## Subelement 01 (Payment Account Data)

DE 56, subelement 01 (Payment Account Data) contains the applicable subfields to carry the unique Payment Account Data specifically associated with the PAN or token used to initiate the transaction.

### Attributes

|                        | Attribute      | Value                     |
|------------------------|----------------|---------------------------|
| Subelement ID          | n-2            | 01                        |
| Subelement Data Length | n-2            | ...33                     |
| Data Representation    | an...33; LLVAR |                           |
| Data Field             |                | Contents of positions 1–2 |
| Number of subfields    | 1              | Payment Account Reference |

## Subfield 01 (Payment Account Reference [PAR])

DE 56, subelement 01, subfield 01 (Payment Account Reference [PAR]) contains the assigned PAR value. A PAR is a unique value associated with a single PAN and attributed to all tokens

associated with that PAN. A PAR can be used to link transactions containing PANs or tokens associated with the same underlying payment account.

Attributes

|                      | Attribute      | Value |
|----------------------|----------------|-------|
| Subfield ID          | n-2            | 01    |
| Subfield Data Length | n-2            | ...29 |
| Data Representation  | an...29; LLVAR |       |
| Justification        | N/A            |       |

Positions and descriptions

| Position | Description                                                                                            |
|----------|--------------------------------------------------------------------------------------------------------|
| 1–4      | BIN Controller Identifier: A four-character value assigned by EMVCo                                    |
| 5–29     | A unique 25-character alphanumeric uppercase value generated by the BIN Controller and linked to a PAN |

Application notes

Mastercard supports PAR for all acquirers and issuers for MDES, MDES Lite, and non-MDES transactions in DE 56, subfield 01, subelement 01.

PAR is not added to Mastercard ATM transactions.

DE 57–DE 59 (Reserved for National Use)

DE 57–DE 59 are reserved for future use.

**NOTE: The Dual Message Authorization System currently does not use these data elements.**

## DE 60 (Advice Reason Code)

DE 60 (Advice Reason Code) indicates to the receiver of an Advice message the specific reason for the transmission of the Advice message.

### Attributes

| Attribute           | Description           |
|---------------------|-----------------------|
| Data Representation | ans...060; LLLVAR     |
| Data Length         | 3 positions           |
| Data Field          | Contents of subfields |
| Subfields           | 3                     |
| Justification       | See subfields         |

### Usage

Following is the usage of DE 60 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Advice/0120: acquirer-generated | M   | P   | M   |
| Authorization Advice/0120: system-generated   | •   | X   | M   |
| Reversal Advice/0420                          | •   | X   | M   |
| Administrative Request/0600                   | M   | P   | M   |
| Administrative Request Response/0610          | ME  | XE  | ME  |
| Administrative Advice/0620: member-generated  | M   | P   | M   |
| Administrative Advice/0620: system-generated  | •   | X   | M   |

### Values

See subfields.

### Application notes

Not all Advice Reason Codes may be used within all programs and services.

## Subfield 1 (Advice Reason Code)

DE 60, subfield 1 contains the advice reason code.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Field          | Contents of positions 1-3 |
| Justification       | N/A                       |

### Values

This subfield is mandatory for all advice messages and indicates the general purpose of the advice message.

The following tables displays the general values for subfields 1 and 2 based on message type for all products, though each code does not pertain to all products.

### DE 60, subfield 1 values, in Authorization Advice/0120

The following values are valid in Authorization Advice/0120 messages.

### Values

| Code | Description                                                                                                                                                                                                                            | MC | NP | VI | TE | MS | CI |

## DE 60, subfield 1 values, in Administrative Request/0600

Following are the valid values in Administrative Request/0600 messages.

### Values

| Code | Description                                                             | MC | NP | VI | TE | MS | CI |
|------|-------------------------------------------------------------------------|----|----|----|----|----|----|
| 650  | Administrative message containing customer application and account data | √  | √  |    |    |    |    |

## DE 60, subfield 1 values, in Administrative Request Response/0610

Following are valid values in Administrative Request Response/0610 messages.

### Values

| Code | Description                                                             | MC | NP | VI | TE | MS | CI |
|------|-------------------------------------------------------------------------|----|----|----|----|----|----|
| 650  | Administrative message containing customer application and account data | √  | √  |    |    |    |    |

## DE 60, subfield 1 Values, in Administrative Advice/0620

Following are valid values in Administrative Advice/0620 messages.

### Values

| Code | Description                                                                                                                                                                           | MC | NP | VI | TE | MS | CI |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|----|----|----|----|----|
| 600  | Message unreadable or indecipherable or contains invalid data. Subfield 2 (Advice Detail Code) may contain the bit map number of the data element where message scanning was aborted) | √  | √  | √  | √  | √  | √  |
| 650  | Administrative textual message transmittal                                                                                                                                            | √  | √  | √  |    | √  | √  |

## DE 60, subfield 1 Value, in Send Blocking Service

These values are valid in Send Blocking Service transactions.

### Values

| Code | Description                                        | MC | NP | VI | TE | MS | CI |
|------|----------------------------------------------------|----|----|----|----|----|----|
| 150  | Send Blocking service processing advice to issuers | X  |    |    |    | X  | X  |

## Subfield 2 (Advice Detail Code)

DE 60, subfield 2 (Advice Detail Code) is optional, depending on the primary Advice Reason Code; if used, it provides additional (specific) information as to the exact nature of the Advice message. Advice Detail Codes are determined individually for each program and service. The Advice Detail Codes for Mastercard activity appear below. Refer to the appropriate documentation for information on codes for non-Mastercard activity.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data representation | n-4                       |
| Data field          | Contents of positions 4-7 |
| Justification       | N/A                       |

### Values

| Value | Description                                                               |
|-------|---------------------------------------------------------------------------|
| 0000  | Accept                                                                    |
| 0001  | Reject: negative file                                                     |
| 0002  | Reject: capture card                                                      |
| 0003  | Reject: issuer not participating                                          |
| 0004  | Reject: invalid PIN                                                       |
| 0005  | Reject: ATM                                                               |
| 0006  | Reject: transaction limit test                                            |
| 0009  | Reject: Invalid Time Validation                                           |
| 0041  | Reject: Payment Cancellation                                              |
| 0059  | Reject: Format error                                                      |
| 0078  | Reject: M/Chip Biometric Data not Present                                 |
| 0100  | Reject: Account Balance Listing, transaction amount exceeds current limit |
| 0101  | Reject: Dynamic Decisioning, AI model decline                             |
| 0216  | Reject: DTVC Invalid/Expired                                              |
| 0217  | Reject: Channel not Authorized by Cardholder                              |

### DE 60, subfield 2 values, in Authorization Advice/0120: system-generated

The following values are valid in Authorization Advice/0120—System-generated messages.

Reason codes 0007–1611 apply only to the Authorization Advice/0120: system-generated message.

### Values

| Value | Description                                   |
|-------|-----------------------------------------------|
| 0007  | Reject: Premium listing cumulative limit test |
| 0008  | Reject: merchant suspicious indicator test    |
| 0009  | Reject: Invalid Time Validation               |
| 0010  | Reject: Stand-In Monitoring Rule              |

| Value | Description                                                                                  |
|-------|----------------------------------------------------------------------------------------------|
| 0011  | Reject: day number 1/number of transactions                                                  |
| 0012  | Reject: day number 2/number of transactions                                                  |
| 0013  | Reject: day number 3/number of transactions                                                  |
| 0014  | Reject: day number 4/number of transactions                                                  |
| 0015  | Reject: day number 1/amount                                                                  |
| 0016  | Reject: day number 2/amount                                                                  |
| 0017  | Reject: day number 3/amount                                                                  |
| 0018  | Reject: day number 4/amount                                                                  |
| 0019  | Reject: extended Cash Advance cumulative amount                                              |
| 0020  | Reject: card number in blocked range                                                         |
| 0021  | Reject: Premium Listing transaction limit test                                               |
| 0028  | Reject: invalid CVC 1                                                                        |
| 0029  | Reject: expired card                                                                         |
| 0031  | Reject: unable to decrypt/encrypt PIN data. (Used with Advice Reason Code 107)               |
| 0036  | Reject: CVC 1 Unable to process                                                              |
| 0047  | Reject: CVC 1 No matching key file for this PAN, PAN expiry date combination; status unknown |
| 0216  | Reject: DTVC Invalid/Expired                                                                 |
| 1000  | Accept: On-Demand Decisioning Rule                                                           |
| 1001  | Reject: On-Demand Decisioning Rule                                                           |

## DE 60, subfield 2 values, in Administrative Advice/0620

Following are the valid values in Administrative Advice/0620 messages.

### Values

| Values | Description                               |
|--------|-------------------------------------------|
| 0029   | MIP-generated risk Advice transactions    |
| 0030   | Member-generated risk Advice transactions |
| 0250   | Activation Code Notification              |
| 0251   | Tokenization Complete Notification        |

| Values | Description                     |
|--------|---------------------------------|
| 0252   | Tokenization Event Notification |

## DE 60, subfield 2 values, in Customer Service Messages

Following are the valid values in Customer Service messages.

### Values

| Value | Description                          |
|-------|--------------------------------------|
| 0080  | Consumer application request         |
| 0081  | Consumer application status inquiry  |
| 0082  | Consumer user lookup inquiry         |
| 0083  | Consumer account lookup inquiry      |
| 0084  | Consumer account maintenance request |
| 0085  | Consumer counteroffer reply          |
| 0086  | Consumer preapproved offer inquiry   |
| 0090  | Business application request         |
| 0091  | Business application status inquiry  |
| 0092  | Business user lookup inquiry         |
| 0093  | Business account lookup inquiry      |
| 0094  | Business account maintenance request |
| 0095  | Business counteroffer reply          |
| 0096  | Business pre-approved offer inquiry  |

## DE 60, subfield 2 values, in Dynamic CVC 3 Validation

Following are valid values in Dynamic CVC 3 Validation transactions.

### Values

| Value | Description                                                                     |
|-------|---------------------------------------------------------------------------------|
| 0037  | Reject: No matching key file for this PAN, PAN expiry date, and KDI combination |
| 0038  | Reject: Security Platform Time Out                                              |

| Value | Description                                 |
|-------|---------------------------------------------|
| 0040  | Reject: Security Platform System Error      |
| 0042  | Reject: CVC 3 Unable to process             |
| 0043  | Reject: ATC outside allowed range           |
| 0044  | Reject: CVC 3 Invalid                       |
| 0045  | Reject: CVC 3 Unpredictable number mismatch |
| 0046  | Reject: ATC Replay                          |

## DE 60, subfield 2 values, in Mastercard In Control Service

The following values are valid in Mastercard In Control™ Service transactions.

### Values

| Value | Description                                                               |
|-------|---------------------------------------------------------------------------|
| 0060  | Reject: Virtual Card Number (expiration date does not match)              |
| 0061  | Reject: Virtual Card Number (expiration date expired)                     |
| 0062  | Reject: Virtual CVC 2 does not match                                      |
| 0063  | Reject: Validity Period Limit: In Control                                 |
| 0064  | Reject: Transaction Amount Limit Check                                    |
| 0065  | Reject: Cumulative Amount Limit Check                                     |
| 0066  | Reject: Transaction Number Usage                                          |
| 0067  | Reject: Merchant ID Limit                                                 |
| 0068  | Reject: Invalid Virtual Card Number–Real Card Number Mapping Relationship |
| 0069  | Reject: MCC Limit                                                         |
| 0070  | Reject: Database Status Bad                                               |
| 0071  | Reject: Decline Other                                                     |
| 0072  | Reject: Geographic Restriction                                            |
| 0073  | Reject: Transaction Type Restriction                                      |
| 0075  | Reject: Transaction Time/Date Restriction                                 |
| 0076  | Reject: Sanctions Score Restriction                                       |
| 0077  | Reject: Mastercard Send and Funding Transaction Count Check               |

## DE 60, subfield 2 values, in M/Chip On-Behalf Services

Following are valid values in M/Chip On-Behalf Services transactions.

### Values

| Value | Description                                                                                                                                |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 0032  | Reject: Chip Data Processing Error                                                                                                         |
| 0033  | Reject: PIN or CHIP Validation Failed                                                                                                      |
| 0034  | Reject: Chip validation failed                                                                                                             |
| 0035  | Reject: TVR/CVR validation failed                                                                                                          |
| 0037  | Reject: No matching key File for this PAN, PAN expiry date and KDI combination—Validation of ARQC and CVR/TR not performed, status unknown |
| 0038  | Reject: Security platform time out                                                                                                         |
| 0039  | Reject: Cryptogram not ARQC                                                                                                                |
| 0040  | Reject: Security platform processing error                                                                                                 |
| 0043  | Reject: ATC outside allowed range                                                                                                          |
| 0046  | Reject: ATC Replay                                                                                                                         |
| 0054  | Reject: Track Data Format Error                                                                                                            |
| 0055  | Reject: Chip CVC Invalid                                                                                                                   |
| 0056  | Reject: Chip CVC/CVC 1 Unable to process                                                                                                   |

## DE 60, subfield 2 values, in Mastercard Digital Enablement Service

Following are valid values in Mastercard Digital Enablement Service.

### Values

| Value | Description                                                         |
|-------|---------------------------------------------------------------------|
| 0201  | Reject: Invalid Token—Primary Account Number mapping relationship   |
| 0202  | Reject: Token in suspended status                                   |
| 0203  | Reject: Token deactivated                                           |
| 0204  | Reject: ATC Invalid—Not in List of Currently Active Single Use Keys |
| 0205  | Reject: ATC Replay                                                  |

| Value | Description                                                                                             |
|-------|---------------------------------------------------------------------------------------------------------|
| 0206  | Reject: Invalid MD AC and UMD AC (Invalid Mobile PIN)                                                   |
| 0207  | Reject: Valid MD AC; Invalid UMD AC (Mobile PIN Try Counter Max Limit not Reached, Token not Suspended) |
| 0208  | Reject: Invalid MD AC; Valid UMD AC                                                                     |
| 0209  | Reject: Valid MD AC; Invalid UMD AC (Mobile PIN Try Counter Max Limit Reached, Token Suspended)         |
| 0210  | Reject: Unpredictable Number Length Indicator Mismatch                                                  |
| 0211  | Reject: TVR/CVR validation failed                                                                       |
| 0212  | Reject: Unable to Process                                                                               |
| 0213  | Reject: Invalid Token                                                                                   |
| 0215  | Reject: Declined by Transaction Analysis                                                                |
| 0032  | Reject: Chip Data Processing Error                                                                      |
| 0034  | Reject: Chip validation failed                                                                          |
| 0035  | Reject: TVR/CVR validation failed                                                                       |
| 0039  | Reject: Cryptogram not ARQC                                                                             |
| 0042  | Reject: CVC 3 Unable to process                                                                         |
| 0043  | Reject: CVC 3 ATC outside allowed range                                                                 |
| 0044  | Reject: CVC 3 Invalid                                                                                   |
| 0045  | Reject: CVC 3 Unpredictable number mismatch                                                             |
| 0046  | Reject: CVC 3 ATC Replay                                                                                |
| 0059  | Reject: Advice Code when DE 39 = 30 (Format Error)                                                      |

## DE 60, subfield 2 values, in Mastercard Merchant Presented QR Service

Following are valid values in Mastercard Merchant Presented QR Service transactions.

### Values

| Value | Description                     |
|-------|---------------------------------|
| 0064  | Reject: Transaction Limit Check |
| 0065  | Reject: Cumulative Limit Check  |

| Value | Description                    |
|-------|--------------------------------|
| 0072  | Reject: Geographic Restriction |

## DE 60, subfield 2 values, in Pay with Rewards

Following are valid values in Mastercard Pay with Rewards service.

### Values

| Value | Description                                                     |
|-------|-----------------------------------------------------------------|
| 0120  | Reject: Pay with Rewards—Insufficient points balance            |
| 0121  | Reject: Pay with Rewards—Redemption rule(s) failed              |
| 0122  | Reject: Pay with Rewards service was not performed successfully |
| 0123  | Reject: Pay with Rewards—Account not registered                 |
| 0124  | Reject: Pay with Rewards System error                           |

## DE 60, subfield 2 values, in PIN Validation

Following are the valid values in PIN Validation transactions.

### Values

| Value | Description                                                |
|-------|------------------------------------------------------------|
| 0050  | Reject: Unable to Process                                  |
| 0051  | Reject: Invalid PIN                                        |
| 0052  | Reject: Mandatory PIN Verification Value (PVV) not on file |
| 0052  | Reject: PIN Retry Exceeded (invalid PIN)                   |

## DE 60, subfield 2 values, in Private Label Processing

Following are valid values in Private Label Processing transactions.

### Values

| Value | Description                                                |
|-------|------------------------------------------------------------|
| 0116  | Reject: Merchant not allowed for Private Label transaction |

## DE 60, subfield 2 values, in TCC, CAT Level, and Promotion Code in Failed Parameter Combinations (Country-Specific)

Following are valid values in TCC, CAT Level, and Promotion Code in Failed Parameter Combinations (country-specific) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 0300  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 0301  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |
| 0310  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction       |
| 0311  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction   |

## DE 60, subfield 2 values, in TCC, CAT Level, and Promotion Code in Failed Parameter Combinations (Global)

Following are valid values in TCC, CAT Level, and Promotion Code in Failed Parameter Combinations (global) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 0400  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 0401  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |
| 0410  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction       |
| 0411  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction   |

## DE 60, subfield 2 values, in MCC, CAT Level, and Promotion Code in Failed Parameter Combinations (Country-Specific)

Following are valid values for MCC, CAT Level, and Promotion Code in Failed Parameter Combinations (country-specific) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 0100  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 0101  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |

| Value | Description                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------|
| 0110  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction     |
| 0111  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction |

## DE 60, subfield 2 values, in MCC and Promotion Code in Failed Parameter Combinations (Country-Specific)

Following are valid values in MCC and Promotion Code in Failed Parameter Combinations (country-specific) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 0500  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 0501  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |
| 0510  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction       |
| 0511  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction   |

## DE 60, subfield 2 values, in MCC and Promotion Code in Failed Parameter Combinations (Global)

Following are valid values in MCC and Promotion Code in Failed Parameter Combinations (global) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 0600  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 0601  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |
| 0610  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction       |
| 0611  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction   |

## DE 60, subfield 2 values, in TCC and Promotion Code in Failed Parameter Combinations (Country-Specific)

Following are valid values in TCC and Promotion Code in Failed Parameter Combinations (country-specific) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 0700  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 0701  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |

| Value | Description                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------|
| 0710  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction     |
| 0711  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction |

## DE 60, subfield 2 values, in TCC and Promotion Code in Failed Parameter Combinations (Global)

Following are valid values in TCC and Promotion Code in Failed Parameter Combinations (global) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 0800  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 0801  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |
| 0810  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction       |
| 0811  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction   |

## DE 60, subfield 2 values, in MCC and CAT Level in Failed Parameter Combinations (Country-Specific)

Following are valid values in MCC and CAT Level in Failed Parameter Combinations (country-specific) transactions.

### Values

| Values | Description                                                                                                                      |
|--------|----------------------------------------------------------------------------------------------------------------------------------|
| 0900   | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 0901   | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |
| 0910   | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction       |
| 0911   | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction   |

## DE 60, subfield 2 values, in MCC and CAT Level in Failed Parameter Combinations (Global)

Following are valid values in MCC and CAT Level in Failed Parameter Combinations (global) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 1000  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 1001  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |

| Value | Description                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------|
| 1010  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction     |
| 1011  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction |

## DE 60, subfield 2 values, in TCC and CAT Level in Failed Parameter Combinations (Country-Specific)

Following are valid values in TCC and CAT Level in Failed Parameter Combinations (country-specific) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 1100  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 1101  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |
| 1110  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction       |
| 1111  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction   |

## DE 60, subfield 2 values, in TCC and CAT Level in Failed Parameter Combinations (Global)

Following are valid values in TCC and CAT Level in Failed Parameter Combinations (global) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 1200  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 1201  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |
| 1210  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction       |
| 1211  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction   |

## DE 60, subfield 2 values, in MCC in Failed Parameter Combinations (Country-Specific)

Following are valid values in MCC in Failed Parameter Combinations (country-specific) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 1300  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 1301  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |

| Value | Description                                                                                                                    |
|-------|--------------------------------------------------------------------------------------------------------------------------------|
| 1310  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction     |
| 1311  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction |

## DE 60, subfield 2 values, in MCC in Failed Parameter Combinations (Global)

Following are valid values in MCC in Failed Parameter Combinations (global) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 1400  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 1401  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |
| 1410  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction       |
| 1411  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction   |

## DE 60, subfield 2 values, in TCC in Failed Parameter Combinations (Country-Specific)

Following are valid values in TCC in Failed Parameter Combinations (country-specific) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 1500  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 1501  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |
| 1510  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card present at point of interaction       |
| 1511  | Reject: transaction limit test<br>Customer-defined limits caused transaction to fail; card not present at point of interaction   |

## DE 60, subfield 2 values, in TCC in Failed Parameter Combinations (Global)

Following are valid values in TCC in Failed Parameter Combinations (global) transactions.

### Values

| Value | Description                                                                                                                      |
|-------|----------------------------------------------------------------------------------------------------------------------------------|
| 1600  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card present at point of interaction     |
| 1601  | Reject: transaction limit test<br>Mastercard default limits caused transaction to fail; card not present at point of interaction |

| Value | Description                                                                                                                        |
|-------|------------------------------------------------------------------------------------------------------------------------------------|
| 1610  | Reject: transaction limit test<br><br>Customer-defined limits caused transaction to fail; card present at point of interaction     |
| 1611  | Reject: transaction limit test<br><br>Customer-defined limits caused transaction to fail; card not present at point of interaction |

## DE 60, subfield 2 values, in Miscellaneous Processing

Following are valid values in miscellaneous processing transactions.

### Values

| Value | Description                                                                                                            |
|-------|------------------------------------------------------------------------------------------------------------------------|
| 1700  | Accept: via X-Code Processing                                                                                          |
| 1701  | Reject: via X-Code Processing                                                                                          |
| 1702  | Reject: capture card via X-Code Processing                                                                             |
| 1903  | Reject: via MIP Transaction Blocking                                                                                   |
| 2000  | Reject: PIN data present in Authorization Request/0100 message (used in conjunction with Reversal Advice/0420 message) |
| 9999  | Reject: failed validation test because transaction type or authorization method was invalid                            |

## DE 60, subfield 2 values, in Send and other transactions blocking service

These values are valid in Send and other transactions blocking service transactions.

### Values

| Code | Description                               |
|------|-------------------------------------------|
| 5111 | Single txn limit - dom - core txn type    |
| 5112 | Single txn limit - dom - special txn type |
| 5113 | Single txn limit - xb - core txn type     |

| Code | Description                                       |
|------|---------------------------------------------------|
| 5114 | Single txn limit - xb - special txn type          |
| 5115 | Reserved for future use                           |
| 5121 | Daily accum limit - dom - core txn type           |
| 5122 | Daily accum limit - dom - special txn type        |
| 5123 | Daily accum limit - xb - core txn type            |
| 5124 | Daily accum limit - xb - special txn type         |
| 5125 | Daily accum limit - dom+xb - core txn type        |
| 5126 | Daily accum limit - dom+xb - special txn type     |
| 5127 | Daily accum limit - dom+xb - group of txn types   |
| 5128 | Reserved for future use                           |
| 5131 | Weekly accum limit - dom - core txn type          |
| 5132 | Weekly accum limit - dom - special txn type       |
| 5133 | Weekly accum limit - xb - core txn type           |
| 5134 | Weekly accum limit - xb special txn type          |
| 5135 | Weekly accum limit - dom+xb - core txn type       |
| 5136 | Weekly accum limit - dom+xb - special txn type    |
| 5137 | Weekly accum limit - dom+xb - group of txn types  |
| 5138 | Reserved for future use                           |
| 5141 | Monthly accum limit - dom - core txn type         |
| 5142 | Monthly accum limit - dom - special txn type      |
| 5143 | Monthly accum limit - xb - core txn type          |
| 5144 | Monthly accum limit - xb - special txn type       |
| 5145 | Monthly accum limit - dom+xb - core txn type      |
| 5146 | Monthly accum limit - dom+xb - special txn type   |
| 5147 | Monthly accum limit - dom+xb - group of txn types |
| 5148 | Reserved for future use                           |
| 5150 | TTI - Domestic not allowed                        |
| 5151 | TTI - ISS - XB not allowed                        |
| 5152 | TTI - Acceptor - XB not allowed                   |
| 5153 | Special txn type - Domestic not allowed           |
| 5154 | Special txn type - ISS - XB not allowed           |

| Code | Description                                  |
|------|----------------------------------------------|
| 5155 | Special txn type - Acceptor - XB not allowed |
| 5156 | MCC not allowed for country                  |
| 5157 | MCC-TTI combination not allowed for country  |
| 5158 | Country code not allowed                     |
| 5159 | Transaction currency not allowed             |
| 5160 | Other restrictions                           |
| 5161 | Reserved for future use                      |
| 5162 | Reserved for future use                      |
| 5163 | Reserved for future use                      |
| 5170 | Product code is not eligible for TTI         |
| 5171 | Account not allowed for TTI                  |
| 5172 | Account not allowed for Special txn type     |
| 5173 | Reserved for future use                      |
| 5197 | Missing TTI                                  |
| 5198 | Legacy or restricted use TTI                 |
| 5199 | TC- MCC- TTI combination not allowed         |

## Subfield 3 (Advice Detail Text)

Subfield 3 (Advice Detail Text) is optional and may be used to contain textual information supplementary to the Advice Detail Code. Advice Detail Text data is determined individually for each program and service.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans...53                   |
| Data Field          | Contents of positions 8–60 |
| Justification       | Left                       |

### Values

A two character alphanumeric value that identifies which rule is responsible for ODD. Issuers should be prepared to receive any two character value in DE 60, subfield 3 (Advice Details Text).

For more information on valid values for Send Blocking Service transactions, refer to *Mastercard Send and Funding Transactions Implementation and Operations for MIP Connections*.

## DE 61 (Point-of-Service [POS] Data)

DE 61 (Point-of-Service [POS] Data) indicates the conditions that exist at the point of service at the time of the transaction. Note that DE 61 supersedes and replaces the ISO-specified DE 25 (Point-of-Service [POS] Condition Code) which is not used in the *Mastercard Network Processing Dual Message Authorization System Guide*.

### Attributes

| Attribute           | Description           |
|---------------------|-----------------------|
| Data Representation | ans...026; LLLVAR     |
| Data Length         | 3 positions           |
| Data Field          | Contents of subfields |
| Subfields           | 14                    |
| Justification       | See subfields         |

### Usage

Following is the usage of DE 61 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | M   | X   | M   |
| Authorization Advice/0120: acquirer-generated | M   | X   | M   |
| Authorization Advice/0120: system-generated   | .   | X   | M   |
| Reversal Request/0400                         | M   | X   | M   |

### Values

See subfields.

Three basic categories of data include:

- POS Condition Code: Indicating POS terminal data (mandatory) in subfields 1–11

- POS Authorization Life Cycle: Indicating the transaction is a preauthorization request and the specific amount of days for which the preauthorization will remain valid (the number of days the issuer or its agent will guarantee or hold funds) in subfield 12
- POS geographic reference: Indicating the specific merchant location of the transaction in subfields 13–14

### Application notes

This data element will be edited as described in the [Dual Message Authorization System Edits](#).

## Subfield 1 (POS Terminal Attendance)

DE 61, subfield 1 (POS Terminal Attendance) indicates if the acceptor is attending the terminal.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

### Values

| Value | Description                                                                           |
|-------|---------------------------------------------------------------------------------------|
| 0     | Attended Terminal                                                                     |
| 1     | Unattended terminal (cardholder-activated terminal [CAT], home PC, mobile phone, PDA) |
| 2     | No terminal used (voice/audio response unit [ARU] authorization); server              |

## Subfield 2 (Reserved for Future Use)

DE 61, subfield 2 (Reserved) is reserved.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | n-1         |

| Attribute     | Description            |
|---------------|------------------------|
| Data Field    | Contents of position 2 |
| Justification | N/A                    |

### Values

Zero-filled.

## Subfield 3 (POS Terminal Location)

DE 61, subfield 3 (POS Terminal Location) indicates the terminal location.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 3 |
| Justification       | N/A                    |

### Values

| Value | Description                                                                                  |
|-------|----------------------------------------------------------------------------------------------|
| 0     | On premises of acceptor facility                                                             |
| 1     | Off premises of acceptor facility (merchant terminal—remote location)                        |
| 2     | Off premises of acceptor facility (cardholder terminal including home PC, mobile phone, PDA) |
| 3     | No terminal used (voice/ARU authorization); server                                           |
| 4     | On premises of acceptor facility (cardholder terminal including home PC, mobile phone, PDA)  |
| 8     | Additional POS Terminal Locations                                                            |

**NOTE: For more details, refer to DE 48, [Subelement 29 \(Additional POS Terminal Locations\)](#).**

## Subfield 4 (POS Cardholder Presence)

DE 61, subfield 4 (POS Cardholder Presence) indicates whether the cardholder is present at the point of service and explains the condition if the cardholder is not present.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 4 |
| Justification       | N/A                    |

### Values

| Value | Description                                                                      |
|-------|----------------------------------------------------------------------------------|
| 0     | Cardholder present                                                               |
| 1     | Cardholder not present, unspecified                                              |
| 2     | Cardholder not present (mail/facsimile order)                                    |
| 3     | Cardholder not present (phone or Automated Response Unit [ARU])                  |
| 4     | Recurring transactions                                                           |
| 5     | Cardholder not present (Electronic order [home PC, Internet, mobile phone, PDA]) |

## Subfield 5 (POS Card Presence)

DE 61, subfield 5 (POS Card Presence) indicates if the card is present at the point of service.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 5 |
| Justification       | N/A                    |

### Values

| Value | Description      |
|-------|------------------|
| 0     | Card present     |
| 1     | Card not present |

## Subfield 6 (POS Card Capture Capabilities)

DE 61, subfield 6 (POS Card Capture Capabilities) indicates whether the terminal has card capture capabilities.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 6 |
| Justification       | N/A                    |

### Values

| Value | Description                                             |
|-------|---------------------------------------------------------|
| 0     | Terminal/operator does not have card capture capability |
| 1     | Terminal/operator has card capture capability           |

## Subfield 7 (POS Transaction Status)

DE 61, subfield 7 (POS Transaction Status) indicates the purpose or status of the request.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 7 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

| Value | Description                                                           |
|-------|-----------------------------------------------------------------------|
| 0     | Normal request (original presentment)                                 |
| 1     | Deferred Authorization                                                |
| 2     | Identity Check Phone Order                                            |

| 9     | Tokenization Request/Notification                                     |

### Application notes

For DE 61, subfield 7, value 8, see separate description of Account Status Inquiry Service (both Purchase ASI and Payment ASI) and Product Inquiry Service.

## Subfield 8 (POS Transaction Security)

DE 61, subfield 8 (POS Transaction Security) indicates the acceptor's confidence in the transaction security level.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 8 |
| Justification       | N/A                    |

### Values

| Value | Description                                   |
|-------|-----------------------------------------------|
| 0     | No security concern                           |
| 1     | Suspected fraud (merchant suspicious—code 10) |
| 2     | ID verified                                   |

## Subfield 9 (POS Transaction Status - Extended)

DE 61, subfield 9 (POS Transaction Status - Extended) indicates the purpose of status of the request.

### Attributes

| Attributes          | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 9 |
| Justification       | N/A                    |

### Values

| Value | Description                                 |
|-------|---------------------------------------------|
| 0     | Normal request (not for Validation request) |
| 1     | Validation request                          |
| 2     | Product Status Inquiry Service (Standalone) |

### Application Notes

When DE 61 (Point of Service [POS] Data), subfield 9 (POS Transaction Status - Extended) contains value 1 (Validation Request), then DE 61 (Point of Service [POS] Data), subfield 07 (POS Transaction Status) must contain a value 0 (Normal request) or a value 8 (Account Status Inquiry Service [ASI]).

DE 61 (Point of Service [POS] Data), subfield 9 (POS Transaction Status - Extended) and DE 61 (Point of Service [POS] Data), subfield 7 (POS Transaction Status) in conjunction with DE 108

(Additional Transaction Reference Data), subelement 07, subfield 01 identifies a Name Validation Service request.

Validation requests are not eligible for alternate processing (Stand-In or X-Code processing). When an issuer is not available, or is offline, Validation requests will be declined using the Authorization Request Response/0110 message containing DE 39 (Response Code), value 91 (Authorization System or issuer system inoperative).

Mastercard will perform the following edits.

### Authorization Request edits

| When the Authorization Request/0100 message with...                                                                                                                                                                                                                                     | Then the Dual Message System (Authorization) will...                                                                                              |

## Subfield 10 (Cardholder-Activated Terminal Level)

DE 61, subfield 10 (Cardholder-Activated Terminal Level) indicates the type of cardholder activated terminal used by the cardholder to initiate the transaction.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | n-1                     |
| Data Field          | Contents of position 10 |
| Justification       | N/A                     |

### Values

| Value | Description                                                   |
|-------|---------------------------------------------------------------|
| 0     | Not a CAT transaction                                         |
| 1     | Authorized Level 1 CAT: automated dispensing machine with PIN |
| 2     | Authorized Level 2 CAT: self-service terminal                 |
| 3     | Authorized Level 3 CAT: limited-amount terminal               |
| 4     | Authorized Level 4 CAT: in-flight commerce                    |
| 5     | Reserved                                                      |
| 6     | Authorized Level 6 CAT: electronic commerce                   |
| 7     | Authorized Level 7 CAT: transponder transaction               |

| Value                                                                             | Description            |
|-----------------------------------------------------------------------------------|------------------------|
| 8                                                                                 | Remote terminal        |
| 9                                                                                 | MPOS Acceptance Device |
| <b>NOTE: Mobile POS are always attended devices and not cardholder activated.</b> |                        |

### Application notes

When the recipient of the money transfer (Payment Transaction; DE 3 subfield 1 = 09) is not present, the transaction is not considered a CAT level transaction. In that case the CAT level = 0.

## Subfield 11 (POS Card Data Terminal Input Capability Indicator)

DE 61, subfield 11 (POS Card Data Terminal Input Capability Indicator) indicates the set of methods supported by the terminal for the input of account number, card, or mobile device data.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | n-1                     |

| Justification       | N/A                     |

### Values

| Value | Description                                                                                                                                                                                                          |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0     | Input capability unknown or unspecified.                                                                                                                                                                             |
| 1     | No terminal used (voice/ARU authorization); server.                                                                                                                                                                  |
| 2     | Terminal supports magnetic stripe input only.                                                                                                                                                                        |
| 3     | Terminal supports contactless EMV input. The terminal may also support one or more other card input types, including contactless magstripe input, EMV contact chip input, magnetic stripe input and key entry input. |

| Value | Description                                                                                                                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4     | Contactless Mag Stripe (Proximity Chip)<br><br>Terminal supports contactless magstripe input but not contactless EMV input. The terminal also may support one or more other card input types, including EMV contact chip input, magnetic stripe input, and key entry input. |
| 5     | Terminal supports EMV contact chip input and magnetic stripe input.                                                                                                                                                                                                         |
| 6     | Terminal supports key entry input only.                                                                                                                                                                                                                                     |
| 7     | Terminal supports magnetic stripe input and key entry input.                                                                                                                                                                                                                |
| 8     | Terminal supports EMV contact chip input, magnetic stripe input and key entry input.                                                                                                                                                                                        |
| 9     | Terminal supports EMV contact chip input only.                                                                                                                                                                                                                              |

### Application notes

DE 61, subfield 11 values 3, 4 (contactless related), 5, 8, and 9 (chip contact related) can ONLY be used if the terminal is chip certified by Mastercard.

DE 61, subfield 11 is used in conjunction with DE 22 (Point of Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode). DE 22, subfield 1 values indicate the method by which the PAN was entered.

DE 61, subfield 11 indicates the terminal data input capabilities and not the specific manner in which the terminal captured the card data for a given transaction.

For example, values 5 and 8 could be used for a magnetic stripe transaction originating from an EMV contact chip capable terminal when the contact magnetic stripe reader was used instead. Similarly, value 3 would be used for a contact chip transaction originating from a contactless EMV capable terminal when the EMV contact chip reader was used.

## Subfield 12 (POS Authorization Life Cycle)

DE 61, subfield 12 (POS Authorization Life Cycle) indicates the number of days a preauthorization will stay in effect for Visa Custom Payment Service automobile rentals and hotel reservations—otherwise it must contain zeros.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | n-2                             |
| Data Field          | Contents of positions 12 and 13 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

Indicates the number of days the preauthorization stays in effect; ATM and Maestro POS transactions should use 01, Visa customer transactions use applicable value. Must be zero filled when not applicable.

## Subfield 13 (POS Country Code [or Sponsored Merchant Information, if applicable])

DE 61, subfield 13 (POS Country Code) indicates the country of the POS location (not the acquirer location) using ISO-specified codes.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-3                         |
| Data Field          | Contents of positions 14–16 |
| Justification       | N/A                         |

### Values

Refer to the *Quick Reference Booklet* for valid country codes.

## Subfield 14 (Acceptor Postal Code)

This subfield contains the postal code of the acceptor.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data representation | ans...10                    |
| Data field          | Contents of positions 17–26 |
| Justification       | Left                        |

## Processing rules

The Acceptor Postal Code must be present for all transactions and contain a valid code for countries that utilize postal codes. This information must be populated and formatted as defined by country postal standards.

## Program rules

Payment facilitator-enabled transactions: The sponsored merchant postal code must be provided.

# Dual Message Authorization System Edits

The Dual Message Authorization System performs the following edits on data element 61 (Point-of-Service [POS] Data).

## Authorization Request/0100 Character Edit

## DE 62 (Intermediate Network Facility [INF] Data)

DE 62 (Intermediate Network Facility [INF] Data), contains "acquiring network trace information" that INFs may require to quickly and accurately route Administrative Advice/0620 messages back to the original acquiring institution. DE 62 assists acquiring INF facilities that connect directly to the Dual Message Authorization System. It allows these INFs to maintain sufficient information within a message to permit immediate online routing of chargebacks and retrieval requests without the requirement of maintaining large online reference databases containing the original transactions.

## Values

DE 62 is a free-format, variable-length alphanumeric data element that may be used to store unique acquiring network ID codes, acquiring network chaining data, or other information useful to INFs in routing online chargebacks and retrieval requests.

## Application notes

DE 62 is an optional data element that customers may place in any originating Authorization Request/0100 or Authorization Advice/0120. Subsequently, this data element (if present in an original transaction) is required to be returned without alteration in any Administrative Advice (Retrieval)/0620 pertaining to the original transaction. It contains INF network trace information that allows acquiring INFs to directly route the chargeback or retrieval request to the original acquirer.

When the Dual Message Authorization System generates an Administrative Advice/0620, it places the value MCBN620060000xxx, where xxx is the MIP ID. When a customer generates a corresponding Administrative Advice Response/0630, DE 62 must contain the same value.

When the Dual Message Authorization System generates a System Generated Advice/0420, it sets a value of MCBN620060000. When a customer generates a corresponding System Generated Advice Response/0430, DE 62 must contain the same value.

# DE 63 (Network Data)

DE 63 (Network Data) is generated by the Dual Message Authorization System for each originating message routed through the network. The receiver must retain the data element and use it in any response or acknowledgment message associated with the originating message.

### Values

See subfields.

### Application notes

This data element contains blanks if the transaction fails edit checking and is rejected before determining the appropriate Financial Network Code.

## Subfield 1 (Financial Network Code)

DE 63, subfield 1 (Financial Network Code) identifies the specific program or service (for example, the financial network, financial program, or card program) with which the transaction is associated. DE 63 will contain the graduated product when the issuer's cardholder account participates in the Product Graduation Account Level Management service.

## Subfield 2 (Banknet Reference Number)

DE 63, subfield 2 (Banknet Reference Number) is generated by the Authorization System for each originating message it routes. The reference number is guaranteed to be a unique value for any transaction within the specified financial network on any processing day.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data representation | an...9                     |
| Data field          | Contents of positions 4–12 |
| Justification       | Left                       |

### Values

The Banknet reference number is a minimum of six characters and a maximum of nine characters long.

## Authorization Request/0100 message edits

### Authorization Request/0100 message

| When...                                                                                                                                                                                                                                               | Then the Dual Message Authorization System...                                  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| an Authorization Request/0100 message is for one of the Mastercard Flex Program product codes and the Issuer Account Range country has a USD transaction threshold amount and DE 5 (Amount, Settlement) is less than the transaction threshold amount | will decline the transaction with DE 39 (Response Code) = 13 (Invalid Amount). |

### Country transaction thresholds

| Country                                                                                            | Transaction threshold |
|----------------------------------------------------------------------------------------------------|-----------------------|
| Colombia, Jamaica, Japan, New Zealand, Panama, Puerto Rico, Trinidad & Tobago, U.S. Virgin Islands | USD 10,000            |
| Hong Kong SAR, Philippines, Singapore, Thailand, Vietnam                                           | USD 6,000             |
| Indonesia                                                                                          | USD 3,000             |

|                                                                                                                                                                                                                                                                                          |                                                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| an Authorization Request/0100 message is for one of the Mastercard Flex Program product codes and the Issuer Account Range country is Brazil and DE 6 (Amount, Cardholder Billing) is less than the transaction threshold of BRL 55,000                                                  | will decline the transaction with DE 39 (Response Code) = 13 (Invalid Amount).                                  |
| an Authorization Request/0100 message is for one of the Mastercard Flex Program product codes and is an intracountry transaction for Bahrain, Egypt, Ghana, Kuwait, Oman, Qatar, Saudi Arabia, or United Arab Emirates, and the MCC is 4900, 9211, 9222, 9223, 9311, 9399, 9402, or 9405 | will decline the transaction with DE 39 (Response Code) = 12 (Invalid Transaction).                             |
| an Authorization Request/0100 message is for one of the Mastercard Flex Program product codes and Issuer, acquirer and merchant country are same and is either Poland or Switzerland                                                                                                     | will decline the transaction with DE 39 (Response Code) = 57 (Transaction not Permitted to Issuer/ Cardholder). |

| When...                                                                                                                                                                              | Then the Dual Message Authorization System...                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| an Authorization Request/0100 message is for one of the Mastercard Flex Program product codes and issuer, acquirer or merchant is not one of the permitted countries for the program | will decline the transaction with DE 39 (Response Code) = 57 (Transaction not Permitted to Issuer/Cardholder). |

## DE 64 (Message Authentication Code)

DE 64 (Message Authentication Code [MAC]) validates the source and the text of the message between the sender and the receiver.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | b-8         |
| Data Length         | N/A         |
| Data Field          | N/A         |
| Subfields           | N/A         |
| Justification       | N/A         |

### Usage

May contain message authentication code as defined by ISO standards.

### Values

The last bit position within any bit map is reserved for DE 64. If authentication is to be used on a message, the MAC information is indicated by the final bit of the final bit map of that message. The final bit of all preceding bit maps shall contain 0; for example, there shall be only one DE 64 per message and that DE 64 must be the last data element of the message.

## DE 65 (Bit Map, Extended)

DE 65 (Bit Map, Extended) is a series of eight bytes (64 bits) used to identify the presence (denoted by 1) or the absence (denoted by 0) of each data element in an extended (third) message segment.

### Attributes

| Attribute           | Description                              |
|---------------------|------------------------------------------|
| Data Representation | b-8                                      |
| Data Length         | N/A                                      |
| Data Field          | Contents of bit positions 1–64 (8 bytes) |
| Subfields           | N/A                                      |
| Justification       | N/A                                      |

### Usage

The Dual Message Authorization System defines only two message segments, the presence or absence of which is indicated by Primary and Secondary Bit Maps. DE 65 would indicate the presence of a third message segment, and must never be present in a Dual Message Authorization System message. The corresponding bit (number 65) must always be 0 in the Secondary Bit Map.

## DE 66 (Settlement Code)

DE 66 (Settlement Code) indicates the result of a reconciliation request.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 67 (Extended Payment Code)

DE 67 (Extended Payment Code) indicates the number of months that the cardholder prefers to pay for an item (the item purchased during the course of this transaction) if permitted by the card issuer.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Length         | N/A                       |
| Data Field          | Contents of positions 1-2 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

### Usage

Following is the usage of DE 67 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## DE 68 (Receiving Institution Country Code)

DE 68 (Receiving Institution Country Code) is the code of the country where the receiving institution is located.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 69 (Settlement Institution Country Code)

DE 69 (Settlement Institution Country Code) is the code of the country where the settlement institution is located.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 70 (Network Management Information Code)

DE 70 (Network Management Information Code) identifies network status.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |

### Application notes

DE 48 (Additional Data: Private Use) may be used in conjunction with DE 70 to provide complete network status or control information. The Mastercard Network uses this data element in Network Management/08xx messages to convey network control commands and network status information to and from customer information processing systems that interface directly to the Dual Message Authorization System.

This data element is defined and used identically within all Mastercard programs and services.

## Network Management Request/0800: sign-on/sign-off

The following values apply to this message.

### Values

| Code | Description                                                                    | MC | NP | VI | TE | MS | CI |
|------|--------------------------------------------------------------------------------|----|----|----|----|----|----|
| 001  | Sign-on (by prefix)                                                            | √  | √  | √  | √  | √  | √  |

## DE 71 (Message Number)

DE 71 (Message Number) is a sequential, cyclic number the message initiator assigns to a message. Message Number is used to monitor the integrity of interchange.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 72 (Message Number Last)

DE 72 (Message Number Last) is a sequential, cyclic number the message initiator assigns to a message, used to monitor the integrity of interchange.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 73 (Date, Action)

DE 73 (Date, Action) specifies the date (year, month, and day) of a future action. In addition, a message originator may use it as a static time such as a birthdate.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 74 (Credits, Number)

DE 74 (Credits, Number) is the numeric sum of credit transactions processed.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 75 (Credits, Reversal Number)

DE 75 (Credits, Reversal Number) is the sum number of reversal credit transactions.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 76 (Debits, Number)

DE 76 (Debits, Number) is the sum number of debit transactions processed.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 77 (Debits, Reversal Number)

DE 77 (Debits, Reversal Number) is the sum number of reversal debit transactions.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 78 (Transfers, Number)

DE 78 (Transfers, Number) is the sum number of all transfer transactions processed.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 79 (Transfers, Reversal Number)

DE 79 (Transfers, Reversal Number) is the sum number of all transfer reversal transactions processed.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 80 (Inquiries, Number)

DE 80 (Inquiries, Number) is the sum number of inquiry transaction requests processed.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 81 (Authorizations, Number)

DE 81 (Authorizations, Number) is the sum number of Authorization Request/0100 and Authorization Advice/0120 messages processed.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 82 (Credits, Processing Fee Amount)

DE 82 (Credits, Processing Fee Amount) is the sum of all processing fees due to an institution or customer for services associated with handling and routing transactions. This Mastercard definition replaces the ISO standard definition.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 83 (Credits, Transaction Fee Amount)

DE 83 (Credits, Transaction Fee Amount) is the sum of all transaction fees due to an institution or customer for processing interchange transactions. This Mastercard definition replaces the ISO standard definition.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 84 (Debits, Processing Fee Amount)

DE 84 (Debits, Processing Fee Amount) is the sum of all processing fees due from an institution or customer for services associated with handling and routing transactions. This Mastercard definition replaces the ISO standard definition.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 85 (Debits, Transaction Fee Amount)

DE 85 (Debits, Transaction Fee Amount) is the sum of all transaction fees due from an institution or customer for processing interchange transactions. This Mastercard definition replaces the ISO standard definition.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 86 (Credits, Amount)

DE 86 (Credits, Amount) is the sum amount of all credit transactions processed exclusive of any fees.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 87 (Credits, Reversal Amount)

DE 87 (Credits, Reversal Amount) is the sum amount of reversal credits processed exclusive of any fees.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 88 (Debits, Amount)

DE 88 (Debits, Amount) is the sum amount of all debit transactions processed exclusive of any fees.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 89 (Debits, Reversal Amount)

DE 89 (Debits, Reversal Amount) is the sum amount of reversal debits processed exclusive of any fees.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 90 (Original Data Elements)

DE 90 (Original Data Elements) is the data elements in the original message, intended to identify a transaction for correction or reversal.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-42                      |
| Data Length         | N/A                       |
| Data Field          | Contents of subfields 1–5 |
| Subfields           | 5                         |
| Justification       | see subfields             |

### Usage

Following is the usage of DE 90 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                        | Org | Sys | Dst |
|--------------------------------|-----|-----|-----|
| Reversal Request/0400          | M   | P   | M   |
| Reversal Request Response/0410 | ME  | XE  | ME  |
| Reversal Advice/0420           | •   | X   | M   |
| Reversal Advice Response/0430  | ME  | XE  | •   |

### Values

See subfields.

### Application notes

DE 90 is mandatory in the Reversal Advice/0420 message. DE 90 is always present in the Reversal Advice/0420 message whether the Reversal Advice/0420 message is reversing an Authorization Request/0100 message or advising the issuer that Mastercard processed a Reversal Request/0400 message on behalf of the issuer.

DE 90, subfield 1 must contain the Message Type Identifier (MTI) of the original authorization message. The remaining subfields may contain valid matching values from the original authorization or may be zero-filled if they are not available.

For reversal messages, if DE 7 (Transmission Date and Time) and DE 11 (System Trace Audit Number [STAN]) from the original Authorization 0100/0110 cannot be saved, DE 90, subelements 2 and 3 may be zero-filled within the Reversal Request/0400 message.

## Subfield 1 (Original Message Type Identifier)

DE 90, subfield 1 (Original Message Type Identifier) indicates the Message Type Identifier (MTI) of the original message.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4                       |
| Data Field          | Contents of positions 1-4 |
| Justification       | N/A                       |

### Values

MTI of original message.

## Subfield 2 (Original DE 11 [Systems Trace Audit Number])

DE 90, subfield 2 (Original DE 11 [Systems Trace Audit Number]) indicates the Systems Trace Audit Number (STAN) that was in DE 11 of the original message.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-6                        |
| Data Field          | Contents of positions 5-10 |
| Justification       | N/A                        |

### Values

STAN of original message.

## Subfield 3 (Original DE 7 [Transmission Date and Time])

DE 90, subfield 3 (Original DE 7 [Transmission Date and Time]) indicates the Transmission Date and Time that was in DE 7 of the original message.

### Attributes

| Attribute           | Description                                        |
|---------------------|----------------------------------------------------|
| Data Representation | n-10                                               |
| Data Field          | Contents of positions 11–20 (in MMDDhhmmss format) |
| Justification       | N/A                                                |

### Values

Transmission date and time of original message. This subfield must contain a valid date expressed as month (MM) and day (DD) and a valid time expressed as hours (hh), minutes (mm), and seconds (ss).

## Subfield 4 (Original DE 32 [Acquiring Institution ID Code])

DE 90, subfield 4 (Original DE 32 [Acquiring Institution ID Code]) indicates the Acquiring Institution ID Code that was in DE 32 of the original message.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-11                        |
| Data Field          | Contents of positions 21–31 |
| Justification       | Right with leading zeros    |

### Values

Acquiring Institution ID code of original message.

## Subfield 5 (Original DE 33 [Forwarding Institution ID Code])

DE 90, subfield 5 (Original DE 33 [Forwarding Institution ID Code]) indicates the Forwarding Institution ID Code that was in DE 33 of the original message.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-11                        |
| Data Field          | Contents of positions 32–42 |
| Justification       | Right with leading zeros    |

### Values

Forwarding Institution ID code of original message. If the Forwarding Institution ID code was not present in the original message, then subfield 5 must contain all zeros.

## DE 91 (Issuer File Update Code)

DE 91 (Issuer File Update Code) indicates to the system maintaining a file which procedure to follow.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Length         | N/A                    |
| Data Field          | Contents of position 1 |
| Subfields           | N/A                    |
| Justification       | N/A                    |

### Usage

Following is the usage of DE 91 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                  | Org | Sys | Dst |
|------------------------------------------|-----|-----|-----|
| Issuer File Update Request/0302          | M   | X   | .   |
| Issuer File Update Request Response/0312 | .   | XE  | ME  |

### Values

| Value | Description |
|-------|-------------|
| 1     | Add         |
| 2     | Update      |
| 3     | Delete      |
| 5     | Inquiry     |

### Application notes

This data element is defined and used identically within all Mastercard programs and services.

## DE 92 (File Security Code)

DE 92 (File Security Code) is an Issuer File Update security code used to indicate that a message originator is authorized to update a file.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 93 (Response Indicator)

DE 93 (Response Indicator) indicates the update action a POS system takes.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 94 (Service Indicator)

DE 94 (Service Indicator) indicates the service a message recipient requires.

### Attributes

| Attribute           | Description                                                            |
|---------------------|------------------------------------------------------------------------|
| Data Representation | ans-7                                                                  |
| Data Length         | N/A                                                                    |
| Data Field          | Contents of positions 1–7. Positions 4–7 must contain spaces or zeros. |
| Subfields           | 3                                                                      |
| Justification       | See subfields                                                          |

### Usage

Following is the usage of DE 94 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                           | Org | Sys | Dst |
|---------------------------------------------------|-----|-----|-----|
| Network Management Request/0800: sign-on/sign-off | M   | X   | .   |

### Values

This data element is used in Network Management Request/0800: sign-on/off messages to indicate that a customer is signing on or off for debit card traffic, credit card traffic, or both. It is also used to indicate if the sign-on or sign-off applies to acquirer traffic, issuer traffic, or both.

The Dual Message Authorization System allows credit card transactions and debit card transactions from a single institution to be routed to different processing systems.

### Application notes

See subfields.

## Subfield 1 (Reserved for Future Use)

DE 94, subfield 1 (Reserved for Future Use) is reserved for future use.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

### Values

| Value | Description             |
|-------|-------------------------|
| 0     | Reserved for Future Use |

## Subfield 2 (Acquirer/Issuer Indicator)

DE 94, subfield 2 (Acquirer/Issuer Indicator) indicates if the sign-on or sign-off message applies to acquirer traffic, issuer traffic, or both.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | a-1                    |
| Data Field          | Contents of position 2 |
| Justification       | N/A                    |

### Values

| Value | Description   |
|-------|---------------|
| A     | Acquirer only |
| I     | Issuer only   |

| Value | Description              |
|-------|--------------------------|
| B     | Both acquirer and issuer |

## Subfield 3 (Address Data Indicator)

DE 94, subfield 3 (Address Data Indicator) indicates how the address data is provided.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 3 |
| Justification       | N/A                    |

### Values

| Value | Description                                                                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0     | AVS not currently supported                                                                                                                                                                                                                                                          |
| 1     | Issuer receives complete address data                                                                                                                                                                                                                                                |
| 2     | Issuer receives condensed address data. (This supports the algorithm that uses the first five numeric digits in an address [when scanning the address from left to right].)                                                                                                          |
| 3     | Issuer receives condensed address data. (This supports the algorithm that uses up to the first five numeric digits in an address. This algorithm stops searching for a numeric after it encounters an alphabetic character or space [when scanning the address from left to right].) |
| 4     | Issuer receives condensed numeric postal code and condensed numeric address data only. (This supports the algorithm that uses the first five numeric digits in an address [when scanning the address from left to right].)                                                           |

## DE 95 (Replacement Amounts)

DE 95 (Replacement Amounts) contains the actual amount subfields necessary to perform a partial or full reversal of a financial transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-42                      |
| Data Length         | N/A                       |
| Data Field          | Contents of subfields 1–4 |
| Subfields           | 4                         |
| Justification       | See subfields             |

### Usage

Following is the usage of DE 95 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                        | Org | Sys | Dst |
|--------------------------------|-----|-----|-----|
| Reversal Request/0400          | C   | X   | C   |
| Reversal Request Response/0410 | CE  | X   | C   |
| Reversal Advice/0420           | •   | X   | C   |
| Reversal Advice Response/0430  | CE  | XE  | •   |

### Values

See subfields.

Subfield 1 (Actual Amount, Transaction) must contain valid numeric data. All other subfields must be zero-filled; if required, the Authorization System performs currency conversion.

DE 95 is necessary to perform a partial reversal of an authorization transaction. However, the Authorization System will support full reversals via usage of a Reversal Request/0400 message. Therefore, acquirers are not required to include DE 95 in the Reversal Request/0400 message. If DE 95 is included in a Reversal Request/0400 message for full reversals, DE 95 must contain a value of all zeros.

The Dual Message Authorization System requires a message initiator to generate only subfield 1 (Actual Amount, Transaction). The Dual Message Authorization System automatically calculates and inserts subfield 2 (Actual Amount, Settlement) and subfield 3 (Actual Amount, Cardholder Billing).

**NOTE: The subfield definitions the Dual Message Authorization System employs differ slightly from the ISO subfield definitions for this data element to accommodate the Mastercard automatic currency conversion service.**

Application notes

This data element is defined and used identically within all Mastercard programs and services. Mastercard does not provide currency conversion services for all programs and services.

Mastercard supports DE 95 in Reversal Request/0400 and Reversal Advice/0420 messages. DE 95 must be less than DE 4. If DE 95 contains all zeros, Mastercard will remove DE 95 before forwarding the message to the issuer.

Subfield 1 (Actual Amount, Transaction)

DE 95, subfield 1 (Actual Amount, Transaction) indicates the actual transaction amount.

Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-12                       |
| Data Field          | Contents of positions 1–12 |
| Justification       | Right with leading zeros   |

Values

Full reversal: If present, and the reversal is a full reversal, DE 95, subfield 1 must contain a value of all zeros.

Partial reversal: If the reversal is a partial reversal, DE 95, subfield 1 must contain a value less than the amount in DE 4 (Amount Transaction).

## Subfield 2 (Actual Amount, Settlement)

DE 95, subfield 2 (Actual Amount, Settlement) indicates the actual settlement amount in the settlement currency.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-12                        |
| Data Field          | Contents of positions 13–24 |
| Justification       | Right with leading zeros    |

### Values

Must contain valid numeric data. Absence of data must be indicated with zeros.

### Application notes

All settlement amounts are specified in U.S. Dollars. The Dual Message Authorization System will provide this subfield in the settlement currency (U.S. Dollars) if subfield 1 is not all zeros and if the customer chooses to receive settlement amount-related data elements; otherwise, subfield 2 is zero-filled.

## Subfield 3 (Actual Amount, Cardholder Billing)

DE 95, subfield 3 (Actual Amount, Cardholder Billing) the actual amount in the issuer currency.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-12                        |
| Data Field          | Contents of positions 25–36 |
| Justification       | Right with leading zeros    |

### Values

Must contain valid numeric data. Absence of data must be indicated with zeros. The Dual Message Authorization System will provide this subfield in the issuer's cardholder billing currency if subfield 1 is not all zeros.

## Subfield 4 (Zero Fill)

DE 95, subfield 4 (Zero Fill) indicates zeros.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-6                         |
| Data Field          | Contents of positions 37–42 |
| Justification       | N/A                         |

### Values

Must contain zeros.

## DE 96 (Message Security Code)

DE 96 (Message Security Code) is a verification between an acceptor and a card issuer that a message is authorized to update or modify a special file.

### Attributes

| Attribute           | Description                                           |
|---------------------|-------------------------------------------------------|
| Data Representation | n-8                                                   |
| Data Length         | N/A                                                   |
| Data Field          | Contents of positions 1–8 (EBCDIC hexadecimal format) |
| Subfields           | N/A                                                   |
| Justification       | N/A                                                   |

### Usage

Following is the usage of DE 96 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                           | Org | Sys | Dst |
|---------------------------------------------------|-----|-----|-----|
| Issuer File Update Request/0302                   | M   | X   | .   |
| Issuer File Update Request Response/0312          | .   | ME  | XE  |
| Network Management Request/0800: sign-on/sign-off | M   | X   | .   |

### Values

If an issuer has been assigned a Security Authorization Code that represents the Mastercard customer password, allowing access in the Dual Message Authorization System network by the customer or *INF* processor, this data element must contain valid security control data when used in Issuer File Update/0302 and Network Management Request/0800: sign-on/sign-off messages.

## DE 97 (Amount, Net Settlement)

DE 97 (Amount, Net Settlement) is the net value of all gross amounts.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 98 (Payee)

DE 98 (Payee), is the third-party beneficiary in a payment transaction.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 99 (Settlement Institution ID Code)

DE 99 (Settlement Institution ID Code) identifies the settlement institution or its agent.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 100 (Receiving Institution ID Code)

DE 100 (Receiving Institution ID Code) is the identity of the institution receiving a Request or Advice message in an interchange system if not the same as identified in DE 2 (Primary Account Number [PAN]) or DE 34 (Primary Account Number [PAN], Extended). The Dual Message

Authorization System uses DE 100 to determine the destination routing of Administrative/06xx messages. For these messages, DE 33 (Forwarding Institution ID Code) identifies the sender of the message; DE 100 identifies the receiver of the message.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n...11; LLVAR              |
| Data Length         | 2 positions                |
| Data Field          | Contents of positions 1–11 |
| Subfields           | N/A                        |
| Justification       | N/A                        |

### Usage

Following is the usage of DE 100 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                      | Org | Sys | Dst |
|----------------------------------------------|-----|-----|-----|
| Administrative Advice/0620: member-generated | M   | P   | M   |
| Administrative Advice/0620: system-generated | .   | X   | M   |
| Administrative Advice Response/0630          | ME  | XE  | .   |

### Values

Must contain a valid five-digit Mastercard customer ID number. It identifies the destination customer or *INF* to receive the message.

### Application notes

This data element is defined and used identically within all Mastercard programs and services.

Processing systems responding to originating Administrative Advice/06xx and Network Management/08xx messages must not swap the contents of DE 33 and DE 100 in the Response message to achieve proper routing of the Response to the originator.

## DE 101 (File Name)

DE 101 (File Name) is the actual or abbreviated name of the file that the issuer accesses. DE 101 is used in Issuer File Update/03xx messages to identify the specific name of a Dual Message Authorization System data file or program parameter table that is being updated by a customer's Issuer File Update Request/0302.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans...17; LLVAR            |
| Data Length         | 2 positions                |
| Data Field          | Contents of positions 1–17 |
| Subfields           | N/A                        |
| Justification       | N/A                        |

### Usage

Following is the usage of DE 101 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                  | Org | Sys | Dst |
|------------------------------------------|-----|-----|-----|
| Issuer File Update Request/0302          | M   | X   | •   |
| Issuer File Update Request Response/0312 | •   | XE  | ME  |

### Values

| Value  | Description                      |
|--------|----------------------------------|
| MCC102 | Stand-In Account File            |
| MCC103 | Electronic Warning Bulletin File |
| MCC104 | Local Stoplist File              |
| MCC105 | Payment Cancellation File        |
| MCC106 | PAN Mapping File                 |

| Value  | Description                                            |
|--------|--------------------------------------------------------|
| MCC107 | Not in use                                             |
| MCC108 | Not in use                                             |
| MCC109 | Contactless Application Transaction Counter (ATC) File |
| MCC111 | PAN-PAR (Payment Account Reference) Mapping File       |

## DE 102 (Account ID 1)

DE 102 (Account ID-1) is a series of digits that identify a customer account or relationship. Customers primarily use it for the from account in a transfer transaction. DE 102 may be used in Authorization Request Response/0110 messages to identify the specific from account that the transaction affected. DE 102 may be used for printing on cardholder transaction receipts.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans...28; LLVAR            |
| Data Length         | 2 positions                |
| Data Field          | Contents of positions 1–28 |
| Subfields           | N/A                        |
| Justification       | N/A                        |

### Usage

Following is the usage of DE 102 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Messages                                      | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request Response/0110           | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |

## Values

The from account is the account specified in digits three and four of DE 3 (Processing Code).

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

# DE 103 (Account ID 2)

DE 103 (Account ID-2) is a series of digits that identify a customer account or relationship. Customers primarily use it for the "to" account in a transfer transaction.

## Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans...28; LLVAR            |
| Data Length         | 2 positions                |
| Data Field          | Contents of positions 1–28 |
| Subfields           | N/A                        |
| Justification       | N/A                        |

## Usage

Following is the usage of DE 103 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request Response/0110           | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |

## Values

The to account is specified in digits five and six of DE 3 (Processing Code).

## Application notes

This data element is defined and used identically within all Mastercard programs and services.

## DE 104 (Digital Payment Data)

DE 104 (Digital Payment Data) is used in Authorization Request/0100 messages to send digital payment data for e-commerce transactions.

### Attributes

| Attribute           | Description                                                                                                                                                               |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Data Representation | ans...999; LLLVAR                                                                                                                                                         |
| Data Length         | 3 positions                                                                                                                                                               |
| Data Field          | Contents of subelements                                                                                                                                                   |
| Subelements         | 001: Digital Payment Cryptogram<br>002: Estimated Amount<br>003: Remote Commerce Acceptor Identifier<br>004: Digital Service Provider<br>005: Digital Authentication Data |
| Justification       | See "Subelements"                                                                                                                                                         |

### Usage

Following is the usage of DE 104 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

### Values

Transaction specific.

## DE 104: Encoding Scheme

Mastercard organizes DE 104 into a group of encoded subelements and subfields. The following table illustrates the structure of DE 104 subelements.

### Subelement structure

| LLL          | "VAR" - maximum length varies |           |                         |                             |           |                         |
|--------------|-------------------------------|-----------|-------------------------|-----------------------------|-----------|-------------------------|
| 3 bytes      | 3 bytes                       | 3 bytes   | Variable length         | 3 bytes                     | 3 bytes   | Variable length         |
| Total Length | First Subelement (SE) Data    |           |                         | Second Subelement (SE) Data |           |                         |
|              | SE ID                         | SE Length | SE Variable Length Data | SE ID                       | SE Length | SE Variable Length Data |

### Subelement structure

| Number of Bytes | Attribute                       | Value                                 |
|-----------------|---------------------------------|---------------------------------------|
| 3               | Total Length field              | The "LLL" portion of the data element |
| 3               | Subelement ID                   | In the range 001-099                  |
| 3               | Subelement Length               | Variable                              |
| 1...nnn         | Subelement Variable Length Data | Contents of Subfields                 |

The following table illustrates the structure of DE 104 subfields within a subelement.

### Subfield structure

| "VAR" - maximum length varies |           |                         |                           |           |                         |
|-------------------------------|-----------|-------------------------|---------------------------|-----------|-------------------------|
| 3 bytes                       | 3 bytes   | Variable length         | 3 bytes                   | 3 bytes   | Variable length         |
| First subfield (SF) Data      |           |                         | Second subfield (SF) Data |           |                         |
| SF ID                         | SF Length | SF variable length data | SF ID                     | SF length | SF Variable length data |

### Subfield structure

| Number of bytes | Attribute                     | Value                 |
|-----------------|-------------------------------|-----------------------|
| 3               | Subfield ID                   | In the range 001-099  |
| 3               | Subfield length               | Variable              |
| 1...nnn         | Subfield variable Length Data | Contents of subfields |

## Subelement 001 (Digital Payment Cryptogram)

DE 104, subelement 001 (Digital Payment Cryptogram) is where the DSRP Cryptogram will be sent to be processed and verified.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 001                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | ans-28; (base 64 encoded) |
| Data Field             | Contains DSRP Cryptogram  |
| Subfields              | N/A                       |
| Justification          | Left                      |

### Usage

Following is the usage of subelement 001 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

## Values

Transaction specific. Refer to [Digital Secure Remote Payments: UCAF Formats](#) for detailed information on the formats supported by Mastercard, which continue to be applicable to the new Digital Payment Data field.

## Application notes

To be included by the acquirer for MDES electronic commerce transactions in Authorization Request/0100 messages.

To be received by the issuer when included by the acquirer in non-MDES transactions in Authorization Request/0100 messages and Reversal Request/0400 messages.

If DE 104, subelement 001 is included on any other message type it will be ignored.

**NOTE: Issuers will not receive DE 104, subelement 001 on MDES transactions.**

## Subelement 002 (Estimated Amount)

DE 104, subelement 002 (Estimated Amount) contains the estimated purchase amount of the transaction when the payment request is presented to the consumer during checkout. This amount may not always be the final amount. The estimated amount is encoded and included within the cryptogram. The estimated amount is in the transaction currency defined in DE 49 (Currency Code, Transaction).

## Attributes

| Attributes             | Description               |
|------------------------|---------------------------|
| Subelement ID          | 002                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | n-12                      |
| Data Field             | Contains estimated amount |
| Subfields              | N/A                       |
| Justification          | Right with leading zeros  |

## Usage

Following is the usage of subelement 002 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

### Application notes

The Authorization System inserts this subelement into Authorization Request/0100 messages when the issuer has opted-in to receive it.

This subelement is expected to be present in transactions initiated via wallets or remote commerce programs that support DSRP cryptogram format 3.

## Subelement 003 (Remote Commerce Acceptor Identifier)

DE 104, subelement 003 (Remote Commerce Acceptor Identifier) contains a merchant identifier such as the merchant business website URL or reverse domain name as presented to the consumer during checkout. The merchant identifier is provided encoded as Base64.

### Attributes

| Attribute              | Description                                      |
|------------------------|--------------------------------------------------|
| Subelement ID          | 003                                              |
| Subelement Data Length | 3 positions                                      |
| Data Representation    | ans...150 (Base64 encoded)                       |
| Data Field             | Contains the Remote Commerce Acceptor Identifier |
| Subfields              | N/A                                              |
| Justification          | Left                                             |

### Usage

Following is the usage of subelement 003 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

### Application notes

Acquirers can optionally submit the Remote Commerce Acceptor Identifier in DE 104, subelement 003 within Authorization Request/0100 and Financial Transaction Request/0200 messages encoded as Base64 when provided by the merchant for MDES remote commerce transactions.

Mastercard will forward to the issuer (when opted-in to receive it). Issuers electing to use a Third Party Token Service Provider for device based wallet programs will receive the subelement in the authorization request when included by the acquirer. Applicable to Authorization Request/0100 messages.

This subelement is expected to be present in remote commerce transactions initiated via wallets or remote commerce programs that support DSRP cryptogram format 3. If present, it must be encoded as Base64.

## Subelement 004 (Digital Service Provider)

DE 104, subelement 004 (Digital Service Provider) is reserved for specific digital programs and services. It is a free-format, variable-length subelement that may be used for multiple purposes.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 004                   |
| Subelement Data Length | 3 positions           |
| Data Representation    | ans...250; LLLVAR     |
| Data Field             | Contents of subfields |
| Subfields              | 2                     |
| Justification          | See subfields         |

### Usage

Following is the usage of subelement 004 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | .   | X   | C   |

### Application notes

The Dual Message Authorization System populates this subelement in Authorization Request/0100 messages when the issuer has opted-in to receive it. Mastercard may occasionally introduce new DE 104, subelement 004 values between releases. Mastercard requires customers to code their systems with flexibility to process messages containing new values.

### Subfield 001 (Digital Service Provider ID 1)

DE 104, subelement 004 (Digital Service Provider), subfield 001 (Digital Service Provider ID 1) contains the alphanumeric value that identifies the Digital Service Provider type and entity.

This field provides information on either the third-party entity that facilitated a tokenized transaction or the entity that authenticated the cardholder in a remote commerce transaction.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 001                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | an-5                     |
| Data Field           | Contents of subfield 001 |
| Justification        | Left                     |

### Values

#### Position 1 (Digital Service Provider Type)

| Value | Description                                                              |
|-------|--------------------------------------------------------------------------|
| A     | Entity that authenticated the cardholder                                 |
| C     | Entity that provided the card on file credential used in the transaction |

| Value               | Description                                                                                                                                                                                                                                                           |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| F                   | Entity that provided the credential to the merchant during checkout                                                                                                                                                                                                   |
| If position 1 is... | Then position 2-5...                                                                                                                                                                                                                                                  |
| A                   | The list of available alphanumeric authenticating entity IDs is in <i>AN 6480 Authenticating Entities and Multi-Factor Authentication Methods Values</i> and the <i>MDES Issuer Implementation Guide</i> . Both documents are on the Technical Resource Center (TRC). |
| C                   | A list of available IDs is in the <i>MDES Issuer Implementation Guide</i> available on the Technical Resource Center (TRC).                                                                                                                                           |
| F                   | A list of available IDs is in the <i>MDES Issuer Implementation Guide</i> available on the Technical Resource Center (TRC).                                                                                                                                           |

### Application notes

The absence of subfield 001 does not impact the authentication status of a transaction. The subfield serves as additional information and should not be used in isolation to make authorization decisions.

### Example: Formatted DE 104, subelement 004, subfield 001

104 225002 012000000000400 003 150d3d3Lm1hc3RlcmNhcmQuY29t... 004 011 001  
005111111

## Subfield 002 (Digital Service Provider ID 2)

DE 104, subelement 004 (Digital Service Provider), subfield 002 (Digital Service Provider ID 2) contains the alphanumeric value that identifies the Digital Service Provider type and entity.

This field provides information on either the third-party entity that facilitated a tokenized transaction or the entity that authenticated the cardholder in a remote commerce transaction.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 002         |
| Subfield Data Length | 3 positions |
| Data Representation  | an-5        |

| Attribute     | Description              |
|---------------|--------------------------|
| Data Field    | Contents of subfield 002 |
| Justification | Left                     |

## Values

### Position 1 (Digital Service Provider Type)

| Value | Description                                                              |
|-------|--------------------------------------------------------------------------|
| A     | Entity that authenticated the cardholder                                 |
| C     | Entity that provided the card on file credential used in the transaction |
| F     | Entity that provided the credential to the merchant during checkout      |

### Position 2-5 (Digital Service Provider Identifier)

| If position 1 is... | Then position 2-5...                                                                                                                                                                                                                                                  |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A                   | The list of available alphanumeric authenticating entity IDs is in <i>AN 6480 Authenticating Entities and Multi-Factor Authentication Methods Values</i> and the <i>MDES Issuer Implementation Guide</i> . Both documents are on the Technical Resource Center (TRC). |
| C                   | A list of available IDs is in the <i>MDES Issuer Implementation Guide</i> available on the Technical Resource Center (TRC).                                                                                                                                           |
| F                   | A list of available IDs is in the <i>MDES Issuer Implementation Guide</i> available on the Technical Resource Center (TRC).                                                                                                                                           |

## Application notes

The absence of subfield 002 does not impact the authentication status of a transaction. The subfield serves as additional information and should not be used in isolation to make authorization decisions.

## Subelement 005 (Digital Authentication Data)

DE 104, subelement 005 (Digital Authentication Data) is reserved for specific digital programs and services. It is a free-format, variable-length sub element that may be used for multiple purposes. The Attributes table identifies the structure of the subfield encoding scheme in the Authorization Request/0100 message.

### Attributes

| Attribute              | Description                                                                     |
|------------------------|---------------------------------------------------------------------------------|
| Subelement ID          | 005                                                                             |
| Subelement Data Length | 3 positions                                                                     |
| Data Representation    | ans...250; LLLVAR                                                               |
| Data Field             | Contents of subfields                                                           |
| Number of subfields    | Subfield 001 (Cardholder Verification)<br>Subfield 002 (Authentication Factors) |
| Justification          | See subfields                                                                   |

### Usage

Whether the usage is mandatory, conditional, optional, system-provided, or not required is as noted for each applicable message.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| Authorization Request/0100                            | •   | X   | C   |
| Authorization Request Response/0120: system-generated | •   | X   | C   |

### Application notes

The Dual Message Authorization System populates this subelement in Authorization Request/0100 messages when the issuer has opted-in to receive it. Mastercard may occasionally introduce new DE 104, subelement 005 values between releases. Mastercard requires customers to code their systems with flexibility to process messages containing new values.

### Subfield 001 (Cardholder Verification)

DE 104, subelement 005 (Digital Authentication Data), subfield 001 (Cardholder Verification) contains an alphanumeric value to indicate the cardholder was authenticated and specifies the Cardholder Verification Method (CVM) used to authenticate the cardholder during a contactless or remote commerce transaction.

#### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 001                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | an-5                     |
| Data Field           | Contents of subfield 001 |
| Justification        | Left                     |

#### Values

#### Position 1 (Transaction authenticated with a valid Cardholder Verification Method)

| Value | Description                                                                                                                                                                                                                                                               |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | Transaction authenticated with a Mastercard-qualified multi-factor authentication (MFA) method. In Europe region: Transaction authenticated with a Mastercard-qualified multi-factor authentication (MFA) method used as Strong Customer Authentication (SCA) delegation. |
| 2     | Transaction authenticated with a Mastercard-operated authentication method                                                                                                                                                                                                |
| 3     | Transaction authenticated with an Issuer authentication method                                                                                                                                                                                                            |
| 4     | Device wallet transaction authenticated with a Consumer Device Cardholder Verification Method (CDCVM). This value may not be present in current device wallet implementations.                                                                                            |

### Position 2-5 (Identifier to the Cardholder Verification Method)

| If position 1 is... | Then position 2-5 will be...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| 1                   | A Mastercard assigned unique identifier for the MFA method. See <i>AN 6480 Authenticating Entities and Multi-Factor Authentication Methods Values</i> for the list of available alphanumeric MFA method IDs.                                                                                                                                                                                                                                                                                                                                   |
| 2                   | 0001: Mastercard authentication method with device binding and device biometrics (FIDO).<br>0002: Mastercard authentication method with device binding and passive authentication.                                                                                                                                                                                                                                                                                                                                                             |
| 3                   | 0001: Transaction authenticated by issuer through Identity Check (EMV 3-D Secure) when Mastercard is an EMV 3-D Secure requestor.<br>0002: Transaction authenticated by the issuer through MDES.<br>0003: Transaction authenticated by the issuer through a proprietary channel.                                                                                                                                                                                                                                                               |
| 4                   | Mastercard assigned unique identifier for the CDCVM method. This value may not be present in current device wallet implementations.<br><br>TRID: When the value is "4TRID" the Token Requestor ID in DE 48, subelement 33 (PAN Mapping File Information), subfield 006 (Token Requestor ID), identifies the entity that authenticated the cardholder.<br><br>DDSP: When the value is "4DDSP" the Digital Service Provider ID in DE 104, subelement 004, subfield 001 or subfield 002, identifies the entity that authenticated the cardholder. |

The list of available methods is in *AN 6480 Authenticating Entities and Multi-Factor Authentication Methods Values* and the *MDES Issuer Implementation Guide*. Both documents are on the Technical Resource Center on Mastercard Connect®.

### Application notes

The absence of subfield 001 does not impact authentication status of a transaction. The subfield serves as additional information and should not be used in isolation to make authorization decisions.

## Subfield 002 (Authentication Factors)

DE 104, subelement 005 (Digital Authentication Data), subfield 002 (Authentication Factors) contains the alphanumeric value that identifies the authentication factors used to authenticate the cardholder during a contactless or remote commerce transaction.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 002                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | an-5                     |
| Data Field           | Contents of subfield 002 |
| Justification        | Left                     |

### Values

| Position | Description                  | Values                 |
|----------|------------------------------|------------------------|
| 1-2      | First authentication factor  | value from table below |
| 3-4      | Second authentication factor | value from table below |
| 5        | Reserved for future use      | 0                      |

### Application notes

The use of authentication factors are subject to any regulatory approvals and compliance with applicable laws and regulations.

### Authentication factors by value

| Value | Authentication factor          | Description                                  | Category   |
|-------|--------------------------------|----------------------------------------------|------------|
| 00    | Not provided                   | Factor not provided                          | N/A        |
| 01    | Consumer device / device token | Token is stored securely on consumer device. | Possession |

| <b>Value</b> | <b>Authentication factor</b>                      | <b>Description</b>                                                                                                                                                                    | <b>Category</b>        |
|--------------|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| 02           | Consumer device / device bound payment credential | Payment credential is bound to consumer device using a device binding process that ensures a unique connection between the device and an application or browser or cryptographic key. | Possession             |
| 03           | SMS OTP                                           | One Time Password or passcode sent via text message to a phone number                                                                                                                 | Possession             |
| 04           | Email OTP                                         | One Time Password or passcode sent via email to an email address only accessible from a registered device                                                                             | Possession             |
| 05           | Email OTP                                         | One Time Password or passcode sent via email to an email address accessible from any device using a knowledge factor                                                                  | Knowledge              |
| 06           | Card Validation Code 2 (CVC2)                     | Static 3-digit number printed on the back of a Mastercard-branded card                                                                                                                | Possession             |
| 07           | Application authentication with unknown factor    | Knowledge or inherence factor validated by an application (for example, issuer, merchant, or wallet application) exact factor and exact category unknown                              | Knowledge or Inherence |
| 08           | Application authentication with knowledge factor  | Knowledge factor validated by an application (for example, issuer, merchant, or wallet application) exact factor unknown                                                              | Knowledge              |

| <b>Value</b> | <b>Authentication factor</b>                     | <b>Description</b>                                                                                                         | <b>Category</b>        |
|--------------|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|------------------------|
| 09           | Application authentication with inherence factor | Inherence factor validated by an application (for example, issuer, merchant, or wallet application) exact factor unknown   | Inherence              |
| 0A           | Device OS authentication with unknown factor     | Knowledge or inherence factor validated by the operating system on the consumer device - exact factor and category unknown | Knowledge or Inherence |
| 0B           | Device OS authentication with knowledge factor   | Knowledge factor validated by the operating system on the consumer device - exact factor unknown                           | Knowledge              |
| 0C           | Device OS authentication with password           | Password validated by the operating system on the consumer device                                                          | Knowledge              |
| 0D           | Device OS authentication with passcode           | Passcode validated by the operating system on the consumer device                                                          | Knowledge              |
| 0E           | Device OS authentication with pattern            | Pattern validated by the operating system on the consumer device                                                           | Knowledge              |
| 0F           | Device OS authentication with inherence factor   | Inherence factor validated by the operating system on the consumer device - exact factor unknown                           | Inherence              |
| 0G           | Device OS authentication with fingerprint        | Fingerprint validated by the operating system on the consumer device                                                       | Inherence              |
| 0H           | Device OS authentication with facial recognition | Face validated by the operating system on the consumer device                                                              | Inherence              |
| 0I           | Device OS authentication with iris recognition   | Iris validated by the operating system on the consumer device                                                              | Inherence              |

| an Authorization Request/0100 message containing DE 104 (Digital Payment Data), subelement 001 (Digital Payment Cryptogram), is of incorrect length or incorrect data representation          | will reject the message and forward to the acquirer an Authorization Request Response/0110 message with: <ul style="list-style-type: none"> <li>DE 39 (Response Code) = 30 (Format error)</li> <li>DE 44 (Additional Response Data) = 104001 (indicating the data element in error)</li> </ul>                |
| DE 104 (Digital Payment Data), subelement 003 (Remote Commerce Acceptor Identifier) is incorrectly formatted in an Authorization Request/0100 message and/or exceeds 150 characters in length | will reject the message and forward to the acquirer an Authorization Request Response/0110 message with: <ul style="list-style-type: none"> <li>DE 39 (Response Code) = 30 (Format error)</li> <li>DE 44 (Additional Response Data) = 104003 (indicating the data element and subelement in error)</li> </ul> |

## DE 105 (Multi-Use Transaction Identification Data)

DE 105 is alphanumeric, variable length using a tag-length-data encoding scheme to allow for easy addition of new subelements.

### Attributes

| Attribute           | Description                                                                                                                       |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Data Representation | ans...999; LLLVAR<br>The length field must be in the range 001-999. Subelements are identified by valid subelement ID and length. |
| Data Length         | 3 positions                                                                                                                       |
| Data Field          | Contents of subelements                                                                                                           |
| Subelements         | 1                                                                                                                                 |

| Attribute     | Description    |
|---------------|----------------|

## Encoding scheme for DE 105

Mastercard organizes DE 105 into a group of encoded subelements and subfields.

## Structure of DE 105 subelement

| LLL          | VAR: maximum length varies |                   |                            |
|--------------|----------------------------|-------------------|----------------------------|
| 3 bytes      | 3 bytes                    | 3 bytes           | Variable length            |
| Total length | First subelement data      |                   |                            |
|              | Subelement ID              | Subelement length | Subelement variable length |

### Structure of DE 105 subelement

| Number of Bytes | Attribute                       | Value                                 |
|-----------------|---------------------------------|---------------------------------------|
| 3               | Total data element length       | The "LLL" portion of the data element |
| 3               | Subelement ID                   | In the range 001–999                  |
| 3               | Subelement length               | Variable                              |
| 1...nnn         | Subelement variable length data | Contents of Subfields                 |

### Structure of DE 105 subfields within a subelement

| LLL                 | VAR: maximum length varies |                               |
|---------------------|----------------------------|-------------------------------|
| 3 bytes             | 3 bytes                    | Variable length               |
| First subfield data |                            |                               |
| Subfield ID         | Subfield length            | Subfield variable length data |

### Structure of DE 105 subfields

| Number of bytes | Attribute                     | Value                   |
|-----------------|-------------------------------|-------------------------|
| 3               | Subfield ID                   | In the range of 001-999 |
| 3               | Subfield length               | Variable                |
| 1...nnn         | Subfield variable length data | Contains valid values   |

## Subelement 001 (Transaction Link ID [TLID])

DE 105, subelement 001 (Transaction Link ID [TLID]) contains the transaction link ID that is globally unique and can be used as a single unique reference for deterministic matching and linking of all message activity.

### Attributes

| Attribute     | Description |
|---------------|-------------|
| Subelement ID | 001         |

| Attribute              | Description |
|------------------------|-------------|
| Subelement Data Length | 3 positions |
| Data Representation    | ans-22      |
| Data Field             | N/A         |
| Subfields              | N/A         |
| Justification          | N/A         |

## Usage

Whether the data element is mandatory, conditional, optional, system-provided, or not required is noted for each applicable message.

## Applicable messages

| Message                                                                                         | Org | Sys | Dst |
|-------------------------------------------------------------------------------------------------|-----|-----|-----|
| Authorization Request/0100                                                                      | C   | X   | C   |

| Reversal Request/0400                                                                           | C   | X   | C   |
| Reversal Request Response/0410                                                                  | CE  | X   | C   |
| Reversal Advice/0420: System generated                                                          | •   | X   | C   |
| Reversal Advice Response/0430                                                                   | CE  | XE  | •   |

**NOTE: Authorization Request/0100 pre-digitization messages will not be assigned a TLID. These messages can be identified with DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status) with a value of 9 (Tokenization Request/Notification).**

## DE 106 (Fleet Service Data)

DE 106 (Fleet Service Data) contains information pertaining to Fleet card transactions and the items being purchased.

### Attributes

| Attribute           | Description                                                                                                                           |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Data Representation | ans...999; LLLVAR<br><br>The length field must be in the range 001-999. Subelements are identified by valid subelement ID and length. |
| Data Length         | 3 positions                                                                                                                           |
| Data Field          | Contents of subelements                                                                                                               |
| Subelements         | 5                                                                                                                                     |
| Justification       | See "Subelements"                                                                                                                     |

### Usage

The following applies to DE 106 usage:

- For subelements defined with a CE (conditional echo) presence notation for an Org (originator) entity Mastercard will not reject a message from the message originator if the original subelement data is not returned as defined in a response message. Based on the presence notation for the Dst (destination) entity Mastercard will forward the subelement data as received from the message originator if it is present in a response message.
- Use of DE 106 (Fleet Service Data) for authorization is required only for EMV chip cards personalized using the IFSF/Conexus specification for retrieving supplemental data from acceptors and cardholders.

Following is the overall usage of DE 106 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |

## Subelement 001 (Fleet Prompted Data)

DE 106, subelement 001 (Fleet Prompted Data) contains up to 5 occurrences of the Prompt Code read from a card chip that indicates prompts that occur at the point of interaction and the data entered in response by the cardholder into the point-of-sale device.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 001                   |
| Subelement Data Length | 3 positions           |
| Data Representation    | ans...220; LLLVAR     |
| Data Field             | Contents of subfields |
| Subfields              | 5                     |
| Justification          | See subfields         |

### Usage

Usage shows whether the field is mandatory, conditional, optional, or system-provided in applicable messages.

### Applicable messages

| Message                                                                                         | Org | Sys | Dst |
|-------------------------------------------------------------------------------------------------|-----|-----|-----|
| Authorization Request/0100                                                                      | O   | P   | C   |
| Authorization Request Response/0110                                                             | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated                                                   | O   | P   | C   |
| Authorization Advice/0120: system-generated                                                     | .   | X   | C   |
| Authorization Advice Response/0130: issuer-generated (responding to an acquirer-generated 0120) | C   | X   | C   |

### Application notes

If subelement 001 was present in the original Authorization Request/0100 message for an Automated Fuel Dispenser (AFD) transaction then subelement 001 in the Authorization Advice/0120: acquirer-generated message for the AFD transaction must contain the same values.

## Subfield 001 (Fleet Prompt 1)

DE 106, subelement 001, subfield 001 (Fleet Prompt 1) contains the first occurrence of the Prompt Code and Driver Related Data.

### Attributes

| Attribute            | Description                                                                                                                                                                |

| 053         | Engine Oil Temperature  |
| 054         | Engine Time Total       |

| Prompt code | Prompt              |
|-------------|---------------------|
| 055         | Hard Breaking       |
| 056         | Hard Acceleration   |
| 058         | Idle Time           |
| 065         | Total Idle Time     |
| 067         | Engine Oil Pressure |
| 068         | Engine Oil Life     |
| 069         | Billing ID          |
| 999         | No prompts issued   |

### Application notes

Prompt Code contains a code that specifies the information requested to be provided by the cardholder at the POI.

Driver Related Data contains the data entered in response to the Prompt Code obtained at the POS.

If the Fleet card magnetic stripe or the chip Third Party Data (tag 9F6E) is encoded to indicate No Prompts Issued or chip data DF30 in tag BF0C is encoded following the International Forecourt Standards Forum (IFSF) with no prompt code values, then one of the Fleet prompt subfields 001 through 005 must contain Prompt code value 999 (No prompts issued) which will not require driver related prompted data at the point-of-sale. When this occurs, acquirers must populate the Driver Related Data field with a default value of 999.

### Subfield 002 (Fleet Prompt 2)

DE 106, subelement 01, subfield 002 (Fleet Prompt 2) contains the second occurrence of the Prompt Code and Driver Related Data.

### Attributes

| 999         | No prompts issued       |

### Application notes

Prompt Code contains a code that specifies the information requested to be provided by the cardholder at the POI.

Driver Related Data contains the data entered in response to the Prompt Code obtained at the POS.

If the Fleet card magnetic stripe or the chip Third Party Data (tag 9F6E) is encoded to indicate No Prompts Issued or chip data DF30 in tag BF0C is encoded following the International Forecourt Standards Forum (IFSF) with no prompt code values, then one of the Fleet prompt subfields 001 through 005 must contain Prompt code value 999 (No prompts issued) which will not require driver related prompted data at the point-of-sale. When this occurs, acquirers must populate the Driver Related Data field with a default value of 999.

## Subfield 004 (Fleet Prompt 4)

DE 106, subelement 001, subfield 004 (Fleet Prompt 4) contains the fourth occurrence of the Prompt Code and Driver Related Data.

| 069         | Billing ID          |
| 999         | No prompts issued   |

### Application notes

Prompt Code contains a code that specifies the information requested to be provided by the cardholder at the POI.

Driver Related Data contains the data entered in response to the Prompt Code obtained at the POS.

If the Fleet card magnetic stripe or the chip Third Party Data (tag 9F6E) is encoded to indicate No Prompts Issued or chip data DF30 in tag BF0C is encoded following the International Forecourt Standards Forum (IFSF) with no prompt code values, then one of the Fleet prompt subfields 001 through 005 must contain Prompt code value 999 (No prompts issued) which will not require driver related prompted data at the point-of-sale. When this occurs, acquirers must populate the Driver Related Data field with a default value of 999.

### Subfield 005 (Fleet Prompt 5)

DE 106, subelement 001, subfield 005 (Fleet Prompt 5) contains the fifth occurrence of the Prompt Code and Driver Related Data.

### Attributes

| 069         | Billing ID              |
| 999         | No prompts issued       |

### Application notes

Prompt Code contains a code that specifies the information requested to be provided by the cardholder at the POI.

Driver Related Data contains the data entered in response to the Prompt Code obtained at the POS.

If the Fleet card magnetic stripe or the chip Third Party Data (tag 9F6E) is encoded to indicate No Prompts Issued or chip data DF30 in tag BF0C is encoded following the International Forecourt Standards Forum (IFSF) with no prompt code values, then one of the Fleet prompt subfields 001 through 005 must contain Prompt code value 999 (No prompts issued) which will not require driver related prompted data at the point-of-sale. When this occurs, acquirers must populate the Driver Related Data field with a default value of 999.

## Subelement 002 (Merchant Fleet Spend Control Override Capability Indicator)

DE 106, subelement 002 (Merchant Fleet Spend Control Override Capability Indicator) indicates if the merchant point-of-sale supports the Fleet Spend Control Override Capability.

### Attributes

| Attribute              | Description            |
|------------------------|------------------------|
| Subelement ID          | 002                    |
| Subelement Data Length | 3 positions            |
| Data Representation    | ans-1                  |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |
| Justification          | N/A                    |

### Usage

Usage shows whether the field is mandatory, conditional, optional, or system-provided in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | O   | P   | C   |

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Advice/0120: system-generated | •   | X   | C   |

### Values

| Value | Description                             |
|-------|-----------------------------------------|
| 0     | Does not support spend control override |
| 1     | Supports spend control override         |

### Application notes

Subelement 002 values enable acquirers to provide issuers with an indicator to identify when a merchant can support the Fleet Spend Control Override Capability. This data will assist issuers in determining when they can send revised purchase restriction values in DE 106, subelement 003 (Fleet Spend Control Override Items) in the Authorization Request Response/0110 message to override the purchase restriction values obtained from the card at the POS. This allows issuers to perform real-time adjustments to the types of products allowed to be purchased using that particular Fleet card.

## Subelement 003 (Fleet Spend Control Override Items)

DE 106, subelement 003 (Fleet Spend Control Override Items) provides merchants with information, on a transaction basis, to override purchase restrictions to allow products to be purchased that may not have otherwise been allowed.

### Attributes

| Attribute              | Description                                                                                                                                                     |

| Subelement ID          | 003                                                                                                                                                             |
| Subelement Data Length | 3 positions                                                                                                                                                     |
| Data Representation    | an-16; the 16 byte hexadecimal representation of the 8 byte binary data that conforms to the Connexus format standard defined for Purchase Restriction Tag DF32 |
| Data Field             | Contents of positions 1-16                                                                                                                                      |
| Subfields              | N/A                                                                                                                                                             |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Usage

Usage shows whether the field is mandatory, conditional, optional, or system-provided in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | P   | C   |

### Application notes

Subelement 003 enables issuers to provide acquirers with revised purchase restriction values in the Authorization Request Response/0110 message to override the purchase restriction values obtained from Connexus Purchase Restriction Tag DF32 found on the EMV card. This subelement will only be populated when DE 106, subelement 002 contains the value '1' indicating that the merchant point-of-sale supports the Fleet Spend Control Override Capability.

DE 106, subelement 003 must contain the 16 byte hexadecimal representation of the 8 byte binary data that conforms to the Connexus format standard defined for Purchase Restriction Tag DF32.

## Subelement 004 (Fleet Fuel Information)

DE 106, subelement 004 (Fleet Fuel Information) contains item level detail information of the motor fuel product(s) purchased at the POS.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 004                   |
| Subelement Data Length | 3 positions           |
| Data Representation    | ans...123; LLLVAR     |
| Data Field             | Contents of subfields |
| Subfields              | 3                     |

| Attribute     | Description   |
|---------------|---------------|
| Justification | See subfields |

## Usage

Usage shows whether the field is mandatory, conditional, optional, or system-provided in applicable messages.

## Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | O   | P   | C   |
| Authorization Advice/0120: acquirer-generated | O   | P   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |

## Application notes

DE 106, subelement 004 allows the acquirer to provide issuers with detailed information on up to three fuel products purchased.

If the fuel product being purchased and related detail is known at the time of authorization, then this field can be optionally provided in the Authorization Request/ 0100 message.

If the fuel product being purchased is not known at the time of authorization and not included in the Authorization Request/0100 message, the fuel product and related detail if available can be optionally provided in the Authorization Advice/0120 message.

If subelement 004 was present in the original Authorization Request/0100 message for an Automated Fuel Dispenser (AFD) transaction, then subelement 004 in the Authorization Advice/0120: acquirer-generated message for the AFD transaction must contain the same values.

## Subfield 001 (Fuel Item Purchased 1)

DE 106, subelement 004, subfield 001 (Fuel Item Purchased 1) contains detail Fleet Fuel Information of the first Fuel Item Purchased.

## Values

| Position                                         | Description                  |
|--------------------------------------------------|------------------------------|
| DE 106 subelement 004, subfield 001, position 16 | Fleet Fuel Unit of Measure 1 |

## Measurement values

| Value | Unit of measure  |
|-------|------------------|
| 1     | Gallons          |
| 2     | Liters           |
| 3     | Pounds           |
| 4     | Kilos            |
| 5     | Imperial gallons |
| 6     | Kilowatt hour    |
| 7     | Minutes          |
| 8     | Hours            |
| Space | Not applicable   |

## Application notes

Fleet Fuel Product Code contains a three-digit code that identifies the fuel item purchased.

Fleet Fuel Unit Price contains the price per unit of the item being purchased and must be right-justified with three positions to the right of the decimal.

Fleet Fuel Unit of Measure contains the code indicating the unit of measure for the fuel item purchased.

Fleet Fuel Quantity contains quantity of the fuel item purchased and must be numeric and greater than zero.

Fleet Fuel Quantity Exponent contains the exponent indicating the decimal position of the quantity of the fuel item being purchased. Value must be in the range of 0-5 and is assumed to three positions.

Fleet Fuel Sale Amount contains the sale amount of the fuel item being purchased. Value must be numeric and greater than zero and in the same currency as DE 4 (Amount, Transaction). The currency exponent for this Fleet Fuel Sale Amount is based on the exponent associated with the DE 49 (Currency Code, Transaction) field value.

## Subfield 002 (Fuel Item Purchased 2)

DE 106, subelement 004, subfield 002 (Fuel Item Purchased 2) contains detail Fleet Fuel Information of the first Fuel Item Purchased.

|----------------------------------------------|------------------------------|
| DE 106, subelement 4, subfield 2 Position 16 | Fleet Fuel Unit of Measure 2 |

### Measurement values

| Value | Unit of measure  |
|-------|------------------|
| 1     | Gallons          |
| 2     | Liters           |
| 3     | Pounds           |
| 4     | Kilos            |
| 5     | Imperial gallons |
| 6     | Kilowatt hour    |
| 7     | Minutes          |
| 8     | Hours            |
| Space | Not applicable   |

### Application notes

Fleet Fuel Product Code contains a three-digit code that identifies the fuel item purchased.

Fleet Fuel Unit Price contains the price per unit of the item being purchased and must be right-justified with three positions to the right of the decimal.

Fleet Fuel Unit of Measure contains the code indicating the unit of measure for the fuel item purchased.

Fleet Fuel Quantity contains quantity of the fuel item purchased and must be numeric and greater than zero.

Fleet Fuel Quantity Exponent contains the exponent indicating the decimal position of the quantity of the fuel item being purchased. Value must be in the range of 0-5 and is assumed to three positions.

Fleet Fuel Sale Amount contains the sale amount of the fuel item being purchased. Value must be numeric and greater than zero and in the same currency as DE 4 (Amount, Transaction). The currency exponent for this Fleet Fuel Sale Amount is based on the exponent associated with the DE 49 (Currency Code, Transaction) field value.

## Subfield 003 (Fuel Item Purchased 3)

DE 106, subelement 004, subfield 003 (Fuel Item Purchased 3) contains detail Fleet Fuel Information of the first Fuel Item Purchased.

### Values

| Position                                          | Description                  |
|---------------------------------------------------|------------------------------|
| DE 106, subelement 004, subfield 003, position 16 | Fleet Fuel Unit of Measure 3 |

### Measurement values

| Value | Unit of measure  |
|-------|------------------|
| 1     | Gallons          |
| 2     | Liters           |
| 3     | Pounds           |
| 4     | Kilos            |
| 5     | Imperial gallons |
| 6     | Kilowatt hour    |
| 7     | Minutes          |
| 8     | Hours            |
| Space | Not applicable   |

### Application notes

Fleet Fuel Product Code contains a three-digit code that identifies the fuel item purchased.

Fleet Fuel Unit Price contains the price per unit of the item being purchased and must be right-justified with three positions to the right of the decimal.

Fleet Fuel Unit of Measure contains the code indicating the unit of measure for the fuel item purchased.

Fleet Fuel Quantity contains quantity of the fuel item purchased and must be numeric and greater than zero.

Fleet Fuel Quantity Exponent contains the exponent indicating the decimal position of the quantity of the fuel item being purchased. Value must be in the range of 0-5 and is assumed to three positions.

Fleet Fuel Sale Amount contains the sale amount of the fuel item being purchased. Value must be numeric and greater than zero and in the same currency as DE 4 (Amount, Transaction). The currency exponent for this Fleet Fuel Sale Amount is based on the exponent associated with the DE 49 (Currency Code, Transaction) field value.

## Subelement 005 (Fleet Non-Fuel Information)

DE 106, subelement 005 (Fleet Non-Fuel Information) contains item level detail information of the non-fuel product(s) purchased at the POS.

### Attributes

| Attribute              | Description                   |
|------------------------|-------------------------------|
| Subelement ID          | 005                           |
| Subelement Data Length | 3 positions                   |
| Data Representation    | ans...552; LLLVAR             |
| Data Field             | Contents of subfields 001-012 |
| Subfields              | 12                            |
| Justification          | See subfields                 |

### Usage

Usage shows whether the field is mandatory, conditional, optional, or system-provided in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | O   | P   | C   |

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Advice/0120: acquirer-generated | O   | P   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |

### Application notes

DE 106, subelement 005 allows the acquirer to provide issuers with detail information on up to 12 non-fuel products purchased.

If subelement 005 was present in the original Authorization Request/0100 message for an Automated Fuel Dispenser (AFD) transaction then subelement 005 in the Authorization Advice/0120: acquirer-generated message for the AFD transaction must contain the same values.

### Subfield 001 (Non-Fuel Item Purchased 1)

DE 106, subelement 005, subfield 001 (Non-Fuel Item Purchased 1) contains item level detail information of the non-fuel product(s) purchased.

| DE 106 subelement 005, subfield 001, positions 17-28 | Fleet Item Unit of Measure 1 |

### Fleet Item Unit of Measure codes

Refer to [Fleet Item Unit of Measure](#) for a list of the Fleet Item Unit of Measure codes and definitions.

### Conexus Payment System product codes

Refer to [Conexus Payment System product codes](#) for a list of product code values is based on the Conexus Payment System product codes.

### Application notes

If the non-fuel product being purchased is not known at the time of authorization and not included in the Authorization Request/0100 message, the non-fuel product and related detail if available can be optionally provided in the Authorization Advice/0120 message.

Fleet Product Code contains the non-fuel related product code of the individual item purchased.

Fleet Item Quantity contains quantity of the non-fuel item(s) purchased and must be numeric and greater than zero.

Fleet Item Quantity Exponent contains the exponents indicating the decimal position of the quantity of the non-fuel item(s) being purchased. Value must be in the range of 0-5.

Fleet Item Unit of Measure contains the code indicating the unit of measure for the non-fuel item purchased.

Fleet Extended Item Amount contains the individual item amount that is normally calculated as price multiplied by quantity. Must contain the amount in the same currency as the Amount, Transaction and be numeric and greater than zero, unless there is zero cost to the customer.

## Subfield 002 (Non-Fuel Item Purchased 2)

DE 106, subelement 005, subfield 002 (Non-Fuel Item Purchased 2) contains item level detail information of the non-fuel product(s) purchased.

### Values

| Position                                             | Description                  |
|------------------------------------------------------|------------------------------|
| DE 106 subelement 005, subfield 002, positions 1-3   | Fleet Product Code 2         |
| DE 106 subelement 005, subfield 002, positions 17-28 | Fleet Item Unit of Measure 2 |

### Fleet Item Unit of Measure codes

Refer to [Fleet Item Unit of Measure](#) for a list of the Fleet Item Unit of Measure codes and definitions.

### Conexus Payment System product codes

Refer to [Conexus Payment System product codes](#) for a list of product code values is based on the Conexus Payment System product codes.

### Application notes

If the non-fuel product being purchased is not known at the time of authorization and not included in the Authorization Request/0100 message, the non-fuel product and related detail if available can be optionally provided in the Authorization Advice/0120 message.

Fleet Product Code contains the non-fuel related product code of the individual item purchased.

Fleet Item Quantity contains quantity of the non-fuel item(s) purchased and must be numeric and greater than zero.

Fleet Item Quantity Exponent contains the exponents indicating the decimal position of the quantity of the non-fuel item(s) being purchased. Value must be in the range of 0-5.

Fleet Item Unit of Measure contains the code indicating the unit of measure for the non-fuel item purchased.

Fleet Extended Item Amount contains the individual item amount that is normally calculated as price multiplied by quantity. Must contain the amount in the same currency as the Amount, Transaction and be numeric and greater than zero, unless there is zero cost to the customer.

### Subfield 003 (Non-Fuel Item Purchased 3)

DE 106, subelement 005, subfield 003 (Non-Fuel Item Purchased 3) contains item level detail information of the non-fuel product(s) purchased.

### Fleet Item Unit of Measure codes

Refer to [Fleet Item Unit of Measure](#) for a list of the Fleet Item Unit of Measure codes and definitions.

### Conexus Payment System product codes

Refer to [Conexus Payment System product codes](#) for a list of product code values is based on the Conexus Payment System product codes.

### Application notes

If the non-fuel product being purchased is not known at the time of authorization and not included in the Authorization Request/0100 message, the non-fuel product and related detail if available can be optionally provided in the Authorization Advice/0120 message.

Fleet Product Code contains the non-fuel related product code of the individual item purchased.

Fleet Item Quantity contains quantity of the non-fuel item(s) purchased and must be numeric and greater than zero.

Fleet Item Quantity Exponent contains the exponents indicating the decimal position of the quantity of the non-fuel item(s) being purchased. Value must be in the range of 0-5.

Fleet Item Unit of Measure contains the code indicating the unit of measure for the non-fuel item purchased.

Fleet Extended Item Amount contains the individual item amount that is normally calculated as price multiplied by quantity. Must contain the amount in the same currency as the Amount, Transaction and be numeric and greater than zero, unless there is zero cost to the customer.

## Subfield 005 (Non-Fuel Item Purchased 5)

DE 106, subelement 005, subfield 005 (Non-Fuel Item Purchased 5) contains item level detail information of the non-fuel product(s) purchased.

### Values

| Position                                             | Description                  |
|------------------------------------------------------|------------------------------|
| DE 106 subelement 005, subfield 005, positions 1-3   | Fleet Product Code 5         |
| DE 106 subelement 005, subfield 005, positions 17-28 | Fleet Item Unit of Measure 5 |

### Fleet Item Unit of Measure codes

Refer to [Fleet Item Unit of Measure](#) for a list of the Fleet Item Unit of Measure codes and definitions.

## Conexus Payment System product codes

Refer to [Conexus Payment System product codes](#) for a list of product code values is based on the Conexus Payment System product codes.

### Application notes

If the non-fuel product being purchased is not known at the time of authorization and not included in the Authorization Request/0100 message, the non-fuel product and related detail if available can be optionally provided in the Authorization Advice/0120 message.

Fleet Product Code contains the non-fuel related product code of the individual item purchased.

Fleet Item Quantity contains quantity of the non-fuel item(s) purchased and must be numeric and greater than zero.

Fleet Item Quantity Exponent contains the exponents indicating the decimal position of the quantity of the non-fuel item(s) being purchased. Value must be in the range of 0-5.

Fleet Item Unit of Measure contains the code indicating the unit of measure for the non-fuel item purchased.

Fleet Extended Item Amount contains the individual item amount that is normally calculated as price multiplied by quantity. Must contain the amount in the same currency as the Amount, Transaction and be numeric and greater than zero, unless there is zero cost to the customer.

## Subfield 006 (Non-Fuel Item Purchased 6)

DE 106, subelement 005, subfield 006 (Non-Fuel Item Purchased 6) contains item level detail information of the non-fuel product(s) purchased.

## Values

| Position                                             | Description                  |
|------------------------------------------------------|------------------------------|
| DE 106 subelement 005, subfield 009, positions 1-3   | Fleet Product Code 9         |
| DE 106 subelement 005, subfield 009, positions 17-28 | Fleet Item Unit of Measure 9 |

### Fleet Item Unit of Measure codes

Refer to [Fleet Item Unit of Measure](#) for a list of the Fleet Item Unit of Measure codes and definitions.

### Conexus Payment System product codes

Refer to [Conexus Payment System product codes](#) for a list of product code values is based on the Conexus Payment System product codes.

### Application notes

If the non-fuel product being purchased is not known at the time of authorization and not included in the Authorization Request/0100 message, the non-fuel product and related detail if available can be optionally provided in the Authorization Advice/0120 message.

Fleet Product Code contains the non-fuel related product code of the individual item purchased.

Fleet Item Quantity contains quantity of the non-fuel item(s) purchased and must be numeric and greater than zero.

Fleet Item Quantity Exponent contains the exponents indicating the decimal position of the quantity of the non-fuel item(s) being purchased. Value must be in the range of 0-5.

Fleet Item Unit of Measure contains the code indicating the unit of measure for the non-fuel item purchased.

Fleet Extended Item Amount contains the individual item amount that is normally calculated as price multiplied by quantity. Must contain the amount in the same currency as the Amount, Transaction and be numeric and greater than zero, unless there is zero cost to the customer.

## Subfield 010 (Non-Fuel Item Purchased 10)

DE 106, subelement 005, subfield 010 (Non-Fuel Item Purchased 10) contains item level detail information of the non-fuel product(s) purchased.

### Fleet Item Unit of Measure codes

Refer to [Fleet Item Unit of Measure](#) for a list of the Fleet Item Unit of Measure codes and definitions.

### Conexus Payment System product codes

Refer to [Conexus Payment System product codes](#) for a list of product code values is based on the Conexus Payment System product codes.

### Application notes

If the non-fuel product being purchased is not known at the time of authorization and not included in the Authorization Request/0100 message, the non-fuel product and related detail if available can be optionally provided in the Authorization Advice/0120 message.

Fleet Product Code contains the non-fuel related product code of the individual item purchased.

Fleet Item Quantity contains quantity of the non-fuel item(s) purchased and must be numeric and greater than zero.

Fleet Item Quantity Exponent contains the exponents indicating the decimal position of the quantity of the non-fuel item(s) being purchased. Value must be in the range of 0-5.

Fleet Item Unit of Measure contains the code indicating the unit of measure for the non-fuel item purchased.

Fleet Extended Item Amount contains the individual item amount that is normally calculated as price multiplied by quantity. Must contain the amount in the same currency as the Amount, Transaction and be numeric and greater than zero, unless there is zero cost to the customer.

### Fleet Item Unit of Measure

Fleet Item Unit of Measure must contain a valid code followed by spaces as defined in the Fleet Item Unit of Measure table.

### Fleet Item Unit of Measure details

| Measure Code | Name | Definition                                  |
|--------------|------|---------------------------------------------|
| ACRE         | Acre | Unit of measure equal to 4840 square yards. |
| ARES         | Are  | Unit of measure equal to 100 square meters. |

| Measure Code | Name             | Definition                                                                         |
|--------------|------------------|------------------------------------------------------------------------------------|
| CELI         | Centiliter       | Unit of volume that is equal to one hundredth of a liter.                          |
| CMET         | Centimeter       | Unit of measure that is equal to one hundredth of a meter.                         |
| EACH         | Each             | One of two or more distinct items.                                                 |
| FOOT         | Foot             | Unit of length equal to 1/3 yard.                                                  |
| GBGA         | GBGallon         | Unit of volume that is equal to 8 pints.                                           |
| GBOU         | GBOunce          | Unit of weight equal to one sixteenth of a pound.                                  |
| GBPI         | GBPint           | Unit of volume that is equal to 568 cubic centimeters.                             |
| GBQA         | GBQuart          | Unit of volume that is equal to 2 pints.                                           |
| GRAM         | Gram             | Unit of measure that is equal to one 1,000th of a kilo.                            |
| HECT         | Hectare          | Unit of measure that is equal to 10,000 square meters.                             |
| INCH         | Inch             | Measure of length equal to 2.54 cm.                                                |
| KILO         | Kilogram         | Basic unit of mass in the International System of Units (SI) equal to 1000 grams.  |
| KMET         | Kilometer        | Unit of measure that is equal to 1000 meters.                                      |
| LITR         | Liter            | Unit of volume that is equal to one thousand cubic centimeters.                    |
| METR         | Meter            | Unit of length in the metric system equal to 39.37 inches.                         |
| MILE         | Mile             | Unit of length equal to 1760 yards.                                                |
| MILI         | MilliLiter       | Unit of volume that is equal to one thousandth of a liter.                         |
| MMET         | Millimeter       | Unit of measure that is equal to one thousandth of one meter.                      |
| PIEC         | Piece            | Standard length of cloth, wallpaper, as an item for sale or amount of a substance. |
| PUND         | Pound            | Unit of weight equal to 0.454 kilograms.                                           |
| SCMT         | SquareCentimeter | Measure of a surface one centimeter by one centimeter.                             |
| SMET         | SquareMeter      | Measure of a surface one meter by one meter.                                       |

| Measure Code | Name             | Definition                                             |
|--------------|------------------|--------------------------------------------------------|
| SMIL         | SquareMillimeter | Measure of a surface one millimeter by one millimeter. |
| SQFO         | SquareFoot       | Measure of a surface one foot by one foot.             |
| SQIN         | SquareInch       | Measure of a surface one inch by one inch.             |
| SQKI         | SquareKilometer  | Measure of a surface one kilometer by one kilometer.   |
| SQMI         | SquareMile       | Measure of a surface one mile by one mile.             |
| SQYA         | SquareYard       | Measure of a surface one yard by one yard.             |
| TONS         | Ton              | Measure of weight, in Britain 2000lb (short ton).      |
| USGA         | USGallon         | Unit of volume that is equal to 8 pints.               |
| USOU         | USOunce          | Unit of weight equal to one sixteenth of a pound.      |
| USPI         | USPint           | Unit of volume that is equal to 473 cubic centimeters. |
| USQA         | USQuart          | Unit of volume that is equal to 2 pints.               |
| YARD         | Yard             | Unit of length equal to 3 feet or 0.9144 meter.        |

## Conexus Payment System product codes

The following list of product code values is based on the Conexus Payment System product codes version 4.1.

### Product codes

| Non-fuel product code | Description                    |
|-----------------------|--------------------------------|
| 100                   | General Automotive Merchandise |
| 101                   | Motor Oil                      |
| 102                   | Car Wash                       |
| 103                   | Oil Change                     |
| 104                   | Oil Filter                     |
| 105                   | Work Order                     |
| 106                   | Anti-Freeze                    |
| 107                   | Washer Fluid                   |
| 108                   | Brake Fluid                    |

| Non-fuel product code | Description                                 |
|-----------------------|---------------------------------------------|
| 109                   | Tires                                       |
| 110                   | Federal Excise Tax (Tires)                  |
| 111                   | Tire Rotation                               |
| 112                   | Batteries                                   |
| 113                   | Lube                                        |
| 114                   | Inspection                                  |
| 115                   | Labor                                       |
| 116                   | Towing                                      |
| 117                   | Road Service                                |
| 118                   | Vehicle Accessories                         |
| 119                   | Vehicle Parts                               |
| 120                   | Preventative Maintenance                    |
| 121                   | Air Conditioning Service                    |
| 122                   | Engine Service                              |
| 123                   | Transmission Service                        |
| 124                   | Brake Service                               |

## DE 107 (Reserved for Mastercard Use)

DE 107 (Reserved for Mastercard Use) is reserved for Mastercard use.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 108 (Additional Transaction Reference Data)

DE 108 (Additional Transaction Reference Data) provides the capability for the acquirers to send sender, receiver, and transaction level data to the issuer in Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, Gaming and Gambling Payments Transactions), Mastercard Merchant Presented QR Transactions, and Visa Account Funding Transactions.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | ans...999; LLLVAR       |
| Data Length         | 3 positions             |
| Data Field          | Contents of subelements |
| Subelements         | 11                      |
| Justification       | See "Subelements"       |

## Usage: Mastercard Send Transactions

Whether the usage is mandatory, conditional, optional, system-provided, or not required is as noted for each applicable message.

**NOTE: Refer to the *Mastercard Send and Funding Transactions Program Standards* for the full list of mandatory subelements in DE 108.**

### Application notes For Mastercard Send Transactions

For Mastercard Send Payment Transactions and Gaming and Gambling Payments Transactions, acquirers that process transactions must send and receive DE 108 (Additional Transaction Reference Data). Issuers must receive and return DE 108 (Additional Transaction Reference Data) for all Mastercard Send Payment Transactions and Gaming and Gambling Payments Transactions.

For Funding Transactions, acquirers that process transactions must send and be prepared to receive if sending DE 108 (Additional Transaction Reference Data) for all Funding Transactions. Issuers must receive and return DE 108 (Additional Transaction Reference Data) when submitted by the acquirer on Funding Transactions.

Mastercard Send Transactions, with the exception Mastercard Merchant Presented QR transactions, will not contain the following DE 108 subelements and subfields:

- Subelement 05 (Digital Account Information), subfield 01 (Digital Account Reference Number)
- Subelement 05, subfield 02 (Mastercard Merchant Presented QR Receiving Account Number)
- Subelement 06 (QR Dynamic Code Data)

### **Application notes For Mastercard Merchant Presented QR Transactions**

For Mastercard Merchant Presented QR Funding Transactions, acquirers that process transactions must send DE 108 (Additional Transaction Reference Data). Issuers must receive DE 108 (Additional Transaction Reference Data) for all Mastercard Merchant Presented QR Funding Transactions.

Mastercard Merchant Presented QR Payment Transactions may contain the following DE 108 subelements and subfields.

- Subelement 02 (Sender Data), subfield 11 (Sender Account Number)
- Subelement 03 (Transaction Reference Data), subfield 01 (Unique Transaction Reference Number)
- Subelement 03, subfield 02 (Additional Message) (Payment Transactions only)
- Subelement 03, subfield 03 (Funding Source)
- Subelement 05 (Digital Account Information), subfield 01 (Digital Account Reference Number)
- Subelement 05, subfield 02 (Mastercard Merchant Presented QR Receiving Account Number)
- Subelement 06 (QR Dynamic Code Data)

Mastercard Merchant Presented QR Payment Transactions will not return DE 108 to the acquirer in any response message.

Customers should be aware that QR data for Mastercard Merchant Presented QR Payment Transactions, may be received in either DE 108 subelement 03, subfield 02 or DE 108, subelement 06. Subelement 06 is considered the primary location and should be considered first as the location for QR Data.

### **Application notes For Mastercard Send and Funding Transactions**

Mastercard Send Payment and Funding Transactions will not contain the following DE 108 subelements and subfields:

- Subelement 05 (Digital Account Information), subfield 01 (Digital Account Reference Number)
- Subelement 05, subfield 02 (Mastercard Merchant Presented QR Receiving Account Number)
- Subelement 06 (QR Dynamic Code Data)

### **Application notes for Account Status Inquiry Transactions related to Mastercard Send and Funding Transactions**

For Account Status Inquiry Transactions, acquirers may send and be prepared to receive DE 108 (Additional Transaction Reference Data). Issuers must be prepared to receive and return DE 108 (Additional Transaction Reference Data) with Account Status Inquiry Transactions.

Acquirers that are requesting verification of receiver/recipient or sender data will send DE 108 (Additional Transaction Reference Data) with subelements:

- Subelement 01 (Receiver/Recipient Data) or Subelement 02 (Sender Data)
- Subelement 07 (Data Verification Request)

Issuers must receive DE 108 (Additional Transaction Reference Data) with subelements:

- Subelement 01 (Receiver/Recipient Data) or Subelement 02 (Sender Data)
- Subelement 07 (Data Verification Request)

Issuers must return DE 108 (Additional Transaction Reference Data) with subelement 08 (Data Verification Response).

**Application notes for Non-Financial Authorization Transactions**

Acquirers and originators requesting validation of account owner information (Name Validation Service) will send DE 108 (Additional Transaction Reference Data) with subelements:

- Subelement 01 (Receiver/Recipient Data) or subelement 02 (Sender Data)
- Subelement 07 (Data Validation Request)

Issuers must respond with DE 108 (Additional Transaction Reference Data) with subelements:

- Subelement 08 (Data Validation Response)

Or, when an issuer participates in the on-behalf Name Match Service the response will include subelements:

- Subelement 09 (Account Information 1)
- Subelement 10 (Account Information 2)
- Subelement 11 (Account Information 3)

Issuers must be enabled for the on-behalf Name Match Service to be able to return DE 108 (Additional Transaction Reference Data) with Subelement 09 (Account Information 1), subelement 10 (Account Information 2), and subelement 11 (Account Information 3).

**DE 108 encoding scheme**

Mastercard organizes DE 108 into a group of encoded subelements and subfields. The following tables illustrate the structure of DE 108 subelements.

**Structure of DE 108 subelements**

| LLL          | VAR (maximum length varies) |                   |                                 |                        |                   |                                 |
|--------------|-----------------------------|-------------------|---------------------------------|------------------------|-------------------|---------------------------------|
| 3 bytes      | 2 bytes                     | 3 bytes           | Variable length                 | 2 bytes                | 3 bytes           | Variable length                 |
| Total length | First subelement data       |                   |                                 | Second subelement data |                   |                                 |
|              | Subelement ID               | Subelement length | Subelement variable length data | Subelement ID          | Subelement length | Subelement variable length data |

### Attributes of DE 108 subelements

| Number of bytes | Attribute                       | Value                                 |
|-----------------|---------------------------------|---------------------------------------|
| 3               | Total data element length       | The "LLL" portion of the data element |
| 2               | Subelement ID                   | In the range 01-99                    |
| 3               | Subelement length               | Variable                              |
| 1...nnn         | Subelement variable length data | Contents of subfields                 |

## DE 108 subelement encoding scheme

The following tables illustrate the structure of DE 108 subfields within a subelement.

### Structure of DE 108 subfields within a subelement

| Subelement VAR (maximum length varies) |                 |                               |                      |                 |                               |
|----------------------------------------|-----------------|-------------------------------|----------------------|-----------------|-------------------------------|
| 2 bytes                                | 2 bytes         | Variable length               | 2 bytes              | 2 bytes         | Variable length               |
| First subfield data                    |                 |                               | Second subfield data |                 |                               |
| Subfield ID                            | Subfield length | Subfield variable length data | Subfield ID          | Subfield length | Subfield variable length data |

### Attributes of DE 108 subfields within a subelement

| Number of bytes | Attribute                     | Value                 |
|-----------------|-------------------------------|-----------------------|
| 2               | Subfield ID                   | In the range 01-99    |
| 2               | Subfield length               | Variable              |
| 1...nn          | Subfield variable length data | Contents of subfields |

## DE 108 Dual Message Authorization System edits

The Dual Message Authorization System will perform the following system edit to verify proper formatting of DE 108.

### Associated edits

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| an Authorization Request/0100, Authorization Advice/0120: acquirer-generated, or Reversal Request/0400 message contains DE 108 (Additional Transaction Reference Data) with subelements that have incorrect length and/or incorrect format (Data Representations), or a subelement ID appears more than once within the same data element | forwards the acquirer an Authorization Request Response/0110, Authorization Advice Response/0130, or Reversal Request Response/0410 message where DE 44 is 6 positions for subelement format errors: <ul style="list-style-type: none"><li>• DE 39 (Response Code) = 30 (Message format error)</li><li>• DE 44 (Additional Response Data) = 1080nn (where nn is the subelement number)</li></ul> |

### Examples

- When an edit error occurs on DE 108, the DE 44 data will be populated as these examples below:
  - Error on DE 108 subelement 2, subfield 1: 108002 (no subfield information is provided)

For non-DE 108 format errors, DE 44 will only have DE info and no subelement information. For example, the format error in DE 22 will have DE 44 as 022.

## Subelement 01 (Receiver/Recipient Data)

DE 108 (Additional Transaction Reference Data), subelement 01 (Receiver/Recipient Data) contains the receiver or recipient name, address, phone number, date of birth, and account details.

**Subfield 01 (Receiver/Recipient First Name)**

DE 108, subelement 01, subfield 01 (Receiver/Recipient First Name) contains the Receiver/Recipient first name.

**Attributes**

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...35; LLVAR         |
| Data Field           | Contents of subfield 01 |
| Justification        | N/A                     |

## Values

If present, cannot contain all spaces or all numeric values.

## Application notes

Subfield 01 must be present for cross-border Mastercard Send Payment Transactions and Gaming and Gambling Payments Transactions, and must be properly formatted.

Subfield 01 is optional for domestic Mastercard Send Payment Transactions, Gaming and Gambling Payments Transactions, and Funding transactions. Mastercard network doesn't enforce system edits on this field and it is optional. However per program rules noted in the [Mastercard Send and Funding Transactions Program Standards](#) guide, it's a required field for domestic and cross-border Funding Transactions and must be provided. Not providing required data in this field may result in compliance assessments.

The first name (Consumer/Business) of the recipient/receiver is included in this subelement.

The table that follows describes the correct submission of business names.

## Application notes: Mastercard Merchant Presented QR transactions

Subfield 01 is optional for Mastercard Merchant Presented QR Payment Transactions. It is not edited and will be forward to destination.

Subfield 01 is not applicable for Mastercard Merchant Presented QR Refund Payment or Funding Transactions.

## Name example

| Business name     | First name        | Last name         |
|-------------------|-------------------|-------------------|
| XYZ               | XYZ               | XYZ               |
| XYZ International | XYZ International | XYZ International |
| XYZ DBA MA        | XYZ DBA MA        | XYZ DBA MA        |

## Subfield 02 (Receiver/Recipient Middle Name)

DE 108, subelement 01, subfield 02 (Receiver/Recipient Middle Name) contains the middle name of the Recipient/Receiver.

## Attributes

| Attribute   | Description |
|-------------|-------------|
| Subfield ID | 02          |

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield Data Length | 2 positions             |
| Data Representation  | ans-1                   |
| Data Field           | Contents of subfield 02 |
| Justification        | N/A                     |

### Values

Valid value will consist of the middle name initial of the Receiver.

### Application notes

Subfield 02 is optional for Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions) according to the published standards. Refer to the *Mastercard Send and Funding Transactions Program Standards* for the full listing of required fields and subelements.

## Subfield 03 (Receiver/Recipient Last Name)

DE 108, subelement 01, subfield 03 (Receiver/Recipient Last Name) contains the last name of the Recipient/Receiver.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 03                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...35; LLVAR         |
| Data Field           | Contents of subfield 03 |
| Justification        | N/A                     |

### Values

If present cannot contain all spaces or all numeric values.

### Application notes

**NOTE:** Refer to *Mastercard Send and Funding Transactions Program Standards* for the full listing of required fields and subelements for both funding and payment transactions.

Subfield 03 must be present for cross-border Mastercard Send Payment Transactions and Gaming and Gambling Payments Transactions, and must be properly formatted.

Subfield 01 is optional for domestic Mastercard Send Payment Transactions, Gaming and Gambling Payments Transactions, and Funding transactions. Mastercard network doesn't enforce system edits on this field and it is optional. However per program rules noted in the *Mastercard Send and Funding Transactions Program Standards* guide its a required field for domestic and cross-border Funding Transactions and must be provided. Not providing required data in this field may result in compliance assessments.

The last name (Consumer/Business) of the recipient/receiver is included in this subelement.

The table that follows describes the correct submission of business names.

#### Application notes: Mastercard Merchant Presented QR transactions

Subfield 03 is optional for Mastercard Merchant Presented QR Payment Transactions. It is not edited and will be forwarded to the destination.

Subfield 03 is not applicable for Mastercard Merchant Presented QR Refund Payment or Funding Transactions.

#### Name example

| Business name     | First name        | Last name         |
|-------------------|-------------------|-------------------|
| XYZ               | XYZ               | XYZ               |
| XYZ International | XYZ International | XYZ International |
| XYZ DBA MA        | XYZ DBA MA        | XYZ DBA MA        |

### Subfield 04 (Receiver/Recipient Street Address)

DE 108, subelement 01, subfield 04 (Receiver/Recipient Street Address) contains the Street Address of the Recipient/Receiver.

#### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Subfield ID         | 04                      |
| Subfield length     | 2                       |
| Data representation | ans...50; LLVAR         |
| Data field          | Contents of subfield 04 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

Valid value will consist of the street address of the Receiver.

### Application notes

Subfield 04 is optional for Mastercard Send Transactions (MoneySend Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 04 (Receiver/Recipient Street Address Line 1 [Visa Only])

DE 108, subelement 01, subfield 04 (Receiver/Recipient Street Address Line 1 [Visa Only]) contains the street address of the receiver or recipient.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 04                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...99; LLVAR         |
| Data Field           | Contents of subfield 04 |
| Justification        | N/A                     |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

### Application notes

Subfield 04 (Receiver/Recipient Street Address Line 1 [Visa Only]) is only for use with Visa-branded transactions.

## Subfield 05 (Receiver/Recipient City)

DE 108, subelement 01, subfield 05 (Receiver/Recipient City) contains the city of the Receiver/Recipient.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 05                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...25; LLVAR         |
| Data Field           | Contents of subfield 05 |
| Justification        | N/A                     |

### Values

Valid location city name of the Receiver/Recipient.

### Application notes

Subfield 05 is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

### Application notes: Mastercard Merchant Presented QR transactions

Subfield 05 is optional for Mastercard Merchant Presented QR Payment Transactions. It is not edited and will be forwarded to the destination.

Subfield 05 is not applicable for Mastercard Merchant Presented QR Refund Payment or Funding Transactions.

## Subfield 06 (Receiver/Recipient State/Province Code)

DE 108, subelement 01, subfield 06 (Receiver/Recipient State/Province Code) contains the state/province code of the Recipient/Receiver.

### Attributes

| Attribute            | Description    |
|----------------------|----------------|
| Subfield ID          | 06             |
| Subfield Data Length | 2 positions    |
| Data Representation  | ans...3; LLVAR |

| Attribute     | Description             |
|---------------|-------------------------|
| Data Field    | Contents of subfield 06 |
| Justification | N/A                     |

### Values

Valid location state code of the Receiver/Recipient.

### Application notes

Subfield is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions). If submitted it cannot contain spaces or invalid codes when country is U.S. or Canada.

**NOTE: Data representation must be alpha (a-3) for Mastercard Send Transactions. For US and Canada, Data representation must be (a-2) for State/Province. Refer to the *Quick Reference Booklet* for valid list of State/Province codes.**

## Subfield 07 (Receiver/Recipient Country)

DE 108, subelement 01, subfield 07 (Receiver/Recipient Country) contains the country of the Recipient/Receiver.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 07                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | a-3                     |
| Data Field           | Contents of subfield 07 |
| Justification        | N/A                     |

### Values

Receiver/Recipient Country must contain a valid three-character alphabetic code and must not be part of a blocked country list. Refer to the *Quick Reference Booklet* for valid list of country codes.

### Application notes

Subfield 07 is optional for Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions).

Transaction will be declined if the sender country is subject to comprehensive geographic sanctions published by the Office of Foreign Assets Control (OFAC), <https://ofac.treasury.gov/sanctions-programs-and-country-information>. The current list of countries subject to such sanctions is subject to change.

## Subfield 08 (Receiver/Recipient Postal Code)

DE 108, subelement 01, subfield 08 (Receiver/Recipient Postal Code) contains the postal code of the Recipient/Receiver.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Subfield ID         | 08                      |
| Subfield length     | 2                       |
| Data representation | ans...10; LLVAR         |
| Data field          | Contents of subfield 08 |
| Justification       | N/A                     |

### Values

Valid location Postal Code of the Recipient's/Receiver.

### Application notes

Subfield 08 is optional for Mastercard Send Transactions (Funding Transactions, MoneySend Payment Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 08 (Receiver/Recipient Postal Code [Visa Only])

DE 108, subelement 01, subfield 08 (Receiver/Recipient Postal Code [Visa Only]) contains the postal code of the receiver or recipient.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 08                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...16; LLVAR         |
| Data Field           | Contents of subfield 08 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

### Application notes

Subfield 08 (Receiver/Recipient Postal Code [Visa Only]) is only for use with Visa-branded transactions.

## Subfield 09 (Receiver/Recipient Phone Number)

DE 108, subelement 01, subfield 09 (Receiver/Recipient Phone Number) contains the phone number of the Recipient/Receiver.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 09                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...20; LLVAR         |
| Data Field           | Contents of subfield 09 |
| Justification        | N/A                     |

### Values

Valid phone number of the Recipient/Receiver.

### Application notes

Subfield 09 is optional for Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions).

### Application notes: Mastercard Merchant Presented QR transactions

Subfield 09 is optional for Mastercard Merchant Presented QR Payment Transactions. It is not edited and will be forwarded to the destination.

Subfield 09 is not applicable for Mastercard Merchant Presented QR Refund Payment or Funding Transactions.

## Subfield 10 (Receiver/Recipient Date of Birth)

DE 108, subelement 01, subfield 10 (Receiver/Recipient Date of Birth) contains the date of birth of the Receiver/Recipient.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 10                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-8                     |
| Data Field           | Contents of subfield 10 |
| Justification        | N/A                     |

### Values

Valid date of birth of the Receiver/Recipient in the format MMDDYYYY.

### Application notes

Subfield 10 is optional for Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions).

#### Application notes: Mastercard Merchant Presented QR transactions

Subfield 10 is optional for Mastercard Merchant Presented QR Payment Transactions. It is not edited and will be forwarded to the destination.

Subfield 10 is not applicable for Mastercard Merchant Presented QR Refund Payment or Funding Transactions.

## Subfield 11 (Receiver/Recipient Account Number)

DE 108, subelement 01, subfield 11 (Receiver/Recipient Account Number) contains the account number of the Recipient/Receiver.

### Attributes

| Attribute            | Description     |
|----------------------|-----------------|
| Subfield ID          | 11              |
| Subfield Data Length | 2 positions     |
| Data Representation  | ans...50; LLVAR |

| Attribute     | Description             |
|---------------|-------------------------|
| Data Field    | Contents of subfield 11 |
| Justification | N/A                     |

### Values

Valid Account Number of the Receiver/Recipient.

### Application notes

Subfield 11 (Receiver/Recipient Account Number) has a maximum length of 34 characters on Visa-branded transactions.

Subfield 11 is optional for Mastercard Send Transactions (MoneySend Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

Mastercard Network does not enforce system edits on this field and hence is optional per specifications. However per program rules noted in the *Mastercard MoneySend and Funding Transactions Program Standards* guide, it is a required field for domestic and cross-border Funding Transactions and must be provided. Not providing required data in this field as per standards may result in compliance assessments.

### Application notes: Mastercard Merchant Presented QR transactions

Subfield 11 is mandatory for Mastercard Merchant Presented QR Payment Transactions. It is not edited and will be forwarded to the destination. If Mastercard Merchant Presented QR transactions are processed with data in DE 108, subelement 01, subfield 11 (Receiver/Recipient Account Number) exceeding the current supported length, Mastercard Merchant Presented QR edits will decline the transaction.

Subfield 11 is not applicable for Mastercard Merchant Presented QR Refund Payment or Funding Transactions.

## Subfield 12 (Receiver/Recipient Identification Type)

DE 108, subelement 01, subfield 12 (Receiver/Recipient Identification Type) contains the identification type of the Recipient/Receiver.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 12          |
| Subfield Data Length | 2 positions |
| Data Representation  | n-2         |

| Attribute     | Description             |
|---------------|-------------------------|
| Data Field    | Contents of subfield 12 |
| Justification | N/A                     |

## Values

If present on Mastercard Send Payment Transactions, Gaming and Gambling Payments Transactions, Visa-branded funding transactions, it must contain one of the following valid values:

## Values

| Value | Description                                       |
|-------|---------------------------------------------------|
| 00    | Passport                                          |
| 01    | National Identification Card                      |
| 02    | Driver's License                                  |
| 03    | Government Issued                                 |
| 04    | Other                                             |
| 05    | Date of birth (Visa only)                         |
| 06    | Customer identification (unspecified) (Visa only) |
| 07    | Business tax ID (Visa only)                       |
| 08    | Individual tax ID (Visa only)                     |
| 09    | Company registration number (Visa only)           |
| 10    | Proxy identification (Visa only)                  |
| 11    | Social security number (Visa only)                |
| 12    | Alien registration number (Visa only)             |
| 13    | Law enforcement identification (Visa only)        |
| 14    | Military identification (Visa only)               |
| 15    | Travel identification (nonpassport) (Visa only)   |
| 16    | Email (Visa only)                                 |
| 17    | Phone number (Visa only)                          |

### Application notes

Values 03 and 04 have no corresponding values in Visa format. Acquirers should not send either value 03 or 04 with Visa-branded transactions.

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details on Visa only values.

### Subfield 13 (Receiver/Recipient Identification Number)

DE 108, subelement 01, subfield 13 (Receiver/Recipient Identification Number) contains the identification number of the Recipient/Receiver.

#### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Subfield ID         | 13                      |
| Subfield length     | 2                       |
| Data representation | ans...25; LLVAR         |
| Data field          | Contents of subfield 13 |
| Justification       | N/A                     |

#### Values

Valid identification number of the Receiver/Recipient.

### Application notes

Subfield 13 is optional for Mastercard Send Transactions (MoneySend Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

### Subfield 13 (Receiver/Recipient Identification Number [Visa Only])

DE 108, subelement 01, subfield 13 (Receiver/Recipient Identification Number [Visa Only]) contains the identification number of the receiver or recipient.

#### Attributes

| Attribute            | Description     |
|----------------------|-----------------|
| Subfield ID          | 13              |
| Subfield Data Length | 2 positions     |
| Data Representation  | ans...35; LLVAR |

| Attribute     | Description             |
|---------------|-------------------------|
| Data Field    | Contents of subfield 13 |
| Justification | N/A                     |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

### Application notes

Subfield 13 (Receiver/Recipient Identification Number [Visa Only]) is only for use with Visa-branded transactions.

## Subfield 14 (Receiver/Recipient Identification Country Code)

DE 108, subelement 01, subfield 14 (Receiver/Recipient Identification Country Code) contains the identification country code of the recipient or receiver.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 14                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans-3                   |
| Data Field           | Contents of subfield 14 |
| Justification        | N/A                     |

### Values

Valid identification country code of the Receiver/Recipient.

### Application notes

Subfield 14 (Receiver/Recipient Identification Country Code) is optional for Mastercard Send Transactions, Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payment Transactions. The field has a three-character ISO country code in Visa-branded transactions.

## Subfield 15 (Receiver/Recipient Identification Expiration Date)

DE 108, subelement 01, subfield 15 (Receiver/Recipient Identification Expiration Date) contains the identification expiration date of the Receiver/Recipient.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 15                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-8                     |
| Data Field           | Contents of subfield 15 |
| Justification        | N/A                     |

### Values

Valid identification expiration date of the Receiver/Recipient in the format MMDDYYYY.

### Application notes

Subfield 15 is optional for Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 16 (Receiver/Recipient Nationality)

DE 108, subelement 01, subfield 16 (Receiver/Recipient Nationality) contains the nationality of the Recipient/Receiver.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 16                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans-3                   |
| Data Field           | Contents of subfield 16 |
| Justification        | N/A                     |

## Values

Nationality of the Receiver/Recipient as defined by a valid country code for the country of citizenship.

## Application notes

Subfield 16 is optional for Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 17 (Receiver/Recipient Country of Birth)

DE 108, subelement 01, subfield 17 (Receiver/Recipient Country of Birth) contains the country of birth of the Recipient/Receiver.

## Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 17                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans-3                   |
| Data Field           | Contents of subfield 17 |
| Justification        | N/A                     |

## Values

Valid Country of birth of the Receiver/Recipient.

## Application notes

Subfield 17 is optional for Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 18 (Receiver/Recipient Account Number Type)

DE 108, subelement 01, subfield 18 (Receiver/Recipient Account Number Type) contains the account number type of the Receiver/Recipient.

## Attributes

| Attribute   | Description |
|-------------|-------------|
| Subfield ID | 18          |

| Attribute            | Description |
|----------------------|-------------|
| Subfield Data Length | 2 positions |
| Data Representation  | n-2         |
| Justification        | n/a         |

## Values

List of valid values:

- 00: Other
- 01: RTN + Bank Account
- 02: IBAN
- 03: Card Account
- 04: Email
- 05: Phone Number
- 06: Bank account number (BAN) + bank identification code (BIC)
- 07: Wallet ID
- 08: Social Network ID

## Application notes

Acquirers are expected per participation requirements to supply Subfield 18 if the related Subfield 11 is provided. Subfield is expected to be one of the valid values for the field.

Subfield 18 is not required for Mastercard QR Transactions and if submitted will be disregarded and not be forwarded to destination.

Subfield 18 is conditional for Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions).

The Mastercard Network does not enforce system edits on this field. It is therefore conditional per specifications. However, per program rules noted in the *Mastercard Send and Funding Transactions Program Standards*, it is a required field for Funding Transactions and must be provided. Not providing required data in this field as per standards may result in compliance assessments.

## Subfield 19 (Receiver/Recipient Street Address Line 2 [Visa Only])

DE 108, subelement 01, subfield 19 (Receiver/Recipient Street Address Line 2 [Visa Only]) contains the street address line 2 of the receiver or recipient.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 19                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...99; LLVAR         |
| Data Field           | Contents of subfield 19 |
| Justification        | N/A                     |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

### Application notes

Subfield 19 (Receiver/Recipient Street Address Line 2 [Visa Only]) is only for use with Visa-branded transactions.

## Subfield 20 (Receiver/Recipient Street Name [Visa Only])

DE 108, subelement 01, subfield 20 (Receiver/Recipient Street Name [Visa Only]) contains the street name of the receiver or recipient.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 20                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...99; LLVAR         |
| Data Field           | Contents of subfield 20 |
| Justification        | N/A                     |

## Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

## Application notes

Subfield 20 (Receiver/Recipient Street Name [Visa Only]) is only for use with Visa-branded transactions.

## Subfield 21 (Receiver/Recipient Building Number [Visa Only])

DE 108, subelement 01, subfield 21 (Receiver/Recipient Building Number [Visa Only]) contains the building number of the receiver or recipient.

## Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 21                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...16; LLVAR         |
| Data Field           | Contents of subfield 21 |
| Justification        | N/A                     |

## Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

## Application notes

Subfield 21 (Receiver/Recipient Building Number [Visa Only]) is only for use with Visa-branded transactions.

## Subfield 22 (Receiver/Recipient Country Subdivision Code, Minor [Visa Only])

DE 108, subelement 01, subfield 22 (Receiver/Recipient Country Subdivision Code, Minor [Visa Only]) contains the minor country subdivision code of the receiver or recipient.

## Attributes

| Attribute   | Description |
|-------------|-------------|
| Subfield ID | 22          |

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...16; LLVAR         |
| Data Field           | Contents of subfield 22 |
| Justification        | N/A                     |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

### Application notes

Subfield 22 (Receiver/Recipient Country Subdivision Code, Minor [Visa Only]) is only for use with Visa-branded transactions.

## Subelement 02 (Sender Data)

DE 108 (Additional Transaction Reference Data), subelement 02 (Sender Data) contains the sender name, address, phone number, date of birth, and account details.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 02                    |

### Subfield 01 (Sender First Name)

DE 108, subelement 02, subfield 01 (Sender First Name) contains the first name of the Sender.

#### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...35; LLVAR         |
| Data Field           | Contents of subfield 01 |
| Justification        | N/A                     |

Values

If present, cannot contain all spaces or all numeric values.

Application notes

Subfield 01 must be present for Mastercard Send Payment Transactions and Gaming and Gambling Payments Transactions and must be properly formatted. Subfield 01 is optional for Funding Transactions.

The first name (Consumer/Business/Government/Non-Government Organization) of the sender is included in this subelement.

The table that follows describes the correct submission of business names.

Application notes: Mastercard Merchant Presented QR transactions

Subfield 01 is optional for Mastercard Merchant Presented QR Payment Transactions. It is not edited and will be forward to destination.

Subfield 01 is not applicable for Mastercard Merchant Presented QR Refund Payment or Funding Transactions.

Name example

| Business Name     | First Name | Last Name     |
|-------------------|------------|---------------|
| XYZ               | XYZ        | XYZ           |
| XYZ International | XYZ        | International |
| XYZ DBA MA        | XYZ        | DBA MA        |

Subfield 02 (Sender Middle Name)

DE 108, subelement 02, subfield 02 (Sender Middle Name) contains the middle name initial of the Sender.

Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans-1                   |
| Data Field           | Contents of subfield 02 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

Valid value will consist of the middle name initial of the Sender.

### Application notes

Subfield 02 is optional for Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 03 (Sender Last Name)

DE 108, subelement 02, subfield 03 (Sender Last Name) contains the last name of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 03                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...35; LLVAR         |
| Data Field           | Contents of subfield 03 |
| Justification        | N/A                     |

### Values

If present, cannot contain all spaces or numeric values.

### Application notes

Subfield 03 must be present and properly formatted for Mastercard Send Payment Transactions and Gaming and Gambling Payments Transactions. Subfield 03 is optional for Funding Transactions.

The last name (Consumer/Business/Government/Non-Government Organization) of the sender is included in this subelement.

The table that follows describes the correct submission of business names.

### Application notes: Mastercard Merchant Presented QR transactions

Subfield 03 is optional for Mastercard Merchant Presented QR Payment Transactions. It is not edited and will be forwarded to the destination.

Subfield 03 is not applicable for Mastercard Merchant Presented QR Refund Payment or Funding Transactions.

#### Name example

| Business name     | First name | Last name     |
|-------------------|------------|---------------|
| XYZ               | XYZ        | XYZ           |
| XYZ International | XYZ        | International |
| XYZ DBA MA        | XYZ        | DBA MA        |

### Subfield 04 (Sender Street Address)

DE 108, subelement 02, subfield 04 (Sender Street Address) contains the street address of the Sender.

#### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 04                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...50; LLVAR         |
| Data Field           | Contents of subfield 04 |
| Justification        | N/A                     |

#### Values

Valid values will consist of street address of the Sender.

#### Application notes

Subfield 04 is mandatory for Mastercard Send Payment Transactions and Gambling and Gaming Payments Transactions.

Subfield 04 is optional for Funding transactions.

## Subfield 05 (Sender City)

DE 108, subelement 02, subfield 05 (Sender City) contains the city of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 05                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...25; LLVAR         |
| Data Field           | Contents of subfield 05 |
| Justification        | N/A                     |

### Values

Valid location city name of the Sender.

### Application notes

Subfield 05 is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

**NOTE: The Mastercard Network does not enforce system edits on this field. It is therefore optional per specifications. However per program rules noted in the [Mastercard Send and Funding Transactions Program Standards](#), it is a required field for Payment Transactions and must be provided. Not providing required data in this field as per standards may result in compliance assessments**

## Subfield 06 (Sender State/Province Code)

DE 108, subelement 02, subfield 06 (Sender State/Province Code) contains the state/province code of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 06                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...3; LLVAR          |
| Data Field           | Contents of subfield 06 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

Valid location State code of the Sender. Cannot contain spaces or invalid code when country is U.S. or Canada.

### Application notes

Subfield 06 is optional for Mastercard Send Transactions (Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions). If submitted on Mastercard Send Payment Transactions and Gaming and Gambling Payments Transactions, subfield 06 cannot contain spaces or invalid code when country is U.S. or Canada.

**NOTE: Data representation must be alpha (a-3) for Mastercard Send Transactions. Refer to *Quick Reference Booklet* for list of valid country codes.**

## Subfield 07 (Sender Country)

DE 108, subelement 02, subfield 07 (Sender Country) contains the country code of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 07                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | a-3                     |
| Data Field           | Contents of subfield 07 |
| Justification        | N/A                     |

### Values

Sender Country must contain a valid three-character alphabetic code and must not be part of a blocked country list. Refer to the *Quick Reference Booklet* for a list of valid codes.

### Application notes

Subfield 07 is mandatory for Mastercard Send Payment Transactions and Gaming and Gambling Payments Transactions and optional for Funding Transactions.

Subfield 07 is optional for Funding Transactions.

Transaction will be declined if the sender country is subject to comprehensive geographic sanctions published by the Office of Foreign Assets Control (OFAC), <https://ofac.treasury.gov/sanctions-programs-and-country-information>. The current list of countries subject to such sanctions is subject to change.

## Subfield 08 (Postal Code)

DE 108, subelement 02, subfield 08 (Postal Code) contains the postal code of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 08                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...10; LLVAR         |
| Data Field           | Contents of subfield 08 |
| Justification        | N/A                     |

### Values

Valid location Postal Code of the Sender.

### Application notes

Subfield 08 is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 09 (Sender Phone Number)

DE 108, subelement 02, subfield 09 (Sender Phone Number) contains the phone number of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 09                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...20; LLVAR         |
| Data Field           | Contents of subfield 09 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

Valid phone number of the Sender.

### Application notes

Subfield 09 is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 10 (Sender Date of Birth)

DE 108, subelement 02, subfield 10 (Sender Date of Birth) contains the date of birth of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 10                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-8                     |
| Data Field           | Contents of subfield 10 |
| Justification        | N/A                     |

### Values

Valid values will consist of the date of birth of the Sender in the format MMDDYYYY.

### Application notes

Subfield 10 is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 11 (Sender Account Number)

DE 108, subelement 02, subfield 11 (Sender Account Number) contains the account number of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 11                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...50; LLVAR         |
| Data Field           | Contents of subfield 11 |
| Justification        | N/A                     |

### Values

Valid account number of the Sender.

The account number that was used to fund the money transfer (for example, the sender used a credit, debit, or other account to fund the money transfer). When cash is used to fund the money transfer, this field should be populated with a unique transaction reference number or an account number from the OI. This information will assist in identifying the sender if the receiving institution requires additional information from the originating institution for the money transfer.

### Application notes

Subfield 11 (Sender Account Number) can have a maximum length of 34 characters for Visa-branded transactions.

### Application notes: Mastercard Send Transactions

Subfield 11 must be present for Mastercard Send Payment Transactions and Gaming and Gambling Payments Transactions and must be properly formatted. Subfield 11 is optional for Funding Transactions. When subfield 11 contains a combination of information as specified in subfield 18 [for example, Bank account number (BAN) + Bank Identification Code (BIC)], the data must be separated by '+' and in the order specified for Mastercard Send and Funding Transactions.

### Application notes: Mastercard Merchant Presented QR Transactions

Payment Transaction usage:

- Authorization Request/0100: Mandatory. Edit must validate. Forward to destination.
- Reversal Advice/0420: Value from Authorization Request/0100 forwarded to destination.

The enhancement introduced within DE 108, subelement 02, subfield 11 (Sender Account Number) does not apply for MCQR transactions. If MCQR transactions are processed with data in DE 108, subelement 02, subfield 11 (Sender Account Number) exceeding the current supported length, Mastercard MCQR edits will decline the transaction.

Refund payment transaction usage: Reversal Advice/0420—Value from Authorization Request/0100 forwarded to destination

Funding transaction usage: Subfield 11 is not applicable

## Subfield 12 (Sender Identification Type)

DE 108, subelement 02, subfield 12 (Sender Identification Type) contains the identification type of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 12                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-2                     |
| Data Field           | Contents of subfield 12 |
| Justification        | N/A                     |

### Values

If present on Mastercard Send Payment Transactions, Gaming and Gambling Payments Transactions, Visa-branded funding transactions, it must contain one of the following valid values:

### Values

| Value | Description                  |
|-------|------------------------------|
| 00    | Passport                     |
| 01    | National Identification Card |
| 02    | Driver's License             |
| 03    | Government Issued            |
| 04    | Other                        |
| 05    | Date of birth (Visa only)    |

| Value | Description                                       |
|-------|---------------------------------------------------|
| 06    | Customer identification (unspecified) (Visa only) |
| 07    | Business tax ID (Visa only)                       |
| 08    | Individual tax ID (Visa only)                     |
| 09    | Company registration number (Visa only)           |
| 10    | Proxy identification (Visa only)                  |
| 11    | Social security number (Visa only)                |
| 12    | Alien registration number (Visa only)             |
| 13    | Law enforcement identification (Visa only)        |
| 14    | Military identification (Visa only)               |
| 15    | Travel identification (non-passport) (Visa only)  |
| 16    | Email (Visa only)                                 |
| 17    | Phone number (Visa only)                          |

### Application notes

Values 03 and 04 have no corresponding values in Visa format. Acquirers should not send either value 03 or 04 with Visa-branded transactions.

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details on Visa-only values.

## Subfield 13 (Sender Identification Number)

DE 108, subelement 02, subfield 13 (Sender Identification Number) contains the identification number of the Sender.

### Attributes

| Attribute           | Value                   |
|---------------------|-------------------------|
| Subfield ID         | 13                      |
| Subfield length     | 2                       |
| Data representation | ans...25; LLVAR         |
| Data field          | Contents of subfield 13 |
| Justification       | N/A                     |

## Values

Valid identification number of the Sender.

## Application notes

Subfield 13 is optional for Mastercard Send Transactions (MoneySend Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 13 (Sender Identification Number [Visa Only])

DE 108, subelement 02, subfield 13 (Sender Identification Number [Visa Only]) contains the identification number of the Sender.

## Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 13                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...35; LLVAR         |
| Data Field           | Contents of subfield 13 |
| Justification        | N/A                     |

## Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

## Application notes

Subfield 13 (Sender Identification Number [Visa Only]) is only for use with Visa-branded transactions.

## Subfield 14 (Sender Identification Country Code)

DE 108, subelement 02, subfield 14 (Sender Identification Country Code) contains the identification country code of the Sender.

## Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 14          |
| Subfield Data Length | 2 positions |

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | ans-3                   |
| Data Field          | Contents of subfield 14 |
| Justification       | N/A                     |

### Values

Valid identification country code of the Sender.

### Application notes

Subfield 14 is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 15 (Sender Identification Expiration Date)

DE 108, subelement 02, subfield 15 (Sender Identification Expiration Date) contains the identification expiration date of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 15                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-8                     |
| Data Field           | Contents of subfield 15 |
| Justification        | N/A                     |

### Values

Valid identification expiration date of the Sender in the format MMDDYYYY.

### Application notes

Subfield 15 is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 16 (Sender Nationality)

DE 108, subelement 02, subfield 16 (Sender Nationality) contains the nationality of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 16                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans-3                   |
| Data Field           | Contents of subfield 16 |
| Justification        | N/A                     |

### Values

Nationality of the sender as defined by a valid country code for the country of citizenship.

### Application notes

Subfield 16 is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

## Subfield 17 (Sender Country of Birth)

DE 108, subelement 02, subfield 17 (Sender Country of Birth) contains the country of birth of the Sender.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 17                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans-3                   |
| Data field           | Contents of subfield 17 |
| Justification        | N/A                     |

### Values

Valid country of birth of the Sender.

### Application notes

Subfield 17 is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

### Subfield 18 (Sender Account Number Type)

DE 108, subelement 02, subfield 18 (Sender Account Number Type) contains the account number type of the Sender.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 18          |
| Subfield Data Length | 2 positions |
| Data Representation  | n-2         |
| Justification        | N/A         |

### Values

List of valid values:

- 00: Other
- 01: RTN + Bank Account
- 02: IBAN
- 03: Card Account
- 04: Email
- 05: Phone Number
- 06: Bank account number (BAN) + Bank Identification Code (BIC)
- 07: Wallet ID
- 08: Social Network ID

### Application notes

Acquirers are expected per participation requirements to supply Subfield 18 if the related Subfield 11 is provided. Subfield is expected to be one of the valid values for the field.

Subfield 18 is not required for Mastercard QR Transactions and if submitted will be disregarded and not be forwarded to destination.

Subfield 18 is optional for Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payment Transactions).

The Mastercard Network does not enforce system edits on this field. It is therefore optional per specifications. However per program rules noted in the [Mastercard Send and Funding](#)

[Transactions Program Standards](#), it is a required field for Funding Transactions and must be provided. Not providing required data in this field as per standards may result in compliance assessments

### Subelement 03 (Transaction Reference Data)

DE 108, subelement 03 (Transaction Reference Data) contains the transaction reference number, funding score, participation ID, and additional data related to Mastercard Send transactions and Mastercard Merchant Presented QR transactions.

#### Attributes

| Attribute              | Description                                                                                                                                                                                                                              |

| the originating institution is registered for the Mastercard Send Payment Transaction Program or Mastercard Gaming and Gambling Payments Program and is submitting an Authorization Request/0100 message for a Mastercard Send Payment Transaction or Gaming and Gambling Payment transaction where: <ul style="list-style-type: none"><li>DE 3, subfield 1 contains value 28</li><li>DE 18 contains MCC associated with Mastercard Send Payment or Gaming and Gambling payment program</li><li>DE 48, subelement 77 Transactions Type Identifier associated with Mastercard Send Payment or Gaming and Gambling payment program</li><li>DE 61, subfield 10 criteria is met for Moneysend Payment transaction</li><li>DE 108, subelement 03, subfield 01 (Unique Transaction Reference) is present and contains all spaces, all zeros, or any combination of spaces and zeros</li></ul> | sends an Authorization Request Response/0110 message to the acquirer where: <ul style="list-style-type: none"><li>DE 39 (Response Code) = 30 (Format error)</li><li>DE 44 (Additional Response Data) = 108003 (Mastercard Send Transaction Data)</li></ul> |

### Subfield 01 (Unique Transaction Reference)

DE 108, subelement 03, subfield 01 (Unique Transaction Reference) contains the Unique Transaction Reference number for Mastercard Send Transactions (MoneySend Payment Transactions, Funding Transactions, and Gaming Payments Transactions) and Mastercard Merchant Presented QR funding transactions.

#### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Subfield ID         | 01          |
| Subfield length     | 2 positions |
| Data representation | ans-19      |

| Attribute     | Description             |
|---------------|-------------------------|
| Data field    | Contents of subfield 01 |
| Justification | N/A                     |

## Values

- Values for customers that do not need to process beyond 99 transactions per second:
  - Unique Transaction Reference Number (ans-19).
  - A valid value string leads with a zero (0), followed by:
    - ICA (n-6)
    - Year (n-1)
    - Julian Date (n-3)
    - Time hhmmss (n-6)
    - Transaction Sequence Number for customers who do not need to process beyond 99 transactions: (01-99) (n-2)

Example: 0555555801215305401

- Values for customers that need to process beyond 99 transactions per second:
  - Unique Transaction Reference Number (ans-19).
  - A valid value string contains:
    - ICA (n-6)
    - Year (n-1)
    - Julian Date (n-3)
    - Time hhmmss (n-6)
    - Transaction Sequence Number for customers who need to process beyond 99 transactions: (001-999) (n-3)

Example: 5555558012153054001

## Application notes

The Mastercard Network does not enforce system edits on this field. However, per program rules noted in the *Mastercard MoneySend and Funding Transactions Program Standards* guide, it is a required field for Funding Transactions (coded with a TTI) and MoneySend Payment and Gaming Payments Transactions. Not providing required data in this field per the standards may result in a compliance assessment.

Payment Transaction usage:

- Authorization Request/0100: Optional. If present, an edit must validate. Forward to destination if edit validates
- Reversal Advice/0420: Optional. If present, forward the value from the Authorization Request/0100 to the destination

Refund Payment Transaction usage:

- Authorization Request/0100: Optional. If present, an edit must validate. Forward to destination if edit validates
- Reversal Advice/0420: Value from Authorization Request/0100 forwarded to destination

Funding Transaction usage:

- Authorization Request/0100: Mandatory. If present, edit must validate. Forward to destination if edit validates
- Authorization Request/0100: Optional. If present, an edit must validate. Forward to destination if edit validates
- Reversal Request/0400: Optional. If present, edit must validate. Forward to destination if edit validates
- Reversal Advice/0420: Value from Authorization Request/0100 forwarded to destination

## Subfield 01 (Sender Reference Number [Visa Only])

DE 108, subelement 03, subfield 01 (Sender Reference Number [Visa Only]) contains the sender reference number.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...16; LLVAR         |
| Data Field           | Contents of subfield 01 |
| Justification        | N/A                     |

### Values

Refer to *VisaNet Authorization-Only Online Messages Technical Specifications* for further details.

### Application notes

Subfield 01 (Sender Reference Number [Visa Only]) is only for use with Visa-branded transactions.

## Subfield 02 (Additional Message)

DE 108, subelement 03, subfield 02 (Additional Message) contains the additional message.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...65; LLVAR         |
| Data Field           | Contents of subfield 02 |
| Justification        | N/A                     |

### Application notes

Mastercard Send Transactions (Mastercard Send Payment Transactions, Funding Transactions, and Gaming and Gambling Payments Transactions).

### Application notes: Mastercard Merchant Presented QR Transactions

Payment Transaction usage:

- Authorization Request/0100: optional. If present, edit must validate. Forward to destination if edit is validated
- Reversal Advice/0420: optional. If present, value from Authorization Request/0100 forwarded to destination

Refund Payment Transaction usage: subfield 02 is not applicable

Funding Transaction usage:

- Authorization Advice/0120: optional. If present, edit must validate. Forward to destination if edit is validated
- Reversal Request/0400: optional. If present, edit must validate. Forward to destination if edit is validated
- Reversal Advice/0420: value from Authorization Request/0100 forwarded to destination

## Subfield 03 (Funding Source)

DE 108, subelement 03, subfield 03 (Funding Source) contains the information representing the Mastercard Send transaction funding source.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 03                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-2                     |
| Data Field           | Contents of subfield 03 |
| Justification        | N/A                     |

### Values

Must be present for MPQR payment authorization request messages and, when present, must contain one of the following valid values.

### Valid values

| Value | Description          |
|-------|----------------------|
| 01    | Credit               |
| 02    | Debit                |
| 03    | Prepaid              |
| 04    | Deposit Account      |
| 05    | Mobile Money Account |
| 06    | Cash                 |
| 07    | Other                |

### Application notes

Subfield 03 is optional for Funding Transactions, Mastercard Send Payment Transactions, and Gaming and Gambling Payments Transactions on Authorization Request/0100 and Reversal Request/0400 messages.

Mastercard will not perform a valid values check on subfield 03 within the Authorization Request/0100 message. Acquirers must send DE 108, subelement 03, subfield 03 on MPQR payment Authorization Request messages.

### Application notes for Mastercard Merchant Presented QR Transactions

| Transaction                                         | Usage                                                          |

## Application notes

Subfield 01 is conditional for non-financial transactions.

## Application notes for Non-Financial Transactions

If DE 108, subelement 07, subfield 01 is received with value '10' in a non-financial Authorization request, and DE 108 subelement 01 (Receiver/Recipient Data), subfield 01 (Receiver/Recipient First name), subfield 02 (Receiver/Recipient Middle Name), and subfield 03 (Receiver/Recipient Last Name) are present, then the issuer should include DE 108, subelement 08, subfield 01 in the response. Issuer provided response is not edited and will be forwarded to the destination. When an issuer opts in for the Name Match service, Mastercard will issue a response in DE 108, subelement 08, subfield 01 on the issuer's behalf. Should a participating issuer provide a value in this subfield, it will be disregarded and replaced with the value provided by Mastercard.

## Subfield 02 (Sender Name Validation Response)

DE 108, subelement 08, subfield 02 (Sender Name Validation Response) contains the originator name validation results for the sender.

## Attributes

| 1        | an-1      | <p>Sender Name Validation Response</p> <p>Contains the results of an attempt to verify that the following data present in the validation request message matched the data on file with the issuer:</p> <ul style="list-style-type: none"><li>• Sender First Name (DE 108, subelement 02, subfield 01)</li><li>• Sender Middle Name (DE 108, subelement 02, subfield 02)</li><li>• Sender Last Name (DE 108, subelement 02, subfield 03)</li></ul> <p>Valid values include:</p> <ul style="list-style-type: none"><li>• A = Match</li><li>• B = Partial Match</li><li>• C = No Match</li><li>• U = Unverified</li></ul> |

### Application notes

Subfield 02 is conditional for non-financial Authorization transactions.

#### Application notes for Non-Financial Authorization Transactions

If DE 108, subelement 07, subfield 01 is received with value '11' in a non-financial Authorization request, and DE 108 subelement 02 (Sender Data), subfield 01 (Sender First name), subfield 02 (Sender Middle Name), and subfield 03 (Sender Last Name) are present, then the issuer should include DE 108, subelement 08, subfield 02 in the response. Issuer provided response is not edited and will be forwarded to the destination. When an issuer opts in for the Name Match service, Mastercard will issue a response in Data Element 108, subelement 08, subfield 02 on the issuer's behalf. Should a participating issuer provide a value in this subfield, it will be disregarded and replaced with the value provided by Mastercard.

## Subelement 09 (Account Owner Information 1)

DE 108, subelement 09 (Account Owner Information 1) contains the account owner name, sequence number and classification. The account owner information is used for the Name Match Service.

| Justification       | N/A                        |

#### Values

If present, cannot contain all spaces or all numeric values.

### Application notes

Subfield 02 is optional if the issuer is opted-in for the on-behalf Name Match Service.

### Subfield 03 (Account Owner Last Name)

DE 108, subelement 09, subfield 03 (Account Owner Last Name) contains the last name of the account owner.

#### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Subfield ID         | 03                         |
| Data Representation | ans...35; LLVAR            |
| Subfield Length     | 2                          |
| Data Field          | Contents of positions 1-35 |
| Justification       | N/A                        |

**Values**

If present, cannot contain all spaces or all numeric values.

**Application notes**

Subfield 03 is optional if the issuer is opted-in for the on-behalf Name Match Service.

**Subfield 04 (Account Owner Sequence Number)**

DE 108, subelement 09, subfield 04 (Account Owner Sequence Number) contains the sequence number of the account owner.

**Attributes**

| Attribute           | Description               |
|---------------------|---------------------------|
| Subfield ID         | 04                        |
| Data Representation | n-3                       |
| Subfield Length     | 2                         |
| Data Field          | Contents of positions 1-3 |
| Justification       | N/A                       |

**Values**

If present, must be numeric.

**Application notes**

Subfield 04 is optional if the issuer is opted-in for the on-behalf Name Match Service.

**Subfield 05 (Account Owner Classification)**

DE 108, subelement 09, subfield 05 (Account Owner Classification) contains the classification category (Personal or Business) of the account owner.

**Attributes**

| Attribute           | Description |
|---------------------|-------------|
| Subfield ID         | 05          |
| Data Representation | a-1         |
| Subfield Length     | 2           |

| Attribute     | Description            |
|---------------|------------------------|
| Data Field    | Contents of position 1 |
| Justification | N/A                    |

If present, must contain one of these following valid values.

### Values

| Value | Description |
|-------|-------------|
| P     | Personal    |
| B     | Business    |

### Application notes

Subfield 05 is optional if the issuer is opted-in for the on-behalf Name Match Service.

## Subelement 10 (Account Owner Information 2)

DE 108, subelement 10 (Account Owner Information 2) contains the details of the account owner for a given PAN. The account owner information is used for the on-behalf Name Match service.

### Attributes

If present, cannot contain all spaces or all numeric values.

### Application notes

Subfield 02 is optional if the issuer is opted-in for the on-behalf Name Match Service.

### Subfield 03 (Account Owner Last Name)

DE 108, subelement 10, subfield 03 (Account Owner Last Name) contains the last name of the account owner.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Subfield ID         | 03                         |
| Data Representation | ans...35; LLVAR            |
| Subfield Length     | 2                          |
| Data Field          | Contents of positions 1-35 |
| Justification       | N/A                        |

### Values

If present, cannot contain all spaces or all numeric values.

### Application notes

Subfield 03 is optional if the issuer is opted-in for the on-behalf Name Match Service.

### Subfield 04 (Account Owner Sequence Number)

DE 108, subelement 10, subfield 04 (Account Owner Sequence Number) contains the sequence number of the account owner.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Subfield ID         | 04                        |
| Data Representation | n-3                       |
| Subfield Length     | 2                         |
| Data Field          | Contents of positions 1-3 |
| Justification       | N/A                       |

## Values

If present, must be numeric.

## Application notes

Subfield 04 is optional if the issuer is opted-in for the on-behalf Name Match Service.

## Subfield 05 (Account Owner Classification)

DE 108, subelement 10, subfield 05 (Account Owner Classification) contains the classification category (Personal or Business) of the account owner.

## Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Subfield ID         | 05                     |
| Data Representation | a-1                    |
| Subfield Length     | 2                      |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

If present, must contain one of these valid values.

## Values

| Value | Description |
|-------|-------------|
| P     | Personal    |
| B     | Business    |

## Application notes

Subfield 05 is optional if the issuer is opted-in for the on-behalf Name Match Service.

## Subelement 11 (Account Owner Information 3)

DE 108, subelement 11 (Account Owner Information 3) contains the details of the account owner for a given PAN. The account owner information is used for the name validation service.

### Attributes

| Attribute           | Description                                                                                                                                                                                                             |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Subelement ID       | 11                                                                                                                                                                                                                      |

### Subfield 01 (Account Owner First Name)

DE 108, subelement 11, subfield 01 (Account Owner First Name) contains the first name of the account owner.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Subfield ID         | 01                         |
| Data Representation | ans...35; LLVAR            |
| Subfield Length     | 2                          |
| Data Field          | Contents of positions 1-35 |
| Justification       | N/A                        |

### Values

If present, cannot contain all spaces or all numeric values.

### Application notes

Subfield 01 is optional if the issuer is opted-in for the on-behalf Name Match Service.

## Subfield 02 (Account Owner Middle Name)

DE 108, subelement 11, subfield 02 (Account Owner Middle Name) contains the middle name of the account owner.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Subfield ID         | 02                         |
| Data Representation | ans...35; LLVAR            |
| Subfield Length     | 2                          |
| Data Field          | Contents of positions 1-35 |
| Justification       | N/A                        |

### Values

Valid values will consist of the middle name of the Account Owner.

### Application notes

Subfield 02 is optional if the issuer is opted-in for the on-behalf Name Match Service.

## Subfield 03 (Account Owner Last Name)

DE 108, subelement 11, subfield 03 (Account Owner Last Name) contains the last name of the account owner.

### Attributes

| Attribute           | Description     |
|---------------------|-----------------|
| Subfield ID         | 03              |
| Data Representation | ans...35; LLVAR |
| Subfield Length     | 2               |

| Attribute     | Description                |
|---------------|----------------------------|
| Data Field    | Contents of positions 1-35 |
| Justification | N/A                        |

### Values

If present, cannot contain all spaces or all numeric values.

### Application notes

Subfield 03 is optional if the issuer is opted-in for the on-behalf Name Match Service.

## Subfield 04 (Account Owner Sequence Number)

DE 108, subelement 11, subfield 04 (Account Owner Sequence Number) contains the sequence number of the account owner.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Subfield ID         | 04                        |
| Data Representation | n-3                       |
| Subfield Length     | 2                         |
| Data Field          | Contents of positions 1-3 |
| Justification       | N/A                       |

### Values

If present, must be numeric.

### Application notes

Subfield 04 is optional if the issuer is opted-in for the on-behalf Name Match Service.

## Subfield 05 (Account Owner Classification)

DE 108, subelement 11, subfield 05 (Account Owner Classification) contains the classification category (Personal or Business) of the account owner.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Subfield ID         | 05                     |
| Data Representation | a-1                    |
| Subfield Length     | 2                      |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

If present, must contain one of these valid values.

### Values

| Value | Description |
|-------|-------------|
| P     | Personal    |
| B     | Business    |

### Application notes

Subfield 05 is optional if the issuer is opted-in for the on-behalf Name Match Service.

## DE 109 (Reserved for ISO Use)

DE 109 (Reserved for ISO Use) is reserved for ISO use.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 110 (Additional Data-2)

DE 110 (Additional Data-2) is reserved for use based on product type.

### Attributes

| Attribute           | Description                  |
|---------------------|------------------------------|
| Data Representation | ans...999; LLLVAR            |
| Data Length         | 3 positions, value = ...999  |
| Data Field          | Contents of subelements 9–10 |
| Subelements         | 2                            |
| Justification       | See Subelements              |

### Usage

Whether the usage is mandatory, conditional, optional, system-provided, or not required is as noted for each applicable message.

### Applicable messages

| Message                                                | Org | Sys | Dst |

### Application notes

DE 110 provides supplemental data in a message when a specific ISO-designated data element is not available. It is a free-format, variable-length alphanumeric data element that may be used for multiple purposes. This data element's content may vary by program and service.

The following tables provide formats and descriptions for the subelements in DE 110. Currently, there are two subelements but as subelements are added, the subelement sequence will not have to be in the order of ID value.

## Subelement 9 (ANSI X9 TR-31 Key Block Key [128-bit Key Block Protection Key])

DE 110, subelement 9 (ANSI X9 TR-31 Key Block Key [128-bit Key Block Protection Key]) contains the attributes provided in a Network Management Request/0800 message.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 09                        |
| Subelement Data Length | 3 positions               |
| Data Representation    | an-80                     |
| Data Field             | Contents of subelement 09 |
| Subfield               | N/A                       |
| Justification          | N/A                       |

### Usage

Whether the usage is mandatory, conditional, optional, system-provided, or not required is as noted for each applicable message.

### Applicable messages

| Message                                                | Org | Sys | Dst |

## Subelement 10 (Key Check Value)

DE 110, subelement 10 (Key Check Value) contains the attributes in a Network Management Request/0800 message.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 10                        |
| Subelement Data Length | 3 positions               |
| Data Representation    | an-6                      |
| Data Field             | Contents of subelement 10 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Usage

Whether the usage is mandatory, conditional, optional, system-provided, or not required is as noted for each applicable message.

### Applicable messages

| Message                                                | Org | Sys | Dst |

## DE 110 (Encryption Data)

DE 110 (Encryption Data) is used in PIN encryption data and key management encryption data.

### Attributes

| Attribute           | Description     |
|---------------------|-----------------|
| Data Representation | b...999; LLLVAR |

| Attribute      | Description         |
|----------------|---------------------|
| Data Length    | b...999 (EBCDIC)    |
| Dataset ID     | 1 byte binary value |
| Dataset Length | 2 byte binary value |
| Data Field     | Dataset Tags        |
| Tag contents   | Values              |
| Justification  | N/A                 |

### Usage

Whether the data element is mandatory, conditional, optional, system-provided, or not required is noted for each applicable message.

### Applicable messages

| Message                                           | Org | Sys | Dst |
|---------------------------------------------------|-----|-----|-----|
| Authorization Request/0100                        | C   | X   | C   |
| Network Management Request/0800: PEK exchange     | .   | X   | C   |
| Network Management Request/0800: sign-on/sign-off | C   | X   | .   |
| Network Management Advice/0820: PEK exchange      | .   | X   | C   |

### Application notes

The length fields in the Tag Length Value (TLV) are coded according to ISO 8825. If the TLV-coded version of a dataset is used the length of the dataset itself is always coded as a two byte binary value.

- The Dataset ID is the first component in a dataset.
- Dataset ID is a one byte binary identifier given to each dataset within a DE 110 field.
- Dataset length is a two byte binary subfield that contains the total length of the TLV element(s) within the dataset.
- The Tag field contains one byte length hexadecimal code that identifies the content of the Value field.
- The Tag length field follows the ISO 8825 spec. n-byte field that defines the length of the Value field.
- The Value field is a variable-length field that will contain the data specified by the Tag field.

**DE 110 layout**

DE 110 (Encryption Data) is a usage layout to support the PCI Standards Security Council's mandate for ISO Format 4 PIN Blocks. The layout follows DE 110 specifications in ISO/DIS 13492.

**Hierarchy of DE 110 for PIN encryption data and key exchange data**

DE 110 contains:

- Dataset ID
- Dataset length
- Tags

Each Tag contains:

- Tag ID
- Tag length
- Tag value

**Entity descriptions**

| Entity         | Description                                                                                                                        |
|----------------|------------------------------------------------------------------------------------------------------------------------------------|
| Dataset ID     | A one byte hex value specific for each data set<br>Example: 0x01                                                                   |
| Dataset length | A two byte hex value. Example: If the length is 24 it will be represented as 0x00 18. This length is the accumulation of all Tags. |
| Tag ID         | A one byte hex specific for each Tag: for example, 0x80                                                                            |

| Entity     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Tag length | <p>The length field is coded according to ISO 8825. The Dataset length is always coded as a two byte binary value. ISO 8825 defines two forms length octets.</p> <ul style="list-style-type: none"> <li>Definite form</li> <li>Indefinite form (not supported by Mastercard)</li> </ul> <p>The definite form has a short and long form.</p> <p>Short form: Tag length consists of a single octet or byte. This form can only be used if the number of octets in the Tag data is less than or equal to 127 bytes. It is encoded as:</p> <ul style="list-style-type: none"> <li>Bit 8 is zero</li> <li>Bits 7 to 1 encode the number of octets or bytes in the contents octets (Tag data) as an unsigned binary integer with bit 7 as the most significant bit.</li> </ul> <p>Example: If the Tag data is 38 bytes the Tag length is encoded as:</p> <pre>00100110</pre> <p>Long form: the Tag length consists of an initial octet and one or more additional octets.</p> <p>The initial octet will be encoded as:</p> <ul style="list-style-type: none"> <li>Bit 8 is one</li> <li>Bits 7 to 1 shall encode the number of additional octets in the length octets, as an unsigned binary integer with bit 7 as the most significant bit the value 11111111 must not be used.</li> </ul> <p>Coding for additional octets:</p> <ol style="list-style-type: none"> <li>First additional octet bits 8 to 1</li> <li>Second additional octet bits 8 to 1</li> <li>Each additional octet bits 8 to 1</li> </ol> <p>Octets will be encoded as unsigned binary integer equal to the number of octets in the Tag data, with bit 8 of the first additional octet as the most significant bit.</p> <p>Examples:</p> <ul style="list-style-type: none"> <li>If the Tag data is 201 bytes the Tag length would be encoded as<br/> <pre>10000001 11001001</pre> <ul style="list-style-type: none"> <li>10000001: Initial byte which tells how many additional length bytes.</li> <li>11001001: The actual length byte.</li> </ul> </li> <li>If the tag data is 402 bytes the Tag length would be encoded as<br/> <pre>10000010 00000001 10010010</pre> </li> </ul> |

| Entity    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

## Dataset 01 (PIN Encryption)

DE 110, Dataset 01 (PIN Encryption) contains the personal identification number (PIN), a unique identifier used by the cardholder at the point-of-interaction (POI).

### Attributes

### Usage

Whether the data element is mandatory, conditional, optional, system-provided, or not required is noted for each applicable message.

**Applicable messages**

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

**TAG 80 (Control)**

DE 110, Dataset 01, TAG 80 (Control) field identifies the key management scheme and associated structure of the remainder of the data element.

**Attributes**

| Attribute           | Description |
|---------------------|-------------|
| Tag ID              | 80          |
| Tag Data Length     | b-1         |
| Data Representation | b-1         |
| Justification       | N/A         |
| Required            | Mandatory   |

**Values**

| Value | Description                               |
|-------|-------------------------------------------|
| 00    | Default value for the Dual Message System |

**TAG 81 (Key-set Identifier)**

DE 110, Dataset 01, TAG 81 (Key-set Identifier) Key-set identifier field is used with DUKPT key management exclusively. The key-set identifier uniquely identifies the base derivation key as defined in the *American National Standard for Financial Services ...Retail Financial Services Symmetric Key Management Part 1: Using Symmetric Techniques (ANSI X9.24 Part 1)*.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Tag ID              | 81          |
| Tag Data Length     | b-1         |
| Data Representation | b-8         |
| Justification       | N/A         |
| Required            | Mandatory   |

### Values

| Value            | Description                               |
|------------------|-------------------------------------------|
| 0000000000000000 | Default value for the Dual Message System |

## TAG 83 (Algorithm)

DE 110, Dataset 01, TAG 83 (Algorithm) selects the encryption algorithm used to encipher the keys contained in the associated key management data element.

### Attributes

| Attribute           | Description                       |
|---------------------|-----------------------------------|
| Tag ID              | 83                                |
| Tag Data Length     | b-1                               |
| Data Representation | n-2 (Packed binary coded decimal) |
| Justification       | N/A                               |
| Required            | Conditional                       |

### Values

| Value | Description                     |
|-------|---------------------------------|
| 01    | Data Encryption Algorithm (DEA) |

| Value | Description                             |
|-------|-----------------------------------------|
| 03    | Triple Data Encryption Algorithm (TDEA) |
| 05    | Advanced Encryption Standard (AES)      |

### Application notes

TAG 83 is for online PIN transactions performed on the Authorization System for acquirers and issuers in the Europe region. It is not a requirement for acquirers outside of the Europe region.

## TAG 86 (Key Index)

DE 110, Dataset 01, TAG 86 (Key Index) indicates the specific PIN key to be used when more than one key is available in a PIN key set.

### Attributes

| Attribute           | Description                       |
|---------------------|-----------------------------------|
| Tag ID              | 86                                |
| Tag Data Length     | b-1                               |
| Data Representation | n-2 (Packed binary coded decimal) |
| Justification       | N/A                               |
| Required            | Conditional                       |

### Values

| Value | Description                                     |
|-------|-------------------------------------------------|
| 00-99 | PIN key index value for the Dual Message System |

### Application notes

TAG 86 is for online PIN transactions performed on the Authorization System for acquirers and issuers in the Europe region. It is not a requirement for acquirers outside of the Europe region.

## TAG 87 (PIN Block Format)

DE 110, Dataset 01, TAG 87 (PIN Block Format) is the format of the PIN Block defined in ISO 9564-1.

### Attributes

#### Attributes

| Attribute           | Description                       |
|---------------------|-----------------------------------|
| Tag ID              | 87                                |
| Tag Data Length     | b-1                               |
| Data Representation | n-2 (Packed binary coded decimal) |
| Justification       | N/A                               |
| Required            | Mandatory                         |

#### Values

| Value | Description            |
|-------|------------------------|
| 10    | ISO PIN Block Format 0 |
| 11    | ISO PIN Block Format 1 |
| 14    | ISO PIN Block Format 4 |

## TAG 88 (Encrypted PIN Block)

DE 110, Dataset 01, TAG 88 (Encrypted PIN Block) contains PIN block encryption as defined in ISO 9564-1.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Tag ID              | 88          |
| Tag Data Length     | b-1         |
| Data Representation | b-8 or b-16 |
| Justification       | N/A         |

| Attribute | Description |
|-----------|-------------|
| Required  | Mandatory   |

### Values

| Value                 | Description |
|-----------------------|-------------|
| 8 byte of PIN Block   | Format 0    |
| 16 bytes of PIN Block | Format 4    |

## TAG 89 (Additional Encrypted PIN Block)

DE 110, Dataset 01, TAG 89 (Additional Encrypted PIN Block) is used for PIN change transaction.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Tag ID              | 89          |
| Tag Data Length     | b-1         |
| Data Representation | b-8 or b-16 |
| Justification       | N/A         |
| Required            | Conditional |

### Values

| Value                            | Description |
|----------------------------------|-------------|
| 8 bytes of additional PIN Block  | Format 0    |
| 16 bytes of additional PIN Block | Format 4    |

## Dataset 04 (Key Exchange)

Dataset 04 (Key Exchange) is a method in cryptography by which cryptographic keys are exchanged between two parties, allowing use of a cryptographic algorithm.

### Attributes

| Attribute           | Description                            |
|---------------------|----------------------------------------|
| Dataset ID          | b-1                                    |
| Dataset Length      | b-2                                    |
| Data Representation | b...999; LLLVAR                        |
| Data Field Contains | cryptogram                             |
| Number of Tags      | 6                                      |
|                     | TAG 80 (Control), Mandatory            |
|                     | TAG 81 (Key-set Identifier), Mandatory |
|                     | TAG 83 (Algorithm), Mandatory          |
|                     | TAG 86 (Key Index), Mandatory          |

### Usage

Whether the data element is mandatory, conditional, optional, system-provided, or not required is noted for each applicable message.

### Applicable messages

| Message                                           | Org | Sys | Dst |
|---------------------------------------------------|-----|-----|-----|
| Network Management Request/0800: PEK exchange     | •   | X   | C   |
| Network Management Request/0800: sign-on/sign-off | C   | X   | •   |
| Network Management Advice/0820: PEK exchange      | •   | X   | C   |

## TAG 80 (Control)

DE 110, Dataset 04, TAG 80 (Control) field identifies the key management scheme and associated structure of the remainder of the data element.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Tag ID              | 80          |
| Tag Data Length     | b-1         |
| Data Representation | b-1         |
| Justification       | N/A         |
| Required            | Mandatory   |

### Values

| Value | Description                               |
|-------|-------------------------------------------|
| 00    | Default value for the Dual Message System |

## TAG 81 (Key-set Identifier)

DE 110, Dataset 04, TAG 81 (Key-set Identifier) is a number that uniquely identifies a key-set.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Tag ID              | 81          |
| Tag Data Length     | b-1         |
| Data Representation | b-8         |
| Justification       | N/A         |
| Required            | Mandatory   |

### Values

| Value            | Description                               |
|------------------|-------------------------------------------|
| 0000000000000000 | Default value for the Dual Message System |

## TAG 83 (Algorithm)

DE 110, Dataset 04, TAG 83 (Algorithm) defines the encryption algorithm used to encipher the keys contained in the associated key management data element.

### Attributes

| Attribute           | Description                       |
|---------------------|-----------------------------------|
| Tag ID              | 83                                |
| Tag Data Length     | b-1                               |
| Data Representation | n-2 (Packed binary coded decimal) |
| Justification       | N/A                               |
| Required            | Mandatory                         |

### Values

| Value | Description                             |
|-------|-----------------------------------------|
| 01    | Data Encryption Algorithm (DEA)         |
| 03    | Triple Data Encryption Algorithm (TDEA) |
| 05    | Advanced Encryption Standard (AES)      |

## TAG 86 (Key Index)

DE 110, Dataset 04, TAG 86 (Key Index) is used when multiple keys are identified with the same key set identifier; for example, key rotation.

### Attributes

| Attribute           | Description                       |
|---------------------|-----------------------------------|
| Tag ID              | 86                                |
| Tag Data Length     | b-1                               |
| Data Representation | n-2 (Packed binary coded decimal) |
| Justification       | N/A                               |
| Required            | Mandatory                         |

### Values

| Value | Description                                                                                    |
|-------|------------------------------------------------------------------------------------------------|
| 00    | Network Management Request/0800: PEK exchange<br>Network Management Request/0820: PEK exchange |
| 00-99 | Network Management Request/0800: sign-on/sign-off                                              |

## Edits

The Dual Message Authorization System will perform the following edits.

### Authorization Request/0100 message

Dual Message Authorization System edits for DE 110 (Encryption Data) are listed.

| an authorization Request/0100 message, DE 3, subfield 1 contains value 92 (PIN Change) and DE 125 (New PIN Data) and DE 110, Dataset 01, TAG 89 is not present | sends the acquirer an Authorization Request Response/0110 message where: <ul style="list-style-type: none"> <li>DE 39 (Response Code) = 30 (Format error)</li> <li>DE 44 (Additional Response Data) = 125 (indicating the data element in error).</li> </ul> |

## DE 111 (Reserved for ISO Use)

DE 111 (Reserved for ISO Use) is reserved for ISO use.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 112 (Additional Data [National Use])

DE 112 (Additional Data [National Use]) is reserved for national organizations to define data unique to specific networks or specific programs and services. DE 112 provides other supplemental data in a message when a specific ISO-designated data element is not available. It is a variable-length, alphanumeric data element used for information on transactions between customers.

### Attributes

| Attribute           | Value                                                                                            |
|---------------------|--------------------------------------------------------------------------------------------------|
| Data Representation | a-1 (for Hungary domestic usage only for processing transactions for Employee Benefits Program). |
| Data Length         | 3 positions                                                                                      |
| Data Field          | Contents of subelements                                                                          |
| Subelements         | Determined by program                                                                            |
| Justification       | N/A                                                                                              |

### Usage

Following is the usage of DE 112 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Values

See subfields.

### Application notes

**NOTE: Mastercard does not perform currency conversion on any amounts in DE 112.**

## DE 112 (Encoding Scheme)

Mastercard organizes DE 112 into a group of encoded subelements. The following table illustrates the structure of DE 112.

### DE structure

| VAR: maximum length varies by program; refer to Data Representation previously for maximum length by program |                            |           |                         |                             |           |                         |
|--------------------------------------------------------------------------------------------------------------|----------------------------|-----------|-------------------------|-----------------------------|-----------|-------------------------|
| LLL                                                                                                          | 3 bytes                    | 3 bytes   | variable by program     | 3 bytes                     | 3 bytes   | variable by program     |
| Total Length                                                                                                 | First Subelement (SE) Data |           |                         | Second Subelement (SE) Data |           |                         |
|                                                                                                              | SE ID                      | SE Length | SE Variable Length Data | SE ID                       | SE Length | SE Variable Length Data |

| Number of Bytes | Attribute                       | Description                                                             |
|-----------------|---------------------------------|-------------------------------------------------------------------------|
| 3               | Total Length field              | The “LLL” portion of the data element up to maximum allowed by program. |
| 3               | Subelement ID                   | In the range 000–099                                                    |
|                 |                                 | 000–069      Defined universally for all programs and services.         |
|                 |                                 | 070–099      Defined for individual programs and services.              |
| 3               | Subelement Length               | Varies by program.                                                      |
| 1...nnn         | Subelement Variable Length Data | Contains valid values.                                                  |

## DE 112 (Dual Message Authorization System Edits)

The Dual Message Authorization System will perform the following system edit to verify proper formatting of DE 112.

| WHEN...                                                         | THEN the Dual Message Authorization System... |
|-----------------------------------------------------------------|-----------------------------------------------|
| Stand-In processing occurs on a commercial card B2B transaction | will not provide DE 112, subelement 045.      |

### Examples

- When an edit error occurs on DE 112, the DE 44 data will be populated as these examples below:
  - Error on DE 112 subelement 45, subfield 1: 11245 (no subfield information is provided)

For non-DE 112 format errors, DE 44 will only have DE info and no subelement information. For example, the format error in DE 22 will have DE 44 as 022.

## Subelement 042 (Acceptor Tax ID)

Subelement 042 (Acceptor Tax ID) will be used in the Dual Message Authorization System to support DE 112 in any received Authorization Request/0100, Authorization Advice/0120, or Reversal Request/0400 message.

### Attributes

| Attributes          | Value                              |
|---------------------|------------------------------------|
| Subelement ID       | 042                                |
| Data Length         | 3 positions                        |
| Data Length Value   | Variable length, 001–012 positions |
| Data Representation | an...012; LLLVAR                   |
| Data Field          | Contents of subelement 042         |
| Justification       | N/A                                |

### Usage

Whether the usage is mandatory, conditional, optional, system-provided, or not required is as noted for each applicable message.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | .   |
| Authorization Advice/0120: acquirer-generated | C   | X   | .   |

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| Reversal Request /0400 | C   | X   | .   |

### Values

| Field name  | Comment                                          |
|-------------|--------------------------------------------------|
| Description | Tax ID                                           |
| Base ID     | n-11 (no dots or dashes), left filled with zeros |
| Check digit | an-1                                             |

### Application notes

This field is required when purchase, purchase with cash back, and refund transactions are submitted by acquirers for merchants in Chile and Paraguay.

The length value is defined as variable length for all markets. However, Chile and Paraguay should use 12 positions exclusively with leading zeros as shown in the examples.

### Examples

| Tax ID       | Format required |
|--------------|-----------------|
| 18.638.773-K | 00018638773K    |
| 7.932.677-1  | 000079326771    |
| 763.567-4    | 000007635674    |

## Subelement 045 (Additional Commercial Issuer Data)

DE 112, subelement 045 is used in the Dual Message Authorization System to provide data required by acquirers and issuers for intracountry processing to be compliant with local regulation for corporate issuer data for B2B transactions.

DE 112, subelement 045 must not be provided in cross-border transactions.

### Attributes

| Attribute     | Description |

| Subfields              | Subfield 01 (Taxpayer Country Code)<br>Subfield 02 (Taxpayer Identification Number)<br>Subfield 03 (Tax Registration Reason Code) |

## Usage

This is the usage of DE 112, subelement 045 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message type identifier             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | P   | C   |

## Subfield 01 (Taxpayer Country Code)

DE 112, subelement 045, subfield 01 is for 3-position alphabetic taxpayer country code of the business buyer, legal entity responsible for the cardholder contract with the issuer of the business or corporate card.

## Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | a...3; LLVAR            |
| Data Field           | Contents of subfield 01 |
| Justification        | Left                    |

## Subfield 02 (Taxpayer Identification Number)

DE 112, subelement 045, subfield 02 is for unique tax identification code of the business buyer, assigned by the tax authority.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...30; LLVAR         |
| Data Field           | Contents of subfield 02 |
| Justification        | N/A                     |

## Subfield 03 (Tax Registration Reason Code)

DE 112, subelement 045, subfield 03 is for tax register reason code of the business buyer, assigned by the tax authority.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 03                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | ans...30; LLVAR         |
| Data Field           | Contents of subfield 03 |
| Justification        | N/A                     |

## Subelement 055 (Brazil Benefits Payment Data)

DE 112, subelement 055 (Brazil Benefits Payment Data) contains data to support processing of intracountry transactions for the Mastercard Benefits Payment Scheme in Brazil.

### Attributes

| Attributes             | Description                   |
|------------------------|-------------------------------|
| Subelement ID          | 055                           |
| Subelement Data Length | 3 positions                   |
| Data Representation    | an...11; LLVAR                |
| Data Field             | Contents of subfields 01 - 02 |
| Subfields              | 2                             |
| Justification          | See subfields                 |

### Usage

Following is the usage of subelement 055 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | C   | P   | C   |
| Authorization Request Response/0110 | C   | P   | C   |

### Values

See subfields.

## Subfield 01 (PAT Eligibility)

DE 112, subelement 055, subfield 01 is provided by acquirers to identify merchants that are PAT (Programa de Alimentação do Trabalhador) eligible when a Brazil domestic transaction is processed as part of the Mastercard Benefits Payment Scheme.

### Attributes

| Attributes           | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | a-1                     |
| Data Field           | Contents of subfield 01 |
| Justification        | N/A                     |

### Values

| Value | Description  |
|-------|--------------|
| Y     | Eligible     |
| N     | Not Eligible |

## Subfield 02 (Benefit Program Code)

DE 112, subelement 055, subfield 02 is provided by issuers to identify the specific benefit program applicable to a Brazil domestic transaction when processed within the Mastercard Benefits Payment Scheme.

### Attributes

| Attributes           | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-2                     |
| Data Field           | Contents of subfield 02 |

| Attributes    | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

| Value | Description                                     |
|-------|-------------------------------------------------|
| 01    | Meal Voucher: Employee Nutrition Program (PAT)  |
| 02    | Food Voucher: Employee Nutrition Program (PAT)  |
| 03    | Culture Voucher: Worker's Culture Program (PCT) |
| 04    | Meal Voucher: Consolidation of Labor Laws (CLT) |
| 05    | Food Voucher: Consolidation of Labor Laws (CLT) |

### Application notes

Acquirers should use subfield 01 (PAT Eligibility) in the Authorization Request/0100 message to indicate merchant PAT eligibility.

Issuers should use subfield 02 (Benefit Program Code) in the Authorization Request Response/0110 message to indicate the specific benefit program applicable to a transaction.

It is not required for issuers to echo back the subfield 01 in the Authorization Request Response/0110 message, however if provided, it will be passed to the acquirer.

## Subelement 60 (Mastercard Network Gateway Services Platform [MNGS] Transport Data) (Mastercard use only)

DE 112, subelement 060 (Mastercard Network Gateway Services Platform [MNGS] Transport Data) (Mastercard use only), is reserved solely for MNGS (Mastercard Network Gateway Services Platform) transport data.

### Attributes

| Attribute              | Description                 |
|------------------------|-----------------------------|
| Subelement ID          | 060                         |
| Subelement Data Length | 3 positions                 |
| Data Representation    | n-399                       |
| Data Field             | Contents of positions 1–399 |

| Attribute     | Description |
|---------------|-------------|
| Subfields     | N/A         |
| Justification | N/A         |

### Usage

Following is the usage of subelement 060 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Authorization Request/0100                  | C   | P   | C   |
| Authorization Request Response/0110         | C   | P   | C   |
| Authorization Advice/0120: system-generated | .   | X   | C   |
| Reversal Request/0400                       | C   | P   | C   |
| Reversal Request Response/0410              | C   | P   | C   |

### Values

This subfield contains MNGS specific application transport data.

### Application notes

MNGS acquired transactions requiring certain services fulfillment will populate subelement 60 to carry application specific data.

## All Regions: Installment Payment Transactions

Following are the technical specifications for Authorization/01xx messages for the global Mastercard Installment Payment Service. Refer to the [Mastercard Installment Payment Service User Guide](#) for additional details.

### Subelement 021 (Installment Payment Data 1)

Subelement 021 (Installment Payment Data 1) is obsolete.

**NOTE: The Dual Message Authorization System currently does not use this subelement.**

## Subelement 022 (Installment Payment Data)

Subelement 022 (Installment Payment Data) is used in the Authorization System for installment payment transactions.

### Attributes

| Attribute              | Description             |
|------------------------|-------------------------|
| Subelement ID          | 022                     |
| Subelement Data Length | 3 positions             |
| Data Representation    | ans...040; LLLVAR       |
| Data Field             | Contents of subfield 01 |
| Subfields              | 1                       |
| Justification          | See subfields           |

### Usage

Following is the usage of subelement 022 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | .   | X   | C   |
| Authorization Request Response/0110 | C   | X   | C   |

## Subfield 01 (Installment Plan ID)

DE 112, subelement 022, subfield 01 (Installment Plan ID) contains a unique value that identifies a specific Mastercard installment transaction during authorization processing, for participating issuers that opt in to receive it.

### Attributes

| Attribute   | Description |
|-------------|-------------|
| Subfield ID | 01          |

| Attribute           | Description             |
|---------------------|-------------------------|
| Subfield length     | 2 positions             |
| Data Representation | ans-36                  |
| Data Field          | Contents of subfield 01 |
| Justification       | N/A                     |

### Values

Mastercard will populate DE 112, subelement 022, subfield 01 with a unique, 36 position Mastercard Installments Payment Services installment plan ID value.

### Example value

3d56f5a7-db48-41f0-875e-30920e8465f3

### Application notes

Acquirers and issuers must never include DE 112, subelement 022, subfield 01 in messages sent to Mastercard.

Mastercard will add DE 112, subelement 022, subfield 01 to Authorization Request/0100 messages for qualified transactions associated with issuers that participate in Mastercard Installments Payment Services. If an issuer includes DE 112, subelement 022, subfield 01 in an Authorization Request Response/0110 message, Mastercard will forward data to the acquirer. However, the acquirer should ignore this data when processing response messages.

## Subelement 023 (Installment Payment Data 3)

Subelement 023 (Installment Payment Data 3) is obsolete.

**NOTE: The Dual Message Authorization System currently does not use this subelement.**

### Alternate Processing

Installment payments are not eligible for alternate processing (Stand-In System or X-Code System). When an issuer is not available, or offline, the Installment Payment transactions will be

declined using the Authorization Request Response/0110 message containing DE 39 (Response Code), value 91 (Authorization System or issuer system inoperative).

## Brazil: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for Brazil payment transactions within Brazil.

### Subelement 012 (Brazil Commercial and Financing Data)

DE 112, subelement 012 (Brazil Commercial and Financing Data) contains additional data to support financing data provided by the acquirer, merchant, or issuer.

**NOTE: For data requirements for Brazil intracountry transactions using the Mastercard BNDES card, refer to the section that follows. The following table applies to non-BNDES transactions only.**

#### Attributes

| Attribute              | Description                 |
|------------------------|-----------------------------|
| Subelement ID          | 012                         |
| Subelement Data Length | 3 positions                 |
| Data Representation    | ans-170                     |
| Data Field             | Contents of positions 1–170 |
| Subfields              | N/A                         |
| Justification          | N/A                         |

### Mastercard Brazil BNDES Card Data Requirements

Mastercard has enhanced the Mastercard Brazilian Development Bank (BNDES) Card to increase card issuance and usage in Brazil and support alternative financing options for small and medium-sized businesses.

Mastercard supports the presence of additional data fields for Brazil intracountry transactions submitted with product code MLD (Mastercard Distribution Card). This addition meets BNDES requirements, in terms of addendum data processed and sent by the BNDES generic module, through the acquirers.

The Mastercard BNDES Card is a solution to access a credit line with subsidized rates by BNDES to finance investments for micro-, small-, and medium-sized businesses established in Brazil.

This product is developed for Brazil domestic use only and transactions are sent to the Mastercard Network using the MLD (Mastercard Distribution Card) product code with a specific promotion code (BNDES1) in all transactions. These are issuer-financed installment (up to 48 installments) transactions, made exclusively through the BNDES Operations Portal.

BNDES has enhanced its Operations Portal's Generic Module, which requires acquirers to send additional data through the Mastercard Network.

**NOTE: All Brazil domestic transactions using the Mastercard BNDES card must contain DE 63 (Network Data), subfield 1 (Financial Network Code), value MLD (Mastercard Distribution Card) in the authorization message. The specific promotion code value BNDES1 must be included in DE 48 (Additional Data—Private Use), subelement 95 (Mastercard Promotion Code).**

In issuer-financed installment billing, the acquirer submits a single clearing record for the full transaction amount. The issuer then bills the cardholder for the installments in accordance with the terms agreed by the cardholder at the point of sale.

**NOTE: A customer's CNPJ number is the registration number provided by the Brazil government to all merchants.**

DE 112, subelement 012 (Brazil Commercial and Financing Data) contains additional data to support Brazil intracountry, consumer credit transactions submitted with value MLD (Mastercard Distribution Card) in DE 63 (Network Data), subfield 1 (Financial Network Code).

For Brazil intracountry transactions using the Mastercard BNDES card, the following data must be included.

### Attributes

| Other (Positions 101–107)                            | Numeric | 7    | Any other added values, if applicable, that the cardholder is paying; two decimal places.                                                                                                             |
| % Other of Total Amount (Positions 108–111)          | Numeric | 4    | Percentage of the whole purchase price that any other added values represent.                                                                                                                         |
| Total Amount to Merchant (Positions 112–123)         | Numeric | 12   | Total amount that will be paid to the merchant (purchase amount); two decimal places.                                                                                                                 |

| Field Name/Positions                                        | Type    | Size | Comment                                                           |
|-------------------------------------------------------------|---------|------|-------------------------------------------------------------------|
| % Amount to Merchant of Total Amount<br>(Positions 124–127) | Numeric | 4    | Percentage of the total amount that will be paid to the merchant. |
| Reserved for Future Use<br>(Positions 128–131)              | Numeric | 4    |                                                                   |

### Application notes

This subelement should be provided to indicate the merchant terminal's capabilities in supporting the third option for the Crediário installment program and services.

Information not populated or optional to a specific field should be zero-filled.

### Subelement 018 (Brazil Post-Dated Transaction Data)

DE 112, subelement 018 (Brazil Post-Dated Transaction Data) contains additional data to support post-dated transaction data provided by the acquirer.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 018                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | ans-39                     |
| Data Field             | Contents of positions 1–39 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

### Usage

Following is the usage of subelement 018 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | C   | P   | C   |
| Authorization Request Response/0110 | CE  | P   | C   |

| Message               | Org | Sys | Dst |
|-----------------------|-----|-----|-----|
| Reversal Request/0400 | C   | .   | C   |

### Values

| Field Name                          | Positions | Attribute | Field Description                                                                                                                                                                                                                                 |

## Dual Message Authorization System Edits

### Post-Dated Transactions

The Dual Message Authorization System performs the following system edits on DE 112, subelement 018 (Brazil Post-Dated Transaction Data), on authorization messages submitted for Post-Dated transactions in Brazil.

| WHEN...                                                                                                                                                                                                                                                                                                                                    | THEN the Dual Message Authorization System...                                                                                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| the Authorization Request/0100 message contains DE 112 (Additional Data—National Use), subelement 018 (Brazil Post-Dated Transaction Data) and the issuer account range is not set up for the Post-Dated Payment service or the issuer and acquirer country codes are not the same                                                         | will reject the transaction with DE 39 (Response Code) = 57 (Transaction not permitted to issuer/ cardholder)                                                                                                              |
| the Authorization Request/0100 message contains DE 112 (Additional Data—National Use), subelement 018 (Brazil Post-Dated Transaction Data), subfield 1 (Service Code) contains value 30 or 31 and DE 61 (Point of Service Data), subfield 7 (POS Transaction Status) does not contain value 5 (Time Based Payment Authorization Request)   | will reject the transaction with <ul style="list-style-type: none"> <li>• DE 39 (Response Code) = 30 (Format error)</li> <li>• DE 44 (Additional Response Data) = 061 (indicating the data element in error)</li> </ul>    |
| the Authorization Request/0100 message contains DE 61 (Point of Service Data), subfield 7 (POS Transaction Status) contains a value 5 (Time Based Payment Authorization Request) and DE 112 (Additional Data—National Use), subelement 018 (Brazil Post-Dated Transaction Data), subfield 1 (Service Code) does not contain value 30 or 31 | will reject the transaction with <ul style="list-style-type: none"> <li>• DE 39 (Response Code) = 30 (Format error)</li> <li>• DE 44 (Additional Response Data) = 112018 (indicating the data element in error)</li> </ul> |

### Alternate Processing

Post-Dated transactions are not eligible for Stand-In or X-Code Processing. If an issuer is not available, or offline, the transactions will be declined using the Authorization Request Response/ 0110 message containing DE 39 (Response Code), value 91 (Dual Message Authorization System or issuer system inoperative).

## Subelement 019 (Original Purchase Amount)

DE 112 (Additional Data [National Use]), subelement 019 contains the amount (two decimal places) that the cardholder wants to finance. Subelement 019 is to be used only for Crediário Account Status Inquiry (ASI) transactions.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 019                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | n-12                       |
| Data Field             | Contents of positions 1–12 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

### Usage

Following is the usage of subelement 019 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | C   | P   | C   |
| Authorization Request Response/0110 | C   | P   | C   |

### Values

This subelement must contain valid numeric data.

### Application notes

This subelement should be provided to indicate the merchant terminal's capabilities for displaying the original purchase amount for the Crediário installment program.

Information not populated or optional to a specific field should be zero-filled.

## Brazil: Merchant Fraud Scoring Data

Following are the technical specifications for Authorization Request/0100 and Authorization Request Response/0110 messages that contain merchant fraud scoring data for card-not-present (CNP) transactions from acquirers in Brazil.

### Subelement 028 (Merchant Fraud Score Data)

DE 112, subelement 028 (Merchant Fraud Score Data) should be used by acquirers in Brazil to send merchant fraud score data.

#### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 028                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | ns-4                      |
| Data Field             | Contents of positions 1–4 |
| Subfields              | N/A                       |
| Justification          | see values                |

#### Usage

Following is the usage of subelement 028 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

#### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | O   | P   | C   |
| Authorization Request Response/0110 | •   | X   | C   |

#### Values

Acquirers may perform merchant fraud scoring either by themselves or through payment gateways. Acquirers in Brazil can forward the merchant fraud scoring information to issuers using this subelement. Issuers can use this data to know that merchant fraud scoring is done by the acquirer and use the data to make approval decision for CNP transaction.

Merchant Fraud Score data provided by acquirers in Brazil should be in the range -999 to +999. Merchant fraud score should be right-justified with leading zeros if the value is less than three digits.

### Application notes

Issuers are not expected to echo DE 112, subelement 028 (Merchant Fraud Score Data) in the Authorization Request Response/0110 message. Mastercard will echo DE 112, subelement 028 (Merchant Fraud Score Data) from Authorization Request/0100 to the acquirers in the Authorization Request Response/0110 message.

## Canada domestic: Transactions

Following are the technical specifications for the Authorization/01xx messages for Canada domestic transactions.

### Subelement 047 (Payment Consent ID)

DE 112 (Additional Data [National Use]), Subelement 047 (Payment Consent ID), is reserved solely for Interac's KONEK commerce platform payment consent ID.

#### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Subelement ID       | 047                        |
| Subelement Length   | 3                          |
| Data Representation | ans-36                     |
| Data Field          | Contents of positions 1-36 |
| Subfields           | N/A                        |
| Justification       | N/A                        |

Whether use is mandatory, conditional, optional, or not required is noted for each applicable message.

#### Usage

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | P   | C   |

## Application notes

An acquirer submitting a transaction with the KONEK payment consent ID will include the KONEK payment consent ID in the Authorization Request/0100 message that the issuer will validate before approving the payment transaction in the Canada region.

## Chile: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for Chile payment transactions within Chile.

### Subelement 010 (Installment Payment Data)

DE 112, Chile, subelement 010 is used in the Dual Message Authorization System for installment payment transactions within Chile.

Subelement 010 must be present if DE 48 (Additional Data: Private Use), subelement 95 (Mastercard Promotion Code) contains the value CHLCTA.

Subelement 010 contains the following subfields used in Chile Domestic Switch (ChIDS) processing. For details on data requirements for these subfields refer to the [Chile Domestic Switch Implementation Guide](#).

- Subfield 1: Total Purchase Amount
- Subfield 2: Number of Installments
- Subfield 3: Installment Type
- Subfield 4: Installment Amount
- Subfield 5: Transaction Interest Rate
- Subfield 6: Deferred Period
- Subfield 7: Deferred Period 1: Installment Amount
- Subfield 8: Deferred Period 1: Interest Rate
- Subfield 9: Deferred Period 1: Period Identifier
- Subfield 10: Deferred Period 2 Installment Amount
- Subfield 11: Deferred Period 2 Interest Rate
- Subfield 12: Deferred Period 2 Period Identifier
- Subfield 13: Deferred Period 3 Installment Amount
- Subfield 14: Deferred Period 3 Interest Rate
- Subfield 15: Deferred Period 3 Period Identifier
- Subfield 16: Simulation Flag
- Subfield 17: Grace Period Flag
- Subfield 18: Grace Period
- Subfield 19: Deferred Period Simulation Flag
- Subfield 20: Reserved for Annual Equivalent Charge Rate (CAE)

## Subelement 042 (Acceptor Tax ID)

Subelement 042 (Acceptor Tax ID) will be used in the Dual Message Authorization System to support DE 112 in any received Authorization Request/0100, Authorization Advice/0120, or Reversal Request/0400 message.

### Attributes

| Tax ID                 | Description      |
|------------------------|------------------|
| Subelement ID          | 042              |
| Subelement Data Length | 3 positions      |
| Data Representation    | an...012; LLLVAR |

### Usage

Following is the usage of subelement 042 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages:

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | .   |
| Authorization Advice/0120: acquirer-generated | C   | X   | .   |
| Reversal Request /0400                        | C   | X   | .   |

### Application notes

This field is required when purchase, purchase with cash back, and refund transactions are submitted by acquirers for merchants in Chile and Paraguay.

### Attributes

| Attribute           | Description                        |
|---------------------|------------------------------------|
| Data Representation | an                                 |
| Data Length         | 3 positions                        |
| Length Value        | Variable length, 001–012 positions |

| Attribute     | Description                |
|---------------|----------------------------|
| Data Field    | Contents of Subelement 042 |
| Justification | N/A                        |
| Description   | Tax ID                     |

## Colombia: Domestic Transactions

Following are the technical specifications for Authorization/01xx messages for Colombia domestic transactions.

### Subelement 035 (Issuer Fee Inquiry Indicator)

DE 112, Colombia, subelement 035 (Issuer Fee Inquiry Indicator) is populated by the acquirer and passed to the issuer to indicate that a transaction qualifies as an Issuer Fee Inquiry.

#### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 035                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | n-2                       |
| Data Field             | Contents of positions 1–2 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

#### Usage

Following is the usage of subelement 035 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

#### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | P   | C   |

### Valid values

| Value | Description                          |
|-------|--------------------------------------|
| 01    | Indicates Issuer Fee Inquiry Request |

## Subelement 036 (Issuer Fee Amount)

DE 112, Colombia, subelement 036 (Issuer Fee Amount) is populated by the issuer with the fee amount that would be associated with the intended ATM cash withdrawal.

### Attributes

| Attribute              | Description                        |
|------------------------|------------------------------------|
| Subelement ID          | 036                                |
| Subelement Data Length | 3 positions                        |
| Data Representation    | n-12                               |
| Data Field             | Contents of positions 1–12         |
| Subfields              | N/A                                |
| Justification          | Right-justified with leading zeros |

### Usage

Following is the usage of subelement 036 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | P   | C   |

### Values

| Value              | Description      |
|--------------------|------------------|
| Valid numeric data | Ex: 000000000123 |

**NOTE:** Amounts are expressed without a decimal separator. For currencies that support exponents, users and systems are responsible for placing the decimal separator appropriately. Currently only for use in Colombia, where currency exponent = 2.

## Colombia: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for Colombia payment transactions within Colombia.

### Subelement 010 (Installment Payment Data)

DE 112, Colombia, subelement 010 (Installment Payment Data) is used in the Dual Message Authorization System for Colombia payment transactions.

Subelement 010 must be present if DE 48, subelement 95 (Mastercard Promotion Code) contains the value COLCTA.

### Attributes

| Attribute              | Description                         |
|------------------------|-------------------------------------|
| Subelement ID          | 010                                 |
| Subelement Data Length | 3 positions                         |
| Data Representation    | ans-2                               |
| Data Field             | Contents of positions 1–2           |
| Subfields              | N/A                                 |
| Justification          | Left-justified with trailing spaces |

### Usage

Conditional.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | P   | C   |
| Authorization Advice/0120: acquirer-generated | C   | P   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |
| Reversal Request /0400                        | C   | P   | C   |

### Values

Example Values:

XX = The number of installments (01–XX)

Maximum number of installments accepted in Colombia may vary (99 as maximum value allowed).

### Subelement 011 (Customer ID)

DE 112, Colombia, subelement 011 (Customer ID) is the customer associated with a voice, card not present, or manual transaction.

### Attributes

| Attribute              | Description                         |
|------------------------|-------------------------------------|
| Subelement ID          | 011                                 |
| Subelement Data Length | 3 positions                         |
| Data Representation    | ans-11                              |
| Data Field             | Contents of positions 1–11          |
| Subfields              | N/A                                 |
| Justification          | Left-justified with trailing spaces |

### Usage

Conditional.

### Applicable messages

| Messages                                      | Org | Sys | Dst |

DE 112, Cuotas: Payment Transactions, subelement 027, subfield 2 (Requested Number of Installments) contains the requested number of payments required to payoff the credit card cash advance.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Subfield ID         | 2                         |
| Data Representation | n-2                       |
| Data Field          | Contents of positions 3–4 |
| Justification       | N/A                       |

### Values

Valid values 01–99.

### Subfield 3 (Approved Number of Installments)

DE 112, Cuotas: Payment Transactions, subelement 027, subfield 3 (Approved Number of Installments) contains the number of installment payments approved by the issuer.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Subfield ID         | 3                         |
| Data Representation | n-2                       |
| Data Field          | Contents of positions 5–6 |

| Attribute     | Description |
|---------------|-------------|
| Justification | Left        |

### Values

Valid values 01–99.

### Subfield 4 (Installment Amount)

DE 112, Cuotas: Payment Transactions, subelement 027, subfield 4 (Installment Amount) contains the monthly payment amount.

#### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Subfield ID         | 4                         |
| Data Representation | n-12                      |
| Data Field          | Contents of positions 7–8 |
| Justification       | Right with leading zeros  |

### Subfield 5 (Total Transaction Amount)

DE 112, Cuotas: Payment Transactions, subelement 027, subfield 5 (Total Transaction Amount) contains the total amount of the credit card cash advance and the interest charged by the issuer.

#### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Subfield ID         | 5                           |
| Data Representation | n-12                        |
| Data Field          | Contents of positions 19–30 |
| Justification       | Right with leading zeros    |

## Subfield 6 (Yearly Interest Rate)

DE 112, Cuotas: Payment Transactions, subelement 027, subfield 6 (Yearly Interest Rate) contains the yearly interest rate that the issuer charges the cardholder for the installment payment.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Subfield ID         | 6                           |
| Data Representation | n-4                         |
| Data Field          | Contents of positions 31–34 |
| Justification       | Right with leading zeros    |

## Subfield 7 (Currency Code)

DE 112, Cuotas: Payment Transactions, subelement 027, subfield 7 (Currency Code) contains the currency code the issuer will be charging the cardholder for repayment.

### Attributes

| Attribute           | Description                 |

## Subfield 8 (Member-Defined Data)

DE 112, Cuotas: Payment Transactions, subelement 027, subfield 8 (Member-defined Data) contains member data.

### Attributes

| Attribute   | Description |
|-------------|-------------|
| Subfield ID | 8           |

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | an-25                       |
| Data Field          | Contents of positions 38–62 |
| Justification       | N/A                         |

### Subfield 9 (Member-Defined Data)

DE 112, Cuotas: Payment Transactions, subelement 027, subfield 9 (Member-defined Data) contains member data.

#### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Subfield ID         | 9                           |
| Data Representation | an-25                       |
| Data Field          | Contents of positions 63–87 |
| Justification       | N/A                         |

## Europe Region and Philippines: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for the Europe Region and Philippines payment transactions.

### Subelement 009 (Installment Payment Data)

DE 112, subelement 009 (Installment Payment Data) is used in the Dual Message Authorization System for installment payment transactions in Georgia and Philippines.

DE 112, subelement 009 only applies when DE 48 (Additional Data: Private Use), subelement 95 (Mastercard Promotion Code) contains the value HGMINS or PHINST.

**NOTE: Customers in the Europe region should refer to global release announcements and the [Mastercard Installment Payment Service User Guide](#) for information about installment payment processing. Mastercard will no longer publish this information in announcements specific to the Europe region as this service is now available globally. Refer to [All Regions: Installment Payment Transactions](#) for more information.**

## Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 009                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | n-33                       |
| Data Field             | Contents of Positions 1–33 |
| Subfields              | N/A                        |
| Justification          | Right with leading zeros   |

## Usage

Following is the usage of subelement 009 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

## Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | C   | P   | C   |
| Authorization Request Response/0110 | CE  | P   | CE  |
| Reversal Request/0400               | C   | P   | C   |
| Reversal Request Response/0410      | CE  | P   | CE  |

## Values

| Value                                  | Description                                                                                                                                     |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Installment type (positions 1–2)       | Installment type contains a type of installment. Valid values include 20 (Issuer-financed), 21 (Merchant-financed), and 22 (Acquirer-financed). |
| Number of installments (positions 3–4) | Number of installments contains the number of installment payments selected by the cardholder. Valid values are 01–99.                          |

| Value                                           | Description                                                                                                                                             |
|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| Interest rate (positions 5–9)                   | Interest rate contains the interest rate (2 decimal) that the issuer charges the cardholder for the installment payments. Default rate is 0% ("00000"). |
| First installment amount (positions 10–21)      | First installment amount contains the amount of the first installment in transaction currency.                                                          |
| Subsequent installment amount (positions 22–33) | Subsequent installment amount contains the amount of the subsequent installment in transaction currency.                                                |

**NOTE: DE 112 (Additional Data [National Use]), subelement 009 (Installment Payment Data) is a conditional echo in the Authorization Request Response/0110 message for Philippines installment payment transactions for finance type 21 (merchant-financed).**

## Dual Message Authorization System Edits

The Dual Message Authorization System performs the following edits on data element 112, subelement 009 (Installment Payment Data), on authorization messages submitted for installment payment transactions in Georgia.

## Subelement 020 (Domestic Acceptor Tax ID)

Subelement 020 (Domestic Acceptor Tax ID) is used in the Croatian Authorization System for payment transactions.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 020                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | ans-20; LLVAR              |
| Data Field             | Contents of Positions 1–20 |
| Subfields              | N/A                        |
| Justification          | Left with trailing spaces  |

### Usage

Following is the usage of subelement 020 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | C   | P   | C   |
| Authorization Request Response/0110 | CE  | P   | CE  |
| Reversal Request/0400               | C   | P   | C   |

| Message                        | Org | Sys | Dst |
|--------------------------------|-----|-----|-----|
| Reversal Request Response/0410 | CE  | P   | CE  |

### Values

Values are assigned by the acquirer.

### Application notes

This field is required when installment transactions are submitted by participating acquirers in Croatia.

## France: Payment Transactions

The following are technical specifications for payment transactions in France. Acquirer hosts must be able to provide the specific information to issuers through the Mastercard Authorization Request/0100 and Authorization Advice/0120 messages using data element (DE) 112 (Additional Data [National Use]) for any transaction occurring at a merchant in France.

### Subelement 020 (Domestic Acceptor Tax ID)

DE 112, France, subelement 020 (Domestic Acceptor Tax ID) is used in the Dual Message Authorization System for French payment transactions. Acquirers send DE 112, subelement 020 to identify the acceptor tax ID (SIRET).

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 020                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | ans...14; LLLVAR           |
| Data Field             | Contents of positions 1–14 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

French payment transactions in the Authorization Request/0100 and Authorization Advice/0120, SIRET value:

### Values

| Positions | Length | Description                |
|-----------|--------|----------------------------|
| 1-3       | 3      | To identify subelement 020 |
| 4-6       | 3      | Overall subelement length  |
| 7-20      | 14     | Acceptor Tax ID            |

## Subelement 096 (Transit Offer ID)

DE 112, France, subelement 096 (Transit Offer ID) is used in the Dual Message Authorization System for French payment transactions. Acquirers send DE 112, subelement 096 to identify the cardholder transit journey.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 096                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | ans...20; LLLVAR           |
| Data Field             | Contents of positions 1-20 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

French payment transactions in the Authorization Request/0100 and Authorization Advice/0120, Transit Offer ID value:

### Values

| Positions | Length | Description                |
|-----------|--------|----------------------------|
| 1-3       | 3      | To identify subelement 096 |
| 4-6       | 3      | Overall subelement length  |
| 7-27      | 20     | Transit Offer ID           |

## Subelement 097 (Application Selection ID)

DE 112, France, subelement 097 (Application Selection ID) is used in the Dual Message Authorization System for French payment transactions. Acquirers send DE 112, subelement 097 to indicate if the application was selected by the merchant or by the cardholder.

### Attributes

| Attribute              | Description             |
|------------------------|-------------------------|
| Subelement ID          | 097                     |
| Subelement Data Length | 3 positions             |
| Data Representation    | n-1                     |
| Data Field             | Contents of positions 1 |
| Subfields              | N/A                     |
| Justification          | N/A                     |

### Values

0 = Selection by default

1 = Cardholder selection

2-9 = Reserved for future use

French payment transactions in the Authorization Request/0100 and Authorization Advice/0120, Application Selection ID value:

### Values

| Positions | Length | Description             |
|-----------|--------|-------------------------|
| 1-3       | 3      | Identify subelement 097 |
| 4-6       | 3      | Subelement length       |
| 7         | 1      | Application ID          |

## Subelement 098 (Brand ID)

DE 112, France, subelement 098 (Brand ID) is used in the Dual Message Authorization System for French payment transactions. Acquirers send DE 112, subelement 098 to identify the brand selected at a POI for a transaction..

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 098                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | n-2                       |
| Data Field             | Contents of positions 1-2 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Values

French payment transactions in the Authorization Request/0100 and Authorization Advice/0120, Application Selection ID value:

00: CB

01: VISA

02: Vpay

03: Electron

04: Mastercard

05: Maestro

06: JCB

07: Discover

08: UPI

09: American Express

10-79: reserved for future use

80-99: reserved for private use

**NOTE: If a subelement is null or empty, the merchant or acquirer must not populate this subelement.**

## Greece: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for installment payment transactions in Greece.

### Subelement 006 (Installment Payment Data)

DE 112, Greece, subelement 006 (Installment Payment Data) is used in the Dual Message Authorization System for Greece payment transactions. It must be present in Authorization Request/0100 and Authorization Request Response/0110 messages when DE 48, subelement 95 (Mastercard Promotion Code) contains the value GREECE.

#### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 006                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | ans...10                   |
| Data Field             | Contents of positions 1–10 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

#### Usage

Greece payment transactions in the Authorization Request/0100 and Authorization Request Response/0110:

#### Applicable messages

| Messages                   | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | P   | C   |
| Reversal Request/0400      | C   | P   | C   |

### Values

| Positions | Length | Description                                                                                                                                                                                                                                                                    |
|-----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Values

| Positions | Length | Description                                                                                                                                                                                 |
|-----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1–12      | 12     | Installment amount (with two decimal places) including any issuer-calculated interest, insurance, or other charges.                                                                         |
| 13–18     | 6      | Due date of first installment (in DDMMYY format).                                                                                                                                           |
| 19–21     | 3      | Financing Currency Code. This is the currency in which the issuer will finance the transaction.<br><br>It specifies the currency using in Installment Amount above.<br><br>978 = Euro (EUR) |
| 22–23     | 2      | Payment Plan. Reserved for future use. Insert all zeros.                                                                                                                                    |

## Hungary: Benefits Program

Following are the technical specifications for transactions in Hungary.

### Subelement 013 (Program ID)

DE 112, subelement 013 (Program ID) contains data to support processing of intracountry transactions for Employee Benefits Program in Hungary.

### Attributes

| Attributes             | Description            |
|------------------------|------------------------|
| Subelement ID          | 013                    |
| Settlement Data Length | 3 positions            |
| Data Representation    | α-1                    |
| Data Field             | Contents of position 1 |
| Subfields              | N/A                    |

| Attributes    | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

| Value | Description        |
|-------|--------------------|
| K     | Program identifier |

## India: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for installment payment transactions in India.

### Subelement 044 (Installment and Recurring Payment Data: Visa Only)

DE 112, subelement 044 (Installment and Recurring Payment Data: Visa Only) is used by the Dual Message Authorization System for installment and recurring payment transactions for accounts issued in India. This subelement is used only with Visa-branded transactions.

### Attributes

| Attribute              | Description                 |
|------------------------|-----------------------------|
| Subelement ID          | 044                         |
| Subelement Data Length | 3 positions                 |
| Data Representation    | an...117; LLLVAR            |
| Data Field             | Contents of subfields 01-12 |
| Subfields              | 12                          |
| Justification          | See subfields               |

### Usage

Following is the usage of this subelement and whether it is mandatory, conditional, optional, system-provided, or not required in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | C   | P   | C   |
| Authorization Request Response/0110 | CE  | P   | CE  |
| Reversal Request/0400               | C   | P   | C   |
| Reversal Request Response/0410      | CE  | P   | CE  |

### Application notes

DE 112, subelement 044 and its subfields are set up in Tag, Length, Value format. The Dual Message Authorization System removes this value if received on transactions that are not Visa-branded. The Dual Message Authorization System performs no editing on this subelement's values.

### Subfield 01 (Transaction Type)

DE 112, subelement 044, subfield 01 (Transaction Type) defines characteristics based on the installment or recurring payment transaction type.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-2                     |
| Data Field           | Contents of subfield 01 |
| Justification        | N/A                     |

### Values

| Position | Value                                                                                                         |
|----------|---------------------------------------------------------------------------------------------------------------|
| 1        | <ul style="list-style-type: none"> <li>1 = Recurring payment and</li> <li>2 = Installment payment.</li> </ul> |

| Position | Value                                                                                                                                                                              |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2        | <ul style="list-style-type: none"> <li>1 = Registration/first transaction</li> <li>2 = Subsequent transaction</li> <li>3 = Modification, and</li> <li>4 = Cancellation.</li> </ul> |

## Subfield 02 (Recurring Payment Validation)

DE 112, subelement 044, subfield 02 (Recurring Payment Validation) identifies if recurring payment transaction has been validated by the originator.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-1                     |
| Data Field           | Contents of subfield 02 |
| Justification        | N/A                     |

### Values

| Value | Description   |
|-------|---------------|
| 0     | Not validated |
| 1     | Validated     |

## Subfield 03 (Maximum Recurring Payment Amount)

DE 112, subelement 044, subfield 03 (Maximum Recurring Payment Amount) defines the maximum amount authorized by the cardholder for a recurring payment transaction.

### Attributes

| Attribute   | Description |
|-------------|-------------|
| Subfield ID | 03          |

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield Data Length | 2 positions              |
| Data Representation  | n-12                     |
| Data Field           | Contents of subfield 03  |
| Justification        | Right with leading zeros |

### Values

The maximum recurring payment amount is expressed in the currency defined by the currency code (subfield 08).

Where a minor unit of currency applies, the maximum recurring payment amount is expressed in the minor unit of currency without a decimal separator (example, value 100 represents INR 1.00).

### Subfield 04 (Registered Transaction Identifier)

DE 112, subelement 044, subfield 04 (Registered Transaction Identifier) provides a unique identifier for the installment and recurring payment mandate.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 04                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | an-10                   |
| Data Field           | Contents of subfield 04 |
| Justification        | N/A                     |

### Values

Any combination of 10 alphanumeric characters is valid.

## Subfield 05 (Number of Payments)

DE 112, subelement 044, subfield 05 (Number of Payments) indicates the number of installment or recurring payment debits.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 05                       |
| Subfield Data Length | 2 positions              |
| Data Representation  | n-2                      |
| Data Field           | Contents of subfield 05  |
| Justification        | Right with leading zeros |

### Values

| Value    | Description                                 |
|----------|---------------------------------------------|
| 00 to 97 | Number of payment debits with leading zeros |
| 98       | Number of payments is not indicated         |
| 99       | Payments are authorized until canceled      |

## Subfield 06 (Payment Frequency)

DE 112, subelement 044, subfield 06 (Payment Frequency) indicates the frequency of payment debits.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 06                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-1                     |
| Data Field           | Contents of subfield 06 |
| Justification        | N/A                     |

### Values

| Value | Description  |
|-------|--------------|
| 0     | Annually     |
| 1     | Daily        |
| 2     | Weekly       |
| 3     | Biweekly     |
| 4     | Monthly      |
| 5     | Quarterly    |
| 6     | Twice yearly |
| 8     | Ad hoc       |

### Subfield 07 (Total Installment Amount)

DE 112, subelement 044, subfield 07 (Total Installment Amount) indicates the total purchase amount corresponding to an installment payment.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 07                       |
| Subfield Data Length | 2 positions              |
| Data Representation  | n-12                     |
| Data Field           | Contents of subfield 07  |
| Justification        | Right with leading zeros |

### Values

The total installment amount is expressed in the currency defined by the Currency Code (subfield 08).

Where a minor unit of currency applies, the total installment amount is expressed in the minor unit of currency without a decimal separator (example, value 100 represents INR 1.00).

## Subfield 08 (Currency Code)

DE 112, subelement 044, subfield 08 (Currency Code) indicates the ISO currency code associated with the maximum recurring payment amount (subfield 03) or total installment amount (subfield 07).

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 08                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | n-3                     |
| Data Field           | Contents of subfield 08 |
| Justification        | N/A                     |

### Values

All currency codes must be selected from the numeric ISO standard currency codes. A list of valid values is available in the [Quick Reference Booklet](#).

Example: A subfield 08 value of 356 indicates the Indian rupee.

## Subfield 09 (Installment Interest Rate)

DE 112, subelement 044, subfield 09 (Installment Interest Rate) indicates the interest rate which applies to the installment payment.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 09                       |
| Subfield Data Length | 2 positions              |
| Data Representation  | n-4                      |
| Data Field           | Contents of subfield 09  |
| Justification        | Right with leading zeros |

### Values

Carries a percentage value with an implied two-position decimal.

Example: An interest rate of 1.23 percent is represented with DE 112, subelement 044, subfield 09 = 0123

## Subfield 10 (Installment Payment Entity)

DE 112, subelement 044, subfield 10 (Installment Payment Entity) identifies the party responsible for managing the splitting and posting of installment payments.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 10                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | an-1                    |
| Data Field           | Contents of subfield 10 |
| Justification        | N/A                     |

### Values

| Value | Description         |
|-------|---------------------|
| 0     | Issuer              |
| 1     | Merchant            |
| 2     | Acquirer            |
| 3     | Payment facilitator |

## Subfield 11 (Installment Interest Charged)

DE 112, subelement 044, subfield 11 (Installment Interest Charged) indicates whether interest is charged to an installment.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 11          |
| Subfield Data Length | 2 positions |

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | an-1                    |
| Data Field          | Contents of subfield 11 |
| Justification       | N/A                     |

### Values

| Value | Description                          |
|-------|--------------------------------------|
| 0     | Regular payment                      |
| 1     | Installment payment without interest |
| 2     | Installment payment with interest    |

## Subfield 12 (Member-Defined Data)

DE 112, subelement 044, subfield 12 (Member-Defined Data) is used to pass data between the acquirer and issuer as defined by the message originator.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 12                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | an-20                   |
| Data Field           | Contents of subfield 12 |
| Justification        | N/A                     |

### Values

This subfield is optional for transactions that contain installment and recurring payment data.

## Japan: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for Japan National Data payment transactions within Japan.

### Subelement 030 (Japan Domestic POS Data)

Subelement 030 (Japan Domestic POS Data) is used in the Dual Message Authorization System to provide data required by acquirers and issuers in Japan for intracountry processing.

#### Attributes

| Attribute              | Description                 |
|------------------------|-----------------------------|
| Subelement ID          | 030                         |
| Subelement Data Length | 3 positions                 |
| Data Representation    | ans-138                     |
| Data Field             | Contents of Positions 1–138 |
| Subfields              | N/A                         |
| Justification          | Right with leading zeros    |

#### Usage

Following is the usage of subelement 030 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

#### Applicable messages

| Message                                       | Org | Sys | Dst |

| Local Transaction Date                                                                                                                                                                                                                                                                                                                                              | 131–138   | n-8<br><br>Format: YYYYMMDD                                                                                                                                                                                                                                                                            |

### Application notes

Because DE 112, subelement 030 contains unique data specific to acquirers and issuers in Japan, Mastercard does not enforce the use of DE 112, subelement 030.

If provided, Mastercard does not validate the contents of DE 112, subelement 030.

If provided, Mastercard will remove subelement 030 from the Authorization Request/0100, Authorization Request Response/0110, Authorization Advice/0120, Authorization Advice Response/0130, Reversal Request/ 0400, and Reversal Request Response/0410 messages when the either acquirer or the issuer country code is not 392 (Japan).

## Subelement 031 (Japan Domestic Response Code)

Subelement 031 (Japan Domestic Response Code) is used in the Dual Message Authorization System to provide data required by acquirers and issuers in Japan for intracountry processing.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 031                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | ans-3                     |
| Data Field             | Contents of Positions 1–3 |
| Subfields              | N/A                       |
| Justification          | Right with leading zeros  |

### Usage

Following is the usage of subelement 031 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | X   | C   |
| Reversal Request Response/0410      | C   | X   | C   |

### Values

| Value      | Positions | Format |
|------------|-----------|--------|
| Error Code | 01–03     | ans-3  |

### Application notes

If present, Mastercard will remove subelement 031 from the Authorization Request Response/0110 and Reversal Request Response/0410 messages when the acquirer or the issuer country code is not 392 (Japan).

## Subelement 032 (Japan Payment Options)

Subelement 032 (Japan Payment Options) is used in the Dual Message Authorization System to provide data for Japan domestic transactions.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 032                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | n-36                      |
| Data Field             | Contents of subfields 1–8 |
| Subfields              | 8                         |
| Justification          | See subfields             |

### Usage

Following is the usage of subelement 032 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | O   | .   | C   |
| Authorization Request Response/0110           | CE  | XE  | CE  |
| Authorization Advice/0120: acquirer-generated | O   | .   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |
| Authorization Advice Response/0130            | CE  | XE  | CE  |
| Reversal Request/0400                         | C   | P   | C   |
| Reversal Request Response/0410                | CE  | XE  | CE  |
| Reversal Advice/0420: system-generated        | .   | X   | C   |
| Reversal Advice Response/0430                 | CE  | X   | .   |

### Values

See subfields.

## Application notes

If subelement 032 is present then all subfields must also be present.

Mastercard provides subelement 032 to facilitate communication of data between the acquirer and issuer. Mastercard does not enforce edits to check the presence of any data. Transactions that do not include DE 112, subelement 032 data will not be rejected.

Mastercard will remove subelement 032 from the Authorization Request/0100, Authorization Request Response/0110, Authorization Advice/0120, Authorization Advice Response/0130, Reversal Request/0400, and Reversal Request Response/0410 messages when either the acquirer or the issuer country code is not 392 (Japan).

## Subfield 1 (Payment Option Code)

DE 112, subelement 032, subfield 1 (Payment Option Code) indicates how the cardholder wants to pay for the transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 1–2 |
| Justification       | Left                      |

### Values

| Value | Description                                                                     |
|-------|---------------------------------------------------------------------------------|
| 10    | Single Payment                                                                  |
| 21    | Bonus Pay                                                                       |
| 22    | Bonus Pay (with number of bonuses)                                              |
| 23    | Bonus Pay (with bonus month)                                                    |
| 24    | Bonus Pay (with number of bonuses and bonus month)                              |
| 31    | Bonus Pay with Installments                                                     |
| 32    | Bonus Pay with Installments (with bonus amount)                                 |
| 33    | Bonus Pay with Installments (with number of bonuses, bonus month)               |
| 34    | Bonus Pay with Installments (with number of bonuses, bonus month, bonus amount) |

| Value | Description                            |
|-------|----------------------------------------|
| 61    | Installments (Twice Pay/Three or More) |
| 80    | Revolving                              |

### Application notes

This field is required and must contain one of the listed values.

### Subfield 2 (Bonuses Per Year)

DE 112, subelement 032, subfield 2 (Bonuses Per Year) indicates if the cardholder receives one or two bonuses per year.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 3–4 |
| Justification       | Right with leading zeros  |

### Values

| Value | Description          |
|-------|----------------------|
| 01    | One bonus per year   |
| 02    | Two bonuses per year |
| 00    | Not Applicable       |

### Application notes

This field must contain values 01 or 02 for Payment Option Codes 22, 24, 33, or 34; otherwise zero filled.

### Subfield 3 (First Bonus Month)

DE 112, subelement 032, subfield 3 (First Bonus Month) identifies month of the next bonus payment received by the cardholder following the purchase date.

#### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 5–6 |
| Justification       | Right with leading zeros  |

#### Values

| Value | Description    |
|-------|----------------|
| 01–12 | Month          |
| 00    | Not Applicable |

#### Application notes

This field must contain a value 01 to 12 for Payment Option Codes 23, 24, 33, or 34; otherwise zero filled.

### Subfield 4 (First Bonus Amount)

DE 112, subelement 032, subfield 4 (First Bonus Amount) indicates the amount of first bonus payment. The currency is the same as the transaction currency.

#### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-12                       |
| Data Field          | Contents of positions 7–18 |
| Justification       | Right with leading zeros   |

### Values

| Value                     | Description                                                                                                |
|---------------------------|------------------------------------------------------------------------------------------------------------|
| 000000000000–999999999999 | Amount of first bonus payment. The currency is the same as the transaction currency. Default is all zeros. |

### Application notes

This field must contain a Bonus Amount for Payment Option Codes 32 and 34; otherwise zero filled.

### Subfield 5 (Second Bonus Month)

DE 112, subelement 032, subfield 5 (Second Bonus Month) identifies the month of the second bonus payment received by the cardholder following the purchase date.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-2                         |
| Data Field          | Contents of positions 19–20 |
| Justification       | Right with leading zeros    |

### Values

| Value | Description    |
|-------|----------------|
| 01–12 | Month          |
| 00    | Not Applicable |

### Application notes

This field must contain a value of 01 to 12 when Payment Option Code is 24, 33, or 34 and subfield 2 (Bonuses Per Year) indicates 2; otherwise it should be zero filled.

## Subfield 6 (Second Bonus Amount)

DE 112, subelement 032, subfield 6 (Second Bonus Amount) indicates the amount of second bonus payment. The currency is the same as the transaction currency.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-12                        |
| Data Field          | Contents of positions 21–32 |
| Justification       | Right with leading zeros    |

### Values

| Value                     | Description                                                                                                 |
|---------------------------|-------------------------------------------------------------------------------------------------------------|
| 000000000000–999999999999 | Amount of second bonus payment. The currency is the same as the transaction currency. Default is all zeros. |

### Application notes

This field should contain a Bonus Amount when Payment Option Code is 34 and subfield 2 (Bonuses Per Year) indicates 2; otherwise it should be zero filled.

## Subfield 7 (Total Number of Installments)

DE 112, subelement 032, subfield 7 (Total Number of Installments) indicates the number of installments.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-2                         |
| Data Field          | Contents of positions 33–34 |
| Justification       | Right with leading zeros    |

### Values

| Value | Description            |
|-------|------------------------|
| 01–99 | Number of installments |
| 00    | Not Applicable         |

### Application notes

This field must contain a value of 01 to 99 when Payment Option Code is 31, 32, 33, 34, or 61; otherwise zero filled.

### Subfield 8 (First Installment Month)

DE 112, subelement 032, subfield 8 (First Installment Month) indicates the month in which the first installment will be paid.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-2                         |
| Data Field          | Contents of positions 35–36 |
| Justification       | Right with leading zeros    |

### Values

| Value | Description    |
|-------|----------------|
| 01–12 | Month          |
| 00    | Not Applicable |

### Application notes

This field must contain a value of 01 to 12 when Payment Option Code is 31, 32, 33, 34, or 61; otherwise zero filled.

## Mexcta: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for Mexcta payment transactions within Mexico.

### Subelement 004 (Credit Line Usage Fee (CLUF))

DE 112, Mexcta, subelement 004 (Credit Line Usage Fee [CLUF]) contains the currency code and fee amount associated with the CLUF for domestic credit card cash advance (CCCA) ATM transactions in Authorization Request Response/0110 and Authorization Reversal Request/0400 Messages.

#### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 004                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | n-11                       |
| Data Field             | Contents of positions 1-11 |
| Subfields              | N/A                        |
| Justification          | Right-justified            |

#### Values

Numeric currency code (positions 1-3).

Fee amount (positions 4-11).

### Subelement 005 (Issuing Bank Name (AKA Doing Business As [DBA]))

DE 112, Mexcta, subelement 005 (Issuing Bank Name [AKA Doing Business As (DBA)]) contains the issuing bank name (DBA) for ATM transactions where the Credit Line Usage Fee (CLUF) applies in Authorization Request Response/0110 and Authorization Reversal Request/0400 Messages.

#### Attributes

| Attribute     | Description |
|---------------|-------------|
| Subelement ID | 005         |

| Attribute              | Description                     |
|------------------------|---------------------------------|
| Subelement Data Length | 3 positions                     |
| Data Representation    | ans-20                          |
| Data Field             | Contents of positions 1–20      |
| Subfields              | N/A                             |
| Justification          | Left-justified, trailing spaces |

## Subelement 006 (Financial Institution ID (FIID))

DE 112, Mexcta, subelement 006 (Financial Institution ID [FIID]) is used in Credit Line Usage Fee (CLUF) transactions on domestic ATM credit card cash advance transactions in the Dual Message Authorization System in Authorization Request Response/0110 and Authorization Reversal Request/0400 Messages.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 006                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | ans-10                     |
| Data Field             | Contents of positions 1–10 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

### Values

Valid FIID.

## Subelement 007 (Installment Payment Data)

DE 112, Mexcta, subelement 007 (Installment Payment Data) is used in the Dual Message Authorization System for Mexcta payment transactions.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 007                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | ans-9                     |
| Data Field             | Contents of positions 1–9 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

### Values

#### Mexcta Payment Transactions in the Authorization Request/0100

| Value | Description                                                                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| XX    | Installment pay plan types (positions 1–2). Valid values include: <ul style="list-style-type: none"> <li>00 (No promotion)</li> <li>03 (Without interest for the cardholder)</li> <li>05 (With interest for the cardholder)</li> <li>07 (Buy today, pay later)</li> </ul>     |
| YY    | The total number of installments (positions 3–4). Valid value is 01–99.                                                                                                                                                                                                       |
| ZZ    | Grace period before first payment (positions 5–6). Valid values is 00–99.                                                                                                                                                                                                     |
| NNN   | Transaction Currency Code (positions 7–9). Same value as DE 49 (Currency Code, Transaction).<br><br>This is the local currency of the acquirer or source location of the transaction. It specifies the currency used in DE 4 (Amount, Transaction).<br><br>484 = Mexican Peso |

### Mexcta Payment Transactions in the Authorization Request Response/0110

| Value | Description                                                                                                                                                                                                                                                                   |

### Subelement 008 (Installment Payment Response Data)

DE 112, Mexcta, subelement 008 (Installment Payment Response Data) is used in the Dual Message Authorization System and Mexcta payment transactions in the Authorization Request Response/0110.

#### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 008                        |
| Subelement Data Length | 23 positions               |
| Data Representation    | ans-23                     |
| Data Field             | Contents of positions 1–23 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

### Values

| Value                                           | Description                                                                                                                                                |
|-------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Installment amount (positions 1–12)             | Installment amount (with two decimal places) including any issuer-calculated interest, insurance, or other charges.                                        |
| Due Date of First Installment (positions 13–18) | Due Date of First Installment (in binary format: ddmmyyyy)                                                                                                 |
| Finance currency code (positions 19–21)         | This is the currency in which the issuer will finance the transaction.<br>This specifies the currency used in installment amount, above 484 (Mexican Peso) |
| Payment Plan (positions 22–23)                  | Reserved for future use. Insert all zeros.                                                                                                                 |

## Netherlands: IBAN (Account Inquiry)

Following are the technical specifications for Account Status Inquiry (ASI) Authorization Request Response/0110 messages that enable customers in the Netherlands to share customer data such as the International Bank Account Number (IBAN).

### Subelement 037 (Additional Cardholder Information)

DE 112 (Additional Data [National Use]), subelement 037 contains cardholder information to help track debit card activity.

### Attributes

| Attribute              | Description                                                                                |
|------------------------|--------------------------------------------------------------------------------------------|
| Subelement ID          | 037                                                                                        |
| Subelement Data Length | 003 positions                                                                              |
| Data Representation    | an...076; LLLVAR                                                                           |
| Data Field             | Contents of subfields 1–2                                                                  |
| Subfields              | Subfield 01: Primary Cardholder Identifier<br>Subfield 02: Secondary Cardholder Identifier |

### Usage

Following is the usage of subelement 37 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | C   | P   | C   |

### Values

See subfields.

### Application notes

Issuers will add DE 112, SE 037 as part of the ASI Authorization Request Response/0110 messages for the Netherlands and add the IBAN and the four-digit card number on the respective subfields. This will be done only after successfully validating that the ASI Authorization Request/0100 message is received by the issuer is a domestic transit ASI request.

### Subfield 01 (Primary Cardholder Identifier)

DE 112, subelement 037 (Additional Cardholder Information), subfield 01 (Primary Cardholder Identifier) is used by customers to share the unique cardholder identifier.

### Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 01                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | an...34; LLVAR          |
| Data Field           | Contents of subfield 01 |
| Justification        | Left                    |

### Values

For Netherlands intracountry transit activity issuers will populate this subfield with the 18-digit International Bank Account Number (IBAN) within the ASI Authorization Request Response/0110 message to the acquirer.

Issuers will populate this field only upon successful validation of ASI Authorization Request/0100 message and then respond back with an ASI Authorization Request Response/0110 message with this additional DE 112, SE 037, SF 01.

## Example

The sample below is an example of an International Bank Account Number (IBAN) for the Netherlands.

## Sample

|                   |                      |
|-------------------|----------------------|
| IBAN              | NL91ABAB0XX71XX300   |
| ISO Country Code  | NL (The Netherlands) |
| IBAN Check Digits | 91                   |
| BBAN              | ABAB0XX71XX300       |
| Bank Identifier   | ABAB                 |
| Account Number    | 0XX71XX300           |

The IBAN consists of a two-letter country code, two check digits and a Basic Bank Account Number (BBAN). A BBAN includes information about the domestic bank and account number. The IBAN print format adds one space after every four characters whereas the electronic format contains no spaces.

## Subfield 02 (Secondary Cardholder Identifier)

DE 112, subelement 037 (Additional Cardholder Information), subfield 02 (Secondary Cardholder Identifier) is used by customers to share the unique cardholder identifier.

## Attributes

| Attribute            | Description             |
|----------------------|-------------------------|
| Subfield ID          | 02                      |
| Subfield Data Length | 2 positions             |
| Data Representation  | an...34; LLVAR          |
| Data Field           | Contents of subfield 02 |
| Justification        | Left                    |

## Values

For Netherlands intracountry transit-related ASI Authorization Request Response/0110 messages will be populated with the four-digit card number information of the cardholder, provided by the issuer to the acquirer, which is then provided to the merchant.

## Paraguay: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for Paraguay payment transactions within Paraguay.

### Subelement 042 (Acceptor Tax ID)

Subelement 042 (Acceptor Tax ID) will be used in the Dual Message Authorization System to support DE 112 in any received Authorization Request/0100, Authorization Advice/0120, or Reversal Request/0400 message.

#### Attributes

| Attribute              | Description      |
|------------------------|------------------|
| Subelement ID          | 042              |
| Subelement Data Length | 3 positions      |
| Data Representation    | ans...12; LLLVAR |

#### Usage

Following is the usage of subelement 042 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages:

#### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | •   |
| Authorization Advice/0120: acquirer-generated | C   | X   | •   |
| Reversal Request /0400                        | C   | X   | •   |

#### Application notes

This field is required when purchase, purchase with cash back, and refund transactions are submitted by acquirers for merchants in Chile and Paraguay.

## Parcelas: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for Parcelas payment transactions within Brazil.

### Subelement 001 (Installment Payment Data)

DE 112, Parcelas, subelement 001 (Installment Payment Data) is used in the Dual Message Authorization System for Parcelas payment transactions.

#### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 001                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | ans-4                     |
| Data Field             | Contents of positions 1–4 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

#### Values

#### Parcelas Payment Transactions in the Authorization Request/0100

Used for both issuer- or merchant-financed Parcelas transactions: From acquirer to issuer requiring approval; use the following format:

|    |                              |
|----|------------------------------|
| XX | Parcelas plan type:          |
|    | 20 = Issuer-financed         |
|    | 21 = Merchant-financed       |
|    | 25 = Crediário               |
| YY | The total number of Parcelas |

#### Parcelas Payment Transactions in the Authorization Request Response/0110

Used for both issuer- or merchant-financed Parcelas transactions: From acquirer to issuer requiring approval. Echoing this subelement in the Authorization Request Response is unique to Brazil processing. Use the following format:

|    |                              |
|----|------------------------------|
| XX | Parcelas plan type:          |
|    | 20 = Issuer-financed         |
|    | 21 = Merchant-financed       |
|    | 25 = Crediário               |
| YY | The total number of Parcelas |

## Subelement 002 (Installment Payment Response Data)

DE 112, Parcelas, subelement 002 (Installment Payment Response Data) is used in the Dual Message Authorization System and Parcelas payment transactions.

### Attributes

| Attribute              | Description                                                 |
|------------------------|-------------------------------------------------------------|
| Subelement ID          | 002                                                         |
| Subelement Data Length | 3 positions                                                 |
| Data Representation    | ans-32 if format 1 is used and<br>ans-4 if format 2 is used |
| Data Field             | Contents of positions 1–32 or 1–4                           |
| Subfields              | N/A                                                         |
| Justification          | N/A                                                         |

### Values

#### Format 1: Issuer-Financed Parcelas transactions in the Authorization Request Response/0110

Issuer acknowledgment format 1, from issuer to acquirer, upon transaction approval; all amounts are express in transaction currency; contents are as follows:

| Value           | Description                                                                                            |
|-----------------|--------------------------------------------------------------------------------------------------------|
| Positions 1–4   | Parcelas information, same as subelement 001.                                                          |
| Positions 5–16  | Parcelas (or installment) amount issuer calculates, including calculated interest; two decimal places. |
| Positions 17–28 | Transaction total amount issuer calculates, including calculated interest; two decimal places.         |

| Value           | Description                                                  |
|-----------------|--------------------------------------------------------------|
| Positions 29–32 | Monthly interest rate issuer calculates; two decimal places. |

### Format 2: Merchant-Financed Parcelas transactions in the Authorization Request Response/0110

Issuer acknowledgment format 2, from issuer to acquirer, upon transaction approval; Parcelas information copied from subelement 001 as follows:

| Value | Description                  |
|-------|------------------------------|
| 21    | Merchant-financed            |
| YY    | The total number of Parcelas |

## Subelement 016 (Additional Installment Payment Response Data)

DE 112, Parcelas, subelement 016 (Additional Installment Payment Response Data) is used in the Dual Message Authorization System and Parcelas payment transactions.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 016                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | ans-74                     |
| Data Field             | Contents of positions 1–74 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

All Authorization Request Response/0110 messages in response to Parcelas Authorization Request/0100 messages must include additional information to identify the total effective cost of installment transactions.

### Values

| Value          | Description                      |
|----------------|----------------------------------|
| Positions 1–12 | Total Effective Cost (TEC) (N12) |

| Value           | Description                               |
|-----------------|-------------------------------------------|
| Positions 13–19 | Taxes (N7)                                |
| Positions 20–23 | % Taxes of Total Amount (N4)              |
| Positions 24–30 | Fee (N7)                                  |
| Positions 31–34 | % Fee of Total Amount (N4)                |
| Positions 35–41 | Insurance (N7)                            |
| Positions 42–45 | % Insurance of Total Amount (N4)          |
| Positions 46–52 | Other (N7)                                |
| Positions 53–56 | % Other of Total Amount (N4)              |
| Positions 57–63 | Total Amount to Merchant (N7)             |
| Positions 64–67 | % Amount to Merchant of Total Amount (N4) |
| Positions 68–74 | % Total Effect Cost (N7)                  |

## Percta: Payment Transactions

Following are the technical specifications for Authorization/01xx messages for Percta payment transactions within Peru.

### Subelement 007 (Installment Payment Data)

DE 112, Percta, Subelement 007 (Installment Payment Data) is used in the Dual Message Authorization System for Percta payment transactions.

#### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 007                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | ans-8                     |
| Data Field             | Contents of positions 1–8 |
| Subfields              | N/A                       |
| Justification          | N/A                       |

## Values

### Percta Payment Transactions in the Authorization Request/0100

| Value | Description                                                                                                                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| XX    | Type of credit (positions 1–2). Valid value is 20 (Issuer-financed) In the case of Peru, issuer finance is the only finance model.                                                                                                                                                                     |
| YY    | The total number of installments (positions 3–4). Valid value is 01–99.                                                                                                                                                                                                                                |
| Z     | Grace period before first payment (position 5). ## Subelement 008 (Installment Payment Response Data)

DE 112, Percta, subelement 008 (Installment Payment Response Data) is used in the Dual Message Authorization System and Percta payment transactions.

### Attributes

| Attribute              | Description                |
|------------------------|----------------------------|
| Subelement ID          | 008                        |
| Subelement Data Length | 3 positions                |
| Data Representation    | ans-23                     |
| Data Field             | Contents of positions 1–23 |
| Subfields              | N/A                        |
| Justification          | N/A                        |

### Values

| Value                                           | Description                                                                                                                                                                                |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Installment amount (positions 1–12)             | Installment amount (with two decimal places) including any issuer-calculated interest, insurance, or other charges.                                                                        |
| Due Date of First Installment (positions 13–18) | Due Date of First Installment (in binary format: ddmmyyyy)                                                                                                                                 |
| Finance currency code (positions 19–21)         | This is the currency in which the issuer will finance the transaction.<br>This specifies the currency used in installment amount, above 604 (Peru Nuevo Sol) or 840 (United States dollar) |
| Payment Plan (positions 22–23)                  | Reserved for future use. Insert all zeros.                                                                                                                                                 |

## Poland: Value-Added Tax specifications

Following are technical specifications for Poland Value-Added Tax (VAT) Split payment transactions in the Authorization Request/0100 and Authorization Response/0110.

### Subelement 041 (Poland VAT Data)

DE 112, Poland, subelement 041 (Poland VAT Data) is used in the Dual Message Authorization System for Poland VAT split payment transaction. It should be present in Authorization

Request/0100 and Authorization Request Response/0110 messages when processing a VAT Split payment transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Subelement ID       | 041                       |
| Data Length         | 3 positions               |
| Data Representation | ans-84                    |
| Data Field          | Contents of position 1-84 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

### Values

| Positions | Length | Description     | Comments                            |
|-----------|--------|-----------------|-------------------------------------|
| 1-12      | 12     | VAT Amount      | Right-justified with leading zeros  |
| 13-24     | 12     | Net Amount      | Right-justified with leading zeros  |
| 25-44     | 20     | Merchant Tax ID | Right-justified with leading spaces |
| 45-84     | 40     | Invoice Number  | Right-justified with leading spaces |

Poland VAT Split payment transactions in the Authorization Request/0100 and Authorization Response/0110.

## Spain: Domestic ATM Transactions

Following are the technical specifications for Authorization/01xx messages for domestic ATM transactions within Spain.

### Subelement 017 (ATM Domestic Fee)

DE 112, subelement 017 (ATM Domestic Fee) contains fees charged for ATM domestic transactions in Spain.

#### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 017                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | n...48; LLLVAR            |
| Data Field             | Contents of subfields 1–3 |
| Subfields              | 3                         |
| Justification          | See subfields.            |

#### Usage

Following is the usage of subelement 017 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

#### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | C   | P   | C   |
| Authorization Request Response/0110 | C   | P   | C   |
| Reversal Request/0400               | C   | P   | C   |

#### Values

See subfields.

## Subfield 1 (ATM Service Fee)

DE 112, subelement 017, subfield 1 (ATM Service Fee) contains fee amount in the currency of DE 49 (Currency Code, Transaction) charged to the issuer to compensate the ATM acquirer for the ATM cost incurred for ATM domestic transactions in Spain.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 01                       |
| Subfield Data Length | 2 positions              |
| Data Representation  | n-12                     |
| Data Field           | Contents of subfield 1   |
| Justification        | Right with leading zeros |

### Values

ATM Service Fee amount in transaction currency.

## Subfield 2 (ATM Disloyalty Fee)

DE 112, subelement 017, subfield 2 (ATM Disloyalty Fee) contains fee amount in the currency of DE 51 (Currency Code, Cardholder Billing), charged by the issuer to the cardholder for using another bank's ATM for ATM domestic transactions in Spain.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 02                       |
| Subfield Data Length | 2 positions              |
| Data Representation  | n-12                     |
| Data Field           | Contents of subfield 2   |
| Justification        | Right with leading zeros |

### Values

ATM Disloyalty Fee amount in Cardholder Billing currency.

### Subfield 3 (Credit Card Fee)

DE 112, subelement 017, subfield 3 (Credit Card Fee) contains fee amount in the currency of DE 51 (Currency Code, Cardholder Billing) charged by the issuer to the cardholder for the grant of credit for ATM domestic transactions in Spain.

#### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 03                       |
| Subfield Data Length | 2 positions              |
| Data Representation  | n-12                     |
| Data Field           | Contents of subfield 3   |
| Justification        | Right with leading zeros |

#### Values

Credit Card Fee amount in Cardholder Billing currency.

## Taiwan: National Data

Following are the technical specifications specific to Taiwan domestic transactions.

### Subelement 038 (Taiwan National Data)

DE 112, subelement 038 (Taiwan National Data) is used in the authorization message to pass national data between acquirers and issuers for intracountry processing.

#### Attributes

| Attribute              | Description                 |
|------------------------|-----------------------------|
| Subelement ID          | 038                         |
| Subelement Data Length | 3 positions                 |
| Data Representation    | ans..256; LLLVAR            |
| Data Field             | Contents of positions 1–256 |
| Subfields              | N/A                         |
| Justification          | N/A                         |

## Usage

Following is the usage of subelement 038 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | O   | .   | C   |
| Authorization Request Response/0110 | O   | .   | C   |
| Reversal Request/0400               | O   | .   | C   |
| Reversal Request Response/0410      | O   | .   | C   |

## Values

Market agreed values for installment data and other national specific data fields.

## United Kingdom: Debt Repayment Transactions

Following are the technical specifications for Authorization/01xx messages for United Kingdom debt repayment transactions within the U.K.

### Subelement 033 (UK Recipient Details)

DE 112, subelement 033 (UK Recipient Details) supports the transmission of recipient details in an authorization request from acquirer to issuer.

### Attributes

| Attribute              | Description               |
|------------------------|---------------------------|
| Subelement ID          | 033                       |
| Subelement Data Length | 3 positions               |
| Data Representation    | ans...89; LLLVAR          |
| Data Field             | Contents of subfields 1–4 |
| Subfields              | 4                         |
| Justification          | See subfields             |

## Usage

Following is the usage of subelement 033 (whether it is mandatory, conditional, optional, or system provided) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

## Values

See subfields.

### Subfield 1 (Recipient Last Name)

DE 112, subelement 033 (UK Recipient Details), subfield 1 (Recipient Last Name) contains the last name of the recipient.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 01                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | ans...35; LLVAR        |
| Data Field           | Contents of subfield 1 |
| Justification        | N/A                    |

## Values

Contains valid last name of the recipient (only the first six letters of the last name are required).

## Subfield 2 (Recipient Postal Code)

DE 112, subelement 033 (UK Recipient Details), subfield 2 (Recipient Postal Code) contains the postal code of the recipient.

### Attributes

| Attribute            | Description                         |
|----------------------|-------------------------------------|
| Subfield ID          | 02                                  |
| Subfield Data Length | 10 positions                        |
| Data Representation  | ans-10                              |
| Data Field           | Contents of subfield 2              |
| Justification        | left-justified with trailing spaces |

### Values

Contains valid location postal code of the recipient. First part represents the district, then space-filled.

## Subfield 3 (Recipient Date of Birth)

DE 112, subelement 033 (UK Recipient Details), subfield 3 (Recipient Date of Birth) contains the date of birth of the recipient.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 03                     |
| Subfield Data Length | 08 positions           |
| Data Representation  | n-8                    |
| Data Field           | Contents of subfield 3 |
| Justification        | N/A                    |

### Values

Contains valid date of birth of the recipient in the format YYYYMMDD.

## Subfield 4 (Recipient Account Number)

DE 112, subelement 033 (UK Recipient Details), subfield 4 (Recipient Account Number) contains valid account number of the recipient.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 04                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | ns...20; LLVAR         |
| Data Field           | Contents of subfield 4 |
| Justification        | N/A                    |

### Values

Contains the recipient account number.

## DE 113 (Reserved for National Use)

DE 113 (Reserved for National Use) is reserved for national organizations to define data unique to specific networks or specific programs and services.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 114 (Reserved for National Use)

DE 114 (Reserved for National Use) is reserved for national organizations to define data unique to specific networks or specific programs and services.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 115 (Reserved for National Use)

DE 115 (Reserved for National Use) is reserved for national organizations to define data unique to specific networks or specific programs and services.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 116 (Mastercard Internal Use Data 2)

DE 116 (Mastercard Internal Use Data 2) is reserved by Mastercard for internal use only. Mastercard will never send DE 116 to external message receivers. External message originators must not include DE 116 in any messages sent to Mastercard. If DE 116 is sent to Mastercard, it will be ignored.

## DE 117 (Reserved for National Use)

DE 117 (Reserved for National Use) is reserved for national organizations to define data unique to specific networks or specific programs and services.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 118 (Reserved for National Use)

DE 118 (Reserved for National Use) is reserved for national organizations to define data unique to specific networks or specific programs and services.

**NOTE: The Dual Message Authorization System currently does not use this data element.**

## DE 119 (Additional Data: Private Use 2)

DE 119 (Additional Data: Private Use 2) contains data associated with various Mastercard programs, products, and services. DE 119 is used to convey data that is not related to any other ISO-defined data elements. It is a variable-length data element used for multiple purposes.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | ans...999; LLLVAR       |
| Data Element Length | 3 positions             |
| Data Field          | Contents of subelements |
| Subelements         | 3                       |
| Justification       | See Subelements         |

## Usage

The following applies to DE 119 usage:

- Subelements do not need to be in any particular order or sequence within DE 119.
- Customers must be able to send and receive all subelements available within DE 119.
- Subelements 900-999 are reserved for Mastercard internal use.

Following is the usage of DE 119 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

| Message                                | Org | Sys | Dst |
|----------------------------------------|-----|-----|-----|
| Authorization Request/<br>0100         | •   | X   | C   |
| Authorization Request<br>Response/0110 | •   | X   | C   |

## Application notes

Mastercard may introduce new DE 119 subelements and subfields between releases to facilitate special processing within a country, region, or among pilot participants. Mastercard requires customers to be able to successfully process various online messages that may contain new unannounced DE 119 subelements and subfields.

DE 119 and DE 48 contain different subelement definitions. Subelements defined for DE 119 must be sent in DE 119, not DE 48.

For information on other uses of this data element, refer to the message layouts.

## Special notes

Acquirers and issuers must be able to send and receive all DE 119 subelements. Responding to DE 119 subelements is conditional, or optional, per individual subelement.

Responding to DE 119 subelements may depend on brand, purpose of the request, and conditional to the individual program or service agreement between the Single Message System and the issuer.

## DE 119 encoding scheme

Mastercard organizes DE 119 into a group of encoded subelements and subfields. The following tables illustrate the structure of DE 119 subelements.

### Structure of DE 119 subelements

| LLL          | VAR (maximum length varies) |                   |                                 |                        |                   |                                 |
|--------------|-----------------------------|-------------------|---------------------------------|------------------------|-------------------|---------------------------------|
| 3 bytes      | 3 bytes                     | 3 bytes           | Variable length                 | 3 bytes                | 3 bytes           | Variable length                 |
| Total length | First subelement data       |                   |                                 | Second subelement data |                   |                                 |
|              | Subelement ID               | Subelement length | Subelement variable length data | Subelement ID          | Subelement length | Subelement variable length data |

### Attributes of DE 119 subelements

| Number of bytes | Attribute                       | Value                                 |
|-----------------|---------------------------------|---------------------------------------|
| 3               | Total data element length       | The "LLL" portion of the data element |
| 3               | Subelement ID                   | In the range 001-999                  |
| 3               | Subelement length               | Variable                              |
| 1...nnn         | Subelement variable length data | Contents of subfields                 |

## DE 119 subelement encoding scheme

The following tables illustrate the structure of DE 119 subfields within a subelement.

### Structure of DE 119 subfields within a subelement

| VAR (maximum length varies) |         |                 |                      |         |                 |
|-----------------------------|---------|-----------------|----------------------|---------|-----------------|
| 3 bytes                     | 3 bytes | Variable length | 3 bytes              | 3 bytes | Variable length |
| First subfield data         |         |                 | Second subfield data |         |                 |

| VAR (maximum length varies) |                 |                               |             |                 |                               |
|-----------------------------|-----------------|-------------------------------|-------------|-----------------|-------------------------------|
| Subfield ID                 | Subfield length | Subfield variable length data | Subfield ID | Subfield length | Subfield variable length data |

#### Attributes of DE 119 subfields within a subelement

| Number of bytes | Attribute                     | Value                 |
|-----------------|-------------------------------|-----------------------|
| 3               | Subfield ID                   | In the range 001-999  |
| 3               | Subfield length               | Variable              |
| 1...nnn         | Subfield variable length data | Contents of subfields |

## Subelement 003 (MDES Service Indicators for Issuers)

DE 119, subelement 003 (MDES Service Indicators for Issuers) provides indicators to issuers about issuer-related services that were applied to the transaction.

#### Attributes

| Attribute           | Description                                                                                                   |
|---------------------|---------------------------------------------------------------------------------------------------------------|
| Subelement ID       | 003                                                                                                           |
| Subelement Length   | 3                                                                                                             |
| Data Representation | ans...98; LLLVAR<br>The "LLL" length field of the LLLVAR must be an integral multiple of 2, not to exceed 098 |
| Justification       | N/A                                                                                                           |

#### Usage

Following is the usage of DE 119, subelement 003 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | .   | X   | C   |

### Application notes

The Dual Message Authorization System inserts this subelement into Authorization Request/0100 messages when the issuer has opted-in to receive it.

This string consists of a repeating 2-byte structure, where each 2-byte segment serves as an indicator of the service performed.

## Subelement 004 (MDES Service Indicators for Acquirers)

DE 119, subelement 004 (MDES Service Indicators for Acquirers) provides indicators to acquirers about acquirer-related services that were applied to the transaction.

### Attributes

| Attribute           | Description                                                                                                   |
|---------------------|---------------------------------------------------------------------------------------------------------------|
| Subelement ID       | 004                                                                                                           |
| Subelement Length   | 3                                                                                                             |
| Data Representation | ans...98; LLLVAR<br>The "LLL" length field of the LLLVAR must be an integral multiple of 2, not to exceed 098 |
| Justification       | N/A                                                                                                           |

### Usage

Following is the usage of DE 119, subelement 004 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request Response/0110 | .   | X   | C   |

### Application notes

The Dual Message Authorization System inserts this subelement into Authorization Request Response/0110 messages.

## Subelement 005 (MDES Service Indicators for Issuers and Acquirers)

DE 119, subelement 005 (MDES Service Indicators for Issuers and Acquirers) provides indicators to both issuers and acquirers about common services that were applied to the transaction.

### Attributes

| Attribute           | Description                                                                                                    |
|---------------------|----------------------------------------------------------------------------------------------------------------|
| Subelement ID       | 005                                                                                                            |
| Subelement Length   | 3                                                                                                              |
| Data Representation | ans...098; LLLVAR<br>The "LLL" length field of the LLLVAR must be an integral multiple of 2, not to exceed 098 |
| Justification       | N/A                                                                                                            |

### Usage

Following is the usage of DE 119, subelement 005 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                             | Org | Sys | Dst |
|-------------------------------------|-----|-----|-----|
| Authorization Request/0100          | •   | X   | C   |
| Authorization Request Response/0110 | •   | X   | C   |

### Application notes

The Dual Message Authorization System inserts this subelement into:

- Authorization Request/0100 messages when the issuer has opted-in to receive it
- Authorization Request Response/0110 messages

This string consists of a repeating 2-byte structure, where each 2-byte segment serves as an indicator of the service performed.

Reserved for future Service Indicators.

Refer to *MDES Technical Specifications for Dual and Single Message Systems* for more information.

## DE 120 (Record Data)

DE 120 (Record Data) is a variable-length data element used for transmitting file record data or textual character string data in various message types.

### Attributes

| Attribute           | Description                                          |
|---------------------|------------------------------------------------------|
| Data Representation | ans...999; LLLVAR (supports extended character sets) |
| Data Length         | 3 positions                                          |
| Data Field          | Contents of subfields 1, or 2, or 3, or 4            |
| Subfields           | 4                                                    |
| Justification       | See subfields                                        |

### Usage

Following is the usage of DE 120 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                      | Org | Sys | Dst |
|----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                   | C   | X   | C   |
| Authorization Request Response/0110          | C   | X   | C   |
| Issuer File Update Request/0302              | C   | X   | .   |
| Issuer File Update Request Response/0312     | .   | X   | C   |
| Administrative Advice/0620: system-generated | .   | X   | C   |
| Administrative Advice/0620: member-generated | C   | P   | C   |

## Values

See subfields.

## Application notes

The following applies to DE 120.

### Authorization Request/0100: AVS messages

When DE 120 is present in Authorization Request/0100 messages, DE 120 contains Address Verification Service data. Only one of the four possible subfields will be present in a message from an acquirer or to an issuer. In Authorization Request Response/0110: AVS messages, DE 120 contains the AVS data originally provided in the Authorization Request/0100 message.

### Issuer File Update Request/0302 messages

When DE 120 is present in Issuer File Update Request/0302 messages, DE 120 contains the new, actual file record data used in "add" or "change" file maintenance requests. In Issuer File Update Request Response/0312 messages, DE 120 contains actual record data for file maintenance requests.

### Administrative Advice/0620 messages

When DE 120 is present in Administrative Advice/0620 messages, DE 120 contains the following:

- In Administrative Advice/0620 messages, DE 120 includes the new subfields Token Requestor ID, Wallet ID, and Device Type.
- In Administrative Advice/0620: System-generated message where DE 60 is 600, DE 120 contains the first 200 bytes of an indecipherable message.
- In Administrative Advice/0620: Member-generated message where DE 60 is 650, DE 120 contains member-provided free format textual data.

## Subfield 01 (AVS Service Indicator 1)

DE 120, subfield 01 (AVS Service Indicator 1) contains AVS data in this format for an issuer whose AVS Service Indicator status is 1.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Subfield ID          | 01                         |
| Subfield Data Length | 2 positions                |
| Data Representation  | ans...29                   |
| Data Field           | Contents of positions 1–29 |

| Attribute     | Description           |
|---------------|-----------------------|
| Justification | Left, trailing spaces |

### Values

| Value                                             | Description                |
|---------------------------------------------------|----------------------------|
| Positions 1–9: Postal Code                        |                            |
| Postal Code                                       | Cardholder postal/ZIP code |
| Positions 10–29: Address (Mastercard)             |                            |
| Address                                           | Cardholder address         |
| Positions 10–29: Address (Visa, American Express) |                            |
| Address                                           | Cardholder address         |

### Application notes

Some merchants or acquirers are currently limited to supporting only numeric data.

The Authorization System will not truncate the address data passed from the acquirer if greater than 29 positions. DE 120 is an LLLVAR field; therefore, it will indicate the length of the data being passed. The issuer should code to accept the data if it is more than 29 positions.

## Subfield 02 (AVS Service Indicator 2)

DE 120, subfield 02 (AVS Service Indicator 2) contains AVS data in this format for an issuer whose AVS Service Indicator status is 2.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Subfield ID          | 02                         |
| Subfield Data Length | 2 positions                |
| Data Representation  | an-14                      |
| Data Field           | Contents of positions 1–14 |
| Justification        | Left, blank-filled         |

### Values

| Value                                 | Description                |
|---------------------------------------|----------------------------|
| Positions 1–9: Postal Code            |                            |
| Postal Code                           | Cardholder postal/ZIP code |
| Positions 10–14: Address (Mastercard) |                            |
| Address                               | Cardholder address         |

### Application notes

Issuer receives condensed address data. (This supports the algorithm that uses the first five numeric digits in an address [when scanning the address from left to right].)

## Subfield 03 (AVS Service Indicator 3)

DE 120, subfield 03 (AVS Service Indicator 3) contains AVS data in this format for an issuer whose AVS Service Indicator status is 3.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Subfield ID          | 03                         |
| Subfield Data Length | 2 positions                |
| Data Representation  | an-14                      |
| Data Field           | Contents of positions 1–14 |
| Justification        | Left, blank-filled         |

### Values

| Value                                 | Description                |
|---------------------------------------|----------------------------|
| Positions 1–9: Postal Code            |                            |
| Postal Code                           | Cardholder postal/ZIP code |
| Positions 10–14: Address (Mastercard) |                            |

| Value   | Description        |
|---------|--------------------|
| Address | Cardholder address |

### Application notes

The issuer receives condensed address data. (This subfield supports the algorithm that uses up to the first five numeric digits that appear before the first alphabetic character or space in the address when scanning the address from left to right.)

## Subfield 04 (AVS Service Indicator 4)

DE 120, subfield 04 (AVS Service Indicator 4) contains AVS data in this format for an issuer whose AVS Service Indicator status is 4.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Subfield ID          | 04                         |
| Subfield Data Length | 2 positions                |
| Data Representation  | an-14                      |
| Data Field           | Contents of positions 1–14 |
| Justification        | Left, blank-filled         |

### Values

| Value                                 | Description                |
|---------------------------------------|----------------------------|
| Positions 1–9: Postal Code            |                            |
| Postal Code                           | Cardholder postal/ZIP code |
| Positions 10–14: Address (Mastercard) |                            |
| Address                               | Cardholder address         |

### Application notes

Issuer supports AVS, receives condensed numeric postal code and condensed numeric address only. (This supports the algorithm that uses only the numeric digits in a postal code and the first five numeric digits in an address [when scanning the address from left to right].)

## Online file maintenance

DE 120 (Record Data), contains the record detail for the file type identified in DE 101 (File Name). The record detail contained in DE 120 depends on the value provided in DE 91 (Issuer File Update Code). The following table lists the allowed DE 91 values for each DE 101 file type.

### Applicable MCCs

| DE 101 (File Name)                                        | DE 91 (Issuer File Update Code) |          |          |           |
|-----------------------------------------------------------|---------------------------------|----------|----------|-----------|
|                                                           | 1 Add                           | 2 Update | 3 Delete | 5 Inquiry |

### MCC 102: Stand-In Account File

DE 120 (Record Data) contains Stand-In Account file data when DE 101 (File Name) contains MCC102.

### Associated edits

Following are the MCC102 data fields that should be included in DE 120 depending on the value in DE 91 (Issuer File Update Code).

| When DE 91 Contains... | Include These Fields in DE 120... |
|------------------------|-----------------------------------|
| 1 = Add                | use all appropriate fields        |
| 2 = Update             | Use all appropriate fields        |
| 3 = Delete             | Use field 1                       |
| 5 = Inquiry            | Use field 1                       |

## Fields

Following is the DE 120 Layout for MCC102.

| Field ID | Field Name                | Attributes | Comments/Valid Values                                                                                                                                                                                                                                                                            |
|----------|---------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1        | Primary Account Number    | an-19      | <p>Number that is embossed or encoded or both on the card. Customers may only input account numbers for BINs assigned to the associated Mastercard-assigned customer ID.</p> <p>Format: Sixteen digit Mastercard account number, followed by three spaces.</p>                                   |
| 2        | Entry Reason              | an-1       | <p>Reason for listing this card. Valid values:</p> <p>C = Credit</p> <p>F = Fraud</p> <p>G = ATM Premium Listing</p> <p>L = Lost</p> <p>O = Other</p> <p>P = Capture Card</p> <p>S = Stolen</p> <p>U = Unauthorized Use</p> <p>V = Premium Listing</p> <p>X = Counterfeit</p>                    |
| 3        | Date Last Update Activity | n-6        | <p>Inquiry only and is ignored on add, change, and delete. (This field is returned in the 0312 response message only for inquiry requests.)</p> <p>Date of the last maintenance activity occurring on this account.</p> <p>Format: MMDDYY</p> <p>MM = month</p> <p>DD = day</p> <p>YY = year</p> |

| Field ID | Field Name                          | Attributes | Comments/Valid Values                                                                                                                                                                                                                                                        |
|----------|-------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4        | Time Last Update Activity           | n-4        | <p>Inquiry only and is ignored on add, change, and delete. (This field returned in the 0312 response message only for inquiry requests.)</p> <p>Time of the last maintenance activity occurring on this account.</p> <p>Format: hhmm</p> <p>hh = hour</p> <p>mm = minute</p> |
| 5        | PIN Length                          | n-2        | No longer applicable. Valid values: zeros.                                                                                                                                                                                                                                   |
| 6        | Premium Listing Accumulative Limit  | n-12       | Valid only for entry reason V. For other reason codes, use 12 zeros.                                                                                                                                                                                                         |
| 7        | Premium Listing Limit Currency Code | n-3        | Valid only for Entry Reason V. For other reason codes, use three zeros.                                                                                                                                                                                                      |
| 8        | Issuer-defined Purge Date           | n-8        | The issuer-defined purge date must be at least 180 days after the account list date in YYYYMMDD format. This field is optional.                                                                                                                                              |
| 9        | Card Sequence Number                | n-3        | The card sequence number of the listed card. Only required for card-level support.                                                                                                                                                                                           |
| 10       | Card Expiration Date                | n-6        | The expiration date of the listed card in YYYYMM format. Only required for card-level support.                                                                                                                                                                               |

## MCC 103: Electronic Warning Bulletin File

DE 120 (Record Data) contains Electronic Warning Bulletin file data when DE 101 (File Name) contains MCC103.

### Fields

Following is the DE 120 Layout for MCC103.

| Field ID | Field Name             | Attributes | Comments/Valid Values                                                                                                                                                                                                                          |
|----------|------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1        | Primary Account Number | an-19      | Number that is embossed or encoded on the card. Customers can only input account numbers for BINs assigned to the associated Mastercard-assigned customer ID.<br><br>Format: Sixteen digit Mastercard account number followed by three spaces. |
| 2        | Customer ID            | n-6        | Mastercard customer ID assigned to the BIN.<br><br>Format: right-justified, zero-filled                                                                                                                                                        |
| 3        | Card Program           | a-3        | Type of card bearing the account number. Refer to DE 63 (Network Data), for the list of card program values allowed. Card programs not allowed for MCC103 are footnoted in DE 63, subfield 1.                                                  |
| 4        | Response Code          | n-2        | Response Code this account listing should prompt for an authorization request. Valid value: 04 capture card                                                                                                                                    |
| 5        | Entry Reason           | a-1        | Reason for listing this card. Valid values:<br><br>C = Credit<br>F = Fraud<br>O = Other<br>X = Counterfeit                                                                                                                                     |
| 6        | Filler                 | an-25      | Reserved for future AMS enhancements.                                                                                                                                                                                                          |

| Field ID | Field Name                     | Attributes | Comments/Valid Values                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------|--------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7        | Regional Indicator/ Purge Date | an-7       | <p>Issuer-requested region and purge date(s) associated with this account number listing. Field is non-positional (excludes regions and purge dates that do not apply). Field may occur up to six times for that many regions and purge dates. Must be entered in ascending order (1, A,..., E).</p> <p>Format: RYYMMDD</p> <p>R = Region</p> <p>Valid region values:</p> <p>1 = United States</p> <p>A = Canada</p> <p>B = Latin America/Caribbean</p> <p>C = Asia/Pacific</p> <p>D = Europe</p> <p>E = Middle East/Africa</p> <p>YY = purge date year</p> <p>MM = purge date month</p> <p>DD = purge date day</p> <p><b>NOTE: To purge an account on the card expiration date, enter that date as the purge date. For additional information on purge dates, refer to the <a href="#">Account Management System User Manual</a>.</b></p> |

## MCC 104: Local Stoplist File

DE 120 (Record Data) contains Local Stoplist file data when DE 101 (File Name) contains MCC104.

### Associated edits

Following are the MCC104 data fields that should be included in DE 120 depending on the value in DE 91 (Issuer File Update Code).

| When DE 91 Contains...                                                                          | Include These Fields in DE 120...              |
|-------------------------------------------------------------------------------------------------|------------------------------------------------|
| 1 = Add                                                                                         | Use all applicable fields.                     |
| <b>NOTE: Add will update an existing record if the system finds a match on the master file.</b> |                                                |
| 1 = Update                                                                                      | Use all applicable fields that require update. |
| 1 = Delete (deletes account from one region)                                                    | Use fields one.                                |
| 1 = Delete (deletes account from one country)                                                   | Use fields one, seven, eight, and ten.         |
| 1 = Delete (deletes account from one subcountry)                                                | Use fields one, seven, eight, nine, and ten.   |
| 3 = Delete (deletes account from all regions, countries, or subcountries)                       | Use field one.                                 |
| 5 = Inquiry                                                                                     | Use field one.                                 |

## Fields

Following is the DE 120 Layout for MCC104.

| Field ID | Field Name             | Attributes | Comments/Valid Values                                                                                                                                                                                                   |
|----------|------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1        | Primary Account Number | an-19      | Number that is embossed, encoded, or both on the card. Customers may input only those account numbers that contain their assigned prefixes.<br><br>Format: 16-digit Mastercard account number followed by three spaces. |
| 2        | Customer ID            | n-6        | Mastercard-assigned customer ID, a Mastercard customer may input only an account number with a BIN assigned to it.<br><br>Format: Right-justified, zero-filled                                                          |
| 3        | Card Program           | a-3        | Type of card bearing the account number. Refer to DE 63 (Network Data), for the list of card program values allowed. Card programs not allowed for MCC104 are footnoted in DE 63, subfield 1.                           |
| 4        | Response Code          | n-2        | Response Code this account listing should prompt for an authorization request. Valid value: 04 capture card                                                                                                             |

## MCC 105: Payment Cancellation File

DE 120 (Record Data) contains Payment Cancellation file data when DE 101 (File Name) contains MCC105.

### Associated edits

Following are the MCC105 data fields that should be included in DE 120 depending on the value in DE 91 (Issuer File Update Code).

| When DE 91 Contains... | Include These Fields in DE 120...                                                                         |
|------------------------|-----------------------------------------------------------------------------------------------------------|
| 1 = Add                | Use all applicable fields; fields 1–5 are mandatory, fields 6–13 are optional                             |
| 2 = Update             | Use all applicable fields; fields 1–5 are mandatory, fields 6–7 are optional. Fields 8–13 not applicable. |
| 3 = Delete             | Use fields 1, 4, and 5; fields 2 and 3 must be filled with spaces. Fields 6–13 not applicable.            |
| 5 = Inquiry            | Use fields 1, 4, and 5; fields 2 and 3 must be filled with spaces. Fields 6–13 not applicable.            |

### Fields

Following is the modified DE 120 Layout for MCC105. Amount fields 6 and 7, when provided, must include a minor unit of currency. For example, USD 100.50 entered as 000000010050. Fields 8–9 are sent in the 0312 response message.

## DE 120 (When Blocking Recurring Payments)

Following are various uses of DE 120 for MCC105:

- Blocking all recurring payment arrangements with all merchants

A block of all recurring payments arrangements can only be accomplished by setting up blocks for each merchant and acquirer combination.

- Blocking all recurring payment arrangements with one merchant, or blocking a cardholder's only recurring payment with one merchant
  - Fields 1–5 are required for Add
  - Fields 6–7 should not be provided
- Blocking one of many recurring payment arrangements with one merchant

The one recurring payment arrangement can only be blocked if its transaction amount is different than any of the other recurring payment arrangements with a particular merchant.

The recurring payment arrangement to be blocked has a fixed (same amount each billing) transaction amount, such as an insurance premium billing

- Fields 1–5 are required for Add
- Field 6 should be provided to specify the fixed transaction amount
- Field 7 should not be provided

The recurring payment arrangement to be blocked has a variable (different amount each billing) transaction amount, such as a long distance telephone billing. For example, if the variable billing previous amounts were between USD 15.00 and USD 50.00, field 6 should contain USD 15.00 and field 7 should contain USD 50.00. This results in transactions being blocked within this specified amount range.

- Fields 1–5 are required for Add
- Field 6 is provided to specify the lowest transaction amount billable
- Field 7 is provided to specify the highest transaction amount billable

Usage of the amount range should only be used if the billing amount of the recurring payment to be blocked is unique and does not overlap with other recurring payments from the same merchant that should not be blocked. If one recurring payment arrangement billing amount was typically between USD 15.00 and USD 50.00 but another recurring payment from the same merchant either had a variable amount that sometimes fell within USD 15.00 to USD 50.00 or had a fixed amount within USD 15.00 to USD 50.00, both recurring payments are blocked.

- The following guidelines apply for the multiple Acceptor IDs:
  - Issuers will only be able to provide multiple Acceptor IDs when PAN (field 1) and Acquirer ICA (field 4) are provided in DE 120.
  - The additional Acceptor IDs must be added in sequence. For example, if codes are entered in Acceptor ID fields 5, 10, and 12, skipping field 11, the 0302 Payment Cancellation MCC105 add request will be rejected with DE 39 = 27 (Edit Error) and DE 44 will contain field number 120011.
  - If issuers provide transaction amount or transaction amount range in the 0302 Payment Cancellation add list request, the transaction amount and transaction amount range will be applicable to all the given Acceptor IDs in the message.

## MCC 106: PAN Mapping File

DE 120 (Record Data) contains Token to PAN Mapping File data when DE 101 (File Name) contains MCC106.

### Associated edits

Following are the MCC106 data fields that should be included in DE 120 depending on the value in DE 91 (Issuer File Update Code).

| When DE 91 Contains... | Include These Fields in DE 120...                                                                                                                                                                                                                                                                                                                     |

| 19       | CVN                   | an-2       | Conditional<br>Required for Cloud Processing Type 2D.<br>Optional for other Cloud Types. |

## MCC 109: Application Transaction Counter File

DE 120 (Record Data) contains Application Transaction Counter file data when DE 101 (File Name) contains MCC109.

### Associated edits

Following are the MCC109 data fields that should be included in DE 120 depending on the value in DE 91 (Issuer File Update Code).

| When DE 91 Contains...                                                           | Include These Fields in DE 120... |
|----------------------------------------------------------------------------------|-----------------------------------|
| 1 = Add                                                                          | Fields 1–4 mandatory              |
| 3 = Delete                                                                       | Fields 1–4 mandatory              |
| <b>NOTE: Applicable only when submitting an R311 bulk file deletion request.</b> |                                   |
| 5 = Inquiry                                                                      | Fields 1–3 mandatory              |

### Associated edits

Following is the DE 120 Layout for MCC109 in the Issuer File Update Request/0302 message. Fields 1 through 3 must be considered contiguous to identify if an entry exists when trying to delete a record.

| Field ID | Field Name                                              | Attributes | Comments/Valid Values                                                                                                                                                             |

## MCC 111: PAN-PAR (Payment Account Reference) Mapping File

DE 120 (Record Data) contains PAN to PAR Mapping File data when DE 101 (File Name) contains MCC111.

Only PAN replacement and PAR record deletion actions are allowed. Both are handled as an "update".

### Associated edits

Following are the MCC111 data fields that should be included in DE 120 depending on the combination of values in DE 91 (Issuer File Update Code) and DE 120 subfield 1 (Action Required).

| When DE 91 Contains...                                          | Include These Subfields in DE 120...                                                                                                                                                                            |
|-----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2 = Update                                                      | Subfield 1 is mandatory                                                                                                                                                                                         |
| This is the only valid Issuer File Update Code value for MCC111 | <ul style="list-style-type: none"> <li>When subfield 1 = U (Update), subfield 2 must contain a replacement PAN</li> <li>When subfield 1 = D (Delete), all other DE 120 subfields must contain spaces</li> </ul> |

### Subfields

The following DE 120 layout applies to Issuer File Update Request/0302 messages requesting the replacement of a PAN associated with a PAR value in the MCC111 PAN-PAR Mapping File. This action should be performed when the issuer is replacing the consumer's current PAN with a new PAN.

| Subfield ID | Subfield Name   | Attributes | Comments/Valid Values                                                                                                                                                                                                               |

| 2           | Replacement PAN | an-19      | Number that is embossed, encoded, or both on the replacement card. Customers may only input account numbers for BINs assigned to the associated customer ID assigned by Mastercard.<br>Format: Left-justified, with trailing spaces |

### Subfields

The following DE 120 layout applies to Issuer File Update Request/0302 messages requesting the deletion of a PAN-PAR mapping record in the MCC111 PAN-PAR Mapping File. This action should be performed only when the issuer has permanently closed/cancelled the consumer's PAN.

| Subfield ID | Subfield Name   | Attributes | Comments/Valid Values                                                                          |
|-------------|-----------------|------------|------------------------------------------------------------------------------------------------|
| 1           | Action Required | an-1       | D = Delete the PAN-PAR mapping record associated with the PAN in DE 2 (Primary Account Number) |

## DE 120 (Error Codes)

Following are the DE 120 Error Codes.

### MCC 102: Error Codes

The Dual Message Authorization System returns an Issuer File Update Request Response/0312 message where DE 39 contains the value 27 and DE 44 contains the value 120xxx (xxx indicates the DE 120 field in which the error occurred).

## MCC 105: Error Codes

If the Dual Message Authorization System detects an error in the Issuer File Update Request/0302 message, it returns an Issuer File Update Request Response/0312 message containing error codes specific to each file name. DE 39 (Response Code) contains value 27 (Issuer File Update field edit error) and DE 44 (Additional Response Data) contains the value 120xxx (where xxx indicates the DE 120 field in which the error occurred).

When DE 39 contains value 80 (Duplicate Add, action not performed), DE 44 contains the following error code:

#### Related errors and error messages

| Error Code | Error Message                                                                                                                                                        |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 120002     | <p>The PAN value in DE 2 is a duplicate of the PAN value in DE 120 subfield 2. The replacement PAN in subfield 2 must be different than the current PAN in DE 2.</p> |

## DE 121 (Authorizing Agent ID Code)

DE 121 (Authorizing Agent ID Code), when used, must contain the appropriate Mastercard-assigned customer ID number that uniquely identifies the Dual Message Authorization System Stand-In Processing facility or alternate routing customer responsible for performing Stand-In Processing on-behalf of the issuer.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n...6; LLLVAR             |
| Data Length         | 3 positions               |
| Data Field          | Contents of positions 1–6 |
| Subfields           | N/A                       |
| Justification       | N/A                       |

### Usage

Following is the usage of DE 121 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request Response/0110           | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |
| Authorization Advice/0120: system-generated   | .   | X   | C   |
| Reversal Request Response/0410                | C   | X   | C   |
| Reversal Advice/0420                          | .   | X   | C   |

### Values

DE 121 must contain a valid Mastercard customer ID number. Any values reserved for Mastercard use will be in the range 000000-000999.

The following values may be present in DE 121:

- If the 0110 message was responded to by the issuer, the value may contain the issuer's Mastercard ID.
- If the 0110 message was responded to by the MIP X-Code System, the value will be 000000.
- If the 0110 message was responded to by the Stand-In System, the value will be 000001.
- If the 0110 message was responded to by an alternate issuer host route, the value will be 000002.
- If the 0110 message was responded to by the Mastercard Rewards System, the value will be 000004 (Mastercard Rewards System).
- If the 0110 message was responded to by another Mastercard on-behalf service not mentioned above, the value will be 000003.

### Application notes

This data element is defined and used identically within all Mastercard programs and services.

When the Stand-In Processing or alternate authorizer performs an Authorization Request/0100 on behalf of an issuer, it must insert this data element into the appropriate response message (for example, Authorization Request Response/0110) and into the appropriate Authorization Advice/0120: system-generated message so that the entire transaction audit trail clearly identifies the specific authorizing agent that actually approved the transaction.

The acquirer must insert this value in the Authorization Advice/0120 message when DE 121 is present in the Authorization Request Response/0110 message.

DE 121 is not required in Authorization Request/0100 or Authorization Advice/0120 messages the original issuer or its designated primary authorizing agent initiates.

DE 121, value 000002 is applicable only to issuers that use an alternate issuer host route instead of the Stand-In System. The issuer will provide in the Authorization Request Response/0110 message DE 121, value 000002 when an alternate issuer processed the original request.

DE 121 will have the value 000003 when a decline occurred due to an on-behalf service.

DE 121 will have the value of 000003 when a transaction was decisioned by a Mastercard on-behalf service.

DE 121, value 000004 is applicable only to issuers participating in the Mastercard Pay with Rewards service and will only be present in the Authorization Advice/0120: system-generated messages notifying issuers of a declined request. The specific reason for the decline will be specified in DE 60 (Advice Reason Code).

## DE 122 (Additional Record Data)

DE 122 is a free-format, variable-length data element used for transmitting file record data in various message types.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | ans...999; LLLVAR       |
| Data Length         | 3 positions             |
| Data Field          | Contents of subelements |
| Subfields           | 1                       |
| Justification       | See "Subelements"       |

### Usage

Following is the usage of DE 122 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| Authorization Request/0100                    | C   | X   | C   |
| Authorization Advice/0120: acquirer-generated | C   | X   | C   |
| Authorization Advice/0120: system-generated   | •   | X   | C   |
| Issuer File Update Request Response/0312      | •   | X   | C   |
| Reversal Request/0400                         | C   | X   | C   |
| Reversal Advice/0420                          | •   | X   | C   |

### Application notes

Subelement 001 contains the Acceptor Street Address, the Acceptor Country Subdivision Code, Acceptor URL Address, Acceptor Customer Service Phone Number, Acceptor Phone Number, Acceptor Additional Contact Information, Acceptor Tax ID, Partner ID Code, Service Location, City Name, Service Location Country Subdivision Code, Service Location Country Code, and

Service Location Postal Code, Acceptor Geographic Coordinates, Service Location Geographic Coordinates, and Acceptor Tax ID should be used for the specified message types.

## Encoding scheme for DE 122

Mastercard organizes DE 122 into a group of encoded subelements and subfields.

### Structure of DE 122 subelement

| LLL          | VAR: maximum length varies |                   |                            |
|--------------|----------------------------|-------------------|----------------------------|
| 3 bytes      | 3 bytes                    | 3 bytes           | Variable length            |
| Total length | First subelement data      |                   |                            |
|              | Subelement ID              | Subelement length | Subelement variable length |

### Values

| Number of Bytes | Attribute                       | Value                                 |
|-----------------|---------------------------------|---------------------------------------|
| 3               | Total data element length       | The "LLL" portion of the data element |
| 3               | Subelement ID                   | In the range 001–099                  |
| 3               | Subelement length               | Variable                              |
| 1...nnn         | Subelement variable length data | Contents of Subfields                 |

### Structure of DE 122 subfields within a subelement

| LLL                 | VAR: maximum length varies |                               |
|---------------------|----------------------------|-------------------------------|
| 3 bytes             | 3 bytes                    | Variable length               |
| First subfield data |                            |                               |
| Subfield ID         | Subfield length            | Subfield variable length data |

### Values

| Number of bytes | Attribute   | Value                   |
|-----------------|-------------|-------------------------|
| 3               | Subfield ID | In the range of 001-099 |

| Number of bytes | Attribute                     | Value                 |
|-----------------|-------------------------------|-----------------------|
| 3               | Subfield length               | Variable              |
| 1...nnn         | Subfield variable length data | Contains valid values |

## Subelement 001 (Additional Acceptor Data)

DE 122 (Additional Record Data), subelement 001 (Additional Acceptor Data) contains the Acceptor Street Address, the Acceptor Country Subdivision Code, Acceptor URL Address, Acceptor Customer Service Phone Number, Acceptor Phone Number, Acceptor Additional Contact Information, Acceptor Tax ID, Partner ID Code, Service Location City Name, Service Location Country Subdivision Code, Service Location Country Code, Service Location Postal Code, Acceptor Geographic Coordinates, Service Location Geographic Coordinates, and Acceptor Tax ID Name.

### Attributes

| Attribute              | Description           |
|------------------------|-----------------------|
| Subelement ID          | 001                   |
| Subelement Data Length | 3 positions           |
| Data Representation    | ans...696; LLLVAR     |
| Data Field             | Contents of subfields |

## Subfield 001 (Acceptor Street Address)

DE 122, subelement 001, subfield 001 (Acceptor Street Address) contains the street address of the acceptor, which should include the street number, street name, and other identifiers of the precise location, such as a building or unit number.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 001                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | ans...048; LLLVAR        |
| Data Field           | Contents of subfield 001 |
| Justification        | Left                     |

### Values

Acceptor Street Address must contain all Address Line 1 and Address Line 2 information, including

- the name of the street or throughfare
- the locality or community
- the building or house number; and
- any apartment, unit, suite, or floor number, if applicable.

This information must be populated and formatted as defined by country postal standards.

### Processing rules

The Acceptor Street Address must be present for all transactions and contain a valid location for the acceptor. The location of the acceptor will generally be the physical location where the transaction occurred or business location for transactions that occur virtually.

If the information for Acceptor Street Address does not exist per country postal standards, then the value of "Unavailable" must be provided.

### Program rules

Payment facilitator-enabled transactions: The sponsored merchant street address must be provided.

## Subfield 002 (Acceptor Country Subdivision Code)

DE 122, subelement 001, subfield 002 (Acceptor Country Subdivision Code) contains the ISO 3166-2 code identifying the state, province, or other country subdivision of the acceptor.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 002                       |
| Subfield Data Length | 3 positions               |
| Data Representation  | ans-003                   |
| Data Field           | Contents of subfield 002  |
| Justification        | Left with trailing spaces |

### Values

Acceptor Country Subdivision Code must contain a valid code as defined in Chapter 2 of the *Quick Reference Booklet* and must be followed by trailing spaces for codes that are less than three positions.

### Processing rules

The Acceptor Country Subdivision Code must be present for all transactions when defined in Chapter 2 of the *Quick Reference Booklet*.

### Program rules

Payment facilitator-enabled transaction: The sponsored merchant country subdivision code must be provided.

## Subfield 003 (Acceptor URL address)

DE 122, subelement 001, subfield 003 (Acceptor URL Address) contains the web address of the acceptor.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 003         |
| Subfield Data Length | 3 positions |

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | ans...255; LLLVAR        |
| Data Field          | Contents of subfield 003 |
| Justification       | Left                     |

### Processing rules

The Acceptor URL Address must be present for all electronic commerce transactions and contain a valid website address. For all other transactions, it must be provided unless a customer service phone is provided for contact.

### Program rules

Payment facilitator-enabled transaction: The sponsored merchant acceptor URL should be provided.

## Subfield 004 (Acceptor Customer Service Phone Number)

DE 122, subelement 001, subfield 004 (Acceptor Customer Service Phone Number) contains the phone number of the acceptor that can be used for transaction inquiries.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 004                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | ans...016; LLLVAR        |
| Data Field           | Contents of subfield 004 |
| Justification        | Left                     |

### Values

Acceptor Customer Service Phone Number must contain a valid value defined and formatted as per local telecom or the ITU Telecommunication Standardization Sector (ITU-T) standards.

For U.S. region and Canada region transactions, if present, Acceptor Customer Service Phone Number must be 10 positions with the beginning three positions numeric.

### Application notes

The Acceptor Customer Service Phone Number should be present for all transactions and contain a valid phone number, unless a URL is provided for contact.

For U.S. region and Canada transactions Acceptor Customer Service Phone Number must be present for mail order, phone order, and standing/recurring transactions.

### Program rules

Payment facilitator-enabled transactions: The sponsored merchant customer service phone number should be provided.

### Subfield 005 (Acceptor Phone Number)

DE 122, subelement 001, subfield 005 (Acceptor Phone Number) contains the business phone number of the acceptor, if different from the acceptor customer service phone number.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 005                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | ans...016; LLLVAR        |
| Data Field           | Contents of subfield 005 |
| Justification        | Left                     |

### Values

Acceptor Phone Number must contain a valid value defined and formatted as per local telecom or the ITU Telecommunication Standardization Sector (ITU-T) standards.

For U.S region and Canada region transactions, if present, Acceptor Phone Number must be 10 positions with the beginning three positions numeric.

### Processing rules

The acceptor phone number can be provided when different from the acceptor customer service phone number.

## Subfield 006 (Acceptor Additional Contact Information)

DE 122, subelement 001, subfield 006 (Acceptor Additional Contact Information) contains additional information for contacting the acceptor, such as an additional phone number or a contact name.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 006                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | ans...025; LLLVAR        |
| Data Field           | Contents of subfield 006 |
| Justification        | Left                     |

### Processing rules

Acceptor Additional Contact Information may contain additional information, such as secondary phone numbers, customer service operation hours, and contact name.

## Subfield 007 (Acceptor Tax ID)

DE 122, subelement 001, subfield 007 (Acceptor Tax ID) contains the identifier of the acceptor issued by a taxation authority.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 007                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | ans-021                  |
| Data Field           | Contents of subfield 007 |
| Justification        | Left                     |

## Values

The subfield must contain a valid value formatted per issuing taxation authority standards in positions 001 through 020 with trailing spaces and position 021 with a value from the following table.

### Values

| Value | Description                        |
|-------|------------------------------------|
| Y     | Acceptor Tax ID provided           |
| N     | Acceptor Tax ID not provided       |
| R     | Refused to provide Acceptor Tax ID |

## Processing rules

Acceptor Tax ID may be optionally provided.

## Subfield 008 (Partner ID Code)

DE 122, subelement 001, subfield 008 (Partner ID Code) identifies a specific partnership agreement, generally between specific acceptors and issuers.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 008                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | ans...006; LLLVAR        |
| Data Field           | Contents of subfield 008 |
| Justification        | Left                     |

## Values

Acceptors and issuers may establish Partner ID codes. If present, this subfield cannot contain all low values, all high values, all zeros, or all spaces.

### Processing rules

This subfield may be used for transactions on accounts issued under co-branding agreements when one of the co-branding partners originates the transaction. It also may be used when the agreement is between the acceptor and the clearing system, such as in certain promotional discounts.

### Subfield 009 (Service Location City Name)

DE 122, subelement 001, subfield 009 (Service Location City Name) contains the name of the city where the cardholder received the services, if it is different from the location identified by the acceptor city name.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 009                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | ans...013; LLLVAR        |
| Data Field           | Contents of subfield 009 |
| Justification        | Left                     |

### Values

Service Location City Name must contain the name of the city, town, or village as defined by country postal standards.

### Processing rules

Service Location City Name must be present for all transactions when different from the location identified in the Acceptor City Name. Alternatively, DE 122, subelement 001, subfield 014 (Service Location Geographic Coordinates) can be provided instead of populating this subfield.

For the U.S. region, this field must match the U.S. Postal Service list of acceptable cities and spellings.

## Subfield 010 (Service Location Country Subdivision Code)

DE 122, subelement 001, subfield 010 (Service Location Country Subdivision Code) contains the code of the country subdivision where the cardholder received the services, if it is different from the location identified by the acceptor country subdivision code.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield ID          | 010                       |
| Subfield Data Length | 3 positions               |
| Data Representation  | ans-003                   |
| Data Field           | Contents of subfield 010  |
| Justification        | Left with trailing spaces |

### Values

Service Location Country Subdivision Code must contain a valid code as defined in Chapter 2 of the [Quick Reference Booklet](#) and must be followed by trailing spaces for codes that are less than three positions.

### Processing rules

The Service Location Subdivision Code must be present for all transactions when different from the location identified in the Acceptor Subdivision Code. Alternatively, DE 122, subelement 001, subfield 014 (Service Location Geographic Coordinates) can be provided instead of populating this subfield.

## Subfield 011 (Service Location Country Code)

DE 122, subelement 001, subfield 011 (Service Location Country Code) contains the code of the country where the cardholder received the services, if it is different from the location identified by the acceptor country code.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 011         |
| Subfield Data Length | 3 positions |

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | ans-003                  |
| Data Field          | Contents of subfield 011 |
| Justification       | Left                     |

### Values

Acceptor Country Code must contain a valid three-character alphabetic code as defined in Chapter 2 of the [Quick Reference Booklet](#). When territories have a defined country code in the [Quick Reference Booklet](#), that country code must be used.

### Processing rules

The Service Location Country Code must be present for all transactions when different from the location identified in the Acceptor Country Code. Alternatively, DE 122, subelement 001, subfield 014 (Service Location Geographic Coordinates) can be provided instead of populating this subfield.

## Subfield 012 (Service Location Postal Code)

DE 122, subelement 001, subfield 012 (Service Location Postal Code) contains the postal code of the country where the cardholder received the services, if it is different from the location identified by the acceptor postal code.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Subfield ID          | 012                      |
| Subfield Data Length | 3 positions              |
| Data Representation  | ans...010; LLLVAR        |
| Data Field           | Contents of subfield 012 |
| Justification        | Left                     |

### Values

Service Location Postal Code must contain a valid code as defined by country postal standards.

## Processing rules

The Service Location Postal Code must be present for all transactions when different from the Acceptor Postal Code and contain a valid code for countries that utilize postal codes. This information must be populated and formatted as defined by country postal standards. Alternatively, DE 122, subelement 001, subfield 014 (Service Location Geographic Coordinates) can be provided instead of populating this subfield.

## Subfield 013 (Acceptor Geographic Coordinates)

DE 122, subelement 001, subfield 013 (Acceptor Geographic Coordinates) contains the latitude and longitude of the acceptor's location.

## Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Subfield ID         | 013                      |
| Subfield Length     | 3                        |
| Data Representation | ns...020; LLLVAR         |
| Data Field          | Contents of subfield 013 |
| Justification       | N/A                      |

## Values

Acceptor Geographic Coordinates, when present, must contain valid latitude and longitude values, comma-separated, represented in decimal degrees to five decimal places in positions 001 through 020 with these format standards:

- Length of geographic coordinates is a range of 15 - 20 positions
- Subfield should not contain alpha characters
- Subfield contains up to two '-'
- Subfield contains precisely two '"
- Subfield contains precisely one ','
- At least one numeric position is found before the first '"
- Five numeric positions are found between first '" and ','
- At least one numeric position is found between ',' and the second '"
- Five numeric positions are found after second '"
- Latitude is greater than or equal to -90.00000 and less than or equal to 90.00000
- Longitude is greater than or equal to -180.00000 and less than or equal to 180.00000
- No space character follows the comma separator

### Latitude and longitude examples

| Location                                    | Latitude and longitude |
|---------------------------------------------|------------------------|
| Anloga, Ghana                               | 5.78381,0.72175        |
| Lagos, Portugal                             | 37.11000,-8.67880      |
| Anchorage, AK                               | 61.21630,-149.89500    |
| Pago Pago, Eastern District, American Samoa | -14.27451,-170.70616   |

### Processing rules

Acceptor Geographic Coordinates can optionally be provided for all transactions and contain valid latitude and longitude values representing the acceptor location.

If the data present in subfield 013 is not formatted according to the "Values" specification, Mastercard will remove the subfield and continue processing the transaction.

### Subfield 014 (Service Location Geographic Coordinates)

DE 122, subelement 001, subfield 014 (Service Location Geographic Coordinates) contains the latitude and longitude where the cardholder received the service, if it is different from the acceptor's location.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Subfield ID         | 014                      |
| Subfield Length     | 3                        |
| Data Representation | ns...020; LLLVAR         |
| Data Field          | Contents of subfield 014 |
| Justification       | N/A                      |

### Values

Service location geographic coordinates, when present, must contain valid latitude and longitude values, comma-separated, represented in decimal degrees to five decimal places in positions 001 through 020 with these format standards:

- Length of geographic coordinates is a range of 15 - 20 positions

- Subfield should not contain alpha characters
- Subfield contains up to two '-'
- The subfield contains precisely two '.'
- Subfield contains precisely one ','
- At least one numeric position is before the first '.'
- Five numeric positions are found between the first '.' and ','
- At least one numeric position is found between ',' and the second '.'
- Five numeric positions are found after second '.'
- Latitude is greater than or equal to -90.00000 and less than or equal to 90.00000
- Longitude is greater than or equal to -180.00000 and less than or equal to 180.00000
- No space character follows the comma separator

### Latitude and longitude examples

| Location                                    | Latitude and longitude |
|---------------------------------------------|------------------------|
| Anloga, Ghana                               | 5.78381,0.72175        |
| Lagos, Portugal                             | 37.11000,-8.67880      |
| Anchorage, AK                               | 61.21630,-149.89500    |
| Pago Pago, Eastern District, American Samoa | -14.27451,-170.70616   |

### Processing rules

Service location geographic coordinates can optionally be provided instead of, or in addition to, subfields 009 through 012 (Service Location - City Name, Country Subdivision Code, Country Code, Country Postal Code) when those subfields are required.

If the data present in subfield 014 is not formatted according to the "Values" specification, Mastercard will remove the subfield and continue processing the transaction.

### Subfield 015 (Acceptor Tax ID Name)

DE 122, subelement 001, subfield 015 (Acceptor Tax ID Name) contains the Acceptor Name that matches the Tax ID for the merchant.

### Attributes

| Attribute       | Value |
|-----------------|-------|
| Subfield ID     | 015   |
| Subfield length | 3     |

| Attribute           | Value                    |
|---------------------|--------------------------|
| Data representation | ans....80; LLLVAR        |
| Data fields         | Contents of subfield 015 |
| Justification       | Left                     |

### Values

When present, the Acceptor Tax ID Name must represent the owner name of the Acceptor Tax ID present in DE 122, subelement 001, subfield 007.

### Processing rules

This field is used for Brazil intracountry messages.

## DE 122 Dual Message Authorization System edits

The Dual Message Authorization System will perform the following system edits.

## DE 123 (Receipt Free Text)

DE 123 (Receipt Free Text) only applies to the Swedish Domestic Authorization Switching Service (SASS), Peru, and the Mastercard Installment Payment Service. For SASS, DE 123 contains information to be printed on a receipt (not displayed on the terminal screen) for balance inquiry and ATM transactions (where DE 3 [Processing Code] is value 01 [Withdrawal] or value 30 [Balance Inquiry]). For Peru and Mastercard Installment Payment Service, DE 123 contains a text message to be printed on point-of-sale (POS) sales receipts.

## DE 124 (Member-Defined Data)

DE 124 (Member-defined Data) is described for general use and Prepaid Voucher, Brazil Maestro only, Bill Payment at the ATM only, and Mastercard Digital Enablement Service use.

**NOTE:** For detailed data layout requirements when using DE 124 with the Mastercard Digital Enablement Service, refer to the [MDES Register for Issuer Pre-digitization Network Message Values](#) section and *MDES Technical Specifications for Dual and Single Message Systems*.

## DE 124 (Member-Defined Data: General Use)

DE 124 (Member-Defined Data: General Use) may be used to submit up to 299 bytes of customer-defined data. DE 124 can contain program-specific data as defined by the DE 124 subelements.

| Reversal Advice/0420                          | .   | X   | C   |

## Application notes

DE 124 may be required in support of programs to convey information between customers in an authorization message.

## Acquirers

## Associated edits

| IF DE 124 is...                                                          | THEN...                                                                                                                                 |
|--------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| up to 299 bytes in acquirer-generated authorization messages             | the Dual Message Authorization System will not edit the content of DE 124 and will forward the entire length of the data to the issuer. |
| more than 299 bytes of data in acquirer-generated authorization messages | the Dual Message Authorization System will only send the first 299 bytes of data to the issuer.                                         |

Absolute positioning of data in DE 124 subfields is required; padding will be necessary. Customers must select all State, Province, and Country Codes from the [Quick Reference Booklet](#). If a country code is used, it must be the ISO 3-character alphabetic (not numeric) Country Code. If used, a State or Province Code should be right-justified in this subfield with one leading blank space. Customers must not use all zeros, all low values, or all high values when formatting DE 124.

Subfields 6–13: are used for Maestro credit usage in Brazil.

## Issuers

### Associated edits

| IF DE 124 is...                                                   | THEN...                                                                                                                                   |
|-------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| Up to 299 bytes in issuer-generated response messages             | The Dual Message Authorization System will not edit the content of DE 124 and will forward the entire length of the data to the acquirer. |
| More than 299 bytes of data in issuer-generated response messages | The Dual Message Authorization System will truncate to 299 bytes the length of the data sent to the acquirer.                             |

The Authorization Request/0100 and Authorization Request Response/0110 messages will be able to contain DE 124 data independently from one another. Therefore, issuers may:

- Send back the same value in DE 124 in the Authorization Request Response/0110 message as was present in DE 124 of the Authorization Request/0100 message.
- Send a different value in DE 124 in the Authorization Request Response/0110 message as was present in DE 124 of the Authorization Request/0100 message.
- Not send DE 124 in the Authorization Request Response/0110 message. In this case, the acquirer will not receive DE 124 in the Authorization Request Response/0110 message.
- Include DE 124 in the Authorization Request Response/0110 message even when the acquirer did not send it in the Authorization Request/0100 message.

## DE 124 (Member-Defined Data: Prepaid Voucher)

DE 124 (Member-Defined Data: Prepaid Voucher) is for use only for Mastercard prepaid meal and food voucher programs in Europe.

### Subfield 1 (Merchant Direct Settlement Indicator)

DE 124 (Member-Defined Data: Prepaid Voucher), subfield 1 (Merchant Direct Settlement Indicator) is for use only for Mastercard prepaid meal and food voucher programs in Europe.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Subfield Data Length | 3 positions               |
| Data Representation  | ans-3                     |
| Data Field           | Contents of positions 1–3 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

B00 equals voucher transactions will be settled bilaterally by the issuer directly with the merchant.

Value B00 is valid for use only in voucher transactions in the Europe region.

An acquirer must clear the transaction via the Dual Message Clearing System by using the bilateral settlement indicator (IPM Private Data Subelement [PDS] 0165 [Settlement Indicator], subfield 1 [Settlement Indicator] = B) in the First Presentment/1240 message.

### Application notes

Issuers must include this indicator in DE 124 Authorization Request Response/0110 messages for voucher transactions they will settle directly with the merchant.

When responding to an Authorization Request/0100 message for a transaction the issuer will settle directly with the merchant, the issuer must include the Prepaid Voucher format of DE 124, with subfield 1 containing Merchant Direct Settlement Indicator value B00.

The issuer must not include this indicator in response messages for meal voucher transactions that require settlement by Mastercard via the Mastercard settlement process.

The presence of the settlement indicator value B00 in DE 124, subfield 1, will serve as indication to the acquirer that the transaction will be settled by the issuer directly with the merchant. Receipt of this indicator value in an authorization response message by the acquirer indicates the acquirer must include PDS 0165 (Settlement Indicator), subfield 1 (Settlement Indicator) with value B (Bilateral settlement agreement applies; the Dual Message Clearing System clears the transaction but does not settle it) in the related clearing First Presentment/1240 message. This value allows the acquirer to clear the message without triggering the Mastercard settlement process.

## DE 124 (Member-Defined Data: Mastercard Send)

Acquirers and issuers are able to exchange DE 124 data in Mastercard Send (funding, refund, and payment), Gaming and Gambling, and MPQR payment transaction Authorization Request/Response messages.

Acquirers and issuers must use DE 108 (Additional Transaction Reference Data) when sending and receiving Receiver and Sender information.

## DE 124 (Member-Defined Data: Brazil Maestro Only)

DE 124 (Member-Defined Data: Brazil Maestro Only) is used only for Brazil Maestro transactions.

Subfields 1 through 8: are used for Maestro credit usage in Brazil.

### Subfield 1 (Unique Reference Number)

DE 124, subfield 1 (Unique Reference Number) contains a unique reference number.

#### Attributes

| Attribute           | Description                         |
|---------------------|-------------------------------------|
| Data Representation | ans-19                              |
| Data Field          | Contents of positions 1–19          |
| Justification       | Left-justified with trailing spaces |

#### Values

Valid value string will contain a leading zero (0), followed by:

ICA (n-6)

Year (n-1)

Julian Date (n-3)

Time hhmmss (n-6)

Transaction Sequence number (01–99) (n-2)

Example: 0555555801215305401

### Subfield 2 (Sender/Payer/User ID)

DE 124, subfield 2 (Sender/Payer/User ID) contains sender consumer, business, government, and non-government names, payer name, or user ID data.

#### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans-24                      |

| Attribute           | Description                         |
|---------------------|-------------------------------------|
| Data Representation | ans-65                              |
| Data Field          | Contents of positions 135–199       |
| Justification       | Left-justified with trailing spaces |

### Values

Additional sender information is formatted as follows:

Telephone number (n-20)

Date of Birth (n-8) (MMDDYYYY)

Optional message (ans-37)

## Subfield 6 (Discretionary Message on Sales Slip Supported)

DE 124, subfield 6 (Discretionary Message on Sales Slip Supported), used in association with Maestro credit in Brazil, is sent by the acquirer in the Authorization Request/0100 message, to indicate whether the POS terminal supports the discretionary message on the sales slip.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | an-1                     |
| Data Field          | Contents of position 1–6 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

| Value | Description                                                                          |
|-------|--------------------------------------------------------------------------------------|
| 0     | No<br>Merchant terminal does not support the printing of messages sent by the issuer |
| 1     | Yes<br>Merchant terminal supports the printing of messages sent by the issuer        |

## Subfield 7 (Discretionary Message on Sales Slip Code)

DE 124, subfield 7 (Discretionary Message on Sales Slip Code) is sent by the issuer in the Authorization Request Response/0110 message, to indicate the number of the message to be printed on the sales slip.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-3                      |
| Data Field          | Contents of positions 7–9 |
| Justification       | Left                      |

### Values

Valid value will contain the number of the message to be printed on the sales slip.

## Subfield 8 (Discretionary Message on Sales Slip Content)

DE 124, subfield 8 (Discretionary Message on Sales Slip Content) contains the variable part of the message to be printed on the sales slip.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | an-10                       |
| Data Field          | Contents of positions 10–19 |
| Justification       | Left                        |

### Values

Valid value will consist of the variable part of the message to be printed on the sales slip.

## Subfield 9 (Phoneshop [Phone Company ID])

DE 124, subfield 9 (Phoneshop [Phone Company ID]) is sent by the acquirer in the Authorization Request/0100 message, to identify the telephone company that provides the service for the Phoneshop product (for example, Telefonica = 01).

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | an-2                        |
| Data Field          | Contents of positions 20–21 |
| Justification       | Left                        |

### Values

Valid value will consist of the phone company ID.

## Subfield 10 (Phoneshop [Cell Phone Number])

DE 124, subfield 10 (Phoneshop [Cell Phone Number]) is sent by the acquirer in the Authorization Request/0100 message, to indicate the cardholder cell phone number for the Phoneshop product.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-10                        |
| Data Field          | Contents of positions 22–31 |
| Justification       | Right                       |

### Values

Valid value will consist of the cell phone number.

## Subfield 11 (Phoneshop [Message Security Code])

DE 124, subfield 11 (Phoneshop [Message Security Code]) is sent by the issuer in the Authorization Request Response/0110 message, to indicate the security code that the merchant sent for validation.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | an-4                        |
| Data Field          | Contents of positions 32–35 |
| Justification       | Left                        |

### Values

Valid value will consist of the message security code.

## Subfield 12 (Merchant CNPJ Number)

DE 124, subfield 12 (Merchant CNPJ Number) is sent by the acquirer in the Authorization Request/0100 message, to indicate the Merchant CNPJ number.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-14                        |
| Data Field          | Contents of positions 36–49 |
| Justification       | Right                       |

### Values

Valid value will consist of the Merchant CNPJ Number (a registration number provided by the government to all merchants).

## Subfield 13 (Total Annual Effective Cost)

DE 124, subfield 13 (Total Annual Effective Cost) is sent by the issuer in the Authorization Request Response/0110 message, to indicate the total annual effective cost in a financing transaction. A financing transaction includes purchase or cash withdrawal using a credit card.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-6                         |
| Data Field          | Contents of positions 50–55 |
| Justification       | Right                       |

### Values

**NOTE: Optionally, issuers may submit spaces preceding the positional start of subfield 13. Data submitted for this subfield should begin in position 50.**

Valid value will consist of the total annual effective cost in a financing transaction (including interest amount, taxes, and fees charged to the cardholder). This amount is mandated by local law number 3517 (implemented to ensure the cardholder is enforced about the total effective cost of the transaction). This applies to purchase or cash withdrawal at an ATM using a credit card.

## DE 124 (Member-Defined Data [Colombia Domestic Use Only])

DE 124 (Member-defined Data [Colombia Domestic Use Only]) is used only for Colombia domestic activity transactions.

Subfields 1 through 11: are used for Colombia domestic activity.

### Subfield 1 (Card Issuer Data)

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 1 (Card Issuer Data) defines the FIID and Logical Network associated with the card issuer.

#### Attributes

| Attribute           | Description                         |
|---------------------|-------------------------------------|
| Data Representation | ans-19                              |
| Data Field          | Contents of positions 1–19          |
| Justification       | Left-justified with trailing spaces |

#### Usage

Optional.

#### Example values

FIID (1–4)

Logical Network ID (5–8) = Examples are as follow: PRO1, MDS, BNET, ASCR, PRO2

- PRO1 = Redeban Multicolor
- MDS or BNET = Mastercard
- ASCR = AScredibanco
- PRO2 = Credibanco

Constant Value (9–19) = zeros

## Subfield 2 (Tax [IVA])

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 2 (Tax [IVA]) defines the tax for Colombia domestic activity.

### Attributes

| Attribute           | Description                        |
|---------------------|------------------------------------|
| Data Representation | n-12                               |
| Data Field          | Contents of positions 20–31        |
| Justification       | Right-justified with leading zeros |

### Usage

Required. If no value, it should contain zeroes.

### Example values

Amount is in Colombian pesos and carries an implied two position decimal.

## Subfield 3 (Tax Amount Base)

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 3 (Tax Amount Base) defines the tax amount base for Colombia domestic activity.

### Attributes

| Attribute           | Description                        |
|---------------------|------------------------------------|
| Data Representation | n-12                               |
| Data Field          | Contents of positions 32–43        |
| Justification       | Right-justified with leading zeros |

### Usage

Required.

### Values

Amount is in Colombian pesos and carries an implied two position decimal.

## Subfield 4 (Retailer Data)

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 4 (Retailer Data) defines the local merchant ID for Colombia domestic activity.

### Attributes

| Attribute           | Description                         |
|---------------------|-------------------------------------|
| Data Representation | ans-27                              |
| Data Field          | Contents of positions 44–70         |
| Justification       | Left-justified with trailing spaces |

### Usage

Optional.

### Example values

Each acquirer may elect to provide the merchant ID in their original format. Example to follow:

Unique merchant ID (44–53)

Spaces (54–62)

Terminal Group (63–66)

Retailer Region (67–70)

## Subfield 5 (Terminal Acquirer Data)

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 5 (Terminal Acquirer Data) identifies information about the terminal owner for Colombia domestic activity.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans-16                      |
| Data Field          | Contents of positions 71–86 |
| Justification       | Right-justified             |

### Usage

Optional.

### Example values

FIID (71–74)

Logical Network (75–78)

Constant Value = zeros

## Subfield 6 (Acquirer Original Processing Code)

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 6 (Original Processing Code) contains the original processing code for Colombia domestic activity.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-6                         |
| Data Field          | Contents of positions 87–92 |
| Justification       | Right-justified             |

## Subfield 7 (Bill Payment/Top up Data)

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 7 (Bill Payment/Top up Data) provides information related to bill payment for Colombia domestic activity.

### Attributes

| Attribute           | Description                         |
|---------------------|-------------------------------------|
| Data Representation | ans-36                              |
| Data Field          | Contents of positions 93–128        |
| Justification       | Left-justified with trailing spaces |

### Values

| Value                | Description                                                                                   |
|----------------------|-----------------------------------------------------------------------------------------------|
| Service Code (93–96) | Number used to identify the provider company (for example: 0001 = Bogota Power Light Company) |

| Value                        | Description                                                                            |
|------------------------------|----------------------------------------------------------------------------------------|
| Service Description (97–126) | Service Provider Bill ID (for example: Invoice number, additional billing information) |
| Originator Device (127)      | Alphanumeric (for example, P)                                                          |
| Filler (128)                 | Space                                                                                  |

## Subfield 8 (Local POS Data)

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 8 (Local POS Data) is present when transaction is a web payment or recurring payment. This field is optional.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-1                       |
| Data Field          | Contents of positions 129 |
| Justification       | N/A                       |

### Usage

Optional.

### Values

| Values | Description                        |
|--------|------------------------------------|
| 6      | Preauthorization/recurring payment |
| 7      | Web payment, Electronic orders     |

## Subfield 9 (Local Response Codes)

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 9 (Local Response Codes) identifies unique response codes for Colombia domestic activity.

### Attributes

| Attribute           | Description                         |
|---------------------|-------------------------------------|
| Data Representation | ans-2                               |
| Data Field          | Contents of positions 130–131       |
| Justification       | Left-justified with trailing spaces |

### Usage

Optional.

### Example values

M2 = Invalid national customer identifier

## Subfield 10 (Original Transaction Data)

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 10 (Original Transaction Data) is present for reversal messages to help uniquely identify the original message.

### Attributes

| Attribute           | Description                         |
|---------------------|-------------------------------------|
| Data Representation | ans-42                              |
| Data Field          | Contents of positions 132–173       |
| Justification       | Left-justified with trailing spaces |

### Usage

Optional.

### Example values

| Example value                       | Example description |
|-------------------------------------|---------------------|
| Original Message Type (132–135)     | 100 or 0200         |
| Sequence Number (136–147)           |                     |
| Original Transaction Date (148–151) | MMDD                |
| Original Transaction Time (152–157) | HHMMSS              |
| Capture Date (158–161)              | MMDD                |
| Filler (162–173)                    | All zeros           |

### Subfield 11 (IAC Tax Amount)

DE 124 (Member-defined Data [Colombia Domestic Use Only]), subfield 11 (IAC Tax Amount) defines the IAC Tax for Colombia domestic activity.

### Attributes

| Attribute           | Description                        |
|---------------------|------------------------------------|
| Data Representation | n-12                               |
| Data Field          | Contents of positions 174–185      |
| Justification       | Right-justified with leading zeros |

## DE 124 (Member-Defined Data: Ukraine Domestic Transactions)

DE 124 (Member-Defined Data: Ukraine Domestic Transactions) enables acquirers to pass merchant identification data to issuers for Ukraine domestic transactions.

- The first three positions contain the length of the remaining positions.
- The next five positions contain the identifier UKR01.
- The next two positions contain one of the tags identifying the type of ID being transmitted.
- The next two positions contain the length of the ID value being transmitted.
- The final set of positions contain the ID value (with the length as indicated by the preceding two positions).

Values

Identifier details for Ukraine domestic transactions

| Identifier | TAG | Length (LL) | Value      | Description                                                                                                                                                                                                                                           |
|------------|-----|-------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UKR01      | 01  | 08          | ABCD0001   | Unified State Register of Enterprises and Organizations of Ukraine (USREOU). The following eight characters include a valid identity number assigned to corporate entities by the Unified State Register of Enterprises and Organizations of Ukraine. |
| UKR01      | 02  | 10          | ABCDXYZ123 | Registration number of the taxpayer's record card (RNOTRC). The following 10 characters include a valid identity number assigned to private entrepreneurs, known as the registration number of the taxpayer's record card.                            |

| Identifier | TAG | Length (LL) | Value                        | Description                                                                                                                                                                                                          |
|------------|-----|-------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UKR01      | 03  | 08-13       | ABCDXYZ1 or<br>ABCDXYZ123456 | Passport. The following eight or 13 characters (depending on the type of passport) include a valid passport letter series (if applicable) and number for private entrepreneurs for whom the RNOTRC is not available. |

Examples of Ukraine domestic transactions:

- 017UKR010108ABCD0001
- 019UKR010210ABCDXYZ123
- 017UKR010308ABCDXYZ1
- 022UKR010313ABCDXYZ123456

#### Application notes

Acquirers must provide DE 124 in Authorization Request/0100 messages for transactions that may fall into the scope of the National Bank of Ukraine requirement.

Acquirers must transmit identification data for all transaction types, which may fall into the scope of the relevant National Bank of Ukraine requirements. Identification of the relevant use cases is solely the acquirer's responsibility.

## DE 125 (New PIN Data)

DE 125 (New PIN Data) consists of a binary block containing a derived encrypted value calculated from the new PIN introduced by the cardholder at the ATM offering the PIN change service.

#### Attributes

| Attribute           | Description                              |
|---------------------|------------------------------------------|
| Data Representation | b-8                                      |
| Data Length         | N/A                                      |
| Data Field          | Contents of bit positions 1-64 (8 bytes) |

| Attribute     | Description |
|---------------|-------------|
| Subfields     | N/A         |
| Justification | N/A         |

### Usage

Following is the usage of DE 125 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                    | Org | Sys | Dst |
|----------------------------|-----|-----|-----|
| Authorization Request/0100 | C   | X   | C   |

### Values

DE 125 contains the new PIN, which is formatted into one of the supported PIN block formats and is then encrypted. The PIN block format and encryption method used must be the same as the one used for the existing PIN that is stored in DE 52. DE 125 is only required in Authorization Request/0100: PIN Change messages. Otherwise, it must not be present.

### Application notes

DE 125 is mutually exclusive with DE 110, Dataset 01, TAG 89 (Additional Encrypted PIN Block); both elements cannot be present simultaneously.

## DE 126 (Private Data)

DE 126 (Private Data) is reserved for future use.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans...100; LLLVAR           |
| Data Length         | 3 positions                 |
| Data Field          | Contents of positions 1–100 |
| Subfields           | N/A                         |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Usage

By provision of the ISO 8583:1987 specification, Mastercard defined this data element for use as Private Data available for Mastercard's optional use for additional acquirer data.

The Dual Message Authorization System does not pass data placed in this data element through to the message receiver; rather, the Dual Message Authorization System temporarily stores the data. The Dual Message Authorization System does not return this data to the message originator in any subsequent response to an original Request, Advice, Response, or Acknowledgment message.

### Values

The length subelement must be in the range 001–100.

### Application notes

This data element is defined and used identically within all Mastercard programs and services.

## DE 127 (Private Data)

DE 127 (Private Data) may contain any private-use data that the customer may want to include in a message. Any Authorization System message originator may use DE 127.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans...100; LLLVAR           |
| Data Length         | 3 positions                 |
| Data Field          | Contents of positions 1–100 |
| Subfields           | N/A                         |
| Justification       | N/A                         |

### Usage

Following is the usage of DE 127 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                                                                         | Org | Sys | Dst |

### Values

The length must be in the range 001–100.

### Application notes

Data placed in DE 127 is not passed through to the message receiver; rather, the Authorization System temporarily stores the data and returns it to the message originator in any subsequent response to an original Request, Advice, Response, or Acknowledgment message.

This data element is defined and used identically within all Mastercard programs and services.

Acquirers that provide DE 127 in the Authorization Request/0100 message will receive the first twenty bytes of the value provided in DE 072 (Data Record) of IPM Fee Collection/1740–783 for interregional non-financial ATM transactions.

## DE 128 (Message Authentication Code)

DE 128 (Message Authentication Code [MAC]) validates the source and the text of the message between the sender and the receiver.

### Attributes

| Attribute           | Description                              |
|---------------------|------------------------------------------|
| Data Representation | b-8                                      |
| Data Length         | N/A                                      |
| Data Field          | Contents of bit positions 1–64 (8 bytes) |
| Subfields           | N/A                                      |
| Justification       | N/A                                      |

### Usage

May contain message authentication code as defined by ISO standards.

### Values

Not applicable.

### Application notes

This data element should not be present in any Dual Message Authorization System message.

The last bit position within any bit map is reserved for DE 128. If authentication is to be used on a message, the MAC information is indicated by the final bit of the final bit map of that message. The final bit of all preceding bit maps shall contain zero; for example, there shall be only one DE 128 per message and that DE 128 must be the last data element of the message.

# Chapter 6 Transaction Message Validation

*System edits, or validation checks, ensure data accuracy, completeness, and consistency by flagging errors or invalid data.*

---

|                                 |      |
|---------------------------------|------|
| Error notification.....         | 1231 |
| Edit errors best practices..... | 1232 |
| Error numbers and messages..... | 1233 |

Overview of system validation or editing

Mastercard performs data editing on submitted messages to enhance accuracy and data quality. An edit focuses on specific transaction components, authentication of messages, or program requirements.

Examples of data conditions edited by the system are:

- Presence of mandatory data in a message (such as PAN)
- Proper formatting of a data element or value (such as ensuring the data is alphabetic or numeric)
- Inclusion of data required for a specific product or program, which may be a validation on a single element or across multiple elements

To enforce compliance, additional validation processes occur outside of system message validations. The Data Integrity Program is one example of these processes. Refer to the *Data Integrity Monitoring Program* guide for more details.

Error notification

The Dual Message Authorization System informs customers of message processing edit failures through response and advice messages.

Data elements within these messages indicate in which data element or data element plus subelement the error occurred and provide information related to error information.

Acquirers are notified of message processing edit failures as follows:

Acquirer edit notification

| Message type                        | Data element                                 |
|-------------------------------------|----------------------------------------------|
| Authorization Request Response/0110 | DE 39 (Response Code)                        |
|                                     | DE 44 (Additional Response Data), if present |
| Authorization Advice Response/0130  | DE 39 (Response Code)                        |
|                                     | DE 44 (Additional Response Data), if present |
| Reversal Request Response/0410      | DE 39 (Response Code)                        |
|                                     | DE 44 (Additional Response Data), if present |

Issuers are notified of message processing edit failures as follows:

**Issuer edit notification**

| Message type                                        | Data element                                                          |
|-----------------------------------------------------|-----------------------------------------------------------------------|
| Authorization Response Negative Acknowledgment/0190 | DE 39 (Response Code)<br>DE 44 (Additional Response Data), if present |
| Authorization Advice/0120: system-generated         | DE 60 (Advice Reason Code)                                            |

DE 44 may appear in any response message when DE 39 contains the value 30, which signifies a format error condition in the related request message. In such cases, DE 44 will contain either:

- A three-digit number representing only the data element number
- A six-digit number indicating both the data element and the subelement numbers, if the data element includes subelements

## Edit errors best practices

These best practices help minimize edit errors and provide guidance for addressing them when they occur.

### Preventing errors

To prevent errors:

- Review and analyze all release announcements for new or updated data formatting and value requirements.
- Perform as much advance data validation and correction as possible before sending messages to Mastercard. This could include verifying the BIN or account range for the PAN, country codes, currency codes, or other data.
- Customers using parameter data obtained from Mastercard-supplied tables (such as those found in the Mastercard Parameter Extract file) as part of their own transaction data validations must use the most recent versions of the tables.
- Follow any field encoding schemes as documented in the Mastercard system specifications. This includes:
  - Populating fields in supported message types, as specified by the Message Type Indicator (MTI)
  - Complying with field length and format specifications, such as numeric or alphabetic
  - Constructing subelement ID, subelement length, subfield ID, and subfield length fields in accordance with the data element-specific encoding schemes found in the Data element definitions and details chapter
  - Using the Mastercard-defined field values
- Mastercard strongly recommends using Mastercard simulators to validate new or modified processing logic.

## Reacting to errors received

If you receive an edit error:

- Use the value in DE 44 to determine where the error occurred.
- Look at the specifications for the data element or subelement in error and compare them against the data submitted in the field.
- Review the application notes for the data element, which may provide additional information on requirements for that field.

## Error numbers and messages

Details of edits are documented in the notes sections associated with data elements, subelements, and subfields in Chapter 5, Data element definitions and details.

Additional information can be found under specific services described in Chapter 6, System functionality and services, and Appendix B, Services or products leveraging the system.

## Chapter 7 System functionality and services

This section describes [Dual Message Authorization System](#) functionality or services that are fundamental to transaction processing. This section also includes information about requesting and using these services.

## Account balance response

The account balance response enables issuers to include account balance information as part of the response to a financial authorization request. The account balance response is an unsolicited transmission of account balance data to the point-of-sale (POS) terminal or ATM. Issuers may provide solicited transmission of account balance through other means. The account balance response provides cardholders with up-to-date balance information on their prepaid cards.

This functionality applies only to ATM transactions or transactions on prepaid cards. Issuers may not use this for credit or debit accounts for POS transactions. Use for credit or debit account increases the risk of fraudulent activity and concerns for cardholder privacy.

Issuers may provide account balance information for both approved and declined authorization responses. Prepaid Debit Mastercard card issuers must provide the cardholder's account balance information in DE 54 (Additional Amounts) of the Authorization Request Response/0110 message.

When the issuer provides the available balance in the authorization response, POS and ATM terminals that are programmed to accept account balance data can display or print the available balance.

- **Approved Responses:** The available balance on an approved response is the account balance after the transaction amount has been deducted from the account.
- **Declined Responses:** For POS transactions where a prepaid card is used, this feature gives the cardholder and merchant information needed to process a split-tender transaction. The merchant can submit another authorization request for the purchase using a lower amount that can be approved by the prepaid issuer and ask the cardholder to provide another form of payment for the remaining purchase amount. The available balance returned in a declined response identifies the current account balance, without deducting the declined transaction amount.

The Dual Message Authorization System forwards the account balance response provided by the issuer to the acquirer only when it is returned in an ATM transaction or in a POS transaction for a prepaid account. Mastercard also will remove balance information from all Maestro® and POS purchase transactions that are initiated with a debit card (not identified to be prepaid related).

## Account data compromise information

Mastercard provides issuers with account data compromise (ADC) event information in authorization messages.

### Authorization Processing

The following describes authorization processing for a transaction that contains a primary account number (PAN) with and without an ADC event match.

- When an acquirer sends an Authorization Request/0100 message to the Mastercard Network, the Dual Message Authorization System searches the ADC database for a match on the PAN.
- If an ADC event match is found, the Dual Message Authorization System inserts the following values in the Authorization Request/0100 message before sending to the issuer:
  - DE 48 (Additional Data: Private Use), subelement 39 (Account Data Compromise Information) containing the account data compromise event information.

DE 48, subelement 39 contains multiple pieces of information, including up to three case key codes (unique keys identifying the case).

Case key codes can be used to locate the Mastercard Alerts Full Case ID associated with a particular ADC event (for example, MCAAlert Full Case ID: MCA2101-US-24. The data in DE48, subelement 39 is displayed in the following format: 021014, which displays five positions for the alert number and the last digit of the year (right-justify and pad string with spaces if needed).

### Authorization reports

The Authorization Parameter Summary Report (SI737010-AA) includes an ADC Event (Account Data Compromise) participant parameter in the Global Parameters section. For a sample of the Authorization Parameter Summary Report (SI737010-AA), refer to [Reports and files](#).

### For more information

For details about data requirements, refer to [Data element definitions and details](#).

## Account Management System

Account Management System (AMS) services include account-level services that issuers use to designate special handling during authorization. Issuers can list cardholder accounts as exception accounts that receive Stand-In or chargeback protection.

Issuers can identify accounts with a preferred status in Premium Listings, providing higher dollar and transaction limits for Stand-In Authorization; or identify accounts that participate in services such as Electronic Warning Bulletin, Payment Cancellation, Contactless Mapping Services, Mastercard In Control, Enhanced Value, Product Graduation, and High Value.

## Stand-In Account File

The Stand-In Account File (MCC102) provides information for use in Stand-In Authorization when making an authorization decision on behalf of the issuer.

Issuers list the following types of accounts in the Stand-In Account File:

- Preferred or premium listings that designate higher authorization limits for preferred cardholders

- Negative accounts that require a Stand-In Authorization response of decline, refer to card issuer, or capture card for lost, stolen, fraud or accounts with credit issues
- Electronic Warning Bulletin (restricted) listings for lost, stolen, and fraudulent accounts, which are distributed daily to all acquirers

## Electronic Warning Bulletin File

The Electronic Warning Bulletin File (MCC103) allows issuers to identify and manage restricted accounts for special handling.

AMS collects and distributes Mastercard restricted account listings in the Electronic Warning Bulletin (EWB) File for use in authorization processing.

Issuers list the following types of accounts in AMS:

- Lost
- Stolen
- Counterfeit
- Severe credit problems with continued activity

Listing in AMS provides issuers with the following benefits:

- Warning bulletin chargeback rights
- Capture-card response for Stand-In Authorization and X-Code Processing

## Local Stoplist File

The Local Stoplist File (MCC104) allows participating issuers to list exception accounts at the country and subcountry levels.

This gives issuers the opportunity to select the geographical area covered by each listing to target a specific fraud problem.

- The country level listing allows issuers to list in a single country.
- The subcountry level listing allows issuers to list in a defined category such as an acceptor business code (MCC) within a country.

## Payment Cancellation File

The Payment Cancellation File (MCC105) supports Payment Cancellation for card-not-present and recurring payment transactions.

Payment cancellation allows issuers to specify criteria to block card-not-present and recurring payment transactions identified in authorization messages and clearing records.

## PAN Mapping File

The PAN Mapping File (MCC106) supports multiple mapping services.

Services which use the PAN mapping file functionality are:

- Contactless Mapping Service
- Mastercard Digital Enablement Service (MDES)
- In Control Mapping
- Token Service Provider PAN Mapping

## Contactless Application Transaction Counter File

The Contactless Application Transaction Counter (ATC) File (MCC109) contains the most recent ATC values for contactless cards or devices that were personalized using dynamic values in the ATC and unpredictable number (UN).

Issuers participating in the CVC 3 Validation in Stand-In Authorization or in the CVC 3 Pre-validation Service may provide this file to Mastercard.

## Blocking ranges of accounts

Mastercard provides customers two ways to list account ranges to stop the acceptance of a range of cards.

The following table explains how to create two types of blocked listings.

### Types of blocked listings

| Type of listing          | How to list                                         | Where it goes                                                              |
|--------------------------|-----------------------------------------------------|----------------------------------------------------------------------------|
| Group or Series          | The issuer requests the Group or Series in writing. | Mastercard adds the listing to AMS.                                        |
| Selective Range Blocking | Stand-In Authorization within MC Connect.           | Mastercard adds the listing to the Stand-In Authorization processing flow. |

The following table compares the levels of protection provided by the listing types.

Levels of protection types

| Type of listing          | Levels of protection   |        |                            |                                                             |
|--------------------------|------------------------|--------|----------------------------|-------------------------------------------------------------|
|                          | Stand-In Authorization | X-Code | Under Merchant Floor Limit | Chargeback Rights under Reason Code 4807                    |
| Group or Series          | Yes                    | Yes    | Yes                        | Only in catastrophic situations when approved by Mastercard |
| Selective Range Blocking | Yes                    | Yes    | No                         | No                                                          |

For more information

For more information about AMS and AMS services, refer to the [Account Management System User Manual](#).

For more information about blocking ranges, refer to [Stand-In Authorization Reference Guide](#).

Account Status Inquiry Service

Account Status Inquiry (ASI) allows acquirers to send Account Status Inquiry transactions to validate aspects of a cardholder account.

The Account Status Inquiry Service supports purchase account status inquiry transactions and payment account status inquiry transactions for Mastercard® credit, Debit Mastercard®, and Maestro® acceptance brands.

In addition to Mastercard products, Account Status Inquiry Service transaction processing supports the following types of acceptance brands:

- American Express
- Diners
- Discover
- JCB
- Private label cards
- Visa

## Purchase Account Status Inquiry/Recurring Payment Account Status Inquiry

Purchase ASI or Recurring Payment ASI is an optional service for merchants, which allows them to validate that a cardholder account is open and the account is not listed in the Electronic Warning Bulletin, without negatively affecting a cardholder's funds availability.

The Purchase ASI or a Recurring Payment ASI service can be used:

- To establish a recurring or bill payment relationship
- To validate a card-not-present purchase before fulfillment
- Before submitting an authorization request for the full amount of a recurring payment

A Recurring Payment ASI must comply with all existing recurring payment transaction identification requirements.

### Account Status Inquiry transaction process

1. The acquirer submits an Account Status Inquiry transaction request in the Authorization Request/0100 message containing:
  - DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), value 00 (Purchase)
  - DE 4 (Amount, Transaction) with a transaction amount of zero
  - DE 48 (Additional Data: Private Use), subelement 82 (Address Verification Service Request), value 52 (AVS and Authorization Request/0100) for AVS requests (optional)
  - DE 48, subelement 92 (CVC 2 Value), CVC 2 value (optional)
  - DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status), value 8 (Account Status Inquiry Service [ASI])

If Recurring Payment ASI: DE 61 (Point-of-Service [POS] Data), subfield 4 (POS Cardholder Presence), value 4 (Standing order/recurring transactions)

2. The issuer sends the acquirer an Authorization Request Response/0110 message where DE 39 (Response Code) may contain value 00 (Approved or completed successfully), 85 (Not declined), or a valid business decline response. If the issuer is unable to reply, the acquirer receives a response code of 91 (Authorization System or issuer system inoperative).
3. If applicable, the issuer provides the applicable AVS response in DE 48, subelement 83 (Address Verification Service Response), and provides a valid CVC 2 response in DE 48, subelement 87 (Card Validation Code Result) in the Authorization Request Response/0110 message.

**NOTE: Product Inquiry messages do not include address verification and/or CVC 2 validation requests. See separate description of Product Inquiry Service.**

Acquirers are prohibited from placing a value of one major unit of currency or any other nominal test amount (including equivalent units of local currency such as EUR 1 or JPY 1) that does not represent an actual purchase amount in DE 4 of the Authorization Request/0100 message.

Transactions occurring at an automated fuel dispenser in the U.S. region identified with MCC 5542 may continue to submit USD 1 (or local currency equivalent) authorization requests.

Contactless transit aggregated transactions generated by the transit authority and held for a period of time before being cleared may continue to submit an authorization request for USD 1 or an amount up to the cardholder verification method (CVM) limit amount published in the *Chargeback Guide* on the day of the transaction (or local currency equivalent) authorization requests.

### **Mastercard Digital Enablement Service (MDES) Account Status Inquiries**

Account Status Inquiry messages can also be initiated with MDES tokens, in this case the appropriate MDES services will be performed when MDES data is provided.

For more information on MDES ASI messages, refer to the [MDES Technical Specifications for Dual and Single Message Systems](#).

### **Country- and currency-related data in MDES pre-digitization and ASI messages**

Issuers that use the country-level authorization service for cards designated for local use only that have chosen to receive MDES pre-digitization and ASI messages must be aware that when a funding account range is configured for local use only, Mastercard will modify the country- and currency-related data fields in the MDES pre-digitization and ASI messages to match the issuer country code and primary currency code (as applicable) of the funding account range, according to the configurations provided by the issuer during the onboarding process. The country- and currency-related data fields include the following:

- DE 43 (Acceptor Name and Location), subfield 5 (Acceptor Country Code)
- DE 49 (Currency Code, Transaction)
- DE 61 (Additional POS Data), subfield 13 (POS Country Code)

Issuers that are not configured for local use only will continue to see the MDES pre-digitization and ASI messages with the United States country and currency codes.

## **Payment Account Status Inquiry**

A Payment Account Status Inquiry (Payment ASI) enables payers to verify that issuers will accept a Payment Transaction on behalf of a payee (recipient) for the actual transaction amount for a particular recipient card account before collecting funds from the sender and initiating the Payment Transaction authorization to credit an account.

This request allows issuers to provide a response to an inquiry sent by the payer, indicating whether the issuer will accept a subsequent Payment Transaction authorization for a particular recipient account and amount. Obtaining a successful Payment ASI helps eliminate the need for a payer to return funds to the sender.

The Payment ASI helps improve the payer's experience when confirming a recipient's card account for future use. Issuers can clearly identify:

- The difference between a Payment ASI transaction and a Payment Transaction authorization, so that they can respond and act accordingly.
- The difference between a Payment ASI transaction and a Purchase ASI transaction.

How it works

Acquirers can submit a Payment ASI Transaction for a subsequent payment transaction to determine whether an issuer will post the specified amount to a particular card account before collecting funds from the sender.

Payment ASI transactions are non-financial transactions. Issuers must not credit the receiving cardholder account based on the amount provided in the Payment ASI request.

- When an issuer receives a Payment ASI transaction of zero, the issuer should confirm that the recipient’s card account exists and can be used in the future for receiving funds.
- When an issuer receives a Payment ASI transaction for an amount greater than zero, the issuer should confirm that the amount specified does not exceed a prepaid load limit or other types of limits they may have for Payment Transactions.
- When the issuer provides an approval response to the Payment ASI for the receiving account, the issuer is indicating that it is expecting to approve a subsequent Payment Transaction request message when it is received for the account.

**NOTE: The receiving issuer may reject the subsequent Payment Transaction if circumstances for the account have changed.**

## Product Inquiry Service

The Product Inquiry Service allows an acquirer to send a product inquiry authorization request message to Mastercard.

**NOTE: Applies only to the U.S. region.**

As part of the authorization response to an acquirer, Mastercard will provide the product code associated with the Mastercard account number. Additionally, because product codes for card programs potentially fall under different interchange rate structures, Mastercard will also populate the authorization response message with the applicable account category code, as defined by Account Level Management.

The information received by the acquirer through a Product Inquiry Service request, along with the published Mastercard interchange rate schedule and rate criteria, can be used by an acquirer and merchant to determine the product and associated interchange rate that may be applied to a purchase transaction.

### Acquirers

Acquirers that choose to support Product Inquiry Service transactions must send Authorization Request/0100 messages containing DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status), value 8 (Account Status Inquiry Service) and DE 4 (Amount, Transaction) with a transaction amount of zero when submitting Product Inquiry Service transaction requests.

**NOTE: Product Inquiry Service messages including address verification or CVC 2 validation requests will be deemed to be an attempt to mitigate fraud. As such, they will be designated as an Account Status Inquiry Service transaction and billed accordingly.**

### Issuers

Issuers will receive Authorization Request/0100 messages containing DE 61, subfield 7, value 8, and DE 4 with a transaction amount of zero. Issuers must respond to these transactions with value 00 (Approved or completed successfully), 85 (Not Declined), 05 (Do Not Honor) or other valid business decline responses in DE 39 (Response Code).

### For more information

For more information about the Product Inquiry Service, contact the Global Customer Service team.

## Address Verification Service

Address Verification Service (AVS) is a fraud deterrent service that provides greater security to merchants and cardholders. It helps to protect against fraudulent use of cards by verifying the cardholder's billing address.

For information on the Name Validation Service, refer to [Name Validation Service](#) section in the appendix.

### How AVS Works

The acquirer requests the cardholder billing address verification as part of the Authorization Request/0100. The issuer performs the verification and returns the appropriate information to the acquirer in the Authorization Request Response/0110.

### Alternate processing

The Stand-In and X-Code systems do not perform AVS. Transactions that contain an AVS request in an Account Status Inquiry Service request will receive a response indicating the service is not available. Transactions that contain an authorization request and an AVS request

will receive the appropriate authorization response in addition to a response indicating the AVS service is not available.

## Participation requirements

Issuers must have online access to participate in AVS.

### Participation requirements

| IF the customer... | AND is located...                                                    | THEN participation is...                   |
|--------------------|----------------------------------------------------------------------|--------------------------------------------|
| issues cards       | in the U.S. and Canada regions                                       | required                                   |
| issues cards       | in a region other than the U.S. that supports AVS use for the region | optional, unless mandated by local country |

## Indicating AVS participation during sign-in

When the issuer signs into the Mastercard Network, the issuer can choose AVS participation options.

The participation is contained in DE 94 (Service Indicator), subfield 3 (Address Data Indicator) of the Network Management Request/0800: sign-on/sign-off message and indicates the following options:

- Does not participate in AVS
- Receives AVS data in non-condensed format
- Receives AVS data in condensed format

**NOTE: Issuers in North America are required to ensure all U.S. and Canada issued cards support and respond to all AVS requests from merchants. It is the issuer's responsibility to ensure that their account ranges for U.S. and Canada issued cards are enabled for AVS. DE 94, subfield 3 value 0 (AVS not currently supported) must not be used. DE 48, subelement 83 (Address Verification Service Response) value U (No data from issuer/Authorization System) may be utilized where there is a declined authorization and the issuer cannot disclose the AVS response.**

## AVS process

The AVS transaction process is listed as follows.

1. The acquirer generates an Authorization Request/0100 message with non-condensed address data included in DE 120 (Record Data). When submitting AVS requests, the Authorization Request/0100 message should always contain DE 120, subfield 01 (AVS Service Indicator 1).
2. The Mastercard Network applies an algorithm to construct the address key, which the issuer uses to verify the address.

3. The issuer host compares the address key in DE 120 to the address key in the issuer database.
4. The issuer generates an Authorization Request Response/0110 message with the AVS response included in DE 48 (Additional Data: Private Use), subelement 83 (Address Verification Service Response).

## Address key

The address key is the part of the Authorization Request/0100 message that contains the address data.

To achieve a complete match, the key that the Mastercard Network sends in DE 120 (Record Data) must be the same as the key in the issuer's database. The address key consists of the following subelements in DE 120:

- Cardholder postal/ZIP code
- Cardholder address (condensed or non-condensed)

### Cardholder postal/ZIP code

The cardholder postal/ZIP code has a fixed length of 9 bytes.

Using AVS Service Indicator 4, AVS will condense the cardholder postal/ZIP code to contain only numeric values, with a maximum of nine values.

**NOTE: Issuers of Mastercard and Debit Mastercard cards in the Canada region must support the validation of Canadian postal codes in a U.S. ZIP code format to facilitate AVS checking at U.S. automated fuel dispensers (AFDs). The required format involves input of the three numeric digits of the cardholder postal code, followed by two trailing zeros to match the required ZIP code format. For example, L7M 1W9 would be entered by the cardholder as 71900. As postal codes are communicated in DE 120 (Record Data), subfield 03 (AVS Service Indicator 3), subelement 3 (AVS Usage) in a nine-position format, L7M 1W9 would be formatted as 71900bbbb, where b is blanks or spaces. For all other non U.S. or Canada region issued cards, Mastercard recommends cardholders pay at the attended terminal within the store.**

### Cardholder address

The length of the cardholder address depends on whether it is condensed or non-condensed.

**Non-condensed** Using AVS Service Indicator 1: A non-condensed cardholder address includes the address data exactly as the acquirer provides it in DE 120. A non-condensed address key includes both the cardholder postal/ZIP code and the cardholder address data exactly as the acquirer provided them in DE 120.

The Dual Message Authorization System will not truncate the address data passed from the acquirer if greater than 29 positions. DE 120 is an LLLVAR field; therefore, it will indicate the length of the data being passed.

**NOTE: Some merchants or acquirers currently are limited to supporting only numeric data.**

Condensed Using AVS Service Indicator 2: A condensed cardholder address using AVS Service Indicator 2 includes the first five numeric values at the beginning of the cardholder address (when scanning the address from left to right) provided by the acquirer in DE 120.

The condensed address key (cardholder postal/ZIP code plus cardholder address) is a fixed length of 14 bytes. It includes the entire cardholder postal/ZIP code and the condensed cardholder address. Mastercard left-justifies and blank-fills both portions of the key, as needed.

Stages of the process to condense the address key:

1. The condensing algorithm begins condensing with the numeric value in the left-most position.
2. The algorithm extracts the first five numeric values of the cardholder address (when scanning the address from left to right).  
The condensing algorithm ignores all special characters (such as hyphens [-], slashes [/ or \], and number signs [#]).
3. AVS constructs the condensed AVS key.

Condensed Using AVS Service Indicator 3: A condensed cardholder address includes as many as five numeric values at the beginning of the cardholder address provided by the acquirer in DE 120.

The condensed address key (cardholder postal/ZIP code plus cardholder address) is a fixed length of 14 bytes. It includes the entire cardholder postal/ZIP code and the condensed cardholder address. Mastercard left-justifies and blank-fills both portions of the key, as needed.

Stages of the process to condense the address key:

1. The condensing algorithm begins condensing with the numeric value in the left-most position.
2. The algorithm extracts up to five numeric values that appear before the first alphabetic character or space. The condensing algorithm:
  - Ignores all special characters (such as hyphens [-], slashes [/ or \], and number signs [#])
  - Excludes the portions of the address that could be open to misinterpretation, such as apartment numbers
3. When AVS finds a space or an alphabetic character, it stops examining the cardholder billing address.
4. AVS constructs the condensed AVS key.

Condensed Using AVS Service Indicator 4: A condensed cardholder address using AVS Service Indicator 4 includes only the numeric values in the cardholder postal/ZIP code (with a maximum of nine values), as well as the first five numeric values in the cardholder address received (when scanning the address from left to right) before forwarding the message to the issuer.

Stages of the process to condense the post/ZIP code and address data:

1. The condensing algorithm begins condensing with the numeric value in the left-most position.
2. The algorithm extracts up to nine numeric values in the cardholder postal/ZIP code and up to five numeric values in cardholder address (when scanning the address from left to right).

The condensing algorithm ignores all special characters (such as hyphens [-], slashes [/ or \], and number signs [#])

- 3. AVS constructs the condensed AVS key.

Non-condensed versus condensed

The following table provides an example of a non-condensed address key compared to a condensed address key.

Non-condensed versus condensed details

| Non-condensed                       | Condensed Using AVS Service Indicator 2 | Condensed Using AVS Service Indicator 3 | Condensed Using AVS Service Indicator 4 |
|-------------------------------------|-----------------------------------------|-----------------------------------------|-----------------------------------------|
| 4J235 1520 Main Street, Apartment 3 | 4J235 ____ 15203                        | 4J235 ____ 1520                         | 4235 ____ 15203                         |

Example 1: complete match

The cardholder billing address is 1520 Main Street, Apartment 3. The issuer is using a condensed address key using AVS Service Indicator 3.

The cardholder neglects to provide the merchant with the apartment number 3, so the merchant omits the apartment number from the AVS request. However, the matching algorithm still finds a complete match.

Example 1: complete match

| Merchant enters... |                    |                 |                      |                                                                                                                                                                                                                                                                                                                                            |
|--------------------|--------------------|-----------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Postal/ZIP Code    | Cardholder Address | AVS Address Key | Issuer's Address Key | Result/Explanation                                                                                                                                                                                                                                                                                                                         |
| 63110              | 1520 Main Street   | 63110____ 1520  | 63110____ 1520       | Complete Match<br><br>The issuer builds its address key based on the AVS algorithm. Both the issuer's address key and the AVS algorithm extract only the numeric values that precede the first space in this example (1520). Therefore, when the merchant does not enter the apartment number, this still results in a complete AVS match. |

## Example 2: no match

The cardholder's address is 54 East Street; however, the cardholder provides the merchant with the address of 59 East Street.

### Example 2: no match

| Merchant enters... |                    |                 |                      |                                                                                                         |
|--------------------|--------------------|-----------------|----------------------|---------------------------------------------------------------------------------------------------------|
| Postal/ZIP Code    | Cardholder Address | AVS Address Key | Issuer's Address Key | Result/Explanation                                                                                      |
| 63110              | 59 East Street     | 63110____59__   | 63110____54__        | No Match<br><br>The issuer's address key does not match the cardholder address given by the cardholder. |

## Issuer procedures

Stages of the process that issuers follow to receive and respond to AVS requests.

1. The issuer signs on to the Dual Message Authorization System using a Network Management Request/0800: sign-on/sign-off message.

### Issuer procedures

| IF the issuer receives...                                                             | THEN the issuer signs on with value... |
|---------------------------------------------------------------------------------------|----------------------------------------|
| non-condensed AVS data                                                                | 1 in DE 94, subfield 3.                |
| condensed AVS data using AVS Service Indicator 2                                      | 2 in DE 94, subfield 3.                |
| condensed AVS data using AVS Service Indicator 3                                      | 3 in DE 94, subfield 3.                |
| condensed AVS data using AVS Service Indicator 4                                      | 4 in DE 94, subfield 3.                |
| for customers using group sign-in, the value chosen applies to all BINs in the group. |                                        |

2. When the issuer receives an AVS request, the issuer verifies the cardholder billing address, matching it against the issuer's address file.
3. The issuer generates an Authorization Request Response/0110 that includes the AVS response and an authorization response.

## Authorization Request/0100: AVS and authorization request

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

### Applicable data elements

| Data Element                                                         | Org | Sys | Dst | Values/Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

### For more information

For details about data requirements, refer to [Data element definitions and details](#).

## Alternate Processing options

Stand-In Authorization and X- Code Processing are alternate processing options.

### Stand-In Authorization service

Stand-In Authorization helps issuers protect their revenue and minimize their risk, strengthening their cardholder relationships and safeguarding their brand reputation.

Stand-In Authorization is a Mastercard service that responds on behalf of the issuer to authorization requests that have been routed to the Mastercard Network when the issuer:

Does not respond

Cannot be reached

Provides an invalid response

Declines the transaction with response code 91, 92, or 96

Stand-In Authorization supports various brands, for example:

- Mastercard®, Maestro®, Cirrus®, and non-Mastercard brands
- Segments: consumer and commercial
- Products: credit and debit
- Channels: POS, CNP, and Quasi-Cash for transactions switched through the Mastercard Network.

As transactions are made and switched through the Mastercard Network, the network attempts to pass transactions to the Issuer. If the Issuer is unavailable or unresponsive, Stand-In Authorization steps in and decides the transaction on their behalf.

Stand-In Authorization is enabled, by default, for all authorization account ranges for Mastercard, Maestro and Cirrus card programs. Information on required use of Stand-In processing is available in the Transaction Processing Rules.

Issuers may list accounts in the Stand-In Account File as Negative (lost/stolen/fraud) or Premium Listings for valued/preferred cardholders. Issuers may list individual card numbers to identify exception accounts that are processed differently than regular accounts. They can list these accounts either with higher limits to ensure approval, such as the limits for Premium Listings or as Negative for lost/stolen/fraud or unpaid/over limit accounts that must be declined. If Stand-In Authorization determines that an account is listed on an exception file, Stand-In processing is modified. For a description of how to list accounts, refer to the [Account Management System User Manual](#).

Issuers must support store-and-forward (SAF) interleaving for online Stand-In advice messages.

Stand-In Authorization can assist issuers in meeting required performance standards. Failure to meet these standards could result in noncompliance assessments. Refer to the [Mastercard Rules](#) and [Transaction Processing Rules](#) for more information about standards and assessments.

## X-Code Processing

X-Code processing applies only when the acquirer is online. It can occur either at the acquirer host or acquirer MIP.

Acquirer host X-Code Processing occurs when the acquirer host cannot communicate with the acquirer MIP.

### Rules for acquirer host X-Code Processing

For acquirer host X-Code Processing, the acquirer must approve and bear liability for the transaction, after validating that the account is not listed as restricted on the Electronic Warning Bulletin file, when the transaction amount is less than or equal to USD 300, except in the circumstances listed below.

The issuer bears liability for authorization requests that it approves. The acquirer must phone the issuer for approval in any of the following instances:

- The transaction amount is more than USD 300.
- The card is not present.
- The merchant suspects that the card may be stolen or counterfeit, or the transaction or the customer causes the merchant to be suspicious.
- The transaction type is one of the following: PIN transactions, unique, mail order/telephone order, electronic commerce order, Payment Transaction, or non-financial transactions (such as balance inquiry, PIN management).

If the transaction amount is more than USD 300 and the acquirer cannot reach the issuer, the acquirer may do any of the following:

- Approve the transaction (and bear liability for the total amount)
- Decline the transaction
- Continue attempting to reach the issuer

If the acquirer has not phoned the issuer for approval, the acquirer can create an Authorization Advice/0120: Acquirer-generated message to notify the issuer of the approved authorization based on the previously stated rules for X-Code Processing.

Acquirer MIP X-Code Processing occurs when the acquirer MIP cannot communicate with the Mastercard Network or the acquirer MIP does not receive a response from the issuer or the Stand-In Authorization within the time frame established by Mastercard.

### MIP X-Code Processing rules

A subset of transactions is eligible for MIP X-Code Processing and may receive an approval. Transactions ineligible for MIP X-Code Processing are always declined.

## Transaction eligibility

| MIP X-Code authorization response | Type of transaction                                                                                                                                                                                                                                                                                                                                    |

| Capture Card                      | Transactions for accounts that are listed on the Electronic Warning Bulletin file                                                                                                                                                                                                                                                                      |
| Approve                           | Transactions that are less than or equal to the MIP X-Code ceiling limits and do not meet any of the criteria listed above                                                                                                                                                                                                                             |

### MIP X-Code ceiling limits

Ceiling limits are assigned to each product category, and transactions with amounts above the ceiling limits are not approved.

### Ceiling limits

| Product Category                                                     | Maximum MIP X-Code Limits |
|----------------------------------------------------------------------|---------------------------|
| Transactions using Mastercard consumer credit products               | USD 950                   |
| Transactions using Mastercard consumer debit products                | USD 400                   |
| Transactions using Mastercard commercial small business products     | USD 950                   |
| Transactions using Mastercard commercial corporate products          | USD 950                   |
| Transactions using all other Mastercard, Maestro and Cirrus products | USD 0                     |

## Liability for X-Code transactions

The issuer is liable for transactions that are approved under acquirer MIP X-Code, up to the MIP X-Code ceiling limits specified.

## MIP X-Code risk assessment

For eligible transactions with amounts falling below the ceiling limits, X-Code Processing applies risk assessment measures to determine the authorization response. This includes efforts to decline transactions for customers who express a desire to prevent on-behalf approvals by Mastercard. These measures are enhanced on an ongoing basis.

# Automated Fuel Dispenser Completion

Acquirers use the Automated Fuel Dispenser (AFD) Completion messages to advise the issuer of the total amount of the Automated Fuel Dispenser (AFD) transaction.

An AFD transaction is identified with MCC 5542 and may occur at a cardholder-activated terminal (CAT) or as an e-commerce transaction.

The acquirer sends an Authorization Request/0100 message to verify a minimum availability of funds in the cardholder's account for an Automated Fuel Dispenser (AFD) transaction. If the request is not declined, the acquirer sends an Authorization Advice/0120: acquirer-generated message to the issuer, specifying the total amount of the AFD transaction. The value in DE 60, subfield 1 (Advice Reason Code) is 191 (Acquirer Processing System [APS] Completed Authorization Transaction).

The Dual Message Authorization System forwards all Authorization Advice/0120: acquirer-generated messages directly to the issuer. The issuer must respond with an Authorization Advice Response/0130: responding to an acquirer-generated 0120 message acknowledging receipt of the Authorization Advice/0120: acquirer-generated message. If the issuer is not available or does not respond within timer limits, the Authorization Advice/0120: acquirer-generated message will be sent to the Stand-In Authorization. The Stand-In Authorization responds with an Authorization Advice Response/0130: system-generated message to the acquirer to acknowledge receipt of the Authorization Advice/0120: acquirer-generated message. The advice message will be added to the SAF for later distribution to the issuer.

**NOTE: The Data Integrity Automated Fuel Dispenser (AFD) edit for acquirers of AFD merchants that are located in the U.S. region is described in *Data Integrity Monitoring Program*.**

## AFD message scenarios

Mastercard supports the following usage scenarios for AFD authorization messages.

### AFD message scenarios

| WHEN the AFD Authorization Request Response/0110 contains...                                                                    | THEN the AFD acquirer...                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DE 39 (Response Code), value 00 (Approved or completed successfully)                                                            | submits the Authorization Advice/0120: acquirer-generated message containing the final fuel sale amount.                                                           |
| DE 39, value 10 (Partial Approval)                                                                                              | submits the Authorization Advice/0120: acquirer-generated message containing the final fuel sale amount that is less than or equal to the partial approval amount. |
| DE 39, value 00 (Approved or completed successfully) or value 10 (Partial Approval) and the transaction is canceled at the pump | submits a Reversal Request/0400 message, or an Authorization Advice/0120 message with a DE 04 zero amount, to cancel the AFD transaction.                          |

**NOTE: The AFD Authorization Advice/0120: acquirer-generated message is not a replacement for the First Presentment/1240 message to the clearing system on a credit transaction.**

## Authorization Request/0100: Automated Fuel Dispenser Preauthorization

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

### Applicable data elements

| Data Element                                                       | Org | Sys | Dst | Values/Comments                                                                                                    |

| DE 18 (Merchant Type)                                                                                                           | M   | •   | M   | 5542 = Fuel Dispenser, Automated                                                                                                                 |
| DE 39 (Response Code)                                                                                                           | M   | •   | M   | Valid values:<br><br>00 = Approved or completed successfully<br><br>10 = Partial Approval                                                        |
| DE 48 (Additional Data: Private Use), subelement 15 (Dual Message Authorization System Advice Date and Time), subfield 1 (Date) | •   | X   | M   | Contains the valid date of the Authorization Advice/0120: acquirer-generated inserted by the Dual Message Authorization System in MMDD format.   |
| DE 48, subelement 15, subfield 2 (Time)                                                                                         | •   | X   | M   | Contains the valid time of the Authorization Advice/0120: acquirer-generated inserted by the Dual Message Authorization System in hhmmss format. |
| DE 48, subelement 20 (Cardholder Verification Method)                                                                           | M   | X   | •   |                                                                                                                                                  |
| DE 60 (Advice Reason Code), subfield 1 (Advice Reason Code)                                                                     | M   | •   | M   | 191 = Acquirer Processing System (APS) Completed Authorization Transaction                                                                       |

**NOTE: Acquirers must not submit DE 48, subelement 82 (Address Verification Service Request) or subelement 92 (CVC 2) as these services are not performed on the Authorization Advice/0120: acquirer-generated message and will cause the 0120 message to be rejected by the Dual Message Authorization System.**

## Authorization Advice/0120: acquirer-generated (Automated Fuel Dispenser Completion)

Customers should be aware of the critical requirements for proper processing of acceptor business code (MCC) 5542 (Fuel Dispenser, Automated) transactions.

### Critical AFD Advice Message Data

The following information provides a summary of the critical acquirer requirements for processing AFD transactions:

- Authorization Advice/0120 (Automated Fuel Dispenser Completion) messages must contain DE 60 (Advice Reason Code), subfield 1 (Advice Reason Code), value 191 (completed authorization) for AFD transactions with an original Authorization Request/0100 message.
- The following Authorization Advice/0120 message data elements must match the value submitted within the original Authorization Request/0100 message for issuer transaction matching purposes:
  - DE 2 (Primary Account Number)
  - DE 7 (Transmission Date and Time)
  - DE 11 (System Trace Audit Number [STAN])
  - DE 32 (Acquiring Institution ID Code)
  - DE 33 (Forwarding Institution ID Code), if present in the Authorization Request/0100 message
  - DE 38 (Authorization ID Response) and DE 39 (Response Code) with the same value as received in the original Authorization Request Response/0110 message
  - DE 48 (Additional Data), subelement 63 (Trace ID) to further assist issuers in matching an AFD completion advice to the original preauthorization
  - DE 48 (Additional Data), subelement 98 (Mastercard Corporate Fleet Card® ID/Driver Number) and/or subelement 99 (Mastercard Corporate Fleet Card® Vehicle Number), with the same values as submitted in the original Authorization Request/0100 message, if present
  - DE 121 (Authorizing Agent ID Code), with same value as was received in the original Authorization Request Response/0110 message, if present

### Track Data in AFD Advice Message: acquirers

The Authorization Advice/0120 message layout shows DE 35 (Track 2 Data) and DE 45 (Track 1 Data) as optional. Acquirers of AFD merchants are reminded that the presence of track data in the Authorization Request/0100 message for a card-present transaction does not necessitate inclusion within the AFD Advice message. This data is not needed by issuers for matching an

AFD advice to an original authorization, and storage of track data for submission of the AFD Advice may not be PCI compliant.

**Track Data in AFD Advice Message: issuers**

The Authorization Advice/0120: acquirer-generated message for an AFD transaction contains the completion amount and other reference data from the original Authorization Request/0100 message data. Issuers are reminded that DE 35 and DE 45 track data is optional in an AFD Advice message and may not be present, regardless of the Point-of-Service (POS) entry mode value in DE 22. As such, the absence or presence of track data in the AFD Advice message should not result in a format error from issuers for card-present fuel purchases.

For details about data requirements, refer to [Data element definitions and details](#) section.

**Authorization Advice Response/0130: Issuer-generated (responding to an acquirer-generated 0120)**

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Advice Response/0130: issuer-generated (responding to an acquirer-generated 0120) data elements apply.

**Applicable data elements**

| Data Element                                                                                                                    | Org | Sys | Dst | Values/Comments                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------|-----|-----|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| DE 48 (Additional Data: Private Use), subelement 15 (Dual Message Authorization System Advice Date and Time), subfield 1 (Date) | ME  | .   | ME  | This should match what was received by the issuer in the Authorization Advice/0120 message, which was provided by the Dual Message Authorization System. |
| DE 48 (Additional Data: Private Use), subelement 15 (Dual Message Authorization System Advice Date and Time), subfield 2 (Time) | ME  | .   | ME  | This should match what was received by the issuer in the Authorization Advice/0120 message, which was provided by the Dual Message Authorization System. |

**Alternate Processing**

Alternate processing is provided if an issuer does not respond or is unable or unavailable to receive the Authorization Advice/0120: acquirer-generated AFD completion messages.

The Dual Message Authorization System responds to the acquirer with an Authorization Advice Response/0130 message containing DE 39 (Response Code), value 00 (Approved or completed successfully) and sends the Authorization Advice/0120: acquirer-generated message to SAF. SAF messages will be sent to the issuer when the issuer is available. DE 60 (Advice Reason

Code), subfield 1 (Advice Reason Code) keeps value 191 (Acquirer Processing System [APS] Completed Authorization Transaction) when delivered from SAF.

## Clearing AFD Transactions

Mastercard recommends that the Trace ID (DE 15 [Settlement Date] and DE 63 [Network Data]) of the completion advice response be used within the clearing presentment.

As an alternative, if the Trace ID of the original preauthorization is used for clearing presentment, that same Trace ID must be included in the AFD completion advice message within DE 48, subelement 63 (Additional Data, Trace ID).

## ATM Bill Payment service

Bill Payment transactions at the ATM help increase the acquirer's transaction volume by providing a convenient method for cardholders to initiate bill pay request transactions.

ATM Bill Payment service supports:

- Non-Europe acquired ATM Bill Payment transactions
- Europe-acquired ATM Bill Payment transactions

### Non-Europe acquired ATM Bill Payment processing

The ATM Bill Payment service allows cardholders to use their Mastercard® credit card or card at any ATM to pay utilities and other bills when the service is supported domestically.

Stages describing authorization processing when a cardholder requests an ATM Bill Payment transaction:

1. The service is initiated by the cardholder at an ATM with a need to pay a bill (for example, electric bill, cable bill, phone bill).
2. The cardholder inputs biller account information, including the ATM bill pay code to identify the biller company, and then submits the bill pay request.
3. The ATM acquirer submits the payment request as a POS transaction to the Single Message System in a Financial Transaction Request/0200 message containing:
  - DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), value 00 (Purchase)
  - DE 18 (Merchant Type) with a MCC data value 6539 (Funding Transaction [Excluding Mastercard Send]). MCC 6539 is limited for use only in certain countries where the service is supported domestically.
  - DE 61 (Point-of-Service [POS] Data), subfield 10 (Cardholder-Activated Terminal Level Indicator), with one of the following values:
    - 1 (Authorized Level 1 CAT: automated dispensing machine with PIN)
    - 2 (Authorized Level 2 CAT: self-service terminal)
  - DE 124 (Member Defined Data) contains details relating to the bill being paid (optional)

4. The Single Message System converts the Financial Transaction Request/0200 message, and then forwards an Authorization Request/0100 message via the Mastercard Network to the issuer.
5. The issuer sends the Authorization Request Response/0110 message back to the Single Message System via the Mastercard Network.
6. The Single Message System converts the Authorization Request Response/0110 message, and then sends a Financial Transaction Request Response/0210 message to the ATM acquirer.
7. The acquirer provides a receipt to the cardholder that contains the bill payment information (such as amount paid, date paid, and ATM bill pay code).
8. The acquirer initiates the bill paying process, paying funds directly to the biller (such as electric company, phone company).
9. The cardholder sees the bill payment transaction in his or her monthly bankcard statement.

Non-Europe acquired ATM Bill Payment transactions are not processed by the Stand-In Authorization or X-Code Processing. Transactions are declined using the Authorization Request Response/0110 message containing DE 39 (Response Code), value 91 (Authorization System or issuer system inoperative).

### **Europe-acquired ATM Bill Payment processing**

The ATM Bill Payment service allows cardholders to use their Mastercard®, Cirrus®, or Maestro® card at any ATM to pay utilities and other bills where the service is supported domestically for the Europe region.

Stages describing authorization processing when a cardholder requests an ATM Bill Payment transactions:

1. The service is initiated by the cardholder at an ATM with a need to pay a bill (for example, electric bill, cable bill, phone bill).
2. The cardholder inputs biller account information, including the ATM bill pay code to identify the biller company, and then submits the bill pay request.
3. The ATM acquirer submits the payment request as a POS transaction to Authorization Request/0100 message containing:
  - DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), value 00 (Purchase)
  - DE 18 (Merchant Type) with MCC data value 6050 (Quasi-Cash: Member Financial Institution) or a more precise MCC related to the nature of the bill that is being paid. For example, MCC 4900 (Utilities: Electric, Gas, Heating Oil, Sanitary, Water) for utilities bills. MCC 6011 (Member Financial Institution: Automated Cash Disbursements) must not be used.
  - DE 61 (Point-of-Service [POS] Data), subfield 10 (Cardholder-Activated Terminal Level Indicator), value 1 (Authorized Level 1 CAT: automated dispensing machine with PIN)
  - DE 124 (Member Defined Data) contains details relating to the bill being paid (optional)
4. The Dual Message Authorization System forwards the Authorization Request/0100 message to the issuer.
5. The issuer sends the Authorization Request Response/0110 message to the acquirer.

6. The acquirer provides a receipt to the cardholder that contains the bill payment information (such as amount paid, date paid, ATM bill pay code).
7. The acquirer initiates the bill paying process, paying funds directly to the biller (such as electric company, phone company).
8. The cardholder sees the bill payment transaction in his or her monthly bankcard statement.

## ATM Credit Card Cash Advance in Installments

This service allows cardholders to initiate an inquiry at the ATM requesting a credit card cash advance to be repaid in monthly installments (for example, 6, 12, or 18 months).

With this enhancement, a cardholder can initiate an inquiry at the ATM requesting a credit card cash advance to be repaid in monthly installments (for example, 6, 12, or 18 months). The issuer can accept the installment terms requested by the cardholder, decline the request, or decline the request and offer an alternate installment schedule. The cardholder has the option to accept or reject the issuer's terms and conditions for the installment payments. If the cardholder accepts the issuer's terms and conditions for repayment, the issuer will then approve or decline the cash advance transaction. If approved, the cardholder will receive the funds, along with the installment payment details printed on the ATM receipt. The issuer will bill the cardholder for the amount of the transaction in the agreed-upon installments.

Acquirers entering this market must be able to:

- Provide ATM screens that offer an installment payment option.
- Provide the ability to print the issuer's installment payment details on the ATM receipt.

The ATM Credit Card Cash Advance in Installments service is currently available to single message transactions (Single Message System-acquired activity).

The ATM Credit Card Cash Advance in Installments service is not available to ATM acquirers in the Europe region.

## Authorization and Preauthorization Processing Standards

All authorizations initiated by acceptors in the Asia/Pacific, Europe, and Middle East/Africa regions must clearly be distinguished as a final authorization or a preauthorization. Authorizations initiated by acceptors in all other regions must be distinguished as a preauthorization, final authorization, or undefined authorization.

Undefined authorizations will no longer be permitted in the U. S. region effective 17 June 2025, Latin America and the Caribbean region on 18 August 2025 and the Canada region 17 September 2025.

For additional detail on Authorization and Preauthorization Processing Standards, refer to the [Transaction Processing Rules](#).

### Authorization and preauthorization processing

Clear and reliable identification of authorizations provides better information about the nature of each authorization and allows issuers to optionally apply different processing to different types of authorizations, ultimately benefiting cardholders.

Final authorization processing is mandated for transactions initiated at acceptors in the Europe region that enables issuers globally to distinguish a final authorization from a preauthorization.

**NOTE:** Refer to the [Scenarios](#) section for detailed scenarios for preauthorization, final authorization, undefined authorization, and chargeback extension request.

## Preauthorization, final authorization, and undefined authorization transactions

An authorization for an amount greater than zero must be identified as either preauthorization, final authorization, or undefined authorization, using the requirements listed here.

### Preauthorization

An authorization for an amount greater than zero should be coded as a preauthorization if it meets one of the following three conditions:

- Authorization is requested for an estimated amount.
- The requested amount of the original authorization may be adjusted if the final Transaction Amount (amount submitted for clearing) is greater than the original amount requested.
- The transaction might not be completed for reasons other than technical failure or lack of full issuer approval. For example, the transaction might not be completed when the cardholder will be offered the choice to complete the transaction with another payment means at a later time (such as, when checking out of a hotel or returning a rental car) or when the goods ordered by the cardholder might be later found to be out of stock. The risk of technical failures such as telecommunications failure or terminal failure should not be taken into account to determine if an authorization must be coded as a preauthorization.

The authorization request is properly identified as a preauthorization when DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status) contains value 4. Acquirers must submit the clearing presentment for a transaction approved as a preauthorization within 30 calendar days of the latest authorization date (preauthorization or incremental authorization) in order to ensure chargeback protection provided by chargeback message reason code 4808: Authorization-Related Chargeback.

Acquirers in the Asia Pacific, Canada, Latin America and Caribbean, Middle East/Africa, and United States regions that do not reverse or clear approved preauthorizations within 30 calendar days of the original preauthorization date will be considered non-compliant with preauthorization processing standards. Non-compliant transactions will be reported on the Authorization Processing Integrity Acquirer Detail report. After the monitoring and reporting period ends, non-compliant preauthorizations will be subject to a non-compliance fee.

### Preauthorization scenarios

The following scenarios are examples in which acceptors can use a preauthorization to benefit from its greater processing flexibility or from its more generous payment guarantee terms.

**NOTE:** Refer to the [Scenarios](#) section for detailed scenarios for preauthorization, final authorization, undefined authorization, and chargeback extension request.

- A hotel wants to obtain a payment guarantee at check-in for the room rate, plus a provision for possible additional expenses related to the minibar or breakfast: the hotel uses a preauthorization because it supports estimated amounts.

- Another hotel wants to obtain a payment guarantee at check-in for a hotel stay of 10 days: the hotel uses a preauthorization because the associated payment guarantee is valid for up to 30 days and the clearing presentment will take longer than seven calendar days.
- An airline wants to obtain a payment guarantee at flight-booking time for certain types of flights where the ticket may take several days to issue: the airline uses a preauthorization because the associated payment guarantee is valid for up to 30 days and the clearing presentment may take longer than seven calendar days.
- An e-commerce merchant wants to obtain a payment guarantee at order time, before it can confirm that the goods are actually available in stock: the merchant uses a preauthorization because the transaction may still be canceled if the goods are later found to be out of stock.
- Another e-commerce merchant wants to obtain a payment guarantee at order time but the items ordered may take several days to ship: the merchant uses a preauthorization because the associated payment guarantee is valid for up to 30 days and the clearing presentment may take longer than seven calendar days.

**NOTE: Maestro preauthorizations are permitted only for automated fuel dispenser (AFD), Maestro contactless transit aggregated, and card-not-present (CNP) transactions.**

### Final authorization

An authorization for an amount greater than zero should be coded as a final authorization if it meets the following conditions:

- Authorization is requested for the final transaction amount that is expected to be presented for clearing.
- The transaction is not expected to be canceled after the authorization request is approved in full (excluding non-completion for reasons of technical failure). The risk of technical failures such as telecommunications failure or terminal failure should not be taken into account to determine if an authorization must be coded as a final authorization.

Any transaction corresponding to an authorization identified as a final authorization must be presented for clearing within seven calendar days of the authorization approval date.

The authorization request is properly identified as a final authorization when DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status) contains value 0 (Normal Request) and DE 48 (Additional Data: Private Use), subelement 61 (POS Data Extended Condition Codes), subfield 5 (Final Authorization Indicator) contains value 1 (Final Authorization).

Acquirers must submit the clearing presentment for a transaction approved as a final authorization within seven calendar days of the authorization date in order to ensure chargeback protection provided by chargeback message reason code 4808: Authorization-related Chargeback.

Acquirers in Europe or Middle East/Africa regions that reverse an approved final authorization or do not clear an approved final authorization within seven calendar days of the authorization date or clear for a different currency or transaction amount than what was authorized will be considered non-compliant with final authorization processing standards. Acquirers in Asia/Pacific, Canada, Latin America and the Caribbean, or United States regions that do not clear an approved final authorization within seven calendar days of the authorization date or clear for a

different currency or transaction amount than what was authorized will be considered non-compliant with final authorization processing standards. Non-compliant transactions will be reported on the Authorization Processing Integrity Acquirer Detail report. Non-compliant final authorizations will be subject to a non-compliance fee.

In the Europe and Middle East/Africa regions, non-compliant final authorizations will be subject to a non-compliance fee if more than one percent of Final Authorizations do not meet their requirements for a given acquirer parent ICA or MCE Group ICA over the weekly billing period. If the one percent threshold is not breached, all Final Authorizations that do not meet their requirements will not be assessed a fee.

**NOTE: Acquirers outside of the Europe and Middle East/Africa regions may optionally submit final authorizations, but must comply with requirements of clearing for the amount and currency authorized, and within seven calendar days if they choose to do so.**

### Undefined authorization

An authorization for an amount greater than zero should be coded as an undefined authorization if it meets the following conditions:

- The final transaction amount may differ from the authorized amount.
- The transaction is not expected to be canceled after the authorization request is approved in full (excluding non-completion for reasons of technical failure). The risk of technical failures such as telecommunications failure or terminal failure should not be taken into account to determine authorization message coding.

The authorization request is properly identified as an undefined authorization when DE 61, subfield 7 contains value 0, and DE 48, subelement 61, subfield 5 contains value 0, or is not present. Acquirers must submit the clearing presentment for a transaction approved as an undefined authorization within seven calendar days of the authorization date in order to ensure chargeback protection provided by chargeback message reason code 4808: Authorization-Related Chargeback.

An approved undefined authorization submitted by an acquirer in the Canada, Latin America and the Caribbean, or United States region that is not reversed or cleared within seven calendar days of the original authorization date will be considered non-compliant with undefined authorization processing standards. Non-compliant transactions will be reported on the Authorization Processing Integrity Acquirer Detail report and the non-compliant undefined authorizations will be subject to a non-compliance fee.

Acquirers in the Europe, Asia/Pacific, and Middle East/Africa regions must no longer code authorizations as undefined. An authorization must be coded either as preauthorization or final authorization. Non-compliant transactions will be reported on the Authorization Processing Integrity Acquirer Detail report and the non-compliant undefined authorizations will be subject to a non-compliance fee.

Undefined authorizations will no longer be permitted in the U. S. region effective 17 June 2025, Latin America and the Caribbean region on 18 August 2025 and the Canada region 17 August 2025.

## Scenarios

The following are common processing scenarios for preauthorizations, final authorizations, and undefined authorizations assuming reversal or clearing occurs prior to the authorization message chargeback expiration date.

**NOTE: For each authorization type, if the authorization completes after the chargeback expiration date and a chargeback extension has not been requested and approved, the acquirer must either submit a new authorization request for the completed transaction amount prior to clearing or submit the transaction for clearing without processing a new authorization and risk potential chargeback for Reason 4808 (Authorization-related Chargeback). A sample scenario has also been provided for chargeback extension request message processing.**

### Preauthorization

The cardholder checks into a hotel on 1 October, and the merchant submits a preauthorization for estimated charges up to USD 1,000. The cardholder checks out of the hotel on 5 October with no further charges applied to his/her bill during the stay. The acquirer submits a clearing presentment based on notification from the merchant of preauthorization completion for the full authorized amount.

#### Scenario P1: clearing amount matches preauthorization amount

| Merchant/<br>Acquirer  | Authorizati<br>on                    | Clearing         | Issuer                              |                                                        |                        |                      |                                     |              |

The cardholder checks into a hotel on 1 October, and the merchant submits a preauthorization for estimated charges up to USD 1,000. The cardholder accrues additional USD 500 in charges. The final bill amount upon cardholder checkout is USD 1,500. The merchant submits an incremental preauthorization for the additional charges of USD 500 and notifies the acquirer of preauthorization completion of USD 1,500. The acquirer submits a clearing presentment based on notification from the merchant of preauthorization completion.

### Scenario P3: preauthorization completes for higher amount than authorized (incremental preauthorization)

The cardholder checks into a hotel on 1 October, and the merchant submits a preauthorization for estimated charges up to USD 1,000. At checkout, the cardholder pays the final bill with a different card.

The merchant notifies the acquirer of the full reversal. The acquirer submits the reversal upon the merchant preauthorization cancellation notification.

#### Scenario P4: preauthorization cancellation

P5.A: Installment payment terms are approved with original preauthorization (that is, at time of reservation or check-in). Installment payment terms do not change at time of transaction completion. The cardholder checks into a hotel on 1 October, and the merchant submits a preauthorization for estimated charges up to USD 1,000. A preauthorization request also includes merchant installment program ID and installment payment terms in DE 48, subelement 95 and DE 112 for the cardholder to pay in five monthly payments of USD 200, which are approved by the issuer. The cardholder checks out of the hotel on 5 October with no further charges applied to his/her bill during the stay and original installment payment terms remain unchanged from original approved authorization. The acquirer submits a clearing presentment

for first installment payment based on notification from the merchant of preauthorization completion for the full authorized amount.

P5.B: Installment payment terms are approved with original preauthorization (that is, at time of reservation or check-in). The terms change at the time of transaction completion.

The cardholder checks into a hotel on 1 October, and the merchant submits a preauthorization for estimated charges up to USD 1,000. Preauthorization also includes merchant installment program ID and terms in DE 48, subelement 95 and DE 112 for the cardholder to pay in five monthly payments of USD 200, which are approved by the issuer. The cardholder checks out of the hotel on 5 October with no further charges applied to his/her bill during the stay, but the original installment payment terms change to four monthly payments for USD 250. Due to the installment payment term change, the original authorization with the original installment payment terms must first be reversed, and a new authorization processed with the new terms for approval. Once the new authorization is approved, clearing can occur for the first installment payment amount.

**Scenario P5: preauthorization with installment payments, P5.B**

P5.C: Installment payment terms are not included with original preauthorization (that is, at time of reservation or check-in). Installment payment terms are added at the time of transaction completion.

The cardholder checks into a hotel on 1 October, and the merchant submits a preauthorization for estimated charges up to USD 1,000. The option to pay in installments is not offered until cardholder checkout. The cardholder checks out of the hotel on 5 October with no further charges applied to his/her bill during the stay. During the checkout process, the cardholder is offered the option to pay in four monthly installment payment of USD 250 each. The original authorization on 1 October must first be reversed, and a new authorization that includes the installment payment terms must be submitted with the installment program ID and terms included in DE 48, subelement 95 and DE 112 for approval. Once the new authorization is approved, clearing can occur for the first installment payment amount.

**Scenario P5: preauthorization with installment payments, P5.C**

F1.B: Final authorization transaction is subsequently reversed due to technical issue such as acquirer to terminal response delivery error, ATM dispense error, or customer returns goods prior to completion being submitted for clearing, customer cancels e-commerce order, etc.

**NOTE: In the Europe and Middle/East Africa regions, the reversal of a final authorization or completion of a final authorization for an amount different from the approved final authorization amount may attract a non-compliance fee if the number of non-compliant final authorizations exceeds 1 percent of the total final authorizations processed in a weekly billing period for an acquirer parent ICA or MCE Group ICA.**

#### Chargeback extension request

On 1 October, the cardholder makes a hotel reservation for a five-night stay in November. The cardholder check-in is not expected to occur until more than 30 days after the initial preauthorization date. On 30 October, the merchant submits a chargeback extension request message to allow for later clearing and extended chargeback protection. The cardholder checks into the hotel on 23 November. The cardholder checks out of the hotel on 28 November with no further charges applied to his/her bill during the stay. The acquirer submits a clearing presentment based on notification from the merchant of preauthorization completion.

**Scenario C1: approved chargeback extension request: preauthorization anticipated to complete after initial chargeback expiration date**

On 1 October, the cardholder makes a hotel reservation for a five-night stay in November. The cardholder check-in is not expected to occur until more than 30 days after the initial preauthorization date. On 30 October, the merchant submits a chargeback extension request message to allow for later clearing and extended chargeback protection. The issuer declines the chargeback extension request. The authorization expires on 31 October. The cardholder checks into the hotel on 23 November. The merchant must request a new authorization due to the previous authorization being expired and not approved for extension by the issuer. The cardholder checks out of the hotel on 28 November with no further charges applied to his/her bill during the stay. The acquirer submits a clearing presentment based on notification from the merchant of preauthorization completion.

**Scenario C2: declined chargeback extension request: preauthorization anticipated to complete after initial chargeback expiration date**

## DE 61 to DE 48 comparison

Issuers globally must recognize values 0 (Normal Authorization/Undefined Finality) and 1 (Final Authorization) in DE 48, subelement 61, subfield 5 to distinguish a final authorization from a normal authorization/undefined finality in Authorization Request/0100 and Authorization Advice/0120 messages.

When submitting Authorization Advice/0120: acquirer-generated messages, DE 48, subelement 61, subfield 5 should be populated with the same value as provided in the original Authorization Request/0100 message.

The following table illustrates the relationship between DE 61 and DE 48 and provides recommendation on the usage of DE 48, subelement 61, subfield 5 under various transaction conditions.

### Comparison table

| DE 61, SF 7        | DE 48, SE 61, SF 5 | DE 4 | DE 3                   | Definition/Comment   | Acquirer                                                                      | Issuer                                    |

## Data integrity

To support the gradual transition of merchants and acquirers in the Asia/Pacific, Canada, Latin America and the Caribbean, and United States regions to the new message coding standards, Mastercard has implemented two new data integrity monitoring edits to support the transition of message coding of authorizations from undefined to preauthorization or final authorization for authorization transactions processed on the Mastercard Network.

Support of the new message coding standards provides issuers the opportunity to apply different processing or cardholder messaging to different types of authorizations. Customers wanting to receive non-compliance notifications and view reporting must be registered for Data Integrity Online through Mastercard Connect®. Refer to [Data Integrity Monitoring Program](#) for additional information.

**NOTE: Acquirers in the Europe and Middle East/Africa regions are not impacted by the new data integrity programs and non-compliance assessments.**

### **Preauthorization message data integrity**

Mastercard considers customers noncompliant when preauthorization requests account for 25 percent or more of all approved domestic purchase transactions. This program will help ensure that an acquirer does not start coding all authorizations as preauthorization in order to take advantage of the extended chargeback protection period.

The following types of transactions are excluded from the compliance validation process:

- Private Label transactions and transactions of card brands other than Mastercard including Debit Mastercard, Maestro, and Cirrus
- Transactions that are approved offline
- Installment transactions
- Incremental authorizations
- Cross-border transactions

### **Undefined authorization data integrity**

The second data integrity edit will help ensure that for acquirers that process at least 100,000 approved financial domestic transactions on the Mastercard Network, not more than 50 percent of an acquirer's total domestic transaction authorizations, per ICA, per month remain coded as undefined. This program will help ensure that acquirers make the overall transition of coding authorizations as either preauthorization or final authorization for their domestic transaction activity.

The focus on domestic transactions in this edit is due to the fact that these transactions, unlike cross-border transactions, do not require currency conversion, which may result in a difference between the authorized and cleared cardholder billing amount that an issuer may use to manage cardholder balances.

The following types of transactions are excluded from the compliance validation process:

- Private Label transactions and transactions of card brands other than Mastercard including Debit Mastercard, Maestro, and Cirrus
- Transactions that are approved offline
- Installment transactions
- Cross-border transactions

## Undefined and preauthorization processing integrity programs

Acquirers in the Asia/Pacific, Canada, Latin America and the Caribbean, and United States regions are subject to a processing integrity fee under the processing integrity programs and non-compliance assessments for Not Reversed or Cleared Undefined Authorization and Preauthorization, starting with the billing invoice. The fee will be applied for each approved authorization that is not cleared or fully reversed by an acquirer within 30 calendar days of the authorization date for preauthorizations and within seven calendar days of the authorization date for undefined financial authorizations.

Acquirers in the Europe region are not impacted by the new processing integrity programs and non-compliance assessments for Not Reversed or Cleared Undefined Authorization and Preauthorization.

## Final authorization, undefined authorization, and preauthorization processing integrity programs

Acquirers in the Middle East/Africa region are subject to processing integrity fee assessments for non-compliant final authorizations, undefined authorizations, and preauthorizations.

Acquirers in the Middle East/Africa region are impacted by a preauthorization transaction fee. Acquirers are impacted by assessments for three processing integrity programs: Final Authorizations Not Meeting Requirement, Undefined Authorizations With and Without Final Authorization Characteristics, and Not Reversed or Cleared Preauthorizations.

## Installment transactions

The following section explains how installment payment authorization messages are coded.

### Issuer-financed installment transactions

Acquirers submitting issuer-financed installment transactions should consider coding authorizations as Final if the authorization can be presented for clearing within seven calendar days of the authorization date and for the amount and currency authorized.

### Merchant-financed and acquirer-financed installment transactions

Acquirers submitting merchant-financed or acquirer-financed installment transactions should consider coding authorizations as Final if the total installment amount is known and the first installment can be presented for clearing within seven calendar days of the authorization date.

Acquirers submitting merchant-financed or acquirer-financed installment transactions should consider coding authorizations as preauthorization if the installment amount is an estimate, or the first installment requires more than seven calendar days from the authorization date to present for clearing.

For details about data requirements, refer to [Data element definitions and details](#).

## Balance inquiries

Mastercard supports several types of balance inquiry requests cardholders can perform.

- ATM and point-of-sale (POS) terminal balance inquiries
- Short Message Service balance inquiries
- Mobile Remote Payments balance inquiries

The balance inquiry service is optional for issuers.

### ATM and point-of-sale terminal balance inquiries

The following information describes ATM balance inquiries and point-of-sale (POS) terminal balance inquiries.

#### ATM balance inquiries

The ATM balance inquiry allows Mastercard cardholders to perform a balance inquiry on the Mastercard® ATM Network.

Upon receipt of an ATM balance inquiry request, participating issuers return the available balance in the authorization response. The Dual Message Authorization System performs any applicable currency conversion and forwards the available balance to the acquirer. The acquirer provides the available balance to the ATM terminal for display at the ATM and on the customer's printed receipt.

**NOTE: When responding to intracountry ATM balance inquiry requests, issuers in the United Kingdom (U.K.) may provide a maximum of two account balances: the ledger balance in addition to the available balance.**

#### Point-of-sale terminal balance inquiries

The point-of-sale (POS) balance inquiry enables cardholders and acquirers to check the remaining amount of funds on a Mastercard prepaid card or private label prepaid card. This feature makes it easier for the cardholder to completely redeem the funds on the prepaid card and reduces the potential of a declined authorization request because the purchase amount exceeds the funds available on the card. Therefore, this feature can help to reduce checkout times and lost sales.

Upon receipt of a POS balance inquiry, participating issuers return the available balance in the authorization response. The Dual Message Authorization System performs any applicable currency conversion and forwards the available balance to the acquirer. The acquirer provides the available balance to the merchant for display on the customer's printed receipt.

There are two types of POS terminal balance inquiries:

- Cardholder-initiated balance inquiry: Cardholders can ask the cashier to check a card's remaining balance before making a purchase. The cardholder and cashier can then determine

whether the entire purchase amount can be funded by the prepaid card or whether a supplemental payment method (split tender) is needed to complete the purchase.

- Automated balance inquiry: Acquirers can expedite sales by sending an automatic POS balance inquiry on a specified range of prepaid accounts issued by the issuer. The cashier can then inform customers in advance whether they will need to use a split tender to complete the purchase.

### Alternate processing

ATM and POS balance inquiries are not eligible for processing by the Stand-In Authorization or X-Code Processing. If the issuer is unavailable, the Dual Message Authorization System returns an Authorization System or issuer system inoperative response to the acquirer.

### Reversals of balance inquiry transactions

Mastercard supports reversals of balance inquiry transactions using Reversal Request/0400 and Reversal Advice/0420 messages containing DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), value 30 (Balance Inquiry). In balance inquiry transactions, DE 4 (Amount, Transaction) contains a value of all zeros.

A balance inquiry reversal is generally initiated when the balance inquiry request is not completed at the point-of-interaction. An acquirer may submit a reversal in an effort to recoup any fee that may be assessed as a result of the original balance inquiry request.

### To participate

Issuers can complete the *Point-of-Sale (POS) and ATM Balance Inquiry Participation* (Form 771) and submit them to Global Customer Service.

### For more information

For details about data requirements refer to [Data element definitions and details](#).

## Short Message Service Balance Inquiry service

The Short Message Service (SMS) Balance Inquiry service allows cardholders with SMS-enabled mobile devices to request and receive balance information on their registered cards via their mobile phone devices.

The SMS Balance Inquiry service allows card issuers to provide their cardholders with convenient real-time access to their account balance information via their mobile devices. Issuers participating in the SMS Balance Inquiry service receive these balance inquiries with DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode), value 81 PAN/Token entry via electronic commerce with optional Identity Check-AAV in DE 48, subelement 43 (UCAF) or DSRP cryptogram in DE 104, subelement 001 (Digital Payment Cryptogram).

This service is only available to issuers of Mastercard and Debit Mastercard cards in the U.S. and Europe regions.

### To participate

Issuers that want to participate in the SMS Balance Service Program must support balance inquiries.

Issuers that want to participate in the SMS Balance Service Program must complete a contract and registration form.

### For more information

For details about data requirements refer to [Data element definitions and details](#).

## Mobile Remote Payments balance inquiries

The Mobile Remote Payments program provides participating cardholders with access to their account balance information via an application on their mobile device. Issuers participating in the Mobile Remote Payments program will receive these balance inquiries in DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode), value 82 (PAN auto entry via server).

### For more information

For details about data requirements refer to [Data element definitions and details](#).

## Balance Inquiry: ATM

Issuers that participate in this service must test with the Customer Implementation Services team. Cirrus is the controlling gateway. It forwards balance inquiry requests only to issuers who are certified for receipt. Issuers must then reply with a balance inquiry response.

## Authorization Request/0100: ATM Balance Inquiry

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

### Applicable data elements

| Data Element               | Org | Sys | Dst | Values/Comments                                                                                                                                            |

| DE 54, subfield 2 (Amount Type)                       | M   | .   | M   | 02 = Available Balance                                                                        |
| DE 54, subfield 3 (Currency Code)                     | M   | .   | M   | Must be a valid three-digit currency code that matches the issuer's currency code.            |
| DE 54, subfield 4 (Debit or Credit Indicator)         | M   | .   | M   | C = Credit amount plus 12 digits<br>or<br>D = Debit amount plus 12 digits                     |

## Authorization Request Response/0110: ATM Balance Inquiry Edits

In addition to the standard Dual Message Authorization System edits on Authorization Request Response/0110 messages, the Dual Message Authorization System will apply the following edits on an Authorization Request Response (ATM balance inquiry)/0110 message.

### Edits

| IF...                                                                                                | THEN...                                                                                                                                                                       |
|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DE 39 (Response Code) contains the value 00, 08, or 85 and DE 54 (Additional Amounts) is not present | the Dual Message Authorization System will send to the issuer an Authorization Response Negative Acknowledgment/0190 message containing:<br><br>DE 39 = 30<br><br>DE 44 = 054 |
| DE 54, subfield 3 (Currency Code) is not a valid currency code                                       | the Dual Message Authorization System will generate an Authorization Response Negative Acknowledgment/0190 message containing:<br><br>DE 39 = 30<br><br>DE 44 = 054           |
| DE 54, subfield 4 (Debit or Credit Indicator) is not C plus 12 digits or D plus 12 digits            | the Dual Message Authorization System will generate an Authorization Response Negative Acknowledgment/0190 message containing:<br><br>DE 39 = 30<br><br>DE 44 = 054           |

## Authorization Advice/0120: Acquirer-Generated (ATM Balance Inquiry Edits)

The Dual Message Authorization System will perform the following edit on Authorization Advice/0120: acquirer-generated messages for ATM Balance Inquiry transactions.

### Edits

| IF...                                                                                                                                       | THEN...                                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| the acquirer submits an Authorization Advice/0120: acquirer-generated message containing DE 3 (Processing Code), value 30 (Balance Inquiry) | the Dual Message Authorization System will reject the message and forward the acquirer an Authorization Advice Response/0130 message containing:<br><br>DE 39 = 30<br>DE 44 = 003 |

## Alternate Processing

ATM Balance inquiry transactions are not eligible for alternate (Stand-In Authorization or alternate issuer host routing) or X-Code Processing.

If the primary issuer is not available to the ATM balance inquiry request, an Authorization Request Response/0110 is returned to the acquirer with DE 39 (Response Code) value 91 (Authorization System or issuer system inoperative).

## Balance Inquiry: Point-of-Sale

When attempting to make a purchase at the point of sale, cardholders uncertain of the remaining balance on a Mastercard prepaid card or a private label card can initiate a balance inquiry at the point of sale to make a more informed decision about how to use the card's funds for the purchase. POS balance inquiry helps the cardholder to completely redeem the funds on the prepaid card, reduces the potential of a declined authorization request when the purchase amount exceeds the funds available on the card, and helps to avoid extended checkout times and lost sales.

The acquirer will receive the cardholder account balance in both the issuer's currency and the transaction currency. The acquirer has the option to provide the merchant with the cardholder account balance in the issuer's currency, transaction currency, or both. The merchant will then display the appropriate account balance on the customer's printed receipt.

Acquirer participation in POS balance inquiry is optional. To request a POS balance inquiry, the acquirer provides the appropriate data elements as defined below.

Acquirers in the U.S. region must support POS balance inquiry transaction type and functionality for all prepaid Mastercard credit and Debit Mastercard card account ranges.

Prepaid card issuers in the U.S. region must support online POS balance inquiries for all prepaid Mastercard credit and Debit Mastercard account ranges.

Issuer participation in POS balance inquiry is optional. To request participation, issuers must submit the *Point-of-Sale (POS) Balance Inquiry Participation Request Form* (Form 771) to Global Customer Service.

## Authorization Request/0100: POS Balance Inquiry

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

## Authorization Advice/0120: acquirer-generated (POS Balance Inquiry Edits)

The Dual Message Authorization System will perform the following edits on Authorization Advice/0120: POS balance inquiry acquirer-generated messages.

### Edits

| IF...                                                                                                                                       | THEN...                                                                                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| The acquirer submits an Authorization Advice/0120: acquirer-generated message containing DE 3 (Processing Code), value 30 (Balance Inquiry) | The Dual Message Authorization System will reject the message and forward the acquirer an Authorization Advice Response/0130 message containing:<br><br>DE 39 = 30<br><br>DE 44 = 003 |

## Alternate Processing

POS Balance inquiry transactions are not eligible for alternate (Stand-In Authorization or alternate issuer host routing) or X-Code Processing.

If the primary issuer is not available to respond to the POS balance inquiry request, an Authorization Request Response/0110 is returned to the acquirer with DE 39 (Response Code) value 91 (Authorization System or issuer system inoperative).

## Balance Inquiry: Short Message Service

The Balance Inquiry Short Message Service (SMS) provides cardholders with real-time access to their account balance information via their mobile devices.

Issuers that want to participate in the SMS Balance Service Program must complete a contract and Issuer SMS Balance Inquiry Service information form.

Issuers participating in the SMS Balance Inquiry service will receive these balance inquiries with DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode), value 81 PAN/Token entry via electronic commerce with optional Identity Check-AAV in DE 48, subelement 43 (UCAF) or DSRP cryptogram in DE 104, subelement 001 (Digital Payment Cryptogram).

## Authorization Request/0100: Short Message Service Balance Inquiry

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

### Applicable data elements

| Data Element                                                                                                                                                                                                          | Org | Sys | Dst | Values/Comments                                                                                                                                                                        |

## Chip-Specific Value Constraints

The Dual Message Authorization System supports the authorization of chip transactions generated using an integrated circuit card (ICC).

Acquirers may choose to acquire chip-related data in one of the two modes:

- Chip Partial Grade mode
- Chip Full Grade mode

The content of chip-related Authorization Request/0100 messages will vary, depending on the mode used. Issuers of ICCs must be able to accept authorization requests in either mode.

## Chip Partial Grade Value Constraints

Following is a list of specific data elements and data element values required in the Authorization Request/0100 message for a chip partial grade transaction.

### Data elements and values

| DE 22, subfield 1 | DE 22, subfield 1 value | DE 35                                            | DE 52 and DE 23  |
|-------------------|-------------------------|--------------------------------------------------|------------------|
| Offline PIN       | 05                      | ICC data as EMV tag 57 (Track 2 Equivalent Data) | Not provided     |
| Online PIN        | 05                      | ICC data as EMV tag 57 (Track 2 Equivalent Data) | Must be provided |
| Signature         | 05                      | ICC data as EMV tag 57 (Track 2 Equivalent Data) | Not provided     |
| No CVM            | 05                      | ICC data as EMV tag 57 (Track 2 Equivalent Data) | Not provided     |

### Data element requirements

| Data Element | Requirements                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DE 22        | <p>For chip transactions, acquirers must provide value 05x.</p> <p>For a chip transaction where the magnetic stripe was used as a fallback technology, acquirers must provide the value 80x. In this case, acquirers must provide the full, unaltered track data.</p> <p>For a chip transaction where manual PAN entry was used as a fallback technology, acquirers may provide the value 79x.</p>                                                                                                                                    |
| DE 23        | The card sequence number may now be provided in chip partial grade transactions where DE 55 is not present. DE 23 must be provided if EMV tag 5F34 (Application PAN Sequence Number) is present on the ICC.                                                                                                                                                                                                                                                                                                                           |
| DE 35        | <p>The ICC data as EMV tag 57 (Track 2 Equivalent Data). This data corresponds with the data stored in Track 2 of the magnetic stripe.</p> <p>For chip transactions, acquirers must provide DE 35 EMV tag 57 if the data object was present on the ICC.</p> <p>For a chip transaction where the magnetic stripe was used as a fallback technology, DE 35 must contain the actual Track 1 or Track 2 data from the magnetic stripe, or in the case of Maestro the actual Track 2 data because only Track 2 is present on the card.</p> |
| DE 52        | DE 52 must be provided if the Cardholder verification method was Online PIN.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Chip Full Grade Value Constraints

This mode is for acquirers who accept chip transactions and whose infrastructure allows them to provide chip-specific data. Acquirers operating in this mode must comply with all chip partial grade requirements and the chip full grade requirements.

### Data element requirements

| Data Element | Requirements                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DE 23        | DE 23 must be provided if EMV tag 5F34 is present on the ICC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| DE 35        | <p>The ICC data as EMV tag 57 (Track 2 Equivalent Data). This data corresponds with the data stored in Track 2 of the magnetic stripe.</p> <p>For chip transactions, acquirers must provide DE 35 EMV tag 57 if the data object was present on the ICC.</p> <p>For a chip transaction where the magnetic stripe was used as a fallback technology, DE 35 must contain the actual Track 1 or Track 2 data from the magnetic stripe, or in the case of Maestro the actual Track 2 data because only Track 2 is present on the card.</p> |
| DE 37        | DE 37, subfield 2 contains the value of Transaction Sequence Counter (EMV Tag 9F41), right-justified, left-padded with zeros.                                                                                                                                                                                                                                                                                                                                                                                                         |
| DE 52        | DE 52 must be provided if the CVM is Online PIN.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| DE 55        | DE 55 must be provided as specified in <a href="#">General message layout information</a> . DE 55 must be tag-length-value (TLV)-encoded and must contain the information (mandatory and optional) as specified in <a href="#">Data element definitions and details</a> .                                                                                                                                                                                                                                                             |
| DE 125       | Acquirers must provide DE 125 for PIN change transactions where DE 52 also must be present.                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Contact and Contactless Chip Specific Value Constraints

Following is the usage of DE 61, subfield 11 in conjunction with DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode). DE 22, subfield 1 values indicate the method by which the PAN was entered.

### Value constraints

| DE 61,<br>subfield 11<br>value |   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## Canada Region Debit Mastercard Merchant Acceptance

The Dual Message Authorization System allows the issuance of the Debit Mastercard® brand by Canada region issuers and allows Canada region merchants to accept domestically issued Debit Mastercard cards.

The Dual Message Authorization System prevents the accidental acceptance of Canada region-issued Debit Mastercard cards and allows issuers to issue Debit Mastercard cards either as stand-alone cards or as cards bearing other acceptance marks.

### Acquirers

Acquirers in the Canada region that have established an agreement with their merchants to process Debit Mastercard transactions must support DE 48 (Additional Data—Private Use), subelement 18 (Service Parameters), subfield 01 (Canada Domestic Indicator) and DE 39 (Response Code), value 81 (Domestic Debit Transaction Not Allowed).

For merchants that accept Canada region-issued Debit Mastercard cards, acquirers in Canada must:

- Include DE 48, subelement 18 (Service Parameters) in the Authorization Request/0100 message indicating the merchant has agreed to process Debit Mastercard.
- Support DE 39, response code value 81 (Domestic Debit Transaction Not Allowed) in the Authorization Request Response/0110 message indicating a transaction has been declined.

Issuers

Issuers in the Canada region that choose to issue Debit Mastercard cards must notify Mastercard Customer Implementation Services (CIS) if the account ranges bear other acceptance marks.

Issuers in Canada must:

- Notify Customer Implementation Services (CIS):
  - When the Debit Mastercard BIN being implemented will bear other acceptance marks.
  - The point-of-interaction (POI) environments (face-to-face or non-face-to-face) in which other acceptance marks will exist.
- Ensure Debit Mastercard cards comply with the Canada region chapter in *Mastercard Rules*.
- Immediately notify Mastercard through CIS of any changes in the account ranges affecting compliance with Mastercard Rules.

Dual Message Authorization System Edits

The Dual Message Authorization System will perform the following edits on transactions that are acquired in Canada, on a card issued in Canada when the acceptance brand of that card is Debit Mastercard.

Associated edits

For transactions with a Canada region-issued Debit Mastercard card that bears other acceptance marks with international only Debit Mastercard routing.

| WHEN...                                                                                                                           | THEN the Dual Message Authorization System...                                                      |

## Cardholder-activated terminals

Cardholder-activated terminals (CATs) are usually unattended terminals that accept bankcards, debit, credit, and proprietary cards. These terminals are frequently installed at rail ticketing stations, gasoline stations, toll roads, parking garages, and other merchant locations.

For procedures related to authorization and other processing requirements related to each CAT level, refer to the [Transaction Processing Rules](#).

## Automated fuel dispensers

If an issuer approves an authorization request for an automated fuel dispenser (AFD) transaction identified with MCC 5542 (an AFD transaction) and occurring at a merchant located in the United States or Canada, then within 60 minutes of the time that the authorization request message was sent, the acquirer must send an Authorization Advice/0120 message advising the issuer of the final transaction amount (or a Reversal Request/0400 message, if the transaction will not be completed or will finalize for a lesser amount than requested).

If after approving an authorization request for an AFD transaction, an issuer in the United States or Canada has placed a hold on cardholder funds in excess of USD 1 or CAD 1 respectively, then within 60 minutes of receiving the acquirer's advice message, the issuer must release any hold amount that exceeds the completed transaction amount specified.

Mastercard recommends that the Trace ID (DE 15 [Settlement Date] and DE 63 [Network Data]) of the completion advice response be used within the clearing presentment.

**NOTE: As an alternative, the Trace ID of the original preauthorization may be used for clearing presentment if that same Trace ID is included in the AFD completion advice message within DE 48, subelement 63 (Additional Data, Trace ID).**

For requirements about intra-European and inter-European Maestro transactions that occur at unattended POS terminals located at petrol stations, refer to the Automated Fuel Dispenser Transactions section in Card-Present Transactions of the [Transaction Processing Rules](#).

## Electric vehicle charging transactions

A transaction occurring at an unattended POS Terminal for the purchase of electric vehicle charging services is identified with MCC 5552 (Electric Vehicle Charging) and a CAT level indicator of CAT 1 or CAT 2 (for card-present transactions) or CAT 6 (for e-commerce transactions).

Alternatively, if the primary business of the merchant is temporary parking services, then MCC 7523 (Automobile Parking Lots and Garages) may be used.

Contactless-only acceptance is permitted. A contactless-only terminal supporting a maximum vehicle charging amount that does not exceed the applicable contactless CVM limit is properly identified as CAT 2.

The transaction may be authorized either prior to or after the vehicle charging.

### Authorization before charging

Each electric vehicle charging transaction for which authorization is requested before vehicle charging begins is properly processed as follows:

1. The merchant must inform the cardholder of any estimated amount for which authorization will be requested (for example, on a screen display or sticker at the terminal) and must obtain the cardholder's consent to the amount before initiating the authorization request. The estimated amount may be the terminal's maximum dispense amount or a specific amount requested by the cardholder.
2. The acquirer's initial authorization request (0100 or 0200) message to the issuer must be identified as a preauthorization. If the preauthorization request contains the partial approval support indicator, and the issuer provides a partial approval response, then the final transaction amount must not exceed the partial approval amount provided in DE 6 (Amount, Cardholder Billing).
3. If the transaction is finalized for an amount that:
  - a. Exceeds the authorized amount, then the acquirer must send an additional (incremental) authorization request for the unauthorized amount; or
  - b. Is less than the authorized amount, then within 24 hours of finalization, the acquirer must either send a partial reversal for the excess authorized amount, or submit the transaction clearing record.
4. In the case of a transaction canceled by the cardholder, then within 24 hours, the acquirer must send a full reversal request.

### Authorization after charging

If the merchant initiates authorization after the vehicle charging is completed, then the acquirer's authorization request must be identified as a final authorization.

## IFC Blocked Gaming File

Issuers have the option to block their cardholders from participating in In-flight Commerce (IFC) gaming (Authorized Level 4 CAT: in-flight commerce) by listing their BINs in the IFC Blocked

Gaming File. Acquirers must ensure timely delivery and installation of the IFC Blocked Gaming File to gambling service providers. IFC Blocked Gaming File access is required before every gaming transaction.

Gaming transactions are not permitted at IFC terminals acquired within Europe.

**NOTE: The IFC Blocked Gaming File applies only to in-flight commerce gaming, and not to other IFC activity.**

### How to list BINS in the IFC Blocked Gaming File

To list BINs in this file, complete the *IFC Range Blocking for Gaming Transactions* (Form 161).

### Effective dates for the IFC Blocked Gaming File

Effective dates for the IFC Blocked Gaming File are the first and 15th day of each month. Mastercard must receive issuer listings at least two weeks before the effective date to be included in the file.

### Distribution of the IFC Blocked Gaming File

Distribution of the IFC Blocked Gaming File occurs two times each month. Mastercard provides it either via a Mastercard bulk file or via Mastercard File Express. For the file layout, refer to the *IFC Blocked Gaming Transactions* (Form 161).

1. Mastercard creates the IFC Blocked Gaming File at approximately 13:00 (St. Louis time) and distributes it to acquirers' MIPs.
2. Acquirers stage the file for unloading and distribute it to their gaming service providers.
3. Gaming service providers must ensure timely delivery and installation of the IFC Blocked Gaming File to the on-board servers that monitor IFC transactions.

**NOTE: Because Mastercard requires IFC Blocked Gaming File access before every gaming transaction, acquirers and gaming service providers must distribute and install the file when they receive it.**

### Mastercard processing of IFC Gaming Transactions

In-flight commerce gaming transactions go directly to the issuer.

## Cardholder Authentication Service

Mastercard offers an indicator that allows acquirers and issuers to recognize when biometrics are used to authenticate the cardholder.

To assist issuers and governments globally to reduce cost and eliminate fraud in their benefit disbursement processes, Mastercard provides an authentication indicator to support those efforts.

The Cardholder Authentication Service is an optional service for issuers.

The authentication indicator, in association with the Biometric Card solution, indicates that the cardholder is:

The user of the card

Present at the time of the transaction

The Cardholder Authentication Service is an optional service that helps participating issuers reduce fraud and increase approvals through biometric verification of the cardholder's identity. With the Cardholder Authentication Service, participating issuers are notified when a transaction is successfully authenticated through the verification of a cardholder's biological trait, such as a thumbprint, with a biometric-enabled card.

### Data Requirements

Mastercard will populate the indicator in DE 48 (Additional Data: Private Use), subelement 17 (Authentication Indicator) based on the presence of the biometric authentication result values in DE 55 (Integrated Circuit Card [ICC] System-Related Data), subelement 9F10, CVR byte1, bit1 and byte2, bit2.

The biometric authentication result values available for DE 55, subelement 9F10, CVR byte1, bit1 are as follows:

- 0: Not successful
  - 1: Successful
- Mastercard will forward the biometric verification result indicators to the issuer in the following messages:
- Authorization Request/0100
  - Authorization Advice/0120 (acquirer-generated and system-generated)

Mastercard will only populate DE 48, subelement 17 with an authentication indicator if the biometric authentication is successful.

### Authentication Service options

Mastercard will offer the following service type options to support cardholder authentication:

- Authentication Service Type 1
- Authentication Service Type 2

### Authentication Service Type 1

For a specific program, issuers may choose an account range where DE 23 (Card Sequence Number) will be used to differentiate the chip's application (Cardholder Authentication vs. Standard).

- 01x (Cardholder Authentication Application) where x is the sequence number 0 to 9; the transaction is processed for the authentication service.
- 02x (Standard Application) where x is the sequence number 0 to 9; the transaction is processed as a standard transaction.

## Authentication Service Type 2

For a specific program, issuers may choose an account range where a PAN will be used to differentiate the chip's application (Cardholder Authentication vs. Standard).

- PAN#1: The account range associated with PAN #1 will indicate that the Cardholder Authentication application on the chip was launched.
- PAN#2: The account range associated with PAN #2 will indicate that a standard CVM (Cardholder Verification Message) application on the chip was launched.

## Authentication Service Type 1 and Authentication Service Type 2

Mastercard will populate DE 48 (Additional Data: Private Use), subelement 17 (Authentication Indicator), value 1 (Transaction qualified for Authentication Service Type 1) and value 2 (Transaction qualified for Authentication Service Type 2) to indicate that the transaction was authenticated using biometrics.

The Authentication Indicator is forwarded to the acquirer in these messages:

- Authorization Request Response/0110
- Authorization Advice Response/0130: issuer-generated (responding to an acquirer-generated 0120)

The Authentication Indicator is forwarded to the issuer in these messages:

- Authorization Request/0100
- Authorization Advice/0120 (acquirer-generated and system-generated)

If the Authentication Indicator is not populated in DE 48, subelement 17, the issuer may choose to authorize or decline the transaction.

## Account Status Inquiry with Authentication Indicator

DE 48 (Additional Data: Private Use), subelement 17 (Authentication Indicator) will be populated for Authentication Service Types 1 and 2 based on the following conditions:

- Account Range is registered for Authentication Service Type 1 or 2
- DE 3 (Processing Code), value 00 (Purchase)
- DE 4 (Amount, Transaction) is zero
- Transaction is an EMV Chip with DE 22 (Point-of-Service [POS] Entry Mode) value 05 or 07
- If present, DE 55 (Integrated Circuit Card [ICC] System-Related Data), tag 9F10:
  - CVR byte 1, bit 1 is present with a value of 1 (successful)
  - CVR byte 2, bit 2 is present with a value of 1 (biometric)
- Is an Account Status Inquiry Transaction where DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status Indicator) contains value 8 (Account Status Inquiry Service)

## Authentication Indicator during transactions other than Account Status Inquiry

DE 48, subelement 17 (Authentication Indicator) will be populated for Authentication Service Types 1 and 2 based on the following conditions:

- Account Range is registered for Authentication Service Type 1 or 2
- DE 4 (Amount, Transaction) is not zero
- Transaction is an EMV Chip with DE 22 (Point-of-Service [POS] Entry Mode) value 05 or 07
- If present, DE 55 (Integrated Circuit Card [ICC] System-Related Data), tag 9F10:
  - CVR byte 1, bit 1 is present with a value of 1 (successful)
  - CVR byte 2, bit 2 is present with a value of 1 (biometric)

### Data requirements

Mastercard will add the following in DE 60 (Advice Reason Code):

- Subfield 1 (Advice Reason Code), values in Authorization Advice/0120
  - 160 (Authentication Advice to Issuer)
  - 192 (M/Chip Offline Advice to Issuer)
- Subfield 2 (Advice Detail Code), value 0078 (M/Chip Biometric Data not Present)

The Dual Message Authorization System performs the following system edits on Authorization Request/0100 messages and Authorization Advice/0120: Acquirer-generated messages.

### Offline Account Status Inquiry on Account ranges set up for the Authentication Indicator

For offline EMV Chip approved Account Status Inquiry only transactions (without purchase, payment, or cash disbursement) on account ranges set up for Authentication Service Type 1 or for Authentication Service Type 2, acquirers must be prepared to send Authorization Advice/0120: Acquirer-generated messages to the issuer with:

- DE 4 (Amount, Transaction), value zero
- DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status Indicator), value 8 (Account Status Inquiry Service)
- DE 60 (Advice Reason Code), new value 192 (M/Chip Offline Advice to Issuer)
- DE 55 (Integrated Circuit Card [ICC] System-Related Data)

Authentication Service Types can be determined by checking Integrated Product Message Mastercard Parameter Extract (MPE) Table IP0040T1: Issuer Account Range containing an Authentication Indicator Value of 1 or 2.

Issuers must support and authenticate DE 55 (Integrated Circuit Card [ICC]) System Related Data).

**NOTE: Issuers that have registered for this transaction authentication service and do not participate in M/Chip Cryptogram Pre-validation Service, will need to validate the Application Cryptogram (tag 9F26 in DE 55) and chip data as in DE 55 for Authentication transactions. In addition to their standard chip data validation processing for chip transactions, issuers may verify Subelement 9F10: Issuer Application Data (IAD), Card Verification Results, Byte 2, Bit 2 will be re-used for CVM type as follows:**

- 0 Standard: non-biometric standard CVM method was used in this transaction**
- 1 Biometric: biometric CVM method was used in this transaction**

## Card Validation Code 1 verification

Card Validation Code 1 (CVC 1) verification provides added security for the card authentication process in authorization request transactions that use magnetic stripe technology.

### Card Validation Code 1

The Card Validation Code 1 (CVC 1) is a three-digit code that must be encoded on Track 1 and Track 2 in three contiguous positions in the Discretionary Data field of the magnetic stripe on all Mastercard Cards.

Issuers may calculate the CVC 1 by one of the following two methods:

- Issuer proprietary calculation: Gives the issuer the option to derive the CVC algorithmically.
- Data Encryption Standard (DES) software: Issuer may perform the calculation through a DES software application within a host system or through use of a tamper-resistant security module (TRSM).

### Card Validation Code 1 on-behalf services

Mastercard provides several Card Validation Code 1 (CVC 1) on-behalf services to support Mastercard products. The CVC 1 on-behalf services are available for transactions that are performed using magnetic stripe technology.

To support on-behalf processing of Mastercard products, the following CVC 1 on-behalf services are available:

- CVC 1 Pre-Validation Service (OBS 11): An optional, pre-validation service performed on authorization request transactions
- CVC 1 Validation Stand-In Authorization (OBS 10): Service in which Stand-In Authorization processes and validates transactions when the issuer is not available; this service is mandatory for issuers with authorization systems that support magnetic stripe transactions.

**NOTE: All issuers must have CVC 1 Validation in Stand-In performed during Stand-In Authorization. Issuers that participate in CVC 1 Pre-Validation Service (OBS 11) do not need to participate in OBS 10 as the results from OBS 11 will be used by Stand-In Authorization.**

Issuers that participate in the CVC 1 On-Behalf Prevalidation Service receive the following information in the Authorization Request/0100 message:

- CVC 1 validation results inserted in DE 48 (Additional Data: Private Use), subelement 71 (On-behalf Services), subfield 1 (On-behalf Service), value 11 (CVC 1 Pre-Validation Service), and subfield 2 (On-behalf Result 1) with one of the following values:
  - V=Valid
  - I=Invalid CVC 1

- K=No matching key file for this PAN, PAN expiry date combination
- U=Unable to process

CVC 1 validation results for OBS 11

The following table describes the results of the CVC 1 validation for OBS 11 for Dual Message System connected issuers.

## Participating in CVC 1 on-behalf services

CVC 1 on-behalf services are currently available to issuers that process through the Dual Message System.

**NOTE: Mastercard does not require acquirers or issuers to enroll in these optional products and services, but they must code their systems to support these fields to leverage such product and services in a timely manner in the event of a security issue.**

### CVC 1 Validation Stand-In Authorization (OBS 10)

This service is mandatory for issuers with authorization systems that support magnetic stripe transactions.

### CVC 1 Pre-Validation Service (OBS 11)

Issuers that choose to participate in the optional CVC 1 Pre-Validation Service (OBS 11) must register by contacting their CIS representative.

**NOTE: Issuers that enroll account ranges in the CVC 1 Pre-Validation Service that are already enrolled in the existing CVC 1 Validation Stand-In Authorization must request the removal of those account ranges from the existing CVC 1 Validation Stand-In Authorization.**

## Alternate processing of invalid CVC 1 validation results

Mastercard considers the results of the CVC 1 validation in:

- DE 48, subelement 71 (On-behalf Services) when responding to the Authorization Request/0100 message for issuers participating in pre-validation services.
- DE 48, subelement 87 (Card Validation Code Result) when responding to the Authorization Request/0100 message for issuers participating in the Stand-In validation service.

Issuers participating in one of the CVC 1 on-behalf services should reference the KMS interface section defined in [On-behalf Key Management Procedures](#) and [On-behalf Key Management Interface Specifications](#) for information about CVC 1 validation keys.

## Authorization reports for CVC 1 on-behalf services

The Authorization Parameter Summary Report (SI737010-AA) lists the name of the on-behalf service in which the issuer is participating for an account range and displays the issuer selection for participating in the Card Validation Code 1 (CVC 1) processing service.

For a sample of the Authorization Parameter Summary Report (SI737010-AA), refer to [Reports and files](#). For a sample of the Daily Account File Activity Report (AM700010-DD), refer to the [Account Management System User Manual](#).

## Card Validation Code 2 verification

Card validation code 2 (CVC 2) verification provides added security for the card authentication process in authorization requests.

### CVC 2

CVC 2 is a three-digit code algorithmically derived by the issuer and indent-printed on the signature panel to the right of the account number.

CVC 2 is one of several card authentication methods currently used by Mastercard to combat fraud. The use of CVC 2 deters fraudulent use of an account number.

## Conditions for CVC 2 verification

CVC 2 verification allows acquirers to receive online verification of CVC 2 values from issuers when certain conditions apply.

- The acquirer transmits the CVC 2 value that the cardholder provided to the merchant in DE 48 (Additional Data: Private Use), subelement 92 (CVC 2) of the Authorization Request/0100 message.
- The issuer provides a valid response in DE 48, subelement 87 (Card Validation Code Result) of the Authorization Request Response/0110 message to indicate that the CVC 2 value was verified (value M or N) or not processed (value P).

## Participation requirements

Participation requirements for acquirers and issuers using CVC 2 verification are listed in table format.

### Acquirers

When cardholders provide merchants with the CVC 2 value for transactions, acquirers must include the CVC 2 value in DE 48, subelement 92 of the Authorization Request/0100 message.

To participate in CVC 2 verification, acquirers must be able to receive the following CVC 2 values in DE 48, subelement 87 of the Authorization Request Response/0110 message.

### Values

| Subelement 87 Value | Description                                         |
|---------------------|-----------------------------------------------------|
| M                   | Valid CVC 2: match                                  |
| N                   | Invalid CVC 2: non-match                            |
| P                   | CVC 2 not processed: issuer temporarily unavailable |
| U                   | CVC 2 unverified: Mastercard use only               |

The acquirer is responsible for ensuring that the merchant receives the CVC 2 response code provided by the issuer in DE 48, subelement 87 of the Authorization Request Response/0110 message.

### Issuers

Issuers must be able to receive and to process the CVC 2 value when present in DE 48, subelement 92 of the Authorization Request/0100 message, and to provide a valid CVC 2 response in DE 48, subelement 87 of the Authorization Request Response/0110 message.

CVC 2 values M, N, and P are considered valid when used by issuers. Only Mastercard can use CVC 2 value U.

The Dual Message Authorization System places a value of U in DE 48, subelement 87 of the Authorization Request Response/0110 message to indicate that the CVC 2 value was not verified, at the issuer's request, as the issuer was temporarily unable to receive the CVC 2 value.

Issuers should note that if an acquirer transmits both CVC 1 and CVC 2 data, CVC 1 processing takes precedence over CVC 2 processing.

To comply with card validation code 2 (CVC 2) requirements, acquirers and issuers must process transactions according to the guidelines in this topic. The following message flows describe authorization message processing for CVC 2 verification transaction in these scenarios when the:

- CVC 2 is verified
- CVC 2 is unverified (because the issuer was temporarily unable to receive the CVC 2 value)
- CVC 2 is processed by Stand-In Authorization
- CVC 2 is processed by X-Code Processing

| invalid                    | issuers should respond with value Y (Invalid CVC 1) in DE 48, subelement 87. Issuers should not verify the CVC 2 value. |
| valid                      | issuers must verify the CVC 2 value and send the appropriate response to the acquirer.                                  |

Authorization Request/0100: CVC 2 Verified

Following are the stages of an Authorization Request/0100: CVC2 transaction when the value is verified.

1. The merchant provides the CVC 2 value, and the acquirer generates an Authorization Request/0100 message with the CVC 2 value in DE 48 (Additional Data: Private Use), subelement 92 (CVC 2).
2. The Dual Message Authorization System forwards the Authorization Request/0100 message to the issuer.
3. After the issuer transmits the Authorization Request Response/0110 message, the Dual Message Authorization System verifies that one of the following values appears in DE 48, subelement 87 (Card Validation Code Result):
  - M (Valid CVC 2: match)
  - N (Invalid CVC 2: non-match)
  - P (CVC 2 not processed: issuer temporarily unavailable)

## Authorization Request/0100: CVC 2 Processed by Stand-In

Following are the stages of an Authorization Request/0100: CVC 2 transaction processed by Stand-In Authorization.

1. The merchant provides the CVC 2 value, and the acquirer generates an Authorization Request/0100 message with the CVC 2 value in DE 48, subelement 92.
2. Stand-In Authorization responds in the following conditions:
  - The issuer is not signed in.
  - The transaction cannot be delivered to the issuer.
  - The issuer is not responding.
  - The issuer's Authorization Request Response/0110 message fails an edit check and is rejected.
3. Stand-In Authorization generates the Authorization Request Response/0110 message.

| temporarily unable to process the CVC 2 value | places value P (CVC 2 not processed, issuer temporarily unavailable) in DE 48, subelement 87 and forwards the Authorization Request Response/0110 message to the acquirer. |

4. The acquirer transmits the CVC 2 response code, provided by the issuer or Mastercard in DE 48, subelement 87 of the Authorization Request Response/0110 message, to the merchant. The acquirer is responsible for ensuring that the merchant receives the CVC 2 response code.
5. Stand-In Authorization also generates Authorization Advice/0120 messages as appropriate and stores the advice in the Store-and-Forward (SAF) queue. Stand-In Authorization will include value U or P in DE 48, subelement 87 for issuers that are temporarily unavailable or otherwise unable to process the transaction.

## Authorization Request/0100: CVC 2 Processed by X-Code

Following are the stages of an Authorization Request/0100: CVC 2 transaction processed by X-Code Processing.

1. The merchant supplies the CVC 2 value to acquirer.
2. The acquirer creates an Authorization Request/0100 message with the CVC 2 value, but the transmission is not successful.
3. The X-Code Processing by the acquirer's MIP responds based on current X-Code Processing rules.

## Dual Message Authorization System Edits

The Dual Message Authorization System performs the following edit for CVC 2.

### Applicable edits

| IF DE 48, subelement 87 (Card Validation Code Result) contains... | AND if the transaction was... | THEN the Dual Message Authorization System...                                                                                                                                                                                                                                         |
|-------------------------------------------------------------------|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| no response or an invalid response                                | approved                      | <p>Mastercard forwards the Authorization Request Response/0110 message to the acquirer with DE 48, subelement 87, value P (CVC 2 not processed, issuer temporarily unavailable)</p> <p>the issuer will not receive an Authorization Response Negative Acknowledgment/0190 message</p> |

## Authorization Request/0100: CVC 2 Unverified

Following are the stages of an Authorization Request/0100: CVC 2 unverified transaction (issuer temporarily unable to receive the CVC 2 value).

1. The merchant provides the CVC 2 value, and the acquirer generates an Authorization Request/0100 message with the CVC 2 value in DE 48, subelement 92.
2. The Dual Message Authorization System forwards the Authorization Request/0100 message to the issuer, but the issuer is temporarily unable to receive the CVC value. The MIP forwards the Authorization Request/0100 message to the issuer without DE 48, subelement 92.
3. After the issuer transmits the Authorization Request Response/0110 message, the Dual Message Authorization System places value U (CVC 2 unverified: Mastercard use only) in DE 48, subelement 87 and forwards it to the acquirer.
4. The acquirer transmits the CVC 2 response code, provided by Mastercard in DE 48, subelement 87 of the Authorization Request Response/0110 message, to the merchant. The acquirer is responsible for ensuring that the merchant receives the CVC 2 response code.

## CVC 2 DE 48 Structure

The following diagram illustrates DE 48 subelements related to CVC 2 transactions.

### CVC 2 DE 48 Structure

| LLL                       | "VAR"  |          |              |             |          |              |                             |

## Card Validation Code 3 (CVC 3) verification

Card validation code 3 (CVC 3) verification provides added security to validate whether a Mastercard® contactless card or device is legitimate.

Mastercard supports card validation code 3 (CVC 3) result data in Authorization Request Response/0110 messages using DE 48, subelement 87 (Card Validation Code Result). Issuers performing CVC 3 validation in-house on contactless transactions may use these CVC 3 values. When the CVC 3 is valid, the Authorization Request Response/0110 message should not contain DE 48, subelement 87.

## CVC 3

CVC 3 is a code algorithmically derived by a contactless card or device.

### Authorization Request Response/0110: CVC 3 Result

Mastercard encourages issuers to include DE 48, subelement 87 when they perform CVC 3 validation and there is an issue with the CVC 3. When the CVC 3 is not valid, the issuer should send the acquirer the Authorization Request Response/0110 message containing CVC 3 result data.

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request Response/0110 data elements apply.

## Applicable data elements

| Data Element                                                                      | Org | Sys | Dst | Values/Comments                                                                                                                                                                                                            |

| DE 48 (Additional Data: Private use), subelement 87 (Card Validation Code Result) | C   | .   | C   | <p>Contains one of the following CVC 2 response codes:</p> <ul style="list-style-type: none"> <li>E = Length of unpredictable number was not a valid length</li> <li>P = Unable to process</li> <li>Y = Invalid</li> </ul> |

## CVC 3 on-behalf services

Mastercard provides CVC 3 on-behalf services to support contactless products. The CVC 3 on-behalf services are available for transactions that derive from proximity chip functionality with magnetic stripe Track 1 or Track 2 data containing a CVC 3 value.

The following CVC 3 on-behalf services are available:

- Dynamic CVC 3 Pre-validation Service: This is an optional, stand-alone service for issuers with contactless-enabled authorization systems that do not support dynamic CVC 3 validation. The Contactless Mapping Service may be used with the Dynamic CVC 3 Pre-validation Service.  
Mastercard will perform the dynamic CVC 3 validation on behalf of the issuer before forwarding the Authorization Request/0100 message. If the issuer is unavailable, Mastercard will consider the results of the dynamic CVC 3 validation when the transaction is processed by Stand-In Authorization.
- Dynamic CVC 3 Validation in Stand-In Authorization: This service is mandatory for issuers with contactless-enabled authorization systems that support dynamic CVC 3 validation in order to provide dynamic CVC 3 validation when the issuer is not available and the transaction is processed by Stand-In Authorization.

**NOTE: All issuers globally that participate in Stand-In Authorization must have Dynamic CVC 3 Validation in Stand-In performed during Stand-In Authorization.**

The issuer receives the following information in the Authorization Request/0100 message:

- The result of the CVC 3 validation inserted in DE 48 (Additional Data: Private Use), subelement 71 (On-behalf Services), subfield 2 (On-behalf Result 1) with one of the following values:
  - A = ATC outside allowed range (applicable when ATC value is dynamic [varying] value)
  - E = (CVC 3 ATC Replay)
  - I = (Invalid CVC 3)
  - K = No matching key file for this PAN, PAN expiry date, and KDI combination

- N = (Unpredictable Number Mismatch)
- U = (Unable to process)
- V = (Valid)
- X = Security platform timeout
- Z = Security platform system error
- ATC information inserted in DE 48, subelement 34 (ATC Information) when DE 48, subelement 71 is value A, E, or V.

If the results are invalid, Mastercard uses the issuer's instructions from the decision matrix as set in the key file. For more information about CVC 3 validation, issuers should reference the Key Management Services (KMS) interface section in the [On-behalf Key Management Procedures](#), [On-behalf Key Management Interface Specifications](#), and [Contactless On-behalf Services Guide](#).

The acquirer receives the following CVC 3 data in the Authorization Request Response/0110 message containing DE 48, subelement 87 (Card Validation Code Result):

- E (Length of unpredictable number was not a valid length)
- P (Unable to process)
- Y (Invalid)

If the CVC 3 data is valid, the Dual Message Authorization System will not include DE 48, subelement 87 in the Authorization Request Response/0110 message to the acquirer.

The issuer receives the following information in the Authorization Advice/0120 message when the Stand-In Authorization responded on behalf of the issuer or when the issuer requested the Optional Non-valid CVC 3 Processing:

- DE 48, subelement 71 (On-behalf Services) identifies the service performed and the result.
- DE 48 (Additional Data: Private Use), subelement 34 (Dynamic CVC 3 ATC Information) is present when the on-behalf service result in subelement 71, subfield 2 (On-behalf Result 1) was value A, E, or V.
- DE 48, subelement 87 (Card Validation Code Result) is present when the CVC 3 validation result was not valid.
- DE 60 (Advice Reason Code) identifies the specific reason for the advice message.

## Optional non-valid CVC 3 processing

Mastercard provides issuers the option to have the Dual Message Authorization System respond to the Authorization Request/0100 messages on their behalf when the CVC 3 value is not valid. Issuers receive an Authorization Advice/0120: System-generated message when the Dual Message Authorization System responds.

This option only is available to issuers participating in the Contactless Mapping Service or the Dynamic CVC 3 Pre-validation Service.

## Overview

The Contactless Application Transaction Counter (ATC) file (MCC109) contains the most recent ATC values for cards supporting EMV Contact, EMV Contactless, and Contactless Magstripe transactions. It is used in the scope of EMV Cryptogram and Dynamic CVC 3 Pre-validation Services and Validation in Stand-In Services.

Issuers may need to use the MCC109 ATC file update when the ATC value of the card gets out of sync compared to the value recorded in the Mastercard MCC109 database. It allows them to cover any ATC value discrepancies that are created when transactions are not routed through the Mastercard Network.

In the context of Dynamic CVC 3 pre-validation and validation in Stand-In Services, issuers must use the MCC109 ATC file update when the ATC length value in the discretionary data of the card is fewer than four digits.

Mastercard supports entry of the ATC data in DE 101 (File Name), value (MCC109) via the following methods:

- Online File Maintenance
- Bulk File Maintenance
- Mastercard eService Maintenance

MCC109 ATC maintenance requests submitted by the Issuer File Update Request/0302 message or Mastercard eService are applied immediately. Maintenance requests submitted by bulk file are applied one time per day at 18:00 hours (Central Time).

## Alternate processing

Mastercard considers the results of the CVC 3 validation in DE 48, subelement 71 (On-behalf Services) when responding to the Authorization Request/0100 message for issuers participating in the Dynamic CVC 3 Pre-validation or Dynamic CVC 3 Validation in Stand-In Authorization. If the results are invalid, Mastercard uses the issuer's instructions from the decision matrix as set in the key file.

Issuers participating in one of the CVC 3 on-behalf services should reference the KMS interface section defined in [On-behalf Key Management Procedures](#) and [On-behalf Key Management Interface Specifications](#) for information about dynamic CVC 3 validation keys.

## Authorization reports

These reports provide information about CVC 3 on-behalf services.

- The Authorization Parameter Summary Report (SI737010-AA) lists the name of the on-behalf service in which the issuer is participating for an account range and displays the issuer selection for participating in the optional, non-valid CVC 3 processing service.
- The Daily Account File Activity Report (AM700010-DD) contains the Contactless Application Transaction Counter (ATC) File activity.

For a sample of the Authorization Parameter Summary Report (SI737010-AA), refer to [Reports and files](#). For a sample of the Daily Account File Activity Report (AM700010-DD), refer to the [Account Management System User Manual](#).

## To participate

CVC 3 on-behalf services are currently available to issuers that process through the Dual Message System.

For more information about CVC 3 on-behalf services and how to participate, refer to the [Contactless On-behalf Services Guide](#).

### For more information

For details about data requirements, refer to [Data element definitions and details](#).

## Card Validation Code 3

Mastercard supports card validation code 3 (CVC 3) result data in Authorization Request Response/0110 messages using DE 48, subelement 87 (Card Validation Code Result). Issuers performing CVC 3 validation in-house on contactless transactions may use these CVC 3 values. When the CVC 3 is valid, the Authorization Request Response/0110 message should not contain DE 48, subelement 87.

### Authorization Request/0100: CVC 3

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

The Authorization Request/0100 message will contain CVC 3 values in DE 45 (Track 1 Data) or DE 35 (Track 2 Data) following the configuration provided by the issuer. The Mastercard contactless account number is entered via contactless magnetic stripe where DE 22 (Point of Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode) is 91.

Mastercard will apply the appropriate algorithm to DE 45 or DE 35 using the parameter data provided by the issuer to determine the validity of the CVC 3.

## Authorization Request Response/0110: CVC 3 Result

Mastercard encourages issuers to include DE 48, subelement 87 when they perform CVC 3 validation and there is an issue with the CVC 3. When the CVC 3 is not valid, the issuer should send the acquirer the Authorization Request Response/0110 message containing CVC 3 result data. Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request Response/0110 data elements apply.

### Applicable data elements

| Data Element                                                                      | Org | Sys | Dst | Values/Comments                                                                                   |
|-----------------------------------------------------------------------------------|-----|-----|-----|---------------------------------------------------------------------------------------------------|
| DE 48 (Additional Data: Private use), subelement 87 (Card Validation Code Result) | C   | .   | C   | E = Length of unpredictable number was not a valid length<br>P = Unable to process<br>Y = Invalid |

## Contactless CVC 3 Processing Service

Mastercard provides contactless processing services to assist issuers processing contactless transactions with the validation of the Card Validation Code 3 (CVC 3) to ensure the values provided by the acquirer match the issuer's expected values.

Mastercard offers the following on-behalf services:

- **Dynamic CVC 3 Pre-validation Service:** This is an optional, stand-alone service for issuers with contactless-enabled authorization systems that do not support dynamic CVC 3 validation. The Contactless Mapping Service may be used with the Dynamic CVC 3 Pre-validation Service.

Mastercard will perform the dynamic CVC 3 validation on behalf of the issuer before forwarding the Authorization Request/0100 message. If the issuer is unavailable, Mastercard will consider the results of the dynamic CVC 3 validation when the transaction is processed by the Stand-In Authorization.

- **Dynamic CVC 3 Validation in Stand-In Authorization Service:** This is a mandated service for issuers with contactless-enabled authorization systems that support dynamic CVC 3 validation in-house that would like Mastercard to provide dynamic CVC 3 validation when the issuer is not available and the transaction is processed by the Stand-In Authorization.

The Contactless Mapping Service is for issuers with non-contactless-enabled authorization systems that are not able to support the processing of a separate contactless account number and the validation of dynamic CVC 3 value.

Participation in any CVC 3 on-behalf service or services is defined by account range. Validation will be facilitated by information the issuer provides to Mastercard. Issuers will be requested to

provide confidential key data to Mastercard that will be critical in the validation process (unless Mastercard arranges for devices to be sent to cardholders on behalf of issuers).

## Dynamic CVC 3 Application Transaction Counter (ATC) Processing

The ATC is used in the calculation of the dynamic CVC 3 cryptogram. The ATC counter value is managed by the chip on a contactless card that increments with every authorization request that occurs at a contactless-enabled terminal.

The Dual Message Authorization System supports DE 48, subelement 71 (On-behalf Service), subfield 2 (On-behalf [OB] Result 1), value E (CVC 3 ATC Replay) in the Authorization Request/0100 message to indicate to the issuer that the ATC value has been used in a previous transaction.

When the result of Dynamic CVC 3 validation in DE 48, subelement 71, subfield 2 is V (Valid) or A (ATC outside allowed range), the Dual Message Authorization System compares the transaction's ATC value to the stored list of ATC values for each contactless account number/sequence number/expiration date combination.

If the ATC used in validating the CVC 3 value is not in the stored list of ATC values, the Dual Message Authorization System adds the transaction's five-digit ATC value to the stored list of ATC values.

If the ATC used in validating the CVC 3 value is in the stored list of ATC values, the Dual Message Authorization System replaces DE 48, subelement 71, subfield 2, value V or A with value E in the Authorization Request/0100 message to the issuer. The Dual Message Authorization System does not add the transaction's ATC again to the stored list of ATC values.

Replacing the DE 48, subelement 71, subfield 2 value V or A, with value E does not affect any data contained in the message that supports value V or A. For example, DE 48, subelement 34 supports value A, but remains unchanged if value E replaces DE 48, subelement 71, subfield 2, value A.

The Dual Message Authorization System populates DE 48, subelement 87 (Card Validation Code Result) value Y (Invalid) in the Authorization Request Response/0110 message to the acquirer.

**NOTE: The Dual Message Authorization System only adds to the list of stored ATC values for transactions that have been processed online through the Mastercard Dual Message Authorization System. ATC values for transactions processed offline are not available for the Dual Message Authorization System to use in CVC 3 ATC replay processing.**

## Dynamic CVC 3 Application Transaction Counter (ATC) Information

DE 48, subelement 34 (Dynamic CVC 3 ATC Information) provides issuers with information about the ATC value derived for use in dynamic CVC 3 validation processing.

DE 48, subelement 34 will be conditionally present in Authorization Request/0100 messages and Authorization Advice/012: system-generated messages when the issuer participates in the

Dynamic CVC 3 Pre-validation service or the Dynamic CVC 3 Validation in Stand-In Authorization service.

The Dual Message Authorization System will provide DE 48, subelement 34 when the Dynamic CVC Pre-validation service or the Dynamic CVC 3 Validation in Stand-In Authorization service is performed and validation results in DE 48, subelement 71 (On-behalf Services), subfield 2 (On-behalf [OB] Result 1) contain the value A (ATC outside allowed range), E (CVC 3 ATC Replay), or V (Valid). DE 48, subelement 34 also may be sent as part of the Contactless Mapping service if implemented with Dynamic CVC 3 Pre-validation.

When responding to the Authorization Request/0100 message, issuers should consider the results of the CVC 3 validation in DE 48, subelement 71, subfield 2 and DE 48, subelement 34 (if present).

## MCC109 (Application Transaction Counter File)

The MCC109 (Application Transaction Counter [ATC] file) contains a range of ATC values for a contactless account number/card sequence number/expiration date combination for contactless cards that were personalized using dynamic values in the ATC and unpredictable number (UN). Issuers participating in the Dynamic CVC 3 Pre-validation service or the Dynamic CVC 3 Validation in Stand-In Authorization service may provide this file to Mastercard. Issuers may only add to or inquire about this file.

Mastercard supports entry of the ATC data in DE 101 (File Name), value (MCC109) via the following methods:

- Issuer File Update/0302 messages
- Bulk file request (R311)
- Mastercard eService

MCC109 (Application Transaction Counter [ATC] File) maintenance requests submitted via the Issuer File Update Request/0302 message or Mastercard eService are applied immediately. Maintenance requests submitted by bulk file are applied one time per day at 18:00 (Central Time).

**NOTE: This functionality does not apply to contactless cards and devices that were personalized to send zeros in the ATC and UN.**

## Dual Message Authorization System Edits

The Dual Message Authorization System performs the following edits on Issuer File Update Request/0302 messages when DE 101 (File Name) contains value MCC109 and DE 120 (Record Data) contains the layout for the contactless ATC File.

### Edits

| Field ID | Field Name                                              | Authorization Edit                                                                                                                                                                                                                                                                                                                                                                             |

**NOTE: Fields 1 through 3 are mandatory for an inquiry. Fields 1 through 4 are mandatory for an add.**

## Card Validation Code Result

The acquirer will receive DE 48, subelement 87 when the CVC 3 validation result was not valid.

Acquirers may receive the following:

- Y = Indicates the ATC was determined to be outside the allowed range specified by the issuer, the ATC was determined to be a replay, or the CVC 3 value was determined to be invalid.
- E = Indicates the length of the unpredictable number was not a valid length resulting in an Unpredictable Number (UN) that was not valid.
- P = Indicates Mastercard was unable to process the CVC 3 validation.

If the CVC 3 data is valid, the Dual Message Authorization System will not include DE 48, subelement 87 in the Authorization Request Response/0110 message to the acquirer.

The issuer will receive the Authorization Advice/0120 message, DE 48, subelement 87 when CVC 3 was invalid in the Authorization Request/0100 message.

### Optional Non-Valid CVC 3 Processing

Issuers may elect to have the Dual Message Authorization System respond to Authorization Request/0100 messages on their behalf when the CVC 3 value is not valid. The issuer will receive an Authorization Advice/0120: system-generated message when the Dual Message Authorization System responds.

For information about how to participate, refer to the [Contactless On-behalf Services Guide](#).

The following table describes the process that occurs when the issuer wants the Dual Message Authorization System to respond to Authorization Request/0100 messages on its behalf during CVC 3 validation.

## Alternate Processing

Mastercard supports issuers subscribing to the Dynamic CVC 3 Pre-validation services that are not available to respond to the Authorization Request/0100 message and issuers subscribing to the Dynamic CVC 3 Validation in Stand-In Authorization service by responding to the authorization message on behalf of the issuer. Mastercard will consider the results of the CVC 3 validation in DE 48, subelement 71 when responding to the Authorization Request/0100.

The values in DE 60 (Advice Reason Code), subfield 2 (Advice Detail Code) are dependent upon the values contained in DE 48, subelement 71, subfield 2 (OB Result 1) as described below.

### Associated edits

| IF DE 48, subelement 71, subfield 2 contains the value... | THEN DE 60, subfield 2 will contain...                                                 |

MIP X-Code Processing does not perform CVC 3 validation. MIP X-Code Processing will respond based on the type of transaction and the MIP X-Code limits defined.

## Cirrus and Maestro transaction processing

The Dual Message Authorization System supports Cirrus® (CIR) and Maestro® (MSI) transaction processing.

**NOTE: Applies only to the Europe region.**

The Dual Message Authorization System supports Cirrus® (CIR) and Maestro® (MSI) transaction processing. Mastercard supports both acquiring and issuing activity on the Dual Message Authorization System for CIR and MSI card products.

Both acquiring and issuing CIR and MSI transactions are limited to Europe region acquirers and issuers that process through the Mastercard Network.

### Cirrus

Cirrus (CIR), as a brand, is a Mastercard card brand designed exclusively for use at ATMs. Cirrus, as a network, is a wholly owned subsidiary of Mastercard International Incorporated that operates the international ATM sharing association known as the Mastercard® ATM Network. CIR is one of the brands accepted by the Cirrus® network.

The following transaction types can be initiated at the ATM and are indicated by the contents of DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code) for CIR transactions:

- 00 (Purchase)
- 01 (Withdrawal)
- 28 (Payment Transaction)
- 30 (Balance Inquiry)
- 91 (PIN Unblock)
- 92 (PIN Change)

Although the Dual Message Authorization System supports CIR transaction acquiring, only specified acquirers have this functionality. To ensure transactions are submitted by eligible acquirers, the Dual Message Authorization System verifies the acquirer parameter when an authorization transaction is branded as CIR.

### Maestro

Maestro (MSI) is a Mastercard brand for debit card products that may be used both at an ATM and at a point-of-service (POS) terminal. POS transactions include face-to-face and electronic commerce (e-commerce) transactions. Following are the valid values for DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code) for MSI transactions:

- 00 (Purchase)
- 01 (Withdrawal)
- 09 (Purchase with Cash Back)
- 20 (Purchase Return/Refund)
- 28 (Payment Transaction)

- 30 (Balance Inquiry)
- 91 (PIN Unblock)
- 92 (PIN Change)

For POS processing, Mastercard has defined specific POS processing criteria for MSI transactions. DE 35 (Track 2 Data) must be present in the POS transaction. For Maestro e-commerce transactions, if the acquirer could not construct DE 35, the Dual Message Authorization System will build DE 35 using the contents of DE 2 (Primary Account Number [PAN]) and DE 14 (Date, Expiration). Although the Dual Message Authorization System supports MSI transaction acquiring, only specified acquirers have this functionality. To ensure transactions are submitted by eligible acquirers, the Dual Message Authorization System verifies the acquirer parameter when an authorization transaction is branded as MSI.

**Alternate processing**

Alternate processing is optional for CIR and MSI transactions.

For issuers that choose to use Stand-In Authorization for alternate processing, Stand-In Authorization uses either the product or account range issuer-defined limits to determine how to respond to an Authorization Request/0100 message. If an issuer does not specify account range level processing, Stand-In Authorization uses the Mastercard defined product level defaults.

For the current definition of minimum transaction limits, refer to [Mastercard Rules](#) and [Transaction Processing Rules](#).

# Contactless Mapping Service for Contactless M/Chip and Contact M/Chip Transactions

The Contactless Mapping Service will be performed for participating account ranges when DE 22, subfield 1 contains value 05 (PAN auto-entry via chip) or value 07 (PAN auto-entry via contactless M/Chip).

## Processing

The following process describes how the Dual Message Authorization System processes Authorization Request/0100, Authorization Advice/0120: acquirer-generated, and Reversal Request/0400 messages for Contactless Mapping Service transactions.

| WHEN the message contains...                                                                                                                   | THEN the Dual Message Authorization System...                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| DE 22, subfield 1, value 05 (PAN auto-entry via chip)<br>and<br>The Contactless Mapping Service was performed on the transaction               | changes the value in DE 22, subfield 1 from 05 to 06, indicating that the Contactless Mapping Service occurred. |
| DE 22, subfield 1, value 07 (PAN auto-entry via contactless M/Chip)<br>and<br>The Contactless Mapping Service was performed on the transaction | changes the value in DE 22, subfield 1 from 07 to 08, indicating that the Contactless Mapping Service occurred. |

The Contactless Mapping Service occurs on Authorization Request/0100, Authorization Advice/0120: acquirer-generated, and Reversal Request/0400 messages. The following example describes the Contactless Mapping Service being performed on an Authorization Request/0100 message.

Stages describing the process that occurs when an Authorization Request/0100 transaction is generated from a contactless M/Chip or contact M/Chip card eligible for the Contactless Mapping Service.

1. When a cardholder initiates an eligible contactless M/Chip or contact M/Chip transaction on a contactless M/Chip or contact M/Chip terminal, the contactless M/Chip PAN or contact M/Chip PAN is passed to the terminal.
2. The acquirer sends an Authorization Request/0100 message containing the contactless M/Chip PAN or contact M/Chip account number to the Dual Message Authorization System.

3. The Dual Message Authorization System maps the contactless M/Chip or contact M/Chip account number to the cardholder's PAN (or funding account), and then forwards the authorization message containing the following values to the issuer:
  - DE 2 (Primary Account Number [PAN]) containing the cardholder's PAN
  - DE 14 (Date, Expiration) containing the cardholder's expiry date, if provided
  - DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode)
  - DE 23 (Card Sequence Number) containing the contactless M/Chip or contact M/Chip card sequence number, if provided
  - DE 35 (Track 2 Data), if provided, is removed
  - DE 45 (Track 1 Data), if provided, is removed
  - DE 48 (Additional Data: Private Use), subelement 33 (Contactless Mapping Information) containing contactless M/Chip or contact M/Chip PAN information
  - DE 48, subelement 71 (On-behalf Services), identifying the Contactless Mapping Service and any other on-behalf services performed
  - DE 55 (Integrated Circuit Card [ICC] System-related Data), as originally sent by the terminal
4. The issuer responds with an Authorization Request Response/0110 message containing the cardholder's PAN in DE 2.
5. The Dual Message Authorization System maps the PAN back to the contactless M/Chip or contact M/Chip account number and places the cardholder's PAN in DE 48, subelement 33, and then sends the contactless M/Chip or contact M/Chip account number in DE 2 to the acquirer.
6. The acquirer forwards the contactless M/Chip or contact M/Chip account number and other authorization response information to the contactless terminal.

The Contactless Mapping Service for contactless M/Chip and contact M/Chip transactions (DE 22, subfield 1, value 05 or 07) requires participation in the Dynamic CVC 3 Pre-validation Service unless the account range comprises M/Chip cards that have not had the magnetic stripe profile programmed.

For more information about the Mastercard Contactless Mapping Service, refer to the [Contactless On-behalf Services Guide](#).

## Dual Message Authorization System Edits

The following edit will be performed on Authorization Request/0100, Authorization Advice/0120, and Reversal Request/0400 messages to enforce the current valid expiration date edit

that exists for both contactless M/Chip and contact M/Chip transactions that are eligible for the Contactless Mapping Service.

## Credential on File transaction processing

A Credential on File transaction is a transaction in which a cardholder has explicitly authorized a merchant or payment facilitator's Sponsored Merchant to store the cardholder's Mastercard® or Maestro® account information (PAN and expiration date, or tokenized PAN and expiration date), and the cardholder subsequently authorizes that same merchant to bill the cardholder's stored Mastercard or Maestro account.

DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode), value 10 (Credential on File) identifies Mastercard-branded Credential on File transactions submitted to the Mastercard Network.

The Credential on File indicator:

- Allows a merchant to identify a pre-existing relationship with a cardholder to the issuer, using an identifier that is common across the payments industry.
- Increases approval rates for e-commerce transactions initiated with cardholder payment credentials already stored by, or on file with, the merchant or the service provider.
- Helps to more clearly identify types of Credential on File transactions for issuers, as there are only slight differences between Credential on File recurring payment transactions and Credential on File e-commerce transactions.

### Transactions identified as Credential on File

The following are categorized as Credential on File transactions and should be identified with the Credential on File indicator:

- Recurring payments
- Installment payments

- E-Commerce and Mail Order/Telephone Order (MO/TO) transactions for which the cardholder authorizes the merchant to use the Credential on File for payment
- Card-not-present transactions originating from a merchant's brick-and-mortar location for which the cardholder authorizes the merchant to use the Credential on File
  - Credential on File transactions are always initiated without the presence of a card; however, they can be cardholder-present transactions in which the cardholder authorizes the merchant to use card credentials stored during a previous consumer interaction. An example of such a transaction is when a consumer makes a purchase at a physical location of a pharmacy that supports both physical/retail and remote business (mail, phone, or e-commerce). The consumer may have previously interacted with the pharmacy through a remote channel using their Mastercard account number and provided permission to store the number for future use. If the consumer walks into one of the pharmacy's retail locations to pick up a prescription, the merchant may offer the consumer an option to pay using the stored credential. In this case, the transaction is cardholder-present, card-not-present, and requires the use of the Credential on File identifier.
- Account Status Inquiry (ASI) messages
  - The absence of the Credential on File value in a Purchase ASI or Recurring Payment ASI message should indicate a one-time request to validate card status or a request to validate prior to saving as Credential on File for future purchases or recurring payments.

## Country Level authorization

Country level authorization is an optional service that allows issuers of local-use-only cards to have the Dual Message Authorization System automatically decline all authorizations acquired outside of their country. The Dual Message Authorization System compares the data in the point-of-service (POS) country code field with the issuer's country. The Dual Message Authorization System only forwards authorizations acquired within the issuer's country to the issuer for processing. The Dual Message Authorization System declines all other transactions.

### Country Level authorization process

Stages of the process that the Dual Message Authorization System follows if the issuer designates the BIN for local-use only:

1. When the acquirer MIP receives an Authorization Request/0100 message, the Dual Message Authorization System checks whether the issuer designated the BIN for local-use-only.
2. When the issuer has designated the BIN for local-use-only, the Dual Message Authorization System compares:
  - The issuer's country on file at Mastercard to the POS Country Code, DE 61 (Point-of-Service [POS] Data), positions 14–16 of the Authorization Request/0100 message.
  - An accurate match depends on acquirers including the correct data in this field.

| WHEN the issuer's country...        | THEN the Dual Message Authorization System...                                                                |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------|
| matches the POS Country Code        | continues with normal processing.                                                                            |
| does not match the POS Country Code | returns DE 39 (Response Code) value 62 (Restricted Card) in the Authorization Request Response/0110 message. |

**NOTE: Use of the Country Level Authorization service does not alter a customer's responsibility for the use of local-use-only cards outside the country of issuance, including liability for all authorized and all below-the-floor-limit transactions. In addition, Mastercard assumes no liability for improper authorizations of such transactions that may result from issuer, acquirer, or merchant errors, or from Dual Message Authorization System or Country Level Authorization service outages.**

Issuers that use the Country Level Authorization service for cards designated for local use only and have chosen to receive MDES pre-digitization and Account Status Inquiry (ASI) messages must be aware that when a funding account range is configured for local use only, Mastercard will modify the following country- and currency-related data fields in the MDES pre-digitization and ASI messages according to the configurations provided by the issuer during the onboarding process:

- DE 43 (Acceptor Name and Location), subfield 5 (Acceptor Country Code)
- DE 49 (Currency Code, Transaction)
- DE 61, subfield 13 (POS Country Code)

Currency conversion

The Dual Message Authorization System automatically provides a currency conversion service to acquirers and issuers to allow processing of Authorization/01xx and Reversal/04xx messages in the customer's preferred currency.

Acquirers may submit online messages in any valid Mastercard supported transaction currency. Acquirers and issuers will receive amount-related data elements in the acquirer's transaction currency and issuer's cardholder billing currency even if they use the same currency. Acquirers and issuers have the option to receive amount-related data elements in the settlement currency (always U.S. dollars).

## Amount-related data elements in Authorization and Reversal messages

The following table lists how acquirers and issuers will send and receive amount-related data elements in authorization and reversal messages.

### Data elements

| DE | Acquirer Sends                     | Issuer Receives                                                                                                                                                                                                                         | Issuer Returns                                                                                                                                                                                                                               | Acquirer Receives                                                                                                                                                                                                                               |

## Dual Message System Processing

The following Dual Message System processing notes apply to currency conversion processing.

If the acquirer provides DE 5, DE 6, DE 9, DE 10, DE 16, DE 50, or DE 51, the Dual Message Authorization System will overwrite with the appropriate values in the message sent to the issuer. DE 5, DE 6, DE 9, DE 10, DE 16, DE 50, or DE 51 will be present, as defined, except when the Dual Message Authorization System has declined an Authorization Request/0100 message and was unable to complete currency conversion processing.

If the settlement currency (U.S. dollars) is the same as the acquirer's currency, DE 5 will be the same value as in DE 4 and DE 9 will contain the value 61000000.

If the acquirer and issuer are the same currency, DE 6 will be the same value as in DE 4 and DE 10 will contain the value 61000000.

DE 54 will not contain additional occurrences of amount types in the settlement currency. DE 54 will only contain occurrences of amount types in U.S. dollars if it is the currency of the acquirer or issuer.

## Data Elements Acquirers Send in Request, Advice, and Reversal Messages

Acquirers are required to send the following currency conversion related data elements in authorization request, advice, and reversal messages.

### Data elements

| DE       | Note                                                                                             | 0100 | 0120 | 0400 |

### Table Key

P under MTI = indicates that the data element will be present in that message

X under MTI = indicates that the issuer will return the data element in the response message if the issuer chooses to receive settlement amount-related data elements in the original request or advice message

## Alternate Processing

Following are details regarding currency conversion in alternate processing.

Authorization Advice/0120 and Reversal Advice/0420 messages that the issuer receives through Store-and-forward (SAF) processing will always contain amount-related data elements in the acquirer's transaction currency and the issuer's cardholder billing currency.

SAF messages will contain amount-related data elements in the settlement currency (U.S. dollars) according to the issuer's preference for receiving these data elements.

## Dual Message Authorization System edits

The Dual Message Authorization System ensures that amount-related data elements, if present in the following response messages from the issuer, are the same values as provided in the request messages sent to the issuer.

Issuers should echo amount-related data elements in response messages as they were received in the request messages. The exception is when an issuer provides DE 39 (Response Code), value 10 (Partial approval) or 87 (Purchase amount only, no cash back allowed) in an Authorization Request Response/0110 message. When providing either of these responses, the issuer is required to provide DE 6 and DE 51 according to the specifications for partial approvals and purchase of goods or services with cash back.

### Authorization Request Response/0110

| IF...                                                                                                                                                                                                                | THEN the Dual Message Authorization System...                                                                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| the value in DE 39 is not 10 (Partial approval) or 87 (Purchase amount only, no cash back allowed), and the amount-related data elements returned by the issuer are different from the values received by the issuer | generates and forwards to the issuer an Authorization Response Negative Acknowledgment/0190 message where:<br>DE 39 = 30<br>DE 44 = the data element in error |

### Reversal Request Response/0410

| IF...                                                                                                        | THEN the Dual Message Authorization System...                                                                                                         |
|--------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| the amount-related data elements returned by the issuer are different from the values received by the issuer | generates and forwards to the issuer an Authorization Response Negative Acknowledgment/0190 where:<br>DE 39 = 30<br>DE 44 = the data element in error |

### Authorization Request/0100 or Authorization Advice/0120

| IF...                                                                                                                                                                                                     | THEN the Dual Message Authorization System...                                                                                                                   |

## Currency conversion rates

The Dual Message Authorization System uses Mastercard issued rates to perform currency conversion between two currencies.

The T057 production and T058 test bulk files contain the Currency Conversion Rate Detail Records; Mastercard-Issued Cross Rates (Rate Class F) and Mastercard-Issued USD Rates (Rate Class M). For each Mastercard-Issued Rate, the Reference Currency is indicated in field 3 of the T057 file.

Based on the T057 Currency Conversion Rate file published for the current processing day (at T+0), Mastercard looks to implement rates on the Dual Message Authorization System at 14:05 St. Louis time the same day (T+0). However, there may be limited situations, such as latency in file transmission, which may cause a delay in file delivery. The rates will be effective upon file delivery until 14:05 St. Louis time the following day (T+1).

## Currency conversion calculation

The Dual Message Authorization System selects the Mastercard-Issued Cross Rates, class record (Rate Class F) only, when the source and target currencies match the source and Reference Currency pair identified in the rate record.

All other currency conversions occur using the Mastercard-Issued USD Rates, class records (Rate Class M), for the source currency to the target currency. In cases where the target currency is not USD, the source currency is converted to USD and then to the target currency (for example, a computed cross rate).

For example:

Assume that the Dual Message Authorization System processes a transaction in which:

- Transaction currency is GBP.
- Cardholder billing currency is EUR.
- Acquirer's reconciliation currency is USD.

Also assume that a Mastercard-Issued Cross Rate has been established for the currency pair GBP: EUR and that EUR is the Reference Currency for this currency pair.

Dual Message Authorization System will calculate:

- EUR cardholder billing amount using the GBP: EUR Mastercard-Issued Cross Rate.
- USD acquirer's reconciliation amount using the GBP: USD Mastercard-Issued USD Rate.

## Electronic Commerce Processing

Electronic commerce transactions are non-face-to-face online transactions using electronic media over any public network, such as the Internet, or private network, such as an extranet. E-commerce processing allows transactions to be initiated from a cardholder-controlled device, such as a PC or mobile phone, for purchasing goods and services on the Internet.

All e-commerce transactions must be uniquely identified by the acquirer in the authorization. This permits the issuer to assess the degree of risk associated with the transaction and to support any processing requirements associated with interchange compliance.

## Customer requirements

- All issuers must be able to receive and process all e-commerce data present in the Authorization Request/0100 messages.
- All acquirers must properly identify e-commerce messages within the Authorization Request/0100 message. They must be able to receive and to process e-commerce Authorization Request Response/0110 messages.

The Authorization Request/0100 includes the security level indicator (in DE 48, subelement 42 [Electronic Commerce Indicators] subfield 1 [Electronic Commerce Security Level Indicator and UCAF Collection Indicator]) that indicates the following security attributes of electronic commerce transactions:

- Security protocol, which indicates the security protocol that was used to facilitate the transaction (for example, channel encryption).
- Cardholder authentication, which indicates the method of cardholder authentication used to facilitate the transactions.
- UCAF collection indicator, which indicates both merchant UCAF readiness and inclusion of any specific authentication data in the UCAF field (DE 48, subelement 43).

Mastercard messaging requirements regarding the security of e-commerce transactions may vary depending upon the security protocol involved in the transaction. Methods may include:

- No security protocol
- Channel encryption, which is a security layer that resides between an application and its transport layers, for example, SSL (Secure Sockets Layer) and HTTPS (Hypertext Transfer Protocol Secure)
- Mastercard® Identity Check™ Transaction using the Universal Cardholder Authentication Field (UCAF™)

If an e-commerce item that ships late is re-authorized for message reason code 4808 (Authorization-Related Chargeback) chargeback protection, this transaction will take on the security characteristics of the original authorization within a dispute resolution.

## Channel Encryption

This section describes an Authorization Request/0100: Electronic Commerce transaction that uses channel encryption protocol between the cardholder and the merchant.

1. The cardholder browses the Internet until the cardholder is ready to make a purchase from a merchant.
2. The cardholder's browser, which supports channel encryption (that is, SSL), sends the purchase and payment information to the merchant. Channel encryption protects the information over the Internet.
3. The merchant receives the purchase information and has access to all the cardholder account data that the cardholder provided.
4. The merchant requests authorization from the acquirer.

5. The acquirer generates an Authorization Request/0100 message, including both of the following:
  - The cardholder payment data
  - The appropriate data element values that identify this as an e-commerce transaction with channel encryption protocol and no cardholder authentication.
6. The issuer receives the authorization request and generates an Authorization Request Response/0110 message.
7. The acquirer receives the Authorization Request Response/0110 and sends the response back to the merchant.
8. The merchant provides acknowledgment to the cardholder (protected by channel encryption as it travels over the Internet).

**NOTE: An approved e-commerce authorization must only have one first presentment submitted for clearing unless the authorization is for airline tickets or installment purchases. In the case of airline tickets and installment purchases multiple first presentments against one approve authorization is allowed.**

## No Security Protocol

This section describes an Authorization Request/0100—Electronic Commerce transaction with no security protocol.

1. The cardholder browses the Internet until the cardholder is ready to make a purchase from a merchant. In this example, the cardholder does not have authentication of the merchant at any time.
2. The cardholder's browser sends the purchase and payment information over the Internet to the merchant. In this example, no security protocol protects the request.
3. The merchant receives the purchase information and has access to all of the cardholder account data that the cardholder provided (including payment information).
4. The merchant requests authorization from the acquirer.
5. The acquirer generates an Authorization Request/0100 message, including both of the following:
  - Cardholder payment data
  - Appropriate data element values that identify this as an e-commerce transaction with no security protocol and no cardholder authentication
6. The issuer receives the authorization request and generates an Authorization Request Response/0110 message.
7. The acquirer receives the Authorization Request Response/0110 message and sends the response back to the merchant.
8. The merchant provides acknowledgment to the cardholder (still unprotected as it travels over the Internet).

## Authorization Request/0100: Electronic Commerce Purchase

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

### Data elements

## Authorization Request Response/0110: Electronic Commerce Purchase

When any response data is present in DE 48 (such as AVS response, CVC 2 response), the issuer uses a normal Authorization Request Response/0110, with all subelements present in the original Authorization Request/0100 message echoed back. Following is a list of the data

elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

### Data elements

| Data Element                                                                                                               | Org | Sys | Dst | Values/Comments                                                                                                        |

## Static Accountholder Authentication Value

Several Mastercard programs enable enrolled merchants that have met specific qualification criteria, to accept Mastercard or Maestro cards for electronic commerce (e-commerce) transactions without using Mastercard Identity Check to authenticate every transaction. Merchants are required to perform full Mastercard Identity Check authentication on the first transaction they perform for any individual cardholder.

These Mastercard programs are as follows:

- Maestro Recurring Payments Program
- Mastercard Utility Payment Program
- Maestro Low Risk Merchant Program

As part of these programs, Mastercard:

- Assigns participating merchants a static Accountholder Authentication Value (AAV) for use with transactions that are processed without Mastercard Identity Check authentication.
- Allocates participating merchants a Mastercard Assigned ID.

Mastercard static AAV UCAF data is identified in Authorization Request/0100 messages by DE 48 (Additional Data: Private Use), subelement 42 (Electronic Commerce Indicators), subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection Indicator), position 3 (UCAF Collection Indicator), value 3 (UCAF data collection is supported by the merchant, and UCAF [Mastercard assigned Static Accountholder Authentication Value] data must be present).

Acquirers must provide the Mastercard assigned merchant ID in DE 48, subelement 32 (Mastercard Assigned ID) of Authorization Request/0100 and Authorization Advice/0120—Acquirer-generated messages.

The combination of static AAV data submitted in the Universal Cardholder Authentication Field (DE 48, subelement 43) and the Mastercard assigned merchant ID (DE 48, subelement 32) is unique and is verified by the Dual Message Authorization System.

**NOTE: The Mastercard Identity Check AAV Verification Service and Mastercard Identity Check AAV Verification in Stand-In Authorization will not be performed on Mastercard or Maestro e-commerce transactions that are processed under the Maestro Recurring Payments Program, the Mastercard Utility Payment Program, or the Maestro Low Risk Merchant Program. These on-behalf services will continue to be performed on Mastercard and Maestro e-commerce transactions that are authenticated using Mastercard Identity Check.**

#### For more information

For information on the Identity Check program, refer to [Mastercard Identity Check](#).

## Specific scenarios for e-commerce transactions

Depending on the merchant's inventory system and the nature of the item being purchased online, an e-commerce transaction may be submitted as either a preauthorization or a final authorization by acceptors globally.

For more information about preauthorization and final authorization usage requirements, refer to [Authorization and Preauthorization Processing Standards](#), [Incremental Preauthorization](#), and the [Transaction Processing Rules](#).

The following describes the recommended processing when dealing with estimated amounts and multi-item purchases where all items may or may not be delivered or are not delivered at the same time.

| the customer requests split shipment based on inventory availability, or e-commerce aggregator processes order through multiple suppliers | refer to the following section <a href="#">E-commerce split or partial shipments</a> .                                                                                                                                                                                                                                                                           |

## Alternate processing: canceling a single item

Issuers will release any hold of funds once a clearing presentment has been matched (using the Trace ID in addition to other data elements) to the original authorization. Accordingly, a merchant is not required to submit a partial reversal if the lower amount is processed by Mastercard clearing within 24 hours of finalization of the transaction, assuming multi-clearing processing is not utilized.

## E-commerce split or partial shipments

Options for managing e-commerce split or partial shipments are listed in table format.

|--------------------------------------------------------------|---------------------------------------------------|
| submit separate authorizations and clear as each item ships. | each item is processed as a separate transaction. |

## Process for an e-commerce transaction

A typical e-commerce transaction is described below.

### E-commerce transaction flow

1. The cardholder accesses a merchant's website via the Internet and requests to make a purchase.
2. The merchant submits the cardholder's information to the acquirer.
3. The acquirer sends an Authorization Request/0100 message via the Mastercard Network to the issuer.
4. The issuer makes the authorization decision and replies using an Authorization Request Response/0110 message.
5. The acquirer responds to the merchant.
6. The merchant completes the transaction according to the authorization response returned.

### Partial reversal processing: Europe region

Since issuers will release any hold of funds once a clearing presentment has been matched (using the Trace ID in addition to other data elements) to the original authorization, a merchant is not required to submit a partial reversal if the remaining items are processed by Mastercard clearing within 24 hours of finalization of the transaction.

## Automated fuel dispenser transactions and e-commerce

An automated fuel dispenser transaction identified with MCC 5542 (an AFD transaction) may occur through the use of a digital application as an in-app payment. Such AFD transactions must comply with all e-commerce transaction processing requirements. In addition, AFD e-commerce transactions use the same processing flow as those occurring at cardholder-activated terminals, with respect to the use of preauthorization and advice messages.

An AFD e-commerce transaction preauthorization request may be submitted for an estimated amount, followed by an advice message advising the issuer of the final transaction amount.

The preauthorization request may be sent for an estimated amount. If approved by the issuer, then within 60 minutes of the time that the authorization request message was sent, the acquirer must send an Authorization Advice/0120 message for the final transaction amount (or a Reversal Request/0400 message if the transaction will not be completed or will finalize for a lesser amount than requested). If the issuer has placed a hold on cardholder funds in excess of USD 1 or CAD 1, as applicable, then within 60 minutes of receiving the acquirer's advice message, the issuer must release any hold amount that exceeds the final transaction amount specified.

Mastercard recommends that the Trace ID (DE 15 [Settlement Date] and DE 63 [Network Data]) of the completion advice response be used within the clearing presentment.

**NOTE: As an alternative, the Trace ID of the original preauthorization may be used for clearing presentment if that same Trace ID is included in the AFD completion advice message within DE 48, subelement 63 (Additional Data, Trace ID).**

## E-commerce payment transactions using tokens with or without cryptographic data

Mastercard allows payment transactions to process without a cryptogram in DE 48 (Additional Data: Private Use), subelement 43 (Universal Cardholder Authentication Field [UCAF]) when they also contain DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), value 28 (Payment Transaction) in the Authorization Request/0100 message.

This functionality applies to the following transaction types:

- Electronic commerce (e-commerce): Identified by DE 22 (POS Entry Mode), subfield 1 (POS Terminal PAN Entry), value 81 (PAN/Token entry via electronic commerce with optional Identity Check AAV in the UCAF field (DE 48, subelement 43) or DSRP cryptogram in the Digital Payment Data field (DE 104).
- Credential on File: Identified by DE 22, subfield 1, value 10 (Credential on File)

Mastercard will reject payment transaction requests involving tokens without cryptograms that are not identified as payment transaction (DE 3, subfield 1, value 28).

## Digital Secure Remote Payment with cryptographic data

Mastercard provides Digital Secure Remote Payment (DSRP) transactions to enable secure mobile-originated transactions for remote payments.

DSRP authorization request messages may be transmitted either with cryptographic data in the Digital Payment Data field (DE 104) or with full EMV data in DE 55.

For details about DSRP, refer to [Digital Secure Remote Payment](#).

### Digital Payment Data field

Located in DE 104 (Digital Payment Data) this field carries digital payment data, such as the Digital Secure Remote Payments (DSRP) cryptogram associated with the token and additional information as new token-related data emerges.

Mastercard Digital Enablement Service (MDES) uses DE 104, subelement 001 (Digital Payment Cryptogram) to carry the DSRP cryptogram in lieu of the UCAF field in DE 48 (Additional Data: Private Use), subelement 43 (Universal Cardholder Authentication Field [UCAF]).

## Universal Cardholder Authentication Field

The Universal Cardholder Authentication Field (Universal Cardholder Authentication Field™) is a standard, globally interoperable method of collecting cardholder authentication data at the point of interaction.

This field provides a universal, multipurpose data transport infrastructure that is used to communicate authentication information between cardholders, merchants, acquirers, and issuers.

### Accountholder Authentication Value

The Accountholder Authentication Value (AAV) is an Identity Check-specific implementation of Universal Cardholder Authentication Field™ related to issuer authentication platforms that incorporate the Secure Payment Application (SPA) algorithm. SPA is a Mastercard security method designed to authenticate cardholders when they transact online.

#### For more information

For more information, refer to [Mastercard Identity Check](#).

## Tokenized e-commerce transactions with dynamic payment credentials

To support Digital Secure Remote Payments (DSRP) Universal Cardholder Authentication Field™ (UCAF) transactions, merchants and acquirers that participate in the Mastercard Digital Enablement Service (MDES) must make changes to their systems. Mastercard has mitigated these impacts by leveraging both a Dynamic Token Verification Code and Dynamic Expiration Date, enabling the transaction to process like a traditional e-commerce payment.

Mastercard also allows the processing of MDES e-commerce transactions that contain a Mastercard Identity Check merchant attempt AAV value in the UCAF field and have been successfully authenticated by the Dynamic Token Verification Code and Dynamic Expiration Date.

#### For more information

For more information on MDES, refer to [Mastercard Digital Enablement Service](#).

## E-commerce Fraud Alerts for Issuers

E-commerce Fraud Alerts for Issuers requires acquirers to inform issuers when a merchant or acquirer has decided not to complete an approved card-not-present (CNP) transaction because of high-fraud risk. This information will enable issuers to appropriately monitor or block those cards to prevent future fraud.

This service will be required for CNP transactions, including e-commerce, mail order/telephone order (MOTO), and recurring payment transactions.

E-commerce Fraud Alerts for issuers:

- Provides issuers with a predictive indicator about cards that need to be monitored due to suspicious behavior
- Allows issuers, acquirers, and merchants to potentially reduce fraud losses, chargebacks, and associated costs by enabling issuers to intervene early on alerted card accounts
- Enables increased collaboration and communications between merchants and issuers to take fraud out of the system and help increase cardholder confidence in the system

### How it works

When an acquirer or merchant has decided not to complete an approved CNP transaction because of high-fraud risk, the acquirer must send the Dual Message Authorization System a Reversal Request/0400 message containing DE 39 (Response Code), value 34 (Suspect Fraud).

The issuer must be prepared to receive DE 39 (Response Code), value 34 (Suspect Fraud) in Reversal Request/0400 or Reversal Advice/0420 messages and generate appropriate Reversal Request Response/0410 or Reversal Advice Response/0430 messages. Issuers must release any hold placed on the cardholder's account for the amount of the original, approved Authorization Request/0100 message.

### Fees

Refer to the **Pricing and Billing Resource Center** application on Mastercard Connect® for fees and billing information.

### Reports

The Issuer Authorization Detail report (AB201010-A2) will be used to support analysis of the reversal messages containing the new code. The Stand-In Detail Authorization report (AB111010-AA) will also be modified to support the new reason code value in DE 39.

An issuer E-commerce Fraud Alerts for Issuers report will be available for Dual Message System transactions that contains detail transaction information. This report can be requested through Portfolio Analytics.

Refer to the **Pricing and Billing Resource Center** application on Mastercard Connect® for fees and billing information.

## Comparison of security protocols

A comparison of security protocols is listed in table format.

### Comparison of security protocols

| Type of Security Protocol                      |                                                                              |                                                                             |                                                                                                                                                                                                                                                                                    |
|------------------------------------------------|------------------------------------------------------------------------------|-----------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Expired card override

Overriding expired card tests allows issuers to override possible expiration date keying errors, to support reissued cards, and to identify transactions they may otherwise approve.

Issuers will receive all Authorization Request/0100 and Reversal Request/0400 messages containing expired expiration dates. Issuers will have the opportunity to review each transaction, and subsequently approve or decline each transaction.

**NOTE: Mastercard automatically enables issuers for expired card override. Issuers that want Mastercard to reject Mastercard Authorization Request/0100 and Reversal Request/0400 messages containing expired expiration dates must complete the *Expiration Date Test Form (Form 379)*.**

## System definition of an expired card

The Dual Message Authorization System defines an expired card as a card with an expiration date that meets one of the following criteria.

- Earlier than the current processing year and month
- 20 years later than the current processing year

Customers can locate the expiration date in DE 14 (Date, Expiration), and from the magnetic stripe track, in DE 45 (Track 1 Data), or DE 35 (Track 2 Data).

## Expired card tests

The following table provides examples of Mastercard expired card test logic.

### Expired card tests

| Transaction Date      | Card Expiration Date (MM/YY) | Authorization Request Expiration Date (YY/MM) | Dual Message Authorization System Response | Explanation of Logic                                                                                                                          |
|-----------------------|------------------------------|-----------------------------------------------|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| 0924 (September 2024) | 1024 (October 2024)          | 2410 (October 2024)                           | Accept                                     | October 2024 is later than the current processing year and month. The system accepts the date as valid.                                       |
| 0924 (September 2024) | 0223 (February 2023)         | 2309 (February 2023)                          | Decline                                    | February 2023 is earlier than the current processing year and month. The system declines the date as expired.                                 |
| 0924 (September 2024) | 0844 (August 2044)           | 3008 (August 2030)                            | Accept                                     | August 2044 is less than 20 years from September 2024. The system accepts the date as valid, because 2030 is still within 20 years from 2044. |

| Transaction Date      | Card Expiration Date (MM/YY) | Authorization Request Expiration Date (YY/MM) | Dual Message Authorization System Response | Explanation of Logic                                                                                                                                  |
|-----------------------|------------------------------|-----------------------------------------------|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0924 (September 2024) | 0145 (January 2045))         | 4501 (January 2045)                           | Decline                                    | January 2045 is 20 years and four months from September 2024. The system declines the dates as expired, because 2045 is more than 20 years from 2024. |

**NOTE: The Dual Message Authorization System uses DE 14 (Date, Expiration), if present, for the expired card test; otherwise, DE 35 (Track 2 Data), if available; otherwise, DE 45 (Track 1 Data), if available. If both DE 14 and track data are present, the Dual Message Authorization System uses DE 14 only.**

#### Issuer is enabled for Expired Card Override

When a transaction fails the expired card tests and the issuer is enabled for Expired Card Override, the Dual Message Authorization System forwards the Authorization Request/0100 or Reversal Request/0400 message to the issuer for processing.

#### Issuer is not enabled for Expired Card Override

If the issuer is not enabled for Expired Card Override and the transaction fails the expired card test, the Dual Message Authorization System generates DE 39 (Response Code), value 54 (Expired Card) of the Authorization Request Response/0110 or Reversal Request Response/0410 message sent to the acquirer.

#### Potential inappropriate declines

If the issuer is not enabled for Expired Card Override, the Dual Message Authorization System may decline cardholder transactions that the issuer would have approved if the Authorization Request/0100 and Reversal Request/0400 messages were sent to the issuer.

#### Expired data errors

Expired card tests assume that the expiration date in the authorization message is correct. However, improper keying, misunderstanding of the date, or other human error can cause the expiration date listed in the authorization message to be incorrect.

The following table provides an example of a reason a merchant might receive an incorrect expired card authorization response.

## Expired card tests

| Transaction Date      | Card Expiration Date (MM/YY) | Authorization Request Expiration Date (YY/MM) | Dual Message Authorization System Response | Explanation of Error                                                                                                                                                                                             |
|-----------------------|------------------------------|-----------------------------------------------|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0924 (September 2024) | 05/31/25                     | 3105 (merchant entered 0531 instead of 0525)  | Decline                                    | May 2025 is eight months from September 2024. However, the merchant entered the month (05) and the day (31), but not the year (25). The Dual Message Authorization System reads the expiration date as May 2031. |

The system declines the date as expired, because 2031 is more than 20 years from 2010. However, the expiration date is valid, and perhaps the issuer would have accepted the transaction.

## Alternate processing

If the issuer is enabled for Expired Card Override and is unavailable, the Dual Message Authorization System performs the expired card tests, either in Stand-In Authorization or during X-Code Processing.

### Stand-In Authorization

Stand-In Authorization performs an expired card test. For transactions that fail the expired card test, Stand-In Authorization:

- Returns to the acquirer DE 39 (Response Code), value 54 (Expired card) in the Authorization Request Response/0110 message.
- Stores the transaction in the Store-and-Forward queue with DE 60 (Advice Reason Code), subfield 2 (Advice Detail Code), value 0029 (Reject: expired card) of the Authorization Advice/0120 message, available for issuer retrieval.
- Identifies transactions with code 54 in the RESPONSE column or code 0029 in the FAIL RSN column on the following reports:
  - AB201010-AA (Authorization Detail)
  - AB111010-AA (Stand-In Detail Authorization)
  - AB517010-AA (Issuer Call Referral Tiered Detail)

Refer to the [Stand-In Authorization Reference Guide](#) and [Reports and files](#) for more information.

### X-Code Processing

X-Code Processing performs an expired card test. For transactions that fail the expired card test, X-Code Processing returns to the acquirer DE 39, value 54 of the Authorization Request Response/0110, and sends an Authorization Advice/0120 to the issuer.

## Gambling transaction processing

The Mastercard Network supports Gaming Payment Transaction processing for the Mastercard and Maestro card brands in Europe and Mastercard card brands in Middle East/ Africa region countries where the crediting of gambling winnings is permitted by law. The Dual Authorization Message System also supports Gaming Payment Transaction processing for the Mastercard and Maestro brands in the United States region to transfer lottery winnings to a card.

U.S. region Mastercard and Maestro issuers must block online gambling transactions in accordance with the Standards and applicable U.S. law. Such potentially illegal online gambling transactions are declined during Stand-In Authorization processing.

## Internet gambling transactions in the U.S. region

Internet gambling transactions are identified in Authorization Request/0100 messages by these values.

- DE 18 (Merchant Type), MCC 7995 (Gambling Transactions)
- DE 61 (Point-of-Service [POS] Data), subfield 10 (Cardholder-Activated Terminal Level Indicator), value 6 (Authorized Level 6 CAT: Electronic commerce)

The presence of both these values in an Authorization Request/0100 message indicates that the acquirer has coded the transaction as an Internet gambling transaction, and possibly a restricted transaction (that is, a payment in connection with a gambling transaction that is illegal in the U.S. region).

U.S. region Mastercard and Maestro issuers must use a method of transaction blocking or decline all such transactions on an individual basis.

Issuers may approve, on an individual basis, any Internet gambling transaction authorization requests identified with MCC 9754 (Gambling: Horse Racing, Dog Racing, Non-Sports Intrastate Internet Gambling) that involve a U.S. region cardholder. In using MCC 9754, the acquirer asserts that the transaction involves gambling activity deemed by the acquirer to be legal in the U.S. region.

Issuers are not required to validate the transaction category code (TCC) value for this purpose.

Specific processing rules and Standards for Internet gambling transactions have been defined in Rule 3.7, Integrity of Brand and Network of the [Mastercard Rules](#).

## Stand-In Authorization processing

The Stand-In Authorization limits of zero will apply for the following parameter combinations:

- MCC 7995 (Gambling Transactions)
- Cardholder-activated terminal (CAT) level 6 (Electronic Commerce Transaction)

If this parameter combination is sent to the Stand-In Authorization for processing, Stand-In Authorization will reject the Authorization Request/0100 message by returning DE 39 (Response Code), value 57 (Transaction not permitted to issuer/cardholder).

These blocking parameters are also established for account range setup.

## Gaming Payment Transaction processing in the Europe and Middle East/Africa regions

The Mastercard Network supports Gaming Payment Transactions in Financial Transaction Request/0200 and Reversal Request/0420 messages for the Mastercard and Maestro card brands in the Europe and Mastercard card brands in the Middle East/Africa region, where online gaming and the crediting of gaming winnings on cards is permitted by law.

Refer to *Transaction Processing Rules* for the full set of Europe-specific standards for gaming Payment Transactions.

Acquirers submit their online Gaming Payment Transaction Financial Transaction Request/0200 and Reversal Request/0420 messages with the following values:

- DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type), value 28 (Payment Transaction)
- In the Europe region, DE 4 (Amount, Transaction), maximum EUR 50,000 if an acquirer provides a transaction amount exceeding EUR 50,000 or its currency equivalent, the Mastercard Network will decline the request with DE 39 (Response Code), value 13 (Invalid amount).
- In the Middle East/Africa region, DE 4 (Amount, Transaction), maximum EUR 50,000 if an acquirer provides a transaction amount exceeding EUR 50,000 or its currency equivalent, the Mastercard Network will decline the request with DE 39 (Response Code), value 13 (Invalid amount).
- DE 18 (Merchant Type), MCC 7995 (Gambling Transactions)
- DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode):
  - Value 10 (Credential on File) and DE 61 (Point-of-Service [POS] Data), subfield 4 (POS Cardholder Presence), value 5 (Cardholder not present [Electronic order]), or
  - Value 81 (PAN/Token entry via electronic commerce with optional Identity Check-AAV in DE 48, subelement 43 (UCAF) or DSRP cryptogram in DE 104, subelement 001 (Digital Payment Cryptogram)
- DE 48 (Additional Data: Private Use), TCC value P (Payment Transaction)
- DE 48, subelement 77 (Transaction Type Identifier), value C04 (Gaming Re-pay)

If an acquirer has not completed an implementation project to submit Gaming Payment Transactions and sends a Gaming Payment Transaction authorization request, the Mastercard Network declines the request with DE 39 (Response Code), value 58 (Transaction not permitted to acquirer or terminal).

Issuers may receive Gaming Payment Transactions if they are in Europe and Middle East/Africa region countries where online gaming and crediting of gaming winnings on cards is permitted by law. For a list of these Europe region countries, refer to Rule 8.12.1 in Europe Region Rules of the *Mastercard Rules*. For a list of these Middle East/Africa region countries, refer to Payment Transactions and Mastercard Send Payment Transactions, MEA Region, of the *Transaction Processing Rules*. If an issuer's country is not one of the listed countries that allows gaming, the Mastercard Network declines the Gaming Payment Transaction request with DE 39 (Response Code), value 57 (Transaction not permitted to issuer/cardholder).

### Alternate processing

Gaming Payment Transactions may be routed to an alternate issuer host. Gaming Payment Transactions are not routed to Stand-In Authorization or X-Code Processing.

When there is either no alternate issuer host or no response from an alternate issuer host, the Mastercard Network will decline the transaction with DE 39 (Response Code), value 91 (Authorization System or issuer system inoperative).

### Acquirer implementation

Acquirers must complete an implementation project to submit Payment Transactions for gaming winnings. For more information about registering for this service, contact your Mastercard regional representative or your Customer Implementation Services (CIS) Implementation Project Manager.

### For more information

For details about data requirements, refer to *Mastercard Rules*, and *Mastercard Gaming and Gambling Payments Program Standards*.

## Gaming Payment Transaction processing in the United States region

The [Single Message System](#) supports Gaming Payment Transactions in Financial Transaction Request/0200 and Reversal Request/0420 messages for the Mastercard and Maestro brands in the [United States \(U.S.\)](#) region to transfer lottery winnings to a card.

An acquirer in the [U.S.](#) region submits a Gaming Payment Transaction Financial Transaction Request/0200 and Reversal Request/0420 message with the following values:

- DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type), value 28 (Payment Transaction)
- DE 4 (Amount, Transaction), maximum USD 10,000
- DE 18 (Merchant Type), MCC 7800 (Government-owned Lottery [U.S. Region Only])

- DE 48 (Additional Data: Private Use), TCC value P (Payment Transaction)
- DE 48, subelement 77, value C04 (Gaming Re-pay)

**NOTE: The Gaming Payment Transaction must not be processed as electronic commerce (e-commerce).**

An issuer in the United States region may receive Gaming Payment Transactions identified as described above.

### Alternate processing

The Gaming Payment Transaction will not be routed to Stand-In Authorization or X-Code Processing. When a Gaming Payment Transaction identified using MCC 7800 is routed to:

- Stand-In Authorization, the Financial Transaction Request/0200 message will be declined with DE 39 (Response Code), value 05 (Do Not Honor); or
- The X-Code Processing, the Financial Transaction Request/0200 message will be declined with DE 39 (Response Code), value 01 (Refer to Card Issuer).

## Global Automated Referral Service

The Global Automated Referral Service (GARS) is an optional service that streamlines the process of responding to call referrals for both acquirers and issuers.

GARS is mandatory in the U.S. region and optional for customers outside the U.S. region.

GARS reduces the processing time for call referrals from an average of 20 minutes to an average of five minutes or less.

It includes the following features:

- A toll-free phone number connecting acquirers to issuers worldwide. Routing is based on the card account number entered by the acquirer (For the toll-free phone number that applies to your area, contact the Global Customer Service team).
- Issuer response time parameters to support the timely provision of authorization responses
- Stand-In Authorization for calls not answered within the required time frame or for issuers not registered for GARS, to guarantee a timely response to the acquirer
- Tracking and reporting of issuer and acquirer performance
- Performance monitoring and pricing that motivate call referral completion and eliminate unnecessary issuance of call referrals

### GARS process

When the merchant receives a refer to card issuer authorization response, the merchant calls the acquirer.

The acquirer calls GARS, which uses one of the following paths to obtain an authorization response:

- GARS connects the acquirer to the issuer
- GARS connects the acquirer to Stand-In Authorization

## Acquirer use of GARS

GARS helps acquirers to more quickly receive a response to a call referral from issuers.

### Acquirer procedures

Acquirers receiving a refer to card issuer authorization response should use the following procedure to receive an authorization decision from the issuer.

## Acquirer best practices

Mastercard recommends that acquirers promote efficient and accurate processing of call referrals by using the following practices when talking to issuers' agents:

- Be prepared to provide the following authorization request information to the issuer's agent:
  - Card account number
  - Expiration date
  - Acceptor business code (MCC)
  - Transaction amount in U.S. dollars
 

If the acquirer chooses to receive DE 5 (Amount, Settlement) in the Authorization Request Response/0110 message, the acquirer may use that amount, which is stated in U.S. dollars; or the acquirer may determine the USD amount in DE 4 (Amount, Transaction) or DE 6 (Amount, Cardholder Billing). If the USD amount is not provided, the acquirer must perform currency conversion to U.S. dollars.
  - Acquirer ICA number
- Initiate the conversation with slow, distinct pronunciation. Be aware that the issuer's agent might not be comfortable with the acquirer's primary language.
- Request clarification when uncertain of the communication.

If GARS routes the call referral to the Mastercard Stand-In Authorization, acquirers should allow additional time to complete the call and be prepared to provide additional authorization information, as required by Stand-In Authorization.

Acquirers should monitor call referral response rates to identify merchants that do not comply with the call referral process.

Acquirers receive reimbursement automatically when they use GARS in response to a refer to card issuer authorization response.

**NOTE: Reimbursement to acquirers using GARS is automatic. If acquirers use non-GARS methods of communication, they must request reimbursement through the Fee Collection Record.**

## Methods acquirers can use to improve GARS performance

The acquirer can improve GARS performance and ensure that it qualifies for reimbursement by doing the following:

- Test your phone system to ensure that it generates true touch-tones on outbound calls. The GARS connection to the issuer is dependent on touch-tones.
- Communicate the GARS procedures to your agents. Mastercard is available to assist you in your training efforts.
- Consider adding a conference call feature to your phone system so that you, your merchant, the cardholder, and the issuer can interact directly.
- Consider adding speed dialing to your phone system to save time when calling GARS.
- Communicate the GARS procedures and the importance of GARS to your merchants. Encourage them to call you (rather than request another form of payment) when a call referral message appears on their POI devices.

## Issuer use of GARS

GARS helps issuers because it provides them with a method to more quickly respond to acquirers requesting authorizations for call referral responses.

### Issuer procedures

When you issue a response of refer to card issuer and the acquirer contacts you via GARS, use the following procedure.

### Issuer best practices

Mastercard recommends that issuers promote efficient and accurate processing of call referrals by using the following practices when talking to acquirers' agents:

- Initiate the conversation with slow, distinct pronunciation. Be aware that the acquirer's agent might not be comfortable with the issuer's primary language.
- Request clarification when uncertain of the communication.

To improve their call referral processes, issuers should monitor:

- The number of call referrals they generate in response to Authorization Request/0100 messages. Issuers should use call referrals only for high-risk situations because call referrals result in an expensive and time-consuming process, which can be detrimental to cardholder relationships.
- The rate of call referrals going to Stand-In Authorization. Issuers should ensure that they have sufficient call center staff and a stable telecommunications infrastructure to be able to support the number of call referrals they generate. Mastercard strongly urges issuers to register for GARS. Acquirer GARS calls will be routed to the Stand-In Authorization for issuers not registered.
- The average duration of call referrals. Issuers should try to meet the goal of keeping call referrals to five minutes or less. Short call durations result in reduced transaction times, improve the call referral process for merchants and cardholders, and provide the best use of resources.

Issuers should establish Stand-In Authorization transaction limits that are specific to transactions approved through GARS call referrals. The Mastercard Stand-In Authorization facility ensures a timely authorization decision when the issuer is not available.

Mastercard suggests that GARS issuers establish two phone numbers for GARS call referral processing. Issuers can have all intracountry call referrals routed to one phone number and all intercountry call referrals routed to another phone number. Issuers can better anticipate potential language differences and offer enhanced services to cardholders traveling outside of their countries.

Charges to the issuer apply for issuing each call referral and for completed GARS calls initiated by the acquirer. Issuers also pay a noncompliance assessment for Stand-In Authorization if they fail to answer a GARS call within 30 seconds.

### **Methods issuers can use to improve GARS performance**

Issuers can use the following methods to improve GARS performance:

- Ensure that your phone system can generate true touch-tone signals. If you use an automated system such as a Voice Response Unit to answer incoming calls, be sure the system responds with a zero key followed by a pound key (0, #). This allows the acquirer's agent to hear the instruction of your automated system to expedite your call referral response.
- Ensure that your system is prepared to answer phone calls within 30 seconds. Calls not answered within these time frames will be routed to Stand-In Authorization.
- Determine whether to establish specific Stand-In transaction limits for GARS. Complete the *GARS Initiation and Change Form* (Form 334) to establish specific limits.
- Determine whether to establish one phone number for all incoming GARS calls or two phone numbers: one for GARS requests from acquirers located outside of the issuer country and one for domestic GARS requests. Indicate the phone numbers on the *GARS Initiation and Change Form* (Form 334).

Submit any changes to your customer representative at least 15 days before using a new phone number or new parameters:

- Determine your ability to handle the volume of completed call referrals using GARS. Because GARS call referrals are fast and easy, there may be an increase in the ratio of calls completed to referrals issued. You may want to consider adjusting staffing and equipment levels to ensure higher control and risk reduction and avoid excessive Stand-In Authorization fees.
- Communicate to your employees the importance of answering GARS calls quickly to avoid additional Stand-In Authorization fees. Mastercard is available to assist you in your training efforts.

## Monitoring call referral activity

The minimum response and talk-time standards apply to all call referrals, both domestic and international, whether processed through GARS or direct customer-to-customer communications.

### Issuer and acquirer performance reports

Issuers and acquirers can monitor call referrals completed through GARS using the following reports:

- Issuer Authorization Detail Report and Issuer Call Referral Detail Report: shows issuer charges for call referrals
- Acquirer Authorization Detail Report and Acquirer Call Referral Detail Report: shows acquirer reimbursement for completed call referrals
- Call Referral Summary Report: shows tiered pricing for excessive issuer call referral activity
- Guaranteed Issuer Availability Report

Refer to the **Pricing and Billing Resource Center** application on Mastercard Connect® for fees and billing information.

### Store and forward messages

Issuers also can monitor call referrals completed through GARS via store-and-forward (SAF) messages. Mastercard generates Authorization Advice/0120 messages for GARS transactions that Stand-In Authorization. Mastercard uses a promotion code of MCGARS to identify GARS Stand-In activity.

## Requesting GARS or changing GARS parameters

To begin to use GARS or to change GARS parameters, complete the *GARS Initiation and Change Form* (Form 334).

## Incremental Preauthorization

Incremental Preauthorization provides a means to associate incremental, or additional, preauthorizations to a single clearing presentment. It is a common practice for merchant categories to submit incremental preauthorizations and settle those through a single clearing presentment. These standards provide a method for issuers, with certainty, to associate

incremental preauthorizations to a single presentment providing them the means to more effectively manage cardholder open-to-buy balances.

## Incremental Preauthorization Transaction Processing

Each incremental preauthorization transaction associated with a single cardholder event must reference the original preauthorization. When incremental Authorization Request/0100 messages are sent for the same transaction, acquirers must include DE 63 (Network Data) and DE 15 (Date, Settlement) information from the original Authorization Request Response/0110 message in DE 48 (Additional Data: Private Use), subelement 63 (Trace ID) as follows:

- Positions 1–3 = value from DE 63, subfield 1 (Financial Network Code)
- Positions 4–9 = value from DE 63, subfield 2 (Banknet Reference Number)
- Positions 10–13 = value from DE 15 (Date, Settlement)
- Positions 14–15 = blank filled

The First Presentment/1240 message submitted by the acquirer must include information from the original Authorization Request Response/0110 message in Integrated Product Message DE 63 (Transaction Life Cycle ID), subfield 2 (Trace ID). Upon receipt of the clearing record, the issuer must release holds created by all authorizations properly related to the original preauthorization.

## Guiding Principles

This section provides insight into the intent of the Incremental Preauthorization process.

- The primary intent of an incremental preauthorization is to increase the amount of an original preauthorization. The authorized amount is equal to the cumulative amount of all authorizations (plus tolerance if applicable). The allowable tolerances are described in the *Chargeback Guide*.
- The original preauthorization is the reference. All attributes associated with the original are inherited by the incremental preauthorizations. Transactions that would have incremental preauthorizations will likely be submitted as preauthorizations.
- The usage of incremental preauthorizations is optional. Acquirers can, as an alternative, submit clearing records (presentments) for each individual authorization.
- Incremental preauthorizations are recognized for all MCCs.
- Transactions that may have incremental preauthorizations are recommended to be submitted as preauthorizations. Incremental preauthorizations must be coded as preauthorizations.

## Specific Scenarios

### Typical Usage

The following table depicts the process of a typical incremental preauthorization. The merchant successfully completes an original preauthorization for 100, followed by an incremental preauthorization of 50. This total amount is then processed as a first presentment.

| Message Type                                                                                                                                                   | DE 63 (Banknet Reference Number) | DE 15 (Settlement Date) | Trace ID<br>(Authorization: DE 48, subelement 63)<br>(Clearing: DE 63, subfield 2) |     |

### Incremental Preauthorization Reversals

Acquirers are encouraged to recognize the original preauthorization and all related incremental preauthorizations in aggregate in the event they need to reverse part or the entire transaction amount. The recommended method of submitting reversals is illustrated in the following table.

### Incremental Preauthorization Reversals

In the following scenario, the merchant successfully completes an original preauthorization for 100, followed by an incremental preauthorization of 50, but then wants to cancel the transaction.

|                                                                                                                                                                |                                  |                         | Trace ID                              |                            |                            |

| In the Reversal transaction, DE 90 (Original Data Elements) will contain DE 11 (System Trace Audit Number [STAN]), DE 7 (Transmission Date and Time), DE 32 (Acquiring Institution ID Code), and DE 33 (Forwarding Institution ID Code) from the Authorization Request Response/0110 message that corresponds to the original preauthorization request. The Transaction Amount (DE 4) is recommended to contain 150, while the Replacement Amount (DE 95) is recommended to contain 0, indicating a full reversal. |                                  |                         |                                       |                               |                            |

Incremental Preauthorization Reversals

In the next scenario, the merchant successfully completes an original preauthorization for 100, followed by an incremental preauthorization of 50. The merchant then reduces the preauthorization by 10 using a partial reversal.

Acquirers are expected to send reversals once they become aware that an adjustment is necessary. An exception to this is if the acquirer will be processing the first presentment within 24 hours of knowing a reversal is necessary.

### Guaranteed Reservations

Guaranteed reservations are common in the hotel, motel, vehicle rental, and cruise line industries. Guaranteed reservations are managed uniquely for each of these segments. The recommended practice for each of these is as follows:

- **Vehicle Rental:** An account status inquiry is issued at the time of the reservation to confirm the account is in good standing. No advance authorization is issued nor is any amount held or liability assumed for no-shows.
- **Cruise Lines:** Typically, cruise lines charge the entire amount of the cruise at the time of the reservation. Any charges incurred during the cruise are submitted as a new authorization with incremental preauthorizations as needed.
- **Hotel Reservation:** A hotel, motel, resort, or other lodging merchant participating in the Guaranteed Reservations service has the option of utilizing the rules in regard to no-show policies. The cardholder is obligated to cancel a confirmed reservation before 18:00 at the hotel, motel, or resort (merchant's local time). If the cardholder fails to cancel the confirmed reservation, the merchant can charge the cardholder a no-show charge equal to one night's lodging. In this case, it is appropriate for the merchant to authorize and clear the amount that would be charged for one night's lodging if they so choose. Any amount above that would be a violation of Mastercard rules and be at risk for a chargeback.

### Authorization Chargeback Protection Period Extension Request

In support of the time limit for chargeback protection related to Dual Message System authorizations, Mastercard provides an Authorization Chargeback Protection Period Extension Request for use by Dual Message System acquirers, which is a non-financial (zero amount) incremental preauthorization Authorization Request/0100 message.

Authorizations originally coded as a preauthorization may require a longer chargeback protection period. To increase the effective duration of the chargeback protection period, the merchant may submit incremental preauthorization requests for either an additional amount or zero amount for the same transaction on later dates. Incremental preauthorizations for an additional amount may be used to increase the authorized amount held against the card.

account and to extend the chargeback protection period associated with the original preauthorization. Incremental preauthorizations for a zero amount may be used to extend only the chargeback protection period associated with the original preauthorization.

If the issuer declines the chargeback extension request and the original preauthorization subsequently expires, the acquirer must request a new authorization.

**NOTE: Each approved preauthorization has an extended payment guarantee period of 30 calendar days from the authorization approval date. The issuer payment guarantee period is limited to a maximum period counting from the authorization or preauthorization date. This maximum period is 30 calendar days for Mastercard authorizations properly coded as preauthorizations and is seven calendar days for all other Mastercard authorizations and for all Maestro and Cirrus authorizations and preauthorizations.**

Issuers must be prepared to receive and process a chargeback protection period extension Authorization Request/0100 message.

To increase only the effective duration of the chargeback protection period of an original preauthorization, the merchant may submit an incremental preauthorization request for a zero amount. The acquirer must submit the Authorization Request/0100 as follows.

- DE 3 (Processing Code), subfield 1 (Transaction Type) = 00 (Purchase)
- DE 4 (Transaction Amount) = Zero (0) (Additional Amount)
- DE 61 (POS Data), subelement 7 (POS Transaction Status) = 4 (Preauthorized request)
- DE 61, subfield 4 (POS Cardholder Presence) is not equal to 4 (Recurring transactions)
- DE 48 (Additional Data), subfield 63 (Trace ID) must be present and contain the Trace ID data (DE 15 and DE 63) from the original preauthorization request in positions 1–15

**NOTE: Authorization Chargeback Protection Period Extension Requests are applicable to all types of purchase preauthorization transactions, except Mastercard contactless transit aggregated or transit debt recovery transactions nor to merchant-financed or acquirer-financed installment payment transactions properly coded as preauthorizations. If submitted, the message will be declined.**

Authorization Advice/0120: acquirer-generated and Reversal Request/0400 messages are not applicable for Authorization Chargeback Protection Period Extension Requests. If submitted, the message will be declined.

The issuer, at its discretion, will send the acquirer an Authorization Request Response/0110 message where DE 39 may contain one of the following values.

- 00 (Approved)
- 05 (Do not honor)
- 85 (Not declined)
- Other valid business declines  
Examples of other acceptable business declines include values 41 (Lost Card), 43 (Stolen Card), and 54 (Expired Card)

If the issuer is unable to reply, the acquirer will receive a response code of 91 (Authorization System or issuer system inoperative).

When the chargeback protection period of a preauthorization is extended because of an incremental preauthorization, it is extended for 30 calendar days from the date of the latest approved incremental preauthorization. Such requests, if approved by the issuer and when properly coded as an incremental preauthorization, will give rise to an extended chargeback protection period and optionally additional approved amounts that may be cleared under the conditions that would apply to the security parameters when applied to the original authorization. In other words:

- To the extent that interchange levels are determined by the security parameters of the authorization, then the parameters of the original authorization will be considered.
- To the extent that chargebacks consider the security parameters of the authorization, then the parameters of the original authorization will be taken into account.

When the chargeback protection period expires, issuers must release any block they may have placed on the cardholder's account in relation to the authorization.

Several other options may be used when the authorization lifecycle expires before the transaction is finalized:

- Submit a new preauthorization within 30 calendar days of the planned date of the stay. This creates the risk of a declined transaction. If the original preauthorization has not expired, Mastercard recommends that a reversal is sent of the first transaction to instruct the issuer to release the funds in advance of receiving the second transaction.
- Periodically use the Account Status Inquiry Service to confirm that the card is in good standing prior to the stay. An authorization for the anticipated amount may be submitted in advance of the stay (but no earlier than 30 calendar days before).
- Use the Advance Resort Deposit process as described in the [Chargeback Guide](#) to authorize and clear the transaction at the time of the reservation.

## Long Running Transactions

Occasionally, transactions have an extended life. Examples of these scenarios are vehicle rentals for multiple weeks, extended resort stays, or long cruises. Mastercard expects merchants to authorize the estimated amount at the initiation of the service. Incremental preauthorizations would be requested if the permitted tolerance (if applicable) is exceeded. For more information about transactions with permissible tolerances, refer to [Transaction Processing Rules](#), Merchant Acceptance section.

With the specific intent of extending the authorization lifecycle, an incremental preauthorization is recommended. As noted earlier, the authorization lifecycle is based on the date of the latest incremental preauthorization.

## Extending Security Features

Mastercard® Identity Check™ protocol authentication relates only to the transaction (and any related incremental preauthorizations if applicable) for which they were originally provided. An acquirer may retain these features by submitting an incremental preauthorization transaction with an amount greater than zero.

## Maestro preauthorized transaction processing

The Dual Message Authorization System allows Europe region acquirers to request preauthorization on transactions for which the final transaction amount is not yet determined. For automated fuel dispenser (AFD) transactions, once the issuer approves the preauthorization request and after the transaction completes at the point-of-interaction and the final amount is determined, the acquirer sends an authorization advice message to the issuer.

**NOTE: Applies only to the Europe region.**

For card-not-present (CNP) and post-authorized aggregated Maestro contactless transit transactions, if the final amount is not equal to the preauthorized amount, a partial reversal is required and clearing must be submitted for the new amount identified in the partial reversal.

The Clearing message must contain the final amount, which is equal to the amount contained the authorization advice message or in the new amount of a partial reversal message.

Preauthorization on Maestro transactions is permitted only at unattended point-of-sale (POS) terminals at petrol stations (MCC 5542, Fuel Dispenser, Automated). Preauthorization on Maestro transactions is also permitted for CNP transactions and for post-authorized aggregated Maestro transactions. Preauthorizations must not be used in any other acceptance environment.

Acquirers must ensure that an authorization request for an amount greater than zero is properly identified as a preauthorization when a CNP transaction might not be completed for reasons other than technical failure or lack of full issuer approval. For example, the transaction might not be completed when the cardholder will be offered the choice at a later time to complete the transaction with another payment means, or when the goods ordered by the cardholder might be later found to be out of stock. The risk of technical failures such as telecommunications failure or POI terminal failure should not be taken into account to determine if an authorization must be coded as a preauthorization.

For a CNP transaction, the transaction amount must equal the preauthorized amount. Preauthorizations for an estimated amount are only permitted for unattended petrol terminal (MCC 5542) transactions.

### How it works

Maestro preauthorized transaction processing works as follows:

- The acquirer submits an Authorization Request/0100 (preauthorization format) message containing the maximum amount determined by the acquirer or the merchant where DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status) contains value 4 (Preauthorized request). Each approved preauthorization has a payment guarantee period of seven calendar days from the authorization approval date.
- The issuer generates an Authorization Request Response/0110 message for the full amount of the preauthorization or for a lesser amount, as determined by the issuer, if the merchant's

terminal supports partial approval. The transaction is guaranteed up to the amount authorized by the issuer.

- The acquirer must send Authorization Advice/0120: Acquirer-generated messages containing DE 60 (Advice Reason Code), subfield 1 (Advice Reason Code), value 191 (Acquirer Processing System [APS] Completed Authorization Transaction) at the completion of Maestro CAT Level 1 petrol transactions.
- The issuer acknowledges the transaction using an Authorization Advice Response/0130 message.
- The acquirer must send Reversal Request/0400 messages containing DE 4 (Amount, Transaction) from the Authorization Request/0100 message or DE 4 from the Authorization Request Response/0110 message if a partial approval response and DE 95 (Replacement Amounts) that contains the actual amount subfield necessary to perform a partial reversal if the final amount is less than the preauthorized amount for card-not-present (CNP) and post-authorized aggregated Maestro contactless transit transactions.
- If any transaction is terminated after the preauthorization, the acquirer must send the issuer a Reversal Request/0400 message containing DE 4 (Amount, Transaction) from the Authorization Request/0100 message or DE 4 from the Authorization Request Response/0110 message if a partial approval response.
- The issuer acknowledges full and partial reversal requests using a Reversal Request Response/0410 message.

## Authorization Request/0100: Maestro Preauthorization

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

### Data elements

| Data Element                                                             | Org | Sys | Dst | Values/Comments                                                   |

### Matching Request and Advice Messages

To match the original Authorization Request/0100 with the Authorization Advice/0120, the following DEs should be used:

- DE 2 (Primary Account Number [PAN])
- DE 7 (Transmission Date and Time)
- DE 11 (System Trace Audit Number [STAN])
- DE 32 (Acquiring Institution ID Code)
- DE 33 (Forwarding Institution ID Code)

## Maestro Recurring Payments Program

The Maestro® Recurring Payments Program enables the Maestro brand to accept recurring payments for electronic commerce (e-commerce) transactions. This program enables Maestro-branded products to provide enhanced value to customers.

### Acquirer requirements

- Acquirers in the Europe region that process Maestro e-commerce transactions may participate in the Maestro Recurring Payments Program.
- Participating acquirers must submit the following values in Authorization Request/0100, Authorization Advice/0120: acquirer-generated, and Reversal Request/0400: acquirer-

generated messages to identify Maestro e-commerce recurring payment transactions received from enrolled merchants:

- DE 22 (Point of Service Data Code), subfield 1 (Terminal Data: Card Data Input Capability), value 81 (PAN/Token entry via electronic commerce with optional Identity Check-AAV in DE 48, subelement 43 [UCAF] or DSRP cryptogram in DE 104, subelement 001 [Digital Payment Cryptogram])
- DE 48 (Additional Data: Private Use), subelement 32 (Mastercard Assigned ID)
- DE 48, subelement 42 (Electronic Commerce Indicators), subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection Indicator), position 3 (UCAF Collection Indicator), value 3 (UCAF data collection is supported by the merchant, and UCAF (Mastercard Assigned Static AAV) data must be present)
- DE 48, subelement 43 (Static AAV)
- DE 61 (Point-of-Service [POS] Data), subfield 4 (POS Cardholder Presence), value 4 (Recurring transactions)
- DE 61 (Point-of-Service [POS] Data), subfield 10 (Cardholder-Activated Terminal Level), value 6 (Authorized Level 6 CAT: Electronic commerce)

### Issuer requirements

- Maestro issuers must support receipt and processing of recurring payment e-commerce transactions, as identified by the presence of the following data elements in Authorization Request/0100, Authorization Advice/0120: acquirer-generated, Authorization Advice/0120: system-generated, Reversal Request/0400: acquirer-generated, and Reversal Request/0400: system-generated messages:
  - DE 22, subfield 1, value 81
  - DE 48, subelement 32
  - DE 48, subelement 42, subfield 1, position 3, value 3
  - DE 48, subelement 43
  - DE 61, subfield 4, value 4
  - DE 61, subfield 10, value 6
- Maestro issuers also must provide the following data elements in Authorization Request Response/0110, Authorization Advice Response/0130: system-generated, and Reversal Request Response/0410 messages:
  - DE 48, subelement 42
  - DE 48, subelement 43

## Authorization Request/0100: Maestro Recurring Payment

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

## Dual Message Authorization System Edits

The following edits are performed on Authorization Request/0100 messages for Maestro Recurring Payment Program transactions.

Mastercard uses the following edit to verify participation in the Maestro Recurring Payments Program. Dual Message Authorization System uses this edit to validate the value in DE 48,

subelement 32 for Authorization Request/0100 and Authorization Advice/0120: acquirer-generated messages.

**NOTE: The same Static AAV value can be used for the Maestro Recurring Payments Program, the Mastercard Utility Payment Program, and the Maestro Low Risk Merchant Program.**

## Mastercard ATM Network

The Mastercard® ATM Network provides cash access around the world to credit and ATM debit cardholders by accepting cards bearing the Mastercard, Maestro, and Cirrus logos.

All Mastercard issuers must participate in the Mastercard ATM Network to provide cash access to their cardholders. For more information about ATM participation, refer to the [Security Rules and Procedures](#).

Where permitted, issuers may provide to their cardholders the option of conducting various transactions, such as balance inquiries and merchandise purchases, using the Mastercard ATM Network.

For information about ATM transaction processing capabilities for Europe region acquirers that process through the Mastercard Network, refer to [ATM processing for Europe region acquirers](#).

## Data security

Evaluation of a number of possible security schemes, such as Internet Protocol Security (IPSec), Secure Sockets Layer (SSL) or Transport Layer Security (TLS) shows that these introduce too great a timing overhead on transactions for the transit environment.

Accordingly, an alternative security scheme should be used to overcome these time issues. The scheme should take into consideration whether the terminal can support software or hardware encryption.

If software encryption is supported, the use of the Advanced Encryption Standard (AES) and symmetric session keys is recommended to encrypt and decrypt data.

If hardware encryption is supported, AES may be slower and 3-key Triple DES (3DES) and symmetric session keys may be an alternative viable option to encrypt and decrypt data. 3-key 3DES is preferable over 2-key 3DES.

Both methods have the advantage of introducing almost no time overhead.

Each session key is associated with a session key ID to uniquely identify the key which has been used in securing the data.

The session keys and corresponding key IDs shall be loaded securely into the terminal in a secure loading area and should be changed periodically and securely through a Maintenance Management System. The terminal should therefore allow for the remote distribution of key files.

## Global ATM Locator

The Mastercard Global ATM Locator is a set of websites and toll-free automated voice recognition systems that cardholders use to search for ATMs.

Cardholders access the Mastercard Global ATM Locator using:

- The Internet
- Mobile phones
- Personal digital assistants
- Voice response telephone numbers
- Onboard vehicle navigation systems
- Bank websites

Maps and directions to ATMs are available in many countries.

## Location Administration Tool

The Location Administration Tool enables customers and processors to efficiently manage and market their ATM location information and service-related terminal attributes to help drive transaction volume and increase revenue at the point-of-interaction. Services include ATMs, Mastercard® contactless terminals, Pre-Paid Travel, and Mastercard® *rePower*™.

## Supported transactions

The Mastercard ATM Network supports a variety of transactions.

- Cash withdrawal from debit accounts
- Cash disbursement from credit accounts
- Account balance inquiry from debit accounts
- Available balance inquiry from credit accounts
- Tokenized transactions at contactless ATMs initiated by Near Field Communications (NFC)-enabled devices and wallets
- Chip PIN management transactions (PIN Change and PIN Unblock for Chip cards)
- Magnetic Stripe PIN management (PIN Change only) transactions
- Merchandise purchase from debit accounts for items, such as postage stamps and other items approved by Mastercard.

Acquirers must successfully complete testing for ATM merchandise transaction before submitting merchandise purchase transactions to Mastercard.

- Mastercard® transactions.

- ATM Bill Payment is allowed for domestic transactions only when the service is offered domestically. When ATM Bill Payment is not allowed, acquirers will receive a response of Transaction not permitted to acquirer/terminal.
- Credit Card Cash Advance in Installments transactions at the ATM are allowed when the service is offered domestically.

## Restrict cash access and ATM balance inquiry transactions

Issuers can restrict cash access at the ATM to align the processing systems with Mastercard product rules. When the issuer has restricted cash access, acquirers receive DE 39 (Response Code), value 57 (Transaction not permitted to issuer/cardholder) in the Authorization Request Response/0110 message.

In addition to cash access restrictions, Mastercard allows issuers to restrict ATM balance inquiry transactions. When the issuer has restricted ATM balance inquiries, acquirers receive DE 39, value 57 in the Authorization Request Response/0110 message.

## Interfaces to the Mastercard ATM Network

Mastercard issuers can choose either of the following options to receive authorization requests for ATM transactions.

- A direct interface to the Mastercard ATM Network
- An interface via the Mastercard Network to the Mastercard ATM Network

### Direct interface

Issuers that choose to interface directly with the Mastercard ATM Network receive ATM transactions via a Financial Transaction Request/0200 message.

For a description of the 0200 messages, refer to [Mastercard Rules](#), and [Transaction Processing Rules](#).

### Interface via the Mastercard Network

If the issuer chooses to receive ATM transactions via the Mastercard Network, the issuer receives ATM transactions in an Authorization Request/0100 message.

Choosing to receive ATM transactions via the Mastercard Network in Authorization Request/0100 messages gives issuers the following additional options:

- Mastercard validation of the PIN
- Application of Mastercard Stand-In Authorization when the issuer is unavailable (only if Mastercard also validates the PIN)

### PIN validation

Issuers can choose to have Mastercard validate the PINs or to validate the PINs themselves.

### Applicable edits

| WHEN...                      | THEN...                                                                                                  |
|------------------------------|----------------------------------------------------------------------------------------------------------|
| Mastercard validates the PIN | Mastercard performs this service before forwarding the Authorization Request/0100 message to the issuer. |
| the issuer validates the PIN | Mastercard forwards the PIN to the issuer with the Authorization Request/0100 message.                   |

Issuers that validate their own PINs must send Mastercard the encryption key to translate encrypted PINs in the online request message.

### Stand-In Authorization

Issuers can choose whether to have Stand-In Authorization process online request ATM transactions when they are not available. Issuers may choose whether to allow transactions with unverified PINs to be processed in the Stand-In Authorization or to have Mastercard validate a PIN if a PIN is present in an online request message when the issuer is unavailable.

### Applicable edits

|---------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|
| Mastercard allow transactions with an unverified PIN in Stand-In Authorization                                      | processes the online request message.                         |
| Mastercard perform Stand-In Authorization and PIN validation                                                        | processes the online request message and validates the PIN.   |
| Mastercard not allow transactions with unverified PINs and not perform PIN validation during Stand-In Authorization | returns a response of decline when the issuer is unavailable. |

## ATM processing for Europe region acquirers

Mastercard provides ATM transaction processing capabilities for Europe region acquirers that process through the Mastercard Network.

**NOTE: Applies only to the Europe region.**

This processing only allows Europe region acquirers to submit ATM transactions via their dual message connection to the Mastercard Network.

ATM transactions are identified by:

- DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code) containing one of the following values:
  - 00 (Purchase)
  - 01 (Withdrawal)
  - 30 (Balance Inquiry)
  - 91 (PIN Unblock)
  - 92 (PIN Change)
- DE 48 (Additional Data: Private Use), position 1 (Transaction Category Code [TCC]) containing value Z (ATM Cash Disbursement)

Only specified acquirers have this functionality. To ensure the transactions are submitted by eligible acquirers, the Dual Message Authorization System verifies the acquirer parameter when an Authorization Request/0100 transaction is determined to originate from an ATM. ATM transactions provided by eligible acquirers are forwarded to the issuer. The Dual Message Authorization System will respond to all other requests with an Authorization Request Response/0110 message containing DE 39 (Response Code), value 58 (Transaction not permitted to acquirer/terminal).

### **ATM access fee**

Acquirers in approved Europe region countries may optionally apply an ATM access fee to domestic cash withdrawal transactions. Acquirers may charge ATM access fees on Mastercard, Maestro, or Cirrus cross-border transactions, as long as the access fee charged on those transactions is not higher than the access fee charged in connection with a transaction of any network accepted at that ATM. If another network accepted at the ATM prohibits the acquirer from charging an ATM access fee on cross-border ATM transactions, the acquirer must not charge an ATM access fee on Mastercard, Maestro or Cirrus cross-border transactions at the ATM. If all other networks accepted at the ATM permit the acquirer to charge access fees on cross-border ATM transactions, the acquirer will be permitted to charge an ATM access fee on cross-border Mastercard, Maestro, and Cirrus ATM transactions.

Acquirers include the transaction amount and access fee in DE 4 (Amount, Transaction) and the access fee amount (if applicable) in DE 28 (Amount, Transaction Fee) of Authorization Request/0100 and Reversal Request/0400 messages.

## **Mastercard One Credential**

Mastercard One Credential is a single, digitally connected credential that offers cardholders a choice of multiple payment methods. It allows customers to choose the payment option (debit, credit, or prepaid, including installments) that best suits their needs through a seamless digital experience in their banking app or website. Mastercard One Credential connects multiple existing funding accounts and lets consumers set their payment preferences.

Overall benefits of the Mastercard One Credential are:

- Consumer benefits: Mastercard One Credential addresses the consumer's need for flexibility and control, enabling consumers to personalize their spending preferences and access various payment methods. This results in greater choice and convenience.
- Issuer benefits: Issuers can provide a differentiated offering, enhancing customer loyalty, stickiness and engagement, solidifying their status as the consumer's primary financial provider. Mastercard One Credential allows issuers to offer new ways to access credit (subject to consumer being credit qualified) to existing customers and reach new customers.
- Acquirer benefits: Acquirers may benefit from increased transaction volumes and incremental revenue with minimal development required as Mastercard One Credential adoption grows.
- Merchant benefits: Availability of multiple funding methods may allow merchants to experience higher average transaction amounts and volumes, better conversion rates, and improved consumer retention through personalized mechanisms.

For more information on Mastercard One Credential, refer to the *Mastercard One Credential Technical Implementation Guide*.

## Member-defined data

Mastercard allows customers to exchange as many as 299 bytes of member-defined data to and from another customer in authorization messages.

Customers may use member-defined data to transmit information such as:

- Loyalty program information
- Promotional information
- Details about a purchase or money transfer
- Any other business-related data

### Structure of member-defined data

Acquirers may provide as many as 299 bytes of member-defined data in DE 124 of the Authorization Request/0100 message.

Issuers may provide as many as 299 bytes of member-defined data in DE 124 of the Authorization Request Response/0110 message. Issuers will receive DE 124 in Authorization Advice/0120 messages if DE 124 was present in the Authorization Request/0100 sent by the acquirer and the transaction was processed by Stand-In Authorization or X-Code Processing.

The Dual Message Authorization System will not edit the content of DE 124 as long as it is alphanumeric/special character data and is only as many as 299 bytes in length. The Dual Message Authorization System will limit the length of the member-defined data in DE 124 to 299 bytes in Authorization Request/0100 messages and 299 bytes in Authorization Request Response/0110 messages.

For additional details on providing member-defined data in DE 124, refer to [Data element definitions and details](#).

## Merchant Advice codes

Mastercard supports the use of the Merchant Advice Code field for issuers and Mastercard to communicate with merchants.

Issuers can use Merchant Advice Codes to provide specific direction to acquirers:

- Identify product type to inform credential on file management
- The actions merchants can take to continue to serve their customers

## Mastercard Authorization Optimizer

Customers should be aware that Mastercard also leverages the Merchant Advice Code field. Mastercard Authorization Optimizer is a global network-based service that provides near real-time intelligence to acquirers and merchants on digital commerce payments, also known as card-not-present (CNP) transactions.

This authorization insight is sent through Authorization Request Response/0110 messages in:

- DE 39 (Response Code)
- DE 48 (Additional Data: Private Use), subelement 84 (Merchant Advice Code)

DE 39 and DE 48, subelement 84 must be used in combination to take full benefit of the service. For more information on Mastercard Authorization Optimizer, refer to the *Mastercard Authorization Optimizer Product Guide*.

## Partial approvals

The partial approval enables an issuer to approve a portion of the transaction amount in the authorization request when the transaction amount exceeds the amount of funds available on the debit card or prepaid card and the merchant terminal supports partial approvals.

An issuer can choose to provide a partial approval response amount that is less than or equal to the requested amount. An issuer can provide a partial approval response equal to the amount requested when the cardholder's account does not have a sufficient balance to cover any allowed amount over the requested amount for tips or service charges. The following scenario demonstrates the successful completion of a partial approval equal to the requested amount.

A cardholder pays USD 50 at a restaurant with a debit card that has an available balance of USD 50. The gratuity allowance for the restaurant transaction is 20 percent. The issuer may use a partial approval response in the amount of USD 50 to indicate there are no additional funds and to obtain chargeback protection for any clearing amount submitted above USD 50 that was partially approved. The merchant must request another form of payment for any amount the cardholder may want to provide.

**NOTE: For automated fuel dispenser (AFD) transactions (MCC 5542), an issuer may respond with a partial approval amount that is less than, equal to, or greater than the requested amount.**

When the acquirer transmits an indicator in the authorization request that the merchant terminal supports partial approvals, the issuer has the option to respond with the partial approval amount and partial approval response code. The cardholder can then choose to use a supplemental payment method (split tender) to pay the balance and complete the purchase when the final transaction amount exceeds the partial approval amount.

All card issuers (including prepaid cards) in the U.S. and Canada regions must support partial approvals and updates to the cardholder's open-to-buy balance upon receipt of a reversal (full or partial).

All acquirers in the U.S. and Canada regions that support merchants within select acceptor business codes (MCCs) must support partial approvals for all account ranges, including all prepaid Debit Mastercard account ranges. This requirement applies only to card-present transactions occurring at attended terminals and at transactions identified with MCC 5542 (Fuel Dispenser, Automated).

For more information, refer to the [Transaction Processing Rules](#).

**NOTE: In the Europe region, a customer must support partial approvals at merchants identified with MCC 5542 (Fuel Dispenser, Automated) for all Mastercard account ranges if the customer supports partial approvals for Maestro or any other debit brand.**

A customer must support partial approvals on Mastercard and Maestro if it supports them on other brands, for the same product types and merchant types as on the other brands. To the extent that support for partial approvals is not required on other brands, then it is not required on Mastercard or Maestro, with the exception of support at merchants identified with MCC 5542 as set out in the preceding paragraph.

## How it works

When a merchant terminal indicates support of partial approval transactions, the acquirer sends an Authorization Request/0100 message containing DE 48 (Additional Data: Private Use), subelement 61 (POS Data, Extended Condition Codes), subfield 1 (Partial Approval Terminal Support Indicator), value 1 (Merchant terminal supports receipt of partial approvals).

When a merchant terminal indicates support of partial approval transactions and the cardholder's open-to-buy balance does not cover the full transaction amount, the issuer may respond to the authorization request with an Authorization Request Response/0110 message containing data elements necessary for a partial approval response, with DE 6 (Amount, Cardholder Billing) representing the cardholder's available purchase amount:

- DE 6 (Amount, Cardholder Billing) with the partial approval amount specified in the issuer's cardholder billing currency
- DE 38 (Authorization ID Response)
- DE 39 (Response Code), value 10 (Partial Approval)

When the issuer responds with DE 39, value 10 and the transaction is an AFD transaction, the amount in DE 6 may be less than, greater than, or equal to the requested amount in DE 6 of the Authorization Request/0100 message.

- DE 51 (Currency Code, Cardholder Billing)

Upon receipt of a partial approval, acquirers often send a balance due message to the integrated terminal. This message indicates the difference between the original purchase amount and the partial amount approved by the issuer. By displaying the remaining balance due amount, the cashier can quickly and accurately prompt the consumer to complete the split-tender purchase.

Acquirers should also advise the merchant of a partial approval that is equal to the request amount, so that the merchant does not add any gratuity.

### Alternate processing

The Stand-In Authorization and X-Code Processing do not provide partial approval responses to authorization requests because these systems do not maintain card balances.

## Authorization Request/0100: Partial Approval

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

**NOTE: Issuers responding with DE 39, value 10 will not be required to echo DE 4 (Amount, Transaction) in the Authorization Request Response/0110 message. Likewise, if DE 5 (Amount, Settlement) was present in the Authorization Request/0100 message to the issuer, the issuer will not be required to echo DE 5 in the Authorization Request Response/0110 message when responding with DE 39, value 10. The issuer will provide the partial approval amount in DE 6 (Amount, Cardholder Billing).**

The Dual Message Authorization System additionally provides the partial approval amount to the acquirer in the following data elements of the Authorization Request Response/0110 message:

- DE 4 in acquirer's transaction currency
- DE 5 in U.S. dollars if the acquirer receives settlement amount-related data elements
- DE 6 in the issuer's cardholder billing currency

The Dual Message Authorization System will provide two additional occurrences of the original amount in DE 54 of the Authorization Request Response/0110 message to the acquirer; one in the acquirer's currency and one in the issuer cardholder billing currency.

## Reversal Request/0400: Partial Approval

In some cases, the cardholder or merchant may elect not to complete the transaction after receiving the partial approval response from the issuer. Mastercard supports full acquirer-generated reversal messages to allow the merchant to cancel the partial approval.

In addition to all other applicable data elements for the Reversal Request/0400 message, acquirers should submit Reversal Request/0400 messages with the following data elements for a partial approval:

- The partial approval amount in DE 4 that was present in the Authorization Request Response/0110 message to the acquirer, not the original amount present in DE 4 of the Authorization Request/0100 message from the acquirer
- DE 39, value 10

When processing a Reversal Request/0400 message for a partial approval (DE 39, value 10), the issuer should increase the cardholder open-to-buy using the partial approval amount present in the amount data element of the Reversal Request/0400 message that corresponds to the issuer cardholder billing currency.

The Reversal Request/0400 message will not contain DE 48, subelement 61 or DE 54, subelement 2, value 57.

## Reversal Advice/0420: Partial Approval

Following are data elements applicable to this message in addition to the required data elements.

If the Dual Message Authorization System generates a Reversal Advice/0420 message after the issuer has responded to the Authorization Request Response/0110 message with DE 39, value 10, the Dual Message Authorization System will provide the following data elements:

- Partial approval amount in DE 4 in the acquirer transaction currency
- Partial approval amount in DE 5 if the issuer has opted to receive amounts in the settlement currency (U.S. dollars)
- Partial approval amount in DE 6 in the issuer cardholder billing currency
- DE 39, value 10
- Original amount in DE 54 in the issuer cardholder billing currency (and acquirer transaction currency if different from issuer cardholder billing currency)

When processing an Reversal Advice/0420 message for a partial approval (DE 39, value 10), the issuer should increase the cardholder open-to-buy using the partial approval amount present in the amount data element of the Reversal Advice/0420 message that corresponds to the issuer's cardholder billing currency.

## Authorization Advice/0120: Acquirer-Generated

The following data elements apply to this message in addition to the required data elements.

When an acquirer creates an Authorization Advice/0120: acquirer-generated message to advise the issuer of an approved authorization performed by the acquirer, it may include DE 48, subelement 61 in the Authorization Advice/0120: acquirer-generated message if it was present in the original Authorization Request/0100 message.

DE 39, value 10 is not a valid value for Authorization Advice/0120: acquirer-generated messages. If an Authorization Advice/0120: acquirer-generated message contains DE 39, value 10 and the advice is not for an Automated Fuel Dispenser Completion (DE 18 = 5542), the Dual Message Authorization System will generate an Authorization Advice Response/0130 message containing DE 39, value 30 and DE 44 (Additional Data), value 039.

If an Authorization Advice/0120: acquirer-generated message contains DE 39, value 10 and the advice is for an Automated Fuel Dispenser Completion, the Dual Message Authorization System will change the DE 39 value to 00 (Approved or completed successfully) before forwarding the advice to the issuer.

## Alternate Processing

The Stand-In Authorization and the X-Code Processing will not provide a partial approval response to an authorization request because these systems do not maintain card balances.

However, if an Authorization Request/0100 message containing DE 48, subelement 61 is processed by the Stand-In Authorization or the X-Code Processing, the corresponding Authorization Advice/0120: system-generated message will contain DE 48, subelement 61.

## Payment Transactions

A Payment Transaction facilitates the movement of funds between two parties: a payer (sender) and a payee (recipient). This transaction can be used to support several business opportunities, such as person-to-person payments, merchant rebates and rewards, loading value to a debit or prepaid account, or issuer rebates and rewards.

The Payment Transaction is identified by DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), value 28 (Payment Transaction), DE 48 (Additional Data: Private Use), Transaction Category Code (TCC), value P (Payment Transaction), and the presence of DE 48, subelement 77 (Transaction Type Identifier).

Payment Transactions are identified in the following messages:

- Authorization Request/0100
- Authorization Advice/0120: system-generated
- Reversal Request/0400
- Reversal Advice/0420

Refer to [Subelement 77 \(Transaction Type Identifier\)](#) for more information that acquirers can use to identify specific types of Payment Transactions.

## Payment Transaction mandate

Mastercard has mandated that all acquirers and issuers support Payment Transactions.

For more information, refer to the Payment Transactions according to the specifications documented in the [Transaction Processing Rules](#), Section 6.1.

For information about Payment Account Status Inquiry (Payment ASI) transactions, refer to [Payment Account Status Inquiry](#).

## Payment Transaction blocking

Issuers that have legal restrictions that would prevent their participation in Payment Transactions can request to block Payment Transactions by completing and submitting the *Payment Transaction Blocking Form* (Form 530).

Mastercard must approve all issuer requests to block Payment Transaction authorizations.

For account ranges that issuers have arranged to have blocked, the Dual Message Authorization System rejects Payment Transactions containing any account number within the account range listed in the Payment Transaction Blocked BIN file. The Dual Message Authorization System returns a response code of Transaction not permitted to issuer/cardholder (DE 39 = 57) to the acquirer.

Issuers can block Payment Transaction authorizations at the account number range level (as many as 11 digits).

### Optional acquirer use of the Payment Transaction Blocked BIN File

Acquirers also have the option to receive the Payment Transaction Blocked BIN file (T114 [Payment Transaction Blocked BIN File] and T115 [Test: Payment Transaction Blocked BIN File]) and may deny Payment Transactions to cardholders with accounts in the blocked account ranges.

## Alternate processing

Customers can choose to use Stand-In Authorization for Payment Transactions. Customers cannot use X-Code Processing for Payment Transactions.

**NOTE: Mastercard does not encourage customers to use Stand-In Authorization for Payment Transaction authorizations.**

### Stand-In Authorization

If customers choose to use Stand-In Authorization for Payment Transaction authorizations, Mastercard recommends that customers use discretion for these transactions.

For more information, refer to the [Stand-In Authorization Reference Guide](#).

### X-Code Processing

Acquirer MIP X-Code Processing will not approve Payment Transactions.

When X-Code Processing processes the authorization, it will generate an authorization response of refer to card issuer (DE 39 = 01) for the Payment Transaction. During acquirer host X-Code Processing, the acquirer must issue a refer to card issuer response to the merchant for Payment Transaction authorizations.

## Authorization Request/0100: Payment Transaction Message

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

The full track data has been read from the data encoded on the card and transmitted within the Authorization Request/0100 in DE 45 (Track 1 Data) or DE 35 (Track 2 Data) without alteration or truncation. To use this value, the acquirer must be qualified to use value 90.</li> <li>• 90 = PAN auto-entry via magnetic stripe, the full track data has been read from the data encoded on the card and transmitted within the authorization request in DE 35 (Track 2 Data) or DE 45 (Track 1 Data) without alteration or truncation.</li> <li>• 91 = PAN auto-entry via contactless magnetic stripe, the full track data has been read from the data on the card and transmitted within the authorization request in DE 35 (Track 2 Data) or DE 45 (Track 1 Data) without alteration or truncation.</li> </ul> | <p>the Dual Message Authorization System declines the request with a format error response where:</p> <p>DE 39 (Response Code) = 30</p> <p>DE 44 (Response Data) = 022</p> |

**NOTE: The Dual Message Authorization System will reject the transaction with a format error on DE 3 if the acquirer sends an Authorization Advice/0120: acquirer-generated message where DE 3, subfield 1 contains value 28.**

## PIN management services

Mastercard supports two PIN management services.

- Chip PIN Management Service: Supports both PIN change and PIN unblock functionality
- Magnetic Stripe PIN Management Service: Supports PIN change functionality only

Issuers that participate in the Chip PIN Management Service also must support the Magnetic Stripe PIN Management service.

Acquirers in the Europe region that process dual message transactions and that participate in the PIN Management service may optionally choose to support PIN change transactions for magnetic stripe cards.

## Chip PIN management service

The Chip PIN Management service allows cardholders to perform the following transactions at ATMs that support Mastercard, Maestro, or Cirrus chip cards.

- PIN change: Allows cardholders to change the PIN code on their chip card.
- PIN unblock: Allows cardholders to unblock the PIN code on their chip card by resetting the PIN try counter.

The Chip PIN Management service is available only to full grade acquirers and chip grade issuers. For example, the Chip PIN Management service is not available for:

- Magnetic stripe-only cards.
- Transactions initiated with a chip card using magnetic stripe technology.
- Issuers that use the Chip to Magnetic Stripe Conversion service.

**NOTE: Only Europe region acquirers are allowed to submit PIN change and PIN unblock transactions to the Dual Message Authorization System.**

The Chip PIN Management service is an optional service. For more information on Chip PIN Management flows, refer to [Introduction to messages](#).

## Chip PIN management transactions

A cardholder can request a PIN change or PIN unblock only if submitting a valid online PIN. The online PIN is always transmitted to the issuer for validation.

**NOTE: Participating issuers must define their own policies for handling forgotten PINs.**

### PIN change process

1. The cardholder enters a valid, online PIN at an ATM that supports Mastercard, Maestro, or Cirrus chip cards.

2. The cardholder must enter the new PIN twice. The ATM/acquirer compares the two new PIN blocks and sends a single encrypted new PIN block in DE 125 (New PIN Data) along with the old PIN encrypted in DE 52 (Personal ID Number [PIN] Data) to the issuer as part of the authorization request.
3. The ATM initiates an EMV chip transaction with the card requesting an Application Cryptogram (AC) for a transaction value of zero, unless an access fee has been applied by the acquirer for an ATM transaction in countries where application of an ATM access fee is allowed.
4. The acquirer sends the issuer an Authorization Request/0100 message containing DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), value 92 (PIN Change) and the data from steps 2 and 3.
5. The issuer validates the online PIN and cryptogram, and then checks any other required information (for example, whether the unblock PIN status is set for the card in their system).
6. The issuer sends an Authorization Request Response/0110 message containing DE 39 (Response Code), which indicates whether to approve or decline the request. If the issuer approves the request, the 0110 message contains DE 39, value 85 (Not declined). In addition, the 0110 message may contain DE 55 with an issuer script. The issuer script contains instructions to the chip card:
  - If the issuer approves the PIN change request, the script message instructs the chip card to change the PIN on the card.
  - If the issuer declines the PIN change request, the issuer may optionally provide additional instructions to the chip card (for example, to block the card or the card application) using the related script.
7. The ATM confirms the status of the cardholder's request and the transaction is complete (that is, the script is applied successfully to the card). The cardholder will be advised if the transaction did not complete properly so that the cardholder understands the status of his or her card.

**NOTE: For PIN change requests, it is important that incomplete transactions are properly reversed. A Reversal Request/0400 message must be initiated when the issuer times out or when the script is not successfully processed by the card. If not, there is a risk that the offline PIN on the card, the online PIN in the issuer host system, and the PIN thought to be correct by the cardholder become unsynchronized.**

### **PIN unblock process**

1. The cardholder enters a valid, online PIN at an ATM that supports Mastercard, Maestro, or Cirrus chip cards.
2. The ATM initiates an EMV chip transaction with the card, requesting an Application Cryptogram (AC) for a transaction value of zero, unless an access fee has been applied by the acquirer for an ATM transaction in countries where application of an ATM access fee is allowed. The Authorization Request/0100 message must include DE 52 to transmit the online PIN.
3. The issuer validates the online PIN and cryptogram, and then checks any other required information (for example, whether the unblock PIN status is set for the card in their system).
4. The issuer generates an Authorization Request Response/0110 message containing DE 39 (Response Code) that indicates whether to approve or decline the request. If the issuer

approves the request, the 0110 message contains DE 39, value 85 (Not declined). In addition, the 0110 message will contain DE 55 with the system-generated Authorization Response Cryptogram (ARPC). Depending on the card application, DE 55 may contain an issuer script. The script message contains instructions to the chip card:

- If the issuer approves the PIN unblock request, the script message instructs the chip card to unblock the PIN on the card.
  - If the issuer declines the PIN unblock request, the issuer may optionally provide additional instructions to block the chip card (for example, block the card or the card application) using the related issuer script.
5. The ATM confirms the status of the cardholder's request and the transaction is complete. The cardholder will be advised if the transaction did not complete properly so that the cardholder understands the status of his or her card.

### **Alternate processing**

The Dual Message Authorization System does not support alternate processing via an alternate issuer host, Stand-In Authorization, or X-Code Processing for Chip PIN Management transactions.

### **Authorization reports**

The following reports provide information that supports the Chip PIN Management service:

- The Authorization Parameter Summary Report (SI737010-AA) includes a Chip PIN Management participant parameter in the Global Parameters section.
- The Authorization Summary Report (AB505010-AA) includes the Chip PIN Management Service values in the Response Code Decline category.

For a sample of the Authorization Summary Report (AB505010-AA) and Authorization Parameter Summary Report (SI737010-AA), refer to [Reports and files](#).

### **Acquirer requirements**

Acquirers using the service are responsible for:

- Offering the PIN change option on their ATMs for chip cards
- Offering the PIN unblock option on their ATMs for chip cards
- Implementing the appropriate dialog between ATMs, chip cards, and cardholders to support the Chip PIN management options

Acquirers must ensure that the new PIN entered by the cardholder is correct. The new PIN is entered twice at the ATM, and the two encrypted PIN blocks must be compared either at the ATM or in the acquirer system. Acquirers only send one new encrypted PIN block to the issuer. If the two PIN blocks do not agree, the acquirer should invite the cardholder to re-enter their new PIN twice.

Acquirers must follow the normal EMV transaction flow at the ATM. The ATM is not expected to process the offline PIN in any way.

Acquirers must support script messages of any length, up to the maximum of 128 bytes.

Acquirers must ensure that the cardholder is accurately advised of the outcome of the PIN change or unblock transaction whether successful or not. This advice must take into account the response from the issuer, the network, and/or the response from the chip card once the script has been delivered to the terminal.

Acquirers send a Reversal Request/0400 message when the issuer times out or when the script is not successfully processed by the chip card.

### Issuer requirements

Issuers using the Chip PIN Management service must validate the ARQC (Authorization Request Cryptogram) transmitted in the Authorization Request/0100. Issuers should also check that the:

- Transaction amount is zero, unless an access fee has been applied by the acquirer for an ATM transaction in countries where application of an ATM access fee is allowed
- ATC (Application Transaction Counter) is greater than the last one received

An Authorization Request/0100 for a PIN unblock transaction may contain an AAC (Application Authentication Cryptogram) instead of an ARQC (depending on the issuer chip card application and card setup). The issuer must carry out the same validation checks on the AAC.

### To participate

Participating acquirers and issuers must notify Mastercard to participate in the Chip PIN Management service. To request participation, contact the Global Customer Service team.

Acquirers and issuers must complete the *PIN Management Service Request* (Form 888), and provide the form to the Global Customer Service team.

When the acquirer does not participate in the PIN Management service, the Dual Message Authorization System sends the acquirer an Authorization Request Response/0110 message containing DE 39 (Response Code), value 58 (Transaction not permitted to acquirer/terminal). When the issuer does not participate in the service, the Dual Message Authorization System sends the acquirer an Authorization Request Response/0110 message containing, DE 39, value 57 (Transaction not permitted to issuer/cardholder).

## Authorization Request/0100: PIN Change or PIN Unblock (Chip Card)

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

### Data elements

| Data Element                        | Org | Sys | Dst | Values/Comments |
|-------------------------------------|-----|-----|-----|-----------------|
| DE 2 (Primary Account Number [PAN]) | M   | .   | M   |                 |

## PIN processing for non-Europe region customers

The Dual Message Authorization System supports processing of Mastercard purchase transactions that contain a personal identification number (PIN).

Cardholders may enter a PIN at the point-of-interaction as an alternative to signing a sales slip. The information in this section describes processing capabilities for non-Europe region acquirers and issuers that process through the Mastercard Network.

For information about PIN processing capabilities, refer to [Transaction Processing Rules](#) and [Security Rules and Procedures](#).

### Stand-In Authorization and acquirer MIP X-Code Processing

Issuers may choose to have the Dual Message Authorization System verify PIN data on their behalf. If the Dual Message Authorization System performs PIN verification, it can perform Stand-In Authorization and X-Code Processing using the existing authorization-qualifying criteria (issuer or Mastercard), when applicable.

If the Dual Message Authorization System does not verify the PIN data and the issuer is unavailable or unable to process the Authorization Request/0100 message, the Dual Message Authorization System responds to the acquirer with an Authorization Request Response/0110 message indicating the issuer could not process the Authorization Request/0100 message, except in situations where an issuer chooses to allow transactions with unverified PINs in Stand-In Authorization. For more information about the option to allow transactions with unverified PINs in Stand-In Authorization, contact the Global Customer Service team.

## Acquirer requirements

Acquirers that choose to support PIN authorization requests must use their existing Dual Message Authorization System with no changes in authorization message routing. Acquirers must comply with the following steps before processing Mastercard purchase transactions that contain a PIN in Authorization/01xx messages.

1. Determine whether to support static or dynamic PIN Encryption Key (PEK) exchanges. The Dual Message Authorization System and customers' systems use PEKs to encrypt or decrypt PINs. PEKs provide a secure means of passing PIN information in Authorization/01xx messages. Acquirers must determine whether they will support either static or dynamic PEK exchanges. For increased security, Mastercard strongly recommends using dynamic PEK exchanges.
2. Only acquirers that provide complete and unaltered track data in their Authorization Request/0100 messages can support PIN processing.
3. Ensure that applicable data elements are present in Authorization Request/0100 messages. For PIN authorization requests, Authorization Request/0100 messages must contain the following data elements:
  - DE 22 (Point-of-Service [POS] Entry Mode)
  - DE 26 (POS PIN Capture Code) (conditional)
  - DE 45 (Track 1 Data) or DE 35 (Track 2 Data)
  - DE 52 (PIN Data)
4. Ensure the ability to process applicable data elements in Authorization Request Response/0110 messages.

## Issuer requirements

Issuers must comply with the following steps before verifying the PINs in Mastercard purchase transactions that contain a PIN in Authorization Request/0100 messages.

1. Determine the method for receiving purchase transactions that contain a PIN from the following options:
  - Through a Dual Message System Authorization Request/0100 message interface: This method is the default method for issuers that currently receive their Mastercard ATM cash disbursement and ATM balance inquiry activity using this interface. Static PEKs that are already active and operational at the Dual Message Authorization System will be used for each of the issuer's bank identification number (BIN)/card ranges. Issuers may choose to support dynamic PEK exchanges instead.
  - Through a Single Message System Financial Transaction Request/0200 message interface: This method is the default method for issuers that currently receive their card activity, ATM activity, or both using this interface. These transactions are identified as preauthorization requests with DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status), value 4 (Preauthorized request) because they must be cleared through the Mastercard clearing facility (the Global Clearing Management System) with all other purchase activity. PEKs that are already active and operational at the Dual Message Authorization System will be used for each of the issuer's BIN/card ranges.

2. Determine whether to support dynamic PEK exchanges.  
For dynamic PEK exchanges, the Dual Message Authorization System and the issuer must establish a new single Key Encryption Key (KEK) for all BINs that the issuer will process. This new KEK must be associated with the issuer's Member Group ID that the issuer uses for sign-on, sign-off, and store-and-forward (SAF) sessions for the associated BINs.  
  
For increased security, Mastercard strongly recommends using dynamic PEKs.
3. Ensure the ability to process applicable data elements in Authorization Request/0100 messages.
4. Ensure the ability to process applicable data elements in Authorization Advice/0120 messages.
5. Ensure the ability to process applicable data elements in Reversal Advice/0420 messages.

**NOTE: If an issuer does not comply with the requirements for verifying PIN data, the Dual Message Authorization System will forward all authorization requests for purchase transactions that contain a PIN to the issuer with PIN data containing zeros. The issuer can then make the authorization decision based on other data within the authorization message.**

## Support for both acquiring and issuing processing

Customers that support both acquiring and issuing authorization processing may use the same PEK for all purchase transactions that contain a PIN.

To use the same PEK, customers must use the same Customer ID as follows:

- As the Member Group ID for establishing the static PEK or the KEK.
- In DE 32 or DE 33 in all acquired transactions.
- In Member Group ID (DE 2) and DE 33 of the Network Management Request (PEK exchange: On Demand)/0800 message.
- In DE 2 of the Network Management Request/0800 group sign-in message.

## Security requirements

Within the Dual Message Authorization System environment, security includes ensuring message security and integrity as well as protection against cardholder PIN disclosure. Mastercard uses secure PIN encryption in the Dual Message Authorization System to protect all PINs.

### Encryption

The approach that the Dual Message Authorization System uses for network security management is PIN encryption using data encryption standard (DES). Customers must use Triple DES. The acquirer must send the entered PIN to the Single Message System, encrypted in an ANSI block format.

For more information about PIN encryption, refer to the *Mastercard Network Processing Single Message System Guide* and [Security Rules and Procedures](#).

For information on supporting or enabling PIN as a Cardholder Verification Method (CVM) or Multi-Factor Authentication (MFA) Methods for Remote Commerce Token Transactions, refer to the [Security Rules and Procedures](#). Refer to the applicable technical specifications and the [Transaction Processing Rules](#) manual for additional Terminal and Transaction processing requirements relating to the use of a PIN.

PIN verification

Mastercard provides a PIN verification service for all purchase transactions that contain a PIN. There are two PIN verification methods to choose from: DES/IBM 3624 or ABA.

The PIN verification service is an optional service.

**NOTE: Track data must be present for Mastercard to perform PIN verification because the Dual Message Authorization System must have a means to obtain offset data from the issuer.**

If the issuer chooses to have the Dual Message Authorization System perform PIN verification, it must provide PIN processing parameters to Mastercard. These parameters determine placement of PIN verification track data.

If the issuer currently uses the PIN Verification Service that the Single Message System provides for ATM transactions, the issuer may choose to have the Dual Message Authorization System perform PIN verification on all PIN-based purchase activity using the same parameters.

PIN verification in Stand-In Authorization

Mastercard provides a PIN verification service for transactions processed by Stand-In Authorization that contain unverified PIN data in Authorization Request/0100 messages. There are two PIN verification methods to choose from: DES/IBM 3624 or ABA.

Stand-In Authorization will not perform the PIN Verification Test, unless issuers participate in a PIN validation service. If no PIN validation is performed on a transaction, Stand-In Authorization will bypass the PIN Verification Test and proceed to the next sequential Stand-In Test.

Issuers that want Mastercard to perform the optional PIN Verification on transactions processed by Stand-In Authorization must participate in a PIN Pre-validation or PIN Validation in Stand-In service.

Issuers that want Mastercard to verify the PIN provided in DE 52 (Personal ID Number [PIN] Data) on transactions processed by Stand-In Authorization must provide PIN processing parameters to Mastercard.

Associated edits

| the PIN is invalid                                                          | PI (the Dual Message Authorization System was unable to verify the PIN) | 0004 (Reject: Invalid PIN)               |
| the Dual Message Authorization System is unable to perform PIN verification | PI (the Dual Message Authorization System was unable to verify the PIN) | 0030 (Reject: Unable to verify PIN data) |

Mastercard will perform the PIN Verification in Stand-In service using track data provided in the message, unless the issuer has chosen to participate in the PIN Verification Value (PVV) on File Service.

### Authorization report

The Authorization Parameter Summary Report (SI737010-AA) includes a Stand-In PIN Verification Bypass indicator that identifies whether the Stand-In Authorization will bypass the PIN Verification Test or perform the PIN Verification Test.

This indicator will be present on the report for all customers, not just those customers that elect to participate in a PIN validation service.

## Magnetic stripe PIN management service

Mastercard® credit, , Maestro®, or Cirrus® cardholders can change their PINs at any participating ATM for non-chip (magnetic stripe) cards that originate from the Mastercard Network.

Issuers that currently support PIN change for chip cards must support receiving PIN change transactions for magnetic stripe cards. Acquirers in the Europe region that currently support PIN

change for chip cards and process dual message transactions may optionally choose to support PIN change transactions for magnetic stripe cards.

### PIN change process

Participating acquirers in the Europe region that process transactions through the Dual Message Authorization System and issuers that choose to support ATM PIN change for magnetic stripe cards must process Authorization Request/0100 messages containing:

- DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), value 92 (PIN Change)
- DE 3, subfields 2 (Cardholder From Account Type Code) and 3 (Cardholder To Account Type Code), value 00 (Default Account [not specified or not applicable])
- DE 4 (Amount, Transaction) must contain a value of zero for PIN change transactions. When ATM transaction fees are allowed, DE 4 may have a value other than zero. In this case, the amount in DE 28 (Amount, Transaction Fee) is included in DE 4.
- DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode) may contain a value of either:
  - 02 (Merchant terminal PAN auto-entry via magnetic stripe: track data is not required). Value 02 is acceptable, as long as the track data is present.
  - 90 (PAN auto-entry via magnetic stripe: the full track data has been read)
- DE 52 (Personal ID Number [PIN] Data)
- DE 125 (New PIN Data) will consist of a binary block containing a derived encrypted value that corresponds with the cardholder's new PIN.

### PIN change transactions

For PIN change transactions, the issuer may respond using one of the following methods:

- If the card is a non-chip (magnetic stripe) card or if the card is a chip card not supporting offline PIN and the issuer approves, the issuer sends an Authorization Request Response/0110 message containing DE 39 (Response Code), value 00 (Approved or completed successfully) or DE 39, value 85 (Not declined).

**NOTE: When approving a PIN change transaction, Mastercard recommends that issuers send DE 39, value 85 in the Authorization Request Response/0110 message.**

- If the card is a non-chip (magnetic stripe) card or if the card is a chip card not supporting offline PIN and the issuer declines, the issuer sends an Authorization Request Response/0110 message containing DE 39, value 70 (Contact Card Issuer), DE 39, value 71 (PIN Not Changed), or DE 39, value 89 (Unacceptable PIN: Transaction Declined: Retry).
- If the card is a chip card supporting offline PIN, the issuer must decline and send an Authorization Request Response/0110 message containing DE 39, value 57 (Transaction not permitted to issuer/cardholder).

Issuers that have chip cards personalized with both online and offline PIN must not approve PIN change transactions when DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode) contains value 80 (chip card at chip-capable terminal was unable to process transaction using data on the chip; therefore, the terminal defaulted to the magnetic stripe-

read PAN. The full track data has been read from the data encoded on the card and transmitted within the Authorization Request/0100 in DE 45 [Track 1 Data] or DE 35 [Track 2 Data without alteration or truncation. To use this value, the acquirer must be qualified to use value 90) or value 90. Chip card at chip-capable terminal was unable to process transaction using data on the chip; therefore, the terminal defaulted to the magnetic stripe-read PAN. The full track data has been read from the data encoded on the card and transmitted within the Authorization Request/0100 in DE 45 (Track 1 Data) or DE 35 (Track 2 Data) without alteration or truncation. To use this value, the acquirer must be qualified to use value 90. If these transactions are approved, the offline PIN will be out-of-sync with the online PIN, and subsequent offline transactions may be declined due to invalid PIN.

If an issuer's account range participates in Chip to Magnetic Stripe Conversion or M/Chip Cryptogram Pre-validation on-behalf services, that account range cannot participate in the Chip PIN Management service, even if the account range also contains magnetic stripe cards.

### Alternate processing

The Dual Message Authorization System does not support alternate processing via an alternate issuer host, the Stand-In Authorization, or X-Code Processing for PIN change transactions performed on magnetic stripe cards.

### To participate

Registration to participate in the Magnetic Stripe PIN Management service is not required for acquirers and issuers currently participating in the Chip PIN Management service. However, changes to add or delete account ranges must be submitted on the *PIN Management Service Request* (Form 888).

Acquirers in the Europe region and issuers that do not currently support PIN change transactions, but choose to support PIN change transactions performed at the ATM for magnetic stripe cards, must complete the *PIN Management Service Request* (Form 888). For more information about registration and testing, contact the Global Customer Service team.

## Authorization Request/0100: PIN Change (Magnetic Stripe Card)

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

## Issuer Response Options to a Magnetic Stripe PIN Change Request

For PIN change transactions, the issuer may respond using one of the following methods.

- If the card is a non-chip (magnetic stripe) card or if the card is a chip card not supporting offline PIN and the issuer approves, the issuer sends an Authorization Request Response/0110 message containing DE 39 (Response Code), value 00 (Approved or completed successfully) or DE 39, value 85 (Not declined).

**NOTE: When approving a PIN change transaction, Mastercard recommends that issuers of chip cards send DE 39, value 85 in the Authorization Request Response/0110 message.**

- If the card is a non-chip (magnetic stripe) card or if the card is a chip card not supporting offline PIN and the issuer declines, the issuer sends an Authorization Request Response/0110 message containing DE 39, value 70 (Contact Card Issuer), DE 39, value 71 (PIN Not Changed), or DE 39, value 89 (Unacceptable PIN—Transaction Declined—Retry).
- If the card is a chip card supporting offline PIN, the issuer must decline and send an Authorization Request Response/0110 message containing DE 39, value 57 (Transaction not permitted to issuer/cardholder).

Issuers that have chip cards personalized with both online and offline PIN must not approve PIN change transactions when DE 22 (Point of Service [POS] Entry Mode, subfield 1 (POS Terminal PAN Entry Mode) contains value 02 or value 90. If these transactions are approved, the offline PIN will be out-of-sync with the online PIN, and subsequent offline transactions may be declined due to invalid PIN.

If an issuer's account range participates in Chip to Magnetic Stripe Conversion or M/Chip Cryptogram Pre-validation on-behalf services, that account range cannot participate in the Chip PIN Management service, even if the account range also contains magnetic stripe cards.

## PIN Processing for Europe Region Customers

Mastercard supports PIN translation for acquirers and issuers and issuer PIN validation for Track 1 and Track 2 on the Mastercard Network for customers in the Europe Region.

For information about PIN processing capabilities, refer to [Transaction Processing Rules](#).

### PIN Translation

The Dual Message Authorization System performs PIN translation on DE 52 (Personal ID Number [PIN] Data) and DE 125 (New PIN Data) for acquirers and issuers that use the Mastercard Network.

When issuers perform PIN processing in-house or when they participate in the Online PIN Validation in Stand-In Authorization, issuers must specify DE 53, subfield 4 (PIN key index number) in the Network Management Request/0800: sign-on/sign-off message, all remaining DE 53, subfields may be zero filled.

Issuers participating in the Online PIN Pre-validation Service are not required to send DE 53 in the Network Management Request/0800: sign-on/sign-off message.

Acquirers specify the key used to encrypt the PIN using the Authorization Request/0100 message.

The Key Management Services (KMS) group provides customers a Member Key ID (MKID) for each service. The MKID is used to notify the KMS group of new security keys. Each customer will associate the PIN key index number to identify a specific security key. Customers may define a maximum of 99 security keys for use during PIN translation.

### DE 53 (Security-related Control Information)

Acquirers will specify DE 53, subfield 3 (PIN Block Format Code) when sending the Authorization Request/0100 message.

Issuers that use the PIN translation service to translate DE 52 and DE 125 (New PIN Data) will receive DE 53, subfield 4 (PIN Key Index Number) that identifies the PIN key used for translation.

PIN translation also will be performed on DE 125, if present, when the PIN translation was successfully completed for DE 52.

## PIN Translation Edits

The following edits apply to Authorization Request/0100 messages (for acquirers only).

PIN Validation

For information about PIN processing capabilities, refer to [Transaction Processing Rules](#).

PIN validation results will be provided in DE 48, subelement 71 (On-behalf Services) in Authorization Request/0100 and Authorization Advice/0120: system-generated messages when PIN validation has been performed on behalf of the issuer. DE 48, subelement 71 will contain the following values related to PIN validation:

- Subfield 1 (On-behalf [OB] Service) will contain the following values:
  - 08 (Online PIN Pre-validation)
  - 09 (Online PIN Validation in Stand-In)
- Subfield 2 (On-behalf [OB] Result 1) when subfield 1 is value 08 or 09:
  - I (Invalid)
  - P (Mandatory PVV not on file)
  - R (PIN retry exceeded [invalid PIN])
  - U (Unable to process)
  - V (Valid)
- Subfield 3 (On-behalf [OB] Result 2) is blank when it is sent to the issuer

The Dual Message Authorization System will manage tracking the number of PIN failed attempts at the card level (for example, PAN, card sequence number from the track and expiration date).

DE 52 (Personal ID Number [PIN] Data) is not included in the Authorization Request/0100 message when PIN validation is performed.

| the issuer uses the Dual Message Authorization System for PIN Validation in Stand-In and the PIN translation fails | <p>sends the acquirer an Authorization Request Response/0110 message where:</p> <ul style="list-style-type: none"> <li>• DE 39 = 88</li> <li>• DE 48, subelement 80 = TI</li> </ul> <p>sends the issuer an Authorization Advice/0120: system-generated message where:</p> <ul style="list-style-type: none"> <li>• DE 48, subelement 71, subfield 1 = 09</li> <li>• DE 48, subelement 71, subfield 2 = U (Unable to process)</li> <li>• DE 60, subfield 2 = 0050 (Unable to process)</li> </ul> |

## PIN Key Management

The Key Management Services (KMS) group will manage the security keys for customers using the PIN translation and PIN validation services supported by the Dual Message Authorization System on the Mastercard Network.

## PIN Verification Value/PIN Offset on File Service

The PIN Verification Value (PVV)/PIN Offset used in PIN validation is usually located on Track 1 or Track 2 of a card's magnetic stripe. Mastercard offers a service by which the issuer may optionally send the PVV/PIN offsets, in a file to Mastercard in order to override the information encoded in the track of a card's magnetic stripe.

Mastercard activates the PVV/PIN Offset data from an issuer upon receipt of the PVV/PIN Offset File. Issuers may send a full file replacements weekly.

## Processing Transactions Using PVV/PIN Offset

Issuers that use the optional PVV/PIN Offset on File processing must request participation in the service for each card range and (optionally) expiry date range.

To process a transaction, the Dual Message Authorization System checks that PVV/PIN Offset details are held on file for the relevant card range and expiry date range. If details are on file for the card range and expiry date range, the Dual Message Authorization System checks for the individual card's details within the issuer's stored file.

The Dual Message Authorization System checks the entry in the PVV/PIN Offset file to ensure that the card's PAN, card sequence number, and expiry date match. If they do match, the Dual Message Authorization System can use the PVV value on file. If the PAN, card sequence number, and expiry date do not match, the Dual Message Authorization System processes the transaction according to the processing parameters that the issuer specifies for the relevant card range and expiry date.

## Processing Parameters

Mastercard stores the issuer PVV/PIN Offset files for use in the Online PIN Pre-validation and the Online PIN Validation in Stand-In on-behalf services. When the Dual Message Authorization System cannot find a matching entry (with the correct PAN, card sequence number, and expiry date values) in the issuer PVV/PIN Offset file, it needs further instructions to process the transaction properly.

The issuer must select one of the following processing options for each card range and expiry date:

- Optional on file: With this option, if no matching PVV/PIN Offset entry is found in the PVV/PIN Offset file, the Dual Message Authorization System retrieves the PVV value from Track 1 or Track 2 of the relevant card.
- Mandatory on file: With this option, the Dual Message Authorization System, having checked the Track 1 or Track 2 information for the issuer card against the entries held in the issuer PVV/PIN Offset file, performs one of the following actions:
  - For Stand-In services, the Dual Message Authorization System returns an Authorization Request Response/0110 message to the acquirer and an Authorization Advice/0120: system-generated message to the issuer with the appropriate response code, detailing the result of the processing.
  - For Pre-validation services, the Dual Message Authorization System forwards the results of the PIN validation to the issuer in an Authorization Request/0100 message and to the acquirer in an Authorization Request Response/0110 message.

The [Global Parameters](#) section provides an indicator to identify issuer participation.

## PVV/PIN Offset File Format

Following is the PVV/PIN Offset File format that has a fixed length of 64 characters. Issuers can use Bulk ID RA85 or CONNECT:Direct to send the PVV/PIN Offset file to Mastercard.

### PVV/PIN Offset File Header Record

| Field Name          | Attribute    | Length | Comments/Values                                                                                                           |
|---------------------|--------------|--------|---------------------------------------------------------------------------------------------------------------------------|
| Record type ID      | Alphanumeric | 3      | HDR—header record                                                                                                         |
| File version number | Numeric      | 3      | 100 (initial version)                                                                                                     |
| Customer ID         | Alphanumeric | 11     | First six digits must contain the issuers ICA with leading zeros<br><br>Seventh digit and beyond contains trailing spaces |

| Field Name            | Attribute    | Length | Comments/Values                                                     |
|-----------------------|--------------|--------|---------------------------------------------------------------------|
| Transmission code     | Alphanumeric | 10     | Member assigned transmission code. May contain all spaces or zeros. |
| Transmission sequence | Numeric      | 4      | 0000–9999<br>Wraps at 9999                                          |
| Transmission date     | Numeric      | 6      | YYMMDD in UTC                                                       |
| Transmission time     | Numeric      | 6      | hhmmss in UTC                                                       |
| Input file type       | Alphanumeric | 1      | F: Full file replace                                                |
| Filler                | Alphanumeric | 20     | Spaces                                                              |

#### PVV/PIN Offset File Detail Record

| Field Name           | Attribute    | Length | Comments/Values                                                                                                                                                                   |
|----------------------|--------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Record type ID       | Alphanumeric | 3      | DTL—detail record                                                                                                                                                                 |
| Update code          | Alphanumeric | 1      | A = Add/Update                                                                                                                                                                    |
| PAN                  | Numeric      | 19     | With trailing spaces                                                                                                                                                              |
| Card expiry date     | Numeric      | 4      | YYMM (must contain a valid year and month)                                                                                                                                        |
| Card sequence number | Numeric      | 1      | Must contain the Sequence Number associated with the PAN or 0. A value of 0 indicates that the card sequence number should not be used as criteria when matching to the PVV file. |
| PVV/PIN Offset       | Numeric      | 6      | Trailing spaces                                                                                                                                                                   |
| Filler               | Alphanumeric | 30     | Spaces                                                                                                                                                                            |

#### PVV/PIN Offset File Trailer Record

| Field Name               | Attribute    | Length | Comments/Values     |
|--------------------------|--------------|--------|---------------------|
| Record type ID           | Alphanumeric | 3      | TRL—trailer record  |
| Number of detail records | Numeric      | 11     | Detail record count |

| Field Name | Attribute    | Length | Comments/Values |
|------------|--------------|--------|-----------------|
| Filler     | Alphanumeric | 50     | Spaces          |

## Alternate Processing

Mastercard will support issuers subscribing to the Online PIN Pre-validation service (OB service code value 08) that are not available to respond to the Authorization Request/0100 message and issuers subscribing to the PIN Validation in Stand-In service (OB service code value 09) by responding to the Authorization Request/0100 message on behalf of the issuer. Mastercard will consider the results of the PIN validation in DE 48, subelement 71 when responding to the Authorization Request/0100 message.

The values contained in DE 60 (Advice Reason Code), subfield 2 (Advice Detail Code) are dependent on the values contained in DE 48, subelement 71, subfield 2 (OB Result 1) as described in the following table.

### Values

| WHEN DE 48, subelement 71, subfield 2 contains the value... | THEN DE 60, subfield 2 will contain... |
|-------------------------------------------------------------|----------------------------------------|
| U (Unable to Process)                                       | 0050                                   |
| I (Invalid)                                                 | 0051                                   |
| P (Mandatory PVV not on file)                               | 0052                                   |
| R (PIN Retry Exceeded [invalid PIN])                        | 0052                                   |

## PIN Processing for Non-Europe Customers

Personal identification number (PIN) is a proven technology that is not easily circumvented. It is secure within actual market conditions. Mastercard permits acquirers to use PIN technology at the point of sale that prompts Mastercard cardholders for a PIN.

This section contains PIN processing procedures for non-Europe customers. For information about PIN processing procedures for Europe region acquirers and issuers that process through the Mastercard Network, refer to [PIN Processing for Europe Region Customers](#).

## Acquirer Requirements

Acquirers must comply with the following before processing Mastercard purchase transactions that contain a PIN (such as CAT Level 1 transactions) in Authorization/01xx messages.

- Support either static or dynamic PIN Encryption Key (PEK) exchanges
- Comply with the Mastercard Magnetic Stripe Compliance Program
- Correctly format Authorization Request/0100—PIN messages
- Correctly format Authorization Request Response/0110—PIN messages

### Support either Static or Dynamic PIN Encryption Key (PEK) exchanges

The Dual Message Authorization System and customers' system use PEK to encrypt or decrypt PINs. PEKs provide a secure means of passing PIN information in Authorization/01xx messages. Acquirers must support either static or dynamic PEK exchanges.

**NOTE: For increased security, Mastercard strongly recommends using dynamic PEK exchanges.**

Following are the differences between the two options.

#### PEK options

| PEK     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Static  | <ul style="list-style-type: none"><li>• Customers and the Dual Message Authorization System establish these keys offline.</li><li>• Customers and the Dual Message Authorization System must establish a single PEK. This PEK must be associated with the acquirer's customer ID.</li></ul>                                                                                                                                                                                                                                                                                                                                       |
| Dynamic | <ul style="list-style-type: none"><li>• Customers and the Dual Message Authorization System exchange these keys automatically online every 24 hours or every 2,500 transactions, whichever occurs first.</li><li>• Customers and the Dual Message Authorization System use Key Encryption Keys (KEKs) to encrypt and decrypt the PEKs during PEK exchanges between the acquirer and the Dual Message Authorization System. Each acquirer must establish a KEK with Mastercard to exchange the PEKs dynamically with the Dual Message Authorization System. This KEK must be associated with the acquirer's customer ID.</li></ul> |

## Mastercard Magnetic Stripe Compliance Program Compliance

PIN verification requires valid track data, only acquirers that comply with the Mastercard magnetic stripe compliance program and provide complete and unaltered track data in their Authorization Request/0100 messages are able to support PIN processing.

### Authorization Request/0100: PIN Transactions

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

#### Data elements

| Data Element                                                                        | Org | Sys | Dst | Values/Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------------------------------------------------------|-----|-----|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode) | M   | .   | M   | Must contain one of the following values: <ul style="list-style-type: none"> <li>05 = Merchant terminal PAN auto-entry via integrated circuit card</li> <li>07 = Merchant terminal PAN auto-entry via contactless M/Chip</li> <li>80 = Chip card at chip-capable terminal was unable to process transaction using data on them chip; therefore, the terminal defaulted to the magnetic stripe-read PAN</li> <li>90 = PAN auto-entry via magnetic stripe: the full track data has been read from the data encoded on the card and transmitted within the authorization request in DE 35 (Track 2 Data) or DE 45 (Track 1 Data) without alteration or truncation</li> </ul> |
| DE 26 (POS PIN Capture Code)                                                        | C   | .   | C   | Must be present when DE 52 (PIN Data) is present and the maximum PIN characters that the terminal accepts is something other (more or less) than 12 characters.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|-----------------------------------------|-----|-----|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DE 48, subelement 80 (PIN Service Code) | C   | .   | C   | <p>Identifies whether the Dual Message Authorization System attempted to verify or translate the PIN. Valid values:</p> <ul style="list-style-type: none"> <li>PV = The Dual Message Authorization System verified the PIN</li> <li>TV = The Dual Message Authorization System translated the PIN for issuer verification</li> <li>PI = The Dual Message Authorization System was unable to verify the PIN</li> <li>TI = The Dual Message Authorization System was unable to translate the PIN</li> </ul> |

Acquirer-related PIN processing errors, indicated by DE 39 (Response Code), value 30 (Format Error) and DE 44 (Additional Response Data) value 052 (DE 52 PIN Data), occur if the Dual Message Authorization System is unable to decrypt the PIN data. Possible causes are:

- The PEK that the Dual Message Authorization System and customer share is not synchronized. It should be the same key.
- The Dual Message Authorization System is unable to determine the proper PEK because DE 32 or DE 33 is incorrect.
- The acquirer is not qualified to be in the Mastercard Magnetic Stripe Compliance Program.
- The acquirer did not correctly establish the static PEK or KEK with Mastercard.
- The DE 22, subfield 1 value is not valid for transactions that contain a PIN.

Following are possible Authorization Request Response/0110 message responses:

## Issuer Requirements

Issuers must comply with the following to process Mastercard transactions that contain a PIN in Authorization Request/0100 messages.

- Receive purchase or ATM transactions that contain a PIN
- Support Static or Dynamic PEK exchanges
- Process applicable data elements in Authorization Request/0100 messages
- Process applicable data elements in Authorization Request Response/0110 messages
- Process applicable data elements in Authorization Advice/0120: system-generated messages
- Process applicable data elements in Reversal Advice/0420: system-generated messages

For information, refer to *Transaction Processing Rules*.

## Receive Purchase Transactions that Contain a PIN

Issuers must be able to receive purchase transactions that contain a PIN using one of the following network options.

- Through a Mastercard Network connection using Authorization Request/0100 messages
- The default method for issuers that currently receive their Mastercard ATM cash disbursement and ATM balance inquiry activity using this interface. Static PEKs that are already active and operational at the Single Message System will be used for each of the issuer's bank identification number (BIN)/card ranges.

Issuers may choose to support dynamic PEK exchanges instead.

- Through a Single Message System connection using Financial Transaction Request/0200 messages

The default method for issuers that currently receive their Debit Mastercard activity, ATM activity, or both using this interface. These transactions will be identified as preauthorization requests with a DE 61, subfield 7, value 4 because they must be cleared through the Mastercard Global Clearing Management System, with all other purchase activity. PEKs that already are active and operational at the Single Message System will be used for each of the issuer's BIN/card ranges.

## Support Static or Dynamic PEK exchanges

For dynamic PEK exchanges, the Dual Message Authorization System and the issuer must establish a new single KEK for all BINs that the issuer will process. This KEK must be associated with the issuer's Group ID that the issuer uses for sign-on, sign-off, and store-and-forward (SAF) sessions for the associated BINs.

**NOTE: For increased security, Mastercard strongly recommends using dynamic PEKs.**

## Authorization Request/0100: PIN Messages

## Authorization Advice/0120: PIN Messages

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Advice/0120 data elements apply.

### Data elements

| Data Element                                              | Org                                                                                                                                                                                                                                              | Sys | Dst | Values/Comments                                                                                                                                                                                                                                                                                                                                                                                                                                        |                             |                                               |                                                           |                                                                                                                                                                                                                                                  |

## Reversal Advice/0420: PIN Messages

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

The issuer must be able to receive Reversal Advice/0420 messages with DE 60 values in addition to all other applicable data elements.

The Reversal Advice/0420 message identifies the corresponding Authorization Request Response/0110 message being reversed that contained PIN data.

### Data elements

## Alternate Processing

The issuer may choose to have the Dual Message Authorization System verify PIN data on their behalf. If the Dual Message Authorization System performs PIN verification, it will perform Stand-In Authorization and X-Code Processing using the issuer or Mastercard existing authorization-qualifying criteria, when applicable.

If the Dual Message Authorization System does not verify the PIN data and the issuer is unavailable or unable to process the Authorization Request/0100 message, the Dual Message Authorization System will respond to the acquirer with an Authorization Request Response/0110 message indicating the issuer could not process the Authorization Request/0100 message, except in situations where an issuer chooses to allow transactions with unverified PINs in Stand-In Authorization.

## Support for Both Acquiring and Issuing Processing

Customers that support both acquiring and issuing authorization processing may use the same PEK for all purchase transactions that contain a PIN. To accomplish this, the customer must use the same customer ID as follows:

- As the Group ID for establishing the static PEK or the KEK.
- In DE 32 (Acquiring Institution ID Code) or DE 33 (Forwarding Institution ID Code) in all acquired transactions.
- In DE 2 and DE 33 of the Network Management Request/0800: PEK exchange—on demand message.
- In DE 2 of the Network Management Request/0800: group sign-on message.

## Cleartext Use Prohibited

If there is a major problem with security equipment (for example, a faulty tamper-resistant security module [TRSM] or DES circuit board), the Dual Message Authorization System suspends all transaction processing with that customer. The customer must not send unencrypted (cleartext) PIN data.

For more information on PIN encipherment, refer to the [Security Rules and Procedures Guide](#).

## Emergency Static PEK or Emergency KEK Process

Following are the stages of the emergency static PEK or KEK process.

1. Mastercard considers the faulty customer as down.
2. Authorized Mastercard personnel randomly generate both parts of an emergency static PEK or KEK.
3. Mastercard personnel call the security or operations staff of the customer. Mastercard gives the emergency static PEK or KEK verbally to the customer.
4. Both the Mastercard personnel and the customer insert the new emergency static PEK or KEK in their TRSMs.
5. The Dual Message Authorization System initiates dynamic PEK exchange with a Network Management Request/0800: PEK exchange, using the new emergency static PEK or KEK.

Mastercard and the customer are to use the emergency static PEK or KEK process only as an interim measure to get the customer up as quickly as possible following a key exchange failure. Mastercard limits the use of the emergency static PEK or KEK in any one occurrence to six business days. The customer must notify their security officers responsible for key management immediately of the security failure situation and must conduct a secure key exchange at the earliest possible time.

## Previous PEKs

After exchanging new PEKs statically or dynamically, the Dual Message Authorization System and the customer are responsible for preserving the previous PEK for five minutes. They do this

in the event that the current PEK becomes inoperative. If the current PEK has a Sanity Check error during this five-minute interval, the Dual Message Authorization System or the customer should attempt to use the previous PEK. If the previous PEK is also inoperative, then refer to the steps previously discussed to determine action.

## PIN Verification Value on File Service

For issuers that use the Single Message System for PIN-processing services and elect to use the PIN Validation in Stand-In service, the Single Message System will perform the PIN validation service using the PVV for a card based on the PVV value provided in a file by the issuer.

Issuers that choose to register for this service must send a PVV/PIN Offset file to the Single Message System to update cardholder PINs and must use Single Message System-managed security keys. A Customer Implementation Services specialist will assist issuers with setting up a file or adding new files for testing and production.

Participating issuers must send a PVV/PIN Offset file to the Single Message System to provide and update cardholder PIN information. This file must be sent using the secure Global File Transfer (GFT) methods approved by Mastercard. The following bulk file IDs have been established for use when submitting PVV/PIN Offset files: RM29 (Production), RM31 (MTF).

Issuers also must ensure that they have exchanged the PIN verification keys (PVKs) with the Single Message System before using this service.

## PVV/PIN Offset File Format

The PVV/PIN Offset file has a fixed length of 64 characters. Issuers may use Bulk ID RM29 (Production), RM31 (MTF) or CONNECT:Direct to send the PVV/PIN Offset file to Mastercard. Refer to the following tables for information about the file header, detail, and trailer records.

### PVV/PIN Offset File Header Record

| Field Name          | Attribute    | Length | Comments and Values                                                                                                          |

| Card expiry date     | Numeric      | 4      | YYMM (must contain a valid year and month)                                                                                                                                                                                 |
| Card sequence number | Numeric      | 1      | Values can be in the range of 0–9<br><br>Must contain the Sequence Number associated with the PAN or 0. A value of 0 indicates that the card sequence number should not be used as criteria when matching to the PVV file. |
| PVV/PIN Offset       | Numeric      | 6      | Trailing spaces                                                                                                                                                                                                            |
| Filler               | Alphanumeric | 30     | Spaces                                                                                                                                                                                                                     |

### PVV/PIN Offset File Trailer Record

| Field Name               | Attribute    | Length | Comments and Values  |
|--------------------------|--------------|--------|----------------------|
| Record type ID           | Alphanumeric | 3      | TRL = trailer record |
| Number of detail records | Numeric      | 11     | Detail record count  |
| Filler                   | Alphanumeric | 50     | Spaces               |

## Alternate Processing

In instances where Stand-In Authorization is not accessible, X-Code Processing is initiated. X-Code Processing does not perform PIN verification. Therefore, authorization requests received with an unverified PIN will be declined.

## PIN Translation and Verification Process

The following describes the key exchanges during the PIN translation and verification process.

1. The cardholder enters the PIN at the point of interaction. The PIN is encrypted by the terminal's hardware under a PIN encryption key and is then sent to the acquirer.
2. The acquirer receives the encrypted PIN, which the acquirer then decrypts using the terminal PEK stored in a TRSM. The acquirer then creates the ANSI PIN block and encrypts it using the DES algorithm as follows:

First Block: PIN Data: The first digit of this block contains the control character 0, followed by a number representing the PIN length (maximum 12), and then the PIN itself. The acquirer then fills the remaining digits of the block on the right with hexadecimal F's to complete the 16-digit account number.

Second Block: PAN Data: The first four digits of the second block contain 0000, followed by the 12 right-most digits of the PAN, excluding the check digit. The acquirer then pads zeros to the left to complete the 16-digit data element.

In formatting an ANSI block, the acquirer performs an XOR function on the two 16-digit blocks.

After creating the PIN block, the acquirer sends it through the DES algorithm along with the 16-digit PEK that the acquirer and the Dual Message Authorization System share, producing the translated PIN block as follows. The acquirer may encrypt the PIN using:

- a. Single DES algorithm

Encrypt PIN information using a single DES key algorithm with single-length PEKs.

- b. Triple DES algorithm with double length PEKs

When a customer chooses to support triple DES, the customer must support both sending and receiving double-length (16-byte) PEKs.

- c. Triple DES algorithm with triple length PEKs

3. The acquirer sends the translated PIN block to the Dual Message Authorization System. The Dual Message Authorization System translates it from the acquirer PEK to the issuer PEK using the procedures described in step 2. The Dual Message Authorization System then sends the translated PIN block to the issuer for verification.  
DE 52 (PIN Data) is not in the Authorization Request/0100 message going to the issuer if the Dual Message Authorization System is performing PIN verification on the issuer's behalf.
4. The issuer then translates the PIN block and verifies the PIN using:
  - a. Single DES algorithm
  - b. Triple DES algorithm with double length PEKs

- c. Triple DES algorithm with triple length PEKs

## Detection of PEK Corruption Using Sanity Checks

Issuers and the Dual Message Authorization System perform Sanity Checks on PIN blocks as part of the PIN encryption/decryption process. This subsection describes Sanity Check errors that indicate PEK out-of-synchronization conditions that may occur during PIN decryption. It also explains ensuing steps that the Dual Message Authorization System and customer take.

All Tamper Resistant Security Modules (TRSMs) must be able to detect possible corruption of PEKs by performing Sanity Checks on the PIN block as part of decryption. When Sanity Check errors occur, customers should use the following procedures to resolve the problem.

## Dual Message Authorization System Sanity Check Error

The following describes the process when the Dual Message Authorization System TRSM discovers a PEK or KEK error.

1. The Dual Message Authorization System's Sanity Check reveals an out-of-synchronization condition with the PEK that it shares with the acquirer.
2. If five consecutive transactions fail the Sanity Check, and the Dual Message Authorization System has performed steps 1–3 with each of the previous five transactions from the acquirer, the Dual Message Authorization System takes the following action:
  - For a static PEK, Mastercard starts emergency procedures to create a new static PEK.
  - For a dynamic PEK, the Dual Message Authorization System sends the acquirer a Network Management Request/0800: PEK exchange message with a new PEK. If there are problems with the new PEK, the Dual Message Authorization System will initiate procedures to establish a new KEK.
3. For a dynamic PEK, the acquirer sends a Network Management Request Response/0810: PEK exchange to the Dual Message Authorization System acknowledging receipt of the Network Management Request/0800: PEK exchange message exchanging the PEK. If the message does not contain a DE 39 value of 00, completed successfully, the Dual Message Authorization System sends another Network Management Request/0800: PEK exchange message.
4. For a dynamic PEK, the Dual Message Authorization System sends a Network Management Advice/0820: PEK exchange message to the acquirer that notifies the customer that the new PEK is active and operational. Subsequent Authorization Request/0100 messages must use the new PEK to encrypt the PIN in DE 52.

## Issuer Sanity Check Error

The issuer TRSMs must be able to detect possible corruption of PEKs. The following describes the process when the issuer TRSM discovers a PEK error using a Sanity Check.

1. The issuer's Sanity Check reveals an out-of-synchronization condition with the PEK that it shares with the Dual Message Authorization System.
2. The issuer attempts to decrypt the PIN block using the prior PEK, if available.

3. If the Sanity Check fails using the prior PEK, the issuer sends an Authorization Request Response/0110 message.
4. If five consecutive transactions fail the Sanity Check, and the issuer has performed steps 1–3 with each of the five transactions, the issuer takes the following appropriate action:
  - For a static PEK, the issuer contacts Mastercard to start emergency procedures to create a new static PEK.
  - For a dynamic PEK, the issuer sends the Dual Message Authorization System a Network Management Request/0800: PEK exchange–On Demand message to create a new PEK. If there are problems with the new PEK, the issuer contacts Mastercard to start emergency procedures to establish a new KEK.
5. For a dynamic PEK, the Dual Message Authorization System acknowledges receipt of the request by sending a Network Management Request Response/0810:PEK exchange message.
6. For a dynamic PEK, the Dual Message Authorization System sends to the issuer a Network Management Request/0800: PEK exchange message with a new PEK.
7. For a dynamic PEK, the issuer sends a Network Management Request Response/0810: PEK exchange message to the Dual Message Authorization System acknowledging receipt of the Network Management Request/0800: PEK exchange message exchanging the PEK. If the message does not contain a DE 39 value of 00, completed successfully, the Dual Message Authorization System sends another Network Management Request/0800: PEK exchange message.
8. For a dynamic PEK, the issuer receives a Network Management Advice/0820: PEK exchange message from the Dual Message Authorization System that notifies the customer that the new PEK is active and operational. Subsequent Authorization Request/0100 messages must use the new PEK to encrypt the PIN in DE 52.

## Product Inquiry Service

The Product Inquiry Service allows an acquirer to send a product inquiry authorization request message to Mastercard.

**NOTE: Applies only to the U.S. region.**

As part of the authorization response to an acquirer, Mastercard will provide an acquirer with the product code associated with the particular Mastercard card number. Additionally, because product codes for various card programs potentially fall under different interchange rate structures, Mastercard will also populate the authorization response message with the applicable account category code as defined by the Account Level Management Service.

The information received by the acquirer through a Product Inquiry Service request, along with the published Mastercard interchange rate schedule and rate criteria, can be used by an acquirer and merchant to determine the product and associated interchange rate that may be applied to a purchase transaction for that card.

## Acquirers

Acquirers that choose to support Product Inquiry Service transactions must send Authorization Request/0100 messages containing DE 61 (Point-of-Service [POS] Data), subfield 7 (POS Transaction Status), value 8 (Account Status Inquiry Service [ASI]) and DE 4 (Amount, Transaction) with a transaction amount of zero when submitting Product Inquiry Service transaction requests.

**NOTE: Product Inquiry Service messages that include address verification and/or CVC 2 validation requests will be deemed to be an attempt to mitigate fraud. As such, they will be designated as an Account Status Inquiry Service transaction and billed accordingly.**

## Issuers

Issuers will receive Authorization Request/0100 messages containing DE 61, subfield 7, value 8, and DE 4 with a transaction amount of zero. Issuers must respond to these transactions with value 00 (Approved or completed successfully), 85 (Not Declined), 05 (Do Not Honor) or other valid business decline responses in DE 39 (Response Code). Invalid business declines include values 03 (Invalid merchant), 12 (Invalid transaction), 13 (Invalid amount), 30 (Format error), 51 (Insufficient funds/over credit limit), 57 (Transaction not permitted to issuer/cardholder), and 58 (Transaction not permitted to acquirer/terminal).

## For More Information

For more information about the Product Inquiry Service, contact the Global Customer Service team.

# Authorization Request/0100: Product Inquiry Service

Following is the list of the data elements applicable to this message. All mandatory Authorization Request/0100 data elements apply.

## Data elements

| DE ID | Data Element Name                                                                                                | Org | Sys | Dst | Comments                                                                             |
|-------|------------------------------------------------------------------------------------------------------------------|-----|-----|-----|--------------------------------------------------------------------------------------|
| 4     | Amount, Transaction                                                                                              | M   | .   | M   | Transaction amount of zero, in the acquirer's currency, at the point of interaction. |
| 61    | Point-of-Service (POS) Data, subfield 7 (POS Transaction Status), value 8 (Account Status Inquiry Service [ASI]) | M   | .   | M   |                                                                                      |

## Promotion code

The promotion code is an alphanumeric code that customers can include in the Authorization Request/0100 message.

The promotion code service is an optional service.

### About promotion codes

Issuers may decide to offer a promotion to merchants. This promotion may require issuers to use different authorization criteria than they do with most transactions. The promotion code allows the issuer to recognize that this transaction uses the different criteria to determine authorization responses for transactions that occur at the participating merchants.

Mastercard may also specify other uses of the promotion code.

### How it works

1. The merchant includes the promotion code when it sends transaction data to the acquirer.
2. The acquirer sends the promotion code in DE 48 (Additional Data: Private Use) of the Authorization Request/0100 message to the issuer for the authorization decision.
3. The issuer can use the promotion code to identify transactions that occur at a merchant that participates in that issuer's promotion program.

For more information on data elements, refer to [Data element definitions and details](#).

### To participate

To participate in the Promotion Code service, issuers must notify Mastercard to participate in this service. To participate, contact the Global Customer Service team.

## Proximity Payments

The Mastercard Proximity Payments solution, which includes Mastercard contactless magnetic stripe and Mastercard contactless M/Chip, is part of the global Proximity Payments Program and is designed to enrich the traditional card with a contactless interface.

The contactless interface provides cardholder and merchant benefits that are particularly relevant in environments such as:

- Unattended point-of-service (POS) devices (for example, gas pumps and vending machines)
- High-traffic environments (for example, quick service and drive-through restaurants)

Proximity payments do not require cardholders holding a contactless Mastercard chip card to swipe or insert the card into a card reader or terminal. Instead, cardholders place the contactless card in proximity of a specially equipped merchant terminal to make a payment.

## Authorization Request/0100: Proximity Payments

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

### Data elements

| Data Element                                                                        | Org | Sys | Dst | Values/Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

The terminal also may support one or more other card input types, including EMV contact chip input, magnetic stripe input, and key entry input.</li> </ul> |

## Purchase of Goods or Services with Cash Back

Mastercard allows the use of Purchase of Goods or Services with Cash Back in Authorization/01xx and Reversal/04xx messages for Debit Mastercard and Maestro cards.

### Participation Mandate

All issuers of Debit Mastercard and Maestro cards are required to support the receipt of authorization and reversal requests for Purchase of Goods or Services with Cash Back transactions. The Purchase of Goods or Services with Cash Back service is automatically associated with all Debit Mastercard and Maestro account ranges.

Issuers will continue to approve or decline Purchase of Goods or Services with Cash Back transactions at their discretion.

### Terminal Support Indicator

The Dual Message Authorization System allows acquirers to indicate whether the merchant terminal supports receipt of the purchase amount only approval response code in an authorization message.

The Authorization Request/0100 message must contain DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), value 09 (Purchase with Cash Back) and DE 48 (Additional Data: Private Use), subelement 61 (POS Data, Extended Condition Codes), subfield 2 (Purchase Amount Only Terminal Support Indicator), value 1 (Merchant terminal supports receipt of purchase-only approval).

For more information, refer to the [Transaction Processing Rules](#).

## Authorization Request/0100: Purchase of Goods or Services with Cash Back

Following is a list of the data elements and values applicable to this message type. All mandatory Authorization Request/0100 data elements apply.

### Data elements

## Issuer Response Options

Issuers have several options in how they respond to a Purchase of Goods or Services with Cash Back request.

When the issuer receives an Authorization Request 0100/message containing DE 48 (Additional Data: Private Use), subelement 61 (POS Data, Extended Condition Codes), subfield 2 (Purchase Amount Only Terminal Support Indicator), value 1 (Merchant terminal supports receipt of purchase only approvals), the issuer has the option to:

- Approve the entire transaction amount
- Decline the entire transaction amount
- Respond with a purchase amount only approval

The issuer must approve the entire purchase amount. Partial approval (DE 39, value 10) of the purchase amount is not allowed.

The following table describes the information that the issuer must provide in the Authorization Request Response/0110 message when responding with a purchase-only approval and the information that the acquirer will receive for a purchase-only approval.

## Issuer Response Options

| The Issuer must provide...                                                                                                                                                                                                                                                                                                                                                                                                                                           | The Acquirer will receive...                                                                                                                                                                                                                                                                                       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| the approved amount (purchase amount) in DE 6 (Amount, Cardholder Billing) in the issuer's cardholder billing currency. This amount must be the purchase amount as calculated by subtracting the DE 54 (Additional Amounts) cash back amount and, if applicable, the DE 28 (Amount, Transaction Fee) from the DE 6 amount present in the Authorization Request/0100 message in the amount data element that corresponds to the issuer's cardholder billing currency. | the purchase-only approval amount in the acquirer's transaction currency in DE 4                                                                                                                                                                                                                                   |

| DE 39 value 87 (Purchase only, no cash back allowed)                                                                                                                                                                                                                                                                                                                                                                                                                 | DE 39, value 87                                                                                                                                                                                                                                                                                                    |
| DE 51 (Currency Code, Cardholder Billing) with the issuer's cardholder billing currency code                                                                                                                                                                                                                                                                                                                                                                         | an occurrence of the original amount of the transaction in DE 54 (Additional Amounts) in the acquirer's transaction currency. The original amount is identified by DE 54, subfield 2 (Amount Type), value 57 (Original Amount), and subfield 4 (Debit or Credit Indicator), value C plus 12-digit original amount. |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | an occurrence of the original amount of the transaction in DE 54 in the issuer's cardholder billing currency. The original amount is identified by DE 54, subfield 2, value 57, and subfield 4, value C plus 12-digit original amount.                                                                             |

**NOTE: Issuers responding with DE 39, value 87 will not be required to echo DE 4 (Amount, Transaction) in the Authorization Request Response/0110. Likewise, if DE 5 (Amount, Settlement) was present in the Authorization Request/0100 message to the issuer, the issuer will not be required to echo DE 5 in the Authorization Request Response/0110 when responding with DE 39, value 87. The issuer will provide the purchase-only approval amount in DE 6 and the issuer currency code in DE 51.**

## Reversal Request/0400

In some cases, the cardholder or merchant may elect not to complete the transaction after receiving the purchase-only approval response from the issuer. Mastercard supports full reversal messages to allow the merchant to cancel the transaction.

In addition to all other applicable data elements for the Reversal Request/0400 message, acquirers should submit Reversal Request/0400 messages with the following data elements for a reversal of a purchase-only approval:

- Purchase-only approval amount in DE 4 that was present in the Authorization Request Response/0110 message to the acquirer, not the original amount present in DE 4 of the Authorization Request/0100 message from the acquirer
- DE 39, value 87

The Dual Message Authorization System will perform currency conversion if appropriate and will provide the following data elements in the Reversal Request/0400 message to the issuer:

- Purchase-only approval amount in DE 4 in the acquirer's transaction currency
- Purchase-only approval amount in DE 5 in U.S. dollars if the issuer has opted to receive this data element in the message
- Purchase-only approval amount in DE 6 in the issuer's cardholder billing currency
- DE 39, value 87

When processing a Reversal Request/0400 for a purchase-only approval (DE 39, value 87), the issuer should increase the cardholder's open-to-buy.

## Reversal Advice/0420

If the Dual Message Authorization System generates a Reversal Advice/0420 message after the issuer has responded to the Authorization Request Response/0110 message with DE 39, value 87, the Dual Message Authorization System will provide the following data elements.

- Purchase-only approval amount in the acquirer's transaction currency in DE 4
- Purchase-only approval amount in DE 5 in U.S. dollars, if the issuer has opted to receive this data element in the message
- Purchase-only approval amount in DE 6 in the issuer's cardholder billing currency
- DE 39, value 87
- Original amount in DE 54 in the issuer's cardholder billing currency and acquirer's transaction currency

When processing a Reversal Advice/0420 for a purchase-only approval (DE 39, value 87), the issuer should increase the cardholder's open-to-buy.

## Authorization Advice/0120

In addition to the standard data elements that are part of the system-generated Authorization Advice/0120 message, these messages should include the following data elements for purchase-only approvals.

- Purchase-only approval amount in DE 4 in the acquirer's transaction currency
- Purchase-only approval amount in DE 5 in the settlement currency (US dollars)
- Purchase only-approval amount in DE 6 in the issuer's cardholder billing currency
- DE 39, value 87 as provided by the issuer or Stand-In in the Authorization Request Response/0110
- Original amount in DE 54 in the issuer's cardholder billing currency and acquirer's transaction currency

## Authorization Advice/0120: acquirer-generated

DE 39, value 87 is not a valid value for Authorization Advice/0120: acquirer-generated messages. If an Authorization Advice/0120: acquirer-generated message contains DE 39, value

87, the Dual Message Authorization System will generate an Authorization Advice Response/0130 message where DE 39 contains value 30 and DE 44 contains value 039.

## Alternate Processing

The Mastercard Network will invoke Stand-In Authorization or X-code Processing in accordance with issuer parameters and Mastercard rules and may subsequently approve the transaction for the following situations:

- If a format error is detected on incoming Authorization Request Response/0110 messages for all brands, regardless of the response code provided by the issuer in DE 39 or response code is invalid.
- If the issuer responds to an Authorization Request/0100 message with an Authorization Request Response/0110 message with one of the following values in DE 39 (Response Code) that indicates a system error, the transaction was unable to route, or the issuer is unavailable:
  - DE 39, value of 91 (Destination processor [customer or *INF*] not available)
  - DE 39, value of 92 (Authorization system or issuer system inoperative)
  - DE 39, value of 96 (System error)
- The Authorization Request/0100 message to the issuer times out or the issuer is marked down.

Issuers have the option to choose whether Purchase with Cash Back (PWCB) transactions are eligible for processing by Stand-In Authorization. An issuer may choose to allow PWCB for only PIN-based transactions, only Signature-based transactions, or allow both PIN and signature-based transactions be processed by Stand-In Authorization.

Mastercard provides issuers with parameters to define whether or not a Purchase With Cash Back transaction should be forwarded to Stand-In Authorization for processing. For a transaction to qualify for the PIN-based category, PIN Data will have to be present in the Authorization Request/0100 message. If PIN Data was not present in the incoming message, the transactions will be categorized as a signature-based transaction.

If the issuer chooses to have PIN, Signature or both PIN and Signature Purchase With Cash Back transactions excluded from Stand-In Authorization, the Dual Message Authorization System will provide the acquirer with an Authorization Request Response/0110 message with a DE 39 Response of 91 if the issuer is not able to respond to the Authorization Request/0100 message.

If the issuer chooses to process PIN, Signature or both PIN and Signature Purchase with Cash Back transactions in Stand-In, Stand-In Authorization may provide the purchase-only amount response DE 39, value 87 when the Authorization Request/0100 message contains DE 3, subfield 1, value 09, and DE 48, subelement 61, subfield 2 contains value 1 and the cash back transaction limit or the cash accumulation limits have been exceeded but the purchase limits have not.

Purchase with Cash Back transactions will not be processed with X-Code Processing.

For more information, refer to the [Stand-In Authorization Reference Guide](#).

## Dual Message Authorization System Edits

The Dual Message Authorization System will perform the following edits on Purchase of Goods or Services with Cash Back transactions.

### Authorization Request/0100

| WHEN...                                                            | THEN the Dual Message Authorization System... |
|--------------------------------------------------------------------|-----------------------------------------------|
| DE 54, subfield 2 with the value 40 and DE 3, subfield 1 is not 09 | DE 39 = 30<br>DE 44 = 003                     |

If the Authorization Request/0100 message passes all Dual Message Authorization System edits, the Dual Message Authorization System will forward the Authorization Request/0100 message to the issuer.

**NOTE: Acquirers should send only one occurrence of DE 54, subfields 1–4 in Authorization Request/0100 and Reversal Request/0400 messages.**

### Authorization Request Response/0110

The Dual Message Authorization System will perform the following edits on the Authorization Request Response/0110 message when the issuer has provided DE 39 with value 87.

The Dual Message Authorization System will provide two additional occurrences of DE 54, subfields 1–4 in the Authorization Request/0100 message to the issuer; one in the acquirer's transaction currency and one in the issuer's cardholder billing currency. This additional occurrence will be appended to the end of DE 54 before sending to the issuer.

If the issuer provides DE 54, subfield 2 with the value 40 in the Authorization Request Response/0110 message, Mastercard will not forward the cash back amount to the acquirer in the Authorization Request Response/0110 message.

## Intracountry cash back transactions

For country-specific rule information, refer to the [Transaction Processing Rules](#) guide.

## Real-time Substantiation

The Real-time Substantiation (formerly referred to as Auto Substantiation) service supports substantiation at the point-of-sale (POS) for qualified expenses incurred on Flexible Spending Account (FSA), Healthcare Reimbursement Arrangement (HRA), or Health Savings Accounts (HSA) cards when used at a merchant with a qualifying Inventory Information Approval System (IIAS).

**NOTE: Applies only to the U.S. region.**

## Background

Internal Revenue Service Notice 2006-69 requires flexible spending account plan administrators to block card transactions occurring at non-medical MCCs (for example, grocery stores, discount stores, wholesale clubs), unless the merchant has implemented an Inventory Information Approval System (IIAS).

If FSA/HRA/HSA plan administrators allowed a transaction to be approved that contained non-verified and non-eligible merchandise, they run the risk of having their entire plan disqualified by the IRS. All grocery stores, discount stores, and online pharmacies that accept FSA debit cards must reference an IIAS at the point of sale.

Internal Revenue Service Notice 2006-69 also requires strict recordkeeping of IIAS-processed transactions. Health plan sponsors and administrators must negotiate agreements with merchants for the merchant to maintain the transaction amount, date the expense was incurred, and nature of the expense, and make this information accessible upon request, or alternatively send the information to the employer, administrator, or other applicable entity.

Affected acquirers are responsible for determining which merchants are IIAS-compliant, as defined by SIGIS.

## Merchant validation for real-time substantiated transactions

The Dual Message Authorization System performs a real-time authorization check to ensure that an Authorization Request/0100 message is from an IIAS-compliant merchant.

The Dual Message Authorization System identifies whether a transaction submitted as real-time substantiated is coming from a SIGIS (Special Interest Group for IIAS Standards)-compliant merchant. The Internal Revenue Service (IRS) placed additional requirements on merchants that do not use a healthcare acceptor business code (MCC) to accept healthcare cards requiring transaction substantiation.

### IIAS-compliant merchants

Mastercard supports the issuance of Mastercard Assigned IDs for merchants.

To indicate an IIAS-compliant merchant, acquirers must provide DE 48 (Additional Data: Private Use), subelement 32 (Mastercard Assigned ID) in Authorization Request/0100, Authorization Advice/0120, and Reversal Request/0400 messages when the transaction is indicated as real-time substantiated (DE 48, subelement 61 [POS Data Extended Condition Codes], position 3 contains value 1).

To obtain Mastercard Assigned IDs for IIAS merchant validation, acquirers should send an email message to [sigis\\_merchant\\_setup@Mastercard.com](mailto:sigis_merchant_setup@Mastercard.com). The request should specify if it is an addition or update of the Mastercard Assigned ID, and at a minimum include the acquirer name, telephone number, email address, acquirer ID, processor ID, merchant parent/owner name (if applicable), Mastercard Assigned ID (if the request is for an update to the existing Mastercard Assigned ID), and merchant contact information.

Acquirers with existing Mastercard Assigned IDs for their merchants should continue to use those values, but must notify Mastercard that those merchants are SIGIS compliant.

### Non-IIAS compliant merchants

To indicate to issuers participating in real-time substantiation that the transaction was submitted as IIAS, but from a non-IIAS compliant merchant, Mastercard will define DE 48, subelement 61 (POS Data, Extended Condition Codes), subfield 3 (Real-time Substantiation Indicator) as value 4 (Transaction was submitted as real-time substantiated but from a non-IIAS certified merchant).

If the issuer is not participating in real-time substantiation, the original value of 1 (Merchant terminal verified the purchased items against the IIAS) is changed to value 0 (Merchant terminal did not verify the purchased items against the IIAS).

### 90% rule Merchant exemption

If the merchant generated 90 percent of its total sales from FSA/HSA/HRA-certified healthcare products in the previous fiscal year, that merchant is exempt from IIAS rules.

To indicate that the merchant is exempt from the IIAS rule based on the 90% rule, the acquirer must provide DE 48, subelement 61 (POS Data Extended Condition Codes), subfield 3 (Real-time Substantiation Indicator), value 2 (Merchant claims exemption from using an IIAS based on the IRS 90 percent rule) in Authorization Request/0100, Authorization Advice/0120, and Reversal Request/0400 messages.

## Merchant terminal verification

Mastercard defines DE 48 (Additional Data: Private Use), subelement 61 (POS Data, Extended Condition Codes), subfield 3 (Real-time Substantiation Indicator) for use in the Authorization Request/0100 message to allow merchants to indicate whether the merchant terminal verified the purchased items against an IIAS.

For accurate processing of IIAS real-time substantiated transactions, Mastercard recommends that issuers validate the acceptor business code (MCC) (DE 18) and Real-time Substantiation Indicator (DE 48, subelement 61, subfield 3).

When the merchant terminal has verified the purchased items against an IIAS, the acquirer should populate the Authorization Request/0100 message with DE 48, subelement 61 and the following subfield values:

- Subfield 1 (Partial Approval Terminal Support Indicator) and subfield 2 (Purchase Amount Only Terminal Support Indicator) must contain values of zero (0) or 1
- Subfield 3 must contain a value of 1
- Subfields 4 and 5 are reserved for future use and must contain values of zero (0)

Acquirers do not receive DE 48, subelement 61 in the Authorization Request Response/0110 message.

When an acquirer creates an Authorization Advice/0120 message to advise the issuer of an approved authorization performed by the acquirer, DE 48, subelement 61 should be present if it was present in the original Authorization Request/0100 message.

## Real-time substantiation amounts

Mastercard supports the processing of real-time substantiation transactions with an indicator to specify healthcare transactions with the healthcare amount type values 10 (Healthcare Eligibility Amount), 11 (Prescription Eligibility Amount), and 12 (Vision Rx Eligibility Amount) in DE 54 (Additional Amounts), subfield 2 (Amount Type).

### Healthcare Eligibility Amount

When the acquirer provides the real-time substantiation indicator in DE 48 (Additional Data: Private Use), subelement 61 (POS Data Extended Condition Codes), subfield 3 (Real-time Substantiation Indicator), amount type 10 (Healthcare Eligibility Amount) allows the acquirer to indicate the portion of DE 4 (Amount, Transaction) that is eligible for real-time substantiation.

## Prescription Eligibility Amount

In addition to the Healthcare Eligibility Amount, Mastercard supports DE 54, subfield 2, value 11 (Prescription Eligibility Amount), which allows the acquirer to indicate the portion of the healthcare eligibility amount that includes the amount spent for prescriptions.

Subfield 2, value 11 must only be present when the acquirer provides subfield 2, value 10 in the Authorization Request/0100 or the Authorization Advice/0120 message. In addition, the amount in subfield 2, value 11 must be less than or equal to the amount of subfield 2, value 10.

DE 54 occurrences with subfield 2, values 10 and 11 are not returned to the acquirer in the Authorization Request Response/0110 message or the Authorization Advice Response/0130 message.

## Vision Rx Eligibility Amount (for U.S. region healthcare customers only)

U.S. region healthcare customers may use value 12 (Vision Rx Eligibility Amount) to indicate the portion of the transaction amount that is spent for vision prescriptions (Rx).

DE 54, subfield 2, value 12 can be provided by itself in the Authorization Request/0100 or the Authorization Advice/0120 messages or in combination with value 10 or values 10 and 11.

## Examples

Examples of Real-time Substantiation transaction processing are listed in table format.

Because Real-time Substantiation transactions can be used in combination with partial approvals, when the issuer receives an Authorization Request/0100 message containing DE 48, subelement 61, subfield 1, value 1, the issuer has the option to:

- Approve the entire transaction amount.
- Decline the entire transaction amount.
- Respond with a partial approval.
- For the issuer to respond with a partial approval, DE 48, subelement 61, subfield 1 must contain a value of 1; otherwise, the issuer must approve or decline the entire transaction amount.
- Partial approvals are not valid for Authorization Advice/0120 messages and will be rejected with a format error.

### Example 1: partial approval: entire Healthcare Eligibility Amount

This example illustrates that the issuer approved the entire Healthcare Eligibility Amount, which in this case is a partial approval of the total transaction amount. In this scenario, the merchant would ask the cardholder to use another form of payment for the remaining USD 60 or remove some items from the purchase.

|                                                                                                                                                                                                                                      |  | To Acquirer                                                                                                                                          |
| <ul style="list-style-type: none"> <li>DE 48, subelement 61 = 10100 (indicates terminal can handle partial approvals and has verified against IIAS)</li> <li>DE 4 = USD 100</li> <li>DE 54, subfield 2, value 10 = USD 40</li> </ul> |  | <ul style="list-style-type: none"> <li>DE 6 = USD 40</li> <li>DE 39 = 10</li> </ul>                                                                  |
|                                                                                                                                                                                                                                      |  | <ul style="list-style-type: none"> <li>DE 4 = USD 40</li> <li>DE 54, subfield 2, value 57 (Original Amount) = USD 100</li> <li>DE 39 = 10</li> </ul> |

### Example 2: partial approval: partial Healthcare Eligibility amount

This example illustrates that the issuer approved only a portion of the Healthcare Eligibility Amount, which in this case is a partial approval of the total transaction amount. In this scenario, the merchant would ask the cardholder to use another form of payment for the remaining USD 80 or remove some items from the purchase.

| Authorization Request/0100                                                                                                                           |  | Authorization Request Response/<br>0110                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------|--|------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                                      |  |                                                                                                                                    |
|                                                                                                                                                      |  | From Issuer                                                                                                                        |
|                                                                                                                                                      |  | To Acquirer                                                                                                                        |
| <ul style="list-style-type: none"> <li>DE 48, subelement 61 = 10100</li> <li>DE 4 = USD 100</li> <li>DE 54, subfield 2, value 10 = USD 40</li> </ul> |  | <ul style="list-style-type: none"> <li>DE 6 = USD 20</li> <li>DE 39 = 10</li> </ul>                                                |
|                                                                                                                                                      |  | <ul style="list-style-type: none"> <li>DE 4 = USD 20</li> <li>DE 54, subfield 2, value 57 = USD 100</li> <li>DE 39 = 10</li> </ul> |

### Example 3: full approval: entire Healthcare Eligibility Amount

In this example, the merchant terminal is indicating that they do not support partial approvals; therefore, a full approval or decline is required. The issuer approves the full transaction; thereby approving the entire Healthcare Eligibility Amount.

| Authorization Request/0100 |  | Authorization Request Response/<br>0110 |
|----------------------------|--|-----------------------------------------|
|                            |  |                                         |
|                            |  | From Issuer                             |
|                            |  | To Acquirer                             |

| Authorization Request/0100                                                                                                                            | Authorization Request Response/<br>0110                                              |                                                                                                                                                                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>DE 48, subelement 61 = 00100</li> <li>DE 4 = USD 100</li> <li>DE 54, subfield 2, value 10 = USD 100</li> </ul> | <ul style="list-style-type: none"> <li>DE 4 = USD 100</li> <li>DE 39 = 00</li> </ul> | <ul style="list-style-type: none"> <li>DE 4 = USD 100</li> <li>DE 39 = 00</li> </ul> <p>No DE 54, subfield 2, value 57 (Original Amount) is provided in this scenario because the issuer responded with DE 39 = 00</p> |

#### Example 4: partial approval: partial Healthcare Eligibility Amount, including prescriptions

This example illustrates that the issuer approved only a portion of the Healthcare and Prescription Eligibility amounts. In this scenario, the merchant would ask the cardholder to use another form of payment for the remaining USD 80 or remove some items from the purchase.

| Authorization Request/0100                                                                                                                                                                         | Authorization Request Response/<br>0110                                             |                                                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                                                                                    | From Issuer                                                                         | To Acquirer                                                                                                                        |
| <ul style="list-style-type: none"> <li>DE 48, subelement 61 = 10100</li> <li>DE 4 = USD 100</li> <li>DE 54, subfield 2, value 10 = USD 40</li> <li>DE 54, subfield 2, value 11 = USD 30</li> </ul> | <ul style="list-style-type: none"> <li>DE 6 = USD 20</li> <li>DE 39 = 10</li> </ul> | <ul style="list-style-type: none"> <li>DE 4 = USD 20</li> <li>DE 54, subfield 2, value 57 = USD 100</li> <li>DE 39 = 10</li> </ul> |

#### Example 5: full approval: entire Healthcare Eligibility Amount, including prescriptions

In this example, the merchant terminal is indicating that they do not support partial approvals; therefore, a full approval or decline is required. The issuer approves the full transaction; thereby approving the entire Healthcare Eligibility Amount, including the Prescription Eligibility Amount.

| Authorization Request/0100 | Authorization Request Response/<br>0110 |             |
|----------------------------|-----------------------------------------|-------------|
|                            | From Issuer                             | To Acquirer |

## Authorization reports

The Authorization Parameter Summary Report (SI737010-AA) includes a Real-time Substantiation participant parameter in the [Global Parameters](#) section.

For a sample of this report and field descriptions, refer to [Reports and files](#).

## Recurring payments

Recurring payments are applicable to the following systems and products.

- Dual Message Authorization System: acquirers
- Dual Message Authorization System: issuers
- Product: Credit, Prepaid and Debit Mastercard

Mastercard supports recurring payment functionality and has defined additional message elements to allow more recurring payment information to be communicated between the acquirer and the issuer.

### Definition

Recurring payments are payments by an issuer to an acquirer on behalf of a cardholder who authorizes a merchant to bill the cardholder's account on a continued, periodic basis (such as monthly, quarterly, or annually) without a specified end date. The amount of each payment may be the same or may fluctuate.

Typical recurring payment merchants include, but are not limited to:

- Newspaper and magazine subscriptions
- Insurance Companies
- Utilities
- Internet Service Providers
- Club memberships
- Charities

For more information, refer to [Transaction Processing Rules](#).

## Indicating a recurring payment

Acquirers can indicate to issuers that a transaction is a recurring payment by including in DE 61 (Point-of-Service [POS] Data), subfield 4 (POS Cardholder Presence).

1. For the first transaction of a recurring payment series, which occurs when the cardholder authorizes the merchant to store a payment credential on file and use the payment credential for future recurring payments, a value of one of the following:
  - 0 (Cardholder present)
  - 4 (Recurring transactions) if the first transaction occurs in a card-not-present environment, such as on a merchant website
2. For any subsequent recurring payment transaction, a value of 4 (Recurring transactions)

For Intra-EEA Transactions and Intracountry transactions in the EEA, the initial authorization in a recurring payment arrangement must be identified as a recurring payment using the appropriate values in the fields specified by the registered switch of the customer's choice.

**NOTE: All recurring payment transactions which follow the first transaction where the cardholder authorizes the merchant to store their credential must be identified as credential-on-file. Such transactions must follow all credential-on-file requirements.**

For more information about determining the status of the cardholder account, refer to the [Purchase Account Status Inquiry/Recurring Payment Account Status Inquiry](#) section.

## Maestro Recurring Payments Program

The Maestro® Recurring Payments Program allows enrolled merchants to begin accepting Maestro cards for recurring payment electronic commerce (e-commerce) transactions. The initial transaction of a recurring payment arrangement may be completed face-to-face, with the subsequent transactions being submitted as standard non-face-to-face recurring payment transactions.

Maestro recurring payment e-commerce transactions are identified in Authorization Request/0100, Authorization Advice/0120: Acquirer-generated, and Reversal Request/0400: acquirer-generated messages by DE 48 (Additional Data: Private Use), subelement 42 (Electronic Commerce Indicators), subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection Indicator), position 3 (UCAF Collection Indicator), value 3 (UCAF data collection is supported by the merchant, and UCAF (Mastercard Assigned Static AAV). In addition, DE 61 (Point-of-Service [POS] Data), subfield 4 (POS Cardholder Presence), value 4 (Recurring transactions) identifies Maestro e-commerce recurring payment transactions.

If the first transaction of a recurring payment arrangement is completed face-to-face, it must be identified as a face-to-face transaction and must not contain the recurring payment indicator in DE 61, subfield 4.

Issuers must not validate DE 48, subelement 43 (Universal Cardholder Authentication Field™), as that validation is performed during authorization processing.

DE 48, subelement 32 (Mastercard Assigned ID) must be present, and the Dual Message Authorization System edits DE 48, subelement 32 and subelement 43 (Static AAV) for valid values.

### Alternate processing

The Mastercard® Identity Check™ AAV Verification Service and Mastercard® Identity Check™ AAV Verification in Stand-In Authorization service will not be performed on Maestro e-commerce transactions that are processed under the Maestro Recurring Payments Program for e-commerce transactions.

## Refund transactions

A refund transaction allows a cardholder to return goods or services previously purchased from a merchant. The Dual Message Authorization System accepts refund transactions for Mastercard® and Maestro® transactions, in addition to Private Label transactions.

An acquirer sends an Authorization Request/0100 message with DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code) containing value 20xx00 for the refund (where xx indicates the type of account to be credited). The issuer approves or declines the refund transaction using an Authorization Request Response/0110 message.

The refund Authorization Request/0100 message can be reversed using a Reversal Request/0400 message, if the merchant or cardholder decides not to complete the refund.

All refund transactions are routed to the same issuer host as for point-of-service (POS) transactions.

Refund transactions are not processed by the Stand-In Authorization or X-Code alternate processing.

- If the issuer is not available to respond to a refund Authorization Request/0100 message, the Dual Message Authorization System sends an Authorization Request Response/0110 message to the acquirer with DE 39 (Response Code), value 91 (Authorization System or Issuer System Inoperative).
- If the issuer is not available to respond to a refund Reversal Request/0400 message, the Dual Message Authorization System sends a Reversal Request Response/0410 message to the acquirer with DE 39, value 00 (Approved or completed successfully). The Dual Message Authorization System also sends a Reversal Advice/0420 message to the issuer as notification of the reversal that was responded to on their behalf.

## Reversal Processing

Mastercard supports the reversal of a full transaction amount or a partial transaction amount using reversal processing.

### Guiding principles for Authorization Reversal Processing

Mastercard provides the following update to its best practices for the management of authorization reversals. These best practices are intended to guide dual message acquirers, issuers, and processors in the usage of these transactions.

#### Background

Merchant-initiated authorization reversal messages are intended to assist issuers in managing "open-to-buy." This processing function is especially critical to debit and prepaid card issuers. Merchants and acquirers submit authorization reversal messages when:

- The final transaction amount was less than the authorized amount
- The cardholder cancels or chooses not to complete all or part of the transaction
- All or a portion of the goods or services could not be provided (for example, out-of-stock items)
- The authorization was submitted in error (for example, duplicate request or technical failures)

#### Guiding principles

The following is provided as guidance for reversal processing. Note that unless otherwise specified, these are best practices and are not mandatory:

- Authorization reversal messages are intended to fully or partially release a hold of funds prior to clearing the transaction.
- Purchase returns (or refunds) may be submitted by the merchant for authorization. If the merchant or cardholder wishes to cancel the transaction, the merchant should initiate a full reversal.
- Mastercard recommends that merchants submit reversals as soon as an adjustment to the original authorization amount is known. Only approved authorization requests or transactions that have timed out are required to be reversed.
  - Merchants and acquirers must submit a full or partial reversal (as applicable) within seven calendar days of an original undefined authorization or final authorization request and within 30 calendar days of an original preauthorization request.
  - Merchants and acquirers must submit a full or partial reversal within 24 hours of transaction cancellation or of the transaction completing for an amount different from the authorized amount.

**NOTE:** Refer to the [Incremental Preauthorization](#) section in this chapter of this manual for more information about revised Standards for authorizations and preauthorizations.

- Reversals must contain the mandatory matching data elements from the original authorization for an issuer to release the appropriate funds, subject to the issuer's risk or fraud control policies.

## Specific Scenarios

Specific Scenarios are described as follows:

- If an incremental authorization has been submitted, a reversal should reference original transaction data, including the original Trace ID, and DE 4 (Amount, Transaction) should be the sum of the original authorized amount plus any incremental amounts.
- Issuers will release any hold of funds once a clearing presentment has been matched (using the Trace ID in addition to other data elements) to the original authorization. Accordingly, a merchant is not required to submit a partial reversal if the lower amount is processed by Mastercard clearing within 24 hours of finalization of the transaction—assuming multi-clearing processing is not utilized.
- Partial reversals must be used when multi-clearing processing is utilized, since issuers will maintain a hold of funds for subsequent presentments.

## Reversal Message Data Element Details

As follows are details about reversal messaging data elements:

- Mandatory Reversal Request/0400 data elements used for issuer matching, which must contain the same value from the original Authorization 0100/0110 message:
  - DE 2 (Primary Account Number [PAN])
  - DE 3 (Processing Code)
  - DE 4 (Amount, Transaction)
  - DE 38 (Authorization ID Response)
  - DE 48, subelement 63 (Trace ID) (from original DE 15 [Date, Settlement] and DE 63 [Network Data])
  - DE 49 (Currency Code, Transaction)
  - DE 90 (Original Data Elements) (from original DE 7 [Transmission Date and Time], DE 11 [System Trace Audit Number (STAN)], and DE 32 [Acquiring Institution ID Code] and DE 33 [Forwarding Institution ID Code])

Reversals submitted for technical failures (DE 39 reversal reason code 06—Error) will not contain DE 38 (Authorization ID) or DE 48, subelement 63 (Trace ID), because no Authorization Request Response/0110 message was received. If Trace ID data from the original authorization is not available due to technical failures, DE 48, subelement 63 in the reversal must contain zeros.

DE 90, subfield 1 must contain the Message Type Identifier (MTI) of the original authorization message. The remaining subfields may contain valid matching values from the original authorization or may be zero-filled if they are not available.

- Mandatory Reversal Request/0400 message data elements that may use default values consistent with the merchant initiating the reversal, unless supplied directly from the merchant point-of-interaction (POI) (for example, merchants with multiple acceptor business codes [MCCs]):
  - DE 18 (Merchant Type)
  - DE 22 (Point-of-Service [POS] Entry Mode)
  - DE 32 (Acquiring Institution ID Code) and DE 33 (Forwarding Institution ID Code) by using default values consistent with the merchant, DE 32 and DE 33 will be the same values as in the original 0100 message
  - DE 39 (Response Code)
  - DE 41 (Acceptor Terminal ID)
  - DE 42 (Acceptor ID)
  - DE 43 (Acceptor Name and Location)
  - DE 61 (Point-of-Service [POS] Data)

Mastercard recommends that DE 39 (Response Code) be populated with one of the following Reversal Request/0400 reason codes:

- 06 is Error
- 17 is Customer Cancellation
- 32 is Partial Reversal
- 34 is Suspect Fraud
- 68 is Response Received Late
- Minimum list of original Authorization 0100/0110 data elements to be saved for submitting a Reversal Request/0400 message:
  - DE 2 (Primary Account Number [PAN])
  - DE 3 (Processing Code)
  - DE 4 (Amount, Transaction)
  - DE 7 (Transmission Date and Time)
  - DE 11 (System Trace Audit Number [STAN])
  - DE 15 (Date, Settlement)
  - DE 38 (Authorization ID Response)
  - DE 49 (Currency Code, Transaction)
  - DE 63 (Network Data)

**NOTE:**

**DE 15, DE 38, and DE 63 will only be available if an approved authorization response was received.**

**If DE 7 and DE 11 from the original authorization cannot be saved, DE 90, subelements 2 and 3 may be zero-filled within the Reversal Request/0400 message.**

- Optional/Conditional data elements that must contain the same value from the original Authorization 0100 if included in the Reversal Request/0400 message:
  - DE 12 (Time, Local Transaction)
  - DE 13 (Date, Local Transaction)

- DE 14 (Date, Expiration)
- DE 23 (Card Sequence Number)
- DE 28 (Amount, Transaction Fee)
- DE 37 (Retrieval Reference Number)
- DE 54 (Additional Amounts)

## Partial Reversals

The Dual Message Authorization System supports partial reversal functionality using the Reversal/04xx messages.

Partial reversal functionality is useful in adjusting a portion of the original authorization amount in the following scenarios:

- A merchant ships only a portion of merchandise.
- A cardholder returns a rental vehicle earlier than originally reserved.
- A cardholder checks out of a hotel earlier than originally reserved.
- A cardholder cancels a portion of the transaction.

Mastercard supports Reversal Request/0400 and Reversal Advice/0420 messages where DE 95 (Replacement Amounts), subfield 1 (Actual Amount, Transaction) contains a value other than all zeros. DE 95, subfield 1, in the originating reversal, must be a lesser amount than the amount in DE 4 (Amount, Transaction).

Refer to the [Chargeback Guide](#) for rules related to partial reversal functionality.

## Reversals of Balance Inquiry Transactions

Mastercard supports Reversal Request/0400 and Reversal Advice/0420 messages containing DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), value 30 (Balance Inquiry). In inquiry transactions, DE 4 must contain a value of all zeros unless an ATM transaction fee DE 28 (Amount, Transaction Fee) has been applied by an acquirer for an ATM transaction in a country where of an ATM transaction fee is allowed.

## Reversals of Purchase of Goods or Services with Cash Back Transactions

Mastercard provides DE 54 (Additional Amounts), subfield 2 (Amount Type), value 40 (Amount Cash Back) to issuers in the Reversal Request/0400 message if DE 54, subfield 2, value 40 was contained in the Reversal Request/0400 message from the acquirer. Acquirers provide DE 4 (Amount, Transaction) in the Reversal Request/0400 message for the full, original amount of the Authorization Request/0100 message. With Purchase of Goods and Services with Cash Back transactions, DE 4 contains the cash back amount, as defined in DE 54.

As with Authorization Request/0100 message processing, the Dual Message Authorization System edits Reversal Request/0400 messages when DE 54, subfield 2, value 40 is present. In this case, the Dual Message Authorization System checks to ensure that DE 3 (Processing

Code), subfield 1 (Cardholder Transaction Type Code) contains value 09 (Purchase with Cash Back).

If DE 54, subfield 2, value 40 is not present, the Dual Message Authorization System performs an additional check to ensure that the Reversal Request/0400 message contains DE 39 (Response Code), value 87 (Purchase only, no cash back allowed).

When an acquirer submits a full or partial reversal for a Purchase Amount Only approval where DE 39 (Response Code) of the Authorization Request Response/0110 message contains value 87, Mastercard recommends that the acquirer not send DE 54 in the reversal message. If the acquirer intends the Reversal Request/0400 message as a partial reversal, DE 95 (Replacement Amounts) will also be present, containing the adjusted amount of the original authorization.

DE 54, subfield 2, value 40 is the only instance of DE 54 that Mastercard will forward to issuers in a Reversal Request/0400 message. All other instances of DE 54 will be removed from the Reversal Request/0400 message before forwarding the message to the issuer.

DE 54, subfield 2, value 40 also may be included in the Reversal Advice/0420 message.

Alternate Processing

While no Stand-In Authorization processing tests will be applied to the Reversal Request/0400 message, the Dual Message Authorization System supports alternate processing of Reversal Request/0400 and Reversal Request Response/0410 messages when the issuer is unable or unavailable to respond to the Reversal Request/0400 message.

The Dual Message Authorization System will perform the following processing when an issuer is unable or is unavailable to respond to the Reversal Request/0400 message:

**NOTE: Customers in the Europe region that route to an alternate issuer host for alternate processing instead of Stand-In, will still receive an Authorization Advice/0120: acquirer-generated as described here. Alternate issuer host processing does not send Reversal Request/0400 or Authorization Advice/0120 messages to the alternate host.**

## Dual Message Authorization System Edits

The Dual Message Authorization System performs the following edits on reversal transaction processing.

### Reversal Request/0400

The Dual Message Authorization System will perform the following edits on the Reversal Request/0400 message as it relates to DE 95 (Replacement Amounts) and partial reversals.

#### Associated edits

## Full Reversals

The Dual Message Authorization System supports full reversal functionality using the Reversal 04xx messages.

Full reversal functionality may be used for, but is not limited to, the following scenarios:

- Acquirer cannot deliver a response message 0110 or 0410 to the merchant
- Acquirer cannot match the response message 0110 or 0410 to the original request
- The authorization response message received contains errors
- The authorization response message was received too late

## Visa transaction processing

The Mastercard Dual Message Authorization System allows acquirers to process Visa transactions via the Mastercard Network. It supports both transactions that qualify for the Visa Custom Payment Service Request and transactions that do not.

## Issuer options

Issuers may choose to accept Visa activity using their connection to the Mastercard Network. This connection is called peer-to-peer. If the issuer is not peer-to-peer, Mastercard routes authorization requests to the Visa network.

## Custom Payment Service Request transactions

For Visa transactions that indicate Custom Payment Service Request, Mastercard routes the authorization request to the Visa network.

Mastercard-acquired Custom Payment Service Request transactions have specific requirements for the Authorization Request/0100 and the Authorization Request Response/0110 messages.

For the data requirements as they apply to the authorization message formats, refer to [Data element definitions and details](#).

## Indicators

Mastercard provides support of various Visa programs using specific indicators in Authorization Request/0100 messages.

### Authorization Characteristics Indicator

Mastercard customers that acquire Visa transactions can receive valid Visa response values for the Authorization Characteristics Indicator (ACI).

Mastercard forwards the ACI value provided by Visa in DE 48 (Additional Data: Private Use), subelement 90 (Visa Custom Payment Service Request) of Authorization Request Response/0110 messages.

**Mail/telephone or electronic commerce indicator**

Visa allows acquirers to participate in its interregional interchange reimbursement fee (IRF) program in cases where the merchant and acquirer met and complied with certificate serial number requirements even though the cardholder did not.

Mastercard acquirers forwarding Visa e-commerce transactions must have the following values in Authorization Request/0100 messages.

**Data elements**

| Data Element                                  | Value                                | Description                                                                                                                                                |
|-----------------------------------------------|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DE 22, subfield 1                             | 10                                   | Credential on File<br><br><b>NOTE: Mastercard mandates support of DE 22, subfield 1, value 10 for all issuers globally.</b>                                |
| DE 22, subfield 1                             | 81                                   | PAN/Token entry via electronic commerce with optional Identity Check AAV in the UCAF field or DSRP cryptogram in the Digital Payment Data field            |
| DE 22, subfield 1                             | 82                                   | PAN Auto Entry via Server (issuer, acquirer, or third party vendor system)                                                                                 |
| DE 61, subfield 10                            | 6                                    | Electronic Commerce                                                                                                                                        |
| DE 48, subelement 40, subfield 01             | Variable binary value 1-16 positions | To indicate that the merchant is certificate-compliant                                                                                                     |
| DE 48, subelement 40, subfield 02             | Not present                          | To indicate that the cardholder is not certificate-compliant                                                                                               |
| DE 48, subelement 42, subfield 01, position 2 | 1                                    | To indicate cardholder certificate not used. For details about Visa usage for subelement 42, refer to <a href="#">Data element definitions and details</a> |
| DE 48, subelement 43, 44, 45                  |                                      | For details about Visa usage for subelements 43, 44, and 45, refer to <a href="#">Data element definitions and details</a> .                               |

### **Market-specific Data Identifier (Visa-only)**

The Visa Market-Specific Data Identifier is a value used in Visa transactions to show the market-specific data identifier. Acquirers provide the appropriate Visa market-specific data identifier in DE 48 (Additional Data: Private Use), subelement 96 (Visa Market-Specific Data Identifier).

### **Prestigious Properties Indicator**

The Prestigious Properties Indicator is a value used in Visa transactions to specify participants in the Visa Prestigious Lodging program. Acquirers provide the appropriate Visa Prestigious properties indicator in DE 48 (Additional Data: Private Use), subelement 97 (Prestigious Properties Indicator).

### **Relationship Participant Indicator**

The Relationship Participant Indicator is a value used in Visa transactions to show that merchants have had long-term relationships with a cardholder from whom they regularly collect recurring payments.

Mastercard acquirers forwarding Visa transactions with a Relationship Participant Indicator must have value R (Merchant/Cardholder Relationship) or value I (Installment Payment) in DE 48 (Additional Data: Private Use), subelement 86 (Relationship Participant Indicator [Visa Only]) of Authorization Request/0100 messages.

### **Transponder Indicator**

Cardholders may use transponders, which use radio frequency signals, to exchange identification information with cardholder-activated terminals or other point-of-interaction (POI) devices to initiate a transaction. These non-face-to-face transactions occur when the card is not present (when the transponder is the device activating the transaction).

Mastercard customers acquiring Visa transactions with a transponder must have value 7 in DE 61 (Point-of-Service [POS] Data), subfield 10 (Cardholder-Activated Terminal Level) in Authorization Request/0100 messages. This value indicates that a transponder was used to exchange authorization information.

### **U.S. Existing Debt Indicator**

When Mastercard acquirers in the U.S. region forward to Visa, through the Mastercard Network, transactions that pay an existing debt, they must indicate such in Authorization Request/0100 messages.

Acquirers must include value 9 in DE 48, subelement 85 (Visa U.S. Existing Debt Indicator) to indicate that the transaction is a payment for an existing debt.

### **Visa Payment Service Indicators**

Mastercard has modified and expanded the existing structure of DE 48 (Additional Data: Private Use), subelement 78 (Payment Service Indicators [Visa Only]) (formerly subelement 78 [Visa U.S. Deferred Billing Indicator]) to update the Data Representation from a-1 to ans-6.

In addition, Mastercard has introduced six new subfields, three of which are defined below, and an additional three for future Visa data use.

- DE 48, subelement 78, subfield 1 (Spend Qualified Indicator) in the Authorization Request/0110 message contains the Spend Qualified Indicator for Visa-branded, dual-message authorization transactions.
- DE 48, subelement 78, subfield 2 (Dynamic Currency Conversion Indicator) in the Authorization Request/0100 message contains the Dynamic Currency Conversion indicator for Visa-branded, dual-message authorization transactions.
- DE 48, subelement 78, subfield 3 (U.S. Deferred Billing Indicator) in the Authorization Request/0100 message contains the U.S. Deferred Billing indicator for Visa-branded, dual-message authorization transactions.
- DE 48, subelement 78, subfields 4-6 are reserved for future use.

The U.S. Deferred Billing Indicator is a value used by U.S. acquirers in Visa transactions to notify U.S. issuers that the transaction is being submitted to bill the cardholder for merchandise that was received within the past 90 days.

Mastercard acquirers forwarding Visa transactions with the U.S. Deferred Billing Indicator must have value D (U.S. Deferred Billing Indicator) in DE 48, subelement 78, subfield 3 in Authorization Request/0100 messages.

## Retail Key Entry program

Mastercard acquirers forwarding Visa Retail Key Entry transactions must have the following values in Authorization Request/0100 messages.

### Data elements

| Data Element                                                                        | Value         | Description                                                       |
|-------------------------------------------------------------------------------------|---------------|-------------------------------------------------------------------|
| DE 22 (Point-of-Service [POS] Entry Mode), subfield 1 (POS Terminal PAN Entry Mode) | 01            | Indicates that the card number was keyed into the POS device      |
| DE 61 (Point-of-Service [POS] Data), subfield 4 (POS Cardholder Presence)           | 0             | Indicates that the cardholder is present                          |
| DE 61, subfield 5 (POS Card Presence)                                               | 0             | Indicates that the card is present                                |
| DE 61, subfield 11 (POS Card Data Terminal Input Capability)                        | 2, 5, 7, or 8 | Indicates that the POS terminal can transmit magnetic stripe data |

**NOTE: For a transaction to be forwarded automatically to the Visa gateway, acquirers must identify transactions as Visa Custom Payment Services transactions. Meeting Retail Key Entry criteria will not force a transaction to the Visa gateway if the issuer is a Mastercard peer-to-peer participant.**

## Secure electronic commerce verification service

The Mastercard Dual Message Authorization System supports the Visa secure e-commerce verification service.

Mastercard will forward to the Visa gateway Authorization Request/0100 messages including secure e-commerce data that also contain a Visa account number in DE 2 (Primary Account Number [PAN]).

To participate, acquirers must provide all e-commerce data elements, including the data elements for the secure e-commerce verification, in Authorization Request/0100 messages.

Acquirers must use DE 48 (Additional Data: Private Use), subelement 43 (UCAF), and subelement 44 (Electronic Commerce Transaction Identifier) to send the secure e-commerce data in Authorization Request/0100 messages. If Visa responds with a Cardholder Authentication Verification Value (CAVV) Results Code, Mastercard forwards the code values to the acquirer in DE 48, subelement 45 (Electronic Commerce Transaction Response Code) of the Authorization Request Response/0110 message.

## Visa product ID

Acquirers that process Visa transactions through the Dual Message Authorization System receive DE 48 (Additional Data: Private Use), subelement 46 (Product ID) in Authorization Request Response/0110 and Reversal Request Response/0410 messages. The associated Visa field for DE 48, subelement 46 is field 62.23 (Product ID).

## Visa Commercial Card inquiry

Acquirers can inquire on Visa Commercial Cards using specific values in DE 48 (Additional Data: Private Use), subelement 94 (Visa Commercial Card inquiry request and response indicator).

## Visa Fleet Card

Mastercard supports processing of Visa Fleet Card transactions through the Dual Message Authorization System in DE 48, subelement 93 (Visa Fleet Card ID Request Data) indicator.

## Visa-assigned Merchant Verification Value

Mastercard supports the Visa mandate requiring that the Merchant Verification Value (MVV) be populated in all processing messages when an MVV has been assigned to the merchant by Visa.

Mastercard only includes the Visa-assigned MVV value on those transactions that are routed to the Visa network using the Mastercard Visa Gateway.

Acquirers of Visa-branded transactions will provide, when applicable, an alphanumeric Merchant Verification Value (MVV) in DE 48 (Additional Data: Private Use), subelement 36 (Visa Defined Data), subfield 1 in Authorization Request/0100 and Reversal Request/0400 messages. If it is provided in any other message types, the Dual Message Authorization System will remove it before sending the transaction to the Visa network.

Mastercard is not aware of which merchants are assigned an MVV by Visa, and therefore will not know which acquirers provide or not provide the MVV in a message. If present, the Mastercard Network forwards the value in the transaction to the Visa network.

The Dual Message Authorization System removes DE 48, subelement 36, subfield 1 from any transaction provided by an acquirer that is not a Visa-branded transaction.

The MVV is not provided back to the acquirer in any messages. If DE 48, subelement 36, subfield 1 is provided in any response messages, the Dual Message Authorization System will remove it before sending the message to the acquirer.

## Visa token processing

Mastercard has expanded the functionality of the Visa Gateway to support tokenization processing for partial shipments, recurring payments, and e-commerce mobile transactions for Visa-branded, dual-message authorization transactions submitted to the Mastercard Network.

These enhancements affect acquirers that use the Mastercard Network to submit Visa-branded dual-message authorization transactions.

### Tokenized Recurring Payment Messages

Acquirers must be prepared to identify tokenized recurring payment transactions in Authorization Request/0100 and Reversal Request/0400 messages.

- Existing value 4 (Standing order/recurring transactions) in DE 61 (Point-of-Service [POS] Data), subfield 4 (POS Cardholder Presence)
- Presence of DE 48 (Additional Data: Private Use), subelement 43 (Secure Electronic Commerce Verification Service) containing the partial shipment verbiage as follows: PARTIALbSHIPMENTbbbbbbbbbbbb or PARTIALSHIPMENT00000000000000 where b represents a space. This field contains 28 positions.
- Existing values 2 (Channel) in position 1 (Security Protocol), 1 (Cardholder certificate not used) in position 2 (Cardholder Authentication), and 0 (UCAF data collection is not supported by the merchant or an Identity Check merchant has chosen not to undertake Identity Check on this transaction) in position 3 (UCAF Collection Indicator) in DE 48 (Additional Data: Private Use), subelement 42 (Electronic Commerce Indicators), subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection Indicator)
- Existing value 81 (PAN/Token entry via electronic commerce with optional Identity Check-AAV in DE 48, subelement 43 [UCAF] or DSRP cryptogram in DE 104, subelement 001 [Digital Payment Cryptogram]) in DE 22 (Point-of-Service Entry Mode), subfield 1 (POS Terminal PAN Entry Mode)

### Tokenized partial shipment messages

Acquirers must be prepared to identify tokenized partial shipment transactions in Authorization Request/0100 and Reversal Request/0400 messages whose original transaction was token-based with a valid cryptogram.

- DE 61 (Point-of-Service [POS] Data), subfield 4 (POS Cardholder Presence), value 5 (Electronic order [home PC, Internet, mobile phone, PDA])
- DE 48 (Additional Data: Private Use), subelement 43 containing the cryptographic data from the original transaction
- DE 48, subelement 42 (Electronic Commerce Indicators), subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection Indicator):
  - Position 1 (Security Protocol), value 2 (Channel)
  - Position 2 (Cardholder Authentication), value 1 (Cardholder certificate not used)
  - Position 3 (UCAF Collection Indicator), value 2 (UCAF data collection is supported by the merchant, and UCAF data must be present [DE 48, subelement 43 must contain a fully authenticated AAV])
- DE 22 (Point-of-Service Entry Mode), subfield 1 (POS Terminal PAN Entry Mode), values 10 (Credential on File) or value 81 (PAN/Token entry via electronic commerce with optional Identity Check-AAV in DE 48, subelement 43 [UCAF] or DSRP cryptogram in DE 104, subelement 001 [Digital Payment Cryptogram])

**NOTE: DE 48, subelement 43 is not required in Reversal Request/0400 messages for partial shipments.**

### Tokenized e-Commerce with mobile device messages

Acquirers must be prepared to receive the tokenized e-commerce with mobile device transaction identifier in Authorization Request Response/0110 and Reversal Request Response/0410 messages.

- Value B (Tokenized e-commerce with mobile device) in DE 48, subelement 90 (Custom Payment Service Request Response [Visa Only])
- Value Y (Transaction is processed through Visa Checkout) in DE 48, subelement 78 (Payment Service Indicators [Visa Only]), subfield 4 (Visa Checkout Indicator)

## Chapter 8 Reports and files

*The Reports and files section contains information about the reports and logs related to the Mastercard Dual Message Authorization System.*

## Presentation of reports

Each authorization report is introduced with an overview that contains the following information.

- Title: name or title of the report
- Generated by: system generating the report
- Purpose: reason for providing the report
- Description: type of information included in the report
- Frequency: how often the report is generated
- Distribution methods: distribution options and associated bulk file or Mastercard File Express application identification numbers

## Report header information

Report header information is contained in all reports generated by the Dual Message Authorization System. This information is not described in the individual report descriptions.

Common report header details are:

- Report number appears in the upper left-hand corner of each report and identifies the report by number.
- Report header is in the upper center of each report and identifies the report by name.
- Page number appears in the upper right-hand corner of each report and identifies the page number within the report.
- Date appears in the upper right-hand corner of each report and identifies the date the report was generated. All times are Central Time (CT) dates.
- Time, when it appears, is in the upper right-hand corner of each report and identifies the time the report was generated. All are CT times.

## Authorization Summary Report (AB505010-AA)

An overview of the Authorization Summary Report (AB505010-AA) is listed in table format.

### Report overview

|              |                                                                           |
|--------------|---------------------------------------------------------------------------|
| Title        | Authorization Summary Report                                              |
| Generated by | Dual Message Authorization System                                         |
| Purpose      | To provide customers with a tool for analyzing authorization performance. |

|                      |                                                                                                                                                                                               |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description          | This report shows weekly authorization transaction processing volumes and percentages by BIN. It reflects transactions processed by the Dual Message Authorization System and billable items. |
| Frequency            | Weekly                                                                                                                                                                                        |
| Distribution Methods | Paper (Sent to the authorization contact established on the Principal Member Questionnaire); Mastercard Operational Reports, Mastercard File Express, complex-to-complex, bulk ID (T829)      |
