)
- Position 3 "1" maps to Field 60 SLI = 06 (3-D Secure merchant, not authenticated)
- Position 3 "2" maps to Field 60 SLI = 05 (Authenticated with CAVV)

For American Express Gateway 3-D Secure transactions the following mapping applies:

- Position 3 "0" maps to Field 61 SLI = 07 (Not Authenticated)
- Position 3 "1" maps to Field 61 SLI = 06 (Attempted with AEVV)
- Position 3 "2" maps to Field 61 SLI = 05 (Authenticated with AEVV)

SLI is the level of security used when a cardmember provides payment information to the merchant during authentication.

JCB and Diners Club use the same Position 3 values (0, 1, and 2) as defined for Mastercard Identity Check.

## Subfield 2 (Original Electronic Commerce Security Level Indicator and UCAF Collection Indicator)

[DE 48](#), subelement 42, subfield 2 (Original Electronic Commerce Security Level Indicator and UCAF Collection Indicator) describes the original Security Level Indicators sent by the acquirer in the Authorization Request/0100 message before the Identity Check downgrade or MDES SLI modification occurred.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 02                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | n-3                       |
| Data Field           | Contents of positions 1-3 |
| Justification        | N/A                       |

### Positions

| Position | Description               |
|----------|---------------------------|
| 1        | Security Protocol         |
| 2        | Cardholder Authentication |
| 3        | UCAF Collection Indicator |

## Subfield 3 (Reason for UCAF Collection Indicator Downgrade)

[DE 48](#), subelement 42, subfield 3 (Reason for UCAF Collection Indicator Downgrade) describes the reason why the Authorization Request/0100 message was downgraded or modified.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 03                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | n-1                    |
| Data Field           | Contents of subfield 3 |
| Justification        | N/A                    |

### Values

| Value | Description                                              |
|-------|----------------------------------------------------------|
| 0     | Missing Universal Cardholder Authentication Field (UCAF) |
| 1     | Invalid Universal Cardholder Authentication Field (UCAF) |
| 2     | Invalid Security Level Indicator                         |
| 3     | X-Code Processing                                        |

### Application notes

A Mastercard Identity Check transaction is downgraded to a non-Identity Check transaction if:

- An Accountholder Authentication Value (AAV) is not present
- An Accountholder Authentication Value (AAV) is invalid in [DE 48](#), subelement 43 (Universal Cardholder Authentication Field [UCAF])
- During X-Code processing, validation is not performed, following which a downgrade reason value 3 is provided

[DE 48](#), subelement 42, subfields 2 and 3 are only present in the Authorization Request Response/0110 message provided by Mastercard to the acquirer if an Identity Check downgrade or MDES SLI modification occurred.

The message format sent in the acquirer Authorization Request Response/0110 message will be in the format 0103xxx0203yyy0301z only if the Identity Check downgrade occurs. Otherwise, the message format will remain as it is today which is 0103xxx.

**NOTE:** [DE 48](#), subelement 42, subfields 2 and 3 will always be submitted together.

## Subelement 43 (Universal Cardholder Authentication Field [UCAF])

DE 48, subelement 43 (Universal Cardholder Authentication Field [UCAF]) contains the encoded Mastercard Identity Check AAV (Accountholder Authentication Value) resulting from all Identity Check fully authenticated or attempts transactions, data for Visa, JCB, Diners Club, or American Express transactions associated with the 3-D Secure Electronic Commerce Verification Service (if collected), or the Static AAV assigned by Mastercard for Maestro Recurring Payments Program, Mastercard Utility Payment Program, or Maestro Low Risk Merchant Program.

Digital Secure Remote Payments (DSRP) submitted as Electronic Commerce (POS entry mode [DE 22](#), subfield 1, value of 10 or 81) transactions should use [DE 104](#) for communicating the MDES and DSRP cryptogram and other Digital Payment information. Refer to the [Digital Secure Remote Payments: UCAF Formats](#) and *MDES Technical Specifications for Dual and Single Message Systems* guides for information on the UCAF formats supported by Mastercard.

## Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 43                         |
| Subelement Data Length | 2 positions                |
| Data Representation    | ans...32; LLVAR            |
| Data Field             | Contents of positions 1-32 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

## Usage

Subelement 43 must be present whenever UCAF data is collected for electronic commerce transactions. Following is the usage of subelement 43 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Request Response/0110           | CE  | XE  | CE  |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |
| Reversal Request/0400                         | C   | X   | C   |
| Reversal Request Response/0410                | CE  | XE  | CE  |
| Reversal Advice/0420                          | •   | X   | C   |

## Values

Refer to the specific program or service applications for:

- [3-D Secure for Mastercard Identity Check](#)
- [3-D Secure Electronic Commerce Verification Service \(Visa or American Express\)](#)
- [Digital Secure Remote Payments](#)
- *SPA2 AAV and Verification for the Mastercard Identity Check Program*
- *MDES Technical Specifications for Dual and Single Message Systems*

## Subelement 43 (3-D Secure for Mastercard Identity Check)

DE 48 (Additional Data: Private Use), subelement 43 (3-D Secure for Mastercard Identity Check) contains UCAF data and is described here for Mastercard Implementation of 3-D Secure for Mastercard Identity Check.

### Attributes

| Attribute           | Value                      |
|---------------------|----------------------------|
| Subelement ID       | 43                         |
| Subelement Length   | 2 positions                |
| Data Representation | ans-28 (base 64 encoded)   |
| Data Field          | Contents of positions 1-28 |
| Subfields           | N/A                        |
| Justification       | N/A                        |

### Values

Values are transaction-specific. Positions 1 and 2 of the Mastercard 3-D Secure SPA AAV are control bytes indicating the Mastercard Identity Check platform that created the field contents.

SLI 211 with h and SLI 212 with j are downgraded to SLI 210 (unauthenticated).

### Mastercard Identity Check Platform

|                                                                                                                                                     |                                                                            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| <b>SPA2 Values for Smart Authentication non-low risk and Attempts Only authenticated SLI value 211</b>                                              |                                                                            |
| kE, kF, kL, kM                                                                                                                                      |                                                                            |
| <b>SPA2 Values for fully authenticated and CIT (cardholder-initiated transaction) and Smart Authentication low risk authenticated SLI value 212</b> |                                                                            |
| kA, kB, kC, kD, kG, kH, kJ, kK, kQ, kR, kS, kT                                                                                                      |                                                                            |
| <b>SPA2 Values for Insights authenticated SLI value 214</b>                                                                                         | <b>SPA2 Values for PSD2 Acquirer Exemption authenticated SLI value 216</b> |
| kX, kY, kZ                                                                                                                                          | kN, kU, kV, kW                                                             |
| <b>SPA2 Values for Recurring MIT (merchant initiated transactions) authenticated SLI value 217</b>                                                  |                                                                            |
| kO, kP                                                                                                                                              |                                                                            |

**NOTE:** Control byte kQ is defined for AAV Refresh with SLI = 212, and kF is defined for Attempts Only with SLI = 211. Attempts Only indicates that authentication was attempted by the merchant but was not performed either by the issuer or by Mastercard Identity Check Smart Authentication Stand-In solution.

**NOTE:** SPA2 AAV leading indicator values i, l, m, and n are reserved for future use.

### Application notes

Mastercard will continue to modify the SLI value in Mastercard Digital Enablement Service (MDES) transactions based on the AAV contained in [DE 48](#), subelement 43. Acquirers and issuers should expect to see Mastercard Identity Check with SecureCode SLI values in MDES transactions.

**NOTE:** Issuers must pass the correct security level indicator (SLI) value with the corresponding AAV control byte during cardholder authentication. Mastercard 3DS protocol, Identity Check Program Rules, and DW Integrity Edits do not allow sending Fully Authenticated AAVs for Smart Authentication non-low risk or Attempts Only Authentications nor Smart Authentication non-low risk or Attempts Only AAVs for Fully Authenticated Authentications. Reference: *SPA2 AAV and Verification for the Mastercard Identity Check Program*.

The following is an example of a properly coded DE 48, subelement 43 for Mastercard Identity Check for Fully Authenticated Authorization including AVS request.

T420701032124328kBMAAAAKRIacwR0SdLcB5eBIJjW

Refer to *Mastercard Identity Check Program Guide* and *SPA2 AAV and Verification for the Mastercard Identity Check Program* for more information.

**NOTE:** Issuers should not perform Identity Check validation on static AAVs in DE 48, subelement 43 nor on Mastercard Identity Check SPA2 AAV generated by Mastercard. Issuers who use the Mastercard AAV Validation Service should refer to the OBS (on-behalf services) field DE 48, subelement 71 (On-behalf Services) for services 05 and 06 services. 05 OBS AAV Verification Service is for full-time AAV verification. 06 OBS AAV Verification Service is for Stand-In Authorization when issuers perform self-validation. Issuers enroll in either the 05 OBS AAV Verification Service or the 06 OBS Stand-In AAV Verification Service.

Issuers and their ACS Providers that are sharing IAV (issuer authentication value) data within the SPA2 AAV can always read and verify this data as they have defined for the 4 hexadecimal bytes shared from their ACS Provider. The IAV can be found in hexadecimal bytes 3-6 after converting the UCAF value from base64 to hexadecimal.

The UCAF field ([DE 48](#), subelement 43) is a variable length field up to a maximum of 32 positions. The Mastercard Identity Check AAV is 28 characters in length. There must be no trailing spaces in the UCAF field.

## Subelement 43 (Digital Secure Remote Payment Universal Cardholder Authentication Field [UCAF])

DE 48, subelement 43 contains UCAF data and is described here for Mastercard Digital Secure Remote Payments (DSRP).

**NOTE: Mastercard requires acquirers to submit the DSRP cryptogram or the new token cryptogram type in DE 104 (Digital Payment Data), subelement 001 (Digital Payment Cryptogram) instead of submitting it in the existing UCAF DE 48, subelement 43 for all tokenized transactions.**

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 43                         |
| Subelement Data Length | 2 positions                |
| Data Representation    | ans-28; (base 64 encoded)  |
| Data Field             | Contents of positions 1-28 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

### Values

Transaction specific.

Refer to MDES Digital Secure Remote Payment Acquirer Implementation Guide for detailed information on the UCAF formats supported by Mastercard.

An MDES transaction might not contain DE 48, subelement 43 when the acquirer has submitted a dynamic expiration date ([DE 14](#)) and a dynamic token verification code (DE 48, subelement 92) in order to perform MDES validation services.

A Digital Secure Remote Payment transaction submitted for Mastercard Digital Enablement Service processing that involves an authorization request for a partial shipment or a recurring payment must contain the partial shipment verbiage in subelement 43 as follows: PARTIALbSHIPMENTbbbbbbbbbbbb or PARTIALSHIPMENT00000000000000 unless subelement 42 = 247 in which case subelement 43 is not required. This field contains 28 positions where b represents a space.

### Application notes

The format is version dependent.

**NOTE: Mastercard requires acquirers to submit the DSRP cryptogram in [DE 104 \(Digital Payment Data\)](#), subelement 001 (Digital Payment Cryptogram) and not in DE 48, subelement 43 (UCAF).**

## Subelement 43 (Static AAV)

[DE 48](#), subelement 43 is the Mastercard implementation of the Static AAV for Maestro Recurring Payments Program, Mastercard Utility Payment Program, Maestro Low Risk Merchant Program, or Maestro Static AAV for Masterpass.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Subelement ID       | 43                         |
| Subelement length   | 2 positions                |
| Data Representation | ans-28                     |
| Data field          | Contents of positions 1-28 |
| Subfields           | N/A                        |
| Justification       | N/A                        |

### Values

Position 1 is one of the following values:

- 3 is Transaction processed under the Maestro Recurring Payments Program
- 5 is Transaction processed under the Mastercard Utility Payment Program
- 5 is Maestro Basic Static AAV (Maestro e-commerce transaction initiated through Masterpass)

Position 2–7 is The Mastercard Assigned ID which uniquely identifies the merchant.

Position 8–28 is The merchant name, padded to the right with nines (9).

For the Maestro Low Risk Merchant Program (Europe region only), for subsequent transactions after the first Maestro e-commerce transaction with the same Maestro card, approved merchants will use [DE 48](#), subelement 43 in the Authorization Request/0100 message with the Mastercard-assigned static Accountholder Authentication Value (AAV) 5MARPPROGRAM9999999999999999 (28 positions).

### Application notes

When subelement 43 contains a Static AAV, subelement 32 (Mastercard Assigned ID) is mandatory. Issuers should not attempt Identity Check validation on a Static AAV.

## Subelement 43 (3-D Secure Electronic Commerce Verification Service [Visa, JCB, Diners Club, and American Express])

[DE 48](#), subelement 43 (3-D Secure Electronic Commerce Verification Service [Visa, JCB, Diners Club, and American Express]) is for 3-D Secure Electronic Commerce Verification Service (Visa, JCB, Diners Club, and American Express).

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 43                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | nb-21                 |
| Data Field             | Contents of subfields |
| Subfields              | 2                     |
| Justification          | N/A                   |

### Usage

Following is the usage of subelement 43 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | P   | C   |
| Reversal Request/0400      | C   | P   | C   |

### Values

See subfields.

### Application notes

Subfield 1 is not passed to external networks on Visa-branded and American Express-branded transactions. Those networks only receive subfield 2, in the respective fields for those message formats.

## Subfield 1 (3-D Secure Electronic Commerce Transaction Indicator)

DE 48, subelement 43, subfield 1 (3-D Secure Electronic Commerce Transaction Indicator) indicates that 3-D Secure authentication verification is requested on a non-Mastercard branded transaction.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data representation | n-1                    |
| Data field          | Contents of position 1 |
| Justification       | N/A                    |

### Values

| Value | Description                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------|
| 8     | Non-Mastercard 3-D Secure Electronic Commerce transaction (Visa, JCB, Diners Club, or American Express) |

## Subfield 2 (3-D Secure Electronic Commerce Cardholder Authentication Verification Value [CAVV] Visa Field 126.9 and American Express Verification Value [AEVV] AMEX field 61)

DE 48, subelement 43, subfield 2 (3-D Secure Electronic Commerce Cardholder Authentication Verification Value [CAVV] Visa Field 126.9 and American Express Verification Value [AEVV] AMEX field 61) is the 3-D Secure authentication value to be verified.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data representation | b-20                      |
| Data field          | Contents of position 2-21 |
| Justification       | N/A                       |

## Values

The 3-D Secure Electronic Commerce Visa, JCB, Diners Club, CAVV or American Express AEVV value in binary format for usage 2 and 3.

## Subelement 44 (3-D Secure Electronic Commerce Transaction Identifier [XID][Visa and American Express])

[DE 48](#), subelement 44 (3-D Secure Electronic Commerce Transaction Identifier [XID][Visa and American Express]) contains the 3-D Secure Electronic Commerce Transaction Identifier (XID).

## Attributes

| Attribute              | Description                                             |
|------------------------|---------------------------------------------------------|
| Subelement ID          | 44                                                      |
| Subelement Data Length | 2 positions                                             |
| Data Representation    | b-20                                                    |
| Data Field             | The Visa or American Express XID value in binary format |
| Subfields              | N/A                                                     |
| Justification          | N/A                                                     |

## Usage

Following is the usage of subelement 44 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | C   | P   | C   |
| Authorization Request Response/0110 | CE  | XE  | CE  |
| Reversal Request/0400               | CE  | XE  | CE  |
| Reversal Request Response/0410      | C   | X   | C   |

## Values

The Visa XID value in binary. Visa field 126.8 or the American Express XID value in binary—AMEX field 61.

### Application notes

The Visa XID value is optional in authorization messages for Visa usage 3 TransStain.

Refer to *Visa Base I Technical Specifications* for the specific formats for Visa 3-D Secure Electronic Commerce Transaction Identifier (XID).

## Subelement 45 (3-D Secure Electronic Commerce Transaction Response Code [Visa and American Express])

[DE 48](#), subelement 45 (3-D Secure Electronic Commerce Transaction Response Code) is the 3-D Secure Electronic Commerce Transaction Response Code that contains the Visa Cardholder Authentication Verification Value (CAVV) or the American Express Verification Value (AEVV) results code.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 45                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-1                      |
| Data Field             | Contents of positions 1-2 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Usage

Following is the usage of subelement 45 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | X   | C   |

### Values

Refer to *Visa Dual Message Authorization System* for field 44.13 (CAVV Results Code) for a complete list of values available for this field.

Refer to *American Express Technical Specifications* for AMEX field 61, position 9, American Express Verification Value (AEVV Results Code) for a complete list of values available for this field.

## Subelement 46 (Product ID [Visa Only])

[DE 48](#), subelement 46 (Product ID) contains the Visa Product ID value (Visa Only).

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 46                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-2                      |
| Data Field             | Contents of positions 1–2 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Usage

Following is the usage of subelement 46 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | X   | C   |
| Authorization Advice Response/0130  | C   | X   | C   |
| Reversal Request Response/0410      | C   | X   | C   |

### Values

Refer to *Visa Dual Message Authorization System* for a complete list of values for field 62.23 (Product ID).

### Application notes

Acquirers should be prepared to receive subelement 46 in Authorization Request Response/0110, Authorization Advice Response/0130, and Reversal Request Response/0410 messages when one of the following occurs:

- Subelement 90 (Custom Payment Service Request [Visa]) is included in the Authorization Request/0100 or Authorization Advice/0120: acquirer-generated messages, which the Dual Message Authorization System forwards to the Visa network.
- Subelement 90 is not included in the Authorization Request/0100 or Authorization Advice/0120: acquirer-generated message and the Authorization System sends the message non-peer-to-peer to the Visa issuer via the Visa network.

## Subelement 47 (Mastercard Payment Gateway Transaction Indicator)

[DE 48](#), subelement 47 (Mastercard Payment Gateway Transaction Indicator) indicates that the transaction is a Mastercard Payment Gateway transaction.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 47                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | ans-8                     |
| Data Field             | Contents of positions 1–8 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Usage

Following is the usage of subelement 47 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

## Subelement 48 (Digital Commerce Solutions Indicators)

[DE 48](#), subelement 48 (Digital Commerce Solutions Indicators) identifies the domain, program type and optional check-in details of a digital commerce transaction.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 48                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | ans...73; LLVAR           |
| Data Field             | Contents of subfields 1-4 |
| Subfields              | 4                         |
| Justification          | N/A                       |

### Usage

Whether the usage is mandatory, conditional, optional, system-provided, or not required is as noted for each applicable message.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | C   | X   | C   |
| Authorization Request Response/0110         | C   | X   | C   |
| Authorization Advice/0120: system-generated | •   | X   | C   |

## Values

See subfields.

## Application notes

[DE 48](#), subelement 48 is present in Authorization Request/0100, Authorization Request Response/0110, and Authorization Advice/0120 messages for specific digital commerce transactions.

## Subfield 01 (Digital Commerce Domain Identifier)

[DE 48](#), subelement 48 (Digital Commerce Solutions Indicators), subfield 01 (Digital Commerce Domain Identifier) identifies the entity responsible for populating the digital commerce solutions indicators defined in subfield 02 (Digital Commerce Program Type), subfield 03 (Digital Commerce Check-In Entity Type and Name), and subfield 04 (Digital Commerce Check-In Method).

## Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 01                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | n-1                    |
| Data Field           | Contents of subfield 1 |
| Justification        | N/A                    |

## Values

| Value | Description             |
|-------|-------------------------|
| 0     | Multi-Domain            |
| 1     | Mastercard              |
| 2     | Acquirer                |
| 3     | Issuer                  |
| 4-9   | Reserved for future use |

## Application notes

Mastercard populates the value of 1. Acquirers or issuers provide values 2 and 3.

## Subfield 02 (Digital Commerce Program Type)

DE 48, subelement 48 (Digital Commerce Solutions Indicators), subfield 02 (Digital Commerce Program Type) identifies the specific digital commerce program.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 02                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-1                   |
| Data Field           | Contents of subfield 2 |
| Justification        | N/A                    |

### Valid values

| Value | Description                |
|-------|----------------------------|
| 0     | Multi-Program              |
| 1     | SQR                        |
| 2     | Click to Pay               |
| 3     | In-store Biometrics        |
| 4     | Next Gen POI               |
| 5     | Mastercard QR: Pay by Link |
| 6     | Mastercard QR: X QR        |
| 7-9   | Reserved for future use    |

### Application notes

Subfield 2 is present when subfield 1 is present.

When subfield 01 is 1 (Mastercard), subfield 02 must one of the listed values:

- 1 (SQR)
- 2 (Click to Pay)
- 3 (In-store Biometrics)

When subfield 01 is 1 (Mastercard), or 2 (Acquirer), subfield 02 must be 4 (Next Gen POI).

When subfield 01 is 2 (Acquirer), subfield 02 can be set by the acquirer to values 5 and 6.

## Subfield 03 (Digital Commerce Program Type Details)

[DE 48](#), subelement 48 (Digital Commerce Solutions Indicators), subfield 03 (Digital Commerce Program Type Details) identifies entity type and entity name. All entities eligible for this subfield must be integrated with the Mastercard Next Gen POI API.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 03                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans...15; LLVAR        |
| Data Field           | Contents of subfield 3 |
| Justification        | N/A                    |

### Values

Subfield 03 is an open text field of up to 15 characters.

### Application notes

When a transaction belongs to a single program type, subfield 03 will contain two characters:

- The first character indicates the program type
- The second character indicates the program subtype

A value of zero in the second character indicates the absence of a subtype. For example, a subfield 03 value of 10 indicates that the transaction type is Mastercard Merchant Presented QR: SRC (SQR) with no subtype.

For Mastercard QR: X QR and Mastercard QR: Pay by Link program types, two distinct subtypes will be applicable:

- A second character value of 1 will specify the subtype as Merchant Presented
- A second character value of 2 will specify the subtype as Consumer Presented

For example, a subfield 03 value of 61 indicates that the transaction type is Mastercard QR: X QR and subtype is Merchant Presented. Similarly, a subfield 03 value of 62 indicates the transaction type is Mastercard QR: X QR and subtype is Consumer Presented.

When a transaction belongs to more than one program type:

- Subfield 02 will have a value of 0 (Multi-Program)
- Subfield 03 will have four characters to indicate each type and subtype the transaction belongs to

For example, a subfield 03 value of 3040 indicates that the transaction type is both Biometric with no subtype and Next Gen Point-of-Interaction (POI) with no subtype.

For a full list of digital commerce solution indicators, refer to *MDES Technical Specifications for Dual and Single Message Systems*.

### Example field values

| Example program                                                                    | DE 48, subelement 48 representation                                                                                                                                                                                                                           | Comments                                                                                                                                                                  |

## Subfield 04 (Digital Commerce Check-In Details)

DE 48, subelement 48 (Digital Commerce Solutions Indicators), subfield 04 (Digital Commerce Check-In Details) is an open text field. This field identifies entity type, entity name and the methods a check-in entity applies to validate cardholder presence. All entities eligible for this subfield must be integrated with the Mastercard Next Gen POI API. This field may also include a reference number for tracking and reporting purpose.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 04                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans...40; LLVAR        |
| Data Field           | Contents of subfield 4 |
| Justification        | N/A                    |

### Values

Subfield 04 is an open text field of up to 40 characters.

### Application notes

Subfield 04 is:

- Only present when subfield 01 , subfield 02, and subfield 03 present are present.
- Required for Next Gen Point-of-Interaction transactions.
- Optional for all other transaction types.

## Subelement 49 (Time Validation Information)

[DE 48](#), subelement 49 (Time Validation Information) contains time data used to calculate time validation and the results of validation when performed.

### Attributes

| Attribute              | Description              |
|------------------------|--------------------------|
| Subelement ID          | 49                       |
| Subelement Data Length | 2 positions              |
| Data Representation    | n-15                     |
| Subfields              | Contents of subfield 1-3 |

### Usage

Following is the usage of subelement 49 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | .   | X   | C   |
| Authorization Advice/0120: system-generated | .   | X   | C   |

### Subfield 1 (Time Value)

[DE 48](#), subelement 49, subfield 1 (Time Value) contains the time data derived from the acquirer transaction to be used in the time validation.

### Attributes

| Attribute           | Description                    |
|---------------------|--------------------------------|
| Data Representation | n-8                            |
| Data Field          | Contents of positions 1-8      |
| Justification       | Right-justified, leading zeros |

### Subfield 2 (Time Discrepancy Value)

[DE 48](#), subelement 49, subfield 2 (Time Discrepancy Value) contains a positive value representing the differential in minutes between the transaction time data and service-calculated time.

### Attributes

| Attribute           | Description                    |
|---------------------|--------------------------------|
| Data Representation | n-5                            |
| Data Field          | Contents of positions 9-13     |
| Justification       | Right-justified, leading zeros |

## Subfield 3 (Time Discrepancy Indicator)

DE 48, subelement 49, subfield 3 (Time Discrepancy Indicator) contains a value that indicates if the time discrepancy value is below, above, or within the minimum and maximum values for the time validation window or that indicates time validation was not performed.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-2                         |
| Data Field          | Contents of positions 14-15 |
| Justification       | N/A                         |

### Values

| Value | Description                                   |
|-------|-----------------------------------------------|
| 01    | Positive value within time validation window  |
| 02    | Positive value outside time validation window |
| 03    | Negative value within time validation window  |
| 04    | Negative value outside time validation window |
| 05    | Unknown (time validation not performed)       |

## Subelement 50 (Embedded Interchange Data)

DE 48, subelement 50 provides data in support of commercial transactions using negotiated interchange rates between acquirers and issuers.

Issuers receive this subelement if they have opted in for the Embedded Flexible Interchange program and if a participating acquirer has included the subelement in the given transaction.

### Attributes

| Attribute              | Description     |
|------------------------|-----------------|
| Subelement ID          | 50              |
| Subelement Data Length | 2 positions     |
| Data Representation    | ans...99; LLVAR |

| Attribute     | Description               |
|---------------|---------------------------|
| Data Field    | Contents of subfields 1-6 |
| Subfields     | 6                         |
| Justification | See subfields             |

Following is the usage of DE 48, subelement 50 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Messages                                              | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| Authorization Request/0100 message                    | C   | P   | C   |
| Authorization Advice/0120 message: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120 message: system-generated   | •   | X   | C   |
| Reversal Request/0400 message                         | C   | P   | C   |
| Reversal Advice/0420 message                          | •   | X   | C   |

### Application notes

[DE 48](#), subelement 50, and its subfields are set up in tag, length, value format.

Registered acquirers provide this subelement to specify the negotiated interchange rate, amount, or both which applies to a commercial transaction.

Acquirers must use one of the valid combination of subfields within this subelement as listed in the Valid subfield combinations table.

### Valid subfield combinations

| Present                                                                                                                                         | Not present                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| Interchange percentage only                                                                                                                     |                                                                                    |
| Subfield 01 (Interchange Indicator), subfield 02 (Interchange Percentage), subfield 03 (Unit Fee Amount), subfield 04 (Flat Interchange Amount) |                                                                                    |
| <ul style="list-style-type: none"> <li>subfield 01</li> <li>subfield 02</li> </ul>                                                              | <ul style="list-style-type: none"> <li>subfield 03</li> <li>subfield 04</li> </ul> |
| Interchange percentage with unit fee amount                                                                                                     |                                                                                    |

| Present                                                                                                 | Not present                                                                        |
|---------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>subfield 01</li> <li>subfield 02</li> <li>subfield 03</li> </ul> | subfield 04                                                                        |
| Flat interchange only                                                                                   |                                                                                    |
| <ul style="list-style-type: none"> <li>subfield 01</li> <li>subfield 04</li> </ul>                      | <ul style="list-style-type: none"> <li>subfield 02</li> <li>subfield 03</li> </ul> |

The Dual Message Authorization System rejects transactions that do not conform to one of the valid combinations. Subfield 05 (Payment Party) and subfield 06 (Supplemental Interchange Data) are optional subfields and can be included with any of the valid combinations.

Subfields with numeric attributes can take a value of all zeros. For example, an acquirer can use the second combination where the Interchange Percentage is present (and non-zero) and the Unit Fee Amount is all zeros. However, an acquirer cannot include Interchange Percentage, Unit Fee Amount, and Flat Interchange Amount in the same transaction even if one or more of those subfields contains all zeros.

Refer to the subfields contained within this subelement to obtain the supporting programs, services, or other specifics about the transaction.

## Subfield 1 (Interchange Indicator)

[DE 48](#), subelement 50, subfield 1 signals that a transaction uses a negotiated interchange rate or amount per the EFI program.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 1                      |
| Subfield Data Length | 2 positions            |
| Data Representation  | a-1                    |
| Data Field           | Contents of subfield 1 |
| Justification        | N/A                    |

## Values

| Value | Description                                                |
|-------|------------------------------------------------------------|
| Y     | Transaction includes negotiated interchange rate or amount |

## Application note

This subfield is mandatory for all EFI program transactions.

## Subfield 2 (Interchange Percentage)

[DE 48](#), subelement 50, subfield 2 provides the negotiated interchange percentage rate per the EFI program.

## Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 2                        |
| Subfield Data Length | 2 positions              |
| Data Representation  | n-6                      |
| Data Field           | Contents of subfield 2   |
| Justification        | Right with leading zeros |

## Values

The interchange percentage carries a percentage value with an implied three-position decimal.

The interchange percentage can take a value of 0.000%, indicating that the negotiated rate is zero. The maximum value for the interchange percentage is 100.000%.

For example, an Interchange Percentage of 1.234% is represented with DE 48, subelement 50, subfield 2, value 001234.

## Application notes

Interchange for an EFI program transaction is calculated based on [DE 4 \(Amount, Transaction\)](#), [DE 48](#) subelement 50 subfield 2 (Interchange Percentage), and [DE 48](#) subelement 50 subfield 3 (Unit Fee Amount), if present.

This subfield is conditional for EFI program transactions. It cannot be included in transactions that also contain subfield 4 (Flat Interchange Amount).

## Subfield 3 (Unit Fee Amount)

[DE 48](#), subelement 50, subfield 3 provides the negotiated unit fee amount per the EFI program.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 3                        |
| Subfield Data Length | 2 positions              |
| Data Representation  | n-12                     |
| Data Field           | Contents of subfield 3   |
| Justification        | Right with leading zeros |

### Values

The Unit Fee Amount is expressed in the currency defined by [DE 49 \(Currency Code, Transaction\)](#).

Where a minor unit of currency applies, the Unit Fee Amount is expressed in the minor unit of currency without a decimal separator, such as, value 000000000100 represents USD 1.00.

### Application notes

Interchange for an EFI program transaction is calculated based on [DE 4 \(Amount, Transaction\)](#), [DE 48](#) subelement 50 subfield 2 (Interchange Percentage), and DE 48 subelement 50 subfield 3 (Unit Fee Amount).

This subfield is conditional for EFI program transactions. It can only be used in transactions that contain subfield 2. It cannot be included in transactions that also contain subfield 4 (Flat Interchange Amount).

## Subfield 4 (Flat Interchange Amount)

[DE 48](#), subelement 50, subfield 4 provides the negotiated flat interchange amount per the EFI program.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 4           |
| Subfield Data Length | 2 positions |
| Data Representation  | n-12        |

| Attribute     | Description              |
|---------------|--------------------------|
| Data Field    | Contents of subfield 4   |
| Justification | Right with leading zeros |

### Values

The Flat Interchange Amount is expressed in the currency defined by [DE 49 \(Currency Code, Transaction\)](#).

Where a minor unit of currency applies, the Flat Interchange Amount is expressed in the minor unit of currency without a decimal separator, such as, value 000000000100 represents USD 1.00.

A Flat Interchange Amount of zero indicates that the negotiated interchange is zero.

### Application notes

Interchange for an EFI program transaction is determined by subfield 4.

This subfield is conditional for EFI program transactions. It cannot be included in transactions that contain either subfield 2 or subfield 2 and subfield 3.

## Subfield 5 (Payment Party)

[DE 48](#), subelement 50, subfield 5 specifies whether the acquirer or issuer pays interchange on this transaction per the EFI program.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 5                      |
| Subfield Data Length | 2 positions            |
| Data Representation  | α-1                    |
| Data Field           | Contents of subfield 5 |
| Justification        | N/A                    |

## Values

### Values

| Value | Description               |
|-------|---------------------------|
| A     | Acquirer pays interchange |
| I     | Issuer pays interchange   |

## Application notes

This subfield is optional for EFI program transactions and must be used only with EFI program transactions.

## Subfield 6 (Supplemental Interchange Data)

[DE 48](#), subelement 50, subfield 6 is a free-text field which acquirers can use to send proprietary data to issuers as part of EFI program transactions.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 6                      |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans...59; LLVAR        |
| Data Field           | Contents of subfield 6 |
| Justification        | N/A                    |

## Values

Proprietary free-text data.

## Application notes

This subfield is optional for EFI program transactions and must be used only with EFI program transactions.

## Subelement 51 (Merchant On-behalf Services)

[DE 48](#), subelement 51 (Merchant On-behalf [OB] Services) notifies the acquirer of the On-behalf Service performed on the transaction, and the results. [DE 48](#) will support multiple occurrences of subelement 51 up to the maximum services for a transaction.

### Attributes

| Attribute              | Description                                                                                            |
|------------------------|--------------------------------------------------------------------------------------------------------|
| Subelement ID          | 51                                                                                                     |
| Subelement Data Length | 2 positions                                                                                            |
| Data Representation    | ans...99; LLVAR<br>The "LL" length field of LLVAR must be an integral multiple of 4, not to exceed 96. |
| Data Field             | Contents of subfields 1–3                                                                              |
| Subfields              | 3                                                                                                      |
| Justification          | N/A                                                                                                    |

### Usage

Following is the usage of subelement 51 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | •   | X   | C   |

### Values

See subfields.

## Subfield 1 (Merchant On-behalf [OB] Service)

[DE 48](#), subelement 51, subfield 1 (Merchant On-behalf [OB] Service) indicates the service performed on the transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-2                      |
| Data Field          | Contents of positions 1–2 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

## Values

See [Subelement 51 \(Valid Subfield 1 and Subfield 2 Value Combinations\)](#).

## Subfield 2 (Merchant On-behalf [OB] Result 1)

[DE 48](#), subelement 51, subfield 2 (Merchant On-behalf [OB] Result 1) indicates the results of the service processing.

## Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Field          | Contents of position 3 |
| Justification       | N/A                    |

## Subelement 51 (Valid Subfield 1 and Subfield 2 Value Combinations)

[DE 48](#), subelement 51 (Valid Subfield 1 and Subfield 2 Value Combinations) are the valid [DE 48](#), subelement 51, subfield 1 (Merchant On-behalf [OB] Service) and subfield 2 (Merchant On-behalf [OB] Result 1) value combinations. The contents of subfield 2 depend on the contents of subfield 1 as described here.

## Attributes

| Attribute           | Subfield 1 (Merchant On-behalf [OB] Service) | Subfield 2 (Merchant On-behalf [OB] Result 1) |
|---------------------|----------------------------------------------|-----------------------------------------------|
| Data Representation | an-2                                         | an-1                                          |
| Data Field          | Contents of positions 1–2                    | Contents of position 3                        |
| Justification       | N/A                                          | N/A                                           |

Following are the [DE 48](#), subelement 51, valid subfield 1 and subfield 2 value combinations.

## Values

| <b>DE 48, Subelement 51, Subfield 1 (Merchant On-behalf [OB] Service) Values (an-2)</b> |                                                   | <b>DE 48, Subelement 51, Subfield 2 (Merchant On-behalf [OB] Result 1) Values (an-1)</b> |                                                                                                                                                                                                                                                                                  |

|                                                                                         |                                                   | I                                                                                        | Invalid; transaction does not qualify for the EMS Real-time Fraud Scoring Service for Merchants due to one of the following: <ul style="list-style-type: none"> <li>• Transaction is card present, or</li> <li>• Card issuance is outside of the valid issuing region</li> </ul> |
|                                                                                         |                                                   | U                                                                                        | EMS Real-time Fraud Scoring Service for Merchants was not performed successfully.                                                                                                                                                                                                |

## Application notes

If the value of subfield 1 and subfield 2 is 90C, then [DE 48](#), SE 55, subfield 1 and subfield 2 will be populated.

Subfield 2 will have values that identify the results from the EMS Real-time Fraud Scoring Service for Merchants processing result.

## Subfield 3 (Additional Information)

[DE 48](#), subelement 51, subfield 3 (Additional Information) indicates if the acquirer in the transaction is enrolled with the service and if the service was requested.

## Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Field          | Contents of position 4 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

| Value | Description                                                         |
|-------|---------------------------------------------------------------------|
| N     | Not qualified for EMS Real-time Fraud Scoring Service for Merchants |
| blank | No value present                                                    |

### Application notes

Subfield 3 will have an indicator of N if the score was not delivered to the acquirer but the acquirer had requested the transaction be scored. This is based on service participation.

## Subelement 52 (Interchange Structure Indicator)

DE 48, subelement 52 (Interchange Structure Indicator) contains the Mastercard-provided interchange structure for point-of-sale (POS) purchase, purchase with cash back, purchase return/refund, and payment transactions initiated on the Dual Message System (Authorization).

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 52                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-2                      |
| Data Field             | Contents of positions 1–2 |
| Subfields              | N/A                       |

### Usage

Following is the usage of subelement 52 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

### Application notes

The Dual Message Authorization System inserts the Interchange Structure Indicator in eligible Authorization Response/0110 and Authorization Advice Response/0130 messages in the U.S. region.

The Interchange Structure Indicator is applicable only to the U.S. region for Purchase, Purchase with Cash Back, Purchase Return/Refund, and Payment Transaction types.

ATM and cash disbursement transactions are not eligible for the Interchange Structure Indicator.

The Interchange Structure Indicator is not applicable to the U.S. territories of American Samoa, Guam, Northern Mariana Islands, Puerto Rico, and U.S. Virgin Islands, which are located in the Asia/Pacific and Latin America and the Caribbean regions.

## Subelement 53 (E-ID Request Code)

DE 48, subelement 53 (E-ID Request Code) enables the issuer to identify that additional cardholder information is being requested by the acquirer. This request code is sent by an acquirer to an issuer in an Account Status Inquiry (ASI) message.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Subelement ID       | 53                     |
| Subelement Length   | 2 positions            |
| Data Representation | ans...99; LLVAR        |
| Data Field          | Contents of subfield 1 |
| Subfields           | 1                      |

### Usage

Following is the usage of subelement 53 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

### Values

See subfields.

### Application notes

Acquirers that support E-ID will include this subelement in an ASI, queuing the issuer to perform further processing outside of the Mastercard Network. This subelement is valid for Europe region activity only.

Subelement 53 (and associated subfield 1) is effective as of 12 June 2018.

For card-not-present transactions, the acquirer should not send subelement 53.

## Subfield 1 (E-ID Request Value)

[DE 48](#), subelement 53, subfield 1 (E-ID Request Value) informs the issuer of the proposed action on the cardholder account.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 1                         |
| Subfield Data Length | 2 positions               |
| Data Representation  | ans-2                     |
| Data Field           | Contents of positions 1–2 |
| Justification        | N/A                       |

### Values

| Value | Description                                                                                   |
|-------|-----------------------------------------------------------------------------------------------|
| 01    | Informs the issuer to pull cardholder personal data for E-ID/Health ID Verification Purposes. |
| 02    | Informs the issuer to verify and send the age of the cardholder.                              |
| 03–99 | Reserved for Future Use                                                                       |

### Application notes

Issuers must:

- Validate that a valid value is present in the message; and
- Send this cardholder information through a network separate from the Mastercard Network.

## Subelement 55 (Merchant Fraud Scoring Data/Approval Probability Indicator)

[DE 48](#), subelement 55 (Merchant Fraud Scoring Data/Approval Probability Indicator) indicates the fraud score on a fraud scoring service transaction when the acquirer requested the transaction to be scored.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Subelement ID       | 55                        |
| Subelement Length   | 2 positions               |
| Data Representation | an...32; LLVAR            |
| Data Field          | Contents of subfields 1–5 |
| Subfields           | 5                         |
| Justification       | See subfields             |

### Usage

Following is the usage of subelement 55 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | .   | X   | C   |

### Application notes

The Dual Message Authorization System inserts this subelement when EMS Real-time Fraud Scoring Service for Merchants is performed on the transaction.

Mastercard will require all issuing and acquiring processors to code for, support, and integrate into their systems the data elements, subelements, and values associated with this item.

For additional information about the requirement, refer to the *Global Safety and Security Standards Roadmap*.

**NOTE: Mastercard does not require acquirers or issuers to enroll in these optional products and services, but they must code their systems to support these fields to leverage such products and services in a timely manner in the event of a security issue.**

## Subfield 1 (Merchant Fraud Score/ASI Probability Indicator)

[DE 48](#), subelement 55, subfield 1 (Merchant Fraud Score/ASI Probability Indicator) indicates the transaction risk score or the ASI probability indicator.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 01                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-3                      |
| Data Field           | Contents of positions 1–3 |
| Justification        | N/A                       |

### Values

The EMS Real-time Fraud Scoring Service for Merchants provides the risk score of 001–998, where 001 indicates the least likely fraudulent transaction and 998 indicates the most likely fraudulent transaction. For ASI transactions, the subfield provides a three-digit number from 111 to 999 in response to an ASI request submitted with a future transaction amount value.

### Application notes

Acquirers submitting Visa-branded transactions receive the merchant fraud scoring data from Visa in the response messages.

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

## Subfield 2 (Reason Code)

[DE 48](#), subelement 55, subfield 2 (Reason Code) contains the reason code.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 02                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-2                      |
| Data Field           | Contents of positions 1–2 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

The EMS Real-time Fraud Scoring Service for Merchants provides the score reason code, an alphanumeric code identifying the data used to derive the fraud score. For ASI transactions, the reason code is an alphanumeric code providing additional detail about the value provided for the ASI Probability Indicator. For ASI, the possible values are:

- 00: Successful
- 01: Not Enough Data (Dormant or New Card)

### Application notes

Participating acquirers may contact the Risk Solutions Team for a list of the specific score reason codes that apply to their institution.

## Subfield 3 (Reserved for Future Use)

[DE 48](#), subelement 55, subfield 3 (Reserved for Future Use) is reserved for future use.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 03                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-3                      |
| Data Field           | Contents of positions 1–3 |
| Justification        | N/A                       |

### Values

Reserved for Future Use.

## Subfield 4 (Reserved for Future Use)

DE 48, subelement 55, subfield 4 (Reserved for Future Use) is reserved for future use.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 04                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-2                      |
| Data Field           | Contents of positions 1–2 |
| Justification        | N/A                       |

### Values

Reserved for Future Use.

## Subfield 5 (Reserved for Future Use)

DE 48, subelement 55, subfield 5 (Reserved for Future Use) is reserved for future use.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 05                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-2                      |
| Data Field           | Contents of positions 1–2 |
| Justification        | N/A                       |

### Values

Reserved for Future Use.

## Subelement 56 (Security Services Additional Data for Issuers)

DE 48, subelement 56 (Security Services Additional Data for Issuers) supports Mastercard embedded security services for issuers. Issuers can receive up to 16 instances of subelement 56.

Each instance has the same format for each service. Issuers must code to receive the 16 instances that the service supports.

### Attributes

| Attribute              | Description                                                                                           |
|------------------------|-------------------------------------------------------------------------------------------------------|
| Subelement ID          | 56                                                                                                    |
| Subelement Data Length | 2 positions                                                                                           |
| Data Representation    | an...96; LLVAR<br>The "LL" length field of LLVAR must be an integral multiple of 6, not to exceed 96. |
| Data Field             | Contents of subfields                                                                                 |
| Subfields              | 2                                                                                                     |
| Justification          | N/A                                                                                                   |

### Usage

Following is the usage of subelement 56 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | •   | X   | C   |
| Authorization Advice/0120: system-generated | •   | X   | C   |

### Values

See subfields.

### Application notes

Mastercard will require all issuing and acquiring processors to code for, support, and integrate into their systems the data elements, subelements, and values associated with this item.

For additional information about the requirement please refer to the *Global Safety and Security Standards Roadmap*.

**NOTE: Mastercard does not require acquirers or issuers to enroll in these optional products and services, but they must code their systems to support these fields to leverage such products and services in a timely manner in the event of a security issue.**

## Subfield 1 (Security Services Indicator)

[DE 48](#), subelement 56, subfield 1 (Security Services Indicator) provides the security services indicator for issuers.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-3                      |
| Data Field          | Contents of positions 1–3 |
| Justification       | N/A                       |

### Values

A three-character code identifying the real-time monitoring service used.

## Subfield 2 (Security Services Data)

[DE 48](#), subelement 56, subfield 2 (Security Services Data) contains additional data supporting the issuer fraud score.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-3                      |
| Data Field          | Contents of positions 4–6 |
| Justification       | N/A                       |

### Values

A three-character value will be populated.

Subelement 56 (Valid Subfield 1 and Subfield 2 Value Combinations)

DE 48, subelement 56 (Valid Subfield 1 and Subfield 2 Value Combinations) following is the valid DE 48, subelement 56, subfield 1 (Security Services Indicator) and subfield 2 (Security Services Data) value combinations.

Service Data Content for Decision Intelligence Service: Authorization IQ Feature

Following is the Service Data Content for the Authorization IQ feature of the Decision Intelligence service. Customers that support Decision Intelligence will receive AQV (GDV-based Spend Ranking), AQF (Frequency-based Spend Ranking), and AQS (Segment Qualifier) on all transactions.

**NOTE: Positions 2 and 3 use the same reason code definitions.**

Service data content

| AQS: Segment Qualifier             | Refer to the Segment Definitions table that follows.     |                                                                         |                                                          |

Segment Definitions for Decision Intelligence Service: Authorization IQ Feature

The Authorization IQ feature of the Decision Intelligence service supports the following series of segments under which each transaction is qualified for dimension analysis.

**NOTE: New segments may be added to the Authorization IQ feature of the Decision Intelligence service at any time.**

## Segment Definitions

| Segment                                      | Segment Qualifier ID                                |
|----------------------------------------------|-----------------------------------------------------|
| Channel: Card Present: Domestic Segments     | 000: Card activity on network less than 60 days old |
| Travel                                       | 001                                                 |
| Retail                                       | 002                                                 |
| Gaming                                       | 003                                                 |
| Gambling                                     | 004                                                 |

| Security Services Indicator | Risk Level        | Reason Code 1 | Reason Code 2                                                                                                                                                                                                                                                                                    |
|                             |                   | Z             | Mastercard has received a minimum of three identity elements from the merchant for this transaction and independently established the trust of the transaction. This flag is only available for DTI and may be populated if a merchant shares data for the Mastercard First Party Trust program. |

**NOTE:** The above codes depict an ordering from negative to positive. This list may be further refined. Reason codes A–H reflect riskier, or less information while reason codes I–Z reflect positive information.

**NOTE:** Identity Check Insights requests can also be submitted with Mastercard Digital Enablement Service (MDES) tokens.

### Service Data Content for Consumer Controls

Following is the Service Data Content for Consumer Controls.

### Service Data Content

### Digital Transaction Insights: Identity Insights

Identity insight reason codes offer a more specific view about the source of the Mastercard risk analysis, with values from AA–ZZ representing these reasons, with AA as the highest risk to ZZ as the lowest risk.

#### Reason codes

## Emerging Fraud Monitoring Service Example Output

### Sample output: EFM9KD

| Output | Identifier                                     | Description                                                  |
|--------|------------------------------------------------|--------------------------------------------------------------|
| EFM    | Identifier for Emerging Fraud Monitoring alert | Static Field                                                 |
| 9      | Model output for Risk Tier                     | High likelihood that this transaction presents a fraud risk  |
| K      | Model output for Fraud Category                | Emerging High Risk Category, Tokenization Exploitation Fraud |
| D      | Model output for Suggested Action              | EFM recommends that this transaction be Declined             |

## Subelement 57 (Security Services Additional Data for Acquirers)

[DE 48](#), subelement 57 (Security Services Additional Data for Acquirers) supports Mastercard embedded security services for acquirers. Acquirers can receive up to 16 instances of subfields one and two within subelement 57. Each instance has the same format for each service. Acquirers must code to receive the 16 instances that the service supports.

### Attributes

| Data Representation    | an...96; LLVAR<br>The "LL" length field of LLVAR must be an integral multiple of 6, not to exceed 96. |
| Data Field             | Contents of subfields                                                                                 |
| Subfields              | 2                                                                                                     |
| Justification          | N/A                                                                                                   |

### Usage

Following is the usage of subelement 57 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | .   | X   | C   |

### Values

See subfields.

## Merchant Risk Predict

Merchant Risk Predict provides predictive, real-time, AI-generated merchant fraud detection scores to acquirers on dual message authorization transactions. The seven scores sit within the authorization message to acquirers and provide feedback on merchant health, compliance, and chargeback risks.

### Subfield 1 (Security Services Indicator)

[DE 48](#), subelement 57, subfield 1 (Security Services Indicator) provides the security services indicator for acquirers.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-3                      |
| Data Field          | Contents of positions 1–3 |
| Justification       | N/A                       |

### Values

A three-character code identifying the Merchant Risk Predict score.

## Subfield 2 (Security Services Data)

[DE 48](#), subelement 57, subfield 2 (Security Services Data) contains a likelihood value for each Merchant Risk Predict score.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-3                      |
| Data Field          | Contents of positions 4–6 |
| Justification       | N/A                       |

### Values

A three-character value will be populated for each score indicating the likelihood of occurrence for each fraud type.

## Subelement 58 (ATM Additional Data)

[DE 48](#), subelement 58 (ATM Additional Data) only applies to Swedish Domestic Authorization Switching Service (SASS). Subelement 58 contains watermark data captured at an ATM. Watermark data is a card authentication technology supported by Swedish ATMs.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 58                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans-33                |
| Data Field             | Contents of subfields |
| Subfields              | 8                     |
| Justification          | N/A                   |

### Usage

Following is the usage of subelement 58 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | O   | X   | C   |
| Reversal Request/0400      | O   | X   | C   |
| Reversal Advice/0420       | .   | X   | C   |

### Values

See subfields.

### Subfield 1 (ATM Time)

[DE 48](#), subelement 58, subfield 1 (ATM Time) indicates the ATM time.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | n-4                              |
| Data Field          | Contents of positions 1–4 (hhmm) |
| Justification       | N/A                              |

### Subfield 2 (ATM Date)

[DE 48](#), subelement 58, subfield 2 (ATM Date) indicates the ATM date.

### Attributes

| Attribute           | Description                         |
|---------------------|-------------------------------------|
| Data Representation | n-6                                 |
| Data Field          | Contents of positions 5–10 (YYMMDD) |
| Justification       | N/A                                 |

## Subfield 3 (Watermark)

DE 48, subelement 58, subfield 3 (Watermark) is the watermark value.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-12                        |
| Data Field          | Contents of positions 11–22 |
| Justification       | N/A                         |

## Subfield 4 (Mark 1)

DE 48, subelement 58, subfield 4 (Mark 1) indicates the card and the watermark status.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans-2                       |
| Data Field          | Contents of positions 23–24 |
| Justification       | N/A                         |

### Values

| Value | Description                          |
|-------|--------------------------------------|
| 0-    | National card                        |
| 4-    | National card, foreign currency      |
| 8-    | International card                   |
| C-    | International card, foreign currency |
| -0    | Watermark readable                   |
| -B    | Watermark unreadable                 |
| -C    | Watermark missing                    |
| -D    | Test mode                            |

| Value | Description |
|-------|-------------|
| -E    | Test mode   |

## Subfield 5 (Mark 2)

[DE 48](#), subelement 58, subfield 5 (Mark 2) indicates the reason code for reversal from ATM.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | an-2                        |
| Data Field          | Contents of positions 25–26 |
| Justification       | N/A                         |

### Values

| Value | Description                                             |
|-------|---------------------------------------------------------|
| 00    | Dispensing error for bank notes or receipts             |
| 02    | Error in response                                       |
| 08    | Failure to return card, response received from host     |
| 48    | Failure to return card, single reversal                 |
| 04    | Timeout—card not picked up, response received from host |
| 80    | Timeout—card not picked up, response received from host |
| 44    | Timeout—card not picked up, single reversal             |
| 40    | Single reversal, unknown reason                         |
| 06    | Error in response and timeout picking up card           |
| 0A    | Error in response and failure to return card            |

## Subfield 6 (Mark 3)

DE 48, subelement 58, subfield 6 (Mark 3) indicates stock of bank notes and receipt status.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans-2                       |
| Data Field          | Contents of positions 27–28 |
| Justification       | N/A                         |

### Values

| Value | Description                              |
|-------|------------------------------------------|
| 0-    | Both SEK 100 and SEK 500 notes available |
| 4-    | SEK 500 notes not available              |
| 8-    | SEK 100 notes not available              |
| C-    | No money available                       |
| -0    | Receipt OK                               |
| -4    | Receipt low                              |
| -8    | Receipt paper empty                      |
| -C    | Receipt technical error                  |

## Subfield 7 (Card Swallowed Status)

DE 48, subelement 58, subfield 7 (Card Swallowed Status) indicates if the ATM took the card or not.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | n-1                     |
| Data Field          | Contents of position 29 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

#### Values

| Value | Description        |
|-------|--------------------|
| 0     | Card not swallowed |
| 1     | Card swallowed     |

### Subfield 8 (Posting Date)

[DE 48](#), subelement 58, subfield 8 (Posting Date) is the posting date.

#### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-4                        |
| Data Field          | Contents of position 30–33 |
| Justification       | N/A                        |

### Subelement 60 (Additional Service Data For Issuers)

[DE 48](#) subelement 60 (Additional Service Data For Issuers) provides data in support of specific issuer services. Issuers receive this subelement if they have opted in for any of the supported services and if those services were performed on the given transaction.

#### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 60                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | ans...43; LLVAR           |
| Data Field             | Contents of subfields 1-4 |

| Attribute     | Description   |
|---------------|---------------|
| Subfields     | 4             |
| Justification | See subfields |

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | •   | X   | C   |
| Authorization Advice/0120: acquirer-generated | •   | X   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |
| Reversal Request/0400                         | •   | X   | C   |

### Usage

Following is the usage of [DE 48](#) subelement 60 in applicable messages, regardless if it is mandatory, conditional, optional, system provided, or not required.

### Application notes

[DE 48](#), subelement 60, and subfields 1 through 4 are set up in Tag, Length, Value (TLV) format.

The Dual Message Authorization System inserts this subelement when selected issuer services are performed. The Dual Message Authorization System will remove [DE 48](#), subelement 60 if received in Authorization Request/0100, Authorization Advice/0120, or Reversal Request/0400 messages from the acquirer.

Refer to the subfields contained within this subelement to obtain the supporting programs, services, or other specifics about the transaction

### Subfield 1 (Reference Conversion Rate)

[DE 48](#), subelement 60, subfield 1 (Reference Conversion Rate) contains the European Central Bank (ECB) reference conversion rate between currencies indicated by DE 49 (Currency Code, Transaction) and DE 51 (Currency Code, Cardholder Billing).

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 01          |
| Subfield Data Length | 2 positions |

| Attribute           | Description                                                              |
|---------------------|--------------------------------------------------------------------------|
| Data Representation | n-8                                                                      |
| Data Field          | Contents of positions 1-8                                                |
| Justification       | Right, excluding the decimal indicator which must be the leftmost digit. |

### Values

The data field for [DE 48](#), subelement 60, subfield 01 is formatted similarly as the data fields for [DE 9 \(Conversion Rate, Settlement\)](#) and [DE 10 \(Conversion Rate, Cardholder Billing\)](#). Position 1 indicates the number of positions the decimal point should be moved from the right. Must be in the range of 0-7.

Positions 2-8 indicates the conversion rate.

The leftmost digit must be in the range 0–7 and denotes the number of positions that the decimal point shall be moved from the right. Example: For a value of 69972522, reference conversion rate is 9.972522 percent.

### Application notes

For European Economic Area (EEA) issuers, the Dual Message Authorization System inserts this subfield for eligible transactions if the account range participates in Cross Border Fee Manager (CBFM) or CBFM ECB Rate Service.

## Subfield 2 (Reference Conversion Rate Differential Sign Indicator)

[DE 48](#), subelement 60, subfield 2 (Reference Conversion Rate Differential Sign Indicator) establishes whether the difference of [DE 10 \(Conversion Rate, Cardholder Billing\)](#) and [DE 48](#), subelement 60, subfield 1 (Reference Conversion Rate) is a positive or negative number.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 02                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | a-1                    |
| Data Field           | Contents of position 1 |
| Justification:       | N/A                    |

## Values

[DE 48](#), subelement 60, subfield 2 provides the algebraic sign of the Reference Conversion Rate Differential.

A value of C (for Credit) indicates that [DE 10 \(Conversion Rate, Cardholder Billing\)](#) is larger than or equal to [DE 48](#), subelement 60, subfield 1 (Reference Conversion Rate).

A value of D (for Debit) indicates that [DE 10 \(Conversion Rate, Cardholder Billing\)](#) is smaller than [DE 48](#), subelement 60, subfield 1 (Reference Conversion Rate).

## Application notes

For EEA issuers, the Dual Message Authorization System inserts this subfield for eligible transactions if the account range participates in CBFM or CBFM ECB Rate Service.

## Subfield 3 (Reference Conversion Rate Percent Differential)

[DE 48](#), subelement 60, subfield 3 (Reference Conversion Rate Percent Differential) provides the difference of DE 10 (Conversion Rate, Cardholder Billing) and [DE 48](#), subelement 60, subfield 1 (Reference Conversion Rate), expressed as a percentage of [DE 48](#), subelement 60, subfield 1.

## Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 03                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | n-6                       |
| Data Field           | Contents of positions 1-6 |
| Justification:       | N/A                       |

## Values

[DE 48](#), subelement 60, subfield 3 provides a percentage of [DE 48](#), subelement 60, subfield 1 (Reference Conversion Rate) to communicate the effective currency conversion markup of the transaction.

The Reference Conversion Percent Rate Differential carries a percentage value with an implied two-position decimal.

[DE 10](#) is typically larger than [DE 48](#), subelement 60, subfield 1. Consequently, the difference of these values is typically positive. [DE 48](#), subelement 60, subfield 2 (Reference Conversion Rate Differential) can only represent zero and positive values by definition. The Reference Conversion Rate Differential and Reference Conversion Rate Differential Sign Indicator can be used together to indicate positive and negative differentials.

Example 1: A differential of +123.45 percent is represented with DE 48 SE 60 SF 2 = C and DE 48 SE 60 SF 3 = 012345

Example 2: A differential of 0.00 percent is represented with DE 48 SE 60 SF 2 = C and DE 48 SE 60 SF 3 = 000000

Example 3: A differential of -1.23 percent is represented with DE 48 SE 60 SF 2 = D and DE 48 SE 60 SF 3 = 000123

### Application notes

For EEA issuers, the Dual Message Authorization System inserts this subfield for eligible transactions if the account range participates in CBFM or CBFM ECB Rate Service.

## Subfield 4 (Currency Rate Unique Identifier)

[DE 48](#), subelement 60, subfield 4 (Currency Rate Unique Identifier) provides a unique identifier for the currency rate dataset used by the Mexico Central Bank (MCB) rate service.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Subfield ID          | 04                         |
| Subfield Data Length | 2 positions                |
| Data Representation  | an-12                      |
| Data Field           | Contents of positions 1-12 |
| Justification        | N/A                        |

The data field for DE 48, subelement 60, subfield 4 contains four pieces of information with construction YYMMDDUUUUUU.

### Values

| Where... | Is...                                                                              |
|----------|------------------------------------------------------------------------------------|
| YY       | The two-digit year at the time of conversion, right-justified with leading zeros.  |
| MM       | The two-digit month at the time of conversion, right-justified with leading zeros. |
| DD       | The two-digit day at the time of conversion, right-justified with leading zeros.   |
| UUUUUU   | A six-digit alphanumeric ID that will be unique each day.                          |

### Application notes

The Dual Message Authorization System inserts this subfield if the account range participates in the Mexico Central Bank (MCB) rate service and if the service is applied to the transaction.

## Subelement 61 (POS Data Extended Condition Codes)

[DE 48](#), subelement 61 (POS Data Extended Condition Codes) indicates whether the merchant terminal supports a specific program or service.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 61                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | n-5                       |
| Data Field             | Contents of positions 1–5 |
| Subfields              | 5                         |
| Justification          | See subfields             |

### Usage

Following is the usage of subelement 61 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |
| Authorization Advice/0120: system-generated   | .   | C   | C   |

### Values

See subfields.

### Application notes

This subelement should be provided to indicate the merchant terminal's capabilities in supporting specific programs and services.

## Subfield 1 (Partial Approval Terminal Support Indicator)

[DE 48](#), subelement 61, subfield 1 (Partial Approval Terminal Support Indicator) indicates if the merchant terminal supports partial approvals.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

### Values

| Value | Description                                                     |
|-------|-----------------------------------------------------------------|
| 0     | Merchant terminal does not support receipt of partial approvals |
| 1     | Merchant terminal supports receipt of partial approvals         |

## Subfield 2 (Purchase Amount Only Terminal Support Indicator)

[DE 48](#), subelement 61, subfield 2 (Purchase Amount Only Terminal Support Indicator) indicates if the merchant terminal supports purchase only approvals.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 2 |
| Justification       | N/A                    |

### Values

| Value | Description                                                           |
|-------|-----------------------------------------------------------------------|
| 0     | Merchant terminal does not support receipt of purchase only approvals |

| Value | Description                                                   |
|-------|---------------------------------------------------------------|
| 1     | Merchant terminal supports receipt of purchase only approvals |

### Subfield 3 (Real-time Substantiation Indicator)

[DE 48](#), subelement 61, subfield 3 (Real-time Substantiation Indicator) indicates if the merchant terminal verified the purchased items against the Inventory Information Approval System (IIAS).

#### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 3 |
| Justification       | N/A                    |

#### Values

| Value | Description                                                                                                                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0     | Merchant terminal did not verify the purchased items against an Inventory Information Approval System (IIAS)                                                                                                                 |
| 1     | Merchant terminal verified the purchased items against an Inventory Information Approval System (IIAS)                                                                                                                       |
| 2     | Merchant claims exemption from using an IIAS based on the IRS 90 percent rule                                                                                                                                                |
| 4     | Transaction was submitted as real-time substantiated but from a non-IIAS-certified merchant. Mastercard uses this value to notify the issuer that the merchant could not be substantiated. Acquirers may not use this value. |

## Subfield 4 (Merchant Transaction Fraud Scoring Indicator)

[DE 48](#), subelement 61, subfield 4 (Merchant Transaction Fraud Scoring Indicator) indicates if the acquirer requested the transaction to be scored by Expert Monitoring for Merchants.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 4 |
| Justification       | N/A                    |

### Values

| Value | Description              |
|-------|--------------------------|
| 0     | No action required       |
| 1     | Transaction to be scored |

### Application notes

Only a value of zero is passed to the issuer on the Authorization Request/0100 message.

Mastercard will require all issuing and acquiring processors to code for, support, and integrate into their systems the data elements, subelements, and values associated with this item.

For additional information about the requirement, refer to the *Global Safety and Security Standards Roadmap*.

**NOTE: Mastercard does not require acquirers or issuers to enroll in these optional products and services, but they must code their systems to support these fields to leverage such products and services in a timely manner in the event of a security issue.**

## Subfield 5 (Final Authorization Indicator)

[DE 48](#), subelement 61, subfield 5 (Final Authorization Indicator) is used to identify final authorization messages.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 5 |
| Justification       | N/A                    |

### Values

| Value | Description                             |
|-------|-----------------------------------------|
| 0     | Normal Authorization/Undefined Finality |
| 1     | Final Authorization                     |

### Application notes

Final authorization is an authorization request for an amount greater than zero, which meets the following conditions:

- Authorization is requested for the final transaction amount.
- The transaction is not expected to be canceled after the authorization request is approved in full (excluding non-completion for technical reasons such as telecommunications failure or terminal failure).

Any transaction corresponding to an authorization identified as a final authorization must be presented within seven calendar days of the authorization approval date. An authorization request is properly identified as a final authorization when [DE 61 \(Point-of-Service \[POS\] Data\)](#), subfield 7 (POS Transaction Status) contains value 0 and [DE 48 \(Additional Data\)](#), subelement 61 (POS Data Extended Condition Codes), subfield 5 contains value 1.

In the Europe region, all authorization messages must be coded as either preauthorization or final authorization requests; undefined coding is not permitted.

When submitting an Acquirer-generated Authorization Advice/0120, subfield 5 (Final Authorization Indicator) should be populated with the same value as provided in the original Authorization Request/0100 message.

Normal authorization/undefined finality is an authorization request for an amount greater than zero where a final amount may or may not be known and the transaction is not expected to be canceled after the authorization request is approved in full.

An authorization request is identified as normal or undefined finality authorization when [DE 61 \(Point-of-Service \[POS\] Data\)](#), subfield 7 (POS Transaction Status) contains value 0 and [DE 48 \(Additional Data\)](#), subelement 61 (POS Data Extended Condition Codes), subfield 5 contains value 0 or is not present.

When [DE 61 \(Point-of-Service \[POS\] Data\)](#), subfield 7 (POS Transaction Status) contains value 4 (Preauthorized request), [DE 48 \(Additional Data\)](#), subelement 61 (POS Data Extended Condition Codes), subfield 5 must either contain value 0 (Normal Authorization/Undefined Finality) or not be present.

## Subelement 62 (Real-Time Payment Information)

[DE 48](#), subelement 62 (Real-Time Payment Information) contains settlement-related information associated with specific Mastercard programs that offer the participants real-time settlement options information.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Subelement ID       | 62                        |
| Subelement Length   | 2 positions               |
| Data Representation | ans...76; LLVAR           |
| Data Field          | Contents of subfields 1–6 |
| Subfields           | See subfields             |
| Justification       | N/A                       |

### Usage

Following is the usage of subelement 62 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | P   | C   |
| Authorization Advice Response/0130  | C   | P   | C   |

| Message                        | Org | Sys | Dst |
|--------------------------------|-----|-----|-----|
| Reversal Request Response/0410 | C   | P   | C   |

## Values

See subfields.

## Application notes

This subelement and subfields are provided by the Account Holding Institution (AHI) in the Authorization Response messages and are sent unaltered to the Acquiring Institution by Mastercard.

## Subfield 1 (Merchant Direct Participation)

[DE 48](#), subelement 62, subfield 1 (Merchant Direct Participation) indicates whether or not the merchant is a direct participant in the real-time payment network and the party to which their transactions are settled. Transactions processed by a direct merchant are settled directly with the merchant, whereas those processed by an indirect merchant are settled with the Acquiring Institution.

## Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 01                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-1                   |
| Data Field           | Contents of subfield 1 |
| Justification        | N/A                    |

## Values

| Value | Description                                                                          |
|-------|--------------------------------------------------------------------------------------|
| Y     | Merchant's account used for settlement via a real-time payment network.              |
| N     | Acquiring Institution's account used for settlement via a real-time payment network. |

## Subfield 2 (Type of Transaction)

[DE 48](#), subelement 62, subfield 2 (Type of Transaction) indicates whether or not a transaction will be settled via a real-time payment network and if so, what type of settlement will occur.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 02                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-1                   |
| Data Field           | Contents of subfield 2 |
| Justification        | N/A                    |

### Values

| Value | Description                                                            |
|-------|------------------------------------------------------------------------|
| D     | Intracountry/Domestic real-time payment settlement transaction         |
| C     | Intercountry real-time payment settlement transaction                  |
| R     | Intraregional real-time payment settlement transaction                 |
| X     | Interregional real-time payment settlement transaction                 |
| Z     | Other real-time payment settlement not elsewhere defined               |
| N     | Acquirer/merchant does not participate in real-time payment settlement |

## Subfield 3 (Real-Time Payment Rules)

[DE 48](#), subelement 62, subfield 3 (Real-Time Payment Rules) indicates which payment network rules and requirements govern the transaction.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 03          |
| Subfield Data Length | 2 positions |

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | ans...10; LLVAR        |
| Data Field          | Contents of subfield 3 |
| Justification       | N/A                    |

### Values

| Value | Description               |
|-------|---------------------------|
| PBA   | Mastercard Pay by Account |

## Subfield 4 (Real-Time Payment Settlement Network ID and Name)

[DE 48](#), subelement 62, subfield 4 (Real-Time Payment Settlement Network ID and Name) indicates the real-time payment network through which settlement fulfillment will occur.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 04                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | n...3; LLVAR           |
| Data Field           | Contents of subfield 4 |
| Justification        | N/A                    |

### Values

| Value | Description     |
|-------|-----------------|
| 01    | On-us Payment   |
| 02    | Faster Payments |
| 03    | UPI             |
| 04    | IMPS            |
| 05    | TCH             |

| Value | Description             |
|-------|-------------------------|
| 06    | Real-time Payment       |
| 07–99 | Reserved for future use |

**NOTE:** Customers must be able to support any values between 01–99. New values can be added at any time.

## Subfield 5 (Real-Time Payment Funds Transfer Position)

[DE 48](#), subelement 62, subfield 5 (Real-Time Payment Funds Transfer Position) indicates the funds transfer position for a transaction settled through a real-time payment network.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 05                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | n-2                    |
| Data Field           | Contents of subfield 5 |
| Justification        | N/A                    |

### Values

| Value | Description                                            |
|-------|--------------------------------------------------------|
| 00    | Funds Transfer not initiated                           |
| 01    | Funds transferred to Acquiring Institution or merchant |
| 02    | Funds requested from Acquiring Institution or merchant |
| 03–99 | Reserved for future use                                |

## Subfield 6 (DSS Reference Number)

[DE 48](#), subelement 62, subfield 6 (DSS Reference Number) indicates the unique number for every bank transaction.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 06                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans...35; LLVAR        |
| Data Field           | Contents of subfield 6 |
| Justification        | N/A                    |

## Subelement 63 (Trace ID)

[DE 48 \(Additional Data: Private Use\)](#) subelement 63 (Trace ID) contains data from [DE 63 \(Network Data\)](#) subfield 1 (Financial Network Code) and subfield 2 (Banknet Reference Number) and [DE 15 \(Date, Settlement\)](#) that is in the original Authorization Request Response/0110 message.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 63                         |
| Subelement Data Length | 2 positions                |
| Data Representation    | ans-15                     |
| Data Field             | Contents of positions 1–15 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

### Usage

Following is the usage of subelement 63 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |
| Reversal Request/0400                         | M   | P   | M   |
| Reversal Request Response/0410                | ME  | XE  | ME  |
| Reversal Advice/0420                          | •   | X   | M   |

### Values

Contains the contents of positions 1–15 as defined below.

### Values of Positions 1–9 (Network Data)

| Attribute           | Value                     |
|---------------------|---------------------------|
| Data Representation | ans-9                     |
| Data Field          | Contents of positions 1–9 |

### Values of Positions 1–9

Contents of [DE 63](#), subfield 1 (Financial Network Code) and subfield 2 (Banknet Reference Number) in the original Authorization Request Response/0110 message. The Banknet Reference number is six characters.

| Value         | Description       |
|---------------|-------------------|
| Positions 1–3 | DE 63, subfield 1 |
| Positions 4–9 | DE 63, subfield 2 |

### Values of Positions 10–15 (Date Settlement)

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | ans-6       |

| Attribute  | Description                 |
|------------|-----------------------------|
| Data Field | Contents of positions 10–15 |

### Values of Positions 10–15

Contents of [DE 15 \(Date, Settlement\)](#) in the original Authorization Request Response/0110 message. The four-digit Settlement Date is in MMDD format followed by two spaces.

### Application notes

[DE 48 \(Additional Data: Private Use\)](#), subelement 63 must be present in Reversal Request/0400 messages and must contain data in positions 1–15, otherwise the message will be rejected with a format error response where [DE 39 \(Response Code\)](#) is 30 and DE 44 is 048063. [DE 48 \(Additional Data: Private Use\)](#), subelement 63 may contain a value of zeros in Reversal Request/0400 messages or Reversal Advice/0420 messages only when an Authorization Request Response/0110 was not successfully received or processed by the acquirer, or if the customer does not have the original reference number or the settlement date from the authorization.

[DE 48 \(Additional Data: Private Use\)](#), subelement 63 must be provided in Authorization Request/0100 messages to identify an incremental preauthorization and a zero amount Authorization Chargeback Protection Period Extension request.

[DE 48 \(Additional Data: Private Use\)](#), subelement 63 has been added to the acquirer-generated authorization advice/0120 layout to further assist issuers in matching an AFD completion advice to the original preauthorization. For additional details, refer to [Clearing AFD Transactions](#) in the Automated Fuel Dispenser Completion section of the Program and Service Format Requirements chapter.

### Application note: European Economic Area (EEA) only

**NOTE: The following information applies in the EEA only, in support of Payment Service Directive 2 (PSD2) Regulatory Technical Standards (RTS) regarding Strong Customer Authentication (SCA).**

Mastercard uses DE 48, subelement 63 (Trace ID) to provide a reference to the first authorization for recurring payment and merchant-initiated transactions in Dual Message Authorization Request/0100, acquirer-generated advice/0120 and Reversal Request/0400 messages.

## Subelement 64 (Transit Program)

[DE 48](#), subelement 64 (Transit Program) is used to identify transit transactions in authorization messages.

**NOTE: Transit Program field is not limited to MCC 4111, MCC 4131, and MCC 4784.**

## Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 64                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | n-4                       |
| Data Field             | Contents of subfields 1–2 |
| Subfields              | 2                         |
| Justification          | N/A                       |

## Usage

Following is the usage of subelement 64 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |

## Values

Contains the Transit Program values in subfields 1 and 2.

## Subfield 1 (Transit Transaction Type Indicator)

[DE 48](#), subelement 64, subfield 1 (Transit Transaction Type Indicator) indicates the transit transaction type identifier. This is a mandatory data element for transit transactions. For more information about transit transactions, refer to the *Global Transit Implementation Guide* or any regional or country specific variant.

**NOTE: Values 3, 4, and 6 for Transit Transaction Type Indicators subelement 64, subfield 1 are limited to MCC 4111, MCC 4131, and MCC 4784.**

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 1-2 |
| Justification       | N/A                       |

### Values

| Value | Description                          |
|-------|--------------------------------------|
| 01    | Prefunded                            |
| 02    | Real-time Authorized                 |
| 03    | Post-Authorized Aggregated           |
| 04    | Authorized Aggregated Split Clearing |
| 05    | Other                                |
| 06    | Post-authorized Aggregated Maestro   |
| 07    | Debt Recovery                        |
| 08-99 | Reserved for Future Use              |

## Subfield 2 (Transportation Mode Indicator)

[DE 48](#), subelement 64, subfield 2 (Transportation Mode Indicator) indicates the transportation mode for a transit transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 3-4 |
| Justification       | N/A                       |

### Values

| Value | Description                                       |

## Subelement 65 (Terminal Compliant Indicator)

[DE 48](#), subelement 65 (Terminal Compliant Indicator) contains two subfields that identify whether or not a POS terminal from which the transaction originated is Terminal Line

Encryption (TLE) and Unique Key Per Terminal (UKPT)/Derived Unique Key Per Terminal (DUKPT) compliant. This field must be present in card-present, POS transactions acquired in India.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 65                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | n-2                       |
| Data Field             | Contents of subfields 1–2 |
| Subfields              | 2                         |
| Justification          | See subfields             |

### Usage

Following is the usage of subelement 65 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |

### Values

Contains the Terminal Compliant Indicator values in subfields 1 and 2.

## Subfield 1 (TLE Compliant)

[DE 48](#), subelement 65, subfield 1 indicates whether or not the POS terminal from which the transaction occurred is Terminal Line Encryption (TLE)-certified.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

### Values

| Value | Description   |
|-------|---------------|
| 1     | Not Certified |
| 2     | Certified     |

## Subfield 2 (UKPT/DUKPT Compliant)

[DE 48](#), subelement 65, subfield 2 indicates whether or not the POS terminal from which the transaction occurred is Unique Key Per Terminal/Derived Unique Key Per Terminal (UKPT/ DUKPT)-certified.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 2 |
| Justification       | N/A                    |

### Values

| Value | Description   |
|-------|---------------|
| 1     | Not Certified |
| 2     | Certified     |

## Subelement 66 (Authentication Data)

*DE 48 (Additional Data)*, subelement 66 is populated by the acquirer and passed to the issuer to indicate the Program Protocol being used.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 66                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans...45; LLVAR       |
| Data Field             | Contents of subfields |
| Subfields              | 2                     |

### Usage

Following is the usage of subelement 66 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Request Response/0110           | •   | XE  | CE  |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |

Values

See subfields.

Application notes

This is a conditional field and must be provided by the acquirers' part of the authorization messages if they are participating and have previously authenticated using the Mastercard Identity Check program. This field will not be edited to ensure that these elements were provided on the transaction. If it is provided by the acquirer or processor, it must meet the specifications defined.

Subfield 1 (Program Protocol)

DE 4, subelement 66 (Authentication Data), subfield 1 indicates the Program Protocol.

Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 01                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-1                   |
| Data Field           | Contents of subfield 1 |
| Justification        | N/A                    |

Values

| Value | Description                |
|-------|----------------------------|
| 1     | EMV 3-D Secure Version 2.1 |
| 2     | EMV 3-D Secure Version 2.2 |
| 3     | EMV 3-D Secure Version 2.3 |
| 4     | EMV 3-D Secure Version 2.4 |
| 5     | EMV 3-D Secure Version 2.5 |
| 6     | EMV 3-D Secure Version 2.6 |
| 7     | EMV 3-D Secure Version 2.7 |
| 8     | EMV 3-D Secure Version 2.8 |

| Value | Description                |
|-------|----------------------------|
| 9     | EMV 3-D Secure Version 2.9 |

**NOTE: EMV 3DS specification versions are detailed by major.minor.patch.editorial (2.3.1.1). Therefore, all patch and editorial versions beyond 2.3.1.1 should be considered the same as 2.3 for the purposes of this table.**

## Subfield 2 (Directory Server Transaction ID)

[DE 48](#), subelement 66 (Authentication Data), subfield 2 allows the acquirer to pass the Directory Server Transaction ID during authorization in order to link authentication and authorization data. The Directory Server Transaction ID is generated by the EMV 3DS Mastercard Directory Server during the authentication transaction and passed back to the merchant with the authentication results.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 02                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans-36                 |
| Data Field           | Contents of subfield 2 |
| Justification        | N/A                    |

### Values

The Directory Server Transaction ID is a Universally Unique Transaction ID which can be provided by the processors/acquirers as part of the authentication transaction.

Example of a Directory Server Transaction ID: f38e6948-5388-41a6-bca4-b49723c19437

### Application notes

This is a conditional field and must be provided by the acquirer if they are participating and have previously authenticated using the Mastercard EMV 3DS (3DS2) Identity Check program. This field will not be edited to ensure these elements were provided on the transaction. If provided by the acquirer or processor, it must meet the specifications defined.

The Directory Server Transaction ID must not be provided as an all caps value.

## Subelement 67 (Mastercard Send Information)

DE 48, subelement 67 (Mastercard Send Information) contains subfield representing the Sanctions Score.

### Attributes

| Attribute              | Description              |
|------------------------|--------------------------|
| Subelement ID          | 67                       |
| Subelement Data Length | 2 positions              |
| Data Representation    | ans...99; LLVAR          |
| Data Field             | Contents of subfield 1-2 |
| Subfields              | 2                        |
| Justification          | See subfields            |

### Usage

Following is the usage of subelement 67 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | .   | X   | C   |
| Authorization Request Response/0110         | .   | X   | C   |
| Authorization Advice/0120: system-generated | .   | X   | C   |

### Values

See subfields.

## Subfield 1 (Sanctions Score)

[DE 48](#), subelement 67, subfield 1 (Sanctions Score) contains the Sanctions Score populated by Mastercard.

### Attributes

| Attribute            | Description                        |
|----------------------|------------------------------------|
| Subfield ID          | 01                                 |
| Subfield Data Length | 2 positions                        |
| Data Representation  | n-3                                |
| Data Field           | Contents of subfield 1             |
| Justification        | Right-justified with leading zeros |

### Values

For issuers who opt-in to the Sanctions Scoring service, a Sanctions Score value will be populated by Mastercard on all cross-border Mastercard Send Payment Transactions globally and domestic Mastercard Send Payment Transactions in Egypt, Canada, across Europe and the United States.

The Sanctions Scoring service automatically checks the Sender name (consumer, business, government, and non-government) against select sanctions watchlists such as the OFAC Specially Designated Nationals and Blocked Persons List, UN List, and EU List.

Based on the likelihood of a match of the sender's name to a sanctioned individual or entity, a score of 000 or a score from 070 to 099 is generated and included in DE 48 (Additional Data: Private Use), subelement 67 (Mastercard Send Information), subfield 1 (Sanctions Score) of the authorization request message delivered to the issuer.

A higher score indicates a closer match to names on the applicable screening lists, while lower scores indicate a less likely match. When a score cannot be determined, the value will be 999. A score of 000 indicates that the transaction passes the Sanctions Scoring check.

**NOTE: If the Sanctions Score is 100 or if the Sanctions Score produced by the Sanctions Scoring service is greater than or equal to the Blocking Score set up by the issuer in the opt-in service, then the authorization request will be declined and an advice will be sent to the issuer with the value of 33F (Mastercard Send Issuer Blocking—Sanctions Score limit exceeded) in [DE 48](#), subelement 71 (On-behalf [OB] Services), subfield 1 (On-behalf [OB] Service) and subfield 2 (On-behalf [OB] Result 1).**

## Subfield 2 (Sanctions Score Additional Information)

DE 48, subelement 67, subfield 2 (Sanctions Score Additional Information) allows for communication of additional information regarding the Sanctions Scoring Service.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 02                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans...58; LLVAR        |
| Data Field           | Contents of subfield 2 |
| Justification        | N/A                    |

### Values

Subfield 2 contains a list of watchlist(s) associated with the sanctions score generated by Mastercard, which are separated with a " | " delimiter.

## Subelement 68 (Financial Account Information)

DE 48, subelement 68 (Financial Account Information) contains the financial account information associated with the Mastercard Pay by Account token.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 68                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | ans...68; LLVAR        |
| Data Field             | Contents of subfield 1 |
| Subfields              | 1                      |

### Usage

Following is the usage of subelement 68 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                                                                                           | Org | Sys | Dst |

### Values

See subfields.

### Application notes

The [DE 48](#), subelement 68 information is added to the message by Mastercard and forwarded to the Account Holding Institution (AHI). Acquiring Institutions will not receive this information.

## Subfield 1 (Financial Account Identifier)

[DE 48](#), subelement 68, subfield 1 (Financial Account Identifier) contains the bank account information or other financial account information associated with the Mastercard Pay by Account token at the time the transaction occurred.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 01                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans...64; LLVAR        |
| Data Field           | Contents of subfield 1 |
| Justification        | N/A                    |

### Values

Financial account identifier must be a minimum of 9 characters and a maximum of 64 characters.

## Subelement 71 (On-behalf Services)

[DE 48](#), subelement 71 (On-behalf Services [OBS]) notifies the issuer of the On-behalf Service performed on the transaction and the results. Subelement 71 will support up to ten services for a transaction.

### Attributes

| Attribute              | Description                                                                                            |
|------------------------|--------------------------------------------------------------------------------------------------------|
| Subelement ID          | 71                                                                                                     |
| Subelement Data Length | 2 positions                                                                                            |
| Data Representation    | ans...40; LLVAR<br>The "LL" length field of LLVAR must be an integral multiple of 4, not to exceed 40. |
| Data Field             | Contents of subfields 1–3                                                                              |
| Subfields              | 3                                                                                                      |
| Justification          | N/A                                                                                                    |

## Usage

Following is the usage of subelement 71 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

## Values

See subfields.

## Subfield 1 (On-behalf [OB] Service)

[DE 48](#), subelement 71, subfield 1 (On-behalf [OB] Service) indicates the service performed on the transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-2                      |
| Data Field          | Contents of positions 1–2 |
| Justification       | N/A                       |

## Values

Refer to [Subelement 71 \(Valid Subfield 1 and Subfield 2 Value Combinations\)](#) and [Subelement 71 \(Valid Subfield 1 and Subfield 3 Value Combinations\)](#).

## Subfield 2 (On-behalf [OB] Result 1)

[DE 48](#), subelement 71, subfield 2 (On-behalf [OB] Result 1) indicates the results of the service processing.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Field          | Contents of position 3 |
| Justification       | N/A                    |

### Values

Refer to [Subelement 71 \(Valid Subfield 1 and Subfield 2 Value Combinations\)](#).

## Subfield 3 (On-behalf Result 2)

[DE 48](#), subelement 71, subfield 3 (On-behalf Result 2) identifies the results of the service processing.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | ans-1                  |
| Data Field          | Contents of position 4 |
| Justification       | N/A                    |

### Values

Mastercard use only. May contain a space or a value.

Refer to [Subelement 71 \(Valid Subfield 1 and Subfield 3 Value Combinations\)](#).

## Subelement 71 (Valid Subfield 1 and Subfield 2 Value Combinations)

[DE 48 \(Additional Data: Private Use\)](#) subelement 71 (Valid Subfield 1 and Subfield 2 Value Combinations) are the valid [DE 48](#), subelement 71 (On-behalf Services [OBS]), subfield 1 (On-behalf [OB] Service) and subfield 2 (OB Result 1) value combinations. The contents of subfield 2 depend on the contents of subfield 1 as described here.

## Attributes

| Attribute           | Subfield 1 (OB Service)   | Subfield 2 (OB Result 1) |
|---------------------|---------------------------|--------------------------|
| Data Representation | an-2                      | an-1                     |
| Data Field          | Contents of positions 1–2 | Contents of position 3   |
| Justification       | Left-justified            | N/A                      |

**NOTE: DE 48 (Additional Data: Private Use), subelement 71 will contain all applicable, on-behalf service results that were performed on a given transaction; examples include Mastercard Digital Enablement Service (MDES) service results and Mastercard Identity Check service results.**

### Subelement 71 (Valid Subfield 1 and Subfield 3 Value Combinations)

DE 48, subelement 71 (Valid Subfield 1 and Subfield 3 Value Combinations) are the valid DE 48, subelement 71 (On-behalf Services [OBS]), subfield 1 (On-behalf [OB] Service) and subfield 3 (OB Result 2) value combinations. The contents of subfield 3 depend on the contents of subfield 1 as described here.

#### Attributes

| Attribute           | Subfield 1 (OB Service)   | Subfield 3 (OB Result 2) |
|---------------------|---------------------------|--------------------------|
| Data Representation | an-2                      | ans-1                    |
| Data Field          | Contents of positions 1–2 | Contents of position 4   |
| Justification       | Left-justified            | N/A                      |

Values

## Application notes

Issuers participating in MDES:

- Receive OBS 50 (MDES PAN Mapping service and corresponding result codes in [DE 48 \(Additional Data: Private Use\)](#), subelement 71 indicating the status of PAN mapping for both static and cloud tokenized transactions.
- Receive OBS 61 (MDES Pre-Validation Service for Cloud and Static tokens [ICC, DSRP, or DTVC data] in [DE 48 \(Additional Data: Private Use\)](#), subelement 71, subfield 1 (On-behalf [OB] Service) to indicate that MDES attempted to validate dynamic data submitted by acquirer for both static and cloud tokenized transactions and a valid value in [DE 48 \(Additional Data: Private Use\)](#), subelement 71, subfield 2 (On-behalf Result 1) to indicate the validation outcome of both dynamic data in static and cloud token transactions.
- Receive a new result code T in [DE 48 \(Additional Data: Private Use\)](#), subelement 71, subfield 3 (On-behalf Result 2) to indicate that the acquirer submitted dynamic token verification code (DTVC) and the validation outcome in On-Behalf Result 1 pertains to DTVC.
- Prepare to process static or cloud token transactions without a CVC 2, DTVC validation results, or both, in the authorization request, as in some cases this information might not be provided to the issuer. However, when CVC 2 is provided, issuers should validate it.
- Issuers should be aware that Mastercard attempts to validate the DTVC submitted by acquirers during transaction processing.
  - When DTVC can be validated, Mastercard will send OBS 61 in [DE 48 \(Additional Data: Private Use\)](#), subelement 71 and suppress the DTVC from [DE 48 \(Additional Data: Private Use\)](#), subelement 92 (CVC 2) in Authorization Request/0100 and in Financial Transaction Request/0200 messages.
  - When the validity of the CVC 2 value cannot be determined, Mastercard will send the CVC 2 in [DE 48 \(Additional Data: Private Use\)](#), subelement 92 (CVC 2) to issuers for decisioning. Issuers will not receive OBS 61 in such transactions. In some use cases, the CVC 2 may reflect the value associated with the consumer's primary account number.

## Subelement 71 (OBS 05 Result Codes)

[DE 48](#), subelement 71 (OBS 05 Result Codes) provides detailed information on the result codes that can be present in [DE 48 \(Additional Data—Private Use\)](#), subelement 71 (On-behalf Services

[OBS]], subfield 2 (OB Result 1) when [DE 48](#), subelement 71, subfield 1 (On-behalf [OB] Service) value = 05 (Mastercard Identity Check™ AAV Verification Service).

### OBS 05 Result Codes

| Authorization Advice/0120: system-generated | .   | X   | C   |

### Values

Mastercard generated.

### Application notes

Issuers no longer need to echo [DE 48](#), subelement 72 in their response messages.

## Subelement 74 (Additional Processing Information)

[DE 48](#), subelement 74 (Additional Processing Information) provides additional information about chip transaction processing and results.

### Attributes

| Attribute              | Description                                                                                          |
|------------------------|------------------------------------------------------------------------------------------------------|
| Subelement ID          | 74                                                                                                   |
| Subelement Data Length | 2 positions                                                                                          |
| Data Representation    | an...30; LLVAR<br>The "LL" length field of LLVAR must be an integral multiple of 3 not to exceed 30. |
| Data Field             | Contents of subfields                                                                                |
| Subfields              | 2                                                                                                    |
| Justification          | See subfields                                                                                        |

### Usage

Following is the usage of subelement 74 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | O   | X   | C   |

Values

See subfields.

Application notes

[DE 48](#), subelement 74 is not applicable in the 0120/0130, 0400/0410 and 0420/0430 messages. If present, it will be removed before forwarding to its destination.

Chip Cryptogram Validation

Issuers performing chip cryptogram validation may include their validation results in [DE 48](#), subelement 74 in the Authorization Request Response/0110 message.

Chip Fallback Transaction Downgrade

The Dual Message Authorization System will include [DE 48](#), subelement 74 in the Authorization Request Response/0110 message when the transaction is eligible for the Chip Fallback Transaction Downgrade. In which case [DE 48](#), subelement 74, subfield 1 value will be "90" and subfield 2 value will be "C". Refer to the [DE 22: Point-of-Service \(POS\) Entry Mode](#) section for additional details.

| Z     | Security platform processing error                                                             |

## Subelement 74 (Valid Subfield 1 and Subfield 2 Value Combinations)

[DE 48](#), subelement 74 (Valid Subfield 1 and Subfield 2 Value Combinations) is the valid [DE 48](#), subelement 74, subfield 1 (Processing Indicator) and subfield 2 (Processing Information) value combinations. The contents of subfield 2 depend on the contents of subfield 1 as described here.

### Valid combinations

| IF subfield 1 contains... | THEN subfield 2 may contain...  |
|---------------------------|---------------------------------|
| 02                        | A, E, F, G, I, K, T, U, X, or Z |
| 03                        | A, E, F, G, I, K, T, U, X, or Z |
| 50                        | A, E, F, G, I, T, U, or X       |
| 90                        | C                               |

## Subelement 75 (Fraud Scoring Data)

[DE 48](#), subelement 75 (Fraud Scoring Data) indicates the fraud score on a fraud scoring service transaction.

Mastercard provides two scoring solutions: Expert Monitoring for Issuers or Decision Intelligence. A score will be included in Authorization Request/0100 and Authorization Advice/0120: system-generated messages to the issuer when the Expert Monitoring or Decision Intelligence scoring was performed on a transaction.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 75                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an...32; LLVAR            |
| Data Field             | Contents of subfields 1–5 |
| Subfields              | 5                         |
| Justification          | See subfields             |

### Usage

Following is the usage of subelement 75 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | .   | X   | C   |
| Authorization Advice/0120: system-generated | .   | X   | C   |

### Values

Contents of subfields 1–2 and applicable subfields 3–5.

### Application notes

The Dual Message Authorization System inserts this subelement when one of the Fraud Scoring Services is performed or when both a Fraud Scoring Service and the Fraud Rule Manager Service are performed on the transaction.

**NOTE: When a rule adjusted score is provided in subfield 3, at least one or more rule reason code values will be provided in subfields 4–5. However, rule reason code values may be provided in subfields 4 or 5 with or without a rule adjusted score in subfield 3.**

**NOTE: Issuers participating in a scoring service will receive subfields 1–2. If those issuers choose to participate in the Fraud Rule Manager Service then those issuers must also prepare to receive subfields 3–5.**

**NOTE: [DE 48](#), subelement 75 will not be included in Authorization Request/0100 messages to the issuer when Mastercard is unable to perform the Fraud Scoring Service.**

Expert Monitoring for Issuers and Decision Intelligence services evaluate fraud detection elements to produce a score that indicates a level of risk in the transaction. Both services utilize the same [DE 48](#), subelement 75 field with dual message authorization transactions.

For additional details on these services, refer to the *Issuer Security Solutions Utilities Guide* and Mastercard Security Solutions Guide for Issuer Services.

### Subfield 1 (Fraud Score)

[DE 48](#), subelement 75, subfield 1 (Fraud Score) indicates the transaction risk score. The value in DE 48, subelement 75, subfield 1 is the model score as indicated in DE 48, subelement 75, subfield 3 (Model Score) unless adjusted by SafetyNet or Rules (Customer Rules or On-behalf of Rules).

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 01                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-3                      |
| Data Field           | Contents of positions 1–3 |
| Justification        | N/A                       |

### Values

Fraud Scoring System provides the three position transaction risk score from 001-998. 001 indicates the least likely fraudulent transaction and 998 indicates the most likely fraudulent transaction.

## Subfield 2 (Fraud Reason Code)

[DE 48](#), subelement 75, subfield 2 (Fraud Reason Code) indicates the key factors that influenced the fraud score. This value is the model reason code as indicated in [DE 48](#), subelement 75, subfield 4 (Model Reason Code) unless overwritten by SafetyNet or Rules (Customer Rules or On-behalf of Rules).

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 02                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-2                      |
| Data Field           | Contents of positions 1–2 |
| Justification        | N/A                       |

### Values

The Fraud Scoring Service provides the score reason code, an alphanumeric code identifying the data used to derive the fraud score.

**NOTE: Participating issuers may contact the Risk Solutions team for a list of the specific score reason codes that apply to their institution.**

## Subfield 3 (Model Score)

[DE 48](#), subelement 75, subfield 3 (Model Score) contains the model risk score. This score is used in Rule Authoring, Rule Discovery, and Decision Intelligence (DI) Dashboard.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 03                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-3                      |
| Data Field           | Contents of positions 1–3 |
| Justification        | N/A                       |

### Values

The Fraud Rule Manager Service provides a rules score of 000 through 999, where 000 indicates the least likely fraudulent transaction and 999 indicates the most likely fraudulent transaction.

## Subfield 4 (Model Reason Code)

[DE 48](#), subelement 75, subfield 4 (Model Reason Code) indicates the key factors that influenced the model fraud score.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 04                        |
| Subfield Data Length | 2 positions               |
| Data Representation  | an-2                      |
| Data Field           | Contents of positions 1–2 |
| Justification        | N/A                       |

### Values

The Fraud Rule Manager Service provides the rule reason code, an alphanumeric code where the information provided gives the data used to derive the rules adjusted score.

Subfield 5 (Reserved for Future Use)

DE 48, subelement 75, subfield 5 (Reserved for Future Use) is reserved for future use.

Subelement 76 (Mastercard Electronic Acceptance Indicator)

DE 48, subelement 76 (Mastercard Electronic Acceptance Indicator) identifies that the transaction is a Mastercard Electronic card transaction. It indicates that the acquirer participates or does not participate in Mastercard Electronic card processing.

Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 76                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

Usage

Following is the usage of subelement 76 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Request Response/0110           | O   | X   | .   |
| Authorization Advice/0120: acquirer-generated | O   | X   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |

## Values

| Value | Description                                                                                                                                                                                                                         |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| C     | Mastercard only participant (not considered a Mastercard Electronic card transaction).                                                                                                                                              |
| E     | Acquirer and its merchant both participate in Mastercard Electronic card processing (considered as a Mastercard Electronic transaction).                                                                                            |
| M     | Acquirer participates in Mastercard Electronic card processing, but the merchant that processed this specific transaction does not participate in Mastercard Electronic (considered not to be a Mastercard Electronic transaction). |
| U     | Unidentified acquirer. It is unknown if the acquirer is a Mastercard Electronic card participant.                                                                                                                                   |

## Application notes

If acquirers do not populate subelement 76 with a valid value or a value is not present, Mastercard will populate [DE 48](#), subelement 76 on behalf of the acquirer based on the acquirer's participation in Mastercard Electronic Card Program and forward the transaction to the issuer.

## Acquirers

When the merchant participates in the Mastercard Electronic Card Program, the participating acquirer should send [DE 48](#), subelement 76 with a value of E in the Authorization Request/0100 message.

When the merchant does not participate in the Mastercard Electronic Card Program, the participating acquirer should send [DE 48](#), subelement 76 with a value of M in the Authorization Request/0100 message.

When participating acquirers do not provide a value or provide an incorrect value in subelement 76, Mastercard will default subelement 76 to the value of E in the Authorization Request/0100 message.

## Issuers

Issuers participating in Mastercard Electronic Card must be prepared to receive [DE 48](#), subelement 76 with values of C, E, or U in the Authorization Request/0100 and Authorization Advice/0120 messages.

Issuers participating in Mastercard Electronic Card must be prepared to send [DE 48](#), subelement 76 with values of C, E, or U in Authorization Request Response/0110 messages.

**NOTE: Mastercard will convert the subelement value of M to the value C in the Authorization Request/0100 sent to the issuer. Therefore, the issuer will not receive a value of M.**

## Subelement 77 (Transaction Type Identifier)

[DE 48](#), subelement 77 (Transaction Type Identifier) indicates the type of additional transaction purpose.

**NOTE: All Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions) require the presence of this identifier.**

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 77                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-3                      |
| Data Field             | Contents of positions 1-3 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Usage

Following is the usage of subelement 77 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

**NOTE: This subelement is mandatory when [DE 18](#)=MCC is any of the following: MCC 4829, MCC 6536, MCC 6537, MCC 6538, and MCC 6540.**

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | C   | P   | C   |
| Authorization Request Response/0110         | OE  | X   | •   |
| Authorization Advice/0120: system-generated | •   | X   | C   |
| Reversal Request/0400                       | C   | P   | C   |
| Reversal Request Response/0410              | OE  | X   | •   |
| Reversal Advice/0420                        | •   | X   | C   |

## Values

| Value | Description                                         |
|-------|-----------------------------------------------------|
| C04   | Gaming Re-pay                                       |
| C07   | General Person-to-Person Transfer                   |
| C51   | Mastercard Send Indicator (Reserved for Future Use) |
| C52   | General Transfer to Own Account                     |
| C53   | Agent Cash Out                                      |
| C54   | Payment of Own Credit Card Bill                     |
| C55   | Business Disbursement                               |
| C56   | Government/Non-Profit Disbursement                  |
| C57   | Rapid Merchant Settlement                           |
| C58   | Cash in at ATM                                      |
| C59   | Cash in at point of Sale                            |
| C60   | Fast Refund to Original Card                        |
| C61   | Mastercard Send Indicator (Reserved for Future Use) |
| C62   | Mastercard Send Indicator (Reserved for Future Use) |
| C63   | Mastercard Send Indicator (Reserved for Future Use) |
| C64   | Mastercard Send Indicator (Reserved for Future Use) |
| C65   | General Business to Business Transfer               |
| C66   | Mastercard Send Indicator (Reserved for Future Use) |
| C67   | Merchant Presented QR                               |
| C68   | Merchant Presented QR                               |
| F07   | General Person-to-Person Transfer                   |
| F08   | Person-to-Person Transfer to Card Account           |
| F52   | General Transfer to Own Account                     |
| F53   | Agent Cash Out                                      |
| F54   | Payment of Own Credit Card Bill                     |
| F55   | Business Disbursement                               |
| F61   | Transfer to Own Staged Digital Wallet Account       |
| F64   | Transfer to Own Debit or Prepaid Account            |

| Value | Description                           |
|-------|---------------------------------------|
| F65   | General Business-to-Business Transfer |
| P10   | Purchase repayment                    |
| P11   | Business-to-Business Payment          |
| P70   | Cryptocurrency                        |
| P71   | High-risk Securities                  |

### Application notes

If [DE 3](#), subfield 1 contains value 28 (Payment Transaction), then [DE 48](#), subelement 77 must be present.

Usage of value C04 is limited to eligible acquirers and issuers in eligible countries. Refer to the *Mastercard Gaming and Gambling Payments Program Standards*.

Usage of value C07 and payment type codes C52–C59, C60–C61, C64–C65, and F07–F65 is limited to eligible countries and eligible acquirers. Refer to the *Mastercard Send and Funding Transactions Program Standards*.

**NOTE: Usage of value C67 is limited to Mastercard Merchant Presented QR transactions. Usage of value C68 is limited to Mastercard Merchant Presented QR refund transactions.**

Usage of value P11 (Business-to-Business Payment) is intended to identify transactions between a buyer and a supplier who does not accept card-based payments, via a Business Payment Service Provider who remits the payment to the supplier.

## Subelement 78 (Payment Service Indicators [Visa Only])

[DE 48](#), subelement 78 (Payment Service Indicators [Visa Only]) contains subfields which represent various Visa payment service indicators.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 78                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | ans-6                     |
| Data Field             | Contents of subfields 1–6 |
| Subfields              | 6                         |

| Attribute     | Description   |
|---------------|---------------|
| Justification | See subfields |

## Usage

Following is the usage of subelement 78 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Request Response/0110           | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice Response/0130            | C   | X   | C   |
| Reversal Request/0400                         | C   | P   | C   |
| Reversal Request Response/0410                | C   | X   | C   |

## Values

See subfields.

## Application notes

Acquirers are not required to populate this subelement in the Authorization Request/0100 message if they do not support any of the Visa payment indicators in subfields 2 through 6 as noted in the following sections.

## Subfield 1 (Spend Qualified Indicator)

[DE 48](#), subelement 78, subfield 1 (Spend Qualified Indicator) provides the Visa spend qualification assessment.

## Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | ans-1                  |
| Data Field          | Contents of position 1 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

| Value | Description                                                                                                                                                       |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Space | Space will be sent back in the Authorization Request Response/0110 message to the acquirer when Visa field 62.25 is not present in the Visa 0110 message response |
| N     | Spend assessment threshold defined by Visa has not been met                                                                                                       |
| B     | Basic spend assessment threshold level met                                                                                                                        |
| Q     | Highest spend assessment threshold level met                                                                                                                      |

### Application notes

The value for this field is mapped from Visa Field 62.25 Spend Qualified Indicator. Refer to Visa's *VisaNet Authorization-Only Online Messages Technical Specifications*. Acquirers will need to populate subfield 1 with a space if any other Payment Service Indicator is submitted in the Authorization Request/0100, Authorization Advice/0120: acquirer-generated, and Reversal Request/0400 messages. Space will be sent back in subfield 1 to the acquirer if any other Payment Service Indicator is returned back in Authorization Request Response/0110, Authorization Advice Response/0130, and Reversal Request Response/0410 messages.

**NOTE: The Spend Qualified Indicator is used by acquirers for Visa's Account Level Processing (ALP) program.**

## Subfield 2 (Dynamic Currency Conversion Indicator)

[DE 48](#), subelement 78, subfield 2 (Dynamic Currency Conversion Indicator) indicates a transaction for which Dynamic Currency Conversion (DCC) is performed by the merchant at the point of sale.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | ans-1                  |
| Data Field          | Contents of position 2 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

| Value | Description                                                                                                                        |
|-------|------------------------------------------------------------------------------------------------------------------------------------|
| Y     | Dynamic Currency Conversion was performed at the point of sale.                                                                    |
| Space | No Dynamic Currency Conversion or not echoed in the Authorization Request Response/0110 or Reversal Request Response/0410 message. |

### Application notes

If the merchant performs dynamic currency conversion at the point of sale, acquirers must send this value in the Authorization Request/0100, Authorization Advice/0120: acquirer-generated and in Reversal Request/0400 messages in case of Reversal. This value will be mapped to Visa Field 126.19—Dynamic Currency Conversion Indicator.

Refer to Visa's *VisaNet Authorization-Only Online Messages Technical Specifications* manual.

The acquirer will need to populate subfield 2 with a space if DCC was not performed and any other Payment Service Indicator is submitted in the Authorization Request/0100, Authorization Advice/0120: acquirer-generated and in Reversal Request/0400 messages. Space will be sent back in subfield 2 to the acquirer if any other Payment Service Indicator is returned back in Authorization Request Response/0110, Authorization Advice Response/0130, and Reversal Request Response/0410 messages.

### Subfield 3 (U.S. Deferred Billing Indicator)

[DE 48](#), subelement 78, subfield 3 (U.S. Deferred Billing Indicator) indicates a transaction for which the billing for merchandise occurred after the merchandise was delivered to the cardholder. This applies to U.S. region acquirers only.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | ans-1                  |
| Data Field          | Contents of position 3 |
| Justification       | N/A                    |

## Values

| Value | Description                                                                      |
|-------|----------------------------------------------------------------------------------|
| D     | U.S. Deferred Billing Indicator                                                  |
| Space | No Deferred Billing or not echoed in Authorization Request Response/0110 message |

## Application notes

This code is provided by the merchant through United States region acquirers in the Authorization Request/0100, Authorization Advice/0120: acquirer-generated, and Reversal Request/0400 messages to indicate that a Visa card is to be billed on a deferred basis, that is, the cardholder is to be billed for merchandise already received. This value will be mapped to Visa Field 126.12—Service Indicators, position 3 (Deferred Billing Indicator).

Refer to the Visa's *VisaNet Authorization-Only Online Messages Technical Specifications*.

Acquirers will need to populate subfield 3 with a space if Deferred Billing is not applicable and any other Payment Service Indicator is submitted in the Authorization Request/0100, Authorization Advice/0120: acquirer-generated and Reversal Request/0400 message. A space will be sent back in subfield 3 to the acquirer if any other Payment Service Indicator is returned back in Authorization Request Response/0110, Authorization Advice Response/0130, and Reversal Request Response/0410 messages.

## Subfield 4 (Visa Checkout Indicator)

[DE 48](#), subelement 78, subfield 4 (Visa Checkout Indicator) indicates that the transaction was processed through Visa Checkout.

## Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | ans-1                  |
| Data Field          | Contents of position 4 |
| Justification       | N/A                    |

## Values

| Value | Description                                                                       |
|-------|-----------------------------------------------------------------------------------|
| Y     | Transaction is processed through Visa Checkout                                    |
| Space | No Visa Checkout or not echoed in the Authorization Request Response/0110 message |

## Application notes

If the transaction is performed through Visa Checkout, acquirers must send this value in the Authorization Request/0100, Authorization Advice/0120: acquirer-generated, and Reversal Request/0400 messages. This value will be mapped to Visa Field 126.18—Agent Unique Account Result.

Refer to the Visa's *VisaNet Authorization-Only Online Messages Technical Specifications*.

The acquirer will need to populate subfield 4 with a space if Visa Checkout was not performed and any other Payment Service Indicator is submitted in the Authorization Request/0100, Authorization Advice/0120: acquirer-generated and Reversal Request/0400 messages. A space will be sent back in subfield 4 to the acquirer if any other Payment Service Indicator is returned back in Authorization Request Response/0110, Authorization Advice Response/0130, and Reversal Request Response/0410 messages.

## Subfield 5 (Message Reason Code)

[DE 48](#), subelement 78, subfield 5 (Message Reason Code) provides the message reason code of the transaction.

## Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | ans-1                  |
| Data Field          | Contents of position 5 |
| Justification       | N/A                    |

## Values

| Value | Description                                                       |
|-------|-------------------------------------------------------------------|
| Space | Default (No message reason code associated with this transaction) |

| Value | Description               |
|-------|---------------------------|
| 0     | Incremental authorization |
| 1     | Resubmission              |
| 2     | Delayed charges           |
| 3     | Reauthorization           |
| 4     | No show                   |
| 5     | Account top up            |
| 6     | Deferred Authorization    |
| 7     | AFD Completion Advice     |

### Application notes

Acquirers must populate a space in Subfield 6 for Authorization Request/0100, Authorization Advice/0120: acquirer-generated, and Reversal Request/0400 messages, if DE 48 Subelement 78 is present. Otherwise, Mastercard will decline the transaction back to the acquirer.

Acquirers must send the value based on the transaction in the Authorization Request/0100, Authorization Advice/0120: acquirer-generated, and Reversal Request/0400 messages. This value will be mapped to Visa Field 63.3 Message Reason Code. Refer to Visa's *VisaNet Authorization-Only Online Messages Technical Specifications*.

### Subfield 6 (Token Response Information)

[DE 48](#), subelement 78, subfield 6 (Token Response Information) provides the Token Response Information received for Visa-branded authorization transactions from VisaNet (VIP) in the authorization request response.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data representation | ans-1                  |
| Data field          | Contents of position 6 |
| Justification       | N/A                    |

### Values

| Value | Description   |
|-------|---------------|
| Space | N/A           |
| 1     | Token program |

### Application notes

Acquirers must populate a space in Subfield 6 for Authorization Request/0100, Authorization Advice/0120: acquirer-generated, and Reversal Request/0400 messages, if DE 48 Subelement 78 is present. Otherwise, Mastercard will decline the transaction back to the acquirer.

The value for this field is provided by Visa in the Authorization Request Response/0110 and Authorization Advice Response/0130 messages. This field contains a value that can identify transactions eligible for token services. Acquirers will need to retain the value in this field from authorization request response messages and send it in clearing transactions to Visa.

Refer to Visa's *VisaNet Authorization-Only Online Messages Technical Specifications*.

## Subelement 79 (Chip CVR/TVR Bit Error Results)

[DE 48](#), subelement 79 (Chip CVR/TVR Bit Error Results) provides the Terminal Verification Results (TVR) and Card Verification Results (CVR) bitmask, and expected values registered by the issuer. This serves as notification of bit validation errors detected in the CVR/TVR within the Issuer Application data during M/Chip Cryptogram Validation processing.

### Attributes

| Attribute              | Description                                                                                           |
|------------------------|-------------------------------------------------------------------------------------------------------|
| Subelement ID          | 79                                                                                                    |
| Subelement Data Length | 2 positions                                                                                           |
| Data Representation    | an...50; LLVAR<br>The "LL" length field of LLVAR must be an integral multiple of 5, not to exceed 50. |
| Data Field             | Contents of subfields 1–4                                                                             |
| Subfields              | 4                                                                                                     |
| Justification          | N/A                                                                                                   |

## Usage

Following is the usage of subelement 79 (whether it is mandatory, conditional, optional, system provided, or not required) in all applicable messages.

## Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | •   | X   | C   |
| Authorization Advice/0120: system-generated | •   | X   | C   |

## Values

See subfields.

## Application notes

The Dual Message Authorization System will stop verification of CVR/TVR bits when 10 errors are detected.

Refer to the following example. In the example:

- The binary representation of the TVR Bit Mask for Byte 3 is "10101000"
- The binary representation of the Expected Result for Byte 3 is "00000000"
- The binary representation of the Validation Result for Byte 3 is "10000000"

The Validation Result indicates that the cardholder verification was not successful.

Refer to the *M/Chip Processing Services: Service Description* document for recommended bit mask settings.

## Binary representations

|                   | Byte 1 | Byte 2 | Byte 3 | Byte 4 | Byte 5 |
|-------------------|--------|--------|--------|--------|--------|
| TVR Bit Mask: Hex | 00     | 00     | A8     | 00     | 00     |
| Expected Result   | 00     | 00     | 00     | 00     | 00     |
| Validation Result | 00     | 00     | 80     | 00     | 00     |

### Subfields

| Subfield   | Description           | Value |
|------------|-----------------------|-------|
| Subfield 1 | CVR or TVR Identifier | T     |
| Subfield 2 | Byte ID               | 03    |
| Subfield 3 | Bit Identifier        | 8     |
| Subfield 4 | Value of Bit in Error | 1     |

### Subfield 1 (CVR or TVR Identifier)

[DE 48](#), subelement 79, subfield 1 (CVR or TVR Identifier) indicates whether bit reported in error is part of CVR or TVR.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

### Values

| Value | Description |
|-------|-------------|
| C     | CVR         |
| T     | TVR         |

## Subfield 2 (Byte ID)

[DE 48](#), subelement 79, subfield 2 (Byte ID) identifies the byte number of the associated bit reported in error.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-2                      |
| Data Field          | Contents of positions 2–3 |
| Justification       | N/A                       |

### Values

01–99

## Subfield 3 (Bit Identifier)

[DE 48](#), subelement 79, subfield 3 (Bit Identifier) identifies the bit number in error within the byte identified in subfield 2.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Field          | Contents of position 4 |
| Justification       | N/A                    |

### Values

1–8

## Subfield 4 (Value of Bit in Error)

[DE 48](#), subelement 79, subfield 4 (Value of Bit in Error) identifies the value of the bit in error that was submitted in transaction.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Field          | Contents of position 5 |
| Justification       | N/A                    |

### Values

| Value | Description           |
|-------|-----------------------|
| 0     | The bit is turned off |
| 1     | The bit is turned on  |

## Subelement 80 (PIN Service Code)

[DE 48](#), subelement 80 (PIN Service Code) indicates the results of PIN processing by the Dual Message Authorization System.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 80                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | a-2                       |
| Data Field             | Contents of positions 1–2 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

## Usage

Subelement 80 is provided by the Dual Message Authorization System in the Authorization Request/0100 message whenever PIN data is present in the Authorization Request/0100 message.

Following is the usage of subelement 80 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | .   | X   | C   |
| Authorization Request Response/0110         | .   | X   | C   |
| Authorization Advice/0120: system-generated | C   | .   | C   |

## Values

| Value | Description                                                                                                  |
|-------|--------------------------------------------------------------------------------------------------------------|
| PD    | The Dual Message Authorization System dropped the PIN (Mastercard Use Only for Credit Transactions with PIN) |
| PV    | The Dual Message Authorization System verified the PIN.                                                      |
| TV    | The Dual Message Authorization System translated the PIN for issuer verification.                            |
| PI    | The Dual Message Authorization System was unable to verify the PIN.                                          |
| TI    | The Dual Message Authorization System was unable to translate the PIN.                                       |

## Subelement 82 (Address Verification Service Request)

[DE 48](#), subelement 82 (Address Verification Service Request) indicates that verification of the cardholder billing address is requested in the authorization message.

## Attributes

| Attribute              | Description |
|------------------------|-------------|
| Subelement ID          | 82          |
| Subelement Data Length | 2 positions |

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 1–2 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

## Usage

Subelement 82 must be present in the authorization request message whenever cardholder address verification is requested by the acquirer.

Following is the usage of subelement 82 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | C   | X   | C   |
| Authorization Request Response/0110         | CE  | XE  | CE  |
| Authorization Advice/0120: system-generated | •   | X   | C   |

## Values

| Value | Description                        |
|-------|------------------------------------|
| 52    | AVS and Authorization Request/0100 |

## Application notes

Mastercard all issuing and acquiring processors to code for, support, and integrate into their systems the data elements, subelements, and values associated with this item.

For additional information about the requirement, refer to the *Global Safety and Security Standards Roadmap*.

**NOTE: Mastercard does not require acquirers or issuers to enroll in these optional products and services, but they must code their systems to support these fields to leverage such products and services in a timely manner in the event of a security issue.**

## Subelement 83 (Address Verification Service Response)

DE 48, subelement 83 (Address Verification Service Response) contains the AVS verification response code in the Authorization Request Response/0110 message.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 83                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Subelement 83 must be provided by the issuer in the Authorization Request Response/0110 message whenever AVS is requested by the acquirer.

Following is the usage of subelement 83 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request Response/0110         | C   | X   | C   |
| Authorization Advice/0120: system-generated | .   | X   | C   |

### Values

| Value | Description                                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| A     | Address matches, postal code does not.                                                                                                          |
| B     | Visa only. Street address match. Postal code not verified because of incompatible formats. (Acquirer sent both street address and postal code.) |
| C     | Visa only. Street address and postal code not verified because of incompatible formats. (Acquirer sent both street address and postal code.)    |

| Value | Description                                                                                                                                      |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| D     | Visa only. Street address and postal code match.                                                                                                 |
| F     | Visa only. Street address and postal code match. Applies to U.K. only.                                                                           |
| G     | Visa only. Non-AVS participant outside the U.S.; address not verified for international transaction.                                             |
| I     | Visa only. Address information not verified for international transaction.                                                                       |
| M     | Street addresses and postal code match.                                                                                                          |
| N     | Neither address nor postal code matches.                                                                                                         |
| P     | Visa only. Postal codes match. Street address not verified because of incompatible formats. (Acquirer sent both street address and postal code.) |
| R     | Retry, system unable to process.                                                                                                                 |
| S     | AVS currently not supported. U.S. issuers will not be able to send through this response code.                                                   |
| U     | No data from issuer/Dual Message Authorization System                                                                                            |
| W     | For U.S. addresses, nine-digit postal code matches, address does not; for address outside the U.S., postal code matches, address does not.       |
| X     | For U.S. addresses, nine-digit postal code and address matches; for addresses outside the U.S., postal code and address match.                   |
| Y     | For U.S. addresses, five-digit postal code and address matches.                                                                                  |
| Z     | For U.S. addresses, five-digit postal code matches, address does not.                                                                            |

### Application notes

Mastercard all issuing and acquiring processors to code for, support, and integrate into their systems the data elements, subelements, and values associated with this item.

For additional information about the requirement, refer to the *Global Safety and Security Standards Roadmap*.

**NOTE: Mastercard does not require acquirers or issuers to enroll in these optional products and services, but they must code their systems to support these fields to leverage such products and services in a timely manner in the event of a security issue.**

## Subelement 84 (Merchant Advice Code)

DE 48, subelement 84 (Merchant Advice Code) contains the merchant advice code.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 84                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-2                      |
| Data Field             | Contents of positions 1–2 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Usage

Subelement 84 is optionally provided by the issuer in the Authorization Request Response/0110 message.

Following is the usage of subelement 84 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                                                          | Org | Sys | Dst |
|----------------------------------------------------------------------------------|-----|-----|-----|
| Authorization Request Response/0110                                              | O   | X   | C   |
| Authorization Request Response/0110: tokenization authorization request response | C   | C   | .   |

| Reversal Request Response/0410                                                   | O   | P   | C   |

### Values

| Value | Description                                  |
|-------|----------------------------------------------|
| 01    | New account information available            |
| 02    | Cannot approve at this time, try again later |

| Value | Description                                                         |
|-------|---------------------------------------------------------------------|
| 03    | Do not try again                                                    |
| 04    | Token requirements not fulfilled for this token type                |
| 05    | Negotiated value not approved                                       |
| 21    | Payment Cancellation (Mastercard use only)                          |
| 22    | Merchant does not qualify for product code                          |
| 24    | Retry after 1 hour (Mastercard use only)                            |
| 25    | Retry after 24 hours (Mastercard use only)                          |
| 26    | Retry after 2 days (Mastercard use only)                            |
| 27    | Retry after 4 days (Mastercard use only)                            |
| 28    | Retry after 6 days (Mastercard use only)                            |
| 29    | Retry after 8 days (Mastercard use only)                            |
| 30    | Retry after 10 days (Mastercard use only)                           |
| 40    | Consumer non-reloadable prepaid card                                |
| 41    | Consumer single-use virtual card number                             |
| 42    | Sanctions Scoring Service: Score Exceeds Applicable Threshold Value |
| 43    | Consumer multi-use virtual card number                              |

### Application notes

Merchant Advice Code value of 43 (Consumer Multi-Use Virtual Card Number) may be used on all approval Authorization Request Response/0110 messages and decline Authorization Request Response/0110 messages only when DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status) contains a value of 8 (Account Status Inquiry Service [ASI]).

## Subelement 84 (Visa Response Codes [Visa Only])

DE 48, subelement 84 (Visa Response Codes [Visa Only]) contains the Visa Field 39 (Response Codes) as received from Visa.

### Attributes

| Attribute              | Description |
|------------------------|-------------|
| Subelement ID          | 84          |
| Subelement Data Length | 2 positions |

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | an-2                     |
| Data Field          | Contents of position 1–2 |
| Subfields           | N/A                      |
| Justification       | N/A                      |

### Usage

Whether use is mandatory, conditional, optional, or not required is noted for each applicable message.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | X   | C   |
| Authorization Advice Response/0130  | C   | X   | C   |
| Reversal Request Response/0410      | C   | X   | C   |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for the list of valid values and definitions.

## Subelement 84 (American Express Response Codes (American Express Only))

DE 48, subelement 84 (American Express Response Codes [American Express only]) contains the American Express Data Field 39 (Action Codes) as received from American Express.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 84                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-3                      |
| Data Field             | Contents of positions 1-3 |
| Subfields              | N/A                       |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Usage

Whether use is mandatory, conditional, optional, or not required is noted for each applicable message.

### Applicable messages

| Attributes                          | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | X   | C   |

### Values

Refer to *American Express Global Credit Authorization Guide (ISO)* for further instructions.

## Subelement 85 (Account Status (Visa Only))

DE 48, subelement 85 (Account Status [Visa Only]) identifies the account range as regulated or non-regulated interchange.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Subelement ID       | 85                     |
| Subelement Length   | 2 positions            |
| Data Representation | a-1                    |
| Data Field          | Contents of position 1 |
| Subfields           | N/A                    |
| Justification       | N/A                    |

### Usage

Following is the usage of subelement 85 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | P   | C   |
| Authorization Advice Response/0130  | C   | P   | C   |

### Values

| Value | Description              |
|-------|--------------------------|
| R     | Account is regulated     |
| N     | Account is non-regulated |

## Subelement 86 (Relationship Participant Indicator [Visa Only])

DE 48, subelement 86 (Relationship Participant Indicator) indicates the transaction originates from a cardholder-merchant relationship.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Subelement ID       | 86                     |
| Subelement Length   | 2 positions            |
| Data Representation | a-1                    |
| Data Field          | Contents of position 1 |
| Subfields           | N/A                    |
| Justification       | N/A                    |

### Usage

Subelement 86 contains an indicator to denote a transaction on a Visa account for a cardholder with a merchant relationship.

Following is the usage of subelement 86 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Request Response/0110           | CE  | XE  | CE  |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice Response/0130            | CE  | XE  | CE  |

### Values

| Value | Description                          |
|-------|--------------------------------------|
| C     | Credential on File                   |
| I     | Installment Payment                  |
| R     | Merchant/Cardholder Periodic Billing |

### Application notes

Visa Credential-on-File transactions: DE 48, subelement 86 value of C (Credential on File) is conditional when DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode) is a value of 10 (Credential on File). Acquirers must submit a value of C when a merchant is initiating the first transaction in a series on behalf of the cardholder using credentials stored on file. For an unscheduled credential-on-file that is merchant-initiated transaction and does not occur at a scheduled interval, acquirers must submit a value of C. Stored credential transactions initiated by cardholders must not submit value C.

## Subelement 87 (Card Validation Code Result)

DE 48, subelement 87 (Card Validation Code Result) indicates the CVC 1, CVC 2, or CVC 3 result code.

### Attributes

| Attribute              | Description |
|------------------------|-------------|
| Subelement ID          | 87          |
| Subelement Data Length | 2 positions |
| Data Representation    | a-1         |

| Attribute     | Description            |
|---------------|------------------------|
| Data Field    | Contents of position 1 |
| Subfields     | N/A                    |
| Justification | N/A                    |

## Usage

Subelement 87 must be provided by the issuer in the Authorization Request Response/0110 message whenever CVC 2 verification is requested by the acquirer.

Subelement 87 is optional whenever DE 45 (Track 1 Data) or DE 35 (Track 2 Data) is present in the Authorization Request/0100 message and CVC 1 is invalid.

Subelement 87 is optionally provided in the Authorization Request Response/0110 message when an issue is encountered during CVC 3 validation.

Following is the usage of subelement 87 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | •   | X   | C   |
| Authorization Request Response/0110         | C   | X   | C   |
| Authorization Advice/0120: system-generated | •   | X   | C   |

## Values

### CVC 1

| Value | Description                                                                                                                                                                                                           |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Y     | Invalid CVC 1 (only if DE 35 (Track 2 Data) or DE 45 (Track 1 Data) is present in the Authorization Request/0100 message.)<br><br>Refer to Application notes section that follows for Stand-In System considerations. |

## CVC 2

| Value | Description                                          |
|-------|------------------------------------------------------|
| M     | Valid CVC 2 (match)                                  |
| N     | Invalid CVC 2 (non-match)                            |
| P     | CVC 2 not processed (issuer temporarily unavailable) |
| U     | CVC 2 Unverified: Mastercard Use Only                |

## CVC 3

| Value | Description                                           |
|-------|-------------------------------------------------------|
| E     | Length of unpredictable number was not a valid length |
| P     | Unable to process                                     |
| Y     | Invalid                                               |

## American Express CID (Card Identifier)

Refer to DE 48 (Additional Data: Private Use), Subelement 95: American Express CID Card Identifier (American Express Only).

| Value | Description             |
|-------|-------------------------|
| Y     | Valid CID (match)       |
| N     | Invalid CID (non-match) |
| U     | CID not processed       |

## Application notes

If the issuer participates in the CVC 1 validation service and the transaction meets the criteria for the CVC 1 test, the Stand-In System considers the results of the CVC 1 validation in subelement 87 when responding to the Authorization Request/0100 message. The issuer can control the response that the Stand-In System uses when the CVC 1 value is invalid or validation cannot be performed. The default value is 05 (Do Not Honor). To change these values, contact Key Management Services at [key\\_management@Mastercard.com](mailto:key_management@Mastercard.com).

If an issuer's BIN is temporarily unable to receive the CVC 2 value, the Dual Message System Authorization inserts the value: U = CVC 2 unverified (Mastercard use only).

## Subelement 87 (CVV2 Response [Visa Only])

DE 48, subelement 87 (CVV2 Response) indicates the CVV2 response on a Visa account.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 87                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Following is the usage of subelement 87 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | X   | C   |

### Values

| Value | Description                                                                            |
|-------|----------------------------------------------------------------------------------------|
| M     | CVV2 match                                                                             |
| N     | CVV2 no match                                                                          |
| P     | Not processed                                                                          |
| S     | CVV2 is on the card, but the merchant has indicated that CVV2 is not present.          |
| U     | Issuer is not Visa-certified for CVV2, has not provided Visa encryption keys, or both. |

## Subelement 88 (Magnetic Stripe Compliance Status Indicator)

DE 48, subelement 88 (Magnetic Stripe Compliance Status Indicator) indicates that the Dual Message Authorization System replaced the DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode) value of 90 or 91 with value of 02.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 88                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Subelement 88 is provided by the Dual Message Authorization System whenever the Dual Message Authorization System replaces the DE 22, subfield 1, value of 90 or 91 to a value of 02 due to magnetic stripe compliance downgrade of the acquirer.

Following is the usage of subelement 88 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | •   | X   | C   |
| Authorization Request Response/0110         | OE  | X   | C   |
| Authorization Advice/0120: system-generated | •   | X   | C   |

### Values

| Value | Description                                                                                 |
|-------|---------------------------------------------------------------------------------------------|
| Y     | Dual Message Authorization System replaced DE 22, subfield 1, value 90 or 91 with value 02. |

## Subelement 89 (Magnetic Stripe Compliance Error Indicator)

DE 48, subelement 89 (Magnetic Stripe Compliance Error Indicator) indicates magnetic stripe compliance errors.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 89                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Subelement 89 is provided by the Dual Message Authorization System whenever errors are detected while editing transactions for magnetic stripe compliance. Following is the usage of subelement 89 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | •   | X   | C   |
| Authorization Request Response/0110         | OE  | X   | C   |
| Authorization Advice/0120: system-generated | •   | X   | C   |

### Values

| Value | Description                                                                                                                                           |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| A     | Track 1 or Track 2 not present in the message                                                                                                         |
| B     | Track 1 and Track 2 present in the message                                                                                                            |
| C     | DE 2 (Primary Account Number [PAN]) not equal in track data                                                                                           |
| D     | DE 14 (Expiration Date) not equal in track data                                                                                                       |
| E     | Service code invalid in track data                                                                                                                    |
| F     | Field separator(s) invalid in track data                                                                                                              |
| G     | A field within the track data has an invalid length                                                                                                   |
| H     | DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode) is 80, 90, or 91 when DE 48, Transaction Category Code (TCC) is T |
| I     | DE 61 (Point-of-Service Data), subfield 4 (POS Cardholder Presence) is 1, 2, 3, 4, or 5                                                               |
| J     | DE 61 Point-of-Service Data), subfield 5 (POS Card Presence) is 1                                                                                     |

## Subelement 90 (Lodging and Auto Rental Indicator)

DE 48, subelement 90 (Lodging and Auto Rental Indicator) indicates the presence of Lodging and Auto Rental Service interchange program.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 90                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Subelement 90 is provided whenever the cardholder is a preferred customer of the merchant.

Following is the usage of subelement 90 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | C   | P   | C   |
| Authorization Request Response/0110         | CE  | XE  | CE  |
| Authorization Advice/0120: system-generated | .   | X   | C   |

### Values

| Value | Description                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------|
| P     | Cardholder is enrolled in a merchant preferred customer program and magnetic stripe data may be absent |

## Subelement 90 (Custom Payment Service Request [Visa Only])

DE 48, subelement 90 (Custom Payment Service Request [Visa Only]) contains the Authorization Characteristics Indicator (Visa Field 62.1).

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 90                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Subelement 90 is used to indicate a custom payment service transaction on a Visa account whenever applicable.

Following is the usage of subelement 90 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Reversal Request/0400                         | C   | P   | C   |

### Values

| Value | Description                                      |
|-------|--------------------------------------------------|
| I     | Incremental authorization                        |
| P     | Preferred customer                               |
| R     | Recurring payment                                |
| Y     | Request for Custom Payment Service participation |

### Application notes

Refer to Visa's *VisaNet Authorization-Only Online Messages Technical Specifications* for a list of all customer request values in Visa field 62.1.

## Subelement 90 (Custom Payment Service Request Response [Visa Only])

DE 48, subelement 90 (Custom Payment Service Request Response) contains the Authorization Characteristics Indicator (Visa Field 62.1).

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 90                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |

| Attribute     | Description |
|---------------|-------------|
| Subfields     | N/A         |
| Justification | N/A         |

## Usage

Following is the usage of subelement 90 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | P   | C   |
| Authorization Advice Response/0130  | C   | P   | C   |
| Reversal Request Response/0410      | C   | P   | C   |

## Values

Acquirer receives Visa customer response code. See Application notes.

## Application notes

If the request qualifies for Visa customer and is approved, refer to the Visa's *VisaNet Authorization-Only Online Messages Technical Specifications* for a complete list of customer-qualified codes in Visa Field 62.1. If the original request does not qualify for customer, Visa returns an "N" or "T" in the response.

## Subelement 91 (Acquirer Reference Data [American Express Only])

DE 48, subelement 91 (Acquirer Reference Data) contains the 15-digit Transaction Identifier (TID), a unique American Express tracking number. The TID is used to identify and track a card customer transaction throughout its life cycle.

## Attributes

| Attribute              | Description     |
|------------------------|-----------------|
| Subelement ID          | 91              |
| Subelement Data Length | 2 positions     |
| Data Representation    | ans...15; LLVAR |

| Attribute  | Description                |
|------------|----------------------------|
| Data Field | Contents of positions 1–15 |
| Subfields  | N/A                        |

### Usage

Following is the usage of subelement 91 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | P   | C   |

### Values

A unique 15 digit TID.

## Subelement 91 (Custom Payment Service Request/Transaction ID [Visa Only])

DE 48, subelement 91 (Custom Payment Service Request/Transaction ID) indicates the presence of Custom Payment Service Request response data.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 91                         |
| Subelement Data Length | 2 positions                |
| Data Representation    | an...19; LLVAR             |
| Data Field             | Contents of positions 1–19 |
| Subfields              | N/A                        |

### Usage

Subelement 91 is used to provide transaction ID and/or Validation Code when subelement 90 indicates an incremental authorization or when submitting a reversal on a Visa account.

Following is the usage of subelement 91 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

#### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Reversal Request/0400                         | C   | P   | C   |

#### Values

Subelement 91 must contain the transaction ID (Visa Field 62.2, 15 bytes numeric). Optionally, the acquirer may submit 19 bytes such that the 15-byte numeric transaction ID is followed by the four-byte alphanumeric validation code for Visa Field 62.3.

## Subelement 91 (Custom Payment Service Response/Transaction ID [Visa Only])

DE 48, subelement 91 (Custom Payment Service Response/Transaction ID) provides authorization response data when custom payment service (subelement 90) is requested on a Visa account.

#### Attributes

| Attribute              | Description                                                            |
|------------------------|------------------------------------------------------------------------|
| Subelement ID          | 91                                                                     |
| Subelement Data Length | 2 positions                                                            |
| Data Representation    | ans...19; LLVAR                                                        |
| Data Field             | Contents of positions 1-4, 1-15, or 1-19 depending on the length field |
| Subfields              | N/A                                                                    |

#### Usage

Following is the usage of subelement 91 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | X   | C   |
| Authorization Advice Response/0130  | C   | X   | C   |
| Reversal Request Response/0410      | C   | X   | C   |

### Values

| Length Field Value       | Subelement 91 Value                                                                                                                                                                                                                                         |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| When length field is 04: | Subelement 91 contains the Visa customer validation code (Visa field 62.3, four bytes alphanumeric). Refer to the Visa's <i>VisaNet Authorization-Only Online Messages Technical Specifications</i> for more information on Visa customer validation codes. |
| When length field is 15: | Subelement 91 contains the transaction ID (Visa field 62.2, 15 bytes numeric).                                                                                                                                                                              |
| When length field is 19: | Subelement 91 contains the transaction ID (Visa field 62.2, 15 byte numeric) and customer validation code (Visa field 62.3, four bytes alphanumeric).                                                                                                       |

## Subelement 92 (CVC 2)

DE 48, subelement 92 (CVC 2) contains the CVC 2 value from the signature panel of the card.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 92                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | n-3                       |
| Data Field             | Contents of positions 1–3 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

## Usage

Subelement 92 contains the CVC 2 value from the signature panel of the card when applicable.

Following is the usage of subelement 92 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | .   | C   |
| Authorization Request Response/0110           | CE  | .   | CE  |
| Authorization Advice/0120: system-generated   | .   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |

## Values

Acquirers must not use 000 as a default when sending this subelement. Acquirers must only provide this subelement when requesting CVC 2 verification.

## Application notes

The contents of DE 48, subelement 92, when populated, are passed to the Dual Message Authorization System issuer in transactions acquired through the Single Message System.

For Mastercard Digital Enablement Service (MDES) transactions, DE 48, subelement 92 must be populated when provided by the merchant; it might contain a Dynamic Token Verification code.

## Subelement 92 (CVV2 Data (Visa Only))

DE 48, subelement 92 (CVV2 Data) consists of the Visa CVV2 presence ID, response type, and CVV2 value.

## Attributes

| Attribute              | Description                         |
|------------------------|-------------------------------------|
| Subelement ID          | 92                                  |
| Subelement Data Length | 2 positions                         |
| Data Representation    | ns-6                                |
| Data Field             | Contents of positions 1, 2, and 3–6 |

| Attribute     | Description   |
|---------------|---------------|
| Subfields     | 3             |
| Justification | See subfields |

## Usage

Subelement 92 contains the CVV2 value from the signature panel of the card when applicable.

Following is the usage of subelement 92 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | C   | P   | C   |
| Authorization Request Response/0110 | CE  | XE  | CE  |

## Values

### Subfield 1 (CVV2 Presence ID)

## Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

## Values

| Value | Description                                                   |
|-------|---------------------------------------------------------------|
| 0     | Merchant did not provide CVV2 or it was deliberately bypassed |
| 1     | CVV2 value present                                            |
| 2     | CVV2 is on card, but not legible                              |
| 9     | Cardholder states no CVV2 is on card                          |

## Subfield 2 (CVV2 Response Code)

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 2 |
| Justification       | N/A                    |

### Values

| Value | Description                                                                      |
|-------|----------------------------------------------------------------------------------|
| 0     | Only the normal response code in DE 39 should be returned by the issuer          |
| 1     | The normal response code and CVV2 response code should be returned by the issuer |

## Subfield 3 (CVV2 Value)

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ns-4                      |
| Data Field          | Contents of positions 3–6 |
| Justification       | Right, with leading zeros |

### Values

CVV2 value from the signature panel of the card. Blank or space-fill as needed. No other special character is allowed.

## Subelement 93 (Fleet Card ID Request Data (Visa Only))

DE 48, subelement 93 (Fleet Card ID Request Data) contains the Fleet Card ID information on a Visa account, when applicable.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 93                    |
| Subelement Data Length | 2 positions           |
| Data Representation    | ans...19; LLVAR       |
| Data Field             | Contents of subfields |
| Subfields              | 2                     |
| Justification          | N/A                   |

### Usage

Following is the usage of subelement 93 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | P   | C   |

### Values

See subfields.

## Subfield 1 (Fleet Card ID Request Indicator)

DE 48, subelement 93, subfield 1 (Fleet Card ID Request Indicator) identifies the Fleet Card ID.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | ans-2       |

| Attribute  | Description              |
|------------|--------------------------|
| Data Field | Contents of position 1–2 |

### Values

\$\$ is Fleet Card ID

## Subfield 2 (Optional Free-form Informational Text)

DE 48, subelement 93, subfield 2 (Optional Free-form Informational Text) provides additional Point-of-Service (POS) information.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans...17                   |
| Data Field          | Contents of positions 3–19 |

### Values

Additional Point-of-Service (POS) information (optional).

## Subelement 94 (Commercial Card Inquiry Request [Visa Only])

DE 48, subelement 94 (Commercial Card Inquiry Request) contains an indicator requesting a commercial card inquiry on a Visa account, when applicable.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 94                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | ans-4                     |
| Data Field             | Contents of subfields 1-2 |
| Subfields              | 2                         |
| Justification          | N/A                       |

## Usage

Following is the usage of subelement 94 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |

## Subfields

### Subfield 1 (Card Request Indicator)

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-3                     |
| Data Field          | Contents of positions 1–3 |
| Justification       | N/A                       |

### Values

| Value                    | Description             |
|--------------------------|-------------------------|
| !01 (hexadecimal 5AF0F1) | Commercial Card Inquiry |

### Subfield 2 (Merchant Request for Commercial Card Type)

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | ans-1                  |
| Data Field          | Contents of position 4 |
| Justification       | N/A                    |

### Values

| Value    | Description       |
|----------|-------------------|
| 0 (zero) | Request Indicator |

## Subelement 94 (Commercial Card Inquiry Response [Visa Only])

DE 48, subelement 94 (Commercial Card Inquiry Response) contains the commercial card inquiry response data as a result of a commercial card inquiry on a Visa account.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 94                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | ans-4                     |
| Data Field             | Contents of subfields 1-2 |
| Subfields              | 2                         |
| Justification          | N/A                       |

### Usage

Following is the usage of subelement 94 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | P   | C   |
| Authorization Advice Response/0130  | C   | P   | C   |

## Subfields

### Subfield 1 (Card Request Indicator)

| Attribute           | Description                                           |
|---------------------|-------------------------------------------------------|
| Data Representation | ans-3                                                 |
| Data Field          | Contents of positions 1–3 (Hexadecimal value: 5AF0F1) |
| Justification       | N/A                                                   |

### Values

| Value                    | Description             |
|--------------------------|-------------------------|
| !01 (hexadecimal 5AF0F1) | Commercial Card Inquiry |

### Subfield 2 (Visa Commercial Card Response)

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | ans-1                  |
| Data Field          | Contents of position 4 |
| Justification       | N/A                    |

### Values

Visa Commercial Card Response contains 0 (zero) when Visa has determined the transaction is not using a commercial card. Otherwise, Visa provides an alphabetical value indicating the type of Visa commercial purchasing card used. Refer to Field 48, Usage 27 in Visa's VisaNet Authorization-Only Online Messages Technical Specifications for the complete set of values.

## Subelement 95 (Mastercard Promotion Code)

DE 48, subelement 95 (Mastercard Promotion Code) contains the promotion code to identify unique use of a Mastercard product for a specific program or service established between issuers and merchants.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 95                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | an-6                      |
| Data Field             | Contents of positions 1–6 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Usage

Following is the usage of subelement 95 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |

| Authorization Request/0100          | C   | P   | C   |
| Authorization Request Response/0110 | CE  | XE  | CE  |

### Values

The four-digit Card Identifier (CID) number on the front of the American Express card.

## Subelement 96 (Visa Market-Specific Data Identifier [Visa Only])

DE 48, subelement 96 (Visa Market-Specific Data Identifier) contains the market-specific data identifier.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 96                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Following is the usage of subelement 96 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org  | Sys  | Dst  |
|-----------------------------------------------|------|------|------|
| Authorization Request/0100                    | C    | P    | C    |
| Authorization Request Response/0110           | CE/C | XE/X | CE/C |
| Authorization Advice/0120: acquirer-generated | C    | P    | C    |
| Authorization Advice Response/0130            | CE   | XE/X | CE   |
| Reversal Request/0400                         | C    | P    | C    |
| Reversal Request Response/0410                | CE/C | XE/X | CE/C |

### Values

Refer to Field 62.4 (Market-Specific Data Identifier) in Visa's VisaNet Authorization-Only Online Messages Technical Specifications for the complete set of values.

## Subelement 97 (Prestigious Properties Indicator [Visa Only])

DE 48, subelement 97 (Prestigious Properties Indicator) contains the prestigious property indicator. For participants in the Visa Prestigious Lodging program (conditional).

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 97                     |
| Subelement Data Length | 2 positions            |
| Data Representation    | a-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Following is the usage of subelement 97 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|

| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice Response/0130            | CE  | XE  | CE  |

### Values

| Value | Description             |
|-------|-------------------------|
| D     | Visa established limits |
| B     | Visa established limits |
| S     | Visa established limits |

## Subelement 98 (Mastercard Corporate Fleet Card ID/Driver Number)

DE 48, subelement 98 (Mastercard Corporate Fleet Card ID/Driver Number) allows the corporate customer to verify the user of the card and enables more detailed reporting. It contains the ID of the user of a Fleet card, when applicable.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 98                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | n...6; LLVAR              |
| Data Field             | Contents of positions 1-6 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

## Usage

Following is the usage of subelement 98 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |

## Values

Cardholder unique.

## Application notes

If DE 48, subelement 98 (Mastercard Corporate Fleet Card ID/Driver Number) was present in the original 0100 AFD authorization message, subelement 98 must be the same value in acquirer-generated 0120 completion advice.

## Subelement 99 (Mastercard Corporate Fleet Card Vehicle Number)

DE 48, subelement 99 (Mastercard Corporate Fleet Card Vehicle Number) allows the corporate customer to verify the user of the card and enables more detailed reporting. It contains the ID of the vehicle used in conjunction with a Fleet card purchase, when applicable.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 99                        |
| Subelement Data Length | 2 positions               |
| Data Representation    | n...6; LLVAR              |
| Data Field             | Contents of positions 1-6 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

## Usage

Following is the usage of subelement 99 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |

## Values

Vehicle-specific.

## Application notes

If subelement 99 was present in the original 0100 AFD authorization message, subelement 99 must be the same value in acquirer-generated 0120 completion advice.

# DE 48, Dual Message Authorization System Edits

The Dual Message Authorization System performs edits as described in this section.

## DE 48, Proper Formatting

The Dual Message Authorization System will perform the following system edit to verify proper formatting of DE 48.

| WHEN...                                                                                                                                                                                                                                                                                                                        | THEN the Dual Message Authorization System...                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| an Authorization Request/0100, Authorization Advice/0120—Acquirer-generated, or Reversal Request/0400 message contains DE 48 (Additional Data—Private Use) with subelements that have incorrect length and/or incorrect format (Data Representations), or a subelement ID appears more than once within the same data element. | <p>Sends the acquirer an Authorization Request Response/0110, Authorization Advice Response/0130, or Reversal Request Response/0410 message where DE 44 is 6 positions for subelement format errors:</p> <ul style="list-style-type: none"> <li>DE 39 (Response Code) = 30</li> <li>DE 44 (Additional Response Data) = 0480nn</li> </ul> |

## Examples

- When an edit error occurs on DE 48, the DE 44 data will be populated as these examples below:
  - Error on DE 48 subelement 42, subfield 1: 048042 (no subfield information is provided)
  - Error on DE 48 subelement 61: 048061
- DE 48 TCC format error will be responded with DE 44 = 048000.

For non-DE 48/DE 108/DE 112 format errors, DE 44 will only have DE information and no subelement information. For example, the format error in DE 22 will have DE 44 as 022.

## DE 48, TCC

The Dual Message Authorization System performs the following edit.

### Edit

| WHEN...                                                                                                                                            | THEN the Authorization System...                                                                                                                                                                                                                            |

### Values

All currency codes must be selected from the numeric ISO standard currency codes. ISO standard currency codes identify DE 49. A list of valid values is available in the *Quick Reference Booklet*.

### Application notes

This data element is defined and used identically within all Mastercard programs and services. Acquirers will receive an Authorization Request Response/0110 message containing a format error in DE 39 when the currency code in DE 49 is a currency code other than those in the ISO Standard Currency Codes table, invalid or pseudo codes will not be accepted.

## DE 50 (Currency Code, Settlement)

DE 50 (Currency Code, Settlement) defines the currency of DE 5 (Amount, Settlement), DE 29 (Amount, Settlement Fee), and DE 95 (Replacement Amounts), subfield 2 (Actual Amount, Settlement).

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |

### Values

All currency codes must be selected from the numeric ISO standard currency codes.

ISO standard currency codes identify DE 50. A list of valid values is in the *Quick Reference Booklet*.

### Application notes

This data element is defined and used identically within all Mastercard programs and services.

As of the date of this publication, all Mastercard programs and services use U.S. dollars (840) as the currency of settlement for programs and services that the Dual Message Authorization System supports.

The Dual Message Authorization System includes this data element if the customer chooses to receive settlement amount-related data elements.

This data will be present, as defined, except when the Dual Message Authorization System has declined an Authorization Request/0100 message and was unable to complete currency conversion processing.

## DE 51 (Currency Code, Cardholder Billing)

DE 51 (Currency Code, Cardholder Billing) defines the currency of DE 6 (Amount, Cardholder Billing), DE 8 (Amount, Cardholder Billing Fee), and DE 95 (Replacement Amounts), subfield 3 (Actual Amount, Cardholder Billing).

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Length         | N/A                       |

## Values

All currency codes must be selected from the numeric ISO standard currency codes.

ISO standard currency codes identify DE 51. A list of valid values is in the *Quick Reference Booklet*.

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

This data will be present, as defined, except when the Dual Message Authorization System has declined an Authorization Request/0100 message and was unable to complete currency conversion processing.

## DE 52 (Personal ID Number [PIN] Data)

DE 52 (Personal ID Number [PIN] Data) contains a number assigned to a cardholder intended to uniquely identify that cardholder at the point of interaction. The use of the PIN is subject to bilateral agreement. The data element may contain the PIN itself or a derivative. This data element transmits PIN information from acquirers to issuers (or to the network) for PIN verification or validation.

### Attributes

| Attribute           | Description                              |
|---------------------|------------------------------------------|
| Data Representation | b-8                                      |
| Data Length         | N/A                                      |
| Data Field          | Contents of bit positions 1–64 (8 bytes) |
| Subfields           | N/A                                      |
| Justification       | N/A                                      |

### Usage

Following is the usage of DE 52 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

### Values

The network supports PINs from four to 12 characters long.

The encrypted PIN block always is eight bytes (64 bits) long regardless of the original PIN length.

CIS uses the Data Encryption Standard (DES) algorithm (ISO 9564-2) to translate PIN data. For purposes of PIN translation, DES requires that a 16-digit hexadecimal number and working key be provided. DE 52 houses the 16-digit number in the customer's PIN block format.

### Application notes

Because of strict security requirements implemented within the network environment, PINs are never transmitted "in the clear" as character data. In addition, PIN data is never included in

Advice or Reversal messages. The primary reason for this is that PIN data is highly sensitive information that is never stored (even in encrypted form) as a permanent component of a transaction, for security reasons. The rules, bylaws, and procedures established for individual programs and services dictate the specific requirements for PIN usage.

This data element is supported for Mastercard transactions.

The Dual Message Application System may perform PIN verification or validation services on behalf of customers that elect to use this optional service. Refer to the appropriate user guide and *Security Rules and Procedures* to determine specific PIN verification/validation options that may be selected for individual Mastercard programs and services.

DE 52 is mandatory for all ATM transactions.

### Application notes

Use of DE 53 in online PIN transactions is specific to the PIN translation process performed on the dual message authorization network for Europe Region Acquirers and Issuers. It is not required to be provided in online PIN transactions for messages from non-Europe Region Acquirers.

**NOTE: DE 52, DE 53 and DE 125 are mutually exclusive with DE 110 Dataset01.**

## Subfield 1 (PIN Security Type Code)

DE 53, subfield 1 (PIN Security Type Code) indicates the type of security processing used for the PIN data.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 1–2 |
| Justification       | N/A                       |

### Values

| Value | Description             |
|-------|-------------------------|
| 97    | Multiple (indexed) keys |

## Subfield 2 (PIN Encryption Type Code)

DE 53, subfield 2 (PIN Encryption Type Code) indicates the type of security processing used for the PIN data.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 3–4 |
| Justification       | N/A                       |

### Values

| Value | Description    |
|-------|----------------|
| 01    | DES encryption |

## Subfield 3 (PIN Block Format Code)

DE 53, subfield 3 (PIN Block Format Code) indicates the type of PIN block format used.

### Attributes

| Attribute           | Description               |

### Values

See subfields.

## Application notes

### General

An "occurrence" is defined as one set of the four DE 54 subfields. Depending on the conditions of the message, DE 54 can be sent by the acquirer, issuer, or the Dual Message Authorization System.

Mastercard Network programs and services do not use more than two "additional amounts" amount types within a single Dual Message Authorization System message, except for healthcare amount types which use three.

The message originator can send only two occurrences of the DE 54 subfields in a message. One occurrence is the first amount type in the message originator's currency. The other occurrence is the second amount type in the message originator's currency. The Dual Message Authorization System will then provide an additional occurrence of each amount type to the message recipient in the message recipient's currency. Therefore, the message recipient can receive a maximum of four occurrences of the DE 54 subfields, except for healthcare amount types where the recipient could receive up to six occurrences. Each amount type will have two occurrences, one in the message originator's currency, and one in the message recipient's currency.

When the Authorization Request Response/0110 message contains DE 39, value 10 (Partial Approval) or 87 (Purchase Amount Only, No Cash Back Allowed), the issuer can send only one occurrence of the DE 54 subfields in the issuer's currency that is not equal to DE 54, subfield 2 (Amount Type) value 57 (Original Amount). The Dual Message Authorization System will provide two occurrences of the amount type sent by the issuer to the acquirer, one in the acquirer's currency, and one in the issuer's currency. The Dual Message Authorization System will also provide two occurrences of the DE 54 subfields where DE 54, subfield 2 (Amount Type) is 57 and DE 54, subfield 4 (Debit or Credit Indicator) is C plus the 12-digit original amount. One occurrence will be in the acquirer's currency and one occurrence will be in the issuer's currency. The exception is that if an occurrence of DE 54, subfield 2 value 58 (POI Amount) is sent, then the Dual Message Authorization System will not provide an additional occurrence in the issuer's currency.

### Partial approvals

The Authorization Request Response/0110 message contains DE 54, subfield 2, value 57 only if the acquirer can process partial approvals and if the issuer is approving part of the total transaction amount. Issuers may include one additional occurrence of DE 54 subfields in the issuer's currency with an amount type value of 02 to indicate the available balance of the account. If the issuer approves the entire transaction amount, DE 54, subfield 2, value 57 will not be present in the authorization request response and the issuer may provide more than one occurrence of DE 54 subfields.

### Account balance response

The account balance response enables the issuers to include balance information as part of the response to a financial authorization request. Issuers can add account balance response information when responding to authorization requests for prepaid accounts and in ATM transactions. The account balance response is an "unsolicited" transmission of account balance

data to the point-of-sale (POS) terminal or ATM. Account balance information returned in the Authorization Request Response/0110 must be provided in the same currency as the Cardholder Billing Currency (DE 51).

### **Account status inquiry**

Amount type 05 is only applicable for Account Status Inquiry (ASI) Authorization transactions. The issuer will not receive an occurrence of DE 54 with amount type 05.

### **Purchase with cash back**

Issuers are not required to return DE 54 in Purchase with Cash Back Authorization Request Response/0110 messages. If DE 54 is returned by the issuer, it will be dropped before the response is forwarded to the acquirer. The Authorization Request Response/0110 message only contains DE 54, subfield 2, value 40 when the transaction is processed by X-Code or declined by Mastercard with a format error condition (DE 39 = 30). When reversing a Purchase with Cash Back Authorization where only the purchase amount of the transaction was approved by the issuer (DE 39 equals 87 [Purchase Only Approval]), acquirers are not required to include the cash portion of the original authorization request in DE 54 of the Reversal Request/0400 message. Also, DE 4 (Amount, Transaction) of the reversal request should only contain the actual Purchase Amount of the original authorization request.

### **Cash back without purchase in participating countries**

Cash Back without Purchase is supported for intracountry transactions in participating countries and is identified in the Authorization Request/0100 messages containing DE 3, subfield 1 (Cardholder Transaction Type), value 09 (Purchase with Cash Back) with the presence of DE 54, subfield 2, value 40. For Cash Back without Purchase transactions, DE 54 must be present and equal the same amount in DE 4.

### **Real-time substantiation**

The Authorization Request/0100 or Authorization Advice/0120 messages contain DE 54, subfield 2, values 10, 11, or 12 to indicate the healthcare, prescription, or vision Rx amounts. DE 54, subfield 2, values 10, 11, and 12 are sent only to the issuers that participate in Real-time Substantiation.

Mastercard supports DE 54 as follows for acquirers and issuers:

- Overall size allowed by Mastercard = 240 bytes or 12 occurrences
- Number of occurrences an acquiring customer can send = 4
- Number of occurrences stored in USD currency = 4
- Number of occurrences converted to issuers currency = 4
- Number of occurrences sent to issuer = 8 (4 in acquirer currency, 4 in issuer currency)

The healthcare purchase information passed in DE 54 when these accounts are used at certain U.S. merchant locations is only required in purchase transaction authorization requests. It is not required and should not be expected to be present in refund transaction (purchase return) authorization requests.

## Purchase of goods or services with cash back

Refer to [Program and Service Format Requirements, Purchase of Goods or Services with Cash Back, Dual Message Authorization System Edits](#).

## POI currency conversion

When POI currency conversion (also known as Dynamic Currency Conversion [DCC]) is performed, Mastercard suggests that acquirers provide the pre-conversion currency and amount in DE 54 with an amount type value of 58 (POI Amount) in subfield 2 for Authorization Request/0100, Authorization Advice/0120, and Reversal Request/0400 messages.

The processing criteria for DCC transactions are as follows:

- The transaction currency code in DE 49 (Currency Code, Transaction) must not be equal to the pre-conversion currency code in DE 54, subfield 3 (Currency Code).
- DE 54 must contain subfield 2 (Amount Type), value 58 (POI Amount), along with all other DE 54 subfields.
- The transaction amount provided in DE 54, subfield 4 (Debit or Credit Indicator) cannot contain all zeros.
- DE 54, subfield 3 must contain a valid, pre-conversion currency code.
- Issuers are not required to return an occurrence of DE 54 with subfield 2, value 58 in Authorization Request Response/0110 message. If it is returned by the issuer, it will be dropped before the response is forwarded to the acquirer.
- For a Purchase with Cash Back transaction to be subjected to DCC, it must contain two occurrences of DE 54 in Authorization Request/0100 or Authorization Advice/0120 messages: one occurrence with a subfield 2 value 58 and another occurrence with a subfield 2 value of 40 (Amount Cash Back).
- Mastercard will allow acquirers to send one occurrence of DE 54 with a subfield 2 value 58 in Reversal Request/0400 messages.
- Mastercard will forward an occurrence of DE 54 with subfield 2, value of 58 in Reversal Advice/0420 messages to the issuers if the acquirer has provided an occurrence of DE 54 with subfield 2, value 58 in Authorization Request/0100 or Reversal Request/0400 message, except when a Reversal Advice/0420 message is sent to the issuer when an Authorization Request Response/0110 message from the issuer is not delivered to the acquirer.

For partial Reversal Request/0400 messages subject to DCC, acquirers may optionally supply the remainder of the transaction amount to be authorized in pre-conversion currency in DE 54, subfield 4 (Debit or Credit Indicator).

## Visa account funding

Acquirers submitting Visa Account Funding Transactions may include a value of 95 (Visa Money Transfer Foreign Exchange Fee [Visa Only]) to identify foreign exchange fees associated with the money transfer transactions when processing an Authorization Request/0100 or a Reversal Request/0400 message by populating it in DE 54, subfield 2. Mastercard will remove any occurrence of the Visa Money Transfer Foreign Exchange Fee (Visa Only) from:

- Authorization Request Response/0110 messages
- Non-Visa-branded transactions

## Subfield 1 (Account Type)

DE 54, subfield 1 (Account Type) contains the two-digit code as defined in DE 3 (Processing Code), subfield 2 (Cardholder "From Account" Type Code) or subfield 3 (Cardholder "To Account" Type Code).

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 1–2 |
| Justification       | N/A                       |

### Values

| Value | Description          |
|-------|----------------------|
| 00    | No account specified |
| 10    | Savings account      |
| 20    | Checking account     |
| 30    | Credit card account  |

The valid values for this field are the same values as defined for [DE 3 \(Processing Code\)](#), subfield 2 (Cardholder "From Account" Type Code).

## Subfield 2 (Amount Type)

DE 54, subfield 2 (Amount Type) indicates the type of amount applied.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 3–4 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |
| Required as   | Conditional |

## Values

| Value | Description                                               |
|-------|-----------------------------------------------------------|
| 01    | Ledger balance                                            |
| 02    | Available balance                                         |
| 03    | Amount owing                                              |
| 04    | Amount due                                                |
| 05    | Future transaction amount                                 |
| 06    | Product Status Inquiry Transaction Amount                 |
| 10    | Healthcare eligibility amount                             |
| 11    | Prescription eligibility amount                           |
| 12    | Vision Rx eligibility amount                              |
| 17    | Prepaid online bill pay fee amount                        |
| 40    | Cash back                                                 |
| 44    | Amount Gratuity                                           |
| 57    | Original Amount                                           |
| 58    | POI Amount                                                |
| 59    | Limit/Balance amount available from Mastercard In Control |
| 80    | Copay Amount                                              |
| 90    | Available Credit                                          |
| 91    | Credit Limit                                              |
| 92    | Outstanding hold amounts                                  |
| 95    | Visa Money Transfer Foreign Exchange Fee (Visa Only)      |

## Subfield 3 (Currency Code)

DE 54, subfield 3 (Currency Code) is a three-digit code that must contain a valid numeric code.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Field          | Contents of positions 5–7 |
| Justification       | Right                     |

### Values

Refer to the Quick Reference Booklet.

## Subfield 4 (Debit or Credit Indicator)

DE 54, subfield 4 (Debit or Credit Indicator) indicates the amount is a credit or debit indicator.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | a-1                    |
| Data Field          | Contents of position 8 |
| Justification       | Right                  |

### Values

| Value | Description                       |
|-------|-----------------------------------|
| C     | Credit amount or positive balance |
| D     | Debit amount or negative balance  |

## Subfield 5 (Amount)

DE 54, subfield 5 (Amount) contains the additional amount.

### Attributes

| Attribute           | Description                        |
|---------------------|------------------------------------|
| Data Representation | n-12                               |
| Data Field          | Contents of positions 9–20         |
| Justification       | Right-justified with leading zeros |

## DE 54 Dual Message Authorization System edits

The Dual Message Authorization System will perform the following system edits.

### Associated edits

| WHEN...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | THEN the Dual Message Authorization System...                                                                                                                                                                                |

## DE 55 (Integrated Circuit Card [ICC] System-Related Data)

DE 55 (Integrated Circuit Card [ICC] System-Related Data) contains binary data that only the issuer, the issuer agent, or MDES processes; it is used locally by the payment application on the chip at a chip-capable terminal. This data element is present in chip full-grade transactions and can be present in DSRP transactions.

### Attributes

| Attribute           | Description                                         |
|---------------------|-----------------------------------------------------|
| Data Representation | b...255; LLLVAR<br>The "LLL" length field of LLLVAR |
| Data Length         | 3 positions                                         |
| Data Field          | Contents of subelements                             |
| Subelements         | Number of subelements depends on message type       |
| Justification       | N/A                                                 |

### Usage

Following is the usage of DE 55 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Request Response/0110           | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |

### Values

See subelements.

### Application notes

For ICC information, refer to *M/Chip Requirements*.

Refer to [DE 55: Authorization System Edits](#) for a description of the edits performed on this data element.

For DSRP information, refer to Mastercard Cloud-Based Payments Product description.

For MDES tokenized transactions, issuers may opt in through MDES Manager to receive track data in DE 55 (Integrated Circuit Card [ICC] System-Related Data) on Dual Message System (Authorization) or Single Message System transactions to issuers.

## DE 55 (Subelement Encoding Scheme)

DE 55 contains chip data formatted in accordance with EMV specifications. Reference Book 3 of the EMV specification for details regarding coding of tag-length-value (TLV) data objects. The chip data in DE 55 consists of a series of subelements in a TLV format.

### Positions in DE 55

| Data Length    | Description                                                                                                                                                         |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1–3            | DE 55 Total Length                                                                                                                                                  |
| 4 or 4–5       | First subelement ID, in binary representation; the length is either one or two positions depending on the definition of the subelement ID in the EMV specification. |
| 5 or 5–6       | First subelement length; the value of the length subelement is always one; position depends on the subelement ID length.                                            |
| 6–xxx or 7–xxx | First subelement variable length data; the starting position depends on the subelement ID length.                                                                   |

Positions of the subelement length and variable length data depend on the subelements used. Subelement ID (Tag), Length, and Variable Length Data may be repeated as needed until all chip data has been presented.

## DE 55 Subelements

The following tables list the required and optional subelements in Authorization Request/0100 and Authorization Request Response/0110 messages that contain chip data.

**NOTE: Subelements that are not listed as either required or optional must not be included in DE 55.**

### Required subelements in Authorization Request/0100

For Authorization requests related to Chip full-grade transactions and requests related to e-commerce transactions with EMV compliant ICC data, acquirers must provide the following data in DE 55 subelements.

## Subelement descriptions

| Subelement Description                                                                                                               | Tag Value | Component | Each Component Length | Total Subelement Length |
|--------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------|-----------------------|-------------------------|
| Application Cryptogram (AC)                                                                                                          | 9F26      | ID        | 2                     | 11                      |
|                                                                                                                                      |           | length    | 1                     |                         |
|                                                                                                                                      |           | data      | 8                     |                         |
| Cryptogram Information Data                                                                                                          | 9F27      | ID        | 2                     | 4                       |
|                                                                                                                                      |           | length    | 1                     |                         |
|                                                                                                                                      |           | data      | 1                     |                         |
| Issuer Application Data (IAD)<br>(Mandatory if the corresponding data object [EMV tag 9F10] is provided by the card to the terminal) | 9F10      | ID        | 2                     | 4–35                    |
|                                                                                                                                      |           | length    | 1                     |                         |
|                                                                                                                                      |           | data      | 1–32                  |                         |
| Unpredictable Number                                                                                                                 | 9F37      | ID        | 2                     | 7                       |
|                                                                                                                                      |           | length    | 1                     |                         |

For the tag values the:

- Hexadecimal representation is given here. Every two positions of hexadecimal data is one byte of binary data.
- Lengths are in binary format.
- Total subelement length is the sum of the subelement's ID, length, and data subfields.

When cash back is not permitted by product rules, 9F03 may be absent, or present with a zero value. When cash back is permitted by product rules:

- If there is a cash back amount, 9F03 carries the amount and presence is mandatory
- If there is no cash back amount, the value of 9F03 is zero. 9F03 may be absent, or present with a zero value.

### Optional subelements in Authorization Request/0100

When DE 55 is present in the Authorization Request/0100 message, the following subelements are optional in DE 55.

### Subelement descriptions

| Subelement Description                                                                                                                           | Tag Value | Component | Each Component Length | Total Subelement Length |

### Optional subelements in Authorization Request Response/0110

Issuers may provide the following DE 55 subelements in Authorization Request Response/0110 messages related to:

- Chip full-grade transactions
- E-commerce transactions with EMV-compliant ICC data

If any of these subelements are present in the Authorization Request Response/0110 message, the acquirer must pass the subelements, unaltered, to the IC card.

### Subelement descriptions

| Subelement Description                                                                              | Tag Value | Component | Each Component Length | Total Subelement Length |

## DE 55 Dual Message Authorization System Edits

The Dual Message Authorization System performs the following edits.

If Mastercard determines through its Internal Chip Monitoring process that improperly formatted chip transactions are being submitted from acquirers not certified to send chip transactions, Mastercard will notify each acquirer before activating an edit. The Dual Message Authorization System will perform the following edits on the Authorization Request/0100 message.
