| Step 1b: validate syntax/attribute of selection elements.....                                                                                    | 2211            |
| Step 1c: validate content of selection elements.....                                                                                             | 2212            |
| Step 2: determine whether the transaction requires business service processing.....                                                              | 2213            |
| Step 3: business service arrangement selection.....                                                                                              | 2214            |
| Step 3a (standard process): retrieve and match card program identifier and business<br>service arrangement participation.....                    | 2214            |
| Step 3b (central acquiring process): retrieve and validate issuer card program<br>identifier and business service arrangement participation..... | 2215            |
| Global Clearing Management System validation of business service arrangement.....                                                                | 2217            |
| Step 4: validate the message reason code and reversal indicator for the card program<br>identifier/business service arrangement combination..... | 2218            |
| Step 5: validate the processing code and reversal indicator for the card program<br>identifier/business service arrangement combination.....     | 2219            |
| Step 6: determine whether IRD validation is required for the transaction.....                                                                    | 2220            |
| Interchange rate designator (IRD) validation.....                                                                                                | 2220            |
| Step 7: validate the processing code and reversal indicator for the IRD.....                                                                     | 2220            |
| Step 8: validate product codes for the IRD.....                                                                                                  | 2221            |

|                                                                                       |             |
|---------------------------------------------------------------------------------------|-------------|
| Step 9: validate AB programs for the IRD.....                                         | 2223        |
| Step 10: validate transaction currency for the business service.....                  | 2224        |
| Step 11: check for intracountry business service overrides.....                       | 2224        |
| Enforcement of business service arrangements.....                                     | 2225        |

# Mastercard Network Processing Dual Message Clearing System Guide

## Overview

This document contains technical information and specifications for customers to understand the system functionality and to process transactions through the Mastercard Dual Message Clearing System. System specifications are based on Mastercard's adoption of the [International Organization for Standardization \(ISO\) 8583:1993](#) message formats. This is a new guide that is a consolidation of the:

- *Global Clearing Management System Reference Manual*
- *IPM Clearing Format error numbers and messages manual*
- *IPM Clearing Formats*

## Audience

This document is intended for parties using the [Mastercard Network](#) to process transactions through the Dual Message Clearing System. This includes acquirers, issuers, processors, and Network Enablement Partners.

# Chapter 1 How to Use This Guide

Mastercard's switching services include three core activities: authorization, clearing, and settlement. This guide describes clearing, which is where the acceptor's bank (acquirer) sends financial transaction data to the Mastercard Dual Message Clearing System before reaching settlement. The clearing process takes place after a transaction has been authorized and before the funds are settled.

## Structure of the guide

This guide explains clearing concepts, how to compile a clearing file or message at a high level, and errors you may encounter in submitting your messages. Additional products or services can impact the data you include in your clearing file, so this manual also contains guidance for each case and relevant amendments.

The initial chapters describe how to implement clearing specifications to support the Mastercard transaction flow. The guide explores Mastercard's implementation of the [ISO 8583:1993](#) messaging standards. This guide also includes Mastercard data validations and supplemental reports.

The appendices contain supporting information for the chapters, including a glossary and basic information about Mastercard products and services.

This document provides the acronym phrase or word definition when the reader hovers their mouse over a highlighted word. Links within the document allow the reader to navigate directly to a related section, which provides supporting information for that topic.

**NOTE: Link and hover features are available in select formats only.**

Introduction to the Dual Message Clearing System.....53

Introduction to Mastercard Switches for Processing ..... 54

Dual Message Clearing System Features.....54

Participants in Mastercard Network Processing..... 55

Dual Message Clearing System Basics.....57

## Fundamentals of Mastercard Processing

Mastercard facilitates the processing of payment transactions between banks, businesses, and customers. Mastercard supports the four-party model: cardholders, acceptors, cardholder's bank, and acceptor's bank. Acceptors include merchants, sponsored merchants, Automated Teller Machine (ATM) owners, or other parties. This process is explained by three main functions and the subsequent flow diagram.

- **Authorization:** Account details are communicated in real time between acquirers and issuers at the point of interaction. The issuer approves or declines the use of the Mastercard card, access device, or account to enable a transaction. Approval from the issuer creates a financial obligation from the issuer to the acquirer (for a transaction that debits funds from a cardholder's account) or from the acquirer to the issuer (for a transaction that credits funds to a cardholder's account).
- **Clearing:** Processing of multiple clearing batch processes per day (that is, clearing cycles) determine and calculate processing costs, resulting in one net amount per *acquirers* and *issuers* per clearing cycle.
- **Settlement:** Aggregation of financial positions from all clearing settlement information into one overall daily net settlement amount for each *acquirer* and *issuer*. Advisements (notifications) are created and distributed to acquirers and issuers along with Transfer Funds Orders to settlement banks for amounts to be transferred to or collected from acquirers and issuers.

### Authorization, Clearing, and Settlement Flows

Process flow displaying the three main functions.

## Introduction to the Dual Message Clearing System

Mastercard's clearing process is the process by which the acquirer sends financial transaction data to Mastercard's Dual Message Clearing System, also known as the [Global Clearing Management System \(GCMS\)](#). Data is exchanged in batches of clearing files that contain clearing messages. Clearing files are offline files and all parties involved in the clearing process are both senders and receivers of clearing data.

The authorization process precedes the clearing process. Mastercard uses the Dual Message Clearing System to complete the transaction processing and allow for the transaction to post to the cardholder account.

The GCMS, Mastercard's centralized clearing facility, processes Dual Message Clearing System data constructed in the Integrated Product Messages (IPM) message format. This message

format is based on the ISO 8583:1993 message standards published by the International Organization for Standardization.

Customers can use clearing data to perform various back-office functions based on their role in the Mastercard Network. For example:

- Acquirers use clearing data to transmit purchase and refund details to issuers, reconcile their financial obligations to acceptors and Mastercard, and manage disputes.
- Issuers use clearing data to post transactions to cardholder accounts, respond to customer service inquiries, and to manage disputes.

## Introduction to Mastercard Switches for Processing

Mastercard leverages its *Dual Message Switch* and *Single Message Switch* for the global processing of transaction data over the *Mastercard Network*.

The *Dual Message Switch* completes processing for *Authorization*, *Clearing*, and *Settlement* functions using both online and batch systems. *Authorization* processes as a real-time message, while *Clearing* and *Settlement* functions are achieved through a batch process.

The *Single Message Switch* completes processing for *Authorization*, *Clearing*, and *Settlement* functions leveraging a single online message. *Authorization* processes as a real-time message and automatically enables *Clearing* and *Settlement* functions through an internal batch process.

## Dual Message Clearing System Features

The Dual Message Clearing System is a complex system that performs many functions throughout a clearing business day, including but not limited to:

- Receive and process clearing files from message originators globally, and then determine the destination for each message received and send consolidated clearing files to message receivers globally.
- Validate clearing data received from message originators to ensure it complies with Mastercard's IPM messages specifications and other applicable processing standards.
- Modify, add, or remove clearing data from messages before sending to the message receiver, or reject clearing messages and return to the message originator when clearing data fails to comply with Mastercard requirements.
- Perform currency conversion.
- Calculate interchange fees.
- Calculate the settlement value of each message and a customer's net settlement position for all clearing data that they send and receive in a clearing business day.
- Provide message originators with acknowledgment messages confirming activity that the customer sent to GCMS and reconciliation.
- Provide message receivers with notification messages confirming activity that the customer received from GCMS and reconciliation.

## Participants in Mastercard Network Processing

*Mastercard Network* processing involves various functions and types of participants. This list includes the most common participants involved in processing, along with simplified descriptions.

### Participants and definitions

| Term     | Definition                                                                                                                                                                                                                                                                                                                                                                             |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Acceptor | A person or party that agrees to accept payment cards or devices bearing a particular brand or in respect to an agreement with the issuer. Also referred to as a merchant, <i>Automated Teller Machine (ATM)</i> , bank, merchant ATM, or other party authorized to accept brand transactions.                                                                                         |
| Acquirer | An acquirer is a licensed Mastercard customer that acquires the data relating to a transaction from the acceptor and submits that data for authorization. The acquirer also supports clearing and settlement functions to exchange funds between the issuer and the acceptor. Also referred to as an acquiring bank, acquirer bank, merchant bank, or acquiring financial institution. |

| Term                       | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cardholder                 | A cardholder is an authorized person or party to whom an account, card, or access device has been issued for the purpose of conducting transactions that access funds through a financial account. Also referred to as a consumer or account holder.                                                                                                                                                                                                                                |
| Customer                   | A financial institution or other entity that has been approved for participation in the payment scheme.                                                                                                                                                                                                                                                                                                                                                                             |
| Issuer                     | An issuer is a licensed Mastercard customer that issues cards or accounts and is responsible for approving or declining <a href="#">authorization</a> requests. The issuer also bills cardholders and supports <a href="#">clearing</a> and <a href="#">settlement</a> functions to exchange funds between the cardholder's account and the acquirer. Also referred to as an issuing bank, issuer bank, cardholder bank, non-bank issuing entity, or issuing financial institution. |
| Network Enablement Partner | A service provider that has a direct agreement with Mastercard and performs certain functions on behalf of one or more customers.                                                                                                                                                                                                                                                                                                                                                   |
| Processor                  | A service provider that provides authorization, clearing, or settlement services on behalf of a customer. Also referred to as a third-party processor or payment processor.                                                                                                                                                                                                                                                                                                         |
| Service provider           | A person or party that is registered with Mastercard by a customer to perform services related to the customer's acquiring or issuing activity.                                                                                                                                                                                                                                                                                                                                     |

**NOTE:** Throughout this guide, functional references to acquirer and issuer also refer to others acting as authorized agents for acquirers and issuers. Mastercard customers are responsible for the acts and omissions of their agents, including those with respect to Mastercard rules, regulations, policies, and procedures.

## Dual Message Clearing System Basics

The following diagrams illustrates the basics of the *Dual Message Authorization System* and *Dual Message Clearing System*.

### Basic Dual Message Authorization System Flow

1. The *cardholder* presents a Mastercard card to the *acceptor* to pay for goods or services.
2. The *acceptor* collects card and transaction data (for example, the *cardholder* may dip or tap the card at a terminal, enter the card data into a website payment page, place an order by phone or mail, or authorize the *acceptor* to use previously stored card data). A request for an authorization decision is sent from the *acceptor* to the *acquirer*.
3. The *acquirer* receives the request, appends additional data as needed, and sends the *authorization request* message to the Mastercard *Dual Message Authorization System*.
4. The *Dual Message Authorization System* receives the *authorization request* message and validates the format and content. Mastercard includes additional data as needed and sends the request message to the *issuer*.
5. The *issuer* receives the *authorization request* message and evaluates the transaction data and the account itself before making an authorization decision. The *issuer* generates an *authorization request* response message indicating its decision and sends the response message to Mastercard.
6. Mastercard receives the authorization request response message and validates the format and content. Mastercard includes additional data as needed and sends the authorization request response message to the acquirer.
7. The *acquirer* receives the authorization request response message and notifies the *acceptor* of the decision.
8. The *acceptor* receives the response to the decision and completes the transaction with the *cardholder*.
9. The *issuer* places a hold for the transaction amount against the *cardholder's* account or open-to-buy. The transaction will post when clearing occurs.

### Clearing and Settlement Process Flow

*Clearing* and *settlement* will occur through a separate process. This diagram outlines this process at a high level.

1. The *acquirer* submits batched clearing messages containing the data for the completed transactions from their acceptors.
2. The Mastercard Dual Message Clearing System will forward the appropriate transaction data to each *issuer* through *batch processing*.
3. The Mastercard Dual Message Clearing System processes the messages and forwards them to the Settlement System. The Settlement System generates reporting and settles with the acquirer and issuer.
4. The issuer uses the clearing data received to post the transaction to the *cardholder's* account.

**NOTE: Mastercard reserves the right to record, store, and use all data transmitted by the Mastercard Dual Message Clearing System in online electronic transactions, subject to Mastercard privacy and security compliance policies and applicable laws and regulations, without further notice.**

## GCMS basic flow

This flow depicts the movement of data associated with the clearing and settlement aspect of a financial transaction. This process is financial. It triggers the posting of transactions to consumer accounts and triggers the movement of funds (settlement) between the parties involved in the transaction.

1. The acceptor closes their acceptance business for the day, performs any internal reconciliation processes they follow, and sends all card-based transactions (for all Mastercard brands) to the acquirer.
2. The acquirer receives the batch of transaction data, separates the data by brand, appends additional data as needed, converts the Mastercard transaction data to the Mastercard IPM clearing format, creates a clearing file (per the IPM specifications), and sends the file to Mastercard. The file can include first presentments and fee collection records.
3. Mastercard receives the file. The Dual Message Clearing System validates the format and content of all messages. If there are any errors, Mastercard returns the erroneous messages to the acquirer indicating the problem, but continues processing the valid messages. Mastercard appends, changes, or removes additional data as needed, determines the various issuers involved, and then prepares and sends a clearing to each issuer. The clearing file sent to an issuer typically contains transactions from multiple acquirers globally.
4. The issuer receives the clearing file, processes the content, and posts transactions to the applicable cardholder accounts.
5. The acquirer settles with the acceptor, debiting or crediting the acceptor's bank account accordingly.

## Chapter 3 Introduction to messages

This section describes the *Integrated Product Message (IPM)* format, file structure messages, how to create reversals, *Message Type Indicators (MTIs)*, and lists of IPM message types.

## Overview

The IPM format is based on the [ISO 8583:1993](#) international message standard, which comprises code values, data elements, and message types. Systems use the [ISO 8583:1993](#) protocol for the electronic exchange of transaction data for the purchase of goods and services.

The ISO standard defines the purpose of the message and origination through the [Message Type Indicators \(MTIs\)](#) defined in the table.

### ISO-defined MTI codes and related usage

| Code | Meaning                                          | Usage                                                                                                                                                                                                                                   |
|------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 00xx | Reserved by ISO                                  | N/A                                                                                                                                                                                                                                     |
| 01xx | Authorization messages                           | Authorization messages are used by the <a href="#">acquirer</a> to obtain approval or guarantee funds from the <a href="#">issuer</a> . These messages are not intended for use in posting to the <a href="#">cardholder's</a> account. |
| 12xx | Financial messages                               | Financial messages permit the application of the approved transaction amount to the cardholder's account for billing or posting.                                                                                                        |
| 13xx | File action messages                             | File action messages are used to add, change, delete, or inquire into a file or record (for example, to report lost or stolen cards).                                                                                                   |
| 14xx | Reversal messages                                | Reversal messages are used to partially or completely negate the effects of a previous financial or authorization transaction.                                                                                                          |
|      | Chargeback messages                              | Chargeback messages are used to partially or completely nullify a previous 12xx financial transaction. A chargeback is an advice or notification as activity has already occurred.                                                      |
| 15xx | Reconciliation messages (not used by Mastercard) | Reconciliation messages provide financial totals between an acquirer and an issuer.                                                                                                                                                     |

| Code | Meaning                     | Usage                                                                                                                                                     |
|------|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 16xx | Administrative messages     | Administrative messages are used for the exchange of non-financial information between network participants.                                              |
| 17xx | Fee collection messages     | Fee collection messages are used to collect or disburse miscellaneous service fees.                                                                       |
| 18xx | Network management messages | Network management messages are used to control the system security and operating condition of a network and may be initiated by any network participant. |
| 19xx | Reserved by ISO             | N/A                                                                                                                                                       |

### ISO 8583:1993 Message Type Identifier (MTI) Structure Definitions

\* Position 4 of the MTI does not indicate which party originated the specific message. More accurately, this position of the MTI indicates which party originally initiated the transaction.

This guide documents the Mastercard implementation of the ISO standard for processing on Mastercard's [Dual Message Clearing System](#). The messages used by the Dual Message Clearing System are a subset of the ISO-defined messages. In some cases, Mastercard's adoption of

these messages differs from ISO definitions. The Dual Message Clearing System supports these message types. This chapter includes additional details on the use of these MTIs.

### Mastercard-defined MTI codes and related usage

| Code | Meaning                                               |
|------|-------------------------------------------------------|
| 1240 | <a href="#">Presentment/1240 messages</a>             |
| 1442 | <a href="#">Chargeback/1442 messages</a>              |
| 1644 | <a href="#">Administrative messages/1644 messages</a> |
| 1740 | <a href="#">Fee Collection/1740 messages</a>          |

## Elements of Integrated Product Messages

[IPM](#) messages contain four types of message elements.

- Message Type Identifier (MTI): Identifies the purpose of the message, such as Financial, Administrative, or Fee Collection.
- Two-bit maps: A series of binary digits (bits) that indicate the presence or absence of data elements.
- Data elements (DEs): Message elements, including subelements or subfields, defined with the [ISO 8583:1993](#) specification that may contain data.
- Private data subelements (PDSs): Message elements that Mastercard defined to support data not defined within the [ISO 8583:1993](#) specification.

## Clearing flows

The figure shows the process or flow of clearing messages through the *Dual Message Clearing System*.

### Clearing message flow through the Dual Message Clearing System

1. The customer (*acquirer* or *issuer*) creates a file of clearing messages to submit data to the *Dual Message Clearing System*. Possible messages include presentments from acquirers and fee collections from acquirers or issuers.
2. At the next cycle closing time (see clearing schedule), the Dual Message Clearing System processes the messages. The system validates the data supplied, calculates and applies any fees, and determines the net settlement amount for each individual clearing cycle.
3. The Dual Message Clearing System generates acknowledgment messages to send to the file originator depending on whether it is an acquirer or issuer. The acknowledgment messages contain the clearing system-calculated totals for the related customer outbound file. The clearing system calculates totals only for accepted files and accepted financial messages.
4. The Dual Message Clearing System generates notification messages to the receiving customer (acquirer or issuer). These messages can include presentments, chargebacks, and fee collections. These messages can be originated by customers or by the Mastercard Network.

## Processing cycles of clearing transactions

A clearing transaction may travel through five processing cycles. Customers can submit clearing transactions from any of these cycles in a single file.

### Processing cycles

| Processing Cycle                                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| First Presentment                                               | First Presentment occurs when the <i>acquirer</i> submits transaction data through the Mastercard <i>Dual Message Clearing System</i> to the <i>issuer</i> for posting to the <i>cardholder's</i> account.                                                                                                                                                                                                                                                          |
| Retrieval requests and fulfillments - Mexico RedMX scheme only* | An issuer can request the merchant transaction slip or receipt from the acquirer if there is any question about the transaction. To complete this cycle, the acquirer either fulfills the issuer's request or sends a message documenting the inability to honor the request.                                                                                                                                                                                       |
| Chargeback*                                                     | After the first presentment of a transaction from the acquirer to the issuer, the issuer may determine that, for a reason specified within the <i>Chargeback Guide</i> , the transaction may be invalid. The issuer may then return the transaction to the acquirer as a chargeback for possible remedy. After receiving a first chargeback, an acquirer can choose to acknowledge the first chargeback and close the claim or proceed with the second presentment. |

| Processing Cycle        | Description                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Second Presentment*     | Second Presentment occurs when the acquirer processes a response to a chargeback received from the issuer. An acquirer can create a second presentment when they believe the issuer's chargeback did not fulfill the requirements of the chargeback reason code or the acquirer can provide information that addresses the original reason for the dispute. |
| Arbitration case filing | After the chargeback and second presentment cycles have been completed, the issuer may continue a dispute by using the pre-arbitration and arbitration case filing process. When an arbitration case is not resolved between the acquirer and the issuer, Mastercard determines responsibility for the dispute.                                             |
| Compliance case filing  | An acquirer or issuer requests that Mastercard resolve a rules violation or a dispute when no remedy exists through the chargeback process.                                                                                                                                                                                                                 |

\* Acquirers use Claims Manager to respond to disputes. For more information, refer to *Mastercom User Guide*. Customers on the RedMX scheme can submit these messages directly to the Dual Message Clearing System. For more details, refer to *Mexico Domestic Switching Acquirer Implementation Guide*.

## Clearing schedule

The clearing process takes place in batches of six primary clearing cycles. Clearing messages and files submitted to Mastercard's [Dual Message Clearing System](#) are processed with the six clearing cycles and settlement is reached by the end of the processing day.

**NOTE: For more information on RedMX scheme and clearing cycles, refer to the *Mexico Domestic Switching Acquirer Implementation Guide*.**

The sending customer can submit clearing data to Mastercard 24 hours a day, 7 days a week.

The following tables show the daily schedule in [Universal Time \(UTC\)](#) for the six primary clearing cycles.

Standard Time (UTC-06) in the United States starts on the first Sunday in November and ends on the second Sunday in March. The following table shows the cycle cut-off times in both UTC and Standard Time for St. Louis.

**Clearing cycles when the United States is in Standard Time (in UTC and St. Louis [CST] time)**

| <b>Business day</b> | <b>Clearing cycle 1</b>        | <b>Clearing cycle 2</b>        | <b>Clearing cycle 3</b>        | <b>Clearing cycle 4</b>        | <b>Clearing cycle 5</b>        | <b>Clearing cycle 6</b>        |
|---------------------|--------------------------------|--------------------------------|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Sunday              | Sunday UTC 00:00               | Sunday UTC 03:00               | Sunday UTC 06:00               | Sunday UTC 09:00               | Sunday UTC 12:00               | Sunday UTC 14:00               |

## IPM file structure

Clearing system messages are included in the files sent between customers and are processed during clearing cycles.

### Requirements for processing

*Issuer*, [Dual Message Clearing System](#), and *acquirer* requirements for processing or actions are based on conditions at the time of the transaction event. The message flows assume that both the acquirer and issuer are using IPM clearing formats.

Messages may appear in any order in a clearing file with these exceptions:

- A file must begin with a File Header/1644 and end with a File Trailer/1644.
- If applicable, a Financial Detail Addendum/1644 must immediately follow the associated Financial Presentment/1240.
- Message Exception/1644 messages are immediately followed by the rejected message.

In addition, each message in a file must contain DE 71 (Message Number) with a unique value. The value in DE 71 for each message must be greater than the value in the previous message. DE 71 must be reset to 00000001 in the File Header/1644 of each logical file.

Refer to the [Reports and files](#) and [Files and best practices](#) sections for more information on the IPM files and the guidelines for creating and sending them.

## Mastercard message classifications

The Mastercard Network allows for the exchange of electronic data that may or may not contain account holder information or result in a financial transaction. The remaining message types are used to support administrative functions.

The message types adopted for use by the Mastercard [Dual Message Clearing System](#), as a broad classification, fall into three functional categories.

### Message type functional categories

| Category                      | Definition                                                                                                                                                                                                                                                                                            |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Financial message function    | This message type function results in a financial impact. It includes instructions or data related to payments, transfers, debits, or credits.                                                                                                                                                        |
| Nonfinancial message function | This message type function does not result in a financial impact. These messages provide information for: <ul style="list-style-type: none"><li>• The processing of clearing messages, which customers could use during reconciliation</li><li>• Balance inquiries</li><li>• PIN management</li></ul> |
| Supporting message function   | These messages work with other messages. They provide additional information related to the financial messages submitted into the system.                                                                                                                                                             |

## List of Dual Message Clearing System IPM messages

The following table list the message types the [Dual Message Clearing System](#) supports and indicates the originating parties for each message type. The Dual Message Clearing System may not support all message types for each Mastercard program and service.

Acquirers and issues are responsible for ensuring correct usage of the message types as described in the following table and may be liable for the impacts of transmitting erroneous messages.

Mastercard documentation refers to IPM message types by stating the MTI value and then the function code value, separated by a hyphen, as follows: File Header/1644-697.

### Presentment/12xx messages

| MTI  | Function code | Description                  | Acquirer | Issuer | MC network          |
|------|---------------|------------------------------|----------|--------|---------------------|
| 1240 | 200           | First Presentment            | X        |        | X                   |
| 1240 | 205           | Second Presentment (Full)    | X        |        | X<br>Claims Manager |
| 1240 | 282           | Second Presentment (Partial) | X        |        | X                   |

### Chargeback/1442 messages

| MTI  | Function code | Description                   | Acquirer | Issuer                                                                                                                                                                            | MC network          |
|------|---------------|-------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| 1442 | 450           | First Chargeback (Full)       |          | X<br>Chargeback messages can only be submitted directly to the Dual Message Clearing System for specific markets. Arbitration chargebacks are only permitted in specific markets. | X<br>Claims Manager |
| 1442 | 451           | Arbitration Chargeback (Full) |          | X                                                                                                                                                                                 |                     |
| 1442 | 453           | First Chargeback (Partial)    |          | X                                                                                                                                                                                 | X<br>Claims Manager |

| MTI  | Function code | Description                       | Acquirer | Issuer | MC network |

| 1740 | 790           | Fee Collection (Funds Transfer) This applies only in the IPM Pre-edit system to UK Domestic Maestro transactions. |          |        |            |

## About message definitions

This section provides details on message definitions used in the *Dual Message Clearing System*.

### Presentment/1240 messages

An *acquirer* sends presentment messages into the clearing system to provide transaction details following successful authorization requests for posting transactions to the *cardholder's* account. In some cases, Mastercard may initiate and send presentment messages.

When a chargeback is initiated on a transaction, the *acquirer* may initiate a second presentment if they either:

- Think the *issuer's* chargeback did not fulfill the requirements of the chargeback reason code
- Can provide information that addresses the original reason for the dispute

For more information on second presentments, refer to the *Chargeback Guide*.

Each message includes Data Element (DE) 24 (Function Code), which indicates the primary type or function of the transaction. The message may also include DE 25 (Message Reason Code) to specify the primary reason for the transaction. Presentment messages can contain these function codes:

- 200 - First Presentment
- 205 - Second Presentment (Full)
- 282 - Second Presentment (Partial)

#### First Presentment/1240-200

|         |                                                                                                         |
|---------|---------------------------------------------------------------------------------------------------------|
| Routing | From the acquirer to the <i>Mastercard Network</i> , then the Mastercard Network to the issuer.         |
|         | From Mastercard Network as the originator to the issuer.                                                |
| Purpose | Function code 200 - Provides transaction data that allows the issuer to post to the cardholder account. |

#### Second Presentment (Full)/1240-205 and Second Presentment (Partial)/1240-282

|         |                                                                                         |
|---------|-----------------------------------------------------------------------------------------|
| Routing | From the acquirer to the Mastercard Network, then the Mastercard Network to the issuer. |
|         | From Mastercard Network as the originator to the issuer.                                |

|         |                                                                                                                                                                                                                                                                                                      |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Purpose | <p>Function code 205 - Indicates that the message is a Second Presentment (full)/1240 for the full Presentment/1240 amount.</p> <p>Function code 282 - Indicates that the message is a Second Presentment (Partial)/1240 for part of the First Presentment/1240 or First Chargeback/1442 amount.</p> |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Chargeback/1442 messages

After the initial presentment of the [cardholder](#) transaction from the [acquirer](#) to the [issuer](#), the issuer may determine that, for a given reason, the transaction may not be valid.

The issuer may return the transaction to the acquirer as a chargeback through Claims Manager. For more information on Claims Manager, refer to the *Mastercom User Guide*.

A chargeback may be submitted for the full amount of the original transaction or in certain cases, for a partial amount.

For information on Mexico dispute processing using the RedMX scheme, including the use of arbitration chargebacks indicated by function codes 451 and 454 in Data Element (DE) 24 (Function Code), refer to the *Mexico Domestic Switching Acquirer Implementation Guide*.

### Chargeback/1442 messages

|         |                                                                                                                                                                                                                                                                               |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing | <p>For Mexico RedMX only - From the issuer to the <a href="#">Mastercard Network</a>, then the Mastercard Network to the acquirer.</p> <p>From Mastercard Network as the originator to the acquirer.</p>                                                                      |
| Purpose | <p>Function code 450 - Indicates that the message is a First Chargeback (full)/1442 for the full First Presentment/1240 amount.</p> <p>Function code 453 - Indicates that the message is a First Chargeback (partial)/1442 for part of the First Presentment/1240 amount.</p> |

## File Header and File Trailer/1644 messages

A File Header/1644 is each file's first message. The header message provides information about the file:

- Originating Customer ID or Processor ID

- File ID
- Transmission ID - optionally provided by customers, [processors](#), or both
- File direction - incoming (generated by Mastercard) or outgoing (customer-generated)
- Processing Mode - production or test
- Reversal Indicator
- Originating Message Format

### File Header/1644-697

|         |                                                                                                                                      |
|---------|--------------------------------------------------------------------------------------------------------------------------------------|
| Routing | From the originator to the <a href="#">Mastercard Network</a> .<br>From the Mastercard Network as the originator to the destination. |
| Purpose | Provides information about the file and the originator.                                                                              |

A File Trailer/1644 is each file's last message and provides information about the file:

- The File ID that links the File Trailer/1644 with the File Header/1644
- The hash totals used to validate the file's integrity

### File Trailer/1644-695

|         |                                                                                                                     |
|---------|---------------------------------------------------------------------------------------------------------------------|
| Routing | From the originator to the Mastercard Network.<br>From the Mastercard Network as the originator to the destination. |
| Purpose | Identifies the end of the file and summarizes the file contents.                                                    |

## Financial Detail Addendum/1644 messages

A Financial Detail Addendum/1644 message provides additional program, service, or industry data to supplement the First Presentment/1240.

The usage code in PDS 0501 (Transaction Description), subfield 1 (Usage Code) indicates the type of addendum data provided.

#### Financial Detail Addendum/1644-696

|         |                                                                                                                                           |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------|
| Routing | From the <a href="#">acquirer</a> to the <a href="#">Mastercard Network</a> , then the Mastercard Network to the <a href="#">issuer</a> . |
| Purpose | Provides additional information pertaining to certain First Presentment/1240 messages.                                                    |

## Reconciliation messages/1644 messages

The reconciliation messages accumulate accepted financial activity processing by the [Dual Message Clearing System](#). Rejected financial activity and all nonfinancial activity are accumulated and reported elsewhere.

For additional information regarding reconciliation of clearing files and amounts, refer to the [Reconciliation](#) section of this guide.

#### File Currency Summary/1644-680

|         |                                                                                   |
|---------|-----------------------------------------------------------------------------------|
| Routing | From the <a href="#">Mastercard Network</a> as the originator to the destination. |
| Purpose | This message provides totals in the source currency.                              |

#### Financial Position Detail/1644-685

|         |                                                                          |
|---------|--------------------------------------------------------------------------|
| Routing | From the Mastercard Network as the originator to the destination.        |
| Purpose | Usage code 685 - This message provides the clearing totals for the file. |

#### Settlement Position Detail/1644-688

|         |                                                                   |
|---------|-------------------------------------------------------------------|
| Routing | From the Mastercard Network as the originator to the destination. |
|---------|-------------------------------------------------------------------|

|         |                                                                                                                 |
|---------|-----------------------------------------------------------------------------------------------------------------|
| Purpose | Usage code 688 - This message provides settlement position information for the customer for the clearing cycle. |
|---------|-----------------------------------------------------------------------------------------------------------------|

## Administrative messages/1644 messages

Administrative messages communicate information to the customers concerning message and file rejects and errors, broadcast messages, and currency conversion rates.

### Currency Update/1644-640 messages

Mastercard supports buy, mid, and sell currency conversion rates. Customers may request Currency Update/1644 messages from Mastercard as part of the clearing file. The delivery options for Currency Update/1644 messages are:

- Do not deliver Currency Update/1644 messages
- Deliver mid rate Currency Update/1644 messages
- Deliver buy and sell rate Currency Update/1644 messages only
- Deliver buy, mid, and sell rate Currency Update/1644 messages

After these options are selected, the customer must also specify which clearing cycles they have selected to receive the deliveries. The clearing cycles indicated should coincide with a delivery cycle for that customer or endpoint.

### Currency Update/1644-640

|         |                                                                                                                               |
|---------|-------------------------------------------------------------------------------------------------------------------------------|
| Routing | From the <a href="#">Mastercard Network</a> as the originator to the destination.                                             |
| Purpose | Provide conversion rates between Mastercard Global Payment currency and all other payment currencies supported by Mastercard. |

### Message Exception/1644-691 messages

The [Dual Message Clearing System](#) generates Message Exception/1644-691 messages when it encounters an exception condition while processing an individual message. Message Exception/1644-691 messages only include errors.

The Message Exception/1644-691 message contains a code identifying the error. It also contains the data element numbers or private data subelement (PDS) numbers that caused the exception conditions. Refer to the [Edits and error messaging](#) section for more information on errors.

Other identifying information related to the message is presented if the Dual Message Clearing System can parse the information.

For Mexico RedMX transactions, under certain conditions, the message is flagged for error but it is cleared and settled. Syntax condition is not rejected. In this case, the error is indicated by PDS 0005 (Message Error Indicator) and is present in the presentment, chargeback, retrieval request, and retrieval request acknowledgment messages.

### Message Exception/1644-691

|         |                                                                                                                        |
|---------|------------------------------------------------------------------------------------------------------------------------|
| Routing | From the Mastercard Network as the originator to the destination.                                                      |
| Purpose | Advises if messages were unrecognizable, could not be parsed, or contained an error in one or more supported elements. |

### Text Message/1644-693 messages

Text Message/1644-693 messages transmit text messages from the clearing system to a customer or processor and broadcast messages from the clearing system to all customers and processors.

### Text Message/1644-693

|         |                                                                   |
|---------|-------------------------------------------------------------------|
| Routing | From the Mastercard Network as the originator to the destination. |
| Purpose | Transmits broadcast message information to customers.             |

### File Reject/1644-699 messages

The clearing system generates File Reject/1644 messages to indicate that an entire file is rejected.

If all detail messages in a logical file are rejected, the clearing system returns each detail message in a Message Exception/1644-691 message. In addition, it returns a File Reject/1644-699 message because it did not accept any of the individual messages. The clearing system returns individual error messages with the Full File Reject Message.

Refer to the [Edits and error messaging](#) section for more information on errors.

### File Reject/1644-699

|         |                                                                   |
|---------|-------------------------------------------------------------------|
| Routing | From the Mastercard Network as the originator to the destination. |
| Purpose | Advises the customer of a clearing file rejection.                |

### Retrieval Request/1644-606 and -605 messages

This functionality is only available for Mexico RedMX scheme customers.

An [issuer](#) sends a Retrieval Request/1644 when it is determined that the transaction information document needs to be examined for issuer or [cardholder](#) needs.

For information on Mexico dispute processing, refer to the *Mexico Domestic Switching Acquirer Implementation Guide*.

## Fee Collection/1740 messages

Fee collection messages are used for the collection or disbursement of fees that require funds settlement between various clearing system participants.

Fee collection messages may include fees generated between pairs of customers and fees generated between the corporation and customers.

These messages must contain 1740 in the MTI and one of these values in data element (DE) 24 (Function Code):

- 700 - Fee Collection (Customer-generated)
- 780 - Fee Collection Return
- 781 - Fee Collection Resubmission
- 782 - Fee Collection Arbitration Return
- 783 - Fee Collection (Clearing System-generated)
- 790 - Fee Collection (Funds Transfer). This value applies only in the IPM pre-edit system to UK Domestic Maestro transactions.

Function Codes 780, 781, and 782 only apply to Fee Collection (Customer-generated)/1740-700 messages. The value in DE 25 (Message Reason Code) provides information on why the fee collection message was initiated.

### Fee Collections (Customer-generated)/1740 messages with Function Codes 700, 780, 781, and 782

|         |                                                                                                                                                                                                                                                                                                                               |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing | From the originator to the <a href="#">Mastercard Network</a> , then the Mastercard Network passes the message to the destination.                                                                                                                                                                                            |
| Purpose | <p>Collection or disbursement from customer-to-customer of fees that brand, program, and service rules permit.</p> <p>Collection or disbursement from customer-to-customer of summary settlement positions between customers that participate in bilateral clearing arrangements with clearing system summary settlement.</p> |

Fee Collection (Clearing System-generated)/1740-783 messages cannot be returned.

### Fee Collection (Clearing System-generated)/1740-783

|         |                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing | From Mastercard Network as the originator to the destination.                                                                                                                                                                                                                                                                                                                                                       |
| Purpose | <p>Function code 783.</p> <p>Collection or disbursement from Mastercard to the customer of fees related to processing services that the clearing system provides.</p> <p>Collection or disbursement from Mastercard to the customer of these fees according to brand, program, and service:</p> <ul style="list-style-type: none"><li>• Administrative fees</li><li>• Membership fees</li><li>• Penalties</li></ul> |

### Fee Collection (Funds Transfer)/1740-790

|         |                                                                                         |
|---------|-----------------------------------------------------------------------------------------|
| Routing |                                                                                         |
| Purpose | This value only applies in the IPM pre-edit system to UK Domestic Maestro transactions. |

## Chapter 4 General message layout information

---

|                                                                                                |     |
|------------------------------------------------------------------------------------------------|-----|
| Overview.....                                                                                  | 85  |
| Data representation.....                                                                       | 85  |
| Data length.....                                                                               | 86  |
| Data field.....                                                                                | 87  |
| Justification.....                                                                             | 88  |
| Date and time attribute notations.....                                                         | 88  |
| Entity descriptions.....                                                                       | 89  |
| Presence notations.....                                                                        | 90  |
| Presence requirement notations.....                                                            | 91  |
| Subfield presence requirements.....                                                            | 92  |
| Message types.....                                                                             | 92  |
| Bit map information.....                                                                       | 92  |
| File Header/1644 messages.....                                                                 | 93  |
| File Trailer/1644 messages.....                                                                | 94  |
| First Presentment/1240 messages.....                                                           | 95  |
| Financial Detail Addendum/1644 messages.....                                                   | 102 |
| Financial Detail Addendum/1644 messages listed by usage code.....                              | 102 |
| Financial Detail Addendum (Passenger Transport Detail, General Ticket Information)/1644.....   | 103 |
| Financial Detail Addendum (Passenger Transport Detail, Rail Data)/1644.....                    | 106 |
| Financial Detail Addendum (Passenger Transport Detail, Trip Leg Data)/1644.....                | 109 |
| Financial Detail Addendum (Vehicle Rental Detail)/1644.....                                    | 112 |
| Financial Detail Addendum (Lodging Summary)/1644.....                                          | 116 |
| Financial Detail Addendum (Temporary Services)/1644.....                                       | 120 |
| Financial Detail Addendum (Shipping/Courier Services)/1644.....                                | 122 |
| Financial Detail Addendum (Electronic Invoices)/1644.....                                      | 125 |
| Use of the Electronic Invoice addendum messages with other addendum messages.....              | 126 |
| Message layout for Financial Detail Addendum (Electronic Invoice, Transaction Data)/1644.....  | 126 |
| Message layout for Financial Detail Addendum (Electronic Invoice, Party Information)/1644..... | 128 |
| Financial Detail Addendum (Payment Transaction Detail)/1644.....                               | 129 |
| Financial Detail Addendum (Telephony Billing Services)/1644.....                               | 131 |

| First Chargeback/1442 messages.....                                           | 157 |
| Second Presentment/1240 messages.....                                         | 164 |
| Retrieval Request/1644 messages.....                                          | 170 |
| Retrieval Request Acknowledgment/1644 messages.....                           | 174 |
| Fee Collection messages.....                                                  | 177 |
| Fee Collection (Retrieval Fee Billing)/1740.....                              | 178 |
| Fee Collection (Handling Fees)/1740.....                                      | 182 |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740.....     | 185 |
| Activity types accumulated by reconciliation messages.....                    | 189 |
| Function Codes used.....                                                      | 189 |
| Message Reason Codes used.....                                                | 189 |
| Reconciliation Amount/Reconciliation Fee totals.....                          | 190 |
| Reconciliation messages.....                                                  | 191 |
| Acknowledgment messages.....                                                  | 191 |
| Notification messages.....                                                    | 191 |
| Reconciliation message totals.....                                            | 191 |
| Debit/Credit totals.....                                                      | 193 |
| Reconciliation category summary.....                                          | 195 |
| Reconciliation category definitions.....                                      | 197 |
| File Currency Summary/1644 messages.....                                      | 203 |
| Financial Position Detail/1644 messages.....                                  | 204 |
| Settlement Position Detail/1644 messages.....                                 | 207 |
| Message Exception/1644 messages.....                                          | 209 |
| File Reject/1644 messages.....                                                | 211 |
| Text Message/1644 messages.....                                               | 214 |
| Currency Update/1644 messages.....                                            | 214 |

## Overview

This section describes how the data attributes and notations are documented for use in the Mastercard Network's Dual Message Clearing System. This information provides details necessary to build or receive the messages supported by the system as described in [Data element and private data subelement definitions and details](#).

The notations used to describe the data elements and message formats are:

- Data representation
- Data length
- Data field
- Justification
- Date and time attribute notations
- Entity descriptions
- Presence notations
- Presence requirement notations

## Data representation

Data representation notations indicate how data is transmitted, processed, and stored.

### Data representation notations

| Notation | Description                                                                                                                                                                                                                                                                                                 |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| a        | alphabetic characters A-Z and a-z (Note that Country and Country Subdivision must be capitalized)                                                                                                                                                                                                           |
| an       | alphabetic (A-Z and a-z) and numeric (digits 0-9) characters                                                                                                                                                                                                                                                |
| ans      | alphabetic (A-Z and a-z), numeric (digits 0-9) and special characters (including spaces)                                                                                                                                                                                                                    |
| as       | alphabetic (A-Z and a-z) and special characters (including spaces)                                                                                                                                                                                                                                          |
| b        | binary<br><br>All binary data elements are constructed of bit-strings that have lengths that are an integral number of eight-bit bytes. No binary data element has a length of less than eight bits (one byte).<br><br>b-8 indicates a fixed-length binary field of eight characters (eight bytes, 64 bits) |
| n        | numeric digits 0-9                                                                                                                                                                                                                                                                                          |
| ns       | numeric digits 0-9 and special characters (including spaces)                                                                                                                                                                                                                                                |

| Notation | Description                                                                                                                                     |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| s        | special characters<br><br>Special characters are any non-numeric or non-alphabetic characters (for example, @, #, &, and \$), including spaces. |

The data encoding conventions have been adapted for all Mastercard Network messages as follows:

- The system aligns all message data element fields on byte boundaries; for example, a data field cannot begin with the low order nibble or any bit other than the high-order bit of any byte.
- All data types listed in the data representation table are encoded for transmission between the Mastercard Network and processor systems using EBCDIC display character representation.
- The ASCII to EBCDIC character set table indicates alpha, numeric, and special characters sent to the Mastercard Network. When received, the Mastercard Network passes these characters through as they are received. The Extended ASCII Character Sets table presents the mapping of decimal to hexadecimal character sets when received by the Mastercard Network. Any characters not shown in the tables are mapped as a space.
- All numeric (attribute n) data elements are right-justified with leading zeros unless otherwise specified in the individual data element definitions. All other data elements are left-justified with trailing blanks unless otherwise specified.
- All Track-2 or Track-3 (attribute ans) data elements are encoded as EBCDIC representations of the hexadecimal data specified in ISO specification 7811 and 7812. Thus, a hex D (binary 1101) is encoded as an EBCDIC character D, and so on. The LLVAR or LLLVAR length specification of each data element specifies the field length in number of bytes.
- The system encodes all length subfields as numeric EBCDIC, right-justified with leading zeros unless otherwise specified.

## Data length

Data length notations define the characteristics of the data length field.

### Data length notations

| Notation  | Description                                                                                                                                                                    |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| -digit(s) | Fixed length in number of positions.<br><br>Example: n-3 indicates a 3-position numeric data element.<br><br>Example: an-10 indicates a 10-position alphanumeric data element. |

| Notation              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ...digit(s)           | <p>Variable length field, with maximum number of positions specified.</p> <p>Example: n...11 indicates a variable-length numeric data element of 1 to 11 digits.</p> <p>Example: an...25 indicates a variable-length alphanumeric data element of 1 to 25 positions.</p>                                                                                                                                                                                                                                                           |
| LLVAR                 | <p>Present with a variable-length data element attribute, indicates that the data element contains these two fields:</p> <ul style="list-style-type: none"> <li>• LL is the length field and represents the number of positions in the variable-length data field that follows. The length field contains a value in the range of 01 to 99.</li> <li>• VAR is the variable-length data field.</li> </ul> <p>Example: an...25; LLVAR represents a variable-length alphanumeric data element with a length of 1 to 25 positions.</p> |
| LLLVAR                | <p>Present with a variable-length data element attribute, indicates that the data element contains two fields:</p> <ul style="list-style-type: none"> <li>• LLL is the length field and represents the number of positions in the variable-length data field that follows. The length field contains a value in the range 001–999.</li> <li>• VAR is the variable-length data field.</li> </ul> <p>Example: an...500; LLLVAR indicates a variable-length alphanumeric data element having a length of 1–500 positions.</p>         |
| TAGLL or TAGLLL       | <p>Integrated Product Messages (IPM) private data subelement (PDS) use only. Unique tag value assigned to the PDS followed by the fixed length value.</p>                                                                                                                                                                                                                                                                                                                                                                          |
| TAGLLVAR or TAGLLLVAR | <p>IPM PDS use only. Unique tag value assigned to the PDS followed by the variable-length value.</p>                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Data field

### Data field notations

| Notation              | Description                                                                         |
|-----------------------|-------------------------------------------------------------------------------------|
| Contents of subfields | <p>Subfield number or number range</p> <p>Example: Contents of subfields 1 to 8</p> |

| Notation                | Description                                                              |
|-------------------------|--------------------------------------------------------------------------|
| Contents of position(s) | Position number or number range<br>Example: Contents of positions 1 to 8 |
| N/A                     | Not applicable                                                           |

## Justification

Data justification indicates the position of the data in the data element. A justification of not applicable (N/A) indicates that the values contained within those fields or subfields take up all positions allowed.

### Justification notations

| Notation      | Description                                                                                                                |
|---------------|----------------------------------------------------------------------------------------------------------------------------|
| Left          | Data is left-justified                                                                                                     |
| Right         | Data is right-justified                                                                                                    |
| See subfields | Data justification is defined in the subfield description indicating the subfield justification may vary between subfields |
| N/A           | Not applicable                                                                                                             |

Right-justified data fields and subfields that do not contain a value that fills the entire field must contain leading zeros. Most numeric (attribute n) data elements are right-justified; for example, amounts always have this right justification with leading zeros.

Left-justified fields and subfields that do not use the entire field with a value must have trailing spaces.

## Date and time attribute notations

Date and time notations indicate the format of the data that represents date and time.

### Date and time notations

| Notation | Description               |
|----------|---------------------------|
| MM       | Month (two digits, 01–12) |

| Notation | Description                                    |
|----------|------------------------------------------------|
| DD       | Day (two digits, 01–31)                        |
| YY       | Year (last two digits of calendar year, 00–99) |
| hh       | Hour (two digits, 00–23)                       |
| mm       | Minute (two digits, 00–59)                     |
| ss       | Second (two digits, 00–59)                     |

## Entity descriptions

Several entities may insert or modify data elements in a message as it flows from the message origin to the Mastercard Network and from the Mastercard Network to the message destination.

These entities typically include the acquirer or issuer at the origin, the Mastercard Network, and the acquirer or issuer at the destination.

### Entity description

| Notation | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Org      | <p>Originator requirements. The message originator must satisfy this data element's requirements.</p> <p>Examples of originators include:</p> <ul style="list-style-type: none"> <li>• Authorization Request/0100 message from an acquirer</li> <li>• Financial Transaction Request/0200 message from an acquirer</li> <li>• First Presentment/1240 message from an acquirer</li> </ul>                                                                                                    |
| Sys      | <p>Mastercard Network requirements. The system may insert, correct, modify, delete, or echo this data element while, for example, routing a message from the originator to the destination. The system may overwrite the data element and, as a result, overwrite any previous content.</p>                                                                                                                                                                                                |
| Dst      | <p>Destination requirements. The message destination must expect this data element (read it) and accept this data element (process it) if the originator requirements are satisfied.</p> <p>Examples of destinations include:</p> <ul style="list-style-type: none"> <li>• Authorization Request/0100 message received by an issuer</li> <li>• Financial Transaction Request/0200 message received by an issuer</li> <li>• First Presentment/1240 message received by an issuer</li> </ul> |

## Presence notations

Presence notations indicate if and how data is present. These notations appear in the originator (Org), Mastercard Network (Sys), and destination (Dst).

Mastercard uses these notation codes to indicate how message senders and receivers must understand the use of data in a message.

### Codes used by the originator or destination

| Notation | Description                                                                                                                                                                                                     |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| M        | Mandatory. The data element is required in the message.                                                                                                                                                         |
| C        | Conditional. The data element is required in the message if conditions described in the accompanying text apply.                                                                                                |
| O        | Optional. The data element is not required, but may be included in the message at the message initiator's option.                                                                                               |
| ME       | Mandatory Echo. The data element is required in a response message and must contain the same value (echoed) from the original request or advice message.                                                        |
| CE       | Conditional Echo. The data element is required in a response message if it was present in the original request or advice message, and it must contain the same value (echoed) from the original message.        |
| OE       | Optional Echo. The data element is not required in a response message if it was present in the original request or advice message, but the same value (echoed) may be included from the original message.       |
| •        | Not Required or Not Applicable. The data element is not required or is not applicable. The transaction originator should not include this data element if this code/symbol is present in the Org or Dst column. |

**NOTE:** The echo notations do not apply to the [Dual Message Clearing System](#).

Mastercard uses these notation codes to indicate how message receivers must interpret the presence or absence of data managed by the [Mastercard Network](#).

### Codes used by the Mastercard Network

| Notation | Description                                                                                                                                                                          |
|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| X        | System Interaction. The Mastercard Network may (or will) insert or overwrite the data element, depending on specific support services provided for individual programs and services. |

| Notation | Description                                                                                                          |
|----------|----------------------------------------------------------------------------------------------------------------------|
| XE       | System Echo. The Mastercard Network will contain the value from the original request or advice (echoed), if present. |
| P        | Pass-through. The data element is forwarded by the Mastercard Network to the destination (unmodified).               |
| .        | When under the Sys column, the Mastercard Network does not forward the data.                                         |

## Presence requirement notations

Presence requirement notations describe the possible presence or usage requirements. An entity presence requirement is the three combined values in the originator (Org), Mastercard Network (Sys), and destination (Dst).

### Presence requirement notations

| Org | Sys | Dst | Description                                                                                                               |
|-----|-----|-----|---------------------------------------------------------------------------------------------------------------------------|
| M   | .   | M   | Mandatory; originator must provide the data element.                                                                      |
| M   | X   | M   | Mandatory; originator must provide the data element; Mastercard Network adjusts/appends data.                             |
| C   | P   | C   | Conditionally required; conditions are described in Comments column for originators and destinations to send and receive. |
| C   | X   | C   | Conditionally required; Mastercard Network adjusts/appends data.                                                          |
| .   | X   | C   | Mastercard Network provides the data element conditionally.                                                               |
| .   | X   | M   | Mastercard Network always provides the data element.                                                                      |
| O   | X   | C   | Optional; originator may provide the data element; Mastercard Network adjusts/appends data.                               |
| M   | .   | .   | Mandatory; originator must provide the data element; Mastercard Network does not forward data.                            |
| C   | .   | .   | Conditionally required; Mastercard Network does not forward data.                                                         |
| O   | .   | .   | Optional; Mastercard Network does not forward data.                                                                       |
| .   | X   | .   | Mastercard use only.                                                                                                      |

## Subfield presence requirements

Data elements and private data subelements (PDSs) may contain subfields.

Some PDS subfields are mandatory and some are optional. For all fixed-length data elements and PDSs, all subfields must be populated. For variable-length data elements and PDSs, these rules must be followed:

- All subfields that comprise the minimum length for the data element or PDS require population. Subfields that are beyond the minimum length of the element are optional and should not be populated unless the sender has valid data to present. In other words, optional subfields should not be populated with filler characters such as all spaces or all zeros.
- If any optional subfield is presented with valid data, all subfields preceding that subfield must be populated. In this case, filler characters such as spaces are acceptable. For example, if a PDS contains four subfields and the sender has valid data to present for subfields 1, 2, and 4, it must fill subfield 3 with all spaces or all zeros so that all four subfields are presented in the correct positions for the PDS.

## Message types

This section describes the formats for all of the file header and trailer messages that the clearing system uses. The layouts identify all required, conditional, optional, or clearing system-provided *data elements (DEs)* and private data subelements (PDSs) for these messages.

## Bit map information

All Mastercard Network messages are variable-length, with a bit map scheme used as the first data elements of the message following the Message Type Identifier (MTI) to indicate the presence or absence of additional data elements in the message.

Each bit map is a 64-bit string contained within an eight-byte data element.

The Mastercard switching systems use a maximum of two-bit maps: a Primary and a Secondary Bit Map. Bits set to 1 or 0 in the Primary Bit Map indicate the presence or absence of *DE 2* through *DE 64*. Bits set to 1 or 0 in the Secondary Bit Map indicate the presence or absence of *DE 66* through *DE 128*.

All bit positions are interpreted from left to right within each bit map. For example, within the Primary Bit Map the left-most bit is bit number 1 and the right-most bit is bit number 64. The first bit in each bit map is 1 or 0 to indicate the presence or absence of another (immediately following) bit map data element.

Bit number 1 in the Primary Bit Map and bit number 65 in the Secondary Bit Map (that is, the first bit in each bit map) have no corresponding data elements; these bits indicate the presence or absence of additional bit map data elements in the message. If bit number 1 is 1, it indicates that the Secondary Bit Map is present and that selected data elements in the range *DE 65* through *DE 128* also are present in the message as indicated by bit positions in the Secondary Bit Map. Mastercard currently uses a maximum of two-bit maps (Primary and Secondary) in

Mastercard Network messages, with a maximum number of message data elements ranging from *DE 1* through *DE 128*. Consequently, *DE 65* (the first bit in the Secondary Bit Map) must always be 0.

Each message must contain the Primary Bit Map. The Secondary Bit Map must be included in a message only when data elements in the range *DE 65* through *DE 128* are present in the message.

## File Header/1644 messages

A File Header/1644 is each file's first message.

### File Header (Customer-generated)/1644 message layout

This table shows the customer-generated message layout.

#### File Header (Customer-generated)/1644 message layout

| No.   | Data element name          | Org | Sys | Dst |
|-------|----------------------------|-----|-----|-----|

## First Presentment/1240 messages

An *acquirer* may initiate a First Presentment/1240 message to advise the *issuer* or its agent that a financial transaction was completed on its behalf.

The First Presentment/1240 message must contain 1240 in the [Message Type Identifier \(MTI\)](#) and 200 in DE 24 to identify it as a First Presentment/1240. This table shows the message layout.

## Financial Detail Addendum/1644 messages

A Financial Detail Addendum/1644 provides additional program, service, or industry data to supplement the First Presentment/1240. This message must contain 1644 in the MTI and 696 in DE 24 to identify it as a Financial Detail Addendum/1644.

### Financial Detail Addendum/1644 messages listed by usage code

This table shows a listing of each type of addendum message by usage code. Usage codes are a value used in PDS, which describes the type of transaction.

#### Financial Detail Addendum/1644 messages listed by usage code

| Usage code | Financial Detail Addendum/1644 messages                 |
|------------|---------------------------------------------------------|
| 01         | Passenger Transport Detail (General Ticket Information) |

## Financial Detail Addendum (Passenger Transport Detail, General Ticket Information)/1644

This message supports ticketing transactions for airline, railway, and travel agency transactions to provide passenger ticket information for the cardholder. Acquirers may submit one occurrence of this message for each airline, railway, or travel agency transaction to provide general ticket information.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

Acquirers should also submit one or more occurrences of the Financial Detail Addendum (Passenger Transport Detail, Trip Leg Data)/1644 message (Usage Code 01, Industry Record Number 001) or the Financial Detail Addendum (Passenger Transport Detail, Rail Data)/1644 Message (Usage Code 01, Industry Record Number 002) or both. Each trip leg message occurrence provides detailed information regarding one trip leg associated with the ticket.

One occurrence of this addendum message must be provided if the associated First Presentment/1240 message contains an airline [acceptor business code \(MCC\)](#) or a Passenger Railway MCC and is submitted for one of the U.S. region incentive interchange rate programs.

One occurrence of this addendum message may be provided if the associated First Presentment/1240 message contains a travel agency MCC and is submitted for one of the U.S. region incentive interchange rate programs.

**NOTE: Refer to the Interchange manuals for more information on interchange rate programs.**

This addendum message may be provided only if the associated First Presentment/1240 contains an airline, railway, or travel agency MCC in DE 26 (Acceptor Business Code).

If the First Presentment/1240 message associated with this addendum is submitted for an incentive interchange program that requires only this addendum, and the associated First Presentment/1240 message is submitted for a railway or travel agent MCC in DE 26, the Financial Detail Addendum (Passenger Transport Detail, Rail Data)/1644 message can be used in addition to this addendum message.

For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.

The clearing system always will reject this Financial Detail Addendum/1644 message if it contains invalid data. The associated First Presentment/1240 message also will be rejected if it is submitted for a U.S. region or international interchange program, unless it is submitted as:

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R
- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C, or
- A transaction submitted for Standard interchange program (U.S. region and international IRDs 01, 61, 63, 65, 75, 85, 95, RU, or WA) as defined by Mastercard.

For information about the individual PDS requirements for this addendum and for the specific incentive interchange programs, refer to the applicable sections of the *Interchange Manual*.

When an occurrence of this addendum message is submitted in association with a First Presentment/1240 message, it must include the following fields.

### First Presentment/1240 message fields

| No.   | Data element name |
|-------|-------------------|
| p0506 | Ticket Number     |
| p0507 | Issuing Carrier   |
| p0509 | Issue Date        |

## Financial Detail Addendum (Passenger Transport Detail, Rail Data)/1644

This message supports ticketing information for railway transactions to provide detailed itinerary information for the cardholder. Acquirers may submit 1–999 occurrences of this message. Each occurrence provides detailed itinerary data associated with a railway transaction.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

The submission of this addendum message is optional. Acquirers may provide a Financial Detail Addendum (Passenger Transport Detail, Rail Data)/1644 message for First Presentment transactions where the [acceptor business code \(MCC\)](#) value is 4112 (Railway) or 4722 (Travel Agency) under these circumstances.

- For U.S. region or international incentive interchange rate programs that require a Financial Detail Addendum (Passenger Transport Detail, General Ticket Information)/1644 and a Financial Detail Addendum (Passenger Transport Detail, Trip Leg Data)/1644, the acquirer may submit the Rail Data addendum in place of the Trip Leg Data addendum.
- For U.S. region or international incentive interchange rate programs that require a Financial Detail Addendum (Passenger Transport Detail, General Ticket Information)/1644 and a Financial Detail Addendum (Passenger Transport Detail, Trip Leg Data)/1644, the acquirer may submit the Rail Data addendum in addition to the General Ticket and Trip Leg Data addenda.

Acquirers must provide a single occurrence of the Financial Detail Addendum (Passenger Transport Detail, General Ticket Information)/1644 message (Usage Code 01, Industry Record Number 000) before the first occurrence of rail detail data for railway transactions.

When the Financial Detail Addendum (Passenger Transport Detail, General Ticket Information) is provided, the occurrence indicator (PDS 0501, subfield 3) submitted for the first Rail Data addendum should equal 002. Otherwise, it should equal 001.

This message supports rail transaction information. Acquirers may submit 1–999 occurrences of this message. Each occurrence provides detailed data for one trip leg of the associated rail transaction.

This addendum message may be provided only if the associated First Presentment/1240 contains a rail or travel agency MCC in DE 26 (Acceptor Business Code).

The submission of this addendum is optional. Acquirers may provide a Financial Detail Addendum (Passenger Transport Detail, Rail Data)/1644 message (Usage Code 01, Industry Record Number 002,) under these circumstances:

- For U.S. region incentive interchange rate programs that require a Financial Detail Addendum (Passenger Transport Detail, General Ticket Information)/1644 and a Financial Detail Addendum (Passenger Transport Detail, Trip Leg Data)/1644, the acquirer may submit the Rail Data addendum in place of the Trip Leg Data addendum.

**NOTE: Refer to the Interchange manuals for more information on interchange rate programs.**

For other incentive interchange rate programs that do not require an addendum, the Rail Data addendum may be submitted by itself, or in addition to any other applicable addendum.

When the Financial Detail Addendum (Passenger Transport Detail, General Ticket Information) is provided, the occurrence indicator (PDS 0501, subfield 3) submitted for the first Rail Data addendum should equal 002. Otherwise, it should equal 001.

For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.

When an occurrence of this addendum message is submitted in association with a First Presentment/1240 message, it must include the following fields.

### First Presentment/1240 message fields

| No.   | Data element name   |
|-------|---------------------|
| p0506 | Ticket Number       |
| p0520 | Travel Date         |
| p0664 | Start Station       |
| p0665 | Destination Station |

## Financial Detail Addendum (Passenger Transport Detail, Trip Leg Data)/1644

This message supports ticketing transactions for airline, railway, and travel agency transactions to provide detailed itinerary information for the cardholder. Acquirers may submit 1–998 occurrences of this message. Each occurrence provides detailed itinerary data for one trip leg associated with an airline, railway, or travel agency transaction.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

If this addendum detail describes an airline itinerary, the City of Origin/Airport Code and City of Destination/Airport Code for each trip leg should contain an Airport Code from the International Air Transport Association (IATA) which contains a list of standard airport and airline service abbreviations.

If acquirers include at least one trip leg of a transaction in the Financial Detail Addendum (Passenger Transport Detail, General Ticket Information)/1644 message (Usage Code 01, Industry Record Number 000) then they must include all trip legs of the transaction.

For railway transactions, acquirers may submit a Financial Detail Addendum (Passenger Transport Detail, Rail Data)/1644 message in addition to or in place of the Financial Detail Addendum (Passenger Transport Detail, Trip Leg Data)/1644 message. One occurrence of this addendum message must be provided if the associated First Presentment/1240 message contains an airline or railway [acceptor business code \(MCC\)](#) and is submitted for one of the U.S. region incentive interchange rate programs listed in this table. Rail Data addendum message may be used instead of or in addition to the trip leg data when a rail MCC is submitted.

One occurrence of this addendum message may be provided if the associated First Presentment/1240 message contains a travel agency MCC and is submitted for one of the U.S. region incentive interchange rate programs.

**NOTE: Refer to the Interchange manuals for more information on interchange rate programs.**

This addendum message may be provided only if the associated First Presentment/1240 contains an airline, railway, or travel agency MCC in DE 26 (Acceptor Business Code).

If the U.S. region or international First Presentment/1240 message associated with the addendum contains a railway or travel agent MCC in DE 26, the Financial Detail Addendum (Passenger Transport Detail, Rail Data)/1644 message can be used in place of or in addition to this addendum.

For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.

The clearing system always rejects this Financial Detail Addendum/1644 message if it contains invalid data. The associated First Presentment/1240 message is also rejected if it is submitted for a U.S. region or international interchange program, unless it is submitted as one of these:

- Credit: DE 3 (Processing Code), subfield 1= 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R
- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C
- A transaction submitted for a Standard interchange program (U.S. region and international IRDs 01, 61, 63, 65, 75, 85, 95, RU, or WA) as defined by Mastercard

For information about the individual PDS requirements for this addendum and for the specific incentive interchange programs listed above, refer to the applicable sections of the *Interchange Manual*.

### Financial Detail Addendum (Vehicle Rental Detail)/1644

This message provides detailed vehicle rental information for the cardholder. One occurrence of this message provides rental agreement data reporting for a single vehicle rental transaction.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message may be provided in a single occurrence (such as a single transaction for a single vehicle rental) or in multiple occurrences (a single transaction for the rental of multiple vehicles).

At least one occurrence of this addendum message must be provided if the associated First Presentment/1240 contains a Vehicle Rental [acceptor business code \(MCC\)](#) and is submitted for one of the U.S. region incentive interchange rate programs.

**NOTE: Refer to the Interchange manuals for more information on interchange rate programs.**

This addendum message may be provided only if the associated First Presentment/1240 contains a vehicle MCC in DE 26 (Acceptor Business Code).

For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.

The clearing system always rejects this Financial Detail Addendum/1644 message if it contains invalid data. The associated First Presentment/1240 message is also rejected if it is submitted for a U.S. region or international interchange program, unless it is submitted as one of these:

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R
- Collection Only transaction: PDS 0165 ((Settlement Indicator), subfield 1 = C
- A transaction submitted for a Standard interchange program (U.S. region and international IRDs 01, 61, 63, 65, 75, 85, 95, or RU, or WA) as defined by Mastercard

For information about the individual PDS requirements for this addendum and for the specific incentive interchange programs listed above, refer to the applicable chapters of the *Interchange Manual*.

When an occurrence of this addendum message is submitted in association with a First Presentment/1240 message, it must include the following fields.

#### Associated First Presentment/1240 message fields

| No.   | Data element name            |
|-------|------------------------------|
| p0544 | Rental Agreement Number      |
| p0545 | Renter Name                  |
| p0546 | Rental Return City           |
| p0547 | Rental Return State/Province |
| p0548 | Rental Return Country        |
| p0549 | Rental Return Location ID    |

| No.   | Data element name    |
|-------|----------------------|
| p0550 | Rental Return Date   |
| p0551 | Rental Checkout Date |
| p0553 | Rental Rate          |
| p0691 | Days Rented          |

## Financial Detail Addendum (Lodging Summary)/1644

This message provides detailed information about lodging accommodations and related expenses for the cardholder. One occurrence of this message provides lodging accommodation reporting for a single lodging folio, such as a single stay at a lodging facility with one check-in and one check-out.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message may be provided in a single occurrence (such as a single transaction for a single room rental) or in multiple occurrences (a single transaction for the rental of several rooms).

This message must be provided if the associated First Presentment/1240 contains a valid Lodging [acceptor business code \(MCC\)](#) and is submitted for one of the U.S. Region incentive interchange rate programs.

**NOTE: Refer to the Interchange manuals for more information on interchange rate programs.**

This addendum message may be provided only if the associated First Presentment/1240 contains a lodging MCC in DE 26 (Acceptor Business Code). The clearing system always rejects a Financial Detail Addendum (Lodging Summary)/1644 message if it contains invalid data.

The associated First Presentment/1240 message is also rejected if it is submitted for a U.S. region or international interchange program, unless it is submitted as:

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R
- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C
- A transaction submitted for a Standard interchange program (U.S. region and international IRDs 01, 61, 63, 65, 75, 85, 95, RU, or WA) as defined by Mastercard

Whenever the Financial Detail Addendum (Lodging Summary)/1644 message is present, and the transaction involves one of the Mastercard Corporate Cards, these optional addendum messages may be provided:

- Corporate Card Common Data Requirement, usage code 98, industry record number 000, or
- Corporate Card Line Item Detail, usage code 98, industry record number 950.

For specific corporate transactions occurring in the United States, Corporate Card Common Data is also required.

For information about the individual PDS requirements for this addendum and for the specific incentive interchange programs listed, refer to the applicable sections of the *Interchange Manual*.

When an occurrence of this addendum message is submitted in association with a First Presentment/1240 message, it must include the following fields.

#### First Presentment/1240 message fields

| No.   | Data element name |
|-------|-------------------|
| p0574 | Arrival Date      |
| p0575 | Departure Date    |
| p0576 | Folio Number      |

| No.   | Data element name |
|-------|-------------------|
| p0580 | Room Rate         |
| p0703 | Total Room Nights |

## Financial Detail Addendum (Temporary Services)/1644

The temporary services detail addendum provides information regarding the billing for services rendered on a temporary or contract basis. The message layout provides information such as the employee job performed, timekeeping, and billing rates.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message is optional. However, if this addendum is submitted with a First Presentment/1240 message for an incentive interchange rate program, and the addendum is rejected because of invalid data, the First Presentment/1240 message will also be rejected.

The clearing system always rejects this Financial Detail Addendum/1644 message if it contains invalid data. The associated First Presentment/1240 message is also rejected if it is submitted for a U.S. region or international interchange program, unless it is submitted as:

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R
- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C
- A transaction submitted for a Standard interchange program (U.S. region and international IRDs 01, 61, 63, 65, 75, 85, 95, RU, or WA) as defined by Mastercard

This addendum message is required for transactions when the associated First Presentment/1240 message contains a DE 26 (Acceptor Business Code) value of 7361 (Employment Agencies, Temporary Help Services).

For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.

**NOTE: Refer to the Interchange manuals for more information on interchange rate programs.**

## Financial Detail Addendum (Shipping/Courier Services)/1644

The Shipping/Courier Services detail addendum provides information regarding delivery or courier services. The message layout supports the shipping and delivery tracking information.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message is optional; however, if this addendum is submitted with a First Presentment/1240 message for an incentive interchange rate program, and the addendum is rejected due to invalid data, the First Presentment/1240 message also will be rejected.

The clearing system always rejects this Financial Detail Addendum/1644 message if it contains invalid data. The associated First Presentment/1240 message also will be rejected if it is submitted for a U.S. region or international interchange program, unless it is submitted as one of the following.

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R
- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C
- A transaction submitted for a Standard interchange program (U.S. region and international IRDs 01, 61, 63, 65, 75, 85, 95, RU, or WA) as defined by Mastercard

- A Shipping/Courier [acceptor business code \(MCC\)](#) (MCC 4214 or 4215) is present in DE 26 (Acceptor Business Code) of the First Presentment/1240 message
- A Financial Detail Addendum (Corporate Line Item Detail)/1644 message is not present

For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.

**NOTE: Refer to the Interchange manuals for more information on interchange rate programs.**

## Financial Detail Addendum (Electronic Invoices)/1644

The Electronic Invoices detail addendum messages are designed to carry electronic invoice data that is not present in other addendum messages, and to allow issuers to supply more transaction information to their corporate clients.

These addendum messages provide additional information passed between buyer and seller in business-to-business (B2B) and electronic-business-to-business (eB2B) transactions.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message is optional; however, [Dual Message Clearing System](#) rejects both Financial Detail Addendum (Electronic Invoice, Transaction Data) and Electronic Invoice (Party Information)/1644 messages, and any other addendum messages submitted with a First Presentment/1240 message for an incentive interchange rate program if any of the addenda contain invalid data.

The associated First Presentment/1240 message is also rejected unless it was submitted in one of these ways:

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R
- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C
- A transaction submitted for a Standard interchange program (U.S. region and international 01, 61, 63, 65, 75, 85, 95, RU, or WA) as defined by Mastercard

These are the electronic invoice addendum messages:

- Electronic Invoice (Transaction Data) (multiple occurrences permitted)
- Electronic Invoice (Party Information) (one to six occurrences permitted)

Here is general information about the optional Financial Detail Addendum (Electronic Invoice, Transaction Data) and (Electronic Invoice, Party Information)/1644 messages:

- The new electronic invoice information is contained in two addendum messages.
  - The Electronic Invoice (Transaction Data) addendum message contains details about the items listed in the invoice. The Electronic Invoice (Transaction Data) addendum must precede the Electronic Invoice (Party Information).
  - The Electronic Invoice (Party Information) addendum message contains information about the buyer, the supplier, the invoice recipient, the payee, the delivery party, and the ship from party. A minimum of one occurrence of the Electronic Invoice (Party Information) addendum message must be present when the Electronic Invoice (Transaction Data) addendum message is present.
- The electronic invoice addendum messages must be sent with the Financial Detail Addendum (Corporate Card Common Data Requirements)/1644 message to provide the tax information needed to comply with the various tax reporting laws that exist in the global marketplace.
- The Financial Detail Addendum (Corporate Line Item Detail)/1644 message optionally may be sent.
- There can be a combined total of 999 occurrences of the two Electronic Invoice messages.

- The number of occurrences (provided in PDS 0501 [Transaction Indicator], subfield 3 [Occurrence Indicator]) of the Electronic Invoice (Transaction Data) addendum is variable.
- The number of occurrences (provided in PDS 0501, subfield 3) of the Electronic Invoice (Party Information) addendum is also variable. Electronic Invoice (Party Information) addendum must have a minimum occurrence of one and can have a maximum occurrence of six.
- Each successive PDS 0501, subfield 3 with the same usage code must be greater than the previous occurrence indicator. No edits are defined to validate the value in Occurrence Indicator because both the Electronic Invoice (Transaction Data) addendum and the Electronic Invoice (Party Information) addendum may have variable occurrences.

## Use of the Electronic Invoice addendum messages with other addendum messages

These are the rules for using the electronic invoice addendum messages with other addendum messages.

- The Financial Detail Addendum (Electronic Invoice, Transaction Data)/1644 and Financial Detail Addendum (Electronic Invoice, Party Information)/1644 messages optionally may accompany any First Presentment/1240 message submitted with a Mastercard Corporate Card.
- If one or more occurrences of the Financial Detail Addendum (Electronic Invoice, Transaction Data)/1644 message is provided, then at least one occurrence of the Financial Detail Addendum (Electronic Invoice, Party Information)/1644 message also must be provided, and must follow the Electronic Invoice (Transaction Data) addendum messages.
- The Financial Detail Addendum (Corporate Card Common Data Requirements)/1644 message must also be provided.
- One or more occurrences of the Financial Detail Addendum (Corporate Card Line Item Detail)/1644 message may optionally be provided.
- One or more occurrences of the Financial Detail Addendum (Generic Detail)/1644 message may optionally be provided.
- Other industry-specific Financial Detail Addendum/1644 messages may be provided if they are appropriate for the transaction, such as Lodging Summary, Vehicle Rental, Passenger Transport, Temporary Services, and Shipping/Courier Services.

## Message layout for Financial Detail Addendum (Electronic Invoice, Transaction Data)/1644

The Electronic Invoice (Transaction Data) addendum provides information about each transaction.

This table shows the message layout.

## Message layout for Financial Detail Addendum (Electronic Invoice, Party Information)/1644

The Electronic Invoice (Party Information) addendum provides information about each entity, or party, involved in the transaction.

PDS 0590 (Party Identification) indicates the entity to which the information in the addendum applies. There is a minimum of one occurrence and a maximum of six occurrences of Electronic Invoice (Party Information). There is no specific sequence in which the party information should be presented.

This table provides the layout for the Financial Detail Addendum (Electronic Invoice, Party Information)/1644 message.

### Message layout for Financial Detail Addendum (Electronic Invoice, Party Information)/1644

## Financial Detail Addendum (Payment Transaction Detail)/1644

This message supports data related to a program permitting Mastercard cardholders to receive payments from a money transfer agent or a financial institution. Within this program, the cardholder's issuer posts the credit to the cardholder's Mastercard account.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message occurs only once per transaction. It is optional, unless the associated First Presentment/1240 message is a Mastercard® MoneySend™ payment transaction with PDS 0043 (Transaction Type Identifier) equal to C04, C07, C52, C53, C54, C55, C56, C57, C58, C59, or C65 if this addendum is submitted with a First Presentment/1240 message for an incentive interchange rate program, and the addendum is rejected because of invalid data, the First Presentment/1240 message is also rejected.

This addendum message can optionally be submitted with First Presentment/1240 messages for Payment Transactions, unless the PDS 0043 is equal to C04, C07, C52, C53, C54, C55, C56, C57, C58, C59, or C65 in which the addendum message is mandatory. The Payment Transaction Detail addendum provides the issuer and cardholder with enhanced data about the acceptor, recipient of funds, and other transaction details.

All acquirers of Mastercard® MoneySend™ payment transactions are required to submit PDS 0670 (Payer/User Information), PDS 0671 (Date of Funds Requested), and PDS 0674 (Additional Trace/Reference Number used by Acceptor).

The associated First Presentment/1240 message is also rejected if it is submitted for a U.S. region or international interchange program, unless it is submitted as:

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R

- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C
- A transaction submitted for a Standard interchange program (U.S. region and international IRDs 01, 61, 63, 65, 75, 85, 95, RU, or WA) as defined by Mastercard

This table shows the message layout.

## Financial Detail Addendum (Telephony Billing Services)/1644

The Telephony Billing Service detail addendum is designed to carry telephony billing data and to enable issuers to supply additional transaction information to their consumer and corporate clients.

These addendum messages are intended to encourage companies to pay for telephony services using a Mastercard Corporate Purchasing Card®.

The enhanced data in the addendum messages provides information normally received on monthly statements generated by the service provider.

Refer to Private Data Subelement (PDS) 0501 (Transaction Description) for the required values for these addendum messages.

An associated First Presentment/1240 message can have a combined total of 999 occurrences of the two Telephony Billing addendum messages.

This message is optional; however, [Dual Message Clearing System](#) rejects both Financial Detail Addendum (Telephony Billing, Summary) and (Telephony Billing, Detail)/1644 messages submitted with a First Presentment/1240 message for an incentive interchange rate program if either addendum contains invalid data. The associated First Presentment/1240 message is also rejected unless it was submitted in one of these ways:

- Credit: DE 3 (Processing Code)
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 (Message Reversal Indicator) = R
- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C

Telephony services include corporate conference call provider services and usage, and corporate mobile phone usage.

These are the two Telephony Billing addendum messages:

- Telephony Billing (Summary) (one occurrence permitted; PDS 0501 [Occurrence Indicator], subfield 3 is 001). Contains summary billing information about the telephone customer and billing totals.
- Telephony Billing (Detail) (1 to 998 occurrences permitted; PDS 0501 [Occurrence Indicator], subfield 3 is variable. If a Telephony Billing (Detail) addendum is present, the occurrence value may be 002–999). Contains specific information about each telephone call. The Telephony Billing Detail is optional. If one or more Telephony Billing (Detail) addendum messages are present, they must follow the Telephony Billing (Summary) message.

For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.

*Dual Message Clearing System* rejects addendum messages that contain invalid data. The associated First Presentment/1240 message is also rejected unless it was submitted as:

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R
- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C
- A transaction submitted for a Standard interchange program (U.S. region and international 01, 61, 63, 65, 75, 85, 95, RU, or WA) as defined by Mastercard

### Use of Telephony Billing addendum messages with other addendum messages

1. The Financial Detail Addendum (Telephony Billing, Summary)/1644 and Financial Detail Addendum (Telephony Billing, Detail)/1644 messages optionally may accompany any First Presentment/1240 message, although they are intended for use in corporate transactions.
2. If one occurrence of the Financial Detail Addendum (Telephony Billing, Summary)/1644 message is provided, these messages also optionally may be provided.
  - One or more occurrences of the Financial Detail Addendum (Telephony Billing, Detail)/1644 message.
  - The Financial Detail Addendum (Corporate Card Common Data Requirements)/1644 message (in transactions involving a Mastercard Corporate Card).
  - One or more occurrences of the Financial Detail Addendum (Generic Detail)/1644 message.
  - One or more occurrences of the Financial Detail Addendum (Corporate Card Line Item Detail)/1644 messages.
  - Other industry-specific Financial Detail Addendum/1644 messages (if they are appropriate for the transaction, such as Lodging Summary, Vehicle Rental, Passenger Transport, Temporary Services, and Shipping/Courier Services).

This table provides the layout for the Financial Detail Addendum (Telephony Billing, Summary)/1644 message.

## Financial Detail Addendum (Travel Agency, Detail)/1644

This message supports corporate transactions for travel agency, airline, or railway transactions.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message supports travel agency transaction information. Acquirers may submit 1–999 occurrences of this message. Each occurrence provides detailed data for one portion of the associated travel agency transaction.

This addendum is optional and is restricted for use with financial transactions where the [acceptor business code \(MCC\)](#) is a Travel Agency (MCC 4722), Railway (MCC 4112), or Airline (MCC 3000–3299, 4511).

Acquirers may provide a Financial Detail Addendum (Travel Agency, Detail)/1644 message (Usage Code 12, Industry Record Number 000) along with any other addendum message, or it may be submitted by itself based on the restrictions for the submitted interchange program.

For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.

This table provides the layout for the Financial Detail Addendum (Travel Agency, Detail)/1644 message.

## Financial Detail Addendum (Lodged Account Detail)/1644

A lodged account is defined as a corporate card account used by a travel agency for multiple individuals within the same corporate client.

Travel costs for all individuals are supplemented with the client-specific information requested by the corporation. This may include things such as cost accounting, project designation, company/division, and so on.

This message supports Lodged Account transactions information for corporate cardholders. Acquirers may submit 1–999 occurrences of this message. Each occurrence provides detailed data for one portion of the associated lodged account transaction.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This addendum is optional and is available to be used along with a financial transaction where [acceptor business code \(MCC\)](#) is a travel agency (4722), airline (3000–3299, 4511), or railway (4112).

Acquirers may provide a Financial Detail Addendum (Lodged Account Detail)/1644 message (Usage Code 13, Industry Record Number 000) along with any other addendum message, or it may be submitted by itself.

For specific corporate transactions occurring in the U.S. region, Corporate Card Common Data is also required.

This table provides the layout for the Financial Detail Addendum (Lodged Account Detail)/1644 message.

## Financial Detail Addendum (Private Label Common Data)/1644

The Financial Detail Addendum (Private Label Common Data)/1644 message (Usage Code 14, Industry Record Number 000) may be provided with a transaction in which a private label card is used.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This addendum message is conditionally required. This message must be provided if the transaction contains the Financial Detail Addendum (Private Label Line Item Detail)/1644 data. The Private Label Common Data addendum must precede the Private Label Line Item Detail addendum.

If this addendum message is rejected for invalid data, the First Presentment/1240 message is not rejected.

This table provides the layout for the Financial Detail Addendum (Private Label Common Data)/1644 message.

## Financial Detail Addendum (Private Label Line Item Detail)/1644

The Financial Detail Addendum (Private Label Line Item Detail)/1644 message (Usage Code 14, Industry Record Number 001) may be provided with a transaction in which a private label card is used. It includes information relevant to private label transactions for participants in the Mastercard Private Label Program.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This addendum message supports a single private label card transaction with multiple line item details. This message may be repeated from 1 to 998 times for each private label card transaction. Each occurrence represents a single-line item for a private label card transaction.

This addendum message is optional. However, submission of the Private Label Line Item Detail addendum message requires the submission of the Financial Detail Addendum (Private Label Common Data)/1644 message. The Private Label Common Data addendum must precede the Private Label Line Item Detail addendum.

If this addendum message is rejected for invalid data, the First Presentment/1240 message is not rejected.

This table provides the layout for the Financial Detail Addendum (Private Label Line Item Detail)/1644 message.

## Financial Detail Addendum (Healthcare)/1644

The Financial Detail Addendum (Healthcare)/1644 provides a detailed description of the item purchased.

Line item detail related to the purchase is presented through 1–999 occurrences of the Financial Detail Addendum (Healthcare)/1644 message (Usage Code 15, Industry Record Number 000). One of these messages is submitted for each occurrence of the line item data in the transaction.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message is optional. If this addendum is submitted with a First Presentment/1240 message and the addendum is rejected due to invalid data, the First Presentment/1240 message will continued to be processed.

PDS 1046 (Member-to-Member Proprietary Data) is the suggested element to house information for the Real-time Substantiation Audit Retrieval Fulfillment that is sent directly to the requester. Issuers can provide instructions to the acquirer for fulfilling this request through the use of PDS 1046 (Member-to-Member Proprietary Data) to be sent in the Retrieval Request/1644, Retrieval Request Acknowledgment/1644 message.

This table provides the layout for the Financial Detail Addendum (Healthcare)/1644 message.

## Financial Detail Addendum (Corporate Card Common Data Requirements)/1644

The Financial Detail Addendum (Corporate Card Common Data Requirements)/1644 message (Usage Code 98, Industry Record Number 000) may be provided with any transaction in which one of the corporate cards is used.

This addendum is required for specific corporate transactions occurring in the United States and conditionally required for specific interchange programs outside the U.S. Region.

If a Mastercard Corporate Purchasing Card® or other corporate program or service is used for airline, railway, lodging, or vehicle rental, those industry-specific addendum messages may be submitted in addition to the Corporate Card Common Data Requirements message.

If the transaction is a business-to-business purchase, customers may provide up to 998 occurrences of the Financial Detail Addendum (Corporate Line Item Detail)/1644 message in addition to the Financial Detail Addendum (Corporate Card Common Data Requirements)/1644 message.

The acceptor location, country subdivision code, postal code, and country code should be provided in DE 43 (Acceptor Name/Location) of the related First Presentment/1240 message (not in this addendum message). In addition, the acceptor location phone number should be provided in subfield 1 of PDS 0170 (Merchant Inquiry Information) of the related First Presentment/1240 message instead of in this addendum message.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message occurs only once per transaction and includes information relevant to any transaction involving a corporate card.

This addendum message may be provided only if the associated First Presentment/1240 is for a transaction that was completed with one of the Mastercard Corporate cards and may optionally be provided with these transactions:

- Any First Presentment/1240 transaction that was completed with one of the Mastercard Corporate Cards
- When a First Presentment/1240 message involves a Corporate Card and includes the Financial Detail Addendum (Lodging Summary)/1644 message

The associated First Presentment/1240 message will also be rejected if it is submitted for a U.S. region or international interchange program, unless it is submitted as:

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R

Acquirers are required to submit PDS 0595 (Acceptor Type) and PDS 0596 (Acceptor Tax ID) within the Financial Detail Addendum (Corporate Card Common Data)/1644 message, for U.S.-acquired Mastercard Commercial Fleet Card transactions occurring at fuel locations.

Acquirers should provide the Financial Detail Addendum (Corporate Card Common Data Requirements)/1644 message containing PDS 0608 (Destination Postal Code), PDS 0609 (Destination State/Province Code), PDS 0610 (Destination Country Code), and PDS 0613 (Ship-From Postal Code) from U.S. acceptors for all commercial card transactions in which goods were shipped. All goods in a transaction must be shipped from one location and received at one location.

This table provides the layout for the Financial Detail Addendum (Corporate Card Common Data Requirements)/1644 message.

#### Financial Detail Addendum (Corporate Card Common Data Requirements)/1644 message layout

### Transactions occurring at United States locations

This addendum must be provided if the associated First Presentment/1240 message meets all of these conditions:

- The product is any corporate product.
- The Acceptor Country Code (DE 43, subfield 6) equals USA.
- The Cardholder Transaction Type (DE 3, subfield 1) equals 00 (Purchase) or 18 (Unique).
- The transaction is not a reversal.

### Interregional transactions

This addendum message must be provided if the associated First Presentment/1240 message is for a transaction that meets these conditions:

- It is a Mastercard Corporate Card.
- The transaction is submitted for one of the incentive interchange rate programs listed in this table.

### Inter-regional transactions

| IRD | Incentive Interchange Rate Programs    |
|-----|----------------------------------------|
| 16  | World Small Ticket Card Present        |
| 67  | Inter-regional Commercial Data Rate II |
| 68  | Commercial Data Rate 1                 |
| 91  | Warehouse Base                         |
| 94  | Commercial Large Ticket II             |
| 99  | Commercial Large Ticket III            |
| E1  | Commercial Large Ticket Rate 1 MPG     |
| E2  | Commercial Large Ticket Rate 2 MPG     |

| IRD | Incentive Interchange Rate Programs |
|-----|-------------------------------------|
| E3  | Commercial Large Ticket Rate 3 MPG  |

### Transactions occurring at European locations

This addendum message must be provided if the associated First Presentment/1240 message is for a transaction that meets these conditions:

- It is a Mastercard Fleet Card or Mastercard Purchasing Card.
- The transaction is submitted for one of the incentive interchange rate programs listed in this table.

### Transactions occurring at European locations

| IRD | Incentive Interchange Rate Programs           |
|-----|-----------------------------------------------|
| 26  | Europe Region Purchasing Large Ticket Level 1 |
| 27  | Europe Region Purchasing Large Ticket Level 2 |

## Financial Detail Addendum (Corporate Fleet Transaction Information)/1644

Customers must ensure that the Financial Detail Addendum (Corporate Fleet Transaction Information)/1644 message precedes the Financial Detail Addendum (Corporate Line Item Detail)/1644 message.

If the Financial Detail Addendum (Corporate Fleet Transaction Information)/1644 messages are not received in the order noted, the First Presentment/1240 message and any associated addendum messages are rejected.

When a Mastercard® is used at a fuel location, the Corporate Fleet Transaction Information message (Usage Code 98, Industry Record Number 002) may be submitted to provide information related to the purchase as a whole, such as motor fuel service type, product code, unit of measure, or quantity.

In addition to this message, customers must provide line item detail related to non-fuel products purchased using a Mastercard Corporate Fleet Card at fuel locations through 1–998 occurrences of the Corporate Program Line Item Detail message (Usage Code 98, Industry Record Number 950 when the Motor Fuel Type (PDS 0622 = 3) is for non-fuel items being purchased). One line item detail message is submitted for each occurrence of line item data in the transaction.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message has up to three occurrences per transaction and includes the common information related to the total fuel purchase.

This message must be provided if the associated First Presentment/1240 message is a Mastercard Corporate Fleet Card transaction for a fuel or non-fuel purchase and it is submitted for the incentive interchange rate programs.

**NOTE: Refer to the Interchange manuals for more information on interchange rate programs.**

This addendum message may be provided only if the associated First Presentment/1240 message is for a transaction that was completed with a Mastercard Corporate Fleet Card at a fuel location.

The associated First Presentment/1240 message is also rejected if it is submitted for a U.S. region or international interchange program, unless it is submitted as:

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R
- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C
- A transaction submitted for a Standard interchange program (U.S. region and interregional IRDs 61, 63, or 65) as defined by Mastercard

For U.S. region acceptors, the submission of this addendum requires the submission of a Financial Detail Addendum (Corporate Card Common Data)/1644 message.

This table provides the layout for the Financial Detail Addendum (Corporate Fleet Transaction Information)/1644 message.

## Financial Detail Addendum (Corporate Line Item Detail)/1644

Customers must ensure that the Financial Detail Addendum (Corporate Fleet Transaction Information)/1644 message precedes the Financial Detail Addendum (Corporate Line Item Detail)/1644 message.

If the Financial Detail Addendum (Corporate Line Item Detail)/1644 messages are not received in the order noted, the First Presentment/1240 message and any associated Addendum messages are rejected.

- When a Corporate Fleet Card (MCF, MNF, MPK, MGF) is used at fuel locations (MCCs 4468, 5541, 5499, and 5983) and the Motor Fuel Information (PDS 0622) = 3:
  - Only non-fuel items being purchased are present on the Fleet Transaction Information addendum
  - The transaction is submitted with an incentive interchange program (IRD16, 62, 67, 68, 91, 94, 99)
  - These PDSs must be provided on the Corporate Line Item Detail Addendum: PDS 0641, PDS 0642, PDS 0643, PDS 0645, PDS 0647, and PDS 0654

When a corporate card (such as Mastercard® or Mastercard Corporate Fleet Card®) is used in a business-to-business purchase, any line item detail related to the purchase is presented via 1–998 occurrences of the Financial Detail Addendum (Corporate Line Item Detail)/1644 message (Usage Code 98, Industry Record Number 950). One of these messages is submitted for each occurrence of line item data in the transaction.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This message supports a single corporate program transaction with multiple line item details. It may be repeated from 001 to 998 times for each corporate card transaction. Each occurrence represents a single line item for a corporate card transaction or a single non-fuel item purchased with a Mastercard Fleet Card at a fuel location.

This message must be provided if any of these conditions are met:

- The associated First Presentment/1240 is submitted for one of the above interchange programs, and it contains a shipping/courier MCC in DE 26 (Acceptor Business Code), in which case the acquirer must provide either the Financial Detail Addendum (Shipping/Courier Services)/1644 message or the Financial Detail Addendum (Corporate Line Item Detail)/1644 message.
- The associated First Presentment/1240 is submitted for one of the above interchange programs, and it contains a temporary services MCC in DE 26, in which case the acquirer must provide the Financial Detail Addendum (Temporary Services)/1644 message. The Financial Detail Addendum (Corporate Line Item Detail)/1644 message is not required.
- The associated First Presentment/1240 is a Mastercard Corporate Purchasing Card, Mastercard Business Card, Mastercard Corporate Card, or Mastercard Corporate Fleet Card (at a non-fuel location) transaction and is submitted for one of the interchange programs listed in this table unless the transaction is a shipping/courier or temporary services transaction.

This message must be provided if the associated First Presentment/1240 meets all of this criteria:

- The Product Code is MCP or MCF at a non-fuel location.
- The Business Service is equal to one of the items in this table.

#### Financial Detail Addendum (Corporate Line Item Detail)/1644, Business Service information

| Business Service Type Code (PDS 0158, subfield 2) | Business Service ID (PDS 0158, subfield 3) | Description           |
|---------------------------------------------------|--------------------------------------------|-----------------------|
| 2                                                 | 050001                                     | Europe Intra-regional |
| 3                                                 | 050012                                     | Europe Inter-country  |
| 3                                                 | 050021                                     | Europe Inter-country  |
| 3                                                 | 050031                                     | Europe Inter-country  |

**NOTE: This applies to additional domestic arrangements within the Europe region.**

The IRD submitted in the associated First Presentment/1240 is either IRD 26: Purchasing Large Ticket Level 1 Interchange or IRD 27: Purchasing Large Ticket Level 2 Interchange.

**NOTE: Refer to the Interchange manuals for more information on interchange rate programs.**

This addendum message may be provided only if the associated First Presentment/1240 is for a transaction that was completed with one of the Mastercard Corporate Cards.

The submission of this addendum requires the submission of a Financial Detail Addendum (Corporate Card Common Data)/1644 message.

The clearing system rejects this Financial Detail Addendum/1644 message if it contains invalid data. The associated First Presentment/1240 message is also rejected if it is submitted for a U.S. region or international interchange program, unless it is submitted as:

- Credit: DE 3 (Processing Code), subfield 1 = 20
- Reversal: PDS 0025 (Message Reversal Indicator), subfield 1 = R
- Collection Only transaction: PDS 0165 (Settlement Indicator), subfield 1 = C
- A transaction submitted for a Standard interchange program (U.S. region and international IRDs 61, 63, or 65) as defined by Mastercard

This table provides the message layout.

## Financial Detail Addendum (Generic Detail)/1644

This message supports data related to new programs and services the Corporation introduces that require the presence of data not available in First Presentment/1240 messages.

The format allows the Corporation to respond to new business opportunities without waiting for the clearing system's next release.

Refer to [PDS 0501 \(Transaction Description\)](#) for the required values for this addendum.

This table provides the layout for the Financial Detail Addendum (Generic Detail)/1644 message.

## First Chargeback/1442 messages

An issuer initiates First Chargeback/1442 messages to return partially or completely a previous First Presentment/1240.

For information regarding Mexico RedMX usage of Arbitration Chargebacks/1442 messages, see the *Mexico Domestic Switching Acquirer Implementation Guide*.

Depending on program and service rules, an issuer may charge back a First Presentment/1240 that the acquirer submitted through Claims Manager. For more information on Claims Manager, refer to the *Mastercom User Guide*.

These messages must contain 1442 in the MTI and one of these values in DE 24 (Function Code):

- 450 to indicate that the message is a First Chargeback (Full)/1442 for the full First Presentment/1240 amount

- 453 to indicate that the message is a First Chargeback (Partial)/1442 for part of the First Presentment/1240 amount
- 451 to indicate that the message is an Arbitration Chargeback (Full)/1442 for the full First Presentment/1240 amount, or
- 454 to indicate that the message is an Arbitration Chargeback (Partial)/1442 for part of the First Presentment/1240 or Second Presentment/1240 amount.

The specific reason for the First Chargeback/1442 or Arbitration Chargeback/1442 is in DE 25 (Message Reason Code).

This table provides the layout for the First Chargeback/1442 message.

## Second Presentment/1240 messages

An acquirer initiates Second Presentment/1240 messages to remedy a previous First Chargeback/1442.

The issuer may return the transaction to the acquirer as a chargeback through Claims Manager. For more information on Claims Manager, refer to the *Mastercom User Guide*.

These messages must contain 1240 in the MTI and one of these values in DE 24 (Function Code):

- 205 to indicate that the Second Presentment (Full)/1240 is for the full First Presentment/1240 amount, or
- 282 to indicate that the message is a Second Presentment (Partial)/1240 for part of the First Presentment/1240 or First Chargeback/1442 amount.

The specific reason for the Second Presentment/1240 is in DE 25 (Message Reason Code).

This table provides the layout for the Second Presentment/1240 message.

## Retrieval Request/1644 messages

An issuer sends a Retrieval Request/1644 to an acquirer when it is determined that the transaction information document needs to be examined for issuer or cardholder needs.

These messages are only applicable for Mexico RedMX transactions. For information regarding Mexico RedMX, see the *Mexico Domestic Switching Acquirer Implementation Guide*.

The message must contain 1644 in the MTI and 603 in Data Element (DE) 24 (Function Code) to identify it as a Retrieval Request/1644.

This table provides the layout for the Retrieval Request/1644 message.

### Retrieval Request/1644 message layout

| No. | Data element name                | Org | Sys | Dst |

## Retrieval Request Acknowledgment/1644 messages

An acquirer sends a Retrieval Request Acknowledgment/1644 to an issuer indicating that the acquirer has fulfilled the Retrieval Request.

These messages are only applicable for Mexico RedMX transactions. For information regarding Mexico RedMX, see the *Mexico Domestic Switching Acquirer Implementation Guide*.

The message must contain 1644 in the MTI and 605 in DE 24 (Function Code) to identify it as a Retrieval Request Acknowledgment/1644.

This table provides the layout for the Retrieval Request Acknowledgment/1644 message.

## Fee Collection messages

Fee Collection messages are used for the collection or disbursement of fees that require funds settlement between various clearing system participants. Fee Collection messages may include fees generated between pairs of customers, and fees generated between the corporation and customers.

This list shows some examples of Fee Collection messages:

- Collection or disbursement from customer to customer of fees that brand, program, and service rules permit
- Collection or disbursement from Mastercard to customer of fees related to processing services that the clearing system provides
- Collection or disbursement from Mastercard to customer of such fees as administrative fees, membership fees, and penalties, according to brand, program, and service
- Collection or disbursement from customer to customer of summary settlement positions between customers that participate in bilateral clearing arrangements with clearing system summary settlement

These messages must contain 1740 in the MTI and one of these values in DE 24:

- 700 Fee Collection (Customer-generated)
- 780 Fee Collection Return (Customer-generated)
- 781 Fee Collection Resubmission (Customer-generated)
- 782 Fee Collection Arbitration Return (Customer-generated)
- 783 Fee Collection (Clearing System-generated)
- 790 Fee Collection (Funds Transfer) This value applies only in the IPM Pre-edit system to UK Domestic Maestro transactions.

Fee Collection (Clearing System-generated)/1740 messages (DE 24 = 783) cannot be returned. Function Codes 780, 781, and 782 apply only to Fee Collection (Customer-generated)/1740 messages (DE 24 = 700).

## Fee Collection (Retrieval Fee Billing)/1740

An acquirer uses this message layout to collect the USD 15 delivery fee from an issuer that reimburses the acquirer for costs associated with delivering a hardcopy retrieval document to the issuer.

If the acquirer fulfills a Retrieval Request/1644 for a hardcopy document, the acquirer should collect the appropriate hardcopy fulfillment fee by submitting a Fee Collection (Retrieval Fee Billing)/1740 with the appropriate code (190000) in DE 3 (Processing Code), and with DE 24 = 700 and DE 25 (Message Reason Code) = 7614. This credits the acquirer and debits the issuer for the retrieval fulfillment fees.

This table provides the layout for the Fee Collection (Retrieval Fee Billing)/1740 message.

## Fee Collection (Handling Fees)/1740

Acquirers and issuers use this message layout to collect the progressive handling fees related to authorization-related chargebacks (chargeback reason codes 4807, 4808, and 4847).

This list shows the values for the message layout.

- The MTI must be 1740.
- DE 24 (Function Code) can be 700, 780, 781, or 782.
- DE 25 (Message Reason Code) must be 7622, 7623, 7624, or 7627.

This table provides the layout for the Fee Collection (Handling Fees)/1740 message.

## Activity types accumulated by reconciliation messages

Reconciliation messages accumulate only accepted financial activity.

Financial activity includes First Presentment/1240, First Chargeback/1442, Second Presentment/1240, Arbitration Chargeback/1442, and Fee Collection/1740 messages.

Non-financial activity includes File Header/1644, File Trailer/1644, Text/1644, Message Exception/1644, File Reject/1644, Retrieval Request/1644, Currency Update/1644, and Financial Detail Addendum/1644 messages.

Rejected financial activity and all non-financial activity are accumulated and reported in other messages.

## Function Codes used

Each reconciliation message type is identified by a unique Data Element (DE) 24 (Function Code).

This table lists the DE 24 function codes.

### Function Codes used

| Function Code | Reconciliation Message Type                         |
|---------------|-----------------------------------------------------|
| 680           | File Currency Summary/1644 (Source currency totals) |
| 685           | Financial Position Detail/1644 (Clearing totals)    |
| 688           | Settlement Position Detail/1644 (Settlement detail) |

## Message Reason Codes used

The reconciliation message formats also include a DE 25 (Message Reason Code).

The values in this data element allow for a mechanism to easily segregate acknowledgment and notification reconciliation messages delivered in a single offline file, as shown in this table.

### Message Reason Codes used

| Message Reason Code | Reconciliation Message Reason Code Description                                                         |
|---------------------|--------------------------------------------------------------------------------------------------------|
| 6861                | Acknowledgment Reconciliation: the clearing system generates after processing member outbound activity |
| 6862                | Notification Reconciliation: the clearing system generates for member inbound activity                 |

**NOTE: Refer to these definitions:**

- **Acknowledgment is a type of IPM reconciliation message confirming activity that the customer sent to [Dual Message Clearing System](#).**
- **Notification is a type of IPM reconciliation message confirming activity that the customer received from Dual Message Clearing System.**

## Reconciliation Amount/Reconciliation Fee totals

Financial Position Detail/1644 messages and Settlement Position Detail/1644 messages provide fee totals (PDS 0146 [Amounts, Transaction Fee]) separately from DE 5 (Amount, Reconciliation) totals. The fee totals are provided by fee type code.

All fees are in PDS 0146 of the clearing transaction. PDS 0146 contains from 1 to 12 fee occurrences. Subfield 1, Fee Type Code identifies each fee. Each fee is accumulated as either a debit or a credit based on subfield 2, Fee Processing Code.

This table describes the process for accumulating fee totals.

### Reconciliation Amount/Reconciliation Fee totals

| DE/PDS   | Amount, Fee, Reconciliation (subfield 7) | Fee Processing Code (subfield 2) | PDS 0025 | Originator Dr/Cr Indicator* | Receiver Dr/Cr Indicator** |
|----------|------------------------------------------|----------------------------------|----------|-----------------------------|----------------------------|
| PDS 0146 | Amount, Fee, Reconciliation              | 19                               | -        | Cr                          | Dr                         |
| PDS 0146 | Amount, Fee, Reconciliation              | 19                               | R        | Dr                          | Cr                         |
| PDS 0146 | Amount, Fee, Reconciliation              | 29                               | -        | Dr                          | Cr                         |
| PDS 0146 | Amount, Fee, Reconciliation              | 29                               | R        | Cr                          | Dr                         |

\* In reconciliation messages, if DE 25 contains 6861, the reconciliation message represents an acknowledgment, which is an accumulation of a customer's previously submitted outgoing clearing file. Therefore, when DE 25 is 6861, the reconciliation message is generated for the originator.

\*\* Further, if DE 25 contains 6862, the reconciliation message represents a notification, which is an accumulation of a customer's new incoming clearing file. Therefore, when DE 25 is 6862, the reconciliation message is generated for the receiver.

In the Financial Position Detail/1644 and the Settlement Position Detail/1644 messages, debit fee totals are provided in reconciliation currency in PDS 0392 (Debit, Fee Amounts), credit fee

totals are provided in reconciliation currency in PDS 0393 (Credits, Fee Amounts), and the net totals are provided in reconciliation currency in PDS 0395 (Amount, Net Fee).

## Reconciliation messages

These sections describe the reconciliation messages.

### Acknowledgment messages

The acknowledgment messages contain the clearing system-calculated totals for the related customer outbound file.

The clearing system responds to a customer-originated file by sending the customer acknowledgment messages based on customer profile options. The clearing system calculates totals only for accepted files and accepted financial messages.

Acknowledgment messages contain a DE 25 (Message Reason Code) value of 6861.

### Notification messages

The notification messages contain the clearing system-calculated totals for the customer's inbound activity.

The clearing system provides notification messages for each customer inbound file based on the customer profile options.

Notification messages contain a DE 25 value of 6862.

### Reconciliation message totals

For the Financial Position Detail/1644 messages and the Settlement Position Detail/1644 messages, [Dual Message Clearing System](#) provides totals for each of the reconciliation categories chosen.

This table shows the usage requirements (mandatory or conditional) for each of these PDSs within the message.

#### PDS usage requirements

| Value | Description                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------|
| M     | Mandatory. The data element is always present in the message.                                                                |
| C     | Conditional. The data element is present in the message if the conditions described in the accompanying text are applicable. |
| N/A   | Not applicable                                                                                                               |

This table shows the PDS usage details.

### PDS usage details

| PDS number | Reconciliation totals       | Currency type                                                                                             | Presence in the 1644/680 message | Presence in the 1644/685 message | Presence in the 1644/688 message |
|------------|-----------------------------|-----------------------------------------------------------------------------------------------------------|----------------------------------|----------------------------------|----------------------------------|
| 0380       | Debits, transaction amount  | Transaction                                                                                               | M                                | C                                | N/A                              |
| 0381       | Credits, transaction amount | Transaction                                                                                               | M                                | C                                | N/A                              |
| 0384       | Amount, net transaction     | Transaction                                                                                               | M                                | C                                | N/A                              |
| 0390       | Debits, transaction amount  | Reconciliation                                                                                            | N/A                              | M                                | M                                |
| 0391       | Credits, transaction amount | Reconciliation                                                                                            | N/A                              | M                                | M                                |
| 0392       | Debits, fee amounts         | Reconciliation                                                                                            | N/A                              | M                                | M                                |

## Debit/Credit totals

Reconciliation messages provide separate totals for debit and credit amounts.

DE 5 (Amount, Reconciliation) reconciliation debit and credit totals are determined for the transaction originator and transaction destination by using the transaction function ([Message Type Identifier \[MTI\]](#) and DE 24 [Function code]), DE 3 [Processing Code], and PDS 0025 [Message Reversal Indicator]. For activity other than bilaterally settled or Collection Only, transaction and fee totals are designated as debit or credit according to the settlement impact to each customer. For example, an original retail purchase is accumulated as a credit to the originator (the acquirer) and a debit to the receiver (the issuer).

An acquirer always originates and an issuer always receives the financial transactions listed in this table.

### Debit/Credit totals originated by acquirers

| MTI  | DE 24 | DE 3      | PDS 0025 | Amount DE/PDS | Originator Dr/Cr Indicator (Acquirer) | Receiver Dr/Cr Indicator (Issuer) |
|------|-------|-----------|----------|---------------|---------------------------------------|-----------------------------------|
| 1240 | 200   | 00-18, 50 | -        | DE 5          | Cr                                    | Dr                                |
| 1240 | 200   | 00-18, 50 | R        | DE 5          | Dr                                    | Cr                                |
| 1240 | 200   | 20, 28    | -        | DE 5          | Dr                                    | Cr                                |
| 1240 | 200   | 20, 28    | R        | DE 5          | Cr                                    | Dr                                |
| 1240 | 205   | 00-18, 50 | -        | DE 5          | Cr                                    | Dr                                |
| 1240 | 205   | 00-18, 50 | R        | DE 5          | Dr                                    | Cr                                |

The two previous tables apply to Collection Only, non-Collection Only, and bilateral activity.

Both acquirers and issuers may originate and receive Fee Collection messages. The clearing system may also originate these messages. The transactions are listed in this table.

## Reconciliation category summary

Financial Position Detail/1644 message and Settlement Position Detail/1644 message totals may include indicators for several reconciliation categories to support a broad range of business requirements.

A Financial Position Detail/1644 message or Settlement Position Detail/1644 message is generated for each unique combination of values for the selected clearing reconciliation categories depending on the options selected by the customer. The amount totals in the reconciliation messages are always in the customer's reconciliation currency (based on DE 5 [Amount Reconciliation] of the original sender or the original receiver, depending on whether the 1644-685 or 1644-688 message is going to the sender [acknowledgment] or receiver [notification]). The totals may also be in a transaction currency/reconciliation currency pair, depending on whether the customer selects transaction currency as an option.

This table shows these categories.

| Reconciled, Transaction Function (PDS 0372)                                            | Y or N                                | Y or N                                | N/A                                    |
| Reconciled, Processing Code (PDS 0374)                                                 | Y or N                                | Y or N                                | N/A                                    |
| Member specified Reconciliation Criteria: Member Reconciliation Indicator 1 (PDS 0375) | Y or N                                | N/A                                   | N/A                                    |
| Original/Reversal Totals Indicator (PDS 0378)                                          | Y or N                                | Y or N                                | N/A                                    |
| Currency Code, Transaction (DE 49)                                                     | Y or N                                | Y or N                                | Y or N                                 |
| Settlement Activity (PDS 0359)                                                         | N/A                                   | N/A                                   | Default                                |
| Card Program Identifier (PDS 0367)                                                     | N/A                                   | N/A                                   | Y or N                                 |
| Transaction Function Group Code (PDS 0368)                                             | N/A                                   | N/A                                   | Y or N                                 |
| Acquirer's BIN (PDS 0369)                                                              | N/A                                   | N/A                                   | Y or N                                 |

To ensure that customers receive a complete representation of their Mastercard settled activity, when either the account range or the Acquirer's BIN category (or both) is selected, [Dual](#)

[Message Clearing System](#) automatically accumulates the totals, in PDS 0302, Reconciled, Member Activity, based on one or more of these values:

- Issuing activity
- Acquiring activity, or
- Fee collection activity.

**NOTE: Customers electing to receive Settlement Position Detail messages always receive both acknowledgment and notification messages for each settlement reconciliation category.**

## Reconciliation category definitions

This topic defines the reconciliation categories.

### PDS 0105 (File ID) and PDS 0300 (Reconciled, File ID)

The file originator must create a unique File ID for each File Header/1644 in and across transmissions. The file originator accomplishes this by using unique values in PDS 0105 in each File Header/1644 and corresponding File Trailer/1644. The File ID for which the totals are presented is provided in PDS 0300 (Reconciled, File) of the Reconciliation message.

In acknowledgment reconciliation messages, PDS 0300 contains the PDS 0105 value submitted by the file originator in customer-generated files.

In notification reconciliation messages, PDS 0300 contains the clearing cycle delivery file ID assigned by [Dual Message Clearing System](#) for files generated by Mastercard.

PDS 0300 is a default category for Settlement Position Detail/1644 messages, and an optional category for Financial Position Detail/1644 messages. Customers who elect to receive the reconciliation messages and choose this category receive either the Financial Position Detail/1644 or Settlement Position Detail/1644-688 messages, or both, as selected by the customer, grouped by this category. The File ID for which the totals are presented is provided in PDS 0300 of the reconciliation message. Customers can use these values in PDS 0300 to identify the corresponding File ID for reconciliation to the Settlement Advisement line item totals as well as their reconciliation reports.

### PDS 0370 (Reconciled, Account Range)

This optional category provides totals of clearing or settlement amounts in reconciliation currency grouped by issuing account ranges. A customer will receive amount totals for their own issuing account ranges as established and maintained at Mastercard.

Totals also may be accumulated by issuing account range activity for the reconciled customer ID. If a customer/processor selects the account range level reconciliation category, PDS 0370 (Reconciled, Account Range) is provided in the Reconciliation messages. Only the customer's issuing account range activity is provided; customers will not receive account range activity for other issuers' account ranges. Customers that select this reconciliation option will receive a message for each unique account range established for its customer ID that had activity in the applicable file, clearing cycle, or both.

For Financial Position Detail/1644 messages, if the PDS 0370 category is selected, the Reconciled, Member Activity (PDS 0302) also must be selected to obtain complete amount totals by issuing account range, acquiring activity (customer ID level), and fee collection activity (customer ID level).

For Settlement Position Detail/1644 messages, if the PDS 0370 category is selected, PDS 0302 will automatically be selected to provide complete amount totals by issuing account range, acquiring activity (customer ID level), and fee collection activity (customer ID level).

### PDS 0302 (Reconciled, Member Activity)

Customers may choose to receive separate financial position detail totals for their acquiring activity, issuing activity, and fee collection activity. This table illustrates the clearing system's classification of Financial messages as issuing, acquiring, or fee collection.

#### PDS 0302 (Reconciled, Member Activity)

| Transaction Description | Transaction Functions              | Acquiring Activity for the Customer Identified by | Issuing Activity for the Customer Identified by | Fee Collection Activity for the Customer Identified by |
|-------------------------|------------------------------------|---------------------------------------------------|-------------------------------------------------|--------------------------------------------------------|
| First Presentment       | 1240–200                           | DE 94                                             | DE 93                                           | N/A                                                    |
| First Chargeback        | 1442–450, 453                      | DE 93                                             | DE 94                                           | N/A                                                    |
| Second Presentment      | 1240–205, 282                      | DE 94                                             | DE 93                                           | N/A                                                    |
| Arbitration Chargeback  | 1442–451, 454                      | DE 93                                             | DE 94                                           | N/A                                                    |
| Fee Collection          | 1740–700, 780, 781, 782, 783, 790* | N/A                                               | N/A                                             | DE 94 and DE 93**                                      |

\* Transaction function 1740–790 is valid only in the IPM Pre-edit system for U.K. Domestic Maestro® transactions.

\*\* DE 94 (Transaction Originator Institution ID Code) indicates the transaction originator, and DE 93 (Transaction Destination ID Code) indicates the transaction receiver.

If selected for Financial Position Detail/1644 messages, the PDS 0302 (Reconciled, Member Activity) category provides totals by issuing activity, acquiring activity, and fee collection activity at the customer ID level. If selected with PDS 0370 (Account Range Category), the totals are by issuing account range, acquiring activity (customer ID level), and fee collections (customer ID level).

Customers cannot choose just to receive issuing activity or just the fee collection activity. They receive totals for whatever activity is processed.

This category is not offered as a settlement reconciliation category; however, [Dual Message Clearing System](#) automatically generates totals for this type of activity for customers that elect reconciliation by issuing account range, acquirers BIN, or both.

This table lists the category and related totals.

### Category and related totals

| Category                                                 | Dual Message Clearing System-provided totals   |
|----------------------------------------------------------|------------------------------------------------|
| Reconciled, Account Range                                | Acquiring activity and fee collection activity |
| Reconciled, Acquirer's BIN                               | Issuing activity and fee collection activity   |
| Reconciled, Account Range and Reconciled, Acquirer's BIN | Fee collection activity                        |

### PDS 0358 (Reconciled, Business Activity)

Customers may choose to receive financial position detail totals by PDS 0358 (Reconciled, Business Activity). PDS 0358 includes the card program identifier, business service ID and level, interchange rate designator, business date and business cycle, and other subelements defined in PDS 0158 (Business Activity). This enables customers to reconcile interchange fees for financial activity occurring in each business service group.

If PDS 0358, subfield 7 contains 0, then DE 26 (Acceptor Business Code [MCC]) is also present in the Financial position Detail/1644 message, to provide totals based on the value in DE 26.

### PDS 0165 (Settlement Indicator)

The settlement indicator in each Financial Position Detail/1644 indicates whether the totals are totals settled by Mastercard, bilaterally settled totals, or Collection Only totals. Customers may optionally choose to receive financial position detail totals by PDS 0165.

Totals settled by Mastercard refer to customer-to-customer and customer-to-Mastercard financial activity for which settlement completes using the Mastercard settlement system as opposed to a bilateral arrangement. Most offline clearing transactions are cleared and settled in this manner.

Bilateral totals refer to transactions submitted for clearing that are settled directly between customers by a mechanism other than the [Dual Message Clearing System](#) (Mastercard does not settle these transactions).

Collection Only totals refer to On-Us or intraprocessor transactions that were cleared and settled outside the clearing system. They are sent to the clearing system for reporting purposes only.

For bilateral and Collection Only totals, amounts are provided in transaction currency only, and only if the customer has also selected Financial Position Detail Reconciliation messages in transaction currency.

If customers want to be able to reconcile, separate, bilateral and Collection Only activity, and that settled by Mastercard, they should choose this category and the transaction currency category.

### **PDS 0372 (Reconciled, Transaction Function)**

Customers may optionally choose to receive financial position detail reconciliation totals by transaction function. Transaction function refers to a combination of MTI and DE 24 (Function Code) that provides a method of uniquely identifying financial transaction categories.

Totals are provided for each unique transaction function supported in this table that shows the transaction function subset.

### **PDS 0372 (Reconciled, Transaction Function)**

| <b>Description</b>                            | <b>MTI</b> | <b>Function Code</b>           |
|-----------------------------------------------|------------|--------------------------------|
| Presentments and Second Presentments          | 1240       | 200, 205, 282                  |
| First Chargebacks and Arbitration Chargebacks | 1442       | 450, 451, 453, 454             |
| Retrieval Requests*                           | 1644       | 603                            |
| Fee Collections                               | 1740       | 700, 780, 781, 782, 783, 790** |

\* Customers selecting this option and submitting 1644-603 (Retrieval Requests; non-financial messages) will receive reconciliation messages with zero counts and amounts.

\*\* Transaction function 1740-790 is valid only in the IPM Pre-edit system for UK domestic Maestro transactions.

### **DE 3 (Processing Code) and PDS 0374 (Reconciled, Processing Code) transaction type**

Customers may optionally choose to receive financial position detail totals by DE 3 (Processing Code). Each financial transaction that a customer submits and receives contains one of the Processing Codes in this table.

### **DE 3 (Processing Code) and PDS 0374 (Reconciled, Processing Code) transaction type**

| <b>Processing Code</b> | <b>Description</b>                                                                                        |
|------------------------|-----------------------------------------------------------------------------------------------------------|
| 00                     | Purchase (Goods and Services) transaction                                                                 |
| 01                     | ATM Cash Withdrawal transaction                                                                           |
| 09                     | Purchase (Goods and Services) with Cashback (Only for use with specific UK domestic Maestro transactions) |

| Processing Code | Description                                 |
|-----------------|---------------------------------------------|
| 12              | Cash Disbursement transaction               |
| 17              | Convenience Checks (Collection Only)        |
| 18              | Unique transaction                          |
| 19              | Fee Collection (Credit Originator)          |
| 20              | Credit transaction                          |
| 28              | Payment Transaction                         |
| 29              | Fee Collection (Debit Originator)           |
| 30              | Balance Inquiry                             |
| 50              | Payment/Balance Transfers (Collection Only) |
| 91              | PIN Unblock                                 |
| 92              | PIN Change                                  |

Customers cannot choose to receive totals for specific DE 3 values. They receive totals for all DE 3 activity processed by the clearing system for which they have activity.

#### **PDS 0375 (Member Reconciliation Indicator 1)**

If selected for a Financial Position Detail/1644 message, financial message originators may choose to include a PDS 0375 (Member Reconciliation Indicator 1).

This PDS contains values the originator defined. If provided, the clearing system generates reconciliation totals in accordance with the originator's defined values. This reconciliation category is available for acknowledgment reconciliation in Financial Position Detail/1644 messages.

Customers can populate PDS 0375 in their customer outgoing messages with any proprietary value up to 50 positions in length.

For example, an acquirer may choose to assign a value for a specific merchant chain and place this value into PDS 0375 in an outgoing customer First Presentment/1240 message related to the merchant chain. The acquirer can then choose Member Reconciliation Indicator 1 (PDS 0375) as an acknowledgment reconciliation message option, and receive acknowledgment reconciliation messages from Dual Message Clearing System containing totals based on this merchant chain identifier.

If the customer has chosen this reconciliation category but does not include PDS 0375 in its customer outgoing data, Dual Message Clearing System creates an acknowledgment reconciliation message with a PDS 0375 value of undefined.

#### **PDS 0378 (Original/Reversal Totals Indicator)**

If selected for Financial Position Detail/1644 messages, PDS 0378 (Original/Reversal Totals Indicator) provides separate totals for original amounts and reversal amounts.

Reversal transactions consist of all transactions that the clearing system receives with a Message Reversal Indicator (subfield 1 of PDS 0025 [Message Reversal Indicator]) value of R.

Original transactions include both original submissions (no PDS 0025 is present) and re-submissions (subfield 1 of PDS 0025 contains a space, and subfield 2 contains a date).

#### **DE 49 (Currency Code, Transaction)**

This optional category provides totals of transaction amounts in reconciliation currency grouped by transaction currency. Customers that choose this reconciliation category receive reconciliation currency amount totals per customer ID for each unique combination of reconciliation and transaction currency pair. All Financial Position Detail/1644 and Settlement Position Detail/1644 message totals are automatically provided in the receiving customer's reconciliation currencies.

Customers that want to reconcile separately the bilateral and Collection Only clearing activity and that settled by Mastercard for their Financial Position Detail/1644 messages should select this category and the PDS 0165 (Settlement Indicator) category.

#### **PDS 0359 (Reconciled, Settlement Activity) (Default)**

This is a default settlement category. Customers who elect to receive the settlement reconciliation messages always receive Settlement Position Detail/1644-688 messages grouped by this category. Customers receive settlement position detail totals based on the information that Dual Message Clearing System populates in PDS 0159 (Settlement Data) of each transaction settled by Mastercard. This category generates one message per customer ID for each unique combination of the items in this list.

- Settlement Service Transfer Agent ID
- Settlement Service Transfer Agent account
- Settlement service level
- Settlement Service ID
- Settlement Foreign exchange rate class
- Reconciliation date
- Reconciliation cycle
- Settlement date
- Settlement cycle

#### **PDS 0367 (Reconciled, Card Program Identifier)**

This optional settlement category provides totals of settlement amounts in reconciliation currency grouped by the value in the card program identifier, PDS 0158, subfield 1. Customers selecting this reconciliation category for Settlement Position Detail/1644 messages will receive amount totals per customer ID for each unique occurrence of a Card Program Identifier.

#### **PDS 0368 (Reconciled, Transaction Function Group Code)**

Customers may choose to receive settlement reconciliation totals by transaction function group. Mastercard created transaction function groups as a method of grouping similar types of

financial transactions together for processing efficiency. Totals are provided within the Settlement Position Detail/1644-688 message for each unique transaction function group.

### PDS 0369 (Reconciled, Acquirer's BIN)

This optional settlement category provides totals of settlement amounts in reconciliation currency grouped by acquiring BINs. Customers that select this category for their Settlement Position Detail/1644 messages receive amount totals for their own acquiring BINs as established and maintained at Mastercard. When this category is selected, the acquirer receives messages for each BIN established for its customer ID that has activity in the applicable file, clearing cycle, or both.

Customers that select this category automatically receive totals for:

- Issuing activity at the customer ID level when Issuing Account Range category is not selected and
- Fee collection activity at the customer ID level.

## File Currency Summary/1644 messages

Customers may use File Currency Summary/1644 messages to reconcile clearing transaction currency totals for each offline file.

File Currency Summary/1644 messages contain debit amount totals, credit amount totals, and net totals. One File Currency Summary/1644 is created for each clearing transaction currency that occurs in a file.

File Currency Summary/1644 messages may be provided as acknowledgment messages (to reconcile a customer's previously submitted outgoing clearing file), notification messages (to reconcile a customer's incoming clearing data), or both. The Message Reason Code distinguishes notification and acknowledgment messages that may be delivered in a common file.

This table provides the message layout.

### File Currency Summary/1644 message layout

| No.   | Data element name       | Org | Sys | Dst |
|-------|-------------------------|-----|-----|-----|
|       | Message Type Identifier | •   | X   | M   |

## Financial Position Detail/1644 messages

Financial Position Detail/1644 messages may be used to reconcile offline file financial activity at a more detailed level than File Currency Summary/1644 messages allow.

One Financial Position Detail/1644 message is generated for each unique combination of values for customer-selected clearing reconciliation categories that occur in a file.

Customers that elect to receive Financial Position Detail/1644 reconciliation messages may choose from ten optional categories for acknowledgment or nine categories for notification messages. Customers must be set up for at least one of the recommended or optional categories to receive the financial position detail reconciliation messages. The clearing system accumulates totals in reconciliation currency and generates Financial Position Detail/1644 reconciliation messages for both customer inbound data (notification data) and customer outbound data (acknowledgment data), if the customer selects both type and message.

This table provides the message layout.

### Financial Position Detail/1644 message layout

## Settlement Position Detail/1644 messages

The Settlement Position Detail/1644 (Function Code 688) message provides details of a customer's settlement activity by settlement service and other settlement reconciliation categories.

This message may be used to reconcile financial activity at the file level against settlement funds transfers. These messages, generated after clearing cycle cutoffs, provide totals for each file processed in the clearing cycle.

Customers that elect to receive settlement reconciliation messages are automatically set up for default categories. In addition, five optional categories are available that customers may choose. Customers must be set up for at least the two default categories to receive the settlement position detail reconciliation messages. The clearing system accumulates totals in reconciliation currency and generates Settlement Position Detail/1644 reconciliation messages for both customer inbound data (notification data) and customer outbound data (acknowledgment data).

**NOTE: The Settlement Position Detail/1644 message is delivered along with the customer's normal activity at the end of each clearing cycle (Bulk Type T112) and will not be distributed within the IPM Early Reconciliation File (Bulk Type T113).**

This table provides the layout for the Settlement Position Detail/1644 message.

## Message Exception/1644 messages

The clearing system generates Message Exception/1644 messages when it encounters an exception condition while processing an individual message.

Only errors are included in Message Exception/1644 messages. The errors are listed in this table.

### Message Exception/1644 messages

| Level of severity | Condition                               | Originator receives                                                                                                                                                                                                                                                                                                                                                                     | Destination receives |
|-------------------|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| Error             | Unparseable or unrecognizable message   | Message Exception/1644 only<br>(The rejected message is not returned.)                                                                                                                                                                                                                                                                                                                  | Nothing              |
| Error             | Error in one or more supported elements | Message Exception/1644 and the rejected message itself. If generated by the IPM Pre-edit utility, Data Element (DE) 71 (Message Number) in the rejected message is modified to contain a value that is greater than the DE 71 value of the preceding message in the file. If generated by <a href="#">Dual Message Clearing System</a> , DE 71 in the rejected message is not modified. | Nothing              |

The Message Exception/1644 message contains a code identifying the error. It also contains the data element numbers or private data subelement (PDS) numbers that caused the exception conditions.

Other identifying information related to the message is presented if the clearing system can parse the information.

For Mexico RedMX scheme transactions, under certain condition the message is flagged for error but it is cleared and settled. Syntax condition is not rejected. In this case, the error is indicated by PDS 0005 and is present in the presentment, chargeback, retrieval request, and retrieval request acknowledgment messages.

This table provides the layout for the Message Exception/1644 message.

### Message Exception/1644 message content

| DE or PDS | Contents |
|-----------|----------|
| MTI       | 1644     |

| PDS 0025  | Reversal Indicator of the exception message (if the clearing system can parse)                                                                                                                                                                                                                                    |
| PDS 0138  | DE 71 (Message Number) of the exception message (if the clearing system can parse)                                                                                                                                                                                                                                |
| PDS 0165  | Settlement Indicator of the exception message (if the clearing system can parse)                                                                                                                                                                                                                                  |
| PDS 0261  | Risk Management Approval Code assigned to First Presentments that exceeded the issuer and/or acquirer transaction amount limits. PDS 0261 is not present in the Message Exception/1644 message. Instead, GCMS inserts it into the First Presentment/1240 message that follows the Message Exception/1644 message. |
| PDS 0280  | PDS 0105 (File ID) of the file containing the exception message (from the File Header/1644, if present and if the clearing system can parse)                                                                                                                                                                      |

## DE 72 (Data Record)

In a Message Exception/1644, DE 72 contains 1–10 data element and PDS numbers in error and their contents, if the clearing system can parse the message.

If a message rejects because the clearing system cannot parse it, DE 72 (Data Record) contains the first 1–200 positions of the rejected message. DE 72 may also contain additional information, depending on the message reject reason.

This list is some examples of DE 72 contents in a Message Exception/1644:

- If the clearing system rejects a message because the combination of MTI and DE 24 (Function Code) is invalid, DE 72 is formatted as:  
DE24\contents MTI^contents of DE24\\1–200 positions of the rejected message.
- If the clearing system rejects a message because a single element contains an invalid value, DE 72 is formatted as:  
DXXX (or PXXXX)\contents of DXXX (or PXXXX)\\.
- If the clearing system rejects a message because more than one element or subfield is in error, DE 72 is formatted as:  
DXXX\contents\\PXXXX\contents\\PXXXX\contents\\.
- If the clearing system rejects a Financial Detail Addendum/1644, DE 72 is formatted as:

\USAGE=xx,IND REC NO=yyy, OCCUR=aaa^DExxx(or PDSxxxx)\contents\.

## File Reject/1644 messages

The clearing system generates File Reject/1644 messages to indicate that an entire file is rejected.

No warning or adjustment conditions are included in File Reject/1644 messages. The errors are listed in this table.

### File Reject/1644 messages

| Level of severity | Condition | Originator receives                                                                                                                                                                                                                                                                                                                                                                                                                                               | Destination receives |
|-------------------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| Error             | Any       | File Reject/1644 message and, if applicable, a Message Exception/1644. If all detail messages in a logical file are rejected, the clearing system returns each detail message in a Message Exception/ 1644 (Function Code 691) message. In addition, it returns a File Reject/1644 (Function Code 699) message because it did not accept any of the individual messages. The clearing system returns individual error messages with the Full File Reject Message. | Nothing              |

The File Reject/1644 message contains the error codes that caused the file to be rejected, plus 1–200 positions of the rejected file's first message. In addition, if the [Dual Message Clearing System](#) identifies any individual data element or PDS errors, the wrong data element or PDS and related error codes are presented. Other identifying information related to the file is presented if the clearing system can parse it.

This table summarizes the critical data provided.

### File Reject/1644 messages critical data

| DE or PDS | Contents                                                                                                                                     |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| MTI       | 1644                                                                                                                                         |
| DE 24     | 699                                                                                                                                          |
| DE 72     | 1–200 positions of the rejected file's first message, plus specific data elements and PDSs and their values that are in error, if applicable |

| DE or PDS | Contents                                                                                                                                   |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| PDS 0005  | File reject error codes, severity codes indicating fatal, and specific data elements and PDSs and their related error codes, if applicable |
| PDS 0138  | DE 71 (Message Number) of the message that caused the file to be rejected (if the clearing system can parse)                               |
| PDS 0280  | PDS 0105 (File ID) of the rejected file (from the File Header/1644, if present and the clearing system can parse)                          |

## DE 72 (Data Record)

In a File Reject/1644 message, DE 72 always contains the first 1–200 positions of the rejected file's first message.

DE 72 may also contain additional information, depending on the file reject reason.

This list is some examples of DE 72 contents in a File Reject/1644 message:

- If the clearing system rejects a file because DE 71 in the File Header/1644 message contains a value other than 00000001, DE 72 is formatted as:  
DE71\contents of DE71\\1–200 positions of the rejected file's first message.
- If the clearing system rejects a file because DE 71 (Message Number) in the header message contains a value other than 00000001 and PDS 0026 (File Reversal Indicator) is present in the File Header/1644, DE 72 is formatted as:  
DE71\contents of DE71\\PDS0026\contents of PDS0026\\1–200 positions of the rejected file's first message.
- If the clearing system rejects a file because PDS 0306 (File Message Counts) in the File Trailer/1644 is not equal to the total number of messages in the logical file, DE 72 is formatted as:  
PDS0306\contents of PDS0306^SYSTEM CALCULATED VALUE=XXXXXXXX\\1–200 positions of the rejected file's first message.
- If a file is rejected because it contains no messages, no recognizable messages, no File Header/1644 messages, or all messages in the file rejected, DE 72 is formatted as:  
\\1–200 positions of the rejected file's first message.
- If the clearing system rejects a message because it was unable to convert it from non-IPM to IPM, DE 72 is formatted as:

It will include the first 200 bytes of the parsed message. (The parsed message structure could vary from one format to another.)

This table provides the message layouts for Message Exception/1644 and File Reject/1644 messages.

### Message Exception/1644 and File Reject/1644 message layouts

| No.   | Data element name                                                                                                                                                             | Org | Sys | Dst |

## Text Message/1644 messages

Text Message/1644 messages transmit text messages from the [Dual Message Clearing System](#) to a customer or processor and broadcast messages from the clearing system to all customers and processors.

This message contains 1644 in the MTI and 693 in DE 24 (Function Code) to identify it as a Text Message/1644. In a delivery file containing more than one clearing cycle of data, one message will be present per customer, per file.

This table provides the layout for the Text Message/1644 message.

### Text Message/1644 message layout

## Currency Update/1644 messages

Currency Update/1644 messages provide conversion rates between Mastercard Global Payment currency and all other payment currencies supported by Mastercard.

Mastercard supports buy, mid, and sell currency conversion rates. Customers may request Currency Update/1644 messages from Mastercard as part of the clearing file.

The delivery options for Currency Update/1644 messages are:

- Do not deliver Currency Update/1644 messages
- Deliver mid rate Currency Update/1644 messages
- Deliver buy and sell rate Currency Update/1644 messages only
- Deliver buy, mid, and sell rate Currency Update/1644 messages

After selecting these options, the customer must also specify which clearing cycles they have selected to receive the deliveries. The clearing cycles indicated should coincide with a delivery cycle for that customer or endpoint.

This message will contain a value of 1644 in the MTI and a value 640 in DE 24 (Function Code) to identify it as a Currency Update/1644 message.

This message provides the layout for the Currency Update/1644 message.

### Currency Update/1644 message layout

## Data element definitions and details

This section provides a detailed definition of data elements (DEs) used in IPM format offline clearing messages.

### Data element layout

This section contains the data element structure for describing data elements. This section omits values and application note information from the data element attributes of those data elements not currently used in the Mastercard Network messages.

#### Attributes

| Attribute           | Description                                              |
|---------------------|----------------------------------------------------------|
| Data Representation | Annotation and data length (fixed or variable in length) |
| Data Length         | 2 or 3 positions, if variable in length                  |
| Data Field          | Contents of subelement, subfields, or N/A                |
| Subfields           | Indicates the number of subelements, subfields, or N/A   |
| Justification       | Left, Right, or N/A                                      |

Following is the usage of DE xx (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

#### Applicable messages

| Message                                                                            | Org | Sys | Dst |
|------------------------------------------------------------------------------------|-----|-----|-----|
| Applicable message types                                                           | .   | .   | .   |
| Refer to <a href="#">Data element definitions and details</a> for the usage codes. |     |     |     |

#### Values

Valid values and name of each value listed.

#### Application notes

Specific application notes, conditions, and cross-edits where applicable.

## Subelement layout

This is the subelement structure for describing data element subelements.

### Attributes

| Attribute              | Description                                              |
|------------------------|----------------------------------------------------------|
| Subelement ID          | Subelement identifier                                    |
| Subelement Data Length | 2 or 3 positions, if variable in length                  |
| Data Representation    | Annotation and data length (fixed or variable in length) |
| Data Field             | Contents of subfields                                    |
| Subfields              | Indicates the number of subfields                        |
| Justification          | See subfields (may be subfield-specific)                 |

Following is the usage of subelement XX (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Refer to Data element definitions and details for the usage codes. |     |     |     |

### Values

The list of subelement values or see subfields.

## Subfield layout

This is the subfield structure for describing data element and subelement subfields. This section omits Subfield ID and Subfield Length from the subfield attributes when not including subfield ID and length in the data.

### Attributes

| Attribute            | Description                                                                         |
|----------------------|-------------------------------------------------------------------------------------|
| Subfield ID          | Subfield identifier (omitted if not part of the data)                               |
| Subfield Data Length | 2 or 3 positions, if variable in length                                             |
| Data Representation  | Annotation and data length (fixed or variable in length)                            |
| Data Field           | Contents of positions                                                               |
| Justification        | Left, Right, or N/A, when not using justification to describe subelement subfields) |

### Values

Valid values and name of each value listed.

## Position layout

This is the position structure for describing subelement and subfield positions.

### Position layout

|                     |                                                          |
|---------------------|----------------------------------------------------------|
| Data Representation | Annotation and data length (fixed or variable in length) |
| Data Field          | Description of data                                      |

## European transaction requirements

Some data elements and PDSs note specific requirements for European use.

Intra-European and Inter-European messages are those in which both the acquirer and issuer are in the Europe region.

## Bit Map, Primary

Bit Map, Primary is a series of 64 bits that identify the presence (denoted by 1) or the absence (denoted by 0) of DE 1 (Bit Map, Secondary) through DE 64 (Message Authentication Code [MAC]) in the message.

This data element must be included in every IPM message as the second data field immediately following the MTI. It indicates the presence or absence of DE 1–DE 64 in the message.

The use of bit maps enables message originators to include only those data elements in a message that are required for a specific function.

### Attributes

This table shows the message attributes.

#### Attributes

| Attribute           | Description                              |
|---------------------|------------------------------------------|
| Data Representation | b-8                                      |
| Data Length         | None                                     |
| Data Field          | Fixed length, 8 bytes (for each bit map) |
| Subfields           | None                                     |
| Justification       | N/A                                      |

### Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Related required data element

DE 1 is also required in every IPM message to be used in conjunction with Bit Map, Primary. DE 1 must be the third data field of every IPM message following the MTI and Bit Map, Primary.

A total bit map mechanism of 128 bits comprises these two bit maps to select any combination of the 128 standard ISO data elements within an IPM message.

**NOTE: All Mastercard IPM messages have mandatory data elements from both the Primary and Secondary Bit Maps. Therefore, both Primary and Secondary Bit Maps are required in all IPM messages.**

## DE 1 (Bit Map, Secondary)

DE 1 (Bit Map, Secondary) is a series of 64 bits that identify the presence (denoted by 1) or the absence (denoted by 0) of DE 65 (Bit Map, Extended) through DE 128 (Message Authentication Code [MAC]) in the message.

### Attributes

| Attribute           | Description                              |
|---------------------|------------------------------------------|

This data element always must be in every IPM message as the third data field immediately following the MTI and the Bit Map, Primary. It indicates the presence or absence of DE 65–DE 128 in the message.

The use of bit maps enables message originators to include only those data elements in a message that are required for a specific function.

### Related required data element

Bit Map, Primary is also required in every IPM message to be used with DE 1.

A total bit map mechanism of 128 bits comprises the two bit maps to select any combination of the 128 standard ISO data elements in an IPM message.

**NOTE: All Mastercard IPM messages have mandatory data elements from both the Primary and Secondary Bit Maps. Therefore, both Primary and Secondary Bit Maps are required in all IPM messages.**

## DE 2 (Primary Account Number [PAN])

DE 2 (Primary Account Number [PAN]) is a series of digits that identify a customer account or relationship.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | n...19; LLVAR                   |
| Data Length         | 2 positions, value = 06–19      |
| Data Field          | Variable length, 6–19 positions |
| Subfields           | None                            |
| Justification       | None                            |

The clearing system expects DE 2 to contain the appropriate number of positions for the account number without any filler characters to the left or right. For example, if a 16-digit account number is captured for a given transaction, the length of DE 2 must be 16, and exactly 16 digits must be provided beginning in position 1 of DE 2.

### Usage

Use of this data element is mandatory, conditional, optional, system provided, or not required in applicable messages.

This data element identifies the cardholder's PAN. It contains an account number of up to 19 digits that is encoded on magnetic stripe track 1 and track 2 or on the embedded chip of a payment card, provisioned on a device or embossed on a bankcard's face.

This data element is required for payment card-originated authorization, financial, and related transactions.

The PAN used in a First Presentment/1240 must remain the same in all subsequent life cycle messages related to it (such as subsequent Retrieval Request/1644, Chargeback/1442, and Second Presentment/1240 messages).

If DE 2 is not provided in the Fee Collection/1740 message for the collection of Handling Fees, the receiving customer has the right to return the message.

### Values

This data element is used for all numeric PANs up to 19 digits long.

Specific requirements for PAN composition are detailed in the ISO 7812 and 7813 specifications. All PANs used in messages must conform to the ISO PAN encoding requirements as specified in these documents.

In addition, all transactions processed through the clearing system must include PAN data that complies with Mastercard standards and policy publications.

## DE 3 (Processing Code)

DE 3 (Processing Code) is a series of digits that describe the effect of a transaction on a customer account and the type of accounts affected.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-6                       |
| Data Length         | None                      |
| Data Field          | Fixed length, 6 positions |
| Subfields           | 3                         |
| Justification       | N/A                       |

### Usage

Use of this data element is mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                               | M   | .   | M   |
| First Chargeback/1442 and Arbitration Chargeback/1442                | M   | .   | M   |
| Second Presentment/1240                                              | M   | .   | M   |
| Retrieval Request/1644                                               | M   | .   | M   |
| Retrieval Request Acknowledgment/1644                                | M   | .   | M   |
| Fee Collection (Retrieval Fee Billing)/1740                          | M   | .   | M   |
| Fee Collection (Handling Fees)/1740                                  | M   | .   | M   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | M   | .   | M   |

The Processing Code describes in First Presentment/1240 messages the cardholder transaction type at the point of interaction. It also indicates whether DE 4 (Amount, Transaction) is to be applied as a credit or a debit to the cardholder's account.

It is also used in the following transaction life cycle messages related to a First Presentment/1240 message to properly identify the original cardholder transaction type and ensure proper application of funds:

- Retrieval Request/1644
- Retrieval Request Acknowledgment/1644
- First Chargeback/1442
- Second Presentment/1240
- Arbitration Chargeback/1442

For all life cycle messages related to a First Presentment/1240 message, the DE 3 value must remain the same.

The Processing Code is also used in Fee Collection messages to indicate funds movement direction.

### Related data element

Refer to [DE 26 \(Acceptor Business Code \[MCC\]\)](#) for more Acceptor Business Code information.

Transactions submitted with DE 3, subfield 1 (Cardholder Transaction Type), value 28 (Payment Transaction) require a valid Transaction Type Identifier in PDS 0043 (Transaction Type Identifier)

### Authorization to clearing data element mapping

The [Dual Message Authorization System](#) authorization messages currently use the ISO 8583:1987 message format, whereas the IPM clearing messages use the ISO 8583:1993 message format. Therefore, there are some differences for the same data elements between the authorization and clearing messages that customers should consider when mapping between them.

This table details the mapping between the authorization and clearing data elements for DE 3.

### Authorization and clearing data element mapping

| To map to<br>IPM DE3 s1<br>value | Description | Use CIS<br>DE3 s1<br>value | Description | Notes |
|----------------------------------|-------------|----------------------------|-------------|-------|
| <b>Mastercard credit</b>         |             |                            |             |       |
| <b>Cardholder account debits</b> |             |                            |             |       |

| 28                               | Payment Transaction                         | 28                         | Payment Transaction                                                                                                                                                                                                                                                                                                                                                                                                        |       |

## DE 3 subfields

DE 3 is comprised of three subfields.

This table describes the subfield formats for DE 3.

### DE 3 subfields

| Number | Positions | Name                              | Attribute | Justification |
|--------|-----------|-----------------------------------|-----------|---------------|
| 1      | 1-2       | Cardholder Transaction Type       | n-2       | N/A           |
| 2      | 3-4       | Cardholder From Account Type Code | n-2       | N/A           |
| 3      | 5-6       | Cardholder To Account Type Code   | n-2       | N/A           |

Subfield 1 describes the specific cardholder transaction type.

Subfield 2 describes the cardholder account type affected for cardholder debit and inquiry transactions and the *from* account type for cardholder transfer transactions.

Subfield 3 describes the cardholder account type affected for cardholder credit transactions and the *to* account type for cardholder transfer transactions. This subfield is currently not used and must be populated with 00.

## Subfield 1 (Cardholder Transaction Type)

The cardholder transaction types that the clearing system supports are listed in these tables.

These tables are applicable for Mastercard credit card transactions:

### Cardholder account debits

| Value | Description                                                                           |
|-------|---------------------------------------------------------------------------------------|
| 00    | Purchase (Goods and Services)                                                         |
| 01    | ATM Cash Withdrawal                                                                   |
| 09    | Purchase (Goods and Services) with Cash Back (available only in designated countries) |
| 12    | Cash Disbursement                                                                     |
| 17    | Convenience Check (available only in Collection Only messages)                        |
| 18    | Unique Transaction (requires unique MCC)                                              |
| 19    | Fee Collection (Credit to Transaction Originator)                                     |

### Cardholder account credits

| Value | Description                                      |
|-------|--------------------------------------------------|
| 20    | Credit (Purchase Return)                         |
| 28    | Payment Transaction                              |
| 29    | Fee Collection (Debit to Transaction Originator) |

### Cardholder account inquiry

| Value | Description     |
|-------|-----------------|
| 30    | Balance Inquiry |

### Chip PIN management transaction

| Value | Description |
|-------|-------------|
| 91    | PIN Unblock |
| 92    | PIN Change  |

### Transfer services

| Value | Description                                                           |
|-------|-----------------------------------------------------------------------|
| 50    | Payment/Balance Transfer (Available Only in Collection Only Messages) |

These tables are applicable for Mastercard debit card transactions:

### Cardholder account debits

| Value | Description                                                    |
|-------|----------------------------------------------------------------|
| 00    | Purchase (Goods and Services)                                  |
| 01    | ATM Cash Withdrawal                                            |
| 09    | Purchase (Goods and Services) with Cash Back                   |
| 12    | Cash Disbursement                                              |
| 17    | Convenience Check (available only in Collection Only messages) |
| 18    | Unique Transaction (requires unique MCC)                       |
| 19    | Fee Collection (Credit to Transaction Originator)              |

### Cardholder account credits

| Value | Description                                      |
|-------|--------------------------------------------------|
| 20    | Credit (Purchase Return)                         |
| 28    | Payment Transaction                              |
| 29    | Fee Collection (Debit to Transaction Originator) |

### Cardholder account inquiry

| Value | Description     |
|-------|-----------------|
| 30    | Balance Inquiry |

### Chip PIN management transaction

| Value | Description |
|-------|-------------|
| 91    | PIN Unblock |
| 92    | PIN Change  |

### Transfer services

| Value | Description                                                           |
|-------|-----------------------------------------------------------------------|
| 50    | Payment/Balance Transfer (available only in Collection Only messages) |

### For Maestro card transactions

| Value | Description                                       |
|-------|---------------------------------------------------|
| 00    | Purchase (Goods and Services)                     |
| 01    | ATM Cash Withdrawal                               |
| 09    | Purchase (Goods and Services) with Cash Back      |
| 12    | Cash Disbursement                                 |
| 19    | Fee Collection (Credit to Transaction Originator) |

| Value | Description                                      |
|-------|--------------------------------------------------|
| 20    | Credit (purchase return)                         |
| 28    | Payment Transaction                              |
| 29    | Fee Collection (Debit to Transaction Originator) |

#### For Cirrus card transactions

| Value | Description                                       |
|-------|---------------------------------------------------|
| 01    | ATM Cash Withdrawal                               |
| 12    | Cash Disbursement                                 |
| 19    | Fee Collection (Credit to Transaction Originator) |
| 29    | Fee Collection (Debit to Transaction Originator)  |

#### For private label card transactions

| Value | Description                              |
|-------|------------------------------------------|
| 00    | Purchase                                 |
| 18    | Unique Transaction (requires unique MCC) |
| 20    | Credit (Purchase Return)                 |
| 28    | Payment Transaction                      |

### Subfield 2 (Cardholder from Account Type Code)

#### For Mastercard credit card transactions

| Value | Description               |
|-------|---------------------------|
| 00    | Default Account           |
| 10    | Savings Account           |
| 20    | Checking Account          |
| 30    | Credit Account            |
| 39    | Commercial Credit Account |

| Value | Description          |
|-------|----------------------|
| 60    | Stored Value Account |

#### For Maestro and Cirrus card transactions

| Value | Description              |
|-------|--------------------------|
| 00    | Default Account          |
| 10    | Savings Account          |
| 20    | Checking Account         |
| 30    | Credit Card Account      |
| 39    | Corporate Credit Account |
| 60    | Stored Value Account     |

**NOTE:** The Mastercard Parameter Extract (MPE) retains only the masked values for the cardholder from account type code.

### Subfield 3 (Cardholder to Account Type Code)

The cardholder to account type code subfield must be 00 (default account) in all clearing system messages.

## DE 4 (Amount, Transaction)

DE 4 (Amount, Transaction) is the amount of the transaction as agreed by the cardholder in the currency appearing on the transaction receipt, which may be the acceptor's local currency or a currency acceptable to the cardholder and acceptor that the acquirer supports, exclusive of PDS 0146 (Amounts, Transaction Fee).

Refer to Section 3.13 Transaction Receipt Requirements of the *Transaction Processing Rules* guide for more information about transaction receipts.

#### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-12                       |
| Data Length         | None                       |
| Data Field          | Fixed length, 12 positions |

| Attribute     | Description               |
|---------------|---------------------------|
| Subfields     | None                      |
| Justification | Right, with leading zeros |

## Usage

Use of this data element is mandatory, conditional, optional, system provided, or not required in applicable messages.

## Applicable messages

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                               | M   | .   | M   |
| First Chargeback/1442 and Arbitration Chargeback/1442                | M   | .   | M   |
| Second Presentment/1240                                              | M   | .   | M   |
| Fee Collection (Retrieval Fee Billing)/1740                          | .   | X   | M   |
| Fee Collection (Handling Fees)/1740                                  | M   | .   | M   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | M   | .   | M   |

## First Presentment/1240 messages

DE 4 is the cardholder transaction actual amount in the acceptor's local currency or in a currency to which the acceptor and cardholder agree and that the acquirer supports. It is exclusive of any transaction fees associated with the transaction. This may or may not be the same as the original amount the acceptor requested in a related authorization request.

## First Chargeback/1442 messages

DE 4 is the First Chargeback/1442 amount in the First Chargeback/1442 currency, exclusive of any transaction fees. A First Chargeback/1442 is classified as partial if it is for less than the First Presentment/1240 amount.

**NOTE: For ATM First Chargeback/1442 messages involving non-European Primary Account Numbers (PANs) and destined for the non-European, non-intracountry Mastercard Network identifier, the issuer must add interchange fees to the chargeback amount before sending the message.**

## Second Presentment/1240 messages

DE 4 is the Second Presentment/1240 amount in the Second Presentment/1240 currency, exclusive of any transaction fees. A Second Presentment/1240 is classified as partial if it is for less than the First Presentment/1240 amount.

### **Arbitration Chargeback/1442 messages**

DE 4 is the Arbitration Chargeback/1442 amount in the Arbitration Chargeback/1442 currency, exclusive of any transaction fees. An Arbitration Chargeback/1442 is classified as partial if it is for less than the amount of the First Presentment/1240.

### **Fee Collection/1740 messages**

DE 4 is the Fee Collection/1740 transaction amount, exclusive of any transaction fees.

Fee Collection/1740 messages can be accepted in any currency except if the transaction is an intracurrency settlement service transaction it must be submitted in the currency of the intracurrency.

### **Fee Collection Return/1740 messages**

DE 4 is the Fee Collection Return/1740 transaction amount, exclusive of any transaction fees.

### **Fee Collection Resubmission/1740 messages**

DE 4 is the Fee Collection Resubmission/1740 transaction amount, exclusive of any transaction fees.

### **Fee Collection Arbitration Return/1740 messages**

DE 4 is the Fee Collection Arbitration Return/1740 transaction amount, exclusive of any transaction fees.

### **Related required data element and PDS**

DE 49 (Currency Code, Transaction) and PDS 0148 (Currency Exponents) must be present in conjunction with DE 4 to identify the transaction's currency and exponent.

### **Values**

In first chargebacks, second presentments, arbitration chargebacks, and fee collection (Retrieval Fee Billing/Handling Fees) messages, if the transaction is not an intracurrency settlement service level transaction, or an intra-European transaction, DE 4 must contain the U.S. dollar equivalent of the transaction amount if submitted by a customer unless the transaction came from the Single Message System. For fee collection messages, if the transaction is an intracurrency settlement service transaction it must be submitted in the currency of the intracurrency settlement agreement.

In all messages other than Fee Collection/1740 messages, DE 4 must be greater than zero.

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a transaction amount of USD 212.50 is expressed as 000000021250.

## DE 5 (Amount, Reconciliation)

DE 5 (Amount, Reconciliation) is the DE 4 (Amount, Transaction) value converted to the customer's reconciliation payment or settlement currency.

This amount is exclusive of any fees that are provided in PDS 0146 (Amounts, Transaction Fee).

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-12                       |
| Data Length         | None                       |
| Data Field          | Fixed length, 12 positions |
| Subfields           | None                       |
| Justification       | Right, with leading zeros  |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                               | C   | X   | M   |
| First Chargeback/1442 and Arbitration Chargeback/1442                | •   | X   | M   |
| Second Presentment/1240                                              | •   | X   | M   |
| Fee Collection (Retrieval Fee Billing)/1740                          | •   | X   | M   |
| Fee Collection (Handling Fees)/1740                                  | •   | X   | M   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | •   | X   | M   |

For ATM transactions submitted by the Mastercard Network, this element is mandatory.

For ATM transactions submitted by the acquirer, DE 5 is mandatory when the ATM indicator is 1 or 4.

For all transactions, the clearing system always provides this element.

If a Currency Conversion Assessment (DE 111) was applied, DE 5 will contain this amount.

### **First Presentment/1240 messages**

DE 5 is DE 4 converted to the issuer's reconciliation currency for the transaction. The clearing system may use an adjusted conversion rate.

### **First Chargeback/1442 messages**

DE 5 is DE 4 converted to the acquirer's reconciliation currency for the transaction.

### **Second Presentment/1240 messages**

DE 5 is DE 4 converted to the issuer's reconciliation currency for the transaction.

### **Arbitration Chargeback/1442 messages**

DE 5 is DE 4 converted to the acquirer's reconciliation currency for the transaction.

### **Fee Collection/1740 Messages, Fee Collection Return/1740 messages, Fee Collection Resubmission/1740 messages, or Fee Collection Arbitration Return/1740 messages**

DE 5 is DE 4 converted to the receiving customer's reconciliation currency for the transaction.

**NOTE: These usage notes assume the transaction passes all system edits, and therefore, DE 5 is calculated in the destination party's reconciliation currency.**

**If a transaction is rejected and therefore returned to the originator, DE 5 is not calculated or presented in the message.**

### **Related data element and PDS**

DE 50 (Currency Code, Reconciliation) and PDS 0148 (Currency Exponents) must be present in conjunction with DE 5 to identify the reconciliation (payment) currency and exponent.

### **Values**

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a reconciliation amount of USD 212.50 is expressed as 000000021250.

## **DE 6 (Amount, Cardholder Billing)**

DE 6 (Amount, Cardholder Billing) is DE 4 (Amount, Transaction) converted to the issuer's designated cardholder billing currency.

This amount is exclusive of any fees that are provided in PDS 0146 (Amounts, Transaction Fee).

## Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-12                       |
| Data Length         | None                       |
| Data Field          | Fixed length, 12 positions |
| Subfields           | None                       |
| Justification       | Right, with leading zeros  |

## Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

## Applicable messages

| Message                 | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| First Presentment/1240  | O   | X   | C   |
| Second Presentment/1240 | O   | X   | C   |

For bilaterally settled transactions, this element is optional.

For all other transactions, the clearing system always provides this element.

### First Presentment/1240 messages

DE 6 is DE 4 converted to the issuer's cardholder billing currency. A supplemental cardholder fee for the Issuer Currency Conversion Rate (ICCR) Service may be added to DE 6 for a participant's transaction.

### Second Presentment/1240 messages

DE 6 is DE 4 converted to the issuer's cardholder billing currency.

### Related required data element and PDS

DE 51 (Currency Code, Cardholder Billing) and PDS 0148 (Currency Exponents) must be present in conjunction with DE 6 to identify the cardholder billing currency and exponent.

The clearing system determines the cardholder billing currency for transactions on the basis of data processing parameters that issuers select in the customer profile database. Cardholder

billing currency selection may be established on issuing account range (PAN) data and other criteria.

The clearing system also optionally enables issuers to determine the cardholder billing currency for a given transaction according to the account range and the transaction currency in DE 49 (Currency Code, Transaction).

### Values

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a cardholder billing amount of USD 212.50 is expressed as 000000021250.

## DE 9 (Conversion Rate, Reconciliation)

DE 9 (Conversion Rate, Reconciliation) is the factor used in converting transaction amount to reconciliation amount.

### How DE 5 is calculated using DE 9

After adjusting for the decimal location, DE 9 is multiplied by DE 4 (Amount, Transaction) to determine DE 5 (Amount, Reconciliation).

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-8                       |
| Data Length         | None                      |
| Data Field          | Fixed length, 8 positions |
| Subfields           | None                      |
| Justification       | N/A                       |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | •   | X   | M   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | •   | X   | M   |

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| Second Presentment/1240                                              | .   | X   | M   |
| Fee Collection (Retrieval Fee Billing)/1740                          | .   | X   | M   |
| Fee Collection (Handling Fees)/1740                                  | .   | X   | M   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | .   | X   | M   |

This data element is calculated by dividing DE 5 by DE 4. The result is adjusted to fit within the last seven positions of DE 9, and the first position is populated with the number of decimal places. DE 9 provides the currency conversion cross-rate from DE 4 to DE 5.

**NOTE: This data element is simply a quotient of the two related amount data elements and may not reflect the actual currency conversion rates or algorithms the clearing system uses to execute the currency conversion service.**

### Values

The left-most digit denotes the number of positions that the decimal separator shall be moved from the right. The left-most digit is in the range 0–9. For example, a data value of 91234567 indicates a conversion rate of 0.001234567.

If DE 5 = DE 4, DE 9 will contain a value of 61000000.

## DE 10 (Conversion Rate, Cardholder Billing)

DE 10 (Conversion Rate, Cardholder Billing) is the factor used in converting a transaction amount to the cardholder billing amount.

After adjusting for the decimal location, DE 10 is multiplied by DE 4 (Amount, Transaction) to determine DE 6 (Amount, Cardholder Billing).

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data representation | n-8                       |
| Data Length         | None                      |
| Data field          | Fixed length, 8 positions |
| Subfields           | None                      |
| Justification       | N/A                       |

## Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

## Applicable messages

| Message                 | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| First Presentment/1240  | .   | X   | C   |
| Second Presentment/1240 | .   | X   | C   |

This data element is calculated by dividing DE 6 by DE 4. The result is adjusted to fit within the last seven positions of DE 10, and the first position is populated with the number of decimal places. DE 10 provides the currency conversion cross-rate from DE 4 to DE 6.

DE 10 is present in a message whenever DE 4 and DE 6 are present.

## Values

The left-most digit denotes the number of positions that the decimal separator shall be moved from the right. The left-most digit is in the range 0–9. For example, a data value of 91234567 indicates a conversion rate of 0.001234567.

If DE 6 = DE 4, DE 10 will contain a value of 61000000.

## DE 12 (Date and Time, Local Transaction)

DE 12 (Date and Time, Local Transaction) is the local year, month, day, and time at which the transaction takes place at the acceptor location.

## Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-12; YYMMDDhhmmss         |
| Data Length         | None                       |
| Data Field          | Fixed length, 12 positions |
| Subfields           | 2                          |
| Justification       | N/A                        |

## Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |

| Retrieval Request/1644                                | M   | .   | M   |
| Retrieval Request Acknowledgment/1644                 | M   | .   | M   |

For business transaction life cycle messages, DE 12 contains the actual cardholder transaction local date and time at the point of interaction.

The DE 12 value submitted in the First Presentment/1240 should be retained and returned unaltered in all subsequent life cycle messages.

DE 12 is required in the life cycle transactions if it was provided on the First Presentment. This is critical if the transaction qualifies for Account Level Management/Spend Shortfall processing. Refer to the *Account Level Management User Manual* for details regarding which transactions qualify for Account Level Management.

## Subfield 1 (Date)

DE 12 (Date and Time, Local Transaction), subfield 1 (Date) describes the date on which a transaction takes place at the acceptor location.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-6; YYMMDD               |
| Data Field          | Contents of positions 1–6 |
| Justification       | N/A                       |

## Requirements

- DE 12, subfield 1 must be present and contain a valid date in the format YYMMDD in all First Presentment/1240 transactions. GCMS rejects the transaction if DE 12, subfield 1 is not present.
- In First Presentment/1240 messages, DE 12 must contain a valid date to qualify for most incentive interchange programs.
- The date cannot be greater than the file header date provided in subfield 2, File Reference Date, of PDS 0105 (File ID), unless the transaction is Collection Only.
- If the transaction is a retrieval request and DE 12 is present, this subfield must contain a valid date in the format YYMMDD.
- This table describes the rules for the date subfield based on the transaction type.

## Rules for the date subfield based on transaction type

| Transaction type                                                                                                       | Transaction date used in DE 12, subfield 1                                                                                                                                                                                                           |
|------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Face-to-face                                                                                                           | The date goods or services are exchanged.                                                                                                                                                                                                            |
| Non-Face-to-face                                                                                                       | The date goods are shipped or services performed                                                                                                                                                                                                     |
| Vehicle Rental                                                                                                         | The date the vehicle is returned, or, if applicable, the prepayment date.                                                                                                                                                                            |
| Lodging                                                                                                                | The date checkout occurred, or if applicable, the prepayment date.                                                                                                                                                                                   |
| No-show                                                                                                                | The date the cardholder was expected to arrive at the hotel or motel and failed to appear.                                                                                                                                                           |
| Airline/Railway                                                                                                        | The date the ticket was issued.                                                                                                                                                                                                                      |
| Cruise Line                                                                                                            | The date transportation documents are issued.                                                                                                                                                                                                        |
| On-board Cruise Line                                                                                                   | The date the passenger disembarks.                                                                                                                                                                                                                   |
| Credit                                                                                                                 | The date the acceptor grants a credit or price adjustment.                                                                                                                                                                                           |
| All in-flight commerce transactions except in-flight commerce mailed purchases                                         | The date the flight departs from the originating city. The transaction date for in-flight commerce mailed purchases is the shipment date unless otherwise disclosed to the cardholder.                                                               |
| Post-authorized Aggregated Contactless Transit or Authorized Aggregated Split Clearing Contactless Transit Transaction | The date the cardholder undertook travel that was included in this aggregation. If the aggregation spanned multiple days, the date used should be that which most clearly allows the cardholder to link the amount charged to the travel undertaken. |

## Subfield 2 (Time)

DE 12 (Date and Time, Local Transaction), subfield 2 (Time) describes the time at which a transaction takes place at the acceptor location.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Date Representation | n-6; hhmmss                |
| Data Field          | Contents of positions 7–12 |
| Justification       | N/A                        |

### Requirements

- This subfield must be in hhmmss format representing hours, minutes, and seconds.
- If the transaction time is unknown or unavailable, the time subfield should be populated with zeros.

## DE 14 (Date, Expiration)

DE 14 (Date, Expiration) specifies the year and month after which a card expires.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4; YYMM                 |
| Data Length         | None                      |
| Data Field          | Fixed length, 4 positions |
| Subfields           | None                      |
| Justification       | N/A                       |

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | O   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |
| Retrieval Request/1644                                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |

This data element may be used in messages to contain the date after which a card expires and is no longer valid for cardholder use.

### Values

This data element must consist of a year (YY) and a month (MM).

## DE 22 (Point of Service [POS] Entry Mode)

DE 22 (Point of Service [POS] Entry Mode) is a series of codes that identify terminal capability, terminal environment, and point-of-interaction (POI) security data.

DE 22 indicates specific conditions that are (or were) present at the time a transaction occurred at the point of interaction.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | an-12                      |
| Data Length         | None                       |
| Data Field          | Fixed length, 12 positions |
| Subfields           | 12                         |
| Justification       | N/A                        |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

This data element describes in First Presentment/1240 messages (and subsequent related life cycle messages) the POI environment at the time that a transaction occurred. Credit (Purchase Return) messages should submit point-of-interaction (POI) data based on the refund environment, not the environment of the original transaction.

If the acquirer fails to provide DE 22 (Point of Service Data Code) in the First Presentment of an electronic commerce transaction, regardless of the IRD submitted, the transaction will be rejected.

### Requirements

This list describes the requirements for DE 22.

- If DE 22 is not present in the First Presentment/1240 message, GCMS rejects the transaction.
- DE 22 data sent in the First and Arbitration Chargeback/1442 and Second Presentment/1240 messages should be the same value as that which was sent in DE 22 in the First Presentment/1240 message.
- DE 22 is required in Retrieval Request/1644 and Retrieval Request Acknowledgment/1644 messages whenever it was included in the associated First Presentment/1240.

### Authorization to clearing data element mapping

The [Dual Message Authorization System](#) authorization messages currently use the ISO 8583:1987 message format, whereas the IPM clearing messages use the ISO 8583:1993 message format. There are some differences for the same data elements between the

authorization and clearing messages that customers should consider when mapping between them.

**NOTE: Refer to the *Data Integrity Monitoring Program* manual for specific edit information.**

### Authorization to clearing mapping for DE 22 subfields

This table describes the mapping of CIS authorization DE 61, DE 22, DE 26, and DE 48 values to IPM DE 22 subfield values

| If the CIS authorization message contains:                                 | Then in this IPM DE 22 subfield, use:                                          |
|----------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| CIS DE 61, subfield 11 (POS Card Data Terminal Input Capability Indicator) | IPM DE 22, subfield 1 (Terminal Data: Card Data Input Capability)              |
| 0                                                                          | 0                                                                              |
| 1                                                                          | 1                                                                              |
| 2                                                                          | 2                                                                              |
| 3                                                                          | M                                                                              |
| 4                                                                          | A                                                                              |
| 5                                                                          | D                                                                              |

## Subfield 1 (Terminal Data, Card Data Input Capability)

DE 22 (Point of Service [POS] Entry Mode), subfield 1 indicates the set of methods supported by the terminal for the input of account number, card, or mobile device data.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Field          | Contents of position 1 |
| Justification       | N/A                    |

| Values | Description                                                                                                           |
|--------|-----------------------------------------------------------------------------------------------------------------------|
| 0      | Input capability unknown or unspecified.                                                                              |
| 1      | No POS terminal used (for example, voice/ARU authorization or other transactions that originated from a data server). |
| 2      | Terminal supports magnetic stripe input only.                                                                         |
| 4      | Optical character reader (OCR) capability                                                                             |
| 5      | Terminal supports EMV contact chip input only.                                                                        |

| Values | Description                                                                                                                                                                                                                                                                                         |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6      | Terminal supports key entry input only.                                                                                                                                                                                                                                                             |
| A      | Contactless Magnetic Stripe (Proximity Chip)<br><br><b>NOTE: Terminal supports contactless magnetic stripe input but not contactless EMV input. The terminal may also support one or more other card input types, including EMV contact chip input, magnetic stripe input, and key entry input.</b> |
| B      | Terminal supports magnetic stripe input, and key entry input.                                                                                                                                                                                                                                       |
| C      | Terminal supports EMV contact chip input, magnetic stripe input, and key entry input.                                                                                                                                                                                                               |
| D      | Terminal supports EMV contact chip input and magnetic stripe input.                                                                                                                                                                                                                                 |
| E      | EMV contact chip and key entry capability.                                                                                                                                                                                                                                                          |
| M      | Contactless EMV/Chip (Proximity Chip)<br><br><b>NOTE: Terminal supports contactless EMV input. The terminal also may support one or more other card input types, including contactless magnetic stripe input, EMV contact chip input, magnetic stripe input, and key entry input.</b>               |
| V      | Other capability                                                                                                                                                                                                                                                                                    |

- DE 22 is used in a clearing message to identify a message as a Clearing contactless magnetic stripe transaction. For this transaction type, DE 22, subfield 1 contains values A or M, and subfield 7 contains value A.
- DE 22 is used in a clearing message to identify a message as a Clearing contactless M/Chip transaction. For this transaction type, DE 22, subfields 1 and 7 contain value M.

## Subfield 2 (Terminal Data, Cardholder Authentication Capability)

DE 22 (Point of Service [POS] Entry Mode), subfield 2 describes the capability of the terminal device to support/accept authentication data.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 2 |
| Justification       | N/A                    |

| Values | Description                                                              |
|--------|--------------------------------------------------------------------------|
| 0      | Terminal does not have PIN entry capability                              |
| 1      | Terminal has PIN entry capability                                        |
| 2      | Electronic signature analysis capability                                 |
| 3      | POS software-based PIN entry capability                                  |
| 5      | Terminal has PIN entry capability but PIN pad is not currently operative |
| 6      | Other                                                                    |
| 9      | Unknown; data unavailable                                                |

### Subfield 3 (Terminal Data, Card Capture Capability)

DE 22 (Point of Service [POS] Entry Mode), subfield 3 indicates whether the terminal has card capture capabilities.

#### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 3 |
| Justification       | N/A                    |

| Values | Description                                             |
|--------|---------------------------------------------------------|
| 0      | Terminal/operator does not have card capture capability |
| 1      | Terminal/operator has card capture capability           |
| 9      | Unknown; data unavailable                               |

## Subfield 4 (Terminal Operating Environment)

DE 22 (Point of Service [POS] Entry Mode), subfield 4 indicates whether the acceptor is attending the terminal and the location of the terminal.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 4 |
| Justification       | N/A                    |

### Applicable messages

| Values | Description                                |
|--------|--------------------------------------------|
| 0      | No terminal used                           |
| 1      | On acceptor premises; attended terminal    |
| 2      | On acceptor premises; unattended terminal  |
| 3      | Off acceptor premises; attended            |
| 4      | Off acceptor premises; unattended          |
| 5      | On cardholder premises; unattended         |
| 6      | Off cardholder premises; unattended        |
| 7      | Private use (Future use)                   |
| 8      | Additional Terminal Operating Environments |
| 9      | Unknown; data unavailable                  |

## Subfield 5 (Cardholder Present Data)

DE 22 (Point of Service [POS] Entry Mode), subfield 5 indicates whether the cardholder is present at the point of service and explains the condition if the cardholder is not present.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | n-1         |

| Attribute     | Description            |
|---------------|------------------------|
| Data Field    | Contents of position 5 |
| Justification | N/A                    |

| Values | Description                                                                    |
|--------|--------------------------------------------------------------------------------|
| 0      | Cardholder present                                                             |
| 1      | Cardholder not present (unspecified)                                           |
| 2      | Cardholder not present (mail/facsimile transaction)                            |
| 3      | Cardholder not present (phone order or from automated response unit [ARU])     |
| 4      | Cardholder not present (standing order/recurring transactions)                 |
| 5      | Cardholder not present (electronic order [PC, Internet, mobile phone, or PDA]) |
| 9      | Unknown; data unavailable                                                      |

## Subfield 6 (Card Present Data)

DE 22 (Point of Service [POS] Entry Mode), subfield 6 indicates if the card is present at the point of service.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 6 |
| Justification       | N/A                    |

### Values

| Values | Description               |
|--------|---------------------------|
| 0      | Card not present*         |
| 1      | Card present*             |
| 9      | Unknown; data unavailable |

| Values | Description                                                                                                   |
|--------|---------------------------------------------------------------------------------------------------------------|
|        | * Due to different versions of ISO standards the CIS values are opposite of values for IPM DE 22, subfield 6. |

## Subfield 7 (Card Data, Input Mode)

DE 22 (Point of Service [POS] Entry Mode), subfield 7 indicates the method used for PAN entry to initiate a transaction.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Field          | Contents of position 7 |
| Justification       | N/A                    |

### Values

| Values | Description                                                                                                                                         |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| 0      | PAN entry mode unknown                                                                                                                              |
| 1      | PAN manual entry; no terminal used                                                                                                                  |
| 2      | PAN auto-entry via magnetic stripe: track data is not required within transaction                                                                   |
| 6      | PAN manual entry using a terminal, or through voice transaction after chip card read error or chip fallback transaction failure                     |
| 7      | Credential on File                                                                                                                                  |
| A      | PAN auto-entry via contactless magnetic stripe: track data provided unaltered within transaction                                                    |
| B      | PAN auto-entry via magnetic stripe: track data provided unaltered within transaction (magnetic stripe entry may also be chip fallback transaction). |
| C      | PAN auto-entry via chip (online authorized transaction)                                                                                             |
| F      | PAN auto-entry via chip (offline chip-approved transaction)                                                                                         |
| M      | PAN auto-entry via contactless M/Chip                                                                                                               |

| Values | Description                                                                                                                               |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------|
| R      | PAN entry via electronic commerce containing Digital Secure Remote Payment (DSRP) cryptogram within DE 55 (Integrated Circuit Card [ICC]) |
| S      | PAN entry via electronic commerce                                                                                                         |
| T      | PAN auto-entry via server (issuer, acquirer, or third party vendor system)                                                                |

- DE 22 is required when DE 55 is present. In this situation, DE 22, subfield 7 must contain values F, M, R, S, or C.
- DE 22 is used in a clearing message to identify a message as a Clearing contactless magnetic stripe transaction. For this transaction type, DE 22, subfield 1 contains values A or M, and subfield 7 contains value A.
- DE 22 is used in a clearing message to identify a message as a Clearing contactless M/Chip transaction. For this transaction type, DE 22, subfields 1 and 7 contain value M.
- For offline chip transactions when DE 38 (Approval Code) is not available, DE 22, subfield 7 must contain value F to identify the transaction as offline chip.
- DE 22, subfield 4 must contain value 2 or 4 when DE 22, subfield 7 contains value R.
- DE 22, subfield 5 must contain values 4 or 5 when DE 22, subfield 7 contains value S.
- Transactions identified as contactless PAN-mapped or Mastercard Digital Enablement Service PAN-mapped, contactless transactions sent to the issuer, will have the value sent by the acquirer (A or M) in DE 22, subfield 7, changed by Mastercard to value M.
- Transactions identified as contactless PAN-mapped or Mastercard Digital Enablement Service PAN-mapped, contactless transactions sent to the acquirer, will have the DE 22, subfield 7 value sent by the issuer (M) changed by Mastercard to the original value sent in by the acquirer.
- Transactions identified as Mastercard Digital Enablement Service PAN-mapped Digital Secure Remote Payment transactions sent to the issuer will have value R sent by the acquirer in DE 22, subfield 7, changed by Mastercard to value O.
- Transactions identified as Mastercard Digital Enablement Service PAN-mapped Digital Secure Remote Payment transactions sent to the acquirer will have value O sent by the issuer and changed by Mastercard to the original value sent in by the acquirer.

## Subfield 8 (Cardholder Authentication Method)

DE 22 (Point of Service [POS] Entry Mode), subfield 8 indicates the method by which the cardholder's identity was verified at the point of service.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | an-1                   |
| Data Field          | Contents of position 8 |
| Justification       | N/A                    |

### Values

| Values | Description                                                   |
|--------|---------------------------------------------------------------|
| 0      | Not authenticated                                             |
| 1      | PIN                                                           |
| 2      | Electronic signature analysis                                 |
| 5      | Manual signature verification                                 |
| 6      | Other manual verification (such as a driver's license number) |
| 9      | Unknown; data unavailable                                     |
| S      | Other systematic verification                                 |

## Subfield 9 (Cardholder Authentication Entity)

DE 22 (Point of Service [POS] Entry Mode), subfield 9 indicates the entity through which the cardholder's identity was verified at the point of service.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 9 |
| Justification       | N/A                    |

### Values

| Values | Description                   |
|--------|-------------------------------|
| 0      | Not authenticated             |
| 1      | ICC, Offline PIN              |
| 2      | Card acceptance device (CAD)  |
| 3      | Authorizing agent, Online PIN |
| 4      | Merchant/acceptor, signature  |
| 5      | Other                         |
| 9      | Unknown; data unavailable     |

### Application notes

For chip transactions, the Cardholder Verification Method (CVM) used for that transaction is specified via the combination of values for DE 22, subfield 8 (Cardholder Authentication Method) and subfield 9 shown in this table.

### Application notes

| CVM         | Subfield 8 value | Subfield 9 value |
|-------------|------------------|------------------|
| Offline PIN | 1                | 1                |
| Online PIN  | 1                | 3                |
| Signature   | 5                | 4                |
| No CVM      | 0                | 0                |

## Subfield 10 (Card Data Output Capability)

DE 22 (Point of Service [POS] Entry Mode), subfield 10 indicates the ability of the terminal to write or output data to a card.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | an-1                    |
| Data Field          | Contents of position 10 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

### Values

| Values | Description                                 |
|--------|---------------------------------------------|
| 0      | Unknown; data unavailable                   |
| 1      | None                                        |
| 2      | Write data to card at magnetic stripe level |
| 3      | Write data to card at ICC chip level        |
| S      | Other                                       |

## Subfield 11 (Terminal Data Output Capability)

DE 22 (Point of Service [POS] Entry Mode), subfield 11 indicates the print and display capabilities of the terminal.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | n-1                     |
| Data Field          | Contents of position 11 |
| Justification       | N/A                     |

### Values

| Values | Description                     |
|--------|---------------------------------|
| 0      | Unknown; data unavailable       |
| 1      | None                            |
| 2      | Printing capability only        |
| 3      | Display capability only         |
| 4      | Printing and display capability |

## Subfield 12 (PIN Capture Capability)

DE 22 (Point of Service [POS] Entry Mode), subfield 12 indicates the maximum number of PIN characters that the POS terminal can capture.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | an-1                    |
| Data Field          | Contents of position 12 |
| Justification       | N/A                     |

### Values

| Values | Description                                  |
|--------|----------------------------------------------|
| 0      | No PIN capture capability                    |
| 1      | Unknown; data unavailable                    |
| 2      | Reserved                                     |
| 3      | Reserved                                     |
| 4      | PIN capture capability 4 characters maximum  |
| 5      | PIN capture capability 5 characters maximum  |
| 6      | PIN capture capability 6 characters maximum  |
| 7      | PIN capture capability 7 characters maximum  |
| 8      | PIN capture capability 8 characters maximum  |
| 9      | PIN capture capability 9 characters maximum  |
| A      | PIN capture capability 10 characters maximum |
| B      | PIN capture capability 11 characters maximum |
| C      | PIN capture capability 12 characters maximum |

## DE 23 (Card Sequence Number)

DE 23 (Card Sequence Number) distinguishes among separate cards that have the same DE 2 (Primary Account Number [PAN]).

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Length         | None                      |
| Data Field          | Fixed length, 3 positions |
| Subfields           | None                      |
| Justification       | Right                     |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                               | O   | .   | C   |

| Retrieval Request Acknowledgment/1644                                | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740                          | O   | .   | C   |
| Fee Collection (Handling Fees)/1740                                  | O   | .   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

DE 23 is used to identify one of several cards issued under a single PAN. Normally, when such cards are issued, the card sequence number is encoded on track 1 or track 2 of the card, and this information is automatically captured during a magnetic stripe-read operation at a POI terminal.

For chip transactions that include EMV-compliant ICC system-related data (DE 55), DE 23 must be present and contain the Application PAN Sequence Number (tag 5F34) if provided by the IC card to the terminal.

If the account range is registered for the Authentication Indicator Type 1 Service, then DE 23 must be present.

### Values

If present, DE 23 contains the Card Sequence Number in the range 000–099.

In the context of chip transactions, the Application PAN Sequence Number (EMV tag 5F34) is defined as a one-byte numeric value. The acquirer software shall therefore convert this one-byte numeric value to a three-byte value in DE 23, with leading zeros. For example, if the value of 5F34 is 2, the value of DE 23 will be 002.

### Application notes

For Europe-acquired, Brazil-issued chip combination cards; acquirers in the Europe region may optionally recognize the Brazil-issued chip combination card acceptance brand selection that is determined by a unique PSN value in DE 23.

- 0x1 (Credit/Mastercard®), where x is the sequence number 0 to 9: the transaction is processed a credit transaction.
- 0x2 (Debit/Mastercard®), where x is the sequence number 0 to 9: the transaction is processed as a debit transaction.
- If neither 0x1 or 0x2 is present, the transaction is processed as a credit transaction.

## DE 24 (Function Code)

DE 24 (Function Code) indicates the specific purpose for a message.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Length         | None                      |
| Data Field          | Fixed length, 3 positions |
| Subfields           | None                      |
| Justification       | Right                     |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

## Values

This table lists all Function Codes the clearing system supports. The associated MTIs are also provided.

## Values

| MTI  | Function Code | Clearing System Transaction Function |
|------|---------------|--------------------------------------|
| 1240 | 200           | First Presentment                    |
| 1240 | 205           | Second Presentment (Full)            |
| 1240 | 282           | Second Presentment (Partial)         |

| MTI  | Function Code | Clearing System Transaction Function             |
|------|---------------|--------------------------------------------------|
| 1442 | 450           | First Chargeback (Full)                          |
| 1442 | 451           | Arbitration Chargeback (Full) <sup>1</sup>       |
| 1442 | 453           | First Chargeback (Partial)                       |
| 1442 | 454           | Arbitration Chargeback (Partial)                 |
| 1644 | 603           | Retrieval Request <sup>1</sup>                   |
| 1644 | 605           | Retrieval Request Acknowledgment                 |
| 1644 | 640           | Currency Update                                  |
| 1644 | 680           | File Currency Summary                            |

| 1644 | 695           | File Trailer                                     |
| 1644 | 696           | Financial Detail Addendum                        |
| 1644 | 697           | File Header                                      |
| 1644 | 699           | File Reject                                      |
| 1740 | 700           | Fee Collection (Customer-generated) <sup>2</sup> |
| 1740 | 780           | Fee Collection Return                            |
| 1740 | 781           | Fee Collection Resubmission                      |
| 1740 | 782           | Fee Collection Arbitration Return                |
| 1740 | 783           | Fee Collection (Clearing System-generated)       |
| 1740 | 790           | Fee Collection (Funds Transfer)                  |
| 1740 | 791           | Fee Collection (Funds Transfer Backout)          |

<sup>1</sup> Not supported for ATM transactions (DE 3 = 010000)<sup>1</sup>

<sup>2</sup> Fee Collection (Customer-generated)/1740 messages includes manually submitted (non-MasterCom) retrieval fulfillments.

## DE 25 (Message Reason Code)

DE 25 (Message Reason Code) provides the message receiver with the reason for sending the message.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Data Representation: | n-4                       |
| Length Field:        | None                      |
| Data Length:         | Fixed length, 4 positions |
| Subfields:           | None                      |
| Justification:       | Right                     |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

DE 25 is required in a First Presentment/1240 message when multiple partial-amount clearing messages are submitted for a single purchase transaction.

DE 25 identifies the specific reason that a transaction was initiated, such as the reason for a Retrieval Request/1644 message, Retrieval Request Acknowledgment/1644 message, First Chargeback/1442 message, or Second Presentment/1240 message.

DE 25 identifies the specific reason that a transaction was initiated, such as the reason for a Fee Collection/1740 message.

## Values

These tables list Message Reason Codes the clearing system supports for IPM messages. The associated MTIs and Function Codes are also provided to indicate the specific circumstances in which each Message Reason Code is used.

### First Presentment/1240 (Function Code = 200)

| Message Reason Code | Message Reason Code Description                                   | Valid for (a) non-intra-European and non-inter-European messages AND (b) intra-European and inter-European Mastercard POS and manual cash disbursement messages | Valid for intra-European Maestro POS messages | Valid for intra-European and inter-European Mastercard ATM, Maestro ATM, Maestro manual cash disbursement, and Cirrus messages |
|---------------------|-------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| 1400                | Not previously authorized due to other reason                     | Yes                                                                                                                                                             | Yes                                           | Yes                                                                                                                            |

This data element contains a four-digit acceptor business code (MCC) that identifies the acceptor's primary business.

Acceptor business codes are required in Mastercard Financial transactions to qualify transactions for specific interchange rates.

DE 26 is mandatory in Retrieval Request/1644 and Retrieval Request Acknowledgment/1644 messages.

If PDS 0358 (Reconciled, Business Activity), subfield 7 ( Acceptor Classification Override Indicator) contains 0, DE 26 will also be present in the Financial Position Detail/1644 message, to provide totals based on the value in DE 26.

The four-position valid Mastercard Acceptor Business Code (MCC) that most reasonably and fairly represents the acceptor's primary business, must be presented in DE 26. For example, if a

large Internet retailer sells an item on behalf of a toy store, DE 26 should contain the MCC associated with the toy store. All MCCs recognized by Mastercard are published in the *Quick Reference Booklet*. For some transactions, Mastercard requires the use of a specific MCC. For example, gambling transactions require the use of MCC 7995.

## Values

Acceptor Business Codes comprise ISO standard business classification codes, augmented with additional classification codes.

The codes for all Mastercard programs and services are in the *Quick Reference Booklet*, which is periodically updated and made available to customer organizations.

Refer to the Interchange manuals for additional information about Mastercard interchange programs and their requirements, including valid DE 26 values for each interchange program, if applicable.

## DE 30 (Amounts, Original)

DE 30 (Amounts, Original) contains the amount data element values from the First Presentment/1240 or Fee Collection (Customer-generated)/1740 messages.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-24                       |
| Data Length         | None                       |
| Data Field          | Fixed length, 24 positions |
| Subfields           | 2                          |
| Justification       | Right                      |

## Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |

| Fee Collection (Retrieval Fee Billing)/1740                          | M   | .   | M   |
| Fee Collection (Handling Fees)/1740                                  | O   | .   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

DE 30 references the amount data elements (specifically, DE 4 [Amount, Transaction] and DE 5 [Amount, Reconciliation]) of the First Presentment/1240 or Fee Collection (Customer-generated)/1740.

In Fee Collection/1740 messages that are generated for reasons other than retrieval fee billing, the sender optionally may provide DE 30 in a Fee Collection Return/1740, Fee Collection Resubmission/1740, or Fee Collection Arbitration Return/1740. In this case, DE 30 contains the DE 4 value from the original Fee Collection (Customer-generated)/1740.

### Related PDSs

Whenever DE 30 is included in a message, PDS 0148 (Currency Exponents) and PDS 0149 (Currency Codes, Amounts, Original) must be included to identify the currency codes and exponents of the original amount subfields.

## DE 30 subfields

This data element consists of two subfields.

### DE 30 Subfields

| Number | Positions | Name                            | Attribute | Justification             |
|--------|-----------|---------------------------------|-----------|---------------------------|
| 1      | 1–12      | Original Amount, Transaction    | n-12      | right, with leading zeros |
| 2      | 13–24     | Original Amount, Reconciliation | n-12      | right, with leading zeros |

### Subfield 1 (Original Amount, Transaction)

Subfield 1 (Original Amount, Transaction) must contain DE 4 from the First Presentment/1240 or Fee Collection (Customer-generated)/1740.

## Subfield 2 (Original Amount, Reconciliation)

Subfield 2 (Original Amount, Reconciliation) must contain all zeros.

## DE 31 (Acquirer Reference Data)

DE 31 (Acquirer Reference Data) is data an acquirer supplies in an acquirer-originated message that may be required for an issuer to return to the acquirer in a subsequent message.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-23                       |
| Data Length         | 2 positions, value = 23    |
| Data Field          | Fixed length, 23 positions |
| Subfields           | 5                          |
| Justification       | N/A                        |

ISO defines DE 31 as a variable-length field. The data in DE 31 is preceded by a two-position length field. In the IPM format, customers must precede DE 31 data with a two-position length field. This length field always contains the value 23 and the data that follows must be exactly 23 positions long.

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |

| Retrieval Request/1644                                | M   | .   | M   |
| Retrieval Request Acknowledgment/1644                 | M   | .   | M   |
| Fee Collection (Retrieval Fee Billing)/1740           | M   | .   | M   |
| Fee Collection (Handling Fees)/1740                   | M   | .   | M   |

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

The acquirer reference data in a Second Presentment/1240 message must be the same as the acquirer reference data in the First Presentment/1240 and Chargeback/1442 messages.

The data must be returned to the acquirer in subsequent related life cycle messages, including Retrieval Request/1644, Retrieval Request Acknowledgment/1644, First Chargeback/1442, Second Presentment/1240, and Arbitration Chargeback/1442 messages related to the First Presentment/1240.

GCMS requires the six-digit acquiring BIN in DE 31, positions 2–7, for all applicable transactions.

If DE 31 is not provided in the Fee Collection/1740 message for the collection of handling fees, the receiving customer has the right to return the message.

### Values

DE 31 must be numeric.

## DE 31 subfields

DE 31 consists of five subfields.

### DE 31 (Acquirer Reference Data) subfields

| Number | Positions | Name                                                                                                                       | Attribute |
|--------|-----------|----------------------------------------------------------------------------------------------------------------------------|-----------|
| 1      | 1         | Mixed Use; any numeric value                                                                                               | n-1       |
| 2      | 2–7       | Contains the 6-digit Acquirer Reference ID.                                                                                | n-6       |
| 3      | 8–11      | Julian Processing Date YDDD contains the Julian processing date the acquirer assigned to the First Presentment/1240.       | n-4       |
| 4      | 12–22     | Acquirer's Sequence Number contains the sequence number that the acquirer assigned to the First Presentment/1240; numeric. | n-11      |
| 5      | 23        | Check Digit Numeric; Luhn Formula Modulus-10 algorithm determines value on the previous 22 positions.                      | n-1       |

## DE 32 (Acquiring Institution ID Code)

DE 32 (Acquiring Institution ID Code) identifies the transaction acquirer.

### Attributes

For clearing system transactions, this data element may identify the financial institution that owns the merchant agreement.

DE 32 supplements the acquiring customer ID (located in either DE 94 [Transaction Originator Institution ID Code] or DE 93 [Transaction Destination Institution ID Code]) by providing additional information about the agent bank relationship. If the issuer returns DE 32 to the acquirer in subsequent chargebacks, the acquirer may more easily determine the institution responsible for the transaction.

## Values

When present in clearing system messages, this data element contains a value the acquirer assigns.

This value may be any proprietary numeric value as the acquirer determines.

When present, DE 32 must be numeric and cannot contain all zeros.

## DE 33 (Forwarding Institution ID Code)

DE 33 (Forwarding Institution ID Code) identifies a message's forwarding institution.

A forwarding institution is the institution in a transaction flow that sends a message forward from the originating institution.

## Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | n...11; LLVAR                   |
| Data Length         | 2 positions value = 06–11       |
| Data Field          | Variable length, 6–11 positions |
| Subfields           | None                            |
| Justification       | Right                           |

## Current processing restrictions

The clearing system accepts a DE 33 length of 6–11 positions but expects this element to contain zeros in all but the last six positions. Only the last six positions are passed along to the receiver of the message.

## Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

DE 33 contains the clearing system customer ID or Processor ID of the processing facility that transmits a message.

### Values

This data element must contain a valid customer ID or Processor ID number.

## DE 37 (Retrieval Reference Number)

DE 37 (Retrieval Reference Number) is a transaction reference number that the acceptor's or designated agent's system supplies. DE 37 retains the transaction's original source information. This reference number assists in locating that source information (or a copy).

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans-12                     |
| Data Length         | None                       |
| Data Field          | Fixed length, 12 positions |
| Subfields           | None                       |
| Justification       | None                       |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |
| Retrieval Request/1644                                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |

This data element is for the exclusive use of acceptor systems that retain the original transaction source documentation such as electronic receipts, paper receipts, imprinted tickets, and cardholder signature documents.

Acquirer systems may assign a unique receipt or sales document identifier to satisfy regulatory or legal requirements when the merchant performs source document capture and truncation.

DE 37 should be supplied on European-acquired debit activity. The Single Message System application uses this field and some additional fields for matching the clearing message to information provided in the authorization response message. An unsuccessful match may result in Mastercard Network-generated chargebacks to the acquirer.

For ATM or electronic POI terminal usage, DE 37 may contain the transaction sequence number the terminal assigns.

### Values

If present, this element cannot contain all spaces or zeros.

## DE 38 (Approval Code)

DE 38 (Approval Code) is a code the authorizing institution assigns indicating approval.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-6                     |
| Data Length         | None                      |
| Data Field          | Fixed length, 6 positions |
| Subfields           | None                      |
| Justification       | Left                      |

## Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

## Applicable messages

| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

This data element transmits a card issuer's authorization code for approved transactions. The acceptor may retain this code to verify that proper authorization was received.

In First Presentment/1240 messages and related cardholder life cycle transactions, this data element contains the actual approval response code the issuer or its agent sends in response to an authorization request.

If DE 38 is present in a First Presentment/1240 message, DE 38 should be provided on all subsequent cycles (First Chargeback, Second Presentment, and so on).

For each transaction authorized via the Mastercard Network ("online-authorized transactions"), DE 38 of the First Presentment/1240 message must be populated with the same value contained in DE 38 of the related Authorization Request Response/0110 message, or for automated fuel dispenser (MCC 5542 and CAT level 2) transactions occurring in the U.S. or Canada regions, the related Authorization Advice Response/0130 message.

This requirement does not apply to transactions where online authorization is not requested or required, such as offline-authorized chip-read transactions, credit (purchase return) transactions, and Collection Only transactions.

DE 38 must be present for all Mastercard Account Level Management transactions. DE 38 should be retained and returned through all subsequent messages in the lifecycle. Account Level Management transactions require DE 38 for correct processing. For more information about Account Level Management services refer to the *Account Level Management Manual*.

Transactions for the accounts participating in the Co-Brand Proprietary Transaction Management require this data element for correct processing.

DE 38 must be present for all Mastercard® MoneySend™ transactions where (a) PDS 0043 (Transaction Type Identifier) equals C07, C52, C53, C54, C55, C56, C57, C58, C59, or C65 and (b) DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type) equals 28 (Payment Transaction).

### Values

This data element must contain an issuer's authorization response code formatted according to Corporation operating rules.

If present, this data element must be left-justified with trailing spaces if not the full 6 positions and cannot contain all spaces, all low values, or all high values. In addition, it cannot contain embedded spaces.

DE 38 must not be present if DE 22 (Point of Service [POS] Entry Mode) is present and DE 22, subfield 7 = F, indicating an offline chip transaction. (This does not apply to intracountry business service arrangements.)

DE 38 is required for all U.S., Canada, Moldova, and Ukraine First Presentment/1240 messages being submitted for incentive interchange. (This excludes transactions submitted for standard IRD, credits, and reversals.)

For transactions authorized via the network, the sixth position of DE 38 could contain an identifier indicating that the cardholder is a participant in Account Level Management, World Elite Spend Shortfall, or World Mastercard Spend Shortfall. Refer to the *Account Level Management Manual* for more information.

DE 38, position 6 may contain any of the account category codes when the account range is participating in an account level management service. This table describes the code values.

### Account category codes and descriptions

| Value | Description                                                                 |
|-------|-----------------------------------------------------------------------------|
| B     | Enhanced Value                                                              |
| M     | Enhanced Value and Product Graduation Plus                                  |

| Z     | No Service: PAN not registered for ALM Activate Account Range         |

Spend shortfall identifiers are described in this table.

### Spend shortfall identifiers

| Value | Description                            |
|-------|----------------------------------------|
| W     | Spend Shortfall                        |
| Y     | Spend Shortfall and Product Graduation |

## DE 40 (Service Code)

DE 40 (Service Code) provides codes that increase flexibility in issuer-defined card acceptance parameters.

These codes also provide acquirers with the ability to interpret card acceptance preferences for all point-of-interaction (POI) conditions.

The service code is an issuer-defined, three-digit value on the magnetic stripe (tracks 1 and 2) and on the chip of a bankcard. The service code instructs the POI terminal about conditions under which the card may be used.

The service code first-digit value of 2 or 6 can only be defined on chip cards:

- That comply with both Mastercard and Visa (EMV chip).
- In which the application on the magnetic stripe matches the application on the chip.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Length         | None                      |
| Data Field          | Fixed length, 3 positions |
| Subfields           | None                      |
| Justification       | N/A                       |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

## Values

DE 40 is required to validate eligibility for some interchange programs. In such cases, acquirers must populate DE 40 with the service code value available on the card. Refer to the *Interchange Manual* for details.

Issuers may find more information about the physical and magnetic characteristics of chip cards in *International Organization for Standardization (ISO) 7813*.

## DE 41 (Acceptor Terminal ID)

DE 41 (Acceptor Terminal ID) identifier assigned by the acceptor or the acquirer to the terminal, payment gateway, or other acceptance device used to capture account data to effect a transaction at the acceptor location.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-8                     |
| Data Length         | None                      |
| Data Field          | Fixed length, 8 positions |
| Subfields           | None                      |
| Justification       | Left                      |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |
| Retrieval Request/1644                                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |
| Fee Collection (Handling Fees)/1740                   | O   | .   | C   |

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

DE 41 is required in intra-European and inter-European ATM First Presentment/1240 messages.

### Values

If present, DE 41 must be left-justified and cannot contain all low values, all high values, all spaces, or all zeros.

### Processing rules

The Acceptor Terminal ID must be present in all transactions.

Acceptor Terminal ID must uniquely identify each point-of-sale terminal and ATM terminal at the acceptor location. For electronic commerce, phone/mail order, or other card-not-present environments, the value must uniquely identify each payment gateway or other device used to capture account data at the acceptor location.

## DE 42 (Acceptor ID)

DE 42 (Acceptor ID) contains the identifier assigned by the acquirer to the acceptor and its location, or to the payment facilitator.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans-15                     |
| Data Length         | None                       |
| Data Field          | Fixed length, 15 positions |
| Subfields           | None                       |
| Justification       | Left                       |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                               | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442                | C   | .   | C   |
| Second Presentment/1240                                              | C   | .   | C   |
| Retrieval Request/1644                                               | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                                | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740                          | O   | .   | C   |
| Fee Collection (Handling Fees)/1740                                  | O   | .   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | C   | .   | C   |

DE 42 is required for all First Presentment/1240 transactions and will be edited except for ATM transactions.

DE 42 is required in First Chargeback/1442, Second Presentment/1240 transactions submitted for specific U.S.-to-U.S. interchange programs when DE 26 is equal to 5542 (Automated Fuel Dispenser).

DE 42 is required for all Fee Collection (Other than Retrieval Fee Billing/handling Fees)/1740-790 and 791 Funds Transfer messages generated by Mastercard on behalf of the customer. This requirement does not apply to U.K. Domestic Maestro activity. Refer to the *Interchange Manual* for specific IRD requirements.

### Values

The acquirer assigns DE 42 values. The values assigned must be unique for each acceptor name/location identified in DE 43 (Acceptor Name/Location) within the acquiring BIN ID. Mastercard recommends that DE 42 values not be reassigned to a different acceptor name/location until the values have been inactive for a minimum of three years. This practice helps to avoid ambiguity and erroneous tracking in fraud data analysis and reporting.

If present, DE 42 must be left-justified and cannot contain all low values, all high values, all spaces, or all zeros.

### Processing rules

The Acceptor ID must be present in all transactions and must uniquely identify each acceptor and its location.

Payment facilitator-enabled transactions must uniquely identify the payment facilitator. The Acceptor ID of the sponsored merchant must be provided in the sponsored merchant ID data element.

## DE 43 (Acceptor Name and Location)

DE 43 (Acceptor Name and Location) contains the name and location of the acceptor point of interaction.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...99; LLVAR                  |
| Data Length         | 2 positions, value = 20–99       |
| Data Field          | Variable length, 20–99 positions |
| Subfields           | 6                                |
| Justification       | Left                             |

### Current processing restrictions

DE 43, subfield 1 must have a minimum length of 1 and a maximum length of 22, excluding the backslash delimiter.

DE 43, subfield 2 must be adjusted to have the total length of DE 43 < = 99.

DE 43, subfield 3 must have a maximum length of 13, excluding the backslash delimiter.

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Retrieval Request/1644                                               | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                                | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740                          | O   | .   | C   |
| Fee Collection (Handling Fees)/1740                                  | O   | .   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

This data element provides the business name, street address, and other location information about the acceptor.

For DE 43, Mastercard will support only the International Organization for Standardization (ISO)/IEC 8859-1:1998 (Latin Alphabet No. 1) character set usage in all subfields. This character set can be identified in several ways:

- In COBOL compiler options, the term would be Code Page 1140.
- In MVS Operating System information, the term CCSID 37 (EBCDIC Latin + 1, USA) is used.
- In ISO, it is identified as ISO8859-1.

All other standards must not be submitted in DE 43 but instead may be submitted in PDS 0171 (Alternate Acceptor Description Data) or PDS 0178 (Alternate Acceptor Description Data 2).

## Subfield 1 (Acceptor Name)

DE 43 (Acceptor Name and Location), subfield 1 (Acceptor Name) contains the name of the acceptor that should be recognizable by the cardholder and may include other descriptors, such as a store number.

### Subfield attributes and values

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 01    |
| Subfield Length     | n-2       | 22    |
| Data Representation | ans...22  |       |

| Attribute     | Value |
|---------------|-------|
| Justification | Left  |

### Subfield requirements

This subfield is mandatory and must contain data in First Presentments/1240, Second Presentments/1240, First Chargebacks/1442, and Arbitration Chargebacks/1442 messages. It must end with a backslash (\) delimiter and be left-justified. It is variable length, 1–22 positions. It cannot contain all low values, all high values, or all spaces. It cannot contain backslashes other than at the end of the subfield.

### Airline transaction requirements

For airline transactions acquired in the U.S. region, the abbreviated airline name, not to exceed nine positions, must be provided in the Acceptor Name for all messages. If more than nine positions are provided, anything after position 9 must be a space up to the backslash delimiter. The ticket number and complete itinerary data must be provided in the Financial Detail Addendum (Passenger Transport Detail)/1644 messages.

The airline ticket number must not be provided in the Acceptor Name. For airline transactions acquired outside the U.S. region, the abbreviated carrier name must be provided in positions 1–9, followed by the ticket number in the Acceptor Name subfield, if the customer is provided with the airline/railway ticket identifier.

### Processing rules

The Acceptor Name must be present for all transactions and contain a valid merchant/ATM owner/entity name that is most recognizable to the cardholder.

Unique identifiers, invoice numbers, or additional descriptors must be placed after the merchant/ATM owner/entity name.

When a merchant is a part of a chain or franchise, the name most recognizable to the cardholder must be provided at the beginning of the field, followed by a store number or other unique identifier for each location. For a chain or franchise that has been issued a Mastercard Assigned ID, all submitted transactions must contain the Mastercard Assigned ID data element.

For any MCC in the 3000-3350 range (Airlines), the Abbreviated Airline listed in Chapter 3 of the *Quick Reference Booklet* must be provided in positions 1-9 of the field followed by the Airline Ticket Number.

For any MCC in the 3351-3500 range (Automobile/Vehicle Rentals), the first nine characters of the Description listed in Chapter 3 of the *Quick Reference Booklet* must be provided in positions 1-9 of the field. If acquired outside the U.S., this must be followed by a unique identifier for each location.

For any MCC in the 3501-3999 range (Hotels and Motels), the first nine characters of the Description listed in Chapter 3 of the *Quick Reference Booklet* must be provided in positions 1-9 of the field and then followed by a unique identifier for each location.

For MCC 4511, a U.S.-acquired airline transaction must contain only the airline name shortened to 9 positions. All other airline transactions must additionally contain the airline ticket number in this field.

The (ISO)/IEC 8859-1:1998 (Latin Alphabet No. 1) character set must be used.

### Program rules

Payment facilitator-enabled transactions: For information on populating the payment facilitator name in combination with the sponsored merchant name in this field, refer to section 5.8.3 Sponsored Merchant Name Information of the *Mastercard Rules*.

Staged digital wallet operator (SDWO): For information on populating the SDWO name in combination with the retailer name, when applicable, in this field, refer to Section 7.6.7 Staged Digital Wallet Operator Requirements of the *Mastercard Rules*.

Installment provider: For information on populating the installment provider name in combination with the retailer name in this field, refer to Section 5.5.2 Multiple-Authorization Installment Billing of the *Transaction Processing Rules*.

Business payment service provider (BPSP): For information on populating the BPSP name in combination with the supplier name in this field, refer to Section 7.6.8 Business Payment Service Provider (BPSP) Requirements of the *Mastercard Rules*.

Mastercard® rePower™ transactions must have the value "MC repower" following the merchant/ATM owner/entity name providing the service.

Payment Transactions must contain the name of the payment provider. Payee information must be provided in the Additional Transaction Reference Data and MoneySend Receiver Data data elements.

### Country rules

Mexico-acquired transactions must contain only:

- uppercase alpha characters (A-Z) (cannot contain accent characters)
- numeric characters (0–9)
- ampersand (&)
- asterisk (\*)
- space (cannot be the first character or contain more than one space between words)

## Subfield 2 (Acceptor Street Address)

DE 43 (Acceptor Name and Location), subfield 2 (Acceptor Street Address) contains the street address of the acceptor, which should include the street number, street name, and other identifiers of the precise location, such as a building or unit number.

### Subfield attributes and values

|                      | Attribute | Value |
|----------------------|-----------|-------|
| Subfield ID:         | n-2       | 02    |
| Subfield Length:     | n-2       | 48    |
| Data Representation: | ans...48  |       |
| Justification        | Left      |       |

### Subfield requirements

- For First Presentment/1240 messages, an acceptor address is mandatory for all non-ATM transactions. Refer to the appropriate regional *Interchange Manual* to determine the IRDs which require the presence of this subfield.
- A valid acceptor street address is required for First Presentment/1240, Second Presentment/1240, and First and Arbitration Chargeback/1442 transactions submitted for the appropriate Canada region interchange rate programs. For more information, refer to the *Interchange Manual Canada Region*.
- For First Presentment/1240 messages, DE 43, subfield 2 must be present for Commercial Card transactions in and between participating countries where value-added tax (VAT) applies. The edit validates that DE 43, subfield 6 (Acceptor Country Code) and the country code associated with the issuer account range in DE 2 (Primary Account Number) are on the list of participating countries. Participating VAT countries will be announced via an announcement and identified via the VAT Indicator in Table IP0028T1 (Country Codes) of the Mastercard Parameter Extract (MPE).
- If present, DE 43, subfield 2 must be left-justified and cannot contain all spaces, zeros, low values, or high values.
- This subfield cannot contain backslashes other than at the end of the subfield.
- Whether populated or not, this subfield must end with a backslash (\) delimiter.

### Values

Acceptor Street Address must contain all Address Line 1 and Address Line 2 information, including:

- The name of the street or thoroughfare.
- The locality or community.

- The building or house number.
- Any apartment, unit, suite, or floor number, if applicable.

This information must be populated and formatted as defined by country postal standards.

### Processing rules

The Acceptor Street Address must be present for all transactions and contain a valid location for the acceptor. The location of the acceptor will generally be the physical location where the transaction occurred or business location for transactions that occur virtually.

If the information for Acceptor Street Address does not exist per country postal standards, then the value of "Unavailable" must be provided.

### Program rules

Payment facilitator-enabled transactions: The sponsored merchant street address must be provided.

## Subfield 3 (Acceptor City Name)

DE 43, subfield 3 contains the city name of the acceptor.

### Subfield attributes and values

|                      | Attribute | Value |
|----------------------|-----------|-------|
| Subfield ID:         | n-2       | 03    |
| Subfield Length:     | n-2       | 13    |
| Data Representation: | ans...13  |       |
| Justification        | Left      |       |

### Subfield requirements

- The Acceptor City is mandatory on all transaction types except Payment Transactions and ATM Transactions.
- This subfield must contain only the Acceptor City and must not contain other information such as Acceptor Customer Service Phone Number, Acceptor URL Address, or other descriptors.
- For First and Second Presentment/1240 and Chargeback/1442 messages, the Acceptor City must be left justified and cannot contain all spaces or all zeros unless the transaction is an ATM or Payment Transaction.
- This subfield cannot contain backslashes other than at the end of the subfield.

- Whether populated or not, this subfield must end with a backslash (\) delimiter. It cannot contain all low values or all high values.
- This subfield must contain only the Acceptor City and must not contain other information such as Acceptor Customer Service Phone Number, Acceptor URL Address, or other descriptors.

### Values

Acceptor City Name must contain the name of the city, town, or village as defined by country postal standards.

For U.S. region transactions, Acceptor City Name must match the U.S. Postal Service list of acceptable cities and spellings by postal code.

### Processing rules

The Acceptor City Name must be present for all transactions and contain a valid location for the acceptor. The location of the acceptor will generally be the physical location where the transaction occurred or the business/operations location for transactions that occur virtually.

### Program rules

Payment facilitator-enabled transactions: The sponsored merchant city name must be provided.

## Subfield 4 (Acceptor Postal Code)

This subfield contains the postal code of the acceptor.

### Attributes

|                      |                             |
|----------------------|-----------------------------|
| Data Representation: | ans-10                      |
| Data Field:          | Contents of positions 84–93 |
| Justification:       | Left                        |

### Subfield requirements

- For U.S. region acceptors, acquirers must provide a five-digit or nine-digit ZIP Code.
- This subfield must be present and must contain a postal code or all spaces. This subfield cannot contain all low values or all high values.

### Processing rules

The Acceptor Postal Code must be present for all transactions and contain a valid code for countries that utilize postal codes. This information must be populated and formatted as defined by country postal standards.

## Program rules

Payment facilitator-enabled transactions: The sponsored merchant postal code must be provided.

## Subfield 5 (Acceptor Country Subdivision Code)

DE 43, subfield 5 (Acceptor Country Subdivision Code) contains the ISO 3166-2 code identifying the state, province, or other country subdivision of the acceptor.

## Attributes

|                      |                             |
|----------------------|-----------------------------|
| Data Representation: | ans-3                       |
| Data Field:          | Contents of positions 94–96 |
| Justification:       | Left                        |

## Subfield requirements

- For Presentments/1240, Chargebacks/1442, Retrievals/1644, and Fee Collections/1740, if DE 43, subfield 6 contains USA or CAN, subfield 5 must contain a valid country subdivision code for the country identified.
- When submitted for a First Presentment/1240 transaction, subfield 5 cannot contain all low values or high values.
- Mastercard will allow and populate DE 43, subfield 5 to contain text other than valid country subdivision code (for example: "com") when PDS 0158 (Business Activity), subfield 4 (Interchange Rate Designator) contains value EZ for a U.S. Intra-regional or Canada intra-country Easy Savings transaction. Mastercard initiates these rebate transactions, which do not impact acquiring transactions.
- The U.S. Postal Service has established three state codes that, when combined with a five-digit ZIP Code from a specific range, will identify the Air/Army Post Office (APO) or Fleet Post Office (FPO) of a U.S. military unit. The U.S. military state codes are available for use in all authorization and clearing messages. Refer to the *Quick Reference Booklet* for more information.

## Values

Acceptor Country Subdivision Code must contain a valid code as defined in Chapter 2 of the *Quick Reference Booklet*.

## Processing rules

The Acceptor Country Subdivision Code must be present for all transactions when defined in Chapter 2 of the *Quick Reference Booklet*.

## Program rules

Payment facilitator-enabled transactions: The sponsored merchant country subdivision code must be provided.

## Subfield 6 (Acceptor Country Code)

DE 43, subfield 6 contains the ISO 3166-1 country code of the acceptor.

## Attributes

|                      |                             |
|----------------------|-----------------------------|
| Data Representation: | ans-3                       |
| Data Field:          | Contents of positions 97–99 |
| Justification:       | Left                        |

## Subfield requirements

- This subfield must contain a valid three-character ISO alphabetic country code in these messages:
  - First Presentment/1240
  - First Chargebacks/1442 and Arbitration Chargebacks/1442
  - Second Presentments/1240
  - Retrieval Request/1644
  - Retrieval Request Acknowledgment/1644
  - Fee Collection (Retrieval Fee Billing)/1740
  - Fee Collection (Handling Fees)/1740
  - Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740

## Values

Acceptor Country Code must contain a valid three-character alphabetic code as defined in Chapter 2 of the *Quick Reference Booklet*. When territories have a defined country code in the *Quick Reference Booklet*, that country code must be used.

## Processing rules

The Acceptor Country Code must be present for all transactions.

## Program rules

Payment facilitator-enabled transactions: The sponsored merchant country code must be provided.

## DE 48 (Additional Data)

DE 48 (Additional Data) contains one or more PDSs that may be required in a message to provide additional clearing system-related, program-related, or service data for which a specific ISO data element is unavailable.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...999; LLLVAR                |
| Data Length         | 3 positions, value = 008–999     |
| Data Field          | Variable length, 8–999 positions |
| Subelements         | See "Values"                     |
| Justification       | Left                             |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

This data element is a carrier data field for private data subelements (PDSs) that supplement the original ISO 8583:1993 specification. These PDSs are annotated with the prefix PDS (for example, PDS 0001 and PDS 0158) for documentation purposes throughout this publication to distinguish them from the ISO-standard data elements, which are simply numbered DE 1–DE 128.

Encoding of PDSs is always initiated in DE 48. If the resulting data space required to contain all PDSs for a message exceeds the maximum length of DE 48 (999 positions), these data elements are employed, in sequential order, to contain PDS data:

- DE 62 (Additional Data 2)
- DE 123 (Additional Data 3)
- DE 124 (Additional Data 4)
- DE 125 (Additional Data 5)

DE 62, DE 123, DE 124, and DE 125 each may contain a maximum of 999 positions, each of encoded PDS information.

### Values

This data element contains one or more PDSs in PDS-encoded format.

PDSs are formatted using a tag-length-data encoding procedure, shown in this table.

### Values

| Number | Positions | Description           |
|--------|-----------|-----------------------|
| 1      | 1–4       | First PDS tag (ID)    |
| 2      | 5–7       | First PDS data length |
| 3      | 8–999     | First PDS data        |

Subfields 1–3 must be repeated as needed until all PDS data is presented or the total length of subfields 1, 2, and 3 causes the total length of DE 48 to exceed 999 positions.

## DE 49 (Currency Code, Transaction)

DE 49 (Currency Code, Transaction) defines the DE 4 (Amount, Transaction) currency.

### Attributes

|                     |                           |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Length         | None                      |
| Data Field          | Fixed length, 3 positions |
| Subfields           | None                      |
| Justification       | N/A                       |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | M   | .   | M   |

DE 49 is required in messages whenever DE 4 is present. It also may be used in Reconciliation or Administrative messages to identify currencies referenced in those messages.

ISO standard currency codes define the currency type, the country of origin, and the implied decimal point location for the related amount data as defined in the ISO 4217 specification.

First Chargeback, Second Presentment, and Arbitration Chargeback messages must adhere to the currency rules outlined in the *Chargeback Guide* and *Quick Reference Booklet* where you can find the currency codes, which are also provided on the MPE. In some cases currency conversion is required based on these guidelines:

- Transactions that qualify for intracurrency settlement may use the intracurrency settlement currency.
- Intra-European and inter-European transactions (transactions exchanged between two European customers) allow for:
  - Original presentment transaction currency (DE49 from the First Presentment)
  - Reconciliation currency (DE50 from the previous message [DE50 from First Presentment when submitting First Chargeback]).
- All other conditions require the Chargeback, Second Presentment, and/or Arbitration Chargeback to be submitted in U.S. Dollars.

### Values

ISO standard numeric currency codes must be used.

This data element may contain the global base currency code in an acknowledgment 1644–680 or 1644–685 reconciliation message if the processed file contained only non-financial messages, depending on customer-reconciliation category options.

For First Presentment/1240 messages, DE 49 (Currency Code, Transaction) must be equal to DE 49 (Currency Code, Transaction) in the Authorization Request/0100 message.

**NOTE: If a First Presentment/1240 message is rejected and the acquirer submits a reversal for the rejected message within nine days, the clearing system will also reject the first presentment reversal. If the acquirer submits a reversal for a previously rejected first presentment more than nine days after the original message was processed and rejected, then the clearing system will not reject the reversal.**

### Related required data element and PDS

DE 4 (Amount, Transaction) and PDS 0148 (Currency Exponents) are required whenever DE 49 is present.

## DE 50 (Currency Code, Reconciliation)

DE 50 (Currency Code, Reconciliation) defines the DE 5 (Amount, Reconciliation) currency.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Length         | None                      |

DE 50 is required in messages whenever DE 5 is present. If the transaction originator provides DE 5, it also must provide DE 50. The transaction originator should provide this only for a bilateral transaction, otherwise GCMS will override. If the clearing system provides DE 5, it will provide DE 50. It also may be used in Reconciliation or Administrative messages to identify currencies referenced in those messages.

ISO standard currency codes define the currency type, the country of origin, and the implied decimal point location for the related amount data as defined in the ISO 4217 specification.

## Values

ISO standard numeric currency codes must be used.

This data element may contain the global base currency code in an acknowledgment 1644–685 reconciliation message if the processed file contained only non-financial messages.

Refer to the *Quick Reference Booklet* where you can find the currency codes, which are also provided on the MPE.

### Related required data element and PDS

The following data element and PDS are required whenever DE 50 is present:

- DE 5 (Amount, Reconciliation)
- PDS 0148 (Currency Exponents)

## DE 51 (Currency Code, Cardholder Billing)

DE 51 (Currency Code, Cardholder Billing) defines the DE 6 (Amount, Cardholder Billing) currency, and DE 111 (Amount, Currency Conversion Assessment) currency.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Data Length         | None                      |
| Data Field          | Fixed length, 3 positions |
| Subfields           | None                      |
| Justification       | N/A                       |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Presentment, Addendum, and Chargeback Messages

| Message                 | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| First Presentment/1240  | C   | X   | C   |
| Second Presentment/1240 | C   | X   | C   |

DE 51 is required in messages whenever DE 6 is present. If the transaction originator provides DE 6, it also must provide DE 51. The transaction originator should provide this only for a bilateral transaction; otherwise, GCMS will override. If the clearing system provides DE 6, it will provide DE 51.

ISO standard currency codes define the currency type, the country of origin, and the implied decimal point location for the related amount data as defined in the ISO 4217 specification.

## Values

ISO standard numeric currency codes must be used.

Refer to the *Quick Reference Booklet* where you can find the currency codes, which are also provided on the MPE.

## Related required data element and PDS

DE 6 (Amount, Cardholder Billing) and PDS 0148 (Currency Exponents) are required whenever DE 51 is present.

## DE 54 (Amounts, Additional)

DE 54 (Amounts, Additional) are additional amounts and related account data for which specific data elements have not been defined.

## Attributes

| Attribute           | Description                                       |
|---------------------|---------------------------------------------------|
| Data Representation | ans-20; LLLVAR                                    |
| Data Length         | 3 positions, value = 020–240 in increments of 20  |
| Data Field          | Variable length, 20–240 positions                 |
| Subfields           | 5 subfields for each additional amount occurrence |
| Occurrences         | 1–12                                              |
| Justification       | N/A or right                                      |

## Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

## Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

Transactions with surcharges (DE 54, subfield 2 = 42) are systemically permitted for all processing codes in DE 3 (Processing Code). However, customers should refer to the *Mastercard Rules* for standards pertaining to the areas in which they process.

DE 54 is required in Purchase with Cash Back transactions (Cardholder Transaction Type, DE 3, subfield 1 = 09) to indicate the cash back amount of the transaction.

The following describes usage expectations for transactions containing one or more of the following Amount Types: cash back amount, surcharge amount, or POI Amount.

- If DE 54 is present in a First Presentment/1240 message and indicates surcharging, customers:
  - Should not provide DE 54 in First Chargeback (Partial)/1442 or subsequent life cycle messages;
  - Should provide DE 54 in First Chargeback (Full)/1442 and subsequent life cycle messages;
  - Must provide the total amount of the Brand-Level Surcharge or Product-Level Surcharge amount in DE 54 in the First Chargeback/1442 message regardless of whether the chargeback is for the partial or full amount of the transaction and subsequent life cycle messages.
  - The first DE 54 occurrence will represent either the cash back amount information (DE 54, subfield 2 = 40) or the surcharging information (DE 54, subfield 2 = 42).
  - The second DE 54 occurrence will represent the original transaction amount and transaction currency, including either cash back amount or the surcharge amount.
- If DE 54 is present in a First Presentment/1240 message and indicates that a POI currency conversion service (also known as dynamic currency conversion [DCC]) was used by the cardholder, then the updated amount and currency are located in DE 4 (Amount, Transaction) and DE 49 (Currency Code, Transaction), respectively. DE 54 contains the original transaction amount and currency information.
- DE 54 will occur multiple times if Purchase with Cash Back (DE 3, subfield 1 [Cardholder Transaction Type] = 09) or surcharging occurs, and the POI currency conversion service (DCC) updated DE 4 (Amount, Transaction) and DE 49 (Currency Code, Transaction).
- Occurrences are described as follows:
  - The first DE 54 occurrence will represent either the cash back amount information (DE 54, subfield 2 = 40) or the surcharging information (DE 54, subfield 2 = 42).
  - The second DE 54 occurrence will represent the original transaction amount and transaction currency, including either cash back amount or the surcharge amount.

**NOTE: For information about the Brand-Level Surcharge or Product-Level Surcharge, refer to the *Mastercard Rules*.**

- Each DE 54 occurrence within a transaction must have a unique DE 54, subfield 2 (Additional Amount, Amount Type) value.
- The sum of all DE 54, subfield 5 occurrences should be equal to or less than DE 4 (Amount, Transaction). Occurrences with Amount, Surcharge (DE 54, subfield 2 = 42) and POI Amount (DE 54, subfield 2 = 58) are excluded from the sum.

In support of local government regulations, the Dual Message Clearing System determines whether interchange should be applied to transactions containing a surcharge. Interchange may be applied to surcharged transactions when:

- The combination of Card Program Identifier, Business Service Level and Business Service ID permits interchange with surcharging OR
- The Acceptor Country Code (DE 43, subfield 6) and the issuing account range (derived from PAN [DE 2]) country code are the same and the country permits interchange in combination with surcharging.

**NOTE: Although this edit will not produce an error, it will identify transactions qualifying for ATM surcharging.**

### Related required data elements and PDSs

For First Presentment/1240 messages in which a healthcare eligibility amount is included:

- DE 54, subfield 2 must be 10 (Healthcare Eligibility Amount)
- DE 54, subfield 3 must contain the same currency as DE 49 (Currency Code, Transaction)
- DE 54, subfield 4 must be C (Credit) or D (Debit)
- DE 54, subfield 5 must contain the healthcare eligibility amount

For First Presentment/1240 messages in which a prescription eligibility amount is included:

- DE 54, subfield 2 must be 11 (Prescription Eligibility Amount)
- DE 54, subfield 3 must contain the same currency as DE 49 (Currency Code, Transaction)
- DE 54, subfield 4 must be C (Credit) or D (Debit)
- DE 54, subfield 5 must contain the prescription eligibility amount

When DE 54 is present in First Presentment/1240 messages in which DE 3, subfield 1 (Cardholder Transaction Type) is 09 (Purchase with Cash Back):

- DE 54, subfield 2 must be 40 (Amount, Cash Back)
- DE 54, subfield 3 must contain the same currency as DE 49 (Currency Code, Transaction)
- DE 54, subfield 4 must be D (Debit)
- DE 54, subfield 5 must contain the cash back amount. This subfield may contain all zeros if the issuer has declined the cash back portion of the transaction. This amount must be less than the DE 4 (Amount, Transaction) amount.<sup>5</sup>

For First Presentment/1240 messages in which a surcharge is included:

- DE 54, subfield 2 must be 42 (Amount, Surcharge)
- DE 54, subfield 3 must contain the same currency as DE 49 (Currency Code, Transaction)
- DE 54, subfield 4 must be D (Debit).
- DE 54, subfield 5 must contain the surcharge amount.

---

<sup>5</sup> For intracountry India activity, the cash back amount can be equal to the DE 4 (Amount, Transaction) amount.

- For processing codes 30, 91, or 92, this amount must be equal to the DE 4 (Amount, Transaction) amount.
- For processing codes other than 30, 91 or 92, this amount must be less than the DE 4 (Amount, Transaction) amount.

For First Presentment/1240 messages when POI currency conversion (also known as dynamic currency conversion [DCC]) is performed, DE 54 must be present and:

- DE 54, subfield 2 must be 58 (Amount, POI Amount)
- DE 54, subfield 3 must contain the pre-conversion currency of the purchase or withdrawal, which must be a different currency from DE 49 (Currency Code, Transaction).

**NOTE: For First Presentment/1240 messages only.**

- DE 54, subfield 4 must be C (Credit) or D (Debit)
- DE 54, subfield 5 must contain the pre-conversion transaction amount. The cash back portion of a Purchase with Cash Back transaction, or a surcharge, will be included in this amount.

## DE 54 subfields

DE 54 may contain one to 12 occurrences of additional amounts.

Each additional amount consists of five subfields as defined in this table. Each field requires 20 positions; the length of this data element must be a multiple of 20, with a maximum length of 240 positions.

### DE 54 subfields

| Number | Positions | Name                             | Attribute            | Justification |
|--------|-----------|----------------------------------|----------------------|---------------|
| 1      | 1–2       | Additional Amount, Account Type  | n-2                  | N/A           |
| 2      | 3–4       | Additional Amount, Amount Type   | n-2                  | N/A           |
| 3      | 5–7       | Additional Amount, Currency Code | n-3                  | N/A           |
| 4      | 8         | Additional Amount, Amount Sign   | a-1, value of D or C | N/A           |
| 5      | 9–20      | Additional Amount, Amount        | n-12                 | Right         |

All subfields must be present for each amount occurrence when DE 54 is present.

### Subfield 1 (Additional Amount, Account Type)

The account type is a two-digit code as defined for digits 3 and 4 or digits 5 and 6 of DE 3 (Processing Code). The account type must be 00 (default account).

## Subfield 2 (Additional Amount, Amount Type)

The Amount Type that the clearing system supports for transactions is in this table.

### Subfield 2 (Additional Amount, Amount Type)

| Value | Description                        |
|-------|------------------------------------|
| 10    | Healthcare Eligibility Amount      |
| 11    | Prescription Eligibility Amount    |
| 12    | Vision Rx Eligibility Amount       |
| 17    | Prepaid Online Bill Pay Fee Amount |
| 40    | Amount, Cash Back                  |
| 42    | Amount, Surcharge                  |
| 44    | Amount Gratuity                    |
| 58    | Amount, POI Amount                 |

## Subfield 3 (Additional Amount, Currency Code)

Subfield 3 identifies the currency of the Additional Amount.

This subfield must contain a valid ISO numeric currency code.

Refer to the *Quick Reference Booklet* where you can find the currency codes, which are also provided on the MPE.

## Subfield 4 (Additional Amount, Amount Sign)

The amount sign indicates whether the Additional Amount must be debited (D) or credited (C). For all messages with a purchase with cash back, a surcharge amount type, or both, the sign must be D. For all other amount types, the sign is from the issuer's perspective on the First Presentment/1240 message and will not change in subsequent life cycle or reversal messages.

## Subfield 5 (Additional Amount, Amount)

Subfield 5 is the amount value for the Additional Amount Type in the Additional Amount Currency.

All currency amounts are expressed in the minor unit of currency without a decimal separator, in accordance with ISO standards for currency notation. For example, a transaction amount of GHP 212.50 is expressed as 000000021250.

The clearing system will verify that when the First Presentment/1240 message contains an Amount with Cash Back (DE 54, subfield 2 = 40) or an Amount, Surcharge (DE 54, subfield 2 = 42), these amounts must be equal to or less than the total transaction amount (DE 4). For processing codes 30, 91, or 92, this amount must be equal to the total transaction amount (DE 4). For processing codes other than 30, 91, or 92, this amount must be less than the total transaction amount (DE 4).

The Additional Amount, Amount must contain the amount in the same currency as DE 49 on life cycle messages.

## DE 55 (Integrated Circuit Card [ICC] System-Related Data)

DE 55 (Integrated Circuit Card [ICC] System-Related Data) contains data related to ICC systems.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | b...255; LLLVAR                  |
| Data Length         | 3 positions, value = 001–255     |
| Data Field          | Variable length, 1–255 positions |
| Subelements         | See "Values"                     |
| Justification       | N/A                              |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |

DE 55 must be provided for all chip transactions except for refund transactions.

If present, DE 55 cannot contain all spaces, all zeros, all low values, or all high values.

If present and maximum length (255), DE 55 must be left justified and zero (low value hex 00) filled.

If DE 55 is present and is greater than 255 characters in length, then the Dual Message Clearing System rejects the transaction.

### Values

DE 55 contains chip data formatted in accordance with the Europay, Mastercard, and Visa (EMV) chip specification.

If present, DE 55 cannot contain all spaces, zeros, low values, or high values.

DE 55 data is presented in binary format and contains the data used locally by a card's chip at a chip-capable terminal. In a First Presentment/1240, the acquirer should not modify this data but instead pass it unaltered to the issuer.

Chip data in DE 55 consists of a series of components in a "tag-length-data" format, similar to the presentation of PDSs in DE 48 (Additional Data). This table shows the layout.

### DE 55 layout

| Number | Positions      | Description                                  |
|--------|----------------|----------------------------------------------|
| 1      | 1 or 1-2       | First chip subelement tag (ID)               |
| 2      | 2 or 3         | First chip subelement data length            |
| 3      | 3-xxx or 4-xxx | First chip subelement data (variable length) |

Components 1–3 must be repeated as needed until all chip subelements are presented. The length of the tag component is either 1 or 2, depending on the definition of the tag in EMV chip. The length of the data length component is always one in DE 55.

### Mandatory and conditional subelements

When customers send DE 55 in clearing messages related to a chip transaction, the data elements in this table must be present.

### Mandatory and conditional subelements

| Subelement Description                                                                                                                   | Tag Value <sup>6</sup> | Format      | Component | Each Component Length <sup>7</sup> | Total Subelement Length <sup>8</sup> |
|------------------------------------------------------------------------------------------------------------------------------------------|------------------------|-------------|-----------|------------------------------------|--------------------------------------|
| Application Cryptogram (AC)                                                                                                              | 9F26                   | b8          | tag       | 2                                  | 11                                   |
|                                                                                                                                          |                        | length      | 1         |                                    |                                      |
|                                                                                                                                          |                        | data        | 8         |                                    |                                      |

<sup>6</sup> The hexadecimal representation is given here. Every two positions of hexadecimal data is one byte of binary data.

<sup>7</sup> Lengths are in binary format.

<sup>8</sup> "Total Subelement Length" is the sum of that subelement's tag, length, and data components.

Data element and private data subelement definitions and details  
DE 55 (Integrated Circuit Card [ICC] System-Related Data)

|                                                                                                       |           | data   | 8–16      |                       |                         |

## DE 62 (Additional Data 2)

DE 62 (Additional Data 2) contains one or more PDSs that may be required in a message to provide additional clearing system-related, program-related, or service-related data for which a specific ISO data element is unavailable.

#### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...999; LLLVAR                |
| Data Length         | 3 positions, value = 008–999     |
| Data Field          | Variable length, 8–999 positions |
| Subelements         | See "Values"                     |
| Justification       | Left                             |

<sup>9</sup> The hexadecimal representation is given here. Every two positions of hexadecimal data is one byte of binary data.

<sup>10</sup> Lengths are in binary format.

<sup>11</sup> "Total Subelement Length" is the sum of that subelement's tag, length, and data components.

This data element is a carrier data field for PDSs that supplement the ISO 8583:1993 specification.

Encoding of PDSs is always initiated in DE 48 (Additional Data). If the resulting data length required to contain all PDSs exceeds the maximum length of DE 48 (999 positions), these ISO data elements are employed, in sequential order, to contain the remaining PDS data:

- DE 62
- DE 123 (Additional Data 3)
- DE 124 (Additional Data 4)
- DE 125 (Additional Data 5)

DE 62, DE 123, DE 124, or DE 125 each may contain a maximum of 999 positions of encoded PDS information.

DE 62 is present in an IPM message only if DE 48 cannot contain the full length of encoded PDSs.

If both DE 48 and DE 62 are present in the message, DE 48 should contain as many complete PDSs (tag+length+data) as fits into 999 bytes. The remaining complete PDSs should be presented in DE 62, and then DE 123, DE 124, and finally DE 125, as needed.

Customers must not split a PDS between DE 48 and DE 62. If an entire PDS coding scheme (tag-length-data) causes DE 48 to exceed 999 positions, the entire PDS coding scheme (tag-length-data) must be presented in DE 62 instead. Therefore, the total length of DE 48 may be less than 999 positions, with DE 62 containing additional PDS data.

### Values

When present, this data element contains one or more PDSs in PDS-encoded format.

PDS data is formatted using a tag-length-data encoding procedure, shown in this table.

### Values

| Number | Positions | Description           |
|--------|-----------|-----------------------|
| 1      | 1–4       | First PDS tag (ID)    |
| 2      | 5–7       | First PDS data length |
| 3      | 8–999     | First PDS data        |

Subfields 1–3 must be repeated as needed until all PDS data is presented or the total length of subfields 1, 2, and 3 causes the total length of DE 62 to exceed 999 positions.

## DE 63 (Transaction Life Cycle ID)

DE 63 (Transaction Life Cycle ID) contains subfields that allow for transaction life cycle control.

All life cycle messages such as authorizations, financials, reversals, retrievals, fulfillments, and chargebacks are linked with the Life Cycle Support Indicator and Trace ID subfields.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans-16; LLLVAR             |
| Data Length         | 3 positions, value = 016   |
| Data Field          | Fixed length, 16 positions |
| Subfields           | 2                          |
| Justification       | See "Subfields"            |

ISO defines DE 63 as a variable-length field. Therefore, the DE 63 data is preceded by a three-position length field. In the IPM format, customers still must precede the DE 63 data with a

three-position length field. This length field always will contain the value 016, and the data that follows always must be exactly 16 positions long.

## Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

DE 63 data may be assigned at the time that the first message in the transaction life cycle is presented, usually at authorization. This data element consists of two subfields:

- Life Cycle Support Indicator
- Trace ID

DE 63 must be present in the First Presentment/1240 message for all transactions authorized via the Mastercard Network ("online-authorized transactions"). This requirement does not apply to transactions where online authorization is not requested or required, such as offline-authorized chip-read transactions, and Collection Only transactions.

Life cycle messages such as Authorization Request/0100, First Presentment/1240, Retrieval Request/1644, Retrieval Request Acknowledgment/1644, First Chargeback/1442, Second Presentment/1240, and Arbitration Chargeback/1442 messages are linked with this data element.

DE 63 should always be retained and returned throughout all subsequent messages in the life cycle.

DE 63 is required for European acquired activity destined for processing through the network unless DE 22 (Point of Service [POS] Entry Mode), subfield 7 (Card Data: Input Mode) = F (Offline Chip). This activity can be identified via one of the these situations:

- First presentment interregional ATM transactions
- First presentment PIN-based Maestro or Cirrus manual cash disbursement transactions
- First presentment interregional Maestro retail transactions
- First presentment European intraregional ATM or retail Enhanced Gateway transactions

Credit (Purchase Return) transactions are exempt from this requirement.

**NOTE: Enhanced Gateway transactions are defined as those from a Europe region acquirer for which the ATM Indicator is equal to 5 and for which the ATM Indicator of the issuer is equal to 4.**

Alternate Automated Fuel Dispenser Clearing Processing: Mastercard recommends that the Trace ID (DE 15 [Date, Settlement] and DE 63 [Network Data]) of the Automated Fuel Dispenser (AFD) completion advice response be used within the clearing presentment. The Trace ID of the original preauthorization may be used for clearing presentment if that same Trace ID is included in the AFD completion advice message within DE 48, subelement 63 (Trace ID).

## Values

If present, DE 63 cannot contain all low values or all high values.

## DE 63 subfields

DE 63 includes two subfields.

### DE 63 subfields

| Number | Positions | Name                         | Attribute | Justification |
|--------|-----------|------------------------------|-----------|---------------|
| 1      | 1         | Life Cycle Support Indicator | ans-1     | left          |
| 2      | 2-16      | Trace ID                     | ans-15    | left          |

### Subfield 1 (Life Cycle Support Indicator)

Currently, the Life Cycle Support Indicator subfield always contains a space.

Subfield 1 is required whenever subfield 2 is present. The valid Life Cycle Support Indicator is described in this table.

### Subfield 1 (Life Cycle Support Indicator)

| Value | Description                                |
|-------|--------------------------------------------|
| space | Trace ID assigned to Authorization message |

### Subfield 2 (Trace ID)

The Trace ID is intended to identify uniquely a transaction through its full life cycle. Currently Mastercard assigns a Trace ID to any transaction authorized via the Mastercard Network.

The Trace ID consists of the Network Reference Number (nine positions) followed by the Network Date (four positions–MMDD), followed by two spaces. For each transaction authorized via the network ("online-authorized transactions"), DE 63 subfield 2 (Trace ID) of the First Presentment/1240 message must be populated with the same values contained in the related authorization message.

This requirement does not apply to transactions where online authorization is not requested or required, such as offline-authorized chip-read transactions, credit (purchase return) transactions, and Collection Only transactions.

For each Authorization Request Response/0110 message transmitted via the network, subfield 2 of the First Presentment/1240 message must be populated with the values contained in DE 15, DE 63 subfield 1, and DE 63 subfield 2. For automated fuel dispenser (MCC 5542) transactions where an Authorization Request/0100 message is followed by an Authorization Advice/0120 message containing the final transaction amount, these values should come from the same fields of the related Authorization Advice Response/0130 message.

Subfield 2 is required if the associated First Presentment/1240 is submitted for any U.S. region consumer or corporate credit or consumer debit incentive interchange rate programs, unless the transaction is a credit, ATM cash disbursement, manual cash disbursement, reversal, Collection Only, or bilaterally settled transaction.

Mastercard recommends that the Trace ID (DE 15 [Date, Settlement] and DE 63 [Network Data]) of the completion advice response be used within the clearing presentment. (Refer to the Alternate AFD Clearing Processing in the following section.)

The Trace ID of the original pre-authorization may be used for Clearing presentment if that same Trace ID is included in the Automated Fuel Dispenser (AFD) completion advice message within CIS DE 48 (Additional Data, Private Use), subelement 63 (Trace ID).

GCMS requires the presence of DE 63 for all U.S. acquired transactions submitted for incentive interchange programs. For transactions containing 14-digit Enabled International Cards beginning with the digits 36, U.S. acquirers should populate Trace ID (DE 63, subfield 2) with the correct Network Reference Number and Network Date.

GCMS requires the presence of DE 63 for all Canada acquired transactions submitted for incentive interchange programs.

When Trace ID (DE 63) is present, edits will be applied against the network Reference Number (DE 63, subfield 2) to confirm the format of the information.

The edit checks are:

- Position 1–3: Must contain a valid Mastercard product code
- Position 4–9: Must contain six alphanumeric characters, no embedded spaces, low values, or high values.

This table represents mapping of values from DE 63 in the Authorization CIS message to the Clearing IPM message.

### Mapping of values from DE 63 (Authorization CIS) to Clearing IPM

| Position | Value                                          | Description                                              |
|----------|------------------------------------------------|----------------------------------------------------------|
| 1–3      | DE 63, subfield 1 of Authorization CIS message | First three positions of authorization response message. |
| 4–9      | DE 63, subfield 2 of Authorization CIS message | First six positions of authorization response message.   |
| 10–13    | DE 15 of Authorization CIS message             |                                                          |
| 14–15    | spaces                                         |                                                          |

## DE 71 (Message Number)

DE 71(Message Number) monitors the integrity and continuity of the files being exchanged. The transaction originator assigns the DE 71 (Message Number) to data messages in a file.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-8                       |
| Data Length         | None                      |
| Data Field          | Fixed length, 8 positions |
| Subfields           | None                      |
| Justification       | Right                     |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                      | Org | Sys | Dst |

This data element provides the file recipient with a readily available means to verify that it receives all data messages in the file.

### Values

The first message in a data file (the File Header/1644) must have the message number initialized to 00000001. For each subsequent message in the file, this data element value must be greater than the value in the previously accepted message.

When the Dual Message Clearing System returns a message because it was rejected, the rejected message will immediately follow its related Message Exception/1644 or File Reject Message. If the Clearing Optimizer application rejects the message, it modifies the DE 71 value of the rejected message so that it is in sequence with the other messages in the file. If GCMS rejects the message, it retains the DE 71 value that the sender originally provided.

## DE 72 (Data Record)

DE 72 (Data Record) contains message text data, file update data, or other information as specified in individual IPM messages.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...999; LLLVAR                |
| Data Length         | 3 positions, value = 001-999     |
| Data Field          | Variable length, 1-999 positions |
| Subfields           | None                             |
| Justification       | Left                             |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                                              | Org | Sys | Dst |

| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | C   | .   | C   |
| Message Exception/1644 and File Reject/1644                          | .   | X   | M   |
| Text Message/1644                                                    | .   | X   | M   |

This data element is a variable-length data field that may be used for transmitting file message data or character string data in various message types.

DE 72 must be a maximum of 100 positions in First Chargeback/1442, Second Presentment/1240, Arbitration Chargeback/1442, and Fee Collection/1740 messages.

DE 72 may be up to 999 positions in Administrative messages that the clearing system generates.

### Values

For First Chargeback/1442, Second Presentment/1240, and Arbitration Chargeback/1422 messages, refer to the *Chargeback Guide* for specific DE 72 requirements based on the value in DE 25 (Message Reason Code). The clearing system does not edit to require DE 72. However, if it is not provided for a given message reason code (DE 25) as specified in the *Chargeback Guide*, the receiving customer has the right to return the message.

For Fee Collection Other/1740 messages, refer to [General message layout information](#) for specific DE 72 requirements based on DE 25. The clearing system does not edit for specific values in DE 72.

If present, DE 72 cannot contain all zeros, all spaces, all low values, or all high values.

## DE 73 (Date, Action)

DE 73 (Date, Action) specifies a future action date or a specific date such as a transaction date.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-6; YYYYMMDD             |
| Data Length         | None                      |
| Data Field          | Fixed length, 6 positions |
| Subfields           | None                      |
| Justification       | N/A                       |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Fee Collection (Retrieval Fee Billing)/1740 | M   | .   | M   |
| Fee Collection (Handling Fees)/1740         | M   | .   | M   |

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | C   | .   | C   |

In Fee Collection messages, this data element identifies a reference date related to the Fee Collection Message Reason Code.

For Fee Collection Other/1740 messages, refer to [General message layout information](#) for specific DE 73 requirements based on DE 25 (Message Reason Code). The clearing system does not edit to require DE 73. However, if it is not provided for a given Message Reason Code as specified in the *GCMS Reference Manual*, the receiving customer has the right to return the message.

### Values

The data in DE 73 must consist of all zeros or a valid year (YY), month (MM), and day (DD). For Fee Collection (Retrieval Fee Billing)/1740 messages, the DD portion may be zeros.

## DE 93 (Transaction Destination Institution ID Code)

DE 93 (Transaction Destination Institution ID Code) identifies the transaction destination institution.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | n...11; LLVAR                   |
| Data Length         | 2 positions, value 06–11        |
| Data Field          | Variable length, 6–11 positions |
| Subfields           | None                            |
| Justification       | Right                           |

### Current processing restrictions

The clearing system accepts a DE 93 length of 6 to 11 positions but expects this element to contain zeros in all but the last six positions. Only the last six positions are passed along to the receiver of the message.

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

This data element identifies the transaction destination institution that has financial responsibility and liability for the transaction.

For Mastercard transactions, this is the institution that has an agreement with Mastercard as being a principal member and has the financial authority to process Mastercard transactions as an acquirer or issuer.

This data element is required in all Fee Collection (Other) and Fee Collection (Handling Fees) transactions.

If the clearing system does not receive this data element from a customer in an originating message, it may perform automated routing services (based on other data elements such as DE 2 (Primary Account Number [PAN]) and inserts and passes to the receiving institution the proper value for DE 93.

## Values

When present in a message, this data element must contain a valid customer ID.

For lifecycle transactions initiated by issuers, DE 93 may contain the ICA number as provided in DE 94 (Transaction Originator Institution ID Code) from the First Presentment/1240 message.

If the ICA number present in DE 93 represents a Single Message System acquirer, the ICA number may not be present in the IPM MPE data as supplied by Mastercard. If the DE 93 value is provided, Mastercard recommends that it be the ICA number related to the bank identification number (BIN) in DE 31 (Acquirer Reference Data), subfield 2 (Acquirer's BIN must contain the six-digit acquirer's BIN).

## DE 94 (Transaction Originator Institution ID Code)

DE 94 (Transaction Originator Institution ID Code) identifies the transaction originator institution.

### Attributes

| Attribute           | Description                         |
|---------------------|-------------------------------------|
| Data Representation | n...11; LLVAR                       |
| Data Length         | 2 positions, value 06–11            |
| Data Field          | Variable length, 6–11 positions     |
| Subfields           | None                                |
| Justification       | Right, with leading zeros as needed |

### Processing restrictions

The clearing system accepts a DE 94 length of 6 to 11 positions but expects this element to contain zeros in all but the last six positions. Only the last six positions are passed along to the receiver of the message.

### Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

This data element identifies the transaction originator institution that has financial responsibility and liability for the transaction.

For Mastercard transactions, this is the institution that has an agreement with Mastercard as being a principal member and that has the financial authority to process Mastercard transactions as an acquirer or issuer.

If the clearing system does not receive this data element from a customer in an originating message, it rejects the message.

In First Presentment/1240, Second Presentment/1240, Financial Detail Addendum/1644, and Fee Collection (Retrieval Fee Billing)/1740 messages, the customer ID cannot be designated as an issuer-only customer ID.

In First Chargeback/1442 and Arbitration Chargeback/1442 messages, the customer ID cannot be designated as an acquirer-only customer ID.

## Values

When present in a message, this data element must contain a valid customer ID. The customer ID must either be equal to the customer processor ID in subfield 3 of PDS 0105 File ID in the File Header/1644-697 message or be processed by that customer/processor ID.

For collection only activity, DE 94 must be compatible with the Acquirer Reference ID in DE 31 (Acquirer Reference Data), subfield 2 (Acquirer's BIN).

For outbound files to customers, DE 94 may contain an ICA number associated with a Single Message System customer. In such cases, the ICA number may not be included in the IPM MPE data provided by Mastercard and is intended for informational purposes.

## Application notes

For bridged transactions, issuers will now receive the ICA number that identifies the transaction originator institution having financial responsibility for the transaction in DE 94 of the First and Second Presentment/1240 messages, instead of a Mastercard-assigned internal ICA.

**NOTE: Transactions that have passed between platforms (Single Message System to Dual Message System, Dual Message System to Single Message System) are referred to as bridged transactions.**

## DE 95 (Card Issuer Reference Data)

DE 95 (Card Issuer Reference Data) is a control value of 10 positions that the issuer assigns with its original chargeback and is used to track the chargeback throughout its life cycle.

The issuer provides DE 95 (Card Issuer Reference Data) when processing retrieval or chargeback messages.

The acquirer is required to include the same data in a subsequent fulfillment of the retrieval request. In the case of a chargeback, this applies to both Second Presentment/1240 and Arbitration Chargeback/1442.

### Attributes

|                     |                            |
|---------------------|----------------------------|
| Data Representation | n-10; LLVAR                |
| Data Length         | 2 positions, value = 10    |
| Data Field          | Fixed length, 10 positions |
| Subfields           | None                       |
| Justification       | Right, with leading zeros  |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Chargeback/1442 and Arbitration Chargeback/1442 | M   | .   | M   |
| Second Presentment/1240                               | M   | .   | M   |
| Retrieval Request/1644                                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |

This data element contains an "issuer's reference number" for a specific cardholder transaction. The acquirer may be required to retain and return DE 95 in subsequent Retrieval Fulfillment (presented via a Fee Collection message) or Second Presentment/1240 messages sent to the issuer.

The issuer may then use DE 95 as a common reference number to link related Retrieval Request/1644, Retrieval Request Acknowledgment/1644, and Retrieval Fulfillment (presented via a Fee Collection message) messages, or to link First Chargeback/1442, Second Presentment/1240, and Arbitration Chargeback/1442 messages to the original cardholder transaction.

### Values

For Retrieval Request/1644, Retrieval Request Acknowledgment/1644, and Retrieval Fulfillment messages (presented via Fee Collection messages), DE 95, if present, should contain the issuer's control number.

**NOTE: This only applies to markets where retrieval requests are allowed.**

For First Chargeback/1442, Second Presentment/1240, and Arbitration Chargeback/1442 messages, DE 95 must contain the Chargeback Reference Number. For items processed through Claims Manager, Claims Manager assigns the Chargeback Reference Number when the First Chargeback/1442 is created, and this number must be unique within BIN. It is used to track the chargeback throughout its life cycle.

If present, DE 95 must be numeric.

## DE 100 (Receiving Institution ID Code)

DE 100 (Receiving Institution ID Code) identifies the receiving institution.

### Attributes

| Attribute            | Description                     |
|----------------------|---------------------------------|
| Data Representation: | n...11; LLVAR                   |
| Length Field:        | 2 positions, value = 06–11      |
| Data Length:         | Variable length, 6–11 positions |
| Subfields:           | None                            |
| Justification:       | Right                           |

### Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                                                                 | Org | Sys | Dst |
|-----------------------------------------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                                                  | •   | X   | M   |

DE 100 contains the customer ID or Processor ID of the physically connected processing facility that receives a message.

### Values

This data element must contain a valid customer ID or Processor ID number.

## DE 105 (Multi-Use Transaction Identification Data)

DE 105 is alphanumeric, variable length using a tag-length-data encoding scheme to allow for easy addition of new subfields.

### Attributes

| Attribute           | Description                  |
|---------------------|------------------------------|
| Data representation | ans...999, LLLVAR            |
| Length field        | 3 positions, value = 001-999 |

| Attribute     | Description                      |
|---------------|----------------------------------|
| Data field    | Variable length, 1-999 positions |
| Subelements   | 1, see "Values"                  |
| Justification | N/A                              |

## Usage

Following is the usage of DE 105 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | X   | C   |
| Financial Detail Addendum/1644                        | C   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | X   | C   |
| Second Presentment/1240                               | C   | X   | C   |

## Values

Data in DE 105 consists of a series of repeatable components in a tag-length-data format, similar to the presentation of the subelements in DE 55 (Integrated Circuit Card [ICC] System-Related Data).

| Component | Positions | Description                             |
|-----------|-----------|-----------------------------------------|
| 1         | 1-3       | First subelement tag (ID)               |
| 2         | 4-6       | First subelement data length            |
| 3         | 7-xxx     | First subelement data (variable length) |

Components 1-3 may be repeated, as needed, until all subelements are presented.

The subelement sequence does not have to be in the order of the ID value. For example, subelement 001 does not have to precede all the other subelements. If a new subelement 017 is defined in the future, it could be presented before subelement 001. Systems must be prepared to read and parse the contents of DE 105 to determine which tags (subelements) are present and which are necessary for their own internal processing.

## Subelement 001 (Transaction Link ID [TLID])

DE 105, subelement 001 (Transaction Link ID [TLID]) contains the transaction link ID that is globally unique and can be used as a single unique reference for deterministic matching and linking of all message activity.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Subelement ID       | 001                      |
| Subelement length   | 3 positions, value = 022 |
| Data representation | ans-22                   |
| Data field          | N/A                      |
| Subfields           | N/A                      |
| Justification       | N/A                      |

### Usage

Whether the data element is mandatory, conditional, optional, system-provided, or not required is noted for each applicable message.

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | X   | C   |
| Financial Detail Addendum/1644                        | C   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | X   | C   |
| Second Presentment/1240                               | C   | X   | C   |

## DE 111 (Amount, Currency Conversion Assessment)

DE 111 (Amount, Currency Conversion Assessment) is the amount based on the result of applying the multi-currency conversion rate (Currency Conversion Assessment) adjustment to the currency conversion rate used to convert DE 4 (Amount, Transaction) to DE 6 (Amount, Cardholder Billing) for qualified transactions.

The currency of this amount is the same as DE 51 (Currency Code, Cardholder Billing).

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Data Representation: | n-12; LLLVAR              |
| Data Length          | 3 positions, value = 012  |
| Data Field:          | 12 positions              |
| Subfields:           | None                      |
| Justification:       | Right, with leading zeros |

ISO defines DE 111 as a variable-length field. Therefore, the DE 111 data is preceded by a three-position length field. In the IPM format, customers still must precede the DE 111 data with a three-position length field. This length field always will contain the value 012, and the data that follows always must be exactly 12 positions long.

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

This data element contains the calculated Currency Conversion Assessment adjustment amount. The clearing system provides DE 111 when the transaction qualifies for a Currency Conversion Assessment conversion adjustment.

### Values

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a cardholder billing amount of USD 212.50 is expressed as 000000021250.

## DE 123 (Additional Data 3)

DE 123 (Additional Data 3) contains one or more PDSs that may be required in a message to provide additional clearing system-related, program-related, or service-related data for which a specific ISO data element is not available.

### Attributes

| Attribute            | Description                      |
|----------------------|----------------------------------|
| Data Representation: | ans...999; LLLVAR                |
| Length Field:        | 3 positions, value = 008-999     |
| Data Length          | Variable length, 8-999 positions |
| Subelements:         | See "Values"                     |
| Justification:       | Left                             |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

| Message                                                                                 | Org | Sys | Dst |

| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740     | C   | X   | C   |
| File Currency Summary/1644                                               | .   | X   | C   |
| Financial Position Detail/1644                                           | .   | X   | C   |
| Settlement Position Detail/1644                                          | .   | X   | C   |

This data element is a "carrier" data field for PDSs that supplement the ISO 8583:1993 specification.

Encoding of PDSs is always initiated in DE 48 (Additional Data). If the resulting data length required to contain all PDSs exceeds the maximum length of DE 48 (999 positions), these ISO data elements are employed, in sequential order, to contain the remaining PDS data:

- DE 62 (Additional Data 2)
- DE 123 (Additional Data 3)
- DE 124 (Additional Data 4)
- DE 125 (Additional Data 5)

DE 62, DE 123, DE 124, and DE 125 may contain a maximum of 999 positions, each, of encoded PDS information.

DE 123 is present in an IPM message only if DE 48 and DE 62 cannot together contain the full length of encoded PDSs.

If a significant amount of PDS data is in a message, DE 48 should contain as many complete PDSs as will fit into 999 bytes. Then DE 62 should contain as many complete PDSs (tag+length+data) as will fit into 999 bytes. The remaining complete PDSs must be presented in DE 123, DE 124, and DE 125, as needed.

Customers must not split a PDS between DE 48 and DE 62, or between DE 62 and DE 123. If an entire PDS coding scheme (tag-length-data) causes DE 48 or DE 62 to exceed 999 positions, the entire PDS coding scheme (tag-length-data) must be presented in the next PDS carrier (DE 62 or DE 123) instead. Therefore, the total length of DE 48 and DE 62 may be less than 999 positions each, with DE 123 containing additional PDS data.

## Values

When present, this data element contains one or more PDSs in PDS-encoded format.

PDS data is formatted using a "tag-length-data" encoding procedure, shown in this table.

## Values

| Number | Positions | Description           |
|--------|-----------|-----------------------|
| 1      | 1–4       | First PDS tag (ID)    |
| 2      | 5–7       | First PDS data length |
| 3      | 8–999     | First PDS data        |

Subfields 1–3 must be repeated as needed until all PDS data is presented or the total length of subfields 1, 2, and 3 causes the total length of DE 123 to exceed 999 positions.

Refer to [Private data subelement definitions](#), for additional information about PDS definitions and an example.

## DE 124 (Additional Data 4)

DE 124 (Additional Data 4) contains one or more PDSs that may be required in a message to provide additional clearing system-related, program-related, or service-related data for which a specific ISO data element is not available.

### Attributes

| Attribute            | Description                     |
|----------------------|---------------------------------|
| Data Representation: | ans...999; LLLVAR               |
| Length Field:        | 3 positions, value = 008–999    |
| Data Length          | Variable length 8–999 positions |
| Subelements:         | 3                               |
| Justification:       | Left                            |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

This data element is a "carrier" data field for PDSs that supplement the ISO 8583:1993 specification.

Encoding of PDSs is always initiated in DE 48 (Additional Data). If the resulting data length required to contain all PDSs exceeds the maximum length of DE 48 (999 positions), the following ISO data elements are employed, in sequential order, to contain the remaining PDS data:

- DE 62 (Additional Data 2)
- DE 123 (Additional Data 3)
- DE 124 (Additional Data 4)
- DE 125 (Additional Data 5)

DE 62, DE 123, DE 124, and DE 125 may contain a maximum of 999 positions, each, of encoded PDS information.

DE 124 is present in an IPM message only if DE 48, DE 62, and DE 123 cannot together contain the full length of encoded PDSs.

If a significant amount of PDS data is in a message, DE 48 should contain as many complete PDSs as will fit into 999 bytes. Then DE 62 should contain as many complete PDSs (tag+length+data) as will fit into 999 bytes. The remaining complete PDSs must be presented in DE 123, DE 124, and DE 125, as needed.

Customers must not split a PDS between DE 48 and DE 62, between DE 62 and DE 123, or between DE 123 and DE 124. If an entire PDS coding scheme (tag-length-data) causes DE 48 or DE 62 to exceed 999 positions, the entire PDS coding scheme (tag-length-data) must be presented in the next PDS carrier (DE 62 or DE 123) instead. Therefore, the total length of DE 48 and DE 62 may be less than 999 positions each, with DE 123 and DE 124 containing additional PDS data.

## Values

When present, this data element contains one or more PDSs in PDS-encoded format.

PDSs are formatted using a "tag-length-data" encoding procedure, shown in this table.

### Values

| Number | Positions | Description           |
|--------|-----------|-----------------------|
| 1      | 1-4       | First PDS tag (ID)    |
| 2      | 5-7       | First PDS data length |
| 3      | 8-999     | First PDS data        |

Subfields 1-3 must be repeated as needed until all PDS data is presented or the total length of subfields 1, 2, and 3 causes the total length of DE 124 to exceed 999 positions.

Refer to [Private data subelement definitions](#), for additional information about PDS definitions and an example.

## DE 125 (Additional Data 5)

DE 125 (Additional Data 5) contains one or more PDSs that may be required in a message to provide additional clearing system-related, program-related, or service-related data for which a specific ISO data element is not available.

### Attributes

| Attribute            | Description                      |
|----------------------|----------------------------------|
| Data Representation: | ans...999; LLLVAR                |
| Length Field:        | 3 positions, value = 008–999     |
| Data Length          | Variable length, 8–999 positions |
| Subelements:         | 3                                |
| Justification:       | Left                             |

### Usage

Use of this data element will be mandatory, conditional, optional, system provided, or not required in applicable messages.

### Applicable messages

This data element is a "carrier" data field for PDSs that supplement the ISO 8583:1993 specification.

Encoding of PDSs is always initiated in DE 48 (Additional Data). If the resulting data length required to contain all PDSs exceeds the maximum length of DE 48 (999 positions), these ISO data elements are employed, in sequential order, to contain the remaining PDS data:

- DE 62 (Additional Data 2)
- DE 123 (Additional Data 3)
- DE 124 (Additional Data 4)
- DE 125 (Additional Data 5)

DE 62, DE 123, DE 124, and DE 125 may contain a maximum of 999 positions, each, of encoded PDS information.

DE 125 is present in an IPM message only if DE 48, DE 62, DE 123, and DE 124 cannot together contain the full length of encoded PDSs.

If a significant amount of PDS data is in a message, DE 48, DE 62, DE 123, and DE 124 should contain as many complete PDSs (tag+length+data) as will fit into 999 bytes each. The remaining complete PDSs must be presented in DE 125 if needed.

Customers must not split a PDS between DE 48 and DE 62, between DE 62 and DE 123, between DE 123 and DE 124, or between DE 124 and DE 125. If an entire PDS coding scheme (tag-length-data) causes a PDS carrier to exceed 999 positions, the entire PDS coding scheme (tag-length-data) must be presented in the next PDS carrier (DE 62, DE 123, DE 124, or DE 125) instead. Therefore, the total length of DE 48, DE 62, DE 123, and DE 124 may be less than 999 positions each, with DE 125 containing the remaining PDS data.

## Values

When present, this data element contains one or more PDSs in PDS-encoded format.

PDS data is formatted using a "tag-length-data" encoding procedure, shown in this table.

## Values

| Number | Positions | Description           |
|--------|-----------|-----------------------|
| 1      | 1-4       | First PDS tag (ID)    |
| 2      | 5-7       | First PDS data length |
| 3      | 8-999     | First PDS data        |

Subfields 1–3 must be repeated as needed until all PDS data is presented or the total length of subfields 1, 2, and 3 causes the total length of DE 125 to exceed 999 positions.

Refer to [Private data subelement definitions](#) for additional information about PDS definitions and an example.

## DE 127 (Network Data)

DE 127 (Network Data) is reserved for internal clearing system use.

### Usage

This data element is a "carrier" data field for internal clearing system PDSs that supplement the ISO 8583:1993 specification. The transaction originator does not provide this element. The clearing system populates DE 127 as needed with temporary data and does not forward this element to the message destination.

## Private data subelement definitions

This section provides a detailed definition of private data subelements (PDSs) used in IPM format offline clearing messages.

## PDS construction and use

This section defines private data subelements (PDSs) used in this specification.

These subelements are defined for situations in which the International Organization for Standardization (ISO) did not define standard data elements in the ISO 8583:1993 specification or in situations in which the ISO data elements are insufficient for operational requirements.

All PDSs are designed to be incorporated as subelements in ISO "private-use" data elements, which are specifically designated in the ISO 8583:1993 specification for "private" organization use. As such, defined PDSs enhance the overall functionality of the implementation of ISO 8583 entirely within the ISO specification framework.

Several ISO standard private-use data elements are designated to be formatted using a common PDS encoding procedure (described later in this chapter). When present in a message, these ISO data elements are always formatted to contain one or more PDSs in the ISO data element.

These ISO private-use data elements are designated to contain PDS-encoded data:

- DE 48 (Additional Data)
- DE 62 (Additional Data 2)
- DE 123 (Additional Data 3)
- DE 124 (Additional Data 4)
- DE 125 (Additional Data 5)

PDSs in DE 48, DE 62, DE 123, DE 124, and DE 125 primarily support individual program and service requirements. PDSs placed in these data elements are considered a permanent part of this specification.

The guidelines for populating the carrier private-use data elements can be found with the specifications for those data elements.

### PDS encoding scheme

Each PDS consists of three components:

- Tag field (tag)
- Length field (length)
- Data field (data)

The first four bytes of each PDS must contain the subelement tag ID, a numeric value in the range 0001–9999, to identify uniquely the subelement.

The next three bytes of each PDS must contain the subelement length, a numeric value in the range 001–992, to specify the total length (in bytes) of the PDS data portion.

The remainder of the PDS consists of the actual data.

Because all PDSs have a common tag-length-data encoding format, new PDSs may be added to messages at any time without affecting message processing software resident on any customer processing system. If a processor does not recognize a PDS tag, it may simply use the length field to count past the PDS data portion and continue parsing for any additional PDSs.

**NOTE: PDSs cannot be duplicated within an IPM message. The clearing system rejects any message containing duplicate occurrences of a PDS tag field.**

This diagram illustrates the PDS encoding scheme in an ISO standard data element.

### PDS encoding scheme

## PDS and subfield justification

The specific justification of data elements and subfields are given within each PDS topic.

Refer to the [Justification](#) section for more information.

**NOTE: Customers can send clearing files with PDSs in any sequence. In all clearing files that customers receive, the clearing system formats the PDS data in ascending sequence by PDS tag number.**

For example, assume a customer wants to present the PDS data in this table.

#### PDS data example

| PDS Number | Description                  | Length | Value          |
|------------|------------------------------|--------|----------------|
| 0165       | Settlement Indicator         | 1      | M              |
| 0023       | Terminal Type                | 3      | CT2            |
| 0170       | Acceptor Inquiry Information | 14     | 1-800-555-1212 |

The customer may construct DE 48 (Additional Data) as shown in this table.

#### DE 48 example

| Positions | Value          | Description       |
|-----------|----------------|-------------------|
| 1-4       | 0165           | First PDS tag     |
| 5-7       | 001            | First PDS length  |
| 8         | M              | First PDS data    |
| 9-12      | 0012           | Second PDS tag    |
| 13-15     | 014            | Second PDS length |
| 16-29     | 19960930000000 | Second PDS data   |
| 30-33     | 0023           | Third PDS tag     |
| 34-36     | 003            | Third PDS length  |
| 37-39     | CT2            | Third PDS data    |
| 40-43     | 0170           | Fourth PDS tag    |

| 47-60     | 1-800-555-1212 | Fourth PDS data   |

## Subelement tag assignment

Each PDS is assigned a unique numeric tag number used for identification.

Mastercard supports PDSs within the range of 0001-9999. GCMS uses the PDS range of 0001 - 0799 to provide information related to programs and services to our customers.

GCMS reserves the PDS ranges of 0800-0899 and 0900-0999 to support internal network functionality. These PDSs will never be sent to customers. GCMS uses these PDSs for network support and other special functions.

The PDSs reserved for customer proprietary use are in the range 1000–1099. Customers can use these PDSs to exchange data related to special programs. The GCMS passes these PDSs unedited to the receivers. These PDSs may be placed in any of the "Additional Data" data elements (DE 48, DE 62, DE 123, DE 124, or DE 125). The total length of the tags, lengths, and data for PDSs 1000–1099 in a single IPM message cannot exceed 992 bytes.

PDS range 1100-9999 are reserved for future use.

## Additional information about the use of PDSs

PDSs are not restricted for use in a particular PDS carrier. PDS 0001–PDS 0799, or PDS 1000–1099, are not required to be in DE 48 as opposed to DE 62, DE 123, DE 124, or DE 125.

Customers/processors can present PDS data in any sequence, in any carrier, if the PDS data is placed first in DE 48, then DE 62, then DE 123, then DE 124, and finally DE 125.

## PDS 0001 (Mastercard Mapping Service Account Number)

PDS 0001 (Mastercard Mapping Service Account Number) provides either the virtual account number/token or the primary account number in a transaction for which mapping services were performed.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | ans...21; TAGLLLLVAR            |
| Tag Field           | 0001                            |
| Data Length         | 3 positions, value = 006–021    |
| Data Field          | Variable length, 6–21 positions |
| Subfields           | 2 subfields                     |
| Justification       | N/A                             |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | .   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | .   | X   | C   |
| Second Presentment/1240                               | .   | X   | C   |
| Retrieval Request/1644                                | .   | X   | C   |
| Retrieval Request Acknowledgment/1644                 | .   | X   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | .   | X   | C   |

The clearing system provides PDS 0001 to the issuer whenever it performs the mapping service. This service maps a virtual card number or token to a real card number or a real card number to a virtual card number or token. PDS 0001 is provided to the acquirer only when a PAN Mapping Service has been performed.

### Subfield 1 (Account Number Type)

PDS 0001 (Mastercard Mapping Service Account Number), subfield 1 describes the type of account number contained in PDS 0001, subfield 2 (Account Number).

### Subfield attributes and values

|                      | Attribute | Value |
|----------------------|-----------|-------|
| Subfield ID:         | n-2       | 01    |
| Subfield Length:     | n-2       | 02    |
| Data Representation: | ans-2     |       |
| Justification:       | Left      |       |

Position 1 of subfield 1 indicates what type of account number is found in subfield 2.

- Values 1–6 if the number in subfield 2 is a contactless account number
- Values 8 or 9 if the number in subfield 2 is a Mastercard In Control™ virtual account number
- Value C if the number in subfield 2 is a Mastercard Digital Enablement Service secure element token
- Value H if the number in subfield 2 is a Mastercard Digital Enablement Service Cloud-Based Payments token

- Value O if the number in subfield 2 is a Mastercard Digital Enablement Service Card on File token
- Value T if the number in subfield 2 is a real card number

Within Retrieval Request/1644-603, Retrieval Request Acknowledgment/1644-605, and Chargeback/1442 dispute messages for Mastercard In Control transactions, PDS 0001, subfield 1, position 1 will contain value T, indicating that PDS 0001, subfield 2 contains the masked real account number. The real account number is masked according to these PCI guidelines.

- Display the first six digits.
- Fill the remaining digits of the real card number with zeros
- Display the final four digits (for example: 12345600000001234 for a 16-digit PANs or 1234560000000001234 for a 19-digit PAN).

Position 2 of this subfield contains a space if GCMS performed the mapping service using Mastercard authorization logs. Position 2 will contain value C if GCMS performed the mapping service using a source other than the Mastercard authorization logs. (This position will contain a C in all retrieval and chargeback messages.)

Possible values for subfield are listed in the table.

### Values

| Values  | Description                                                                                                                                                                                                                         |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| C Space | Subfield 2 contains the Mastercard Digital Enablement Service secure element device token used at the point of sale. The account range is owned by an issuer. Mapping was based on the authorization log.                           |
| CC      | Subfield 2 contains the Mastercard Digital Enablement Service secure element device token used at the point of sale. The account range is owned by an issuer. Mapping was based on a source other than the authorization log.       |
| H Space | Subfield 2 contains the Mastercard Digital Enablement Service Cloud-Based Payments device token used at the point of sale. The account range is owned by an issuer. Mapping was based on the authorization log.                     |
| HC      | Subfield 2 contains the Mastercard Digital Enablement Service Cloud-Based Payments device token used at the point of sale. The account range is owned by an issuer. Mapping was based on a source other than the authorization log. |
| O Space | Subfield 2 contains the Mastercard Digital Enablement Service Card on File token submitted by the acquirer. The account range is owned by Mastercard. Mapping was based on the authorization log.                                   |
| OC      | Subfield 2 contains the Mastercard Digital Enablement Service Card on File token submitted by the acquirer. The account range is owned by Mastercard. Mapping was based on a source other than the authorization log.               |
| TC      | Subfield 2 contains a primary account number. Mapping was based on a source other than the authorization logs.                                                                                                                      |

| Values | Description                                                                                                                                                                                                                                                                                                                                  |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1      | Subfield 2 contains a contactless account number owned by an issuer, and the issuer is actively participating in the PayPass® Mapping Service. Every transaction containing this account range is to be mapped. Mapping was based on the authorization logs.                                                                                 |
| 1C     | Subfield 2 contains a contactless account number owned by an issuer, and the issuer is actively participating in the PayPass® Mapping Service. Every transaction containing this account range is to be mapped. Mapping was based on a source other than the authorization logs.                                                             |
| 2      | Subfield 2 contains a contactless account number owned by an issuer, and the issuer is actively participating in the PayPass® Mapping Service. Not all transactions in this issuer account range are mapped, because the issuer is phasing in the PayPass® Mapping Service. Mapping was based on the authorization logs.                     |
| 2C     | Subfield 2 contains a contactless account number owned by an issuer, and the issuer is actively participating in the PayPass® Mapping Service. Not all transactions in this issuer account range are mapped, because the issuer is phasing in the PayPass® Mapping Service. Mapping was based on a source other than the authorization logs. |
| 3      | Subfield 2 contains a contactless account number provided by Mastercard and is assigned to an issuer that is actively participating in the PayPass® Mapping Service. Mapping was based on the authorizations logs.                                                                                                                           |
| 3C     | Subfield 2 contains a contactless account number provided by Mastercard and is assigned to an issuer that is actively participating in the PayPass® Mapping Service. Mapping was based on a source other than the authorization logs.                                                                                                        |
| 4      | Subfield 2 contains a contactless account number provided by Mastercard and is assigned to an issuer that is passively participating in the PayPass® Mapping Service by permitting its cardholders to request a contactless card or device via that website. Mapping was based on the authorization logs.                                    |
| 4C     | Subfield 2 contains a contactless account number provided by Mastercard and is assigned to an issuer that is passively participating in the PayPass® Mapping Service by permitting its cardholders to request a contactless card or device via the website. Mapping was based on a source other than the authorization logs.                 |
| 5      | Subfield 2 contains a contactless account number provided by Mastercard and is assigned to a merchant that sponsors the contactless card or device. The issuer is passively participating in the PayPass® Mapping Service. Mapping was based on the authorization logs.                                                                      |
| 5C     | Subfield 2 contains a contactless account number provided by Mastercard and is assigned to a merchant that sponsors the contactless card or device. The issuer is passively participating in the PayPass® Mapping Service. Mapping was based on a source other than the authorization logs.                                                  |
| 6      | Subfield 2 contains a contactless account number provided by Mastercard, and Mastercard sponsors the contactless card or device. The issuer is passively participating in the PayPass® Mapping Service. Mapping was based on the authorization logs.                                                                                         |

| Values | Description                                                                                                                                                                                                                                                              |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6C     | Subfield 2 contains a contactless account number provided by Mastercard, and Mastercard sponsors the contactless card or device. The issuer is passively participating in the PayPass® Mapping Service. Mapping was based on a source other than the authorization logs. |
| 8      | Subfield 2 contains a Mastercard In Control account number. Mapping was based on the authorization logs.                                                                                                                                                                 |
| 8C     | Subfield 2 contains a Mastercard In Control account number. Mapping was based on a source other than the authorization logs.                                                                                                                                             |
| 9      | Subfield 2 contains the VCN used at the point of sale. Mapping was based on the authorization log.                                                                                                                                                                       |
| 9C     | Subfield 2 contains the VCN used at the point of sale. Mapping was based on a source other than the authorization log.                                                                                                                                                   |

## Subfield 2 (Account Number)

PDS 0001 (Mastercard Mapping Service Account Number), subfield 2 contains a virtual/token or real account number or a PAN.

### Subfield attributes and values

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 02    |
| Subfield Length     | n-2       | 04-19 |
| Data Representation | n...19    |       |
| Justification       | Left      |       |

### Application notes

- When issuers receive PDS 0001, this subfield always contains a virtual account number/token.
- When acquirers receive PDS 0001, this subfield always contains a real card number.
  - When Mastercard performs token mapping subfield 2 will contain only the last four digits of the PAN.
  - The Dual Message Clearing System will continue to send the full account number for tokenized InControl VCN transactions and transactions with transit MCCs:
    - MCC 3246: RyanAir
    - MCC 4111: Transportation-Suburban and Local Commuter Passenger, including Ferries

- MCC 4112: Passenger Railways
- MCC 4131: Bus Lines
- MCC 4511: Air Carries, Airlines- Not Else Where Classified
- MCC 4784: Bridge and Road Fees, Tolls
- MCC 7523: Automobile Parking Lots and Garages

## PDS 0002 (GCMS Product Identifier)

PDS 0002 (GCMS Product Identifier) identifies the product recognized by GCMS for the combination of issuer account range (part of DE 2 [Primary Account Number (PAN)]) and Card Program Identifier.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Data Representation: | ans-3; TAGLLL             |
| Tag Field:           | 0002                      |
| Length Field:        | 3 positions, value = 003  |
| Data Length:         | Fixed length, 3 positions |
| Subfields:           | None                      |
| Justification:       | Left                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Usage

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | .   | X   | M   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | .   | X   | M   |
| Second Presentment/1240                               | .   | X   | M   |
| Retrieval Request/1644                                | .   | X   | M   |
| Retrieval Request Acknowledgment/1644                 | .   | X   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | .   | X   | M   |

Licensed Product Identifier is provided in Fee Collection (Other)/1740 and Fee Collection (Handling Fees)/1740 if DE 2 (Primary Account Number [PAN]) is present and the issuer account range associated with the PAN contains a brand/product assignment that is compatible with the brand and business service arrangement assigned to the transaction by clearing.

The product codes in this table are representative of the credit and debit product codes recognized by the clearing system. This table identifies the product identifier used by GCMS (PDS 0002) as well as the Licensed Product Identifier (PDS 0003). Each Licensed Product Identifier has a different description, although multiple Licensed Product Identifier values may be associated with a common GCMS Product Identifier.

The Product Class Override Indicator is populated by GCMS in PDS 0158 subfield 8. The clearing system populates subfield 8 (Product Class Override Indicator) with a Product Class value indicating whether product class override interchange rates were used in the interchange fee amount designated in PDS 0146 (Amount, Transaction Fees).

**NOTE: Immediate Debit products begin with "T" in the GCMS Product Identifier and have "immediate" in the description.**

#### GCMS product identifier

| GCMS Product Identifier (PDS 0002) | Licensed Product Identifier (PDS 0003) | Licensed Product Identifier Description | Product Class Override Indicator            |
|------------------------------------|----------------------------------------|-----------------------------------------|---------------------------------------------|
| ACS                                | ACS                                    | Digital Debit                           | ACS, Digital Debit                          |
| BPC                                | BPC                                    | Bill Pay Commercial                     | BPC, Bill Pay Commercial                    |
| BPD                                | BPD                                    | Business Premium Debit                  | BPD, Business Premium Debit                 |

## PDS 0003 (Licensed Product Identifier)

PDS 0003 (Licensed Product Identifier) identifies the actual product code assigned by Mastercard when licensing the combination of issuer account range (part of DE 2 [Primary Account Number (PAN)]) and Card Program Identifier.

### Attributes

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | •   | X   | M   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | •   | X   | M   |
| Second Presentment/1240                               | •   | X   | M   |
| Retrieval Request/1644                                | •   | X   | M   |
| Retrieval Request Acknowledgment/1644                 | •   | X   | M   |
| Fee Collection (Retrieval Fee Billing)/1740           | •   | X   | M   |

Issuers that participate in the Mastercard Product Graduation program, should refer to the *Account Level Management Manual* for details on how PDS 0003 will be populated.

For issuers that participate in the Mastercard Product Graduation program, PDS 0003 will be populated based on whether the transactions are qualified or non-qualified.

PDS 0003 contains the product identifier associated with the graduated account number for qualified transactions authorized through the Mastercard Network. Details on the identification of a qualified transaction can be found in the *Account Level Management Manual*. When the transaction is considered non-qualified, PDS 0003 identifies the Licensed Product Identifier according to the licensed product associated with the issuer account range. The *Account Level Management Manual* contains the definition of non-qualified transactions.

For issuers that participate in the Canada Consumer Product Monitoring service, PDS 0003 is populated as follows:

- For qualified transactions authorized using the Mastercard Network, this field reflects the product code of the registered PAN.

- For non-qualified transactions, this field identifies the Licensed Product Identifier according to the licensed product associated with the issuer account range. Refer to the *Account Level Management Manual* for the definitions of non-qualified transactions.
- For Canada Consumer Product Monitoring transactions, the Dual Message Clearing System populates PDS 0003 (Licensed Product Identifier) with the product code registered in ALM for the PAN. This is dependent upon the acquirers providing DE 63 in the clearing message based on what was received in the authorization message. If the clearing message from the acquirer does not contain DE 63, then ALM processes will not be applied and PDS 0003 will be populated based on the product code associated with the account range in IP0040T1 (Issuer Account Range).

## PDS 0004 (Funding Account Information)

PDS 0004 (Funding Account Information) identifies the Funding Source and Account Number of the funding source.

| Tag Field           | 0004                            |
| Data Length         | 3 positions, value = 003–036    |
| Data Field          | Variable length, 3–36 positions |
| Subfields           | 2 subfields                     |
| Justification       | N/A                             |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

## Requirements

PDS 0004 must be present on Payment Transactions (Processing code = 28) when Transaction Type Identifier (PDS 0043) has a value C67 and the Interchange Rate Designator is a Mastercard Merchant Presented (MPQR) (PDS 0158, subfield 4 is value QR).

## Subfield 1 (Funding Source)

PDS 0004 (Funding Account Information), subfield 1 contains the information representing the transaction funding source.

## Attributes

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 01    |
| Subfield Length     | n-2       | 02    |
| Data Representation | n-2       |       |
| Justification       | N/A       |       |

Subfield 1 must be present and contain one of the valid values listed in this table.

## Values

| Values | Description          |
|--------|----------------------|
| 01     | Credit               |
| 02     | Debit                |
| 03     | Prepaid              |
| 04     | Deposit Account      |
| 05     | Mobile Money Account |
| 06     | Cash                 |
| 07     | Other                |

In the Asia/Pacific region, funding sources are limited to Mastercard® cards. In subfield 1, values 04, 05, 06, and 07 are not applicable.

## Subfield 2 (Sender Account Number)

PDS 0004 (Funding Account Information), subfield 2 indicates the account number of the sender.

### Subfield 2 (Sender Account Number)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 02    |
| Subfield Length     |           | 34    |
| Data Representation | an...34   |       |
| Justification       | Left      |       |

Subfield 2 must be present, numeric, cannot contain all zeros, and cannot exceed a length of 20. Subfield 2 is a variable length field with a length value 01 - 34, however, the maximum length will be restricted to 20.

## PDS 0005 (Message Error Indicator)

PDS 0005 (Message Error Indicator) identifies the location, severity, and general description of data element errors in a message.

### Attributes

| Attribute           | Description                                           |
|---------------------|-------------------------------------------------------|
| Data Representation | ans...140; TAGLLLLVAR                                 |
| Tag Field           | 0005                                                  |
| Data Length         | 3 positions, value = 014–140                          |
| Data Field          | Variable length, 14–140 positions in increments of 14 |
| Subfields           | 4 fixed-length subfields for each error occurrence    |
| Occurrences         | 1–10                                                  |
| Justification       | Left or N/A                                           |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Retrieval Request/1644                      | .   | X   | C   |
| Retrieval Request Acknowledgment/1644       | .   | X   | C   |
| Message Exception/1644 and File Reject/1644 | .   | X   | M   |

The clearing system provides PDS 0005 in Message Exception/1644 and File Reject/1644 messages to indicate the location of fatal or non-fatal errors in processed messages.

The clearing system may report up to a maximum of 10 exception conditions detected in a message.

### PDS 0005 subfields

The clearing system reports each exception condition using four subfields.

#### PDS 0005 subfields

| Number | Positions | Name                | Attribute | Justification |
|--------|-----------|---------------------|-----------|---------------|
| 1      | 1–5       | Data Element ID     | an-5      | left          |
| 2      | 6–7       | Error Severity Code | n-2       | N/A           |
| 3      | 8–11      | Error Message Code  | an-4      | N/A           |
| 4      | 12–14     | Subfield ID         | n-3       | N/A           |

The clearing system repeats the subfield format from 1 to 10 times in PDS 0005 to report a maximum of 10 error conditions for a single message.

### Subfield 1 (Data Element ID)

Subfield 1 (Data Element ID) identifies the ISO data element or PDS where the error occurred. ISO data elements are identified with the prefix D. This is followed by the data element number right-justified with leading zeros so that the number fills four positions. For example, D0003 indicates DE 3, D0100 indicates DE 100, and so on.

PDSs are identified with the prefix P followed by the four-digit tag ID. For example, P0002 indicates PDS 0002, P0146 indicates PDS 0146, and so on.

This subfield may contain spaces if the error is a general error not related to a specific data element or PDS.

### Subfield 2 (Error Severity Code)

Subfield 2 (Error Severity Code) indicates the severity of the error the clearing system detects. Errors may affect the clearing system or destination processor's ability to process a message successfully (fatal error).

#### Subfield 2 (Error Severity Code)

| Value | Description                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------|
| 00    | Fatal Error; invalid or incomplete data was encountered that prevented the clearing system from processing the transaction. |
| 01–25 | Local domestic reason codes                                                                                                 |

### Subfield 3 (Error Message Code)

Subfield 3 (Error Message Code) is a four-digit value that refers to a specific edit error message to identify the error condition. Refer to [Edits and error messaging](#) for more information.

### Subfield 4 (Subfield ID)

Subfield 4 (Subfield ID) holds the three-position subfield ID of the element in error. This subfield will contain zeros if the element in error is not defined with subfields.

## PDS 0006 (Applied Business Service Arrangement)

PDS 0006 (Applied Business Service Arrangement) identifies, for a rejected message, the card program identifier, and business service arrangement for which the transaction was being evaluated at the time of the rejection.

This PDS is included in a Message Exception/1644 message when a message fails an edit not related to the selection of the acceptance brand and business service arrangement information.

#### Attributes

| Attribute           | Description    |
|---------------------|----------------|
| Data Representation | ans-10; TAGLLL |
| Tag Field           | 0006           |

| Attribute     | Description                 |
|---------------|-----------------------------|
| Data Length   | 3 positions, value = 010    |
| Data Field    | Fixed length, 010 positions |
| Subfields     | 3                           |
| Justification | N/A                         |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| Message Exception/1644 | .   | X   | C   |

## PDS 0006 subfields

This PDS consists of three subfields.

## Subfield attributes and values

| Number | Positions | Name                                   | Attribute | Justification |
|--------|-----------|----------------------------------------|-----------|---------------|
| 1      | 1–3       | Card Program Identifier                | ans-3     | N/A           |
| 2      | 4         | Business Service Arrangement Type Code | ans-1     | N/A           |
| 3      | 5–10      | Business Service ID Code               | ans-6     | N/A           |

## Subfield 1 (Card Program Identifier)

Subfield 1 (Card Program Identifier) is a three-character code that identifies the card program or financial network to which a transaction belongs.

Refer to [PDS 0158 \(Business Activity\)](#) in this chapter for a list of valid values for subfield 1.

## Subfield 2 (Business Service Arrangement Type Code)

Subfield 2 (Business Service Arrangement Type Code) is a one-position numeric value that identifies the interchange relationship between the transaction's participants. These business service arrangement type codes are supported by the clearing system.

### Subfield 2 (Business Service Arrangement Type Code)

| Value | Description      |
|-------|------------------|
| 1     | Interregional    |
| 2     | Intraregional    |
| 3     | Intercountry     |
| 4     | Intracountry     |
| 8     | Member-to-member |

## Subfield 3 (Business Service ID Code)

Subfield 3 (Business Service ID Code) is a six-position value that identifies the business service assigned to the transaction for rulings and reconciliation. See [PDS 0158 \(Business Activity\)](#), subfield 3 for the Business Service ID code format.

## PDS 0010 (Currency Rate Service)

PDS 0010 (Currency Rate Service) identifies transactions eligible for a Currency Rate Service when calculating DE 6 (Amount, Cardholder Billing).

### Attributes

#### Attributes

| Attribute           | Description                    |
|---------------------|--------------------------------|
| Data representation | ans...7; TAGLLLVAR             |
| Tag field           | 0010                           |
| Data Length         | 3 positions, value = 001-007   |
| Data field          | Variable length, 1-7 positions |
| Subfields           | 2                              |

| Attribute     | Description     |
|---------------|-----------------|
| Justification | See "Subfields" |

## Usage

## Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

## Application notes

The Clearing system provides PDS 0010 to the issuer if the account range participates in the Currency Rate service and the transaction qualifies for the service.

## Subfield 1 (Currency Rate Service Applied)

The Clearing system inserts PDS 0010, subfield 01 (Currency Rate Service Applied) if the account range participates in the Currency Rate service and the transaction qualifies for the service.

## Attributes

| Field               | Attribute | Value             |
|---------------------|-----------|-------------------|
| Subfield ID         | n-1       | 1                 |
| Subfield length     | n-1       | 1                 |
| Data representation | a-1       | Y (Yes)<br>N (No) |
| Justification       | N/A       |                   |

## Values

| Value   | Description                                                                                                  |
|---------|--------------------------------------------------------------------------------------------------------------|
| Y (Yes) | The issuer is registered for the currency rate service and Clearing applied the service to this transaction. |

| Value  | Description                                                                                                        |
|--------|--------------------------------------------------------------------------------------------------------------------|
| N (No) | The issuer is registered for the currency rate service but Clearing did not apply the service to this transaction. |

## Subfield 2 (Currency Rate Date)

PDS 0010, subfield 02 (Currency Rate Date) in format YYMMDD provides the FX rate date used to calculate DE 6 (Amount, Cardholder Billing).

Subfield 2 will be present only if subfield 1 equals Y.

### Attributes

| Field               | Attribute | Value  |
|---------------------|-----------|--------|
| Subfield ID         | n-1       | 2      |
| Subfield length     | n-1       | 6      |
| Data representation | n-6       | YYMMDD |
| Justification       | N/A       |        |

### Values

| Value      | Description   |
|------------|---------------|
| Date field | YYMMDD format |

## PDS 0011 (Additional PAN Data)

PDS 0011 (Additional PAN Data) is used to provide issuers with accounts related to the PAN in DE 2 (Primary Account Number [PAN]).

### Attributes

| Attributes          | Description           |
|---------------------|-----------------------|
| Data Representation | ans...714; TAGLLLLVAR |
| Tag Field           | 0011                  |

| Attributes    | Description                                      |
|---------------|--------------------------------------------------|
| Length Field  | 3 positions, value = 021–714 in increments of 21 |
| Data Field    | Variable length, 21–714 positions                |
| Subfields     | 2 subfields for each occurrence                  |
| Occurrences   | 1-34                                             |
| Justification | Left                                             |

### Applicable messages

| Message                 | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| First Presentment/1240  | .   | X   | C   |
| Second Presentment/1240 | .   | X   | C   |

### Application notes

The Clearing system provides PDS 0011 to the issuer whenever it performs the mapping for an additional PAN that is relevant to the transaction.

## PDS 0011 subfields

### PDS 0011 subfields

This PDS may contain 1 to 34 occurrences of Additional PAN Data. Each occurrence of Additional PAN Data information consists of two subfields as defined in this table.

| Number | Positions | Name                                | Attribute | Justification |
|--------|-----------|-------------------------------------|-----------|---------------|
| 1      | 1-2       | Additional Account Number Indicator | ans-2     | Left          |
| 2      | 3-21      | Additional Account Number           | ans-19    | Left          |

## Subfield 1 (Additional Account Number Indicator)

PDS 0011, subfield 1 (Additional Account Number Indicator) describes the type of account number contained in PDS 0011, subfield 2 (Additional Account Number)

### Attributes

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 01    |
| Subfield Length     | n-2       | 02    |
| Data Representation | ans-2     |       |
| Justification       | Left      |       |

### Values

| Value   | Description                                                                                                                        |
|---------|------------------------------------------------------------------------------------------------------------------------------------|
| 8C      | Subfield 02 contains a Mastercard In Control virtual card number. Mapping was based on a source other than the authorization logs. |
| M Space | Mastercard One Credential Funding PAN                                                                                              |

## Subfield 2 (Additional Account Number)

PDS 0011, subfield 2 (Additional Account Number) contains an account number related to the PAN in DE 2 (Primary Account Number [PAN]), left-justified and right-padded with spaces.

### Attributes

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 02    |
| Subfield Length     | n-2       | 19    |
| Data Representation | ans-19    |       |
| Justification       | Left      |       |

When issuers receive PDS 0011, this subfield always contains a virtual card number.

## PDS 0012 (Authorization Matching Data)

PDS 0012 (Authorization Matching Data) contains insights into clearing-to-authorization matching outcomes on select IPM data elements (DEs).

Multiple DEs may be provided in TAGLLLLVAR format if more than one DE does not match between clearing and authorization.

### Attributes

|                      |                                  |
|----------------------|----------------------------------|
| Data Representation: | ans...048; TAGLLLLVAR            |
| Tag Field:           | 0012                             |
| Length Field:        | 3 positions, value = 001-048     |
| Data Field:          | Variable length, 1-048 positions |
| Subfields:           | None                             |
| Justification:       | Left                             |

### Usage

| Message Type Identifier | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| First Presentment/1240  | .   | X   | C   |

PDS 0012 will contain one of the following values based on the outcome of the clearing-to-authorization matching process for the selected data elements.

### Values

| Value | Description                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N     | Authorization record not found.                                                                                                                                                                   |
| M     | Authorization record found.<br>Transaction amount matched.<br>Approval code matched.<br>Acceptor business code matched.<br>All data elements in scope matched between clearing and authorization. |

| Value                                                                                                                    | Description                                                                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| P                                                                                                                        | Authorization record found.                                                                                                                                                                                                                                                      |
| DE number, length, and value of DEs from the associated authorization that do not match the clearing in TAGLLVAR format. | One or more data elements in scope not matched between clearing and authorization.<br><br>PDS 0012 will include the values from the associated authorization that do not match to the corresponding DEs in clearing supported by the clearing-to-authorization matching process. |

For example, a matching Authorization Request/0100 message found with DE 4 (Transaction Amount) equal to 000000000123, DE 18 (Acceptor Business Code [MCC]) equal to 4567, and DE 38 (Authorization ID Response) equal to 89ABCD:

### Example

| If...                                                                  | Then PDS 0012 will contain...             |
|------------------------------------------------------------------------|-------------------------------------------|
| Only DE 4 does not match the First Presentment/1240 Message            | P004012000000000123                       |
| DE 4 and DE 18 do not match the First Presentment/1240 Message         | P0040120000000001230180044567             |
| DE 4, DE 18, and DE 38 do not match the First Presentment/1240 Message | P004012000000000123018004456703800689ABCD |

## PDS 0014 (Digital Account Reference Number)

PDS 0014 (Digital Account Reference Number) is provided in a Mastercard Merchant Presented QR (MPQR) payment transaction to allow receiving institutions the ability to initiate a refund to the consumer via the originating institution.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | n...19; TAGLLVAR                |
| Tag Field           | 0014                            |
| Data Length         | 3 positions, value = 006–019    |
| Data Field          | Variable length, 6–19 positions |
| Subfields           | None                            |

| Attribute     | Description |
|---------------|-------------|
| Justification | None        |

### Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | O   | X   | C   |

## PDS 0015 (Clearing Currency Conversion Identifier)

PDS 0015 (Clearing Currency Conversion Identifier) provides the information of the effective date of the Currency Conversion Rate File T057 used for currency conversion by the Mastercard Clearing System.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-7; TAGLLL             |
| Tag Field           | 0015                      |
| Data Length         | 3 positions, value = 007  |
| Data Field          | Fixed length, 7 positions |
| Subfields           | 2                         |
| Justification       | See subfields             |

## Subfield 1 (Currency Conversion Date)

PDS 0015 (Clearing Currency Conversion Indicator), subfield 1 (Currency Conversion Date) contains the effective date of the Currency Conversion Rate File T057 applied for processing. The value in this subfield is in YYMMDD format.

### Attributes

| Field               | Attribute   | Value |
|---------------------|-------------|-------|
| Subfield ID         | n-2         | 01    |
| Subfield Length     | n-2         | 06    |
| Data Representation | n-6; YYMMDD |       |
| Justification       | Right       |       |

## Subfield 2 (Currency Conversion Indicator)

PDS 0015 (Clearing Currency Conversion Identifier), subfield 2 (Currency Conversion Indicator) indicates whether the Currency Conversion Rate File T057 applicable to the clearing record was effective at the time of authorization or at the time of business processing.

### Attributes

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 02    |
| Subfield Length     | n-2       | 01    |
| Data Representation | ans-1     |       |
| Justification       | N/A       |       |

### Values

| Value | Description                                                                                                                                                                                  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0     | Transaction not eligible for use of the currency conversion rate effective at the time of authorization processing. GCMS Central site processing date rates applied for currency conversion. |
| 1     | Authorization processing date rates applied for currency conversion rates applied for currency conversion.                                                                                   |

| Value | Description                                                              |
|-------|--------------------------------------------------------------------------|
| 2     | GCMS Central site processing date rates applied for currency conversion. |

## PDS 0016 (Digital Service Provider)

PDS 0016 (Digital Service Provider) provides information about the digital service provider to either the third-party entity that facilitated a tokenized transaction or the entity that authenticated the cardholder in a remote commerce transaction.

### Attributes

| Attribute           | Description                                                                              |
|---------------------|------------------------------------------------------------------------------------------|
| Data Representation | ans...10; TAGLLLLVAR                                                                     |
| Tag Field           | 0016                                                                                     |
| Data Length         | 3 positions, value = 005-010                                                             |
| Data Field          | Variable length, 5-10 positions                                                          |
| Subfields           | Subfield 1 (Digital Service Provider ID 1)<br>Subfield 2 (Digital Service Provider ID 2) |
| Justification       | See "Subfields"                                                                          |

### Usage

Whether the usage is mandatory, conditional, optional, system-provided, or not required is as noted for each applicable message.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

### Application notes

The clearing system populates values in PDS 0016 in First Presentment/1240 messages only when the issuer has opted into the service to receive it.

## Subfield 1 (Digital Service Provider ID 1)

PDS 0016, subfield 1 (Digital Service Provider ID 1) identifies the Digital Service Provider type and entity.

### Attributes

| Attribute           | Value                  |
|---------------------|------------------------|
| Data representation | ans-5                  |
| Data field          | Contents of position 5 |
| Justification       | Left                   |

### Values

### Application notes

The Interchange Structure Indicator is sent to acquirers and issuers for U.S. region transactions.

The Interchange Structure Indicator is applicable only to the U.S. region for Purchase, Purchase with Cash Back, Unique Transaction (requires unique MCC), Purchase Return/Refund, and Payment Transaction types.

ATM and cash disbursement transactions are not eligible for the Interchange Structure Indicator.

The Interchange Structure Indicator is not applicable to the U.S. territories of American Samoa, Guam, Northern Mariana Islands, Puerto Rico, and U.S. Virgin Islands, which are located in the Asia/Pacific and Latin America and the Caribbean regions.

## PDS 0018 (Acceptance Data)

PDS 0018 (Acceptance Data) provides information about the form factor of the terminal device used to initiate a transaction.

### Attributes

| Attribute           | Description |
|---------------------|-------------|
| Data Representation | n-1; TAGLLL |

| Attribute     | Description                |
|---------------|----------------------------|
| Tag Field     | 0018                       |
| Data Length   | 3 positions, value = 001   |
| Data Field    | Fixed length, 001 position |
| Subfields     | 1                          |
| Justification | None                       |

## Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | O   | .   | C   |

## Subfield 1 (mPOS Acceptance Device Type)

PDS 0018, subfield 01 (mPOS Acceptance Device Type) identifies the type of device used by the merchant as the terminal for accepting mPOS.

## Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data Representation | n-1                    |

## PDS 0020 (Digital Commerce Solutions Indicators)

PDS 0020 (Digital Commerce Solutions Indicators) identifies the domain, program type and optional check-in details of a digital commerce transaction.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data representation | ans...57; LLVAR             |
| Data Length         | 2 positions, value = 57     |
| Data field          | Contents of subfields 01–04 |
| Subfields           | 4                           |
| Justification       | See Subfields               |

### Usage

Whether the usage is mandatory, conditional, optional, system-provided, or not required is as noted for each applicable message.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

### Subfield values

| Subfields | Name                               | Usage                                                                                      |
|-----------|------------------------------------|--------------------------------------------------------------------------------------------|
| 01        | Digital Commerce Domain Identifier | Identifies the entity responsible for populating the Digital Commerce Solutions Indicators |
| 02        | Digital Commerce Program Type      | Identifies the specific digital commerce program                                           |

| Subfields | Name                                           | Usage                                                                           |
|-----------|------------------------------------------------|---------------------------------------------------------------------------------|
| 03        | Digital Commerce Check-In Entity Type and Name | Identifies entity type and entity name                                          |
| 04        | Digital Commerce Check-In Method               | Identifies methods that check-in entity applies to validate cardholder presence |

## Subfield 1 (Digital Commerce Domain Identifier)

PDS 0020, subfield 1 (Digital Commerce Domain Identifier) identifies the entity responsible for populating the digital commerce solutions indicators defined in subfield 2 (Digital Commerce Program Type), subfield 3 (Digital Commerce Check-In Entity Type and Name), and subfield 4 (Digital Commerce Check-In Method).

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data representation | ans-1                  |
| Data field          | Contents of position 1 |
| Justification       | N/A                    |

### Values

| Value | Description             |
|-------|-------------------------|
| 0     | Multi-Domain            |
| 1     | Mastercard              |
| 2     | Acquirer                |
| 3     | Issuer                  |
| 4-9   | Reserved for future use |

## Subfield 2 (Digital Commerce Program Type)

PDS 0020, subfield 2 (Digital Commerce Program Type) identifies the specific digital commerce program.

### Attributes

| Attribute           | Description            |
|---------------------|------------------------|
| Data representation | an-1                   |
| Data field          | Contents of position 1 |
| Justification       | Left                   |

### Values

#### Values

| Value | Description                   |
|-------|-------------------------------|
| 0     | Multi-Program                 |
| 1     | SQR                           |
| 2     | Click to Pay                  |
| 3     | Biometrics Checkout Program   |
| 4     | Next Gen Point-of-Interaction |
| 5     | Mastercard QR: Pay by Link    |
| 6     | Mastercard QR: X QR           |
| 7-9   | Reserved for future use       |

### Application notes

Values 5 and 6 are only used when PDS 0020, subfield 1 value = 2 (Acquirer).

## Subfield 3 (Digital Commerce Program Type Details)

PDS 0020, subfield 3 (Digital Commerce Program Type Details) identifies the methods a program type and its subtype apply to validate cardholder presence.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data representation | ans...15                |
| Data field          | Contents of position 15 |
| Justification       | N/A                     |

### Application notes

When a transaction belongs to a single program type, subfield 03 will contain two characters:

- The first character indicates the program type
- The second character indicates the program subtype

A value of zero in the second character indicates the absence of a subtype. For example, a subfield 03 value of 10 indicates the transaction type is Mastercard Merchant Presented QR: SRC (SQR) with no subtype.

For Mastercard QR: X QR and Mastercard QR: Pay by Link program types, two distinct subtypes will be applicable:

- A second character value of 1 will specify the subtype as Merchant Presented
- A second character value of 2 will specify the subtype as Consumer Presented

For example, a subfield 03 value of 61 indicates the transaction type is Mastercard QR: X QR and subtype is Merchant Presented. Similarly, a subfield 03 value of 62 indicates the transaction type is Mastercard QR: X QR and subtype is Consumer Presented.

When a transaction belongs to more than one program type:

- Subfield 02 will have a value of 0 (Multi-Program)
- Subfield 03 will have four characters to indicate each type and subtype the transaction belongs to

For example, a subfield 03 value of 3040 indicates the transaction type is both Biometric with no subtype and Next Gen Point-of-Interaction (POI) with no subtype.

For a full list of digital commerce solution indicators, refer to [MDES Technical Specifications for Dual and Single Message Systems](#).

### Example field values

| Example program                                                                    | PDS 0020 representation                                                                                                                                                                                                                               | Comments                                                                                                                                                                  |
|------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Transaction with SQR                                                               | <ul style="list-style-type: none"> <li>Subfield 1 = 1 (Mastercard)</li> <li>Subfield 2 = 1 (SQR)</li> <li>Subfield 3 = 10 (SQR)</li> <li>Subfield 4 = Not present</li> </ul>                                                                          | Sample values when the transaction belongs to a single program type                                                                                                       |
| Transaction with XQR when the QR is Merchant presented                             | <ul style="list-style-type: none"> <li>Subfield 01 = 2 (Acquirer)</li> <li>Subfield 02 = 6 (XQR)</li> <li>Subfield 03 = 61 (XQR, Merchant Presented)</li> <li>Subfield 04 = Not present</li> </ul>                                                    | Sample values when the transaction belongs to a single program type and sub-type                                                                                          |
| Transaction with Next Gen POI and In-store Biometric                               | <ul style="list-style-type: none"> <li>Subfield 1 = 1 (Mastercard)</li> <li>Subfield 2 = 0 (Multi-Program)</li> <li>Subfield 3 = 3040 (30 = Biometric, 40 = Next Gen POI)</li> <li>Subfield 4 = Next Gen POI Check In details</li> </ul>              | Sample values when the transaction belongs to more than one program type (Multi-Program)                                                                                  |
| Transaction with Click to Pay and Pay By Link QR when the QR is consumer presented | <ul style="list-style-type: none"> <li>Subfield 01 = 0 (Multi-Domain)</li> <li>Subfield 02 = 0 (Multi-Program)</li> <li>Subfield 03 = 2052 (20 = Click to Pay, 52 = Pay By Link QR, Consumer Presented)</li> <li>Subfield 04 = Not Present</li> </ul> | Sample values when multiple program details are collected by multiple sources, like Click to Pay from Mastercard and Pay By Link QR, Consumer presented from the acquirer |

## Subfield 4 (Digital Commerce Check-In Details)

PDS 0020, subfield 04 (Digital Commerce Check-In Details) is an open text field. This field identifies entity type, entity name and the methods a check-in entity applies to validate cardholder presence. All entities eligible for this subfield must be integrated with the Mastercard Next Gen POI API. This field may also include a reference number for tracking and reporting purpose.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data representation | ans...40                |
| Data field          | Contents of position 40 |

| Attribute     | Description |
|---------------|-------------|
| Justification | N/A         |

## PDS 0021 (Transaction Type Indicator)

PDS 0021 (Transaction Type Indicator) provides information about the form factor of the terminal device used to initiate a transaction.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | ans-1; TAGLLL            |
| Tag Field           | 0021                     |
| Data Length         | 3 positions, value = 001 |
| Data Field          | Fixed length, 1 position |
| Subfields           | None                     |
| Justification       | N/A                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

## PDS 0022 (Additional Terminal Operating Environments)

PDS 0022 (Additional Terminal Operating Environments) identifies a cardless ATM transaction.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | an-1; TAGLLL             |
| Tag Field           | 0022                     |
| Data Length         | 3 positions, value = 001 |
| Data Field          | Fixed length, 1 position |
| Subfields           | None                     |
| Justification       | N/A                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Usage

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

### Values

Additional terminal operating environment values are listed in this table.

### Values

| Value | Description                                                                                                         |
|-------|---------------------------------------------------------------------------------------------------------------------|
| A     | Transaction has been initiated remotely and completed at a physical terminal on premises of the acceptor facility.  |
| B     | Transaction has been initiated remotely and completed at a physical terminal off premises of the acceptor facility. |

## PDS 0023 (Terminal Type)

PDS 0023 (Terminal Type) identifies the type of terminal used at the point of interaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-3; TAGLLL             |
| Tag Field           | 0023                      |
| Data Length         | 3 positions, value = 003  |
| Data Field          | Fixed length, 3 positions |
| Subfields           | None                      |
| Justification       | Left                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

PDS 0023 is required in non-reversal First Presentment/1240, First Chargeback/1442, Second Presentment/1240, and Arbitration Chargeback/1442 messages.

Transactions submitted in the U.S. region with the following terminal types may have limitations on the interchange rate programs they can be submitted for:

- CT1, Automated Dispensing Machine, (Cardholder Activated Terminal [CAT] Level 1)
- CT2, Self-Service Terminal (CAT Level 2)
- CT3, Limited Amount Terminal (CAT Level 3)
- CT4, In-Flight Commerce Terminal (CAT Level 4)

Refer to the *Interchange Manual for the U.S. Region* for more information.

## Values

Terminal Type codes for point-of-interaction (POI) terminal devices are listed in this table.

### Values

| Value | Description                                                                                |
|-------|--------------------------------------------------------------------------------------------|
| ATM   | ATM terminal                                                                               |
| CT1   | CAT level 1 (automated dispensing machine)                                                 |
| CT2   | CAT level 2 (self-service terminal)                                                        |
| CT3   | CAT level 3 (limited amount terminal)                                                      |
| CT4   | CAT level 4 (in-flight commerce terminal)                                                  |
| CT6   | CAT level 6 (electronic commerce transaction)                                              |
| CT7   | CAT level 7 (transponders)                                                                 |
| CT8   | Remote terminal                                                                            |
| CT9   | MPOS Acceptance Device                                                                     |
| MAN   | Manual, no terminal                                                                        |
| NA    | Terminal type data unknown or not available (The third position of this value is a space.) |
| POI   | POI terminal                                                                               |

If present, PDS 0023 must be left-justified and cannot contain all low values, all high values, or all spaces.

PDS 0023 must contain a value of CT6 when DE 22, Subfield 7 is populated with a value of S.

### Authorization to clearing data element mapping

The CIS authorization messages currently use the ISO 8583:1987 message format, whereas the IPM clearing messages use the ISO 8583:1993 message format. Therefore, there are some differences for the same data elements between the authorization and clearing messages that customers should consider when mapping between them.

This table details the mapping between the authorization and clearing data elements.

### Authorization to clearing data element mapping

| To map to PDS 0023, Terminal Type value |                                                                                           | Use CIS DE 61, Point of Service (POS) Data, subfield 10 (Cardholder-Activated Terminal Level) |                                                               |
|-----------------------------------------|-------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|---------------------------------------------------------------|
| Description                             | Description                                                                               |                                                                                               |                                                               |

## PDS 0025 (Message Reversal Indicator)

PDS 0025 (Message Reversal Indicator) identifies a message as a reversal of a previous message.

### Attributes

| Attribute           | Description                    |
|---------------------|--------------------------------|
| Data Representation | ans...7; TAGLLLVAR             |
| Tag Field           | 0025                           |
| Data Length         | 3 positions, value = 001–007   |
| Data Field          | Variable length, 1–7 positions |
| Subfields           | 2                              |
| Justification       | See “Subfields”                |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | O   | •   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | •   | C   |
| s2 Central Site Processing Date of Original Message   | O   | X   | C   |
| Second Presentment/1240                               | C   | X   | C   |
| s2 Central Site Processing Date of Original Message   | O   | X   | C   |
| Retrieval Request/1644                                | C   | X   | C   |
| s2 Central Site Processing Date of Original Message   | O   | •   | C   |
| Retrieval Request Acknowledgment/1644                 | C   | X   | C   |
| s2 Central Site Processing Date of Original Message   | O   | •   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | C   | X   | C   |
| s2 Central Site Processing Date of Original Message   | O   | X   | C   |
| Fee Collection (Handling Fees)/1740                   | C   | X   | C   |

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| s2 Central Site Processing Date of Original Message                  | O   | X   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | C   | X   | C   |
| s2 Central Site Processing Date of Original Message                  | O   | X   | C   |
| Message Exception/1644 and File Reject/1644                          | .   | X   | C   |

PDS 0025 in an advice or notification message indicates that a previously transmitted message was transmitted in error and should be ignored or reversed.

The value in PDS 0025 in a Message Exception/1644 message is taken from the actual rejected message. This PDS is not provided in a File Reject/1644 message. PDS 0026 is provided in File Reject/1644 message if it was present in the File Header/1644 message of the rejected file.

All other data elements in the message remain unchanged from the original message to provide sufficient information for that message to be nullified or reversed.

**NOTE: An R in subfield 1 reverses the original funds flow.**

## PDS 0025 subfields

PDS 0025 contains two subfields.

This PDS should not be present unless a message is to be reversed.

### PDS 0025 subfields

| Number | Positions | Name                                             | Attribute        | Justification |
|--------|-----------|--------------------------------------------------|------------------|---------------|
| 1      | 1         | Message Reversal Indicator                       | as-1; R or space | N/A           |
| 2      | 2-7       | Central Site Processing Date of Original Message | n-6; YYMMDD      | N/A           |

**NOTE: Chargeback reversals cannot be processed in the same file as the original chargeback.**

### Subfield 1 (Message Reversal Indicator)

If a message is not a reversal, customers/processors should not provide PDS 0025.

If a customer/processor does provide PDS 0025 in a clearing message, subfield 1 (Message Reversal Indicator) is always required and must contain an R or space and cannot contain null values.

The clearing system may provide PDS 0025 in a message if it is part of a "full file reversal" that the original message sender requested. If this is the case, subfield 1 of PDS 0025 contains an R if this message is a reversal of a previous message in which PDS 0025 was not present. Subfield 1 contains a space if this message is a reversal of a previous message in which PDS 0025 subfield 1 contained an R. Refer to [PDS 0026 \(File Reversal Indicator\)](#) for additional information on full file reversals.

## Subfield 2 (Central Site Processing Date of Original Message)

Subfield 2 (Central Site Processing Date of Original Message) is required only when PDS 0025 is present in First Presentment/1240 messages. Subfield 2 must contain a valid date in the format YYMMDD.

Subfield 2, if present, must contain a date that is less than or equal to the clearing system processing date.

When PDS 0025 is present in First Presentment/1240 messages, the clearing system compares that to original first presentment message and if it is within 7 days from the date of original first presentment processing, it applies the foreign exchange rate of original first presentment transaction. In all other instances, the clearing system uses current business processing date for currency conversion.

When PDS 0025 is present in First Chargeback/1442, Second Presentment/1240, or Arbitration Chargeback/1442 messages, the clearing system uses the current business processing date for currency conversion.

## PDS 0026 (File Reversal Indicator)

PDS 0026 (File Reversal Indicator) identifies the entire file as a reversal of a previous file.

### Attributes

| Attribute            | Description                    |
|----------------------|--------------------------------|
| Data Representation: | an...7; TAGLLLVAR              |
| Tag Field:           | 0026                           |
| Length Field:        | 3 positions, value = 001-007   |
| Data Length          | Variable length, 1-7 positions |
| Subfields:           | 2                              |

| Attribute      | Description     |
|----------------|-----------------|
| Justification: | See "Subfields" |

## Usage

This table shows the usage of this PDS (mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                                | Org | Sys | Dst |
|----------------------------------------|-----|-----|-----|
| File Header (Customer-generated)/1644  | C   | .   | .   |
| Message Exception and File Reject/1644 | .   | X   | C   |

The presence of PDS 0026 in a File Header (Customer-generated)/1644 indicates that the clearing system should reverse all messages contained in the logical file. The clearing system manages this process by inserting or revising PDS 0025 (Message Reversal Indicator) in each message.

**NOTE: An R in subfield 1 reverses the original funds flow.**

When PDS 0026 is present in the File Header (Customer-generated)/1644 and the individual transaction message:

- Does not contain PDS 0025, the clearing system builds PDS 0025 using the values submitted in PDS 0026 in the File Header (Customer-generated)/1644.
- Already contains PDS 0025, the value of subfield 1 is changed from R to a space or a space to R.

The value in subfield 2 of PDS 0025 remains unchanged.

## Example 1

| IF...                                                                                                                                                                                                                                                                                                      | THEN the clearing system...                                                                                                                                                                                                                                                                                       |

| <ul style="list-style-type: none"> <li>• PDS 0026 subfield 1 is R and subfield 2 is 991013 in the File Header (Customer-generated)/1644, and</li> <li>• One of the First Presentment/1240 messages within the file contains PDS 0025 with an R in subfield 1 and a date of 991012 in subfield 2</li> </ul> | <ul style="list-style-type: none"> <li>• Changes R to space in PDS 0025 subfield 1 of the First Presentment/1240, and</li> <li>• Retains the value of 991012 in PDS 0025 subfield applies the FX rate of original first presentment when matched. Else apply current business processing date FX rate.</li> </ul> |

## Example 2

| IF...                                                                                                                                                                                                                                                                                                     | THEN the clearing system...                                                                                                                                                                                                                                                                                         |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>PDS 0026 subfield 1 is R and subfield 2 is 991013 in the File Header (Customer-generated)/1644, and</li> <li>One of the First Presentment/1240 messages within the file contains PDS 0025 with a space in subfield 1 and a date of 991011 in subfield 2</li> </ul> | <ul style="list-style-type: none"> <li>Changes space to an R in PDS 0025, subfield 1 of the First Presentment/1240, and</li> <li>Retains the value of 991011 in PDS 0025 subfield 2 applies the FX rate of original first presentment when matched. Else apply current business processing date FX rate.</li> </ul> |

## PDS 0026 subfields

PDS 0026 consists of two subfields.

This PDS should not be present unless the entire file is to be reversed.

### PDS 0026 subfields

| Number | Positions | Name                                          | Attribute   | Justification |
|--------|-----------|-----------------------------------------------|-------------|---------------|
| 1      | 1         | File Reversal Indicator                       | a-1; R      | N/A           |
| 2      | 2-7       | Central Site Processing Date of Original File | n-6; YYMMDD | N/A           |

### Subfield 1 (File Reversal Indicator)

If PDS 0026 is present, subfield 1 (File Reversal Indicator) is always required and must contain a value of R.

### Subfield 2 (Central Site Processing Date of Original File)

If PDS 0026 is present, subfield 2 (Central Site Processing Date of Original File) is always required and must contain a valid date equal to or less than the current business processing date.

## PDS 0027 (Flex Code)

PDS 0027 (Flex Code) is specific to Brazil Flex Card transactions to communicate the product code used for clearing.

### Attributes

| Attribute            | Description               |

| Second Presentment/1240                               | O   | .   | C   |

### Mastercard Merchant Presented QR (MPQR) Transactions requirements

Payment transaction usage:

- First Presentment/1240: Not available. Edit if presented. Reject transaction if edit fails. Forward message to destination if edit validates.
- Second Presentment/1240: Not available. Edit if presented. Reject transaction if edit fails. Forward message to destination if edit validates.
- First Chargeback/1442 and Arbitration Chargeback/1442: Not available. Edit if presented. Reject transaction if edit fails. Forward message to destination if edit validates.

Refund payment transaction usage:

- First Presentment/1240: Not available. Edit if presented. Reject transaction if edit fails. Forward message to destination if edit validates.
- Second Presentment/1240: Not available. Edit if presented. Reject transaction if edit fails. Forward message to destination if edit validates.
- First Chargeback/1442 and Arbitration Chargeback/1442: Not available. Edit if presented. Reject transaction if edit fails. Forward message to destination if edit validates.

Funding transaction usage:

- First Presentment/1240: Optional. If present, edit must validate. Forward message to destination if edit validates.
- Second Presentment/1240: Optional. If present, edit must validate. Forward message to destination if edit validates.
- First Chargeback/1442 and Arbitration Chargeback/1442: Optional. If present, edit must validate. Forward message to destination if edit validates.

## PDS 0029 (QR Dynamic Code Data)

PDS 0029 (QR Dynamic Code Data) is a placeholder for regional data with limited Mastercard editing or data validation.

### Attributes

| Attribute            | Description                  |
|----------------------|------------------------------|
| Data Representation: | ans...237; TAGLLLLVAR        |
| Tag Field:           | 0029                         |
| Length Field:        | 3 positions, value = 001–237 |
| Data Length:         | Variable length, 001–237     |
| Subfields:           | None                         |
| Justification:       | Left                         |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |

| First Presentment/1240                                | O   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |

### Mastercard Merchant Presented QR (MPQR) Transactions requirements

Payment transaction usage:

- First Presentment/1240: Optional. If present, edit must validate. Forward message to destination if edit validates.
- Second Presentment/1240: Optional. If present, edit must validate. Forward message to destination if edit validates.
- First Chargeback/1442 and Arbitration Chargeback/1442: Optional. If present, edit must validate. Forward message to destination if edit validates.

Refund payment transaction usage:

- First Presentment/1240: Not available. Edit if presented. Reject transaction if edit fails. Forward message to destination if edit validates.
- Second Presentment/1240: Not available. Edit if presented. Reject transaction if edit fails. Forward message to destination if edit validates.
- First Chargeback/1442 and Arbitration Chargeback/1442: Not available. Edit if presented. Reject transaction if edit fails. Forward message to destination if edit validates.

Funding transaction usage:

- First Presentment/1240: Optional. If present, edit must validate. Forward message to destination if edit validates.
- Second Presentment/1240: Optional. If present, edit must validate. Forward message to destination if edit validates.
- First Chargeback/1442 and Arbitration Chargeback/1442: Optional. If present, edit must validate. Forward message to destination if edit validates.

## PDS 0030 (QR Initiated Transaction)

PDS 0030 is used to identify QR initiated transactions.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data representation | an-1                     |
| Data field          | Fixed length, 1 position |

### Value

1 = QR Initiated Transaction In Peru

### Usage

Following is the usage of PDS 0030 (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

**NOTE: This PDS is only applicable to the nano merchant IRD NM. If this PDS is submitted by the acquirers for this IRD then it will be passed along to the issuers. If this PDS is submitted by the acquirers for any other IRD then it will be removed prior to going to the issuers.**

## PDS 0042 (Merchant Capability)

PDS 0042 (Merchant Capability) identifies transactions submitted by a registered MasterPass® by Mastercard® merchant.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Data Representation: | an-1; TAGLLL             |
| Tag Field:           | 0042                     |
| Length Field:        | 3 positions, value = 001 |
| Data Length:         | Fixed length, 1 position |

| Attribute      | Description |
|----------------|-------------|
| Subfields:     | None        |
| Justification: | N/A         |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |
| First Chargeback/1442  | C   | .   | C   |
| Arbitration Chargeback | C   | .   | C   |
| Second Presentment     | C   | .   | C   |

The acquirer populates PDS 0042 to identify e-commerce transactions that are initiated at a Mastercard merchant, but the cardholder did not use Mastercard to facilitate the transaction.

## Values

This table lists the valid values.

## Values

| Value | Description                 |
|-------|-----------------------------|
| A     | Mastercard Enabled Merchant |

## Requirements

These are requirements for PDS 0042.

- When PDS 0042 is provided, value A is the only character permitted; a space is not allowed.
- PDS 0042 is required for e-commerce transactions submitted for the Mastercard enabled merchant incentive. If the acquirer fails to provide PDS 0042 in the First Presentment message, the transaction will not qualify for the incentive.

## PDS 0043 (Transaction Type Identifier)

PDS 0043 (Transaction Type Identifier) monitors and tracks a participant's activity in special promotion programs.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Data Representation: | ans-3; TAGLLL             |
| Tag Field:           | 0043                      |
| Length Field:        | 3 positions, value = 003  |
| Data Length:         | Fixed length, 3 positions |
| Subfields:           | None                      |
| Justification:       | Left                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |
| Retrieval Request/1644                                | C   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | C   | .   | C   |

The transaction originator (the merchant or the acquirer) supplies the information in this PDS. The value in PDS 0043 indicates that the acquirer or merchant is certified to participate in a program such as Gaming. It contains the Transaction Type Identifier.

PDS 0043 must be present in First Presentment/1240 transactions submitted for the U.S. region interchange programs, as defined in the *Interchange Manual for the U.S. Region*, unless the transaction is a credit, reversal, or Collection Only transaction.

PDS 0043 is required when:

- All Payment Transactions (DE 3 [Processing Code] subfield 1 = 28).
- All MoneySend™ Funding Transactions (DE 3, subfield 1 = 00 and DE 26 [Acceptor Business Code (MCC)] = 6538, 4829 or 6540).
- All MoneySend Payment Transactions (DE 3, subfield 1 = 28 and DE 26 = 6536 or 6537).
- All MoneySend payment transactions (DE 3, subfield 1 = 28 [Payment Transaction]). PDS 0043 will contain one of the following values.

## Values

PDS 0043 values are established and administered under the authority of brand-specific program and service management and marketing personnel. The values are listed in this table.

### Values

| Value | Description                                                           |
|-------|-----------------------------------------------------------------------|
| C02   | Mastercard rebate                                                     |
| C03   | <i>rePower</i> Load Value                                             |
| C04   | Gaming Re-pay                                                         |
| C06   | Payment of a credit card balance with cash or check                   |
| C07   | General Person-to-Person Transfer                                     |
| C51   | Mastercard Move Transaction Type Identifier (Reserved for Future Use) |
| C52   | General Transfer to Own Account                                       |
| C53   | Agent Cash Out                                                        |
| C54   | Payment of Own Credit Card Bill                                       |
| C55   | Business Disbursement                                                 |
| C56   | Government/Non-profit Disbursement                                    |
| C57   | Rapid Merchant Settlement                                             |
| C58   | Cash in at ATM                                                        |
| C59   | Cash in at Point of Sale                                              |
| C60   | Fast Refund to Original Card                                          |
| C61   | Mastercard Move Transaction Type Identifier (Reserved for Future Use) |
| C62   | Mastercard Move Transaction Type Identifier (Reserved for Future Use) |
| C63   | Mastercard Move Transaction Type Identifier (Reserved for Future Use) |

| Value | Description                                                           |
|-------|-----------------------------------------------------------------------|
| C64   | Mastercard Move Transaction Type Identifier (Reserved for Future Use) |
| C65   | General Business to Business Transfer                                 |
| C66   | Mastercard Move Transaction Type Identifier (Reserved for Future Use) |
| C67   | Mastercard Merchant Presented QR                                      |
| C68   | Mastercard Merchant Presented QR Refund Payment                       |
| C91   | Utility Payments (for Brazil domestic use only)                       |
| C92   | Government Services (for Brazil domestic use only)                    |
| C93   | Mobile phone top-ups (for Brazil domestic use only)                   |
| C94   | Coupon booklet payments (for Brazil domestic use only)                |
| F07   | General Person-to-Person Transfer                                     |
| F08   | Person-to-Person Transfer to Card Account                             |
| F52   | General Transfer to Own Account                                       |
| F53   | Agent Cash Out                                                        |
| F54   | Payment of Own Credit Card Bill                                       |
| F55   | Business Disbursement                                                 |
| F61   | Transfer to Own Staged Digital Wallet Account                         |
| F64   | Transfer to Own Debit or Prepaid Card Account                         |
| F65   | General Business-to-Business Transfer                                 |
| P01   | Mastercard ATM Cash Pick-Up Transaction                               |
| P10   | Purchase repayment                                                    |
| P11   | Business-to-business payment                                          |
| P70   | Cryptocurrency                                                        |
| P71   | High-risk Securities                                                  |

PDS 0043 (Transaction Type Identifier) cannot contain all spaces or all zeros.

The Payment Transaction Types of C03–C07, C52–C59, and C92–C94 are valid for Clearing for specific business service arrangements.

Payment transactions submitted with a Cardholder Transaction Type of 28 (Payment Transaction) require a value of C04, C07, C52, C53, C54, C55, C56, C57, C58, C59, and C65.

Funding transactions submitted with a Cardholder Transaction Type of 00 (Purchase Goods and Services) require a value of C07, C52, C53, C54, C55, C56, C57, C65 for MCC 6538

(MoneySend Funding) and F07, F08, F52, F53, F54, F55, F61, F64, and F65 for MCC 4829 (Money Transfer) or MCC 6540 (POI Funding Transactions).

Funding Refund transactions submitted with a Cardholder Transaction Type of 20 (Purchase Return) require a value of C07, C52, C53, C54, C55, C56, C57, C65 for MCC 6538 (MoneySend Funding) and F07, F08, F52, F53, F54, F55, F61, F64, and F65 for MCC 4829 (Money Transfer) or MCC 6540 (Funding Transactions).

Values C07, C52, C53, C54, C55, C56, C57, C58, C59, and C65 indicate the payment transaction is associated with Mastercard® MoneySend and MCC 6536 (MoneySend Intracountry) or MCC 6537 (MoneySend Intercountry). MoneySend payment transactions require the submission of the Financial Detail Addendum, Payment Transaction Detail/1644.

Values C07, C52, C53, C54, C55, C56, C57, C58, C59, and C65 indicate the Payment Transaction is associated with Mastercard® MoneySend and MCC 6536 or 6537. In the MEA region, the value C04 indicates that the Gaming Payment Transaction is associated with MCC 7995. Values C07, C52, C53, C54, C55, C56, C57, C58, C59, and C65 indicate the Payment Transaction is associated with Mastercard® MoneySend and MCC 6536 or 6537.

MoneySend Payment Transactions and Gaming Payment Transactions require the submission of the Financial Detail Addendum, Payment Transaction Detail/1644.

The value C04 indicates that the Gaming Payment Transaction is associated with:

- In the Europe region, Intra-European and inter-European IRDs 20 and 23, and MCC 7995; or
- In the U.S. region:
  - MCC 7800 (Government Owned Lottery [U.S. Region Only])
  - MCC 7801 (Internet Gambling [U.S. Region Only])
  - MCC 7802 (Government Licensed Horse/Dog Racing [U.S. Region Only])
  - MCC 7994 (Video Game Arcades/Establishments)

### Authorization to clearing data element mapping

The CIS authorization messages currently use the ISO 8583:1987 message format, whereas the IPM clearing messages use the ISO 8583:1993 message format. Therefore, there are some differences for the same data elements between the authorization and clearing messages that customers should consider when mapping between them.

This table details the mapping between the authorization and clearing data elements.

## Clearing to authorization mapping

| To map to PDS 0043, Transaction Type Identifier value |                                                                       | Use CIS DE 48, Additional Data, subelement 77 (Payment Transaction Type Identifier) Description |                                                                       |
|-------------------------------------------------------|-----------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
|                                                       | Description                                                           |                                                                                                 |                                                                       |
| C02                                                   | Mastercard rebate                                                     | C02                                                                                             | Mastercard rebate                                                     |

## PDS 0044 (Program Participation Indicator)

PDS 0044 (Program Participation Indicator) identifies participation in a program.

### Attributes

| Attribute            | Description                          |
|----------------------|--------------------------------------|
| Data Representation: | ans...20: TAGLLLLVAR                 |
| Tag Field:           | 0044                                 |
| Length Field:        | 3 positions, value=001–020 positions |
| Data Length:         | Variable length, 1–20 positions      |
| Subfields:           | 20 <sup>12</sup>                     |
| Justification:       | See “Subfields”                      |

### Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

<sup>12</sup> Subfields 3–20 are reserved for future use.

| Message                 | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| Second Presentment/1240 | .   | X   | C   |

## Subfield 1 (CVC 2 Validation Program Indicator)

PDS 0044 (Program Participation Indicator), subfield 1 indicates whether or not the transaction qualifies for the Mastercard® Card Validation Code 2 (CVC 2) Validation Program.

### Attributes

|                      |                        |
|----------------------|------------------------|
| Data Representation: | ans-1                  |
| Data Field:          | Contents of position 1 |
| Justification:       | Left                   |

### Values

This table lists the valid values.

### Values

| Values | Description                                                 |
|--------|-------------------------------------------------------------|
| C      | The transaction qualifies for the CVC 2 Validation Program. |

## Subfield 2 (PayPass Chargeback Eligibility Indicator)

PDS 0044 (Program Participation Indicator), subfield 2 indicates whether or not Mastercard® transaction qualifies for chargeback protection.

### Attributes

|                      |                        |
|----------------------|------------------------|
| Data Representation: | ans-1                  |
| Data Field:          | Contents of position 2 |
| Justification:       | Left                   |

### Values

This table lists the valid values.

### Values

| Values  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| I       | Value for PayPass transaction is ineligible for chargeback for reason code 4837 based upon the Cardholder Verification Method (CVM) limit in effect on the day of the transaction. The value I indicates that chargeback is not allowed for above mentioned chargeback reason codes if the transaction amount is less than or equal to the CVM limit as defined on IPM MPE IP0058T1. Refer to the <i>Chargeback Guide</i> for details about processing PayPass transactions. |
| (space) | Transaction is eligible for chargeback.                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## PDS 0045 (Mastercard Generated Installment Identifier)

PDS 0045 (Mastercard Generated Installment Identifier) provides information about Mastercard® identified and processed installment transactions.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Data Representation: | a-1; TAGLLL              |
| Tag Field:           | 0045                     |
| Length Field:        | 3 positions, value = 001 |
| Data Length:         | Fixed length, 1 position |
| Subfields:           | None                     |
| Justification:       | N/A                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

Mastercard will populate PDS 0045 to identify and process installment transactions.

### Values

This table lists the valid values.

#### Values

| Value | Description                                                                           |
|-------|---------------------------------------------------------------------------------------|
| A     | Transaction approved for installment processing.                                      |
| C     | Credit transaction to reverse the purchase transaction                                |
| E     | Transaction eligible for Installment Processing                                       |
| M     | Approved for installment processing and Mastercard generated installment payment data |
| P     | Purchase transaction of each split installment transaction                            |
| Y     | Transaction qualifies for the installment processing                                  |

## PDS 0046 (Japan Common Merchant Code)

PDS 0046 (Japan Common Merchant Code) identifies the merchant's category in Japan referred to as the Common Merchant Category Code (CMC). Mastercard® uses this value to identify a link to a corresponding Mastercard Assigned ID.

#### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Data Representation: | ans-4; TAGLLL             |
| Tag Field:           | 0046                      |
| Length Field:        | 4 positions, value = 004  |
| Data Length:         | Fixed length, 4 positions |
| Subfields:           | None                      |
| Justification:       | N/A                       |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Usage

| Message                 | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| First Presentment/1240  | C   | .   | C   |
| First Chargeback/1442   | C   | .   | C   |
| Second Presentment/1240 | C   | .   | C   |

If PDS 0046 is submitted in a First Presentment/1240 message, acquirers must also submit it in the Second Presentment/1240 message. Similarly, issuers that receive the PDS 0046 in first presentment must retain it and provide it in the subsequent First Chargeback/1442 messages.

PDS 0046 is only available for Japan intracountry transactions. Acquirers must submit PDS 0046 in First Presentment/1240 messages.

Mastercard will remove PDS 0046 if present in any Presentment message submitted by a non-Japan acquirer. The message will not be rejected.

## PDS 0052 (Electronic Commerce Security Level Indicator)

PDS 0052 (Electronic Commerce Security Level Indicator) provides information about the Universal Cardholder Authentication Field™ (UCAF) security protocol for international Mastercard® card internet transactions.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Data Representation: | n-3; TAGLLL               |
| Tag Field:           | 0052                      |
| Length Field:        | 3 positions               |
| Data Length:         | Fixed length, 3 positions |
| Subfields:           | 3                         |
| Justification:       | See "Subfields"           |

### Usage

PDS 0052 must be present in First Presentment/1240 transactions related to transactions authorized with a static accountholder authentication value assigned by Mastercard®.

All Mastercard® e-commerce/Identity Check acquirers and acquirers supporting MDES transactions are expected to send the Mastercard validated/modified Electronic Commerce

Security Level indicator value from the Authorization Request Response/0110 message in the first presentment for clearing.

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

If the acquirer fails to provide PDS 0052 in the First Presentment of a UCAF transaction, regardless of the IRD submitted, the authorization will not qualify for liability shift.

Mastercard® considers the inclusion of PDS 0052 in these messages to be an electronic commerce (e-commerce) clearing requirement associated with UCAF processing. Adherence to e-commerce clearing requirements is an eligibility requirement for transactions processed under UCAF liability shift rules.

PDS 0052 is required in all e-commerce First Presentment/1240 messages. An e-commerce transaction can be identified by the presence of DE 22, subfield 7, value of S (Electronic Commerce). If PDS 0052 is not present in an e-commerce Presentment message, regardless of the IRD, GCMS will reject the transaction.

When DE22 subfield 7 = "S" (E-commerce) or DE22 subfield 7 = "7" (Credential On file) and DE22 subfield 5 = "5" (Cardholder not present).

Additionally, when the acquirer includes PDS 0052 in a First Presentment/1240 message, DE 22, subfield 7 must contain value S and PDS 0023 (Terminal Type) must contain value CT6 (CAT level 6 [electronic commerce transaction]). If both criteria are not met, then the clearing system will remove PDS 0052 from the message before sending it to the issuer.

### Values

A value of 0 in PDS 0052, subfield 3 (UCAF Collection Indicator) is not edited in the clearing system.

First Presentment/1240 transactions submitted with a value of 24 (Merchant UCAF) in Business Activity/Interchange Rate Designator (PDS 0158 [Business Activity], subfield 4), must include PDS 0052. The value in PDS 0052, subfield 3 (UCAF Collection Indicator) must be a 1.

First Presentment/1240 transactions submitted with a value of PF (Premium Full UCAF) in PDS 0158 subfield 4 (Business Activity/Interchange Rate Designator) must include Electronic Commerce Security Level Indicator (PDS 0052). The value in PDS 0052, subfield 3 (UCAF

Collection Indicator) must be a 2 or 3. If PDS 0052 subfield 3 contains a value 3 (indicating MARP transaction) then PDS 0176 must be submitted.

For details about the static Accountholder Authentication Values (AAVs), refer to *Transaction Processing Rules* for more information.

PDS 0052, if present must be numeric and a fixed length of 3.

### Authorization to clearing data element mapping

The CIS authorization messages currently use the ISO 8583:1987 message format, whereas the IPM clearing messages use the ISO 8583:1993 message format. Therefore, there are some differences for the same data elements between the authorization and clearing messages that customers should consider when mapping between them.

This table details the mapping between the authorization and clearing data elements.

### Mapping from clearing to authorization

| To map to PDS 0052, Electronic Commerce Security Level Indicator, subfield 1 (Security Protocol) value | Description                                               | Use CIS DE 48, Additional Data, subelement 42 (Electronic Commerce Indicators), subfield 1 (Electronic Commerce Security Level Indicator and UCAF Collection Indicator), position 1 (Security Protocol) value | Description                                               |

## Subfield 2 (Cardholder Authentication)

PDS 0052 (Electronic Commerce Security Level Indicator), subfield 2 indicates the type of cardholder authentication used in the authorization process. Acquirers must populate subfield 2 with the same value received in DE 48, subelement 42, subfield 1, position 2 of the corresponding Authorization Request Response/0110 message.

## Attributes

|                     |                        |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 2 |
| Justification       | N/A                    |

## Values

This table lists the valid values.

## Values

| Values | Description                       |
|--------|-----------------------------------|
| 0      | Reserved for future use           |
| 1      | E-commerce/Identity Check Program |
| 3      | Reserved for future use           |
| 4      | Tokenized payment                 |
| 5–9    | Reserved for future use           |

## Subfield 3 (UCAF Collection Indicator)

PDS 0052 (Electronic Commerce Security Level Indicator), subfield 3 identifies the level of UCAF supported in the authorization process. Acquirers must populate subfield 3 with the same value received in DE 48, subelement 42, subfield 1, position 3 of the corresponding Authorization Request Response/0110 message.

### Attributes

|                     |                        |

| 247   | Tokenized Merchant Initiated Transaction |

## PDS 0056 (Mastercard Electronic Card Indicator)

PDS 0056 (Mastercard Electronic Card Indicator) is a series of codes that indicate whether the acquirer and merchant participate in the Mastercard Electronic™ program.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Data Representation: | a-1; TAGLLL              |
| Tag Field:           | 0056                     |
| Length Field:        | 3 positions, value = 001 |
| Data Length:         | Fixed length, 1 position |
| Subfields:           | None                     |
| Justification:       | N/A                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

The clearing system populates values in PDS 0056 in First Presentment/1240 messages for all Mastercard Electronic™ products. This value indicates to the issuer whether the acquirer and their merchant participate in the Mastercard Electronic™ program.

### Values

The Mastercard Electronic™ indicator values are listed in this table.

## Values

| Value | Description                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------|
| C     | Participant in Mastercard® only (considered not a Mastercard Electronic™ participant)                                    |
| E     | Acquirer and its merchants both participate in Mastercard Electronic™ (considered a Mastercard Electronic™ participant). |
| U     | Unidentified acquirer. It is unknown whether the acquirer is a Mastercard Electronic™ participant.                       |

## PDS 0057 (Transaction Category Indicator)

PDS 0057 (Transaction Category Indicator) provides information about the transaction that cannot be determined from other transaction information, such as DE 2 (Primary Account Number) or DE 22 (Point of Service [POS] Entry Mode).

## Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Data Representation: | ans-2; TAGLLL             |
| Tag Field:           | 0057                      |
| Length Field:        | 3 positions, value = 002  |
| Data Length:         | Fixed length, 2 positions |
| Subfields:           | None                      |
| Justification:       | N/A                       |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|

| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |

| Message                 | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| Second Presentment/1240 | C   | .   | C   |

## Values

If present, PDS 0057 must contain a valid value. The values are shown in this table.

## Values

| Value | Description                                                                                                                                                                        |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01    | The transaction is a Mastercard® commercial card transaction initiated via the Payment Gateway (a Payable Account transaction).                                                    |
| 02    | This transaction is from an acceptor terminal that is exempt from having an IIAS because it has met the IRSs 90 percent qualification rule.                                        |
| 03    | The transaction is from an acceptor terminal that verified qualified healthcare expenses against an Inventory Information Approval System (IIAS) during the authorization process. |
| 04    | The transaction is submitted as a healthcare transaction but from a non-IIAS-certified merchant.                                                                                   |

Customers may only submit values of 01, 02, or 03. The value of 04 may only be populated by GCMS.

GCMS updates the value of PDS 0057 from a value of 03 to a value of 04 if one of these occurs:

- A transaction is submitted with PDS 0057 value of 03, but PDS 0176 (Mastercard Assigned ID) is not present.
- GCMS was unable to validate that PDS 0176 was inventory information approval system (IIAS)-certified.

## Authorization to clearing data element mapping

The CIS authorization messages currently use the ISO 8583:1987 message format, whereas the IPM clearing messages use the ISO 8583:1993 message format. Therefore, there are some differences for the same data elements between the authorization and clearing messages that customers should consider when mapping between them.

This table details the mapping between the authorization and clearing data elements.

## Clearing to authorization mapping

| To map to PDS 0057 (Transaction Category Indicator), value |                                                                                                                                                                                | Use CIS DE 48 (Additional Data), subelement 61 (POS Data, Extended Condition Codes), subfield 3 (Real-time Substantiation Indicator), value |                                                                                                                                                                                                                               |
|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                            | Description                                                                                                                                                                    |                                                                                                                                             | Description                                                                                                                                                                                                                   |
| 01                                                         | Transaction is a Mastercard® commercial card transaction initiated via the Payment Gateway (a Payable Account transaction).                                                    | 0                                                                                                                                           | Merchant terminal did not verify the purchased items against the IIAS.                                                                                                                                                        |
| 03                                                         | Transaction is from an acceptor terminal that verified qualified healthcare expenses against an Inventory Information Approval System (IIAS) during the authorization process. | 01                                                                                                                                          | Merchant terminal verified the purchased items against an IIAS.                                                                                                                                                               |
| 02                                                         | Transaction is from an acceptor terminal that is exempt from having an IIAS because it has met the IRSs 90 percent qualification rule.                                         | 02                                                                                                                                          | Merchant claims exemption from using an IIAS, based on the IRS 90 percent rule.                                                                                                                                               |
| 04                                                         | Transaction is submitted as a Healthcare transaction but from a non-IIAS certified merchant.                                                                                   | 04                                                                                                                                          | Transaction was submitted as real-time substantiated but from a non-IIAS certified merchant. Mastercard® uses this value to notify the issuer that the merchant could not be substantiated. Acquirers may not use this value. |

## PDS 0058 (Token Assurance Level)

PDS 0058 (Token Assurance Level) contains a value that indicates the confidence level of the token to PAN/cardholder binding.

### Attributes

| Attribute            | Description                 |
|----------------------|-----------------------------|
| Data Representation: | n-2; TAGLLL                 |
| Tag Field:           | 0058                        |
| Length Field:        | 3 positions, value=002      |
| Data Length:         | Fixed length, 002 positions |
| Subfields:           | None                        |
| Justification:       | N/A                         |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | O   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | X   | C   |
| Second Presentment/1240                               | O   | X   | C   |

## PDS 0059 (Token Requestor ID)

PDS 0059 (Token Requestor ID) contains the ID assigned by the token service provider to the token requestor.

### Attributes

| Attribute            | Description  |
|----------------------|--------------|
| Data Representation: | n-11; TAGLLL |

| Attribute      | Description                 |

| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | •   | X   | C   |

## Subfield 1 (Financial Account Identifier)

PDS 0068 (Financial Account Information), subfield 1 (Financial Account Identifier) contains the bank account information or other financial account information associated with the Mastercard® Pay by Account token at the time the transaction occurred.

## Attributes

|                      | Attribute         | Value |
|----------------------|-------------------|-------|
| Subfield ID:         | n-2               | 01    |
| Data Representation: | ans...064; LLLVAR |       |
| Subfield Length:     | n-2               | 02    |
| Data Field:          | n-2               |       |
| Justification        | N/A               |       |

## Values

The financial account identifier value is a minimum of 9 characters and a maximum of 64 characters.

## PDS 0071 (Chip to Magnetic Stripe Conversion Service Indicator)

PDS 0071 (Chip to Magnetic Stripe Conversion Service Indicator) is used to notify the issuer of the conversion.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Data Representation: | ans-04; TAGLLL            |
| Tag Field:           | 0071                      |
| Length Field:        | 3 positions, value = 004  |
| Data Length:         | Fixed length, 4 positions |
| Subfields:           | 3                         |
| Justification:       | N/A                       |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

## PDS 0071 subfields

PDS 0071 contains three subfields.

### PDS 0071 subfields

| Number | Positions | Name                   | Attribute | Justification |
|--------|-----------|------------------------|-----------|---------------|
| 1      | 1-2       | On-behalf (OB) Service | an-2      | left          |

| Number | Positions | Name                    | Attribute | Justification |
|--------|-----------|-------------------------|-----------|---------------|
| 2      | 3         | On-behalf (OB) Result 1 | an-1      | N/A           |
| 3      | 4         | On-behalf (OB) Result 2 | ans-1     | N/A           |

### Subfield 1 (On-behalf [OB] Service)

Subfield 1 identifies the service performed on the transaction.

#### Subfield 1 (On-behalf [OB] Service)

| Attributes           |                                                 |
|----------------------|-------------------------------------------------|
| Data Representation: | an-2                                            |
| Data Field:          | Contents of positions 1-2                       |
| Justification:       | Left-justified                                  |
| Values:              | 01 = Chip to Magnetic Stripe Conversion Service |

### Subfield 2 (On-behalf [OB] Result 1)

Subfield 2 indicates the results of the service processing.

#### Subfield 2 (On-behalf [OB] Result 1)

| Attributes           |                                                                                       |
|----------------------|---------------------------------------------------------------------------------------|
| Data Representation: | an-1                                                                                  |
| Data Field:          | Contents of positions 3                                                               |
| Justification:       | N/A                                                                                   |
| Values:              | C= Conversion of the M/Chip transaction to a magnetic stripe transaction was complete |

### Subfield 3 (On-behalf [OB] Result 2)

Subfield 3 is for Mastercard® internal use only.

### Subfield 3 (On-behalf [OB] Result 2)

| Attributes           |                         |
|----------------------|-------------------------|
| Data Representation: | ans-1                   |
| Data Field:          | Contents of positions 4 |
| Justification:       | N/A                     |
| Values:              | Space                   |

## PDS 0072 (Authentication Indicator)

PDS 0072 (Authentication indicator) is populated when a transaction qualifies for an Authentication service.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Data Representation: | n-1; TAGLLL              |
| Tag Field:           | 0072                     |
| Length Field:        | 3 positions, value = 001 |
| Data Length:         | Fixed length, 1 position |
| Subfields:           | N/A                      |
| Justification:       | N/A                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

The transaction is rejected when PDS 0072 is sent by the acquirer.

Mastercard® populates the authentication indicator in PDS 0072 based on the validation of biometric authentication result values in DE 55, subelement 9F10, CVR byte1, bit1 and byte2, bit2.

### Values

This table lists the valid values.

### Values

| Value | Description                                             |
|-------|---------------------------------------------------------|
| 1     | Transaction qualified for Authentication Service Type 1 |
| 2     | Transaction qualified for Authentication Service Type 2 |

## PDS 0073 (Additional Commercial Issuer Data)

PDS 0073 (Additional Commercial Issuer Data) represents additional commercial issuer data for B2B transactions.

### Attributes

| Attribute           | Description                        |
|---------------------|------------------------------------|
| Data representation | ans...63; TAGLLLVAR                |
| Tag field           | 0073                               |
| Length field        | 63 positions                       |
| Data Length:        | Variable length, 003-063 positions |
| Subfields           | 3                                  |
| Occurrences         | 1-3                                |
| Justification       | Left                               |

### Usage

| Subfield 3 (Tax<br>Registration<br>Code)           | n-2, 03     | n-3, 030        | ans-030             | 30 positions | Left          |

## PDS 0080 (Amount, Tax)

PDS 0080 (Amount, Tax) contains the tax associated with a transaction.

### Attributes

| Attribute            | Description                                      |
|----------------------|--------------------------------------------------|
| Data Representation: | an-060: TAGLLLVAR                                |
| Tag Field:           | 0080                                             |
| Length Field:        | 3 positions, value = 020–060 in increments of 20 |
| Data Length          | Variable length, 020–060 positions               |
| Subfields:           | 5 subfields for each value added tax occurrence  |

| Attribute      | Description |
|----------------|-------------|
| Justification: | N/A         |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                               | C   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442                | C   | X   | C   |
| Second Presentment/1240                                              | C   | X   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | C   | X   | C   |

## Values

If present, PDS 0080 must be alphanumeric and represents the tax amount calculated from the Amount, Transaction (DE 4) or the Amount, Transaction Fee (PDS 0146) on Presentment/1240 and Chargeback/1442 messages, and from the Amount, Transaction (DE 4) on Fee Collection/1740 messages.

For applicable intracountry Mexico transactions, the clearing system supplies the tax amount, except on ATM activity.

For applicable intracountry Mexico 1740 transactions, PDS 0080 should be submitted by customers where the Fee Processing Impact Switch is set to N on IP0097T1 for the message reason code.

The Mastercard® Network supplies the tax amount in PDS 0080, when applicable.

## PDS 0080 subfields

This PDS consists of five subfields.

### Subfields

#### PDS 0080 subfields

| Number | Position(s) | Name                    | Attribute | Justification |
|--------|-------------|-------------------------|-----------|---------------|
| 1      | 1–3         | Rate Type Code          | n-3       | N/A           |
| 2      | 4–15        | Amount, Value Added Tax | n-12      | N/A           |
| 3      | 16–18       | Currency Code           | n-3       | N/A           |
| 4      | 19          | Currency Exponent       | n-1       | N/A           |
| 5      | 20          | Debit/Credit Indicator  | a-1       | N/A           |

### Subfield 1 (Rate Type Code)

Customer processing systems must be able to accommodate new rate types that may be added at any time.

The rate type codes that the clearing system assigns are listed in this table.

#### Subfield 1 (Rate Type Code)

| Value | Description           |
|-------|-----------------------|
| 010   | Value Added Tax (VAT) |

### Subfield 2 (Amount, Tax)

Subfield 2 (Amount, Tax) indicates the tax amount that applies to the purchased goods and services or fees accrued from the purchased goods and services. This subfield must be numeric.

### Subfield 3 (Currency Code)

Subfield 3 (Currency Code) is an ISO-standard currency code that identifies the currency type.

## Subfield 4 (Currency Exponent)

Subfield 4 (Currency Exponent) explicitly identifies the implied decimal position applicable to the ISO standard currency code.

A zero indicates that the decimal point immediately follows the least significant digit of the related amount data.

Values in the range 1–5 indicate that the decimal point is located 1–5 positions to the left of the least significant digit of the related amount data.

Currently, only numeric currency exponents (values 1–5) are supported. Refer to the *Quick Reference Booklet* for a complete list of currency codes and related implied currency exponent values.

## Subfield 5 (Debit/Credit Indicator)

Subfield 5 (Debit/Credit Indicator) identifies if the subfield 2 (Amount, Tax) is a debit or credit position for the message receiver.

## PDS 0105 (File ID)

PDS 0105 (File ID) uniquely identifies a logical data file to be exchanged between a customer or processor and the clearing system.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Data Representation: | n-25; TAGLLL               |
| Tag Field:           | 0105                       |
| Length Field:        | 3 positions, value = 025   |
| Data Length:         | Fixed length, 25 positions |
| Subfields:           | 4                          |
| Justification:       | N/A or right               |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                       | Org | Sys | Dst |
|-----------------------------------------------|-----|-----|-----|
| File Header (Customer-generated)/1644         | M   | .   | .   |
| File Header (Clearing System-generated)/1644  | .   | X   | M   |
| File Trailer (Customer-generated)/1644        | M   | .   | .   |
| File Trailer (Clearing System-generated)/1644 | .   | X   | M   |

This PDS comprises four subfields that indicate the file type, the file processing date, the ID of the customer or processor associated with the file, and a file sequence number to uniquely identify the file and delivery cycle (1–6). The combination of these four subfields must together form a value that uniquely identifies all logical files to or from a customer processing center.

For customer-generated files, the clearing system retains 180 days of file ID history for each customer or processor and uses this information to edit duplicate file IDs. A clearing file rejects in its entirety if it contains a duplicate File ID. A file ID is considered a duplicate if subfields 2, 3, and 4 of PDS 0105 plus subfield 1 of PDS 0026 (File Reversal Indicator) match an entry in the file ID history file.

### PDS 0105 subfields

This PDS consists of four subfields.

#### PDS 0105 subfields

| Number | Positions | Name                 | Attribute | Justification |
|--------|-----------|----------------------|-----------|---------------|
| 1      | 1–3       | File Type            | n-3       | N/A           |
| 2      | 4–9       | File Reference Date  | n-6       | N/A           |
| 3      | 10–20     | Processor ID         | n-11      | right         |
| 4      | 21–25     | File Sequence Number | n-5       | right         |

#### Subfield 1 (File Type)

Subfield 1 (File Type) is a three-digit code that indicates the type of logical data file being transmitted. Values are listed in this table.

### Subfield 1 (File Type)

| Value   | Description                                                 |
|---------|-------------------------------------------------------------|
| 001     | Clearing file: Generated by Mastercard®                     |
| 002     | Clearing file: Member-generated                             |
| 003     | Early Reconciliation file: Generated by Mastercard®         |
| 011     | Clearing file: Generated by LPRUS                           |
| 013     | Early Reconciliation file: Generated by LPRUS               |
| 021     | Clearing file: Generated by NSPK                            |
| 023     | Early Reconciliation file: Generated by NSPK                |
| 031     | Clearing file: Generated by LPIDN                           |
| 033     | Early Reconciliation file: Generated by LPIDN               |
| 901     | Generated by Mastercard®, MasterCom System                  |
| 902     | Generated by Mastercard®, Rewards System                    |
| 903     | Generated by Mastercard®, EPSNet System                     |
| 904     | Generated by Mastercard® Network                            |
| 905     | Clearing file: Generated by Mastercard® SEND                |
| 906     | Clearing file: Generated by Mastercard® CBK                 |
| 907–999 | Clearing file: Generated by Mastercard® on behalf of member |

### Subfield 2 (File Reference Date)

PDS 0105, subfield 2 (File Reference Date) is for customer-generated logical files. The subfield contains the date the transmitting customer or processor submitted or processed the file. The file reference date must be equal to or no more than 30 days before the current Central Site business date. The required date format is YYMMDD.

For logical files that are generated by Mastercard®, this subfield will contain the clearing system's business processing date.

### Subfield 3 (Processor ID)

For customer-generated files, subfield 3 (Processor ID) contains the customer ID of the customer or processor submitting the file.

For files generated by Mastercard® on behalf of the customer, subfield 3 (Processor ID) contains the customer ID of the customer or processor receiving the file.

### Subfield 4 (File Sequence Number)

Subfield 4 (File Sequence Number) is a five-digit value that the customer or processor submitting the file assigns. It must be unique for each Processor ID and File Reference Date combination.

For customer-generated logical files, this subfield must be numeric. Customers that submit clearing files from multiple locations each day may choose to assign specific ranges of sequence numbers to each location to ensure that file IDs are not duplicated.

For logical files that are generated by Mastercard®, this subfield contains the two-position clearing cycle indicator, followed by a one-position delivery cycle and two-position sequential number that is incremented for each processing file, and clearing cycle, throughout a clearing processing day.

The data in this subfield must be right-justified with leading zeros.

#### PDS 0105, subfield 4 in files generated by Mastercard®

| Positions                                                                                                              | Name            | Attribute      | Justification |
|------------------------------------------------------------------------------------------------------------------------|-----------------|----------------|---------------|
| 1–2                                                                                                                    | Clearing Cycle  | n-2            | right         |
| <b>NOTE: This value will be 99 if the customer receives clearing files containing data from two or more clearings.</b> |                 |                |               |
| 3                                                                                                                      | Delivery Cycle  | (Values = 1–6) |               |
| 4–5                                                                                                                    | Sequence Number |                | right         |

### PDS 0106 (Clearing Optimizer Information)

PDS 0106 (Clearing Optimizer Information) contains information from the clearing optimizer software.

This information is included in PDS 0106:

- The release number and release version of the clearing optimizer software used to validate the IPM clearing file.
- The version of the IPM Mastercard Parameter Extract (MPE) file used by the software at the time the IPM clearing file was validated.
- The platform version of the clearing optimizer software used to validate the IPM clearing file.

## Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Data Representation: | n-13; TAGLLL               |
| Tag Field:           | 0106                       |
| Length Field:        | 3 positions, value = 013   |
| Data Length:         | Fixed length, 13 positions |
| Subfields:           | 3                          |
| Justification:       | N/A or right               |

## Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                               | Org | Sys | Dst |
|---------------------------------------|-----|-----|-----|
| File Header (Customer-generated)/1644 | C   | .   | .   |

PDS 0106 is created exclusively by the Mastercard® clearing optimizer software.

Originators of IPM clearing files must not create or include PDS 0106 in any messages they generate. PDS 0106 will automatically be added to the File Header/1644 message of all IPM clearing files processed and accepted by the clearing optimizer software using information generated by the software. PDS 0106 will be present in the accepted IPM clearing files produced by the software and subsequently sent to Mastercard® by the file originator.

Originators of IPM clearing files must not modify or remove PDS 0106 when present in a production clearing file processed by the clearing optimizer software and subsequently sent to Mastercard® for clearing processing; when PDS 0106 is created by the software, it must be sent to Mastercard®.

Mastercard® does not include PDS 0106 in any clearing message within any clearing file sent to a clearing file receiver. File receivers never receive PDS 0106.

PDS 0106 applies only to IPM clearing files processed by the clearing optimizer software. If the software is not used by the file originator, PDS 0106 is not present. Mastercard® accepts clearing files with or without PDS 0106.

## PDS 0106 subfields

This PDS consists of three subfields.

### Subfields

| Number | Positions | Name                       | Attribute | Justification |
|--------|-----------|----------------------------|-----------|---------------|
| 1      | 1–4       | Clearing Optimizer Package | n-4       | N/A           |
| 2      | 5–12      | MPE Version                | n-8       | right         |
| 3      | 13        | Clearing Optimizer Version | n-1       | N/A           |

### Subfield 1 (Clearing Optimizer Package)

PDS 0106 (Clearing Optimizer Information), subfield 1 (Clearing Optimizer Package) identifies the release number and release version of the clearing optimizer software used to validate the IPM clearing message. The first three positions specify the release number, and the fourth position specifies the release version.

### Subfield 2 (MPE Version)

This subfield identifies the version of the IPM MPE file used by the software at the time the IPM clearing file was validated.

### Subfield 3 (Clearing Optimizer Version)

This subfield identifies the platform version of the clearing optimizer software used to validate the IPM clearing file.

### Values

| Values | Description      |
|--------|------------------|
| 1      | Mainframe        |
| 2      | Auto-Edit        |
| 3      | Workstation Plus |

## PDS 0110 (Transmission ID)

PDS 0110 (Transmission ID) uniquely identifies a physical transmission or grouping of logical files to be exchanged between a customer or processor and the clearing system.

Each transmission may contain multiple logical files that PDS 0105 (File ID) identifies.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Data Representation: | n-25; TAGLLL               |
| Tag Field:           | 0110                       |
| Length Field:        | 3 positions, value = 025   |
| Data Length:         | Fixed length, 25 positions |
| Subfields:           | 4                          |
| Justification:       | N/A or right               |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                               | Org | Sys | Dst |
|---------------------------------------|-----|-----|-----|
| File Header (Customer-generated)/1644 | O   | .   | .   |

Customers that stack multiple logical files in a physical transmission may use this optional PDS. Customers may provide it in File Header/1644 messages to tie together all logical files in the physical transmission.

If present, the same PDS 0110 value may be placed into PDS 0110 in each File Header/1644 in the physical transmission.

The clearing system generates reconciliation information that accumulates data at the individual logical file level. Transmission-level totals are not provided.

## PDS 0110 subfields

This PDS consists of four subfields.

### Subfields

| Number | Positions | Name                         | Attribute | Justification |
|--------|-----------|------------------------------|-----------|---------------|
| 1      | 1–3       | Transmission Type            | n-3       | N/A           |
| 2      | 4–9       | Transmission Reference Date  | n-6       | N/A           |
| 3      | 10–20     | Processor ID                 | n-11      | right         |
| 4      | 21–25     | Transmission Sequence Number | n-5       | right         |

The combination of these four subfields must together form a value that uniquely identifies each transmission or grouping of logical files within a business day from a customer processing center.

### Subfield 1 (Transmission Type)

Subfield 1 (Transmission Type) is a three-digit code that indicates the transmission type shown in this table.

#### Subfield 1 (Transmission Type)

| Value | Description                             |
|-------|-----------------------------------------|
| 002   | Clearing transmission: member-generated |

### Subfield 2 (Transmission Reference Date)

Subfield 2 (Transmission Reference Date) is the date that the originating customer or processor processed or submitted the transmission. It must be less than or equal to the clearing system's business processing date. The required date format is YYMMDD.

### Subfield 3 (Processor ID)

For customer-generated transmissions, subfield 3 (Processor ID) contains the customer ID of the customer or processor submitting the transmission.

## Subfield 4 (Transmission Sequence Number)

Subfield 4 (Transmission Sequence Number) is a five-digit number the transmission originator assigns. It should be unique for each combination of transmission type, transmission reference date, and processor ID. GCMS does not edit for duplicate transmission IDs.

## PDS 0122 (Processing Mode)

PDS 0122 (Processing Mode) indicates the type of processing to be performed on transaction messages.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Data Representation: | ans-1;TAGLLL             |
| Tag Field:           | 0122                     |
| Length Field:        | 3 positions, value = 001 |
| Data Length:         | Fixed length, 1 position |
| Subfields:           | None                     |
| Justification:       | N/A                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Usage

| Message                                      | Org | Sys | Dst |
|----------------------------------------------|-----|-----|-----|
| File Header (Customer-generated)/1644        | M   | .   | .   |
| File Header (Clearing System-generated)/1644 | .   | X   | M   |

PDS 0122 indicates the type of processing (such as production or test) to be applied to an entire data file of transaction messages.

### Values

Processing mode values are listed in this table.

### Values

| Value | Description |
|-------|-------------|
| P     | Production  |
| T     | Test        |

## PDS 0137 (Fee Collection Control Number)

PDS 0137 (Fee Collection Control Number) contains a financial control number (reference number) that a fee collection message originator assigns.

### Attributes

| Attribute            | Description                      |
|----------------------|----------------------------------|
| Data Representation: | n...20; TAGLLLVAR                |
| Tag Field:           | 0137                             |
| Length Field:        | 3 positions, value = 017–020     |
| Data Length:         | Variable length, 17–20 positions |
| Subfields:           | None                             |
| Justification:       | Right                            |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| Fee Collection (Retrieval Fee Billing)/1740                          | M   | .   | M   |
| Fee Collection (Handling Fees)/1740                                  | M   | .   | M   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | M   | .   | M   |

This PDS assists customers in referencing and reconciling various posted miscellaneous fees and billings using the fee collection message.

A customer may assign PDS 0137 as a documentation reference for customer-generated fee collection messages sent to another customer.

Customers must submit a minimum of 17 positions and a maximum of 20 positions for PDS 0137. The information must be numeric, right-justified, and have leading zeros.

The clearing system also uses this PDS to provide control numbers on Fee Collection (Clearing System-generated)/1740 messages.

In all Fee Collection/1740 messages, PDS 0137 is required and must be the same on the initial fee collection and all subsequent returns.

## PDS 0138 (Source Message Number ID)

PDS 0138 (Source Message Number ID) contains the message sequence number from a previously submitted file's message.

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Data Representation: | n-8; TAGLLL               |
| Tag Field:           | 0138                      |
| Length Field:        | 3 positions, value = 008  |
| Data Length:         | Fixed length, 8 positions |
| Subfields:           | None                      |
| Justification:       | Right                     |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Message Exception/1644 and File Reject/1644 | .   | X   | C   |

This PDS identifies in Message Exception/1644 messages the message sequence number of a rejected message from a previously transmitted data file. It contains the value from DE 71 (Message Number) from the rejected message.

This PDS is present if the clearing system can parse the rejected message.

## PDS 0140 (Amount, Cardholder Billing Amounts USD)

PDS 0140 (Amount, Cardholder Billing Amounts USD) is provided only for customers that participate in Settlement Service Level 1 (Regional), where the Currency Code is 392 (Yen).

PDS 0140 (Amount, Cardholder Billing Amounts USD) identifies Amount, Cardholder Billing in USD and Amount, Cardholder Currency Conversion Assessment USD on the outbound message to customers for First and Second Presentments/1240, when PDS 0159, subfield 3 (Settlement Service Level Code) is equal to 1 (Regional) and DE 50 (Currency Code, Reconciliation) is equal to 392 (Yen).

**NOTE: Both subfields of PDS 0140 are always USD, Currency Code 840, with a currency exponent of two.**

### Attributes

| Attribute            | Description                        |
|----------------------|------------------------------------|
| Data Representation: | n-24; TAGLLLLVAR                   |
| Tag Field:           | 0140                               |
| Length Field:        | 3 positions, value = 012-024       |
| Data Length:         | variable length, 012-024 positions |
| Subfields:           | 2                                  |
| Justification:       | Right                              |

### Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| s2 Amount, Currency Conversion Assessment USD | •   | X   | C   |

## PDS 0140 subfields

This PDS consists of two subfields.

### PDS 0140 subfields

| Number | Positions | Name                                       | Attribute | Justification |
|--------|-----------|--------------------------------------------|-----------|---------------|
| 1      | 1–12      | Amount, Cardholder Billing USD             | n-12      | right         |
| 2      | 13–24     | Amount, Currency Conversion Assessment USD | n-12      | right         |

### Subfield 1 (Amount, Cardholder Billing USD)

This subfield contains the amount in the cardholder billing in USD.

### Subfield 2 (Amount, Currency Conversion Assessment USD)

This subfield contains the calculated currency conversion assessment adjustment amount in USD.

## PDS 0141 (Customer Currency Conversion Revenue Data)

PDS 0141 (Customer Currency Conversion Revenue Data) contains the Customer Currency Conversion Revenue (CCCR) amount and the rate that was used for the calculation.

GCMS sends this data in First Presentment/1240 messages to issuers in Brazil participating in the CCCR service.

### Attributes

| Attribute            | Description  |
|----------------------|--------------|
| Data Representation: | n-25; TAGLLL |

| Attribute      | Description                |
|----------------|----------------------------|
| Tag Field:     | 0141                       |
| Length Field:  | 3 positions, value = 025   |
| Data Length:   | Fixed length, 25 positions |
| Subfields:     | 2                          |
| Justification: | Right                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

## Subfield 1 (Customer Currency Conversion Revenue Rate)

PDS 0141 (Customer Currency Conversion Revenue Data), subfield 1 indicates the customer currency conversion rate applied to transactions processed for cards issued in Brazil in which the transaction currency is reflected in neither Brazilian Reals nor U.S. Dollars.

### Attributes

|                      |                            |
|----------------------|----------------------------|
| Data Representation: | n-13                       |
| Data Field:          | Contents of positions 1–13 |
| Justification:       | Right-justified            |

### Values

The seven left-most digits denote the values that appear to the left of the decimal of the customer currency conversion rate, and the six right-most digits denote the values that appear after the decimal of the customer currency conversion rate. For example, a data value of 0000002350000 indicates a conversion rate of 0000002.350000.

## Subfield 2 (Customer Currency Conversion Revenue Amount)

PDS 0141 (Customer Currency Conversion Revenue Data), subfield 2 indicates the calculated customer currency conversion amount in the reconciliation currency.

This amount is added to the amount in DE 5 (Amount, Reconciliation) for transactions processed for cards issued in Brazil in which the transaction currency is reflected in neither Brazilian Reals nor U.S. Dollars.

### Attributes

|                      |                             |
|----------------------|-----------------------------|
| Data Representation: | n-12                        |
| Data Field:          | Contents of positions 14–25 |
| Justification:       | Right-justified             |

### Values

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a customer currency conversion amount of BRL 212.50 is expressed as 000000021250.

## PDS 0142 (Additional Service Data For Issuers)

PDS 0142 (Additional Service Data For Issuers) contains the European Central Bank (ECB) reference rates and the percentage difference in comparison to the Mastercard Foreign Exchange rate.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Data Representation: | ans-15; TAGLLL             |
| Tag Field:           | 0142                       |
| Length Field:        | 3 positions, value = 015   |
| Data Length:         | Fixed length, 15 positions |
| Subfields:           | 3                          |
| Justification:       | See subfields              |

## Usage

The following table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

## Values

Issuers will receive these subfields if they have opted in for any of the supported services and if those services were performed on the given transaction.

If present, PDS 0142 must be a fixed length of 15 and will represent European Issuer Foreign exchange reference rate and any percentage difference between the Mastercard Foreign Exchange rate.

### PDS 0142 Subfields

| Number | Position(s) | Name                                                  | Attribute | Justification |
|--------|-------------|-------------------------------------------------------|-----------|---------------|
| 01     | 1-8         | Reference Conversion Rate                             | n-8       | N/A           |
| 02     | 9           | Reference Conversion Rate Differential Sign Indicator | ans-1     | N/A           |
| 03     | 10-15       | Reference Conversion Rate Percent Differential        | n-6       | N/A           |

## Subfield 01 (Reference Conversion Rate)

Subfield 01 (Reference Conversion Rate) is numeric and contains the processing day's European Central Bank reference rate and may be all zeros.

PDS 0142 subfield 01 provides the "currency conversion cross-rate" from DE 4 (Amount, Transaction) to DE 6 (Amount, Cardholder Billing).

The first position or the leftmost digit is populated with the number of decimal places and denotes the number of positions that the decimal separator shall be moved from the right.

The left-most digit is in the range 0–9. For example, a data value of 91234567 indicates a conversion rate of 0.001234567.

### Subfield 02 (Reference Conversion Rate Differential Sign Indicator)

Subfield 02 (Reference Conversion Rate Differential Sign Indicator) identifies if the subfield 03 (Reference Conversion Rate Differential) is a debit or credit position for the message receiver.

Subfield 02 has a value of C (for Credit) or value of D (for Debit).

A value of C indicates that DE 10 (Conversion Rate, Cardholder Billing) is larger than or equal to PDS 0142, subfield 01 (Reference Conversion Rate).

A value of D indicates that DE 10 (Conversion Rate, Cardholder Billing) is less than PDS 0142, subfield 01 (Reference Conversion Rate).

### Subfield 03 (Reference Conversion Rate Percent Differential)

Subfield 03 (Reference Conversion Rate Percent Differential) is numeric and contains the percentage difference of DE 10 (Cardholder Billing Conversion Rate) and PDS 0142 subfield 01 (Reference Conversion Rate).

Subfield 03 carries a percentage value with an implied two-position decimal.

For Example:

- A differential of +123.45% is represented with PDS 0142 subfield 02 = C and PDS 0142 subfield 03 = 012345
- A differential of 0.00% is represented with PDS 0142 subfield 02 = C and PDS 0142 subfield 03 = 000000
- A differential of -1.23% is represented with PDS 0142 subfield 02 = D and PDS 0142 subfield 03 = 000123

## PDS 0145 (Amount, Alternate Transaction Fee)

PDS 0145 (Amount, Alternate Transaction Fee) presents an alternative fee amount associated with a transaction. This field is used by Mexico Domestic Business Service 4/484001.

#### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Data Representation: | n-15; TAGLLL               |
| Tag Field:           | 0145                       |
| Length Field:        | 3 positions, value 015     |
| Data Length:         | Fixed length, 15 positions |

| Attribute      | Description |
|----------------|-------------|
| Subfields:     | 2           |
| Justification: | N/A         |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                     | Org | Sys | Dst |
|-----------------------------|-----|-----|-----|
| First Presentment/1240      | C   | X   | C   |
| First Chargeback/1442       | O   | X   | C   |
| Arbitration Chargeback/1442 | O   | X   | C   |

Fees are assessed in an appropriate currency according to card program identifier, program, or service rules. For example, a fee assessed to the customer, such as a variable transaction interchange fee, may be assessed in the transaction currency; a regional clearing system processing fee might be assessed in the preferred currency of the country in which the clearing system is operated.

## Values

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a transaction amount of USD 212.50 is expressed as 000000021250.

## Notes

PDS 0148 (Currency Exponents) must be present with PDS 0145 to identify the transaction's exponent.

## PDS 0145 subfields

PDS 0145 may contain one occurrence of the transaction fee.

### Subfield 1 (Currency Code, Fee)

PDS 0145 (Amount, Alternate Transaction Fee), subfield 1 (Currency Code, Fee) identifies the currency of the fee amount. The fee is defined in the calculated fee currency and may include a

fixed amount, a percentage of the transaction amount, or both. This subfield must contain a valid ISO numeric currency code.

### Subfield 2 (Amount, Fee)

PDS 0145 (Amount, Alternate Transaction Fee), subfield 2 (Amount, Fee) identifies the fee amount in the currency in which the fee is calculated.

## PDS 0146 (Amounts, Transaction Fee)

PDS 0146 (Amounts, Transaction Fee) presents all fee amounts associated with a transaction.

This PDS may accommodate 1 to 12 different fee types.

### Attributes

| Attribute           | Description                                      |
|---------------------|--------------------------------------------------|
| Data Representation | n...432; TAGLLLVAR                               |
| Tag Field           | 0146                                             |
| Data Length         | 3 positions, value = 036–432 in increments of 36 |
| Data Field          | Variable length, 36–432 positions                |
| Subfields           | 7 subfields for each transaction fee occurrence  |
| Occurrences         | 1–12                                             |
| Justification       | N/A                                              |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | X   | C   |
| Second Presentment/1240                               | O   | X   | C   |

For ATM transactions submitted by the Mastercard® Network, this element is mandatory.

For bilaterally settled and collection only transactions, this element is optional.

Fees are assessed in an appropriate currency according to card program identifier, program, or service rules. For example, a fee assessed to the acquirer, such as a variable transaction interchange fee, may be assessed in the transaction currency; a regional clearing system processing fee might be assessed in the preferred currency of the country in which the clearing system is operated.

If the transaction is classified as bilateral settlement (indicated by B in subfield 1 of PDS 0165 [Settlement Indicator]), and the business service assigned to the transaction does not specify that fees should be calculated:

- If the message originator populates PDS 0146 with expected fees, the clearing system passes them to the receiving customer.
- If the message originator does not provide PDS 0146, PDS 0146 will not be present at all in the message sent to the receiving customer.

In all other conditions, the clearing system calculates the fees and provides them to the receiving customer in PDS 0146.

### Related required PDS

PDS 0148 (Currency Exponents) must be present with PDS 0146 to identify the transaction's exponent.

### Values

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a transaction amount of USD 212.50 is expressed as 000000021250.

**NOTE: This field remains unchanged from the original message when processing a reversal of a previous message.**

## PDS 0146 subfields

This PDS may contain 1 to 12 occurrences of transaction fees.

### Subfields

Each transaction fee consists of seven subfields as defined in this table. Each fee requires 36 positions; the length of this PDS must be a multiple of 36, with a maximum length of 432 positions.

### PDS 0146 subfields

| Number | Positions | Name                                                                                                                   | Attribute | Justification |
|--------|-----------|------------------------------------------------------------------------------------------------------------------------|-----------|---------------|
| 1      | 1–2       | Fee Type Code A, code in the range 00–99 to indicate the fee type.                                                     | n-2       | N/A           |
| 2      | 3–4       | Fee Processing Code A, code that indicates the entity to be debited and the entity to be credited for this fee amount. | n-2       | N/A           |
| 3      | 5–6       | Fee Settlement Indicator identifies the PDS location of the settlement service information applicable to this fee.     | n-2       | N/A           |
| 4      | 7–9       | Currency Code, Fee The ISO numeric currency code for the Amount, Fee (subfield 5).                                     | n-3       | N/A           |
| 5      | 10–21     | Amount, Fee The transaction fee amount in the calculated currency of the fee.                                          | n-12      | N/A           |
| 6      | 22–24     | Currency Code, Fee, Reconciliation. The ISO numeric currency code for the Amount, Fee, Reconciliation (subfield 7).    | n-3       | N/A           |
| 7      | 25–36     | Amount, Fee, Reconciliation. Fee amount in the reconciliation currency (payment currency).                             | n-12      | N/A           |

All subfields are present for each fee occurrence. If the fee reconciliation (payment) currency is the same as the fee calculation currency, fee subfields 6 and 7 contain the same values as subfields 4 and 5. When the transaction originator provides PDS 0146, subfield 3 may contain zeros.

### Subfield 1 (Fee Type Code)

Customer processing systems must be able to accommodate new fee types that may be added at any time. The codes assigned by the clearing system are listed in this table.

### Subfield 1 (Fee Type Code)

| Value | Description                                                  |
|-------|--------------------------------------------------------------|
| 00    | Transaction interchange fee (fixed plus variable fee amount) |

### Subfield 2 (Fee Processing Code)

This subfield identifies the entity to be debited and the entity to be credited for the fee amount. The valid values are listed in this table.

### Subfield 2: Fee Processing Code

| Value | Description                                             |
|-------|---------------------------------------------------------|
| 19    | Debit transaction destination                           |
| 29    | Credit transaction destination                          |
| 00    | Not applicable: May be used if member provides PDS 0146 |

### Subfield 3 (Fee Settlement Indicator)

This subfield identifies the settlement service PDS to which the fee is associated for the purpose of financial reconciliation and settlement. The values are listed in this table.

### Subfield 3 (Fee Settlement Indicator)

| Value | Description                                                                                                                                                                                                                           |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 00    | Settlement services do not apply to this fee. Fee settlement or fee billing occurs as a separate activity and is not included in this transaction's reconciliation and settlement (usually applies when bilateral settlement occurs). |
| 01    | This settlement service is identified in PDS 0159 (Settlement Data).                                                                                                                                                                  |

### Subfield 4 (Currency Code, Fee)

Subfield 4 (Currency Code, Fee) identifies the currency of the fee amount. This is the currency in which the clearing system calculates the fee. For example, if the fee is listed in Mastercard®

publications as a U.S. Dollar fee, subfields 4 and 5 will contain the fee in U.S. Dollars. The fee is defined in the calculated fee currency and may include a fixed amount, a percentage of the transaction amount, or both. This subfield must contain a valid ISO numeric currency code.

### Subfield 5 (Amount, Fee)

Subfield 5 (Amount, Fee) is the fee amount in the currency in which the fee is calculated by the clearing system. In First Presentment/1240 messages, the total interchange fees assessed must not be greater than the transaction amount.

### Subfield 6 (Currency Code, Fee, Reconciliation)

Subfield 6 (Currency Code, Fee, Reconciliation) identifies this fee's reconciliation (payment) currency. Standard ISO numeric currency codes are used.

### Subfield 7 (Amount, Fee, Reconciliation)

Subfield 7 (Amount, Fee, Reconciliation) is the fee amount converted to the reconciliation (payment) currency for the message recipient.

## PDS 0147 (Extended Precision Amounts)

PDS 0147 (Extended Precision Amounts) is for business service arrangements that are enabled for the extended decimal precision service.

This PDS represents the fee amount associated with a transaction extended to six decimal positions. PDS 0147 may accommodate a total of one to 12 different fee types. Table IP1100T1 will be modified by adding elements to prevent customers from sending in PDS 0147 (Extended Precision Amounts).

### Attributes

| Attribute           | Description                                      |
|---------------------|--------------------------------------------------|
| Data Representation | n...576; TAGLLLVAR                               |
| Tag Field           | 0147                                             |
| Data Length         | 3 positions, value = 048-576 in increments of 48 |
| Data Field          | Variable length, 048-576 positions               |
| Subfields           | 7 subfields for each transaction fee occurrence  |
| Occurrences         | 1-12                                             |
| Justification       | N/A                                              |

## Usage

For all transactions where extended decimal precision is active, the clearing system provides this field. This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | .   | X   | C   |
| Second Presentment/1240                               | .   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | .   | X   | C   |

## Values

All currency amounts are expressed to 6 decimals without a decimal separator in accordance with ISO standards for currency notation. For example, an Interchange Fee amount of USD .000123 is expressed as 000000000000000123.

**NOTE:** This field remains unchanged from the original message when processing a reversal of a previous message.

## PDS 0147 subfields

This PDS may contain one to 12 occurrences of transaction fees.

Each transaction fee consists of seven subfields as defined in this table. Each fee requires 48 positions; the length of this PDS must be a multiple of 48, with a maximum length of 576 positions.

### PDS 0147 subfields

| Number | Positions | Name                                                                                                                   | Attribute | Justification |
|--------|-----------|------------------------------------------------------------------------------------------------------------------------|-----------|---------------|
| 1      | 1–2       | Fee Type Code: A code in the range 00–99 to indicate the fee type.                                                     | n-2       | N/A           |
| 2      | 3–4       | Fee Processing Code: A code that indicates the entity to be debited and the entity to be credited for this fee amount. | n-2       | N/A           |

| Number | Positions | Name                                                                                                                            | Attribute | Justification |
|--------|-----------|---------------------------------------------------------------------------------------------------------------------------------|-----------|---------------|
| 3      | 5–6       | Fee Settlement Indicator:<br>Identifies the PDS location of the settlement service information applicable to this fee.          | n-2       | N/A           |
| 4      | 7–9       | Currency Code, Fee: The ISO numeric currency code for the Interchange Amount, Fee (subfield 5).                                 | n-3       | N/A           |
| 5      | 10–27     | Interchange Amount, Fee: The transaction fee amount to 6 decimals in the calculated currency of the fee.                        | n-18      | N/A           |
| 6      | 28–30     | Currency Code, Fee, Reconciliation: The ISO numeric currency code for the Interchange Amount, Fee, Reconciliation (subfield 7). | n-3       | N/A           |
| 7      | 31–48     | Interchange Amount, Fee, Reconciliation: Fee amount calculated to 6 decimals in the reconciliation currency (payment currency). | n-18      | N/A           |

All subfields are present for each fee occurrence. If the fee reconciliation (payment) currency is the same as the fee calculation currency, fee subfields 6 and 7 contain the same values as subfields 4 and 5.

### Subfield 1 (Fee Type Code)

The code that the clearing system assigns are in this table. Customer processing systems must be able to accommodate new fee types that may be added at any time.

#### Subfield 1 (Fee Type Code)

| Value | Description                                                   |
|-------|---------------------------------------------------------------|
| 00    | Transaction interchange fee (fixed plus variable fee amount). |

## Subfield 2 (Fee Processing Code)

This subfield identifies the entity to be debited and the entity to be credited for the fee amount. The values are listed in this table.

### Subfield 2 (Fee Processing Code)

| Value | Description                     |
|-------|---------------------------------|
| 19    | Debit transaction destination.  |
| 29    | Credit transaction destination. |

## Subfield 3 (Fee Settlement Indicator)

This subfield identifies the settlement service PDS to which the fee is associated for the purpose of financial reconciliation and settlement. The values are listed in this table.

### Subfield 3 (Fee Settlement Indicator)

| Value | Description                                                                                                                                                                                                                            |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 00    | Settlement services do not apply to this fee; fee settlement, or fee billing occurs as a separate activity and is not included in this transaction's reconciliation and settlement (usually applies when bilateral settlement occurs). |
| 01    | Settlement Data; this settlement service is identified as PDS 0159 (Settlement Data).                                                                                                                                                  |

## Subfield 4 (Currency Code, Fee)

Subfield 4 (Currency Code, Fee) identifies the currency of the interchange amount fee. This is the currency in which the fee is calculated by the clearing system. For example, if the fee is listed in Mastercard® publications as a U.S. Dollar fee, then subfields 4 and 5 will contain the fee in U.S. Dollars. The fee is defined in the calculated fee currency, and may include a fixed amount, a percentage of the transaction amount, or both. This subfield must contain a valid ISO numeric currency code.

### Subfield 5 (Interchange Amount, Fee)

Subfield 5 (Interchange Amount, Fee) is the interchange fee amount calculated to six decimals in the currency in which the fee is calculated with extended precision by the clearing system. For example, if the fee is listed in Mastercard® publications as a U.S. Dollar fee, then subfields 4 and 5 will contain the fee in U.S. Dollars.

### Subfield 6 (Currency Code, Fee, Reconciliation)

Subfield 6 (Currency Code, Fee, Reconciliation) identifies this fee's reconciliation (payment) currency. Standard ISO numeric currency codes are used.

### Subfield 7 (Interchange Amount, Fee, Reconciliation)

Subfield 7 (Interchange Amount, Fee, Reconciliation) is the Interchange Amount, Fee calculated to six decimals converted to the reconciliation (payment) currency for the message recipient.

## PDS 0148 (Currency Exponents)

PDS 0148 (Currency Exponents) explicitly identifies the implicit decimal point locations associated with each ISO standard currency code used in a message.

### Attributes

| Attribute           | Description                                            |
|---------------------|--------------------------------------------------------|
| Data Representation | ans...60; TAGLLLLVAR                                   |
| Tag Field           | 0148                                                   |
| Data Length         | 3 positions, value = 004–060 in increments of 4        |
| Data Field          | Variable length, 4–60 positions                        |
| Subfield            | 2 subfields for each currency exponent data occurrence |
| Occurrences         | 1–15                                                   |
| Justification       | N/A                                                    |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | M   | X   | M   |

This PDS identifies the decimal point location for all currency amounts in a message.

Message originators must populate PDS 0148 with the currency exponents that apply to any amount and currency code data elements, such as DE 4 (Amount, Transaction), DE 49 (Currency Code, Transaction), and DE 30 (Amounts, Original) provided in a message.

The clearing system populates PDS 0148 with the currency exponents that apply to any clearing system-provided amount and currency code data elements, such as DE 5 (Amount Reconciliation) and DE 50 (Currency Code, Reconciliation); DE 6 (Amount, Cardholder Billing) and DE 51 (Currency Code, Cardholder Billing); or PDS 0146 (Amounts, Transaction Fee).

Each currency code in the message should be presented only once in PDS 0148, along with the corresponding currency exponent.

The clearing system validates the currency exponents in subfield 2 of PDS 0148 to ensure they are valid for the currency codes in subfield 1. If they are not valid, the clearing system rejects the transaction.

For example, assume that a transaction occurs between Canada region customers in U.S. Dollars (currency code 840, exponent 2). The clearing system assesses fees in Canadian Dollars (currency code 124, exponent 2):

- The acquirer submits a First Presentment/1240 in which DE 49 contains 840. PDS 0148 also must be present and must contain a single value of 8402, representing currency code 840 and currency exponent 2.

- The clearing system then calculates fees and presents them in PDS 0146. Because the fees are in a currency that is not yet present in PDS 0148, the clearing system adds a second occurrence to PDS 0148, containing a value of 1242 to indicate currency code 124 and currency exponent 2.
- The clearing system then calculates DE 5 and DE 6 in Canadian dollars (currency code 124) and adds them to the message, along with their related currency codes of DE 50 and DE 51. Because currency code 124 is already present in PDS 0148, the clearing system does not add any more values to PDS 0148.
- The issuer receives the First Presentment/1240 containing all of the amount and currency data elements and PDSs previously described (DE 4 and DE 49; DE 5 and DE 50; DE 6 and DE 51; PDS 0146; and PDS 0148). PDS 0148 contains two data occurrences with values of 8402 and 1242, respectively.

### Values

If present, PDS 0148 cannot contain all low values or all high values.

## PDS 0148 subfields

This PDS may contain from 1 to 15 occurrences of currency exponent information.

Each occurrence consists of two subfields as defined in this table. Each occurrence requires four positions; the length of this PDS must be a multiple of four, with a maximum length of 60 positions.

### PDS 0148 subfields

| Number | Positions | Name              | Attribute | Justification |
|--------|-----------|-------------------|-----------|---------------|
| 1      | 1-3       | Currency Code     | n-3       | N/A           |
| 2      | 4         | Currency Exponent | an-1      | N/A           |

### Subfield 1 (Currency Code)

Subfield 1 (Currency Code) is an ISO-standard currency code that identifies the currency type.

### Subfield 2 (Currency Exponent)

Subfield 2 (Currency Exponent) explicitly identifies the implied decimal position applicable to the ISO standard currency code.

A zero indicates that the decimal point immediately follows the least significant digit of the related amount data.

Currently, only numeric currency exponents (values 1–5) are supported. Values in the range 1–5 indicate that the decimal point is located 1–5 positions to the left of the least significant digit of the related amount data.

Refer to the *Quick Reference Booklet* for a complete list of currency codes and related implied currency exponent values.

## PDS 0149 (Currency Codes, Amounts, Original)

PDS 0149 (Currency Codes, Amounts, Original) defines the DE 30 (Amounts, Original) currencies.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| Fee Collection (Other than Retrieval Fee Billing/handling Fees)/1740 | C   | .   | C   |

This PDS is required when DE 30 is in the message.

PDS 0148 (Currency Exponents) must also be present in a message when PDS 0149 is present.

### Values

Subfield 1 (Currency Code, Original Transaction Amount) must contain valid ISO numeric currency codes. There must be an occurrence of PDS 0149, subfield 1 (Currency Code, Original Transaction Amount) along with its corresponding currency exponent in PDS 0148.

Subfield 2 (Currency Code, Original Reconciliation Amount) must contain all zeros.

## PDS 0149 subfields

This PDS contains two subfields.

### PDS 0149 subfields

| Number | Positions | Name                                          | Attribute | Justification |
|--------|-----------|-----------------------------------------------|-----------|---------------|
| 1      | 1–3       | Currency Code, Original Transaction Amount    | n-3       | N/A           |
| 2      | 4–6       | Currency Code, Original Reconciliation Amount | n-3       | N/A           |

## PDS 0150 (Additional Recurring Payments Information)

PDS 0150 (Additional Recurring Payments Information) is used in the Clearing System to provide additional data for recurring payments.

### Application notes

Mastercard is not enforcing edits to check the presence or content of any data.

## PDS 0157 (Alternate Processor Indicator)

PDS 0157 (Alternate Processor Indicator) distinctly identifies a transaction as an alternate processor transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-4; TAGLLL             |
| Tag Field           | 0157                      |
| Data Length         | 3 positions, value = 003  |
| Data Field          | Fixed length, 4 positions |
| Subfields           | None                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

PDS 0157 is allowed only on collection-only transactions.

GCMS will apply the Cross-border Assessment (CBA) transaction qualification process on alternate processor transactions.

### Values

If present, PDS 0157 must contain a valid value of ALTC to indicate Alternate Processor Cross-border transaction.

If PDS 0157 Alternate Processor Indicator is present, PDS 0165 subfield 1 (Settlement Indicator) must contain a value of C.

## PDS 0158 (Business Activity)

PDS 0158 (Business Activity) identifies the business arrangement applied to this transaction.

This PDS includes information about the applicable card program identifier for a transaction, the business relationship between the acquirer and issuer (or the transaction originator and destination customers), the interchange rules governing all participants in the transaction, and the clearing system business date and processing cycle for reconciliation purposes.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | ans...34; TAGLLLLVAR            |
| Tag Field           | 0158                            |
| Data Length         | 3 positions, value = 003–034    |
| Data Field          | Variable length, 3–34 positions |
| Subfields           | 15                              |
| Justification       | See "Subfields"                 |

PDS 0158 must be a length of 003 to 034.

The clearing system determines and/or validates PDS 0158. If the business service requires an interchange rate designator (IRD) for a given message type, the message originator must submit all spaces or valid values in subfields 1, 2, and 3, and a valid interchange rate designator in subfield 4. For example, PDS 0158 is required to be present for all U.S. region transactions that are of Mastercard® brand, except for the following.

- ATM (DE 3, subfield 1 = 01)
- Cash Disbursement (DE 3, subfield 1 = 12)
- Retrieval Requests and Fee Collections

Customers may choose to submit only the IRD and provide spaces in subfields 1–3. In this situation, GCMS derives the corresponding card program identifier and business service information and populates the message with these values. If the system cannot determine the appropriate values for the submitted IRD, the transaction is rejected.

If the customer provides values other than spaces and if the submitted information in subfields 1–3 does not match the information the clearing system assigns, the clearing system rejects the transaction. The clearing system will also reject the transaction if the (non-space) values in subfields 1–3 are invalid for the interchange rate designator provided in subfield 4.

PDS 0158 is important to reconciliation processing because it identifies the card program identifier, the business service, the interchange rate designator, and the business date and processing cycle to which the transaction is assigned for reconciliation purposes.

Refer to the *Technical Resource Center* on Mastercard Connect® for a complete listing of domestic, regional, and interregional interchange programs.

### Business service selection general information

The transaction business relationship (referred to as the business service) is described collectively by the Card Program Identifier, the Business Service Type Code, and the Business

Service ID Code subfields. The business service defines the transaction interchange rule basis together with the interchange rate designator submitted by the originator of the message.

A business service is an arrangement among a defined group of customers (such as acquirers and issuers) that share a common level of interchange participation for a specific card program identifier such as the Mastercard® brand. Business services may involve but are not limited to:

- Two or more customers (member-to-member)
- The country of the merchant
- Customers in a single country (intracountry)
- Customers in two or more countries or regions (intercountry)
- Customers within a business region (intraregional)
- Customers between business regions (interregional)

Each business service may have its own criteria, interchange rates, transaction life cycle procedures, business date calendar, and other features.

When the clearing system receives a business transaction for processing, it evaluates these types of information to determine the applicable card program and business service:

- The country of the acquirer
- The country to which the issuing account range is assigned
- The card programs associated with the acquirer
- The card programs associated with the issuing account range
- DE 3 (Processing Code)
- The business services in which the transaction originator participates, and for which the message qualifies
- The business services in which the transaction receiver participates and for which the message qualifies
- The interchange rate designator submitted in the message

Both the origination and destination customers of a transaction (such as the acquirer and issuer) must be licensed for a selected card program and must participate in a common business service; otherwise, the clearing system rejects the transaction because no business rules govern its completion.

The clearing system selects the appropriate business service from those in common between the issuer and acquirer in this order of priority:

- Member-to-member
- Intracountry
- Intercountry
- Intraregional
- Interregional

After the business service is determined, the clearing system evaluates financial transactions with respect to the interchange criteria defined for the business service and submitted interchange rate designator to determine the correct interchange rate. The clearing system validates any data the message originator submits in PDS 0158, calculates interchange fees,

and forwards the transaction to the receiver. This information is made available to the transaction originating processor through reconciliation processing options.

### Values

If present, PDS 0158 must be a length of three positions and cannot contain all low values or all high values.

## Subfield 1 (Card Program Identifier)

PDS 0158 (Business Activity), subfield 1 (Card Program Identifier) is a three-character code that identifies the card program or financial network to which a transaction belongs.

### Subfield 1 (Card Program Identifier)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 01    |
| Subfield Length     | n-2       | 03    |
| Data Representation | ans-3     |       |
| Justification       | Left      |       |

### Values

Valid card program identifiers for programs and services the clearing system supports are listed in this table.

### Values

| Values | Description           |
|--------|-----------------------|
| CIR    | Cirrus®               |
| DMC    |                       |
| MCC    | Mastercard® Credit    |
| MSI    | Maestro®              |
| PRO    | Sweden domestic brand |
| PVL    | Private label         |

| Values | Description                                                                                                                                                                                                                               |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| spaces | Customers must submit all spaces in this subfield unless specifically directed otherwise by Mastercard®. The clearing system will then determine the correct value and populate this subfield before sending the message to the receiver. |

## Subfield 2 (Business Service Arrangement Type Code)

PDS 0158 (Business Activity), subfield 2 (Business Service Arrangement Type Code) is a one-position numeric value that identifies the business relationship between the transaction's participants.

### Subfield 2 (Business Service Arrangement Type Code)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 02    |
| Subfield Length     | n-2       | 01    |
| Data Representation | ans-1     |       |
| Justification       | Left      |       |

### Values

When a business service arrangement ID code is submitted in subfield 3, this subfield must contain the business service arrangement type code and cannot contain all spaces. The values are shown in this table.

### Values

| Values | Description      |
|--------|------------------|
| 1      | Interregional    |
| 2      | Intraregional    |
| 3      | Intercountry     |
| 4      | Intracountry     |
| 8      | Member-to-member |

| Values | Description                                                                                                                                                                                                                               |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| spaces | Customers must submit all spaces in this subfield unless specifically directed otherwise by Mastercard®. The clearing system will then determine the correct value and populate this subfield before sending the message to the receiver. |

### Subfield 3 (Business Service ID Code)

PDS 0158 (Business Activity), subfield 3 (Business Service ID Code) is a six-position value that identifies the business service to which the transaction is assigned for reconciliation and rules basis.

When a business service arrangement type code is submitted in subfield 2, this subfield must contain a valid business service ID code and cannot contain all spaces.

#### Subfield 3 (Business Service ID Code)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 03    |
| Subfield Length     | n-2       | 06    |
| Data Representation | ans-6     |       |
| Justification       | Left      |       |

#### Type and ID Codes and Descriptions

| Type code | Type description | ID code | ID code description                                                                                                              |
|-----------|------------------|---------|----------------------------------------------------------------------------------------------------------------------------------|
| 1         | Interregional    | FFTnn   | FF = "from" acquiring region<br>TT = to issuing region<br><br>nn = unique number assigned to each interregional business service |
| 2         | Intraregional    | RRnnnn  | RR = business region<br>nnnn = unique number assigned to each intraregional business service                                     |
| 3         | Intercountry     | nnnnnn  | nnnnnn = unique ID assigned to each intercountry business service                                                                |

| Type code | Type description | ID code | ID code description                                                                                                                                                                                                                      |
|-----------|------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4         | Intracountry     | CCCnnn  | CCC = ISO numeric country code<br>nnn = unique number assigned to each intracountry business service                                                                                                                                     |
| 8         | Member-to-member | Nnnnnn  | Nnnnnn = unique number assigned to each member-to-member business service                                                                                                                                                                |
| spaces    |                  |         | Customers must submit all spaces in this subfield unless specifically directed otherwise by Mastercard. The clearing system will then determine the correct value and populate this subfield before sending the message to the receiver. |

The Mastercard billing and clearing codes, Account Management System (AMS) region codes, and corresponding descriptions are listed in this table. The two-digit billing and clearing codes are used in subfield 3, denoted with FF, TT, and RR.

#### Billing and clearing codes

| Billing or clearing code | AMS region code | Description                     |
|--------------------------|-----------------|---------------------------------|
| 01                       | 1               | United States                   |
| 02                       | A               | Canada                          |
| 03                       | B               | Latin America and the Caribbean |
| 04                       | C               | Asia/Pacific                    |
| 05                       | D               | Europe                          |
| 06                       | E               | Middle East/Africa              |

### Subfield 4 (Interchange Rate Designator)

PDS 0158 (Business Activity), subfield 4 (Interchange Rate Designator) is a two-position code that indicates the interchange rate and editing rules applied to the transaction.

A valid two-position IRD is required for all U.S. region and international First Presentment/1240 messages and chargeback cycle messages with the Mastercard® brand. It also is required in messages submitted for a business service that requires an IRD to be present in the given message type.

If business need dictates, Mastercard® may introduce new business service arrangements, interchange rate designators, or both outside of the typical release schedule.

#### Subfield 4 (Interchange Rate Designator)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 04    |
| Subfield Length     | n-2       | 02    |
| Data Representation | ans-2     |       |
| Justification       | Left      |       |

#### Subfield 5 (Central Site Business Date)

PDS 0158 (Business Activity), subfield 5 (Central Site Business Date) identifies the official business processing date when the business service reconciles a transaction.

The central site business date format is YYMMDD. For all business transactions, the clearing system determines the central site business date and inserts it into the transaction.

The central site business date is the clearing system's processing date expressed in the local time zone of the clearing system's processing center.

#### Subfield 5 (Central Site Business Date)

|                     | Attribute   | Value |
|---------------------|-------------|-------|
| Subfield ID         | n-2         | 05    |
| Subfield Length     | n-2         | 06    |
| Data Representation | n-6; YYMMDD |       |
| Justification       | Right       |       |

#### Subfield 6 (Business Cycle)

PDS 0158 (Business Activity), subfield 6 (Business Cycle) is a two-digit numeric subfield (such as 01, 02, or 03) that identifies a reconciliation period in a business date.

The business cycle is adjusted at each business service's processing cycle cutover. At cycle cutover time, the business cycle is incremented by one unless the business date is also being cut over to the next period. In this case, the business date is incremented to the next available business day for the business service, and the business cycle is reset to 01.

For all business transactions, the clearing system determines the business cycle and inserts it into the transaction.

### Subfield 6 (Business Cycle)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 06    |
| Subfield Length     | n-2       | 02    |
| Data Representation | n-2       |       |
| Justification       | Right     |       |

### Subfield 7 (Acceptor Classification Override Indicator)

The clearing platform populates PDS 0158 (Business Activity), subfield 7 (Acceptor Classification Override Indicator) with appropriate values to indicate whether Acceptor Business Code (MCC) override rates, Acceptor Business (AB) Type override rates, or neither, were used in the interchange fee amount designated in PDS 0146 (Amount, Transaction Fees).

### Subfield 7 (Acceptor Classification Override Indicator)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 07    |
| Subfield Length     | n-2       | 01    |
| Data Representation | ans-1     |       |
| Justification       | N/A       |       |

### Values

This table lists the values.

### Values

| Value | Description                                                  |
|-------|--------------------------------------------------------------|
| Space | No acceptor classification override was applied.             |
| 0     | Acceptor Business Code (MCC) Override was applied.           |
| 1     | AB Type "Other" Override was applied.                        |
| A     | AB Type "Passenger Transport: Airline" Override was applied. |
| B     | AB Type "Cruise Line/Steamship" Override was applied.        |

| Value | Description                                                  |
|-------|--------------------------------------------------------------|
| C     | AB Type "Cash Disbursement" Override was applied.            |
| D     | AB Type "Payment Transaction" Override was applied.          |
| F     | AB Type "Restaurant" Override was applied.                   |
| H     | AB Type "Lodging" Override was applied.                      |
| M     | AB Type "Mail Order/Telephone Order" Override was applied.   |
| P     | AB Type "Beauty Salon" Override was applied.                 |
| R     | AB Type "Passenger Transport: Railway" Override was applied. |
| S     | AB Type "Supermarket" Override was applied.                  |
| T     | AB Type "Telephone" Override was applied.                    |
| U     | AB Type "Unique" Override was applied.                       |
| V     | AB Type "Automobile/Vehicle Rental" Override was applied.    |
| W     | AB Type "Warehouse Club" Override was applied.               |
| Z     | AB Type "ATM" Override was applied.                          |

## Subfield 8 (Product Class Override Indicator)

The clearing platform populates PDS 0158 (Business Activity), subfield 8 (Product Class Override Indicator) with a product class value to indicate whether product class override interchange rates were used in the interchange fee amount designated in PDS 0146 (Amount, Transaction Fees).

### Subfield 8 (Product Class Override Indicator)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 08    |
| Subfield Length     | n-2       | 03    |
| Data Representation | ans-3     |       |
| Justification       | N/A       |       |

## Values

**NOTE:** Refer to [PDS 0002 \(GCMS Product Identifier\)](#) for the full value list.

This table shows the values.

## Values

| Value | Description                            | GCMS Product Identifier (PDS 0002) |
|-------|----------------------------------------|------------------------------------|
| Space | No Product Class override was applied. |                                    |

## Subfield 9 (Corporate Incentive Rates Apply Indicator)

The clearing platform populates PDS 0158 (Business Activity), subfield 9 (Corporate Incentive Rates Apply Indicator) with a value that indicates if corporate incentive rates were used in the interchange fee amount designated in PDS 0146 (Amounts, Transaction Fee).

## Subfield 9 (Corporate Incentive Rates Apply Indicator)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 09    |
| Subfield Length     | n-2       | 01    |
| Data Representation | ans-1     |       |
| Justification       | N/A       |       |

## Values

This table lists the values.

## Values

| Value | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N     | No corporate incentive interchange was applied.                                                                                                                                                                                                                                                                                                                                                                                                        |
| V     | <p>UK summary VAT level corporate incentive rates were applied, meaning that the UK acquirer:</p> <ul style="list-style-type: none"> <li>Met all non-addendum business requirements for the specified interchange program.</li> <li>Did not provide addendum data required by first-level incentive interchange conditions.</li> <li>Provided the data mandated for UK VAT summary in the relevant Financial Detail Addendum/1644 messages.</li> </ul> |

| Value | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 1     | First-level corporate card incentive interchange was applied, meaning that the acquirer: <ul style="list-style-type: none"> <li>Met all non-addendum business requirements for the specified interchange program.</li> <li>Provided the mandated data in the relevant Financial Detail Addendum/1644 messages.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                           |
| 2     | Second-level corporate card incentive interchange was applied, meaning that the acquirer: <ul style="list-style-type: none"> <li>Met all non-addendum business requirements for the specified interchange program.</li> <li>Did not provide addendum data required by first-level incentive interchange conditions OR was a UK acquirer that did not provide the information needed to qualify for the UK summary VAT Level incentive interchange.</li> <li>Provided PDS 0502 (Custom Identifier) in the First Presentment/1240 message with a value that allows Mastercard to match the Mastercard First Presentment/1240 with addendum data obtained from third-party T&amp;E vendors.</li> </ul> |

## Subfield 10 (Special Conditions Indicator)

The clearing platform populates PDS 0158 (Business Activity), subfield 10 (Special Conditions Indicator) with a value to indicate whether an adjustment was included in the fee amount designated in PDS 0146.

### Subfield 10 (Special Conditions Indicator)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 10    |
| Subfield Length     | n-2       | 01    |
| Data Representation | ans-1     |       |
| Justification       | N/A       |       |

### Values

This table lists the values

### Values

| Value | Description                                           |
|-------|-------------------------------------------------------|
| N     | Neither Late Presentment nor ATM Surcharge adjustment |
| Y     | Late Presentment adjustment only                      |
| 2     | ATM Surcharge adjustment only                         |
| 3     | Both Late Presentment and ATM Surcharge adjustment    |

### Subfield 11 (Mastercard Assigned ID Override Indicator)

The clearing platform populates PDS 0158 (Business Activity), subfield 11 (Mastercard Assigned ID Override Indicator) with a value of Y or N to indicate whether override rates were used in the interchange fee amount designated in PDS 0146 (Amount, Transaction Fees) based on PDS 0176 (Mastercard Assigned ID).

### Subfield 11 (Mastercard Assigned ID Override Indicator)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 11    |
| Subfield Length     | n-2       | 01    |
| Data Representation | ans-1     |       |
| Justification       | N/A       |       |

### Subfield 12 (Account Level Management Account Category Code)

PDS 0158 (Business Activity), subfield 12 (Account Level Management Account Category Code) contains a one-position code that indicates whether the account associated with the transaction (stored on DE 2 [Primary Account Number]) is participating in one or several account level management programs where an incremental interchange is included in the transaction's interchange amount when using rate type 020 for enhanced value or interchange is calculated based on the graduated product.

### Subfield 12 (Account Level Management Account Category Code)

|             | Attribute | Value |
|-------------|-----------|-------|
| Subfield ID | n-2       | 12    |

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield Length     | n-2       | 01    |
| Data Representation | ans-1     |       |
| Justification       | N/A       |       |

## Values

PDS 0158, subfield 12 contains a value for account level management when unique IRDs are not defined. Customers in the Europe Region use this subfield. Customers in the U.S. and Canada Regions do not use subfield 12 to identify the transaction processed as account level management.

GCMS populates PDS 0158, subfield 12 when:

- An account in the Europe region associated with the transaction is participating in Enhanced Value where an incremental incentive is included in the transaction's interchange amount.
- An account in the Europe region associated with the transaction is participating in Product Graduation.
- An account in the Europe region associated with the transaction is participating in a both Enhanced Value and Product Graduation where an incremental incentive is included in the transaction's interchange amount.

This subfield will be populated by GCMS as part of the qualification process for account level management transactions.

## Values

| Value       | Description                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N (default) | For markets that use a rate adjustment for incentive interchange and unique IRDs are not defined for account level management, such as Europe, value N indicates a rate adjustment was not applied. For markets that use unique IRDs for account level management incentive interchange or markets that do not participate in account level management services, value N represents the default value. |
| B           | Enhanced Value                                                                                                                                                                                                                                                                                                                                                                                         |
| M           | Product Graduation and Enhanced Value                                                                                                                                                                                                                                                                                                                                                                  |
| P           | Product Graduation                                                                                                                                                                                                                                                                                                                                                                                     |

## Subfield 13 (Rate Indicator)

PDS 0158 (Business Activity), subfield 13 (Rate Indicator) indicates the rate applied by GCMS to the transaction.

### Subfield 13 (Rate Indicator)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 13    |
| Subfield Length     | n-2       | 01    |
| Data Representation | ans-1     |       |
| Justification       | N/A       |       |

### Values

This table lists the values.

### Values

| Value | Description                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| B     | Base                                                                                                                                                                                                                                 |
| C     | MPP Regulated Rate 1                                                                                                                                                                                                                 |
| E     | The transaction qualified for the Europe Cross Border Acquiring Regulated Rate. The clearing system adjusted the interchange fee since the original interchange fee was greater than the maximum allowed interchange fee.            |
| F     | The transaction qualified for Europe Cross Border Acquiring Regulated Rate. The clearing system did not adjust the interchange fee since the original interchange fee was less than or equal to the maximum allowed interchange fee. |
| P     | MPP Regulated Rate 2                                                                                                                                                                                                                 |
| 1     | Base plus Fraud Adjustment                                                                                                                                                                                                           |

| Second Presentment/1240                                              | C   | X   | C   |
| Fee Collection (Retrieval Fee Billing)/1740                          | C   | X   | C   |
| Fee Collection (Handling Fees)/1740                                  | C   | X   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | C   | X   | C   |

The clearing system inserts PDS 0159 into all transactions with settlement impact for which the clearing system is responsible for managing funds settlement.

A transaction has settlement impact if it causes funds to be moved between customers or between the customer and Mastercard when the transaction is successfully completed.

Amount, Reconciliation (DE 5) always is assigned to PDS 0159 for reconciliation.

In PDS 0146 (Amounts, Transaction Fee), each occurrence of a transaction fee (subfield 7 [Amount, Fee, Reconciliation]) is assigned to PDS 0159 for reconciliation, as indicated by the Fee Settlement Indicator subfield associated with each fee.

### PDS 0159 subfields

PDS 0159 (Settlement Data) consists of nine subfields.

The subfields are defined in this table.

#### PDS 0159 subfields

| Number | Positions | Name                                        | Attribute | Justification |
|--------|-----------|---------------------------------------------|-----------|---------------|
| 1      | 1–11      | Settlement Service Transfer Agent ID Code   | ans-11    | right         |
| 2      | 12–39     | Settlement Service Transfer Agent Account   | ans-28    | left          |
| 3      | 40        | Settlement Service Level Code               | n-1       | N/A           |
| 4      | 41–50     | Settlement Service ID Code                  | ans-10    | left          |
| 5      | 51        | Settlement Foreign Exchange Rate Class Code | an-1      | N/A           |

| Number | Positions | Name                 | Attribute   | Justification |
|--------|-----------|----------------------|-------------|---------------|
| 6      | 52–57     | Reconciliation Date  | n-6; YYMMDD | N/A           |
| 7      | 58–59     | Reconciliation Cycle | n-2         | N/A           |
| 8      | 60–65     | Settlement Date      | n-6; YYMMDD | N/A           |
| 9      | 66–67     | Settlement Cycle     | n-2         | N/A           |

### Subfield 1 (Settlement Service Transfer Agent ID Code)

Currently, subfield 1 (Settlement Service Transfer Agent ID Code) is space-filled.

The Settlement Service Transfer Agent ID Code identifies the transfer agent ID selected for the receiving customer. The agent established one or more accounts with at least one bank approved to effect settlement with Mastercard. The agent's accounts are used for settling activity with Mastercard for itself, a customer or group of customers, or both.

The clearing system always determines this subfield's data value.

### Subfield 2 (Settlement Service Transfer Agent Account)

Subfield 2 (Settlement Service Transfer Agent Account) contains the agent's bank account number for the receiving customer associated with the settlement service identified in subfield 4.

The clearing system always determines this subfield's value.

### Subfield 3 (Settlement Service Level Code)

Subfield 3 (Settlement Service Level Code) is a one-digit code that identifies the settlement level of the settlement service.

The clearing system always determines this subfield's data value. Supported values are listed in this table.

#### Subfield 3 (Settlement Service Level Code)

| Value | Description   |
|-------|---------------|
| 1     | Regional      |
| 3     | Intracurrency |

### Subfield 4 (Settlement Service ID Code)

Subfield 4 (Settlement Service ID Code) contains a 10-position value that uniquely identifies the settlement service. This subfield is populated according to the settlement service ID selected for the receiving customer.

The clearing system always determines this subfield's data value.

### Subfield 5 (Settlement Foreign Exchange Rate Class Code)

Subfield 5 (Settlement Foreign Exchange Rate Class Code) identifies the classification of foreign exchange rates used to compute payment amounts for this settlement service.

The clearing system always determines this subfield's data value. Supported values are listed in this table.

#### Subfield 5 (Settlement Foreign Exchange Rate Class Code)

| Value | Description                                                                                                            |
|-------|------------------------------------------------------------------------------------------------------------------------|
| F     | Fixed; indicates that a fixed rate class was used to convert from transaction currency to receiver's payment currency. |
| M     | Market; indicates that a market rate was used to convert from base currency to the receiver's payment currency.        |
| N     | Not applicable; no conversion occurred.                                                                                |

### Subfield 6 (Reconciliation Date)

Subfield 6 (Reconciliation Date) is a six-digit subfield in the format YYMMDD that identifies the clearing system's processing date expressed in the local time zone of the clearing system's processing center. Clearing reconciliation cutoffs may occur every day.

The clearing system may process a transaction on a Sunday, but the transaction may not be settled until Monday if the settlement bank is not open on Sundays. If this occurs, the clearing system assigns the Sunday date to subfield 6 and assigns the Monday date to subfield 8 (Settlement Date).

The clearing system always determines this subfield's data value. The clearing system inserts Reconciliation Date into any transaction to which it has assigned a Settlement Service Level Code and Settlement Service ID Code.

This subfield contains the same value as Central Site Business Date (PDS 0158, subfield 5).

## Subfield 7 (Reconciliation Cycle)

Subfield 7 (Reconciliation Cycle) is a two-digit subfield that identifies a reconciliation period in a reconciliation date. The reconciliation cycle is adjusted at each clearing reconciliation cutoff. At cutoff, the reconciliation cycle is incremented by one unless the last cycle in the reconciliation date is being cutoff. In this case, the reconciliation date is incremented to the next available business day for the settlement service, and the reconciliation cycle is 01. The reconciliation cycles in this table are assigned.

### Subfield 7 (Reconciliation Cycle)

| Value | Description |
|-------|-------------|
| 01    | Cycle 1     |
| 02    | Cycle 2     |
| 03    | Cycle 3     |
| 04    | Cycle 4     |
| 05    | Cycle 5     |
| 06    | Cycle 6     |

The clearing system always determines this subfield's data value. The clearing system inserts reconciliation cycle into any transaction to which it assigned a settlement service level code and settlement service ID code.

This subfield contains the same value as PDS 0158, subfield 6 (Business Cycle).

## Subfield 8 (Settlement Date)

Subfield 8 (Settlement Date) is a six-digit subfield in the format YYMMDD that identifies the date that the settlement service initiates settlement for the message, such as the settlement advisement date, which is based on the clearing date, settlement service cutoff cycle, and calendar for the settlement service. Settlement service settlement cutoffs occur only on banking business days the settlement service specifically identifies.

The clearing system may process a transaction on a Sunday but may not settle it until Monday if the settlement bank is not open on Sundays. If this occurs, the clearing system assigns the Sunday date to subfield 6 (Reconciliation Date) and assigns the Monday date to subfield 8 (Settlement Date).

The clearing system always determines this subfield's data value. The clearing system inserts the settlement date in any transaction to which it assigned a settlement service level code and settlement service ID code.

The settlement date is adjusted for each settlement service level and settlement service ID.

The clearing system populates this field with all nines to indicate that a specific installment payment option has been indicated in PDS 0195 (Installment Data), subfield 2 (Payment Option Code) and that the settlement dates and settlement amounts will be assigned in PDS 0160 (Settlement Data, Multiple).

### Subfield 9 (Settlement Cycle)

Subfield 9 (Settlement Cycle) is a two-digit subfield that identifies a settlement period in a settlement date. The settlement cycle is adjusted at each settlement service reconciliation cutoff. The settlement cycle in this table is assigned.

#### Subfield 9 (Settlement Cycle)

| Value | Description |
|-------|-------------|
| 01    | Cycle 1     |

Clearing file activity senders and receivers should anticipate that additional settlement cycle cutoffs will be added over time to support regional and local needs. All customers and processors should be prepared to receive and reconcile against multiple settlement cycles.

## PDS 0160 (Settlement Data, Multiple)

PDS 0160 (Settlement Data, Multiple) provides the settlement date and respective settlement amount for each clearing transaction with an installment payment option.

#### Attributes

| Attribute           | Description                    |
|---------------------|--------------------------------|
| Data Representation | n-108; TAGLLL                  |
| Tag Field           | 0160                           |
| Data Length         | 3 positions, value = 018–108   |
| Data Field          | Variable length, 108 positions |
| Subfields           | 2                              |
| Occurrences         | 1–6                            |
| Justification       | See "Subfields"                |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | .   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | .   | X   | C   |
| Second Presentment/1240                               | .   | X   | C   |

The clearing system inserts PDS 0160 into all First Presentment messages and subsequent cardholder life cycle transactions with settlement impact for which the clearing system is responsible for managing installment payment funds settlement.

A transaction with a payment option is identified by the presence of PDS 0195 (Installment Data).

If PDS 0195, subfield 2 (Payment Option Code) is present and indicates a specific payment option, PDS 0159 (Settlement Data), subfield 8 (Settlement Date) will contain all nines to alert the customer to look at PDS 0160 for the settlement dates and settlement amounts.

If PDS 0195, subfield 2 contains value 61 (Installments [Twice Pay/Three or More]), and subfield 1 (Total Number of Installments) is value 2, and it is a First Presentment, PDS 0160 will contain two sets of settlement dates as the twice pay payments of a First Presentment will be settled in two parts.

For Japan domestic transactions, if PDS 0195, subfield 2 contains value 61, and subfield 1 is 2 in First Presentment/1240, the clearing system inserts PDS 0160 into the message. However, the clearing system does not insert PDS 0160 into First Chargeback/1442, Arbitration Chargeback/1442, or Second Presentment/1240 even when PDS 0195, subfield 2 contains value 61, and subfield 1 is value 2.

## PDS 0160 subfields

This PDS consists of two subfields.

### PDS 0160 Subfields

| Number | Positions | Name            | Attribute   | Justification |
|--------|-----------|-----------------|-------------|---------------|
| 1      | 1-6       | Settlement Date | n-6; YYMMDD | N/A           |

| Number | Positions | Name              | Attribute | Justification |
|--------|-----------|-------------------|-----------|---------------|
| 2      | 7-18      | Settlement Amount | n-12      | Right         |

### Subfield 1 (Settlement Date)

Subfield 1 (Settlement Date) is a six-digit subfield in the format YYMMDD that identifies the date that the settlement service initiates settlement for the message. An example is the settlement advisement date, which is based on the clearing date, settlement service cutoff cycle, and calendar for the settlement service. Settlement service settlement cutoffs occur only on the banking business days that the settlement service specifically identifies.

The clearing system always determines this subfield's data value if the transaction is identified as having a specific installment payment option in PDS 0195 (Installment Data), subfield 2 (Payment Option Code).

The settlement date is adjusted for each settlement service level and settlement service ID.

### Subfield 2 (Settlement Amount)

Subfield 2 (Settlement Amount) is the amount to be settled with the customer on the date specified in subfield 1 (Settlement Date).

GCMS calculates this amount according to the installment payment option identified in PDS 0195.

## PDS 0164 (Currency Cross Rates)

PDS 0164 (Currency Cross Rates) in Currency Update/1644 messages provides customers with cross-rates between global base currency (currently U.S. Dollars) and other standard currencies.

These rates are expressed as indirect rates. That is, they contain the inverted rates of conversion between a given currency and global base currency (currently U.S. Dollars).

### Attributes

| Attribute           | Description                                      |
|---------------------|--------------------------------------------------|
| Data Representation | ans...230; TAGLLLVAR                             |
| Tag Field           | 0164                                             |
| Data Length         | 3 positions, value = 023-230 in increments of 23 |
| Data Field          | Variable length, 23-230 positions                |
| Subfields           | 5 subfields for each currency data occurrence    |

| Attribute     | Description     |
|---------------|-----------------|
| Occurrences   | 1–10            |
| Justification | See “Subfields” |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message              | Org | Sys | Dst |
|----------------------|-----|-----|-----|
| Currency Update/1644 | .   | X   | M   |

This PDS contains one to 10 occurrences of currency conversion data. The clearing system may provide multiple Currency Update/1644 messages to customers (each with up to 10 rates per message) to provide information on currency conversion rates used in processing Financial messages.

## PDS 0164 subfields

The subfields of PDS 0164 may contain one to 10 occurrences of currency cross rate data.

Each occurrence of currency update information consists of five subfields as defined in this table.

## PDS 0164 subfields

| Number | Positions | Name                     | Attribute   | Justification |
|--------|-----------|--------------------------|-------------|---------------|
| 1      | 1–3       | Currency Code            | n-3         | N/A           |
| 2      | 4–14      | Currency Conversion Rate | n-11        | right         |
| 3      | 15        | Currency Conversion Type | a-1         | N/A           |
| 4      | 16–21     | Business Date            | n-6; YYMMDD | N/A           |
| 5      | 22–23     | Delivery Cycle           | n-2         | right         |

## Subfield 1 (Currency Code)

Subfield 1 (Currency Code) is the ISO numeric currency code of the currency for which conversion rate information is being provided.

## Subfield 2 (Currency Conversion Rate)

Subfield 2 (Currency Conversion Rate) is the conversion rate between DE 50) Currency Code, Reconciliation) and the Currency Code in subfield 1.

This subfield's first position indicates the decimal point position of the conversion rate data.

For example, a subfield value of 90001234567 indicates a conversion rate of 0.001234567.

### Example

Assume that currency XYZ has a direct ratio to U.S. dollars (USD) of 3:1. The indirect rate is 1/3, or 0.33333. The clearing system inserts a 9 in the first position of subfield 2 to indicate the location of the decimal and the resulting value in PDS 0164 subfield 2 is 90333333333. The receiver interprets this as 0.333333333.

The receiver multiplies this rate by the non-U.S. dollar amount to determine the U.S. dollar equivalent or divides the U.S. dollar amount by this rate to determine the non-U.S. dollar amount.

To illustrate this example:

- 100 XYZ \* (multiplied by) 0.333333333 = 33.33 USD
- 100 USD / (divided by) 0.333333333 = 300 XYZ

## Subfield 3 (Currency Conversion Type)

Subfield 3 (Currency Conversion Type) indicates the type of rate represented in subfields 1 and 2. The customer uses three rate types to calculate settlement (buy, mid, or sell). The values for subfield are in this table.

### Subfield 3: Currency Conversion Type

| Value | Description |
|-------|-------------|
| B     | Buy rate    |
| M     | Mid rate    |
| S     | Sell rate   |

## Subfield 4 (Business Date)

Subfield 4 (Business Date) indicates the business date that the currency conversion rates are effective. The format is YYMMDD.

## Subfield 5 (Delivery Cycle)

Subfield 5 (Delivery Cycle) contains the delivery cycle in which the currency conversion rates are being distributed.

## PDS 0165 (Settlement Indicator)

PDS 0165 (Settlement Indicator) indicates the settlement impact of amounts in an IPM message.

### Attributes

| Attribute           | Description                                        |
|---------------------|----------------------------------------------------|
| Data Representation | ans...30; TAGLLLVAR                                |
| Tag Field           | 0165                                               |
| Data Length         | 3 positions, value = 001–030                       |
| Data Field          | Variable length, 1–30 positions                    |
| Subfields           | 2; subfield 1 is mandatory; subfield 2 is optional |
| Justification       | See "Subfields"                                    |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |

| s2 Settlement Agreement Information                                  | O   | .   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | M   | .   | M   |
| s2 Settlement Agreement Information                                  | O   | .   | C   |
| Message Exception/1644 and File Reject/1644                          | .   | X   | C   |

The transaction originator must provide this PDS. It must indicate normal, bilateral, or collection only processing.

### Values

If present, PDS 0165 cannot contain all low values or all high values.

### Application note

Europe region issuers that participate in a meal voucher program must ensure that PDS 0165, subfield 1, contains value B for any transaction the issuer will settle directly with the participating merchant. Issuers that act as meal voucher service providers indicate their intention to settle a transaction directly with a merchant by using the Prepaid Voucher format of Authorization System DE 124 in the Authorization Request Response/0110 message for such transactions. The requirements for this format are defined in the *Mastercard Network Processing Dual Message Authorization System Guide*.

## PDS 0165 subfields

This PDS consists of two subfields

### PDS 0165 Subfields

| Number | Positions | Name                             | Attribute | Justification |
|--------|-----------|----------------------------------|-----------|---------------|
| 1      | 1         | Settlement Indicator             | an-1      | N/A           |
| 2      | 2–30      | Settlement Agreement Information | ans...29  | left          |

### Subfield 1 (Settlement Indicator)

Subfield 1 (Settlement Indicator) identifies the type of clearing and settlement processing to be performed for a transaction. Values are listed in this table.

#### Subfield 1 (Settlement Indicator)

| Value | Description                                                                                                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| B     | Bilateral settlement agreement applies; the clearing system clears the transaction but does not settle it.                                                                                                               |
| C     | Collection Only; the transaction is On-Us or intraprocessor and was cleared and settled outside the clearing system; it is submitted to the clearing system according to rules governing "collection-only" transactions. |
| M     | Mastercard® clearing and net settlement; the clearing system should clear and settle the transaction.                                                                                                                    |

### Subfield 2 (Settlement Information)

The message originator may provide Settlement Information. This optional variable-length subfield (up to 29 characters long) may contain additional information related to a bilateral settlement agreement.

The information conveyed is assumed to have proprietary meaning between the participants; therefore, the clearing system does not perform any editing on this subfield.

If a bilateral settlement agreement does not require additional information, this subfield should be omitted, and PDS 0165 should be truncated at the end of the first subfield.

### Subfield 2 (Settlement Information)

| Value | Description                                                                                                                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| X     | Settlement is initiated by the Single Message System on behalf of the Clearing Platform. The X value is followed by a unique 25-byte input source reference ID to assist with reconciliation. The reference ID is used in PDS 0300 (Reconciled, File) to create a new logical file for Settlement Position Detail/1644-688 messages. |

**NOTE:** When PDS 0165 has the value X in subfield 2, position 1, the Input Source Reference IDs in position 2 through position 26 will be used as the identifier assigned to PDS 0300 (Reconciled, File) to create a new logical file for 1644/688 Settlement Reconciliation Notification Messages.

## PDS 0170 (Acceptor Inquiry Information)

PDS 0170 (Acceptor Inquiry Information) provides acceptor contact data for cardholder, acquirer, or issuer use if there are questions or disputes concerning a transaction.

### Attributes

| s3 Additional Contact Information                     | O   | .   | C   |

For U.S. and Canada-acquired First Presentment/1240 transactions, PDS 0170 subfield 1 (Customer Service Phone Number) must be present when DE 22 (Point of Service [POS] Entry Mode), subfield 5 (Cardholder Present Data) is equal to 2 (cardholder not present, mail transaction), 3 (cardholder not present, phone transaction), or 4 (cardholder not present, standing [recurring] transaction).

### Values

If present, PDS 0170 cannot contain all low values, all high values, all spaces, or all zeros.

## PDS 0170 subfields

This PDS consists of three subfields

### PDS 0170 subfields

| Number | Positions | Name                                                               | Attribute | Justification |
|--------|-----------|--------------------------------------------------------------------|-----------|---------------|
| 1      | 1-16      | Customer Service Phone Number<br>(Optional subfield for this PDS.) | ans-16    | left          |
| 2      | 17-32     | Acceptor Phone Number<br>(Optional subfield for this PDS.)         | ans-16    | left          |

| Number | Positions | Name                                                               | Attribute | Justification |
|--------|-----------|--------------------------------------------------------------------|-----------|---------------|
| 3      | 33–57     | Additional Contact Information<br>(Optional subfield for this PDS) | ans...25  | left          |

### Subfield 1 (Acceptor Customer Service Phone Number)

PDS 0170, subfield 1 (Acceptor Customer Service Phone Number) contains the phone number of the acceptor that can be used for transaction inquiries.

#### Subfield 1 values

Acceptor Customer Service Phone Number must contain a valid value defined and formatted as per local telecom or the ITU Telecommunication Standardization Sector (ITU-T) standards.

For U.S. region and Canada transactions, if present, Acceptor Customer Service Phone Number must be 10 positions with the beginning three positions numeric.

#### Subfield 1 processing rules

The Acceptor Customer Service Phone Number should be present for all transactions and contain a valid phone number, unless a URL is provided for contact.

For U.S. region and Canada transactions Acceptor Customer Service Phone Number must be present for mail order, phone order, and standing/recurring transactions.

The Acceptor Customer Service Phone Number should be present for all transactions and contain a valid phone number, unless a URL is provided for contact.

For U.S. region and Canada transactions Acceptor Customer Service Phone Number must be present for mail order, phone order, and standing/recurring transactions.

If present, subfield 1 cannot contain all zeros or any of these values:

- 000-000-0000
- (000) 000-0000
- 000 000 0000

For these transactions acquired in the U.S. or Canada regions, the Customer Service Phone Number (PDS 0170, subfield 1), if present, must contain a 10-position phone number and must be left-justified with trailing spaces.

- First Presentment/1240
- Second Presentment/1240
- First Chargeback/1442
- Arbitration Chargebacks/1442
- Retrieval Requests/1644
- Fee Collection (Retrieval Fee Billing)/1740

The first three positions must be numeric.

For U.S. and Canada-acquired First Presentment/1240 transactions, PDS 0170 subfield 1 (Customer Service Phone Number) must be present when DE 22 (Point of Service [POS] Entry Mode), subfield 5 (Cardholder Present Data) is equal to 2 (cardholder not present, mail transaction), 3 (cardholder not present, phone transaction), or 4 (cardholder not present, standing [recurring] transaction), unless the transaction is collection only or a reversal.

### Subfield 1 program rules

Payment facilitator-enabled transactions: The sponsored merchant customer service phone number should be provided.

### Subfield 2 (Acceptor Phone Number)

PDS 0170, subfield 2 (Acceptor Phone Number) contains the business phone number of the acceptor, if different from the acceptor customer service phone number.

If present, subfield 2 cannot contain all zeros or any of these values:

- 000-000-0000
- (000) 000-0000
- 000 000 0000

For these original, non-credit transactions acquired in the U.S. or Canada regions, subfield 2, if present, must contain a 10-position phone number and must be left-justified with trailing spaces.

The first three positions must be numeric.

- First Presentment/1240
- Second Presentment/1240
- First Chargeback/1442
- Arbitration Chargebacks/1442
- Retrieval Requests/1644
- Fee Collection (Retrieval Fee Billing)/1740

### Subfield 2 values

Acceptor Phone Number must contain a valid value defined and formatted as per local telecom or the ITU Telecommunication Standardization Sector (ITU-T) standards.

For U.S region and Canada transactions, if present, Acceptor Phone Number must be 10 positions with the beginning three positions numeric.

### Subfield 2 processing rules

The acceptor phone number can be provided when different from the acceptor customer phone number.

## Subfield 3 (Additional Contact Information)

Subfield 3 (Additional Contact Information) may contain additional acceptor contact information, such as secondary phone numbers, customer service operation hours, and contact name.

If present, PDS 0170 cannot contain all zeros.

## PDS 0171 (Alternate Acceptor Description Data)

PDS 0171 (Alternate Acceptor Description Data) may provide a local language version of the data in DE 43 (Acceptor Name/Location) using a non-standard character set.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...201; TAGLLLLVAR            |
| Tag Field           | 0171                             |
| Data Length         | 3 positions, value = 004–201     |
| Data Field          | Variable length, 4–201 positions |
| Subfields           | 2                                |
| Justification       | See "Subfields"                  |

**NOTE: Subfield 2 includes binary data. Converting this data to other formats may cause data loss.**

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | O   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |
| Retrieval Request/1644                                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | O   | .   | C   |

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Fee Collection (Retrieval Fee Billing)/1740 | O   | .   | C   |

This PDS is optional in First Presentment/1240 messages and subsequent cardholder life cycle transactions.

### Values

If present, PDS 0171 cannot contain all low values or all high values.

## PDS 0171 subfields

This PDS consists of two subfields.

### Subfield attributes and values

| Number | Positions | Name                      | Attribute | Justification |
|--------|-----------|---------------------------|-----------|---------------|
| 1      | 1–3       | Character Set Indicator   | an-3      | N/A           |
| 2      | 4–201     | Acceptor Description Data | b...198   | left          |

### Subfield 1 (Character Set Indicator)

Subfield 1 (Character Set Indicator) identifies the character set in which the alternate acceptor description is provided. The values are listed in this table.

### Subfield 1 (Character Set Indicator)

| Value | Description           |
|-------|-----------------------|
| ARA   | Arabic                |
| CHS   | Chinese (simplified)  |
| CHT   | Chinese (traditional) |
| CYR   | Cyrillic              |
| GRK   | Greek                 |
| HEB   | Hebrew                |
| HIR   | Hiragana              |
| HAN   | Hangul                |

| Value | Description |
|-------|-------------|
| KAN   | Kanji       |
| KAT   | Katakana    |
| ROM   | Roman       |
| THI   | Thai        |
| VIE   | Vietnamese  |

## Subfield 2 (Acceptor Description Data)

**NOTE: Subfield 2 includes binary data. Converting this data to other formats may cause data loss.**

Subfield 2 (Acceptor Description Data) consists of a free-format text describing the acceptor name or location (or both), provided in the character set as indicated in subfield 1.

This data is variable length, with a maximum length of 198 positions. This subfield is not edited.

## PDS 0172 (Sole Proprietor Name)

PDS 0172 (Sole Proprietor Name) provides the acceptor's proprietor name.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | ans...30; TAGLLLLVAR            |
| Tag Field           | 0172                            |
| Data Length         | 3 positions, value = 001-030    |
| Data Field          | Variable length, 1-30 positions |
| Subfields           | None                            |
| Justification       | Left                            |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | O   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |
| Retrieval Request/1644                                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |

### Values

This PDS is optional in First Presentment/1240 messages and subsequent cardholder life cycle transactions. If present, it must be left-justified and cannot contain all spaces.

## PDS 0173 (Legal Corporate Name)

PDS 0173 (Legal Corporate Name) provides the acceptor's legal corporation name.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | ans...30; TAGLLLLVAR            |
| Tag Field           | 0173                            |
| Data Length         | 3 positions, value = 001-030    |
| Data Field          | Variable length, 1-30 positions |
| Subfields           | None                            |
| Justification       | Left                            |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |
| Retrieval Request/1644                                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |

This PDS is conditional in First Presentment/1240 messages and subsequent cardholder life cycle transactions. If present, it must be left-justified and cannot contain all spaces.

### Values

This PDS must be present in the associated First Presentment/1240 messages submitted with this criteria:

- DE 43 (Acceptor Name/Location), subfield 6 (Acceptor Country Code) equals USA.
- DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type) equals 00 Purchase (Goods and services) or 18 Unique.
- The transaction must be processed with a Mastercard® commercial card.
- The transaction is submitted for a U.S.-acquired Commercial Interchange Rate program.

Transactions submitted for U.S. Commercial Standard, International Commercial Standard, and International Commercial Purchasing Standard interchange are excluded from submitting PDS 0173 in the associated First Presentment/1240 messages, unless PDS 0596 (Acceptor Tax ID), subfield 2 (Acceptor Tax ID Provided Code) equals Y.

## PDS 0174 (Dun & Bradstreet Number)

PDS 0174 (Dun & Bradstreet Number) provides the acceptor's Dun & Bradstreet assigned number.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | n-15; TAGLLL             |
| Tag Field           | 0174                     |
| Data Length         | 3 positions, value = 015 |

| Attribute     | Description                |
|---------------|----------------------------|
| Data Field    | Fixed length, 15 positions |
| Subfields     | None                       |
| Justification | Left                       |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                                               | Org | Sys | Dst |

| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |

## Values

This PDS is optional in First Presentment/1240 messages and subsequent cardholder life cycle transactions. If present, it must be numeric and cannot contain all zeros.

## PDS 0175 (Acceptor URL Address)

PDS 0175 (Acceptor URL Address) contains the web address of the acceptor.

## Attributes

| Attribute           | Description                      |

| Second Presentment/1240                                              | O   | .   | C   |
| Retrieval Request/1644                                               | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                                | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740                          | O   | .   | C   |
| Fee Collection (Handling Fees)/1740                                  | O   | .   | C   |
| Fee Collection (other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

## Values

If present, PDS 0175 must be left-justified and cannot contain all spaces or all zeros.

## Processing rules

The Acceptor URL Address must be present for all electronic commerce transactions and contain a valid website address. For all other transactions, it must be provided unless a customer service phone is provided for contact.

## Program rules

Payment facilitator-enabled transaction: The sponsored merchant acceptor URL should be provided.

## PDS 0176 (Mastercard Assigned ID)

PDS 0176 (Mastercard Assigned ID) is assigned by Mastercard® for interchange and transaction data integrity purposes. Once an ID is assigned, all transactions that are submitted should contain this ID.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-6; TAGLLL             |
| Tag Field           | 0176                      |
| Data Length         | 3 positions, value = 006  |
| Data Field          | Fixed length, 6 positions |
| Subfields           | None                      |
| Justification       | Left                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

If PDS 0176 is present and valid in a First Presentment/1240 message, GCMS will forward it to the issuer. The issuer must retain PDS 0176 and provide it in subsequent First Chargeback/1442 and Arbitration Chargeback/1442 messages. Similarly, acquirers that receive PDS 0176 in a First Chargeback/1442 message must retain it and provide it in subsequent Second Presentment/1240 messages. This is needed for GCMS to apply the same interchange rate to the lifecycle transaction it applied to the First Presentment/1240 transaction.

## Editing rules

PDS 0176 is not a required field for IIAS transactions. It may be sent with IIAS transactions; however, if it is sent, it will be checked for validity. If the ID is not valid, the transaction will be rejected.

If present, PDS 0176 (Mastercard Assigned ID) must be valid and must be used only for transactions that are authorized to use this ID. If received in First Presentments, it must be returned in First Chargebacks, Second Presentments, and Arbitration Chargebacks.

If PDS 0057 (Transaction Category Indicator) has the value 3 (The transaction is from an acceptor terminal that verified qualified healthcare expenses against an inventory information approval system [IIAS] during the authorization process), the Mastercard Assigned ID is required.

For specific interchange programs defined in the U.S. region intracountry BSA 2/010001, GCMS will require and validate PDS 0176 if these conditions have been met:

- The acquirer has submitted PDS 0176 for the transaction,
- DE 3 (Processing Code), subfield 1 is Purchase: Goods and Services (00), Unique Transaction: Requires Unique MCC (18), or Credit: Purchase Return (20).

**NOTE: Refer to the *Interchange Manual for the U.S. Region* for information of specific IRDs.**

If the transaction meets this mentioned criteria, the Mastercard Assigned ID and IRD combination is edited against the valid Mastercard Assigned ID and IRD list.

For the interchange programs defined in the Canada intracountry Business Service Arrangement 4/124001, GCMS will require and validate PDS 0176 (Mastercard Assigned ID) if these conditions have been met:

- The acquirer has submitted PDS 0176 for the transaction.
- DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type) is 00 (Purchase [Goods and Services]), 09 (Purchase [Goods and Services] with Cash Back [only for use with card products]), or 20 (Credit [Purchase Return]).
- The acquirer has submitted the transaction for a tiered interchange program. Refer to the *Interchange Manual Canada Region* for specific IRD requirements.

For the interchange programs defined in the Canada intracountry BSA 4/124001, GCMS will require and validate PDS 0176 if these conditions have been met:

- The acquirer has submitted PDS 0176 for the transaction.
- DE 3 (Processing Code), subfield 1 is Purchase: Goods and Services (00), Unique Transaction: Requires Unique MCC (18), or Credit: Purchase Return (20).

Refer to the *Interchange Manual Canada Region* for specific IRD requirements

If the transaction meets this criteria, the Mastercard Assigned ID and IRD combination is edited against the valid Mastercard Assigned ID and IRD list.

For specific interchange programs defined in intracountry BSAs of Eurozone countries, GCMS will require and validate PDS 0176 if these conditions have been met:

- The acquirer has submitted PDS 0176 for the transaction.
- For IRDs S3 and T2, DE 3 (Processing Code), subfield 1 is 00 (Purchase), 09 (Purchase with Cash Back), or 20 (Credit).
- For IRD P3, DE 3 (Processing Code), subfield 1 is 00 (Purchase).

Refer to the *Interchange and Service Fees Manual: Europe Region* for specific IRD requirements

### Interchange programs

| IRD | Description                         |
|-----|-------------------------------------|
| S3  | Maestro® POS Large Merchant         |
| P3  | Maestro® PayPass® Large Merchant    |
| T2  | Debit Mastercard POS Large Merchant |

If the transaction meets the above criteria, the Mastercard Assigned ID and IRD combination is edited against the valid Mastercard Assigned ID and IRD list maintained at Mastercard®.

### Acquirers impact

Acquirers should note the following:

- For First Presentment/1240 non-collection messages, if the IRD submitted is a specified U.S.-to-U.S. IRD as outlined in criteria in the Interchange Manual for the U.S. Region, then PDS 0176 must be present.
- For First Presentment/1240 non-collection messages, if PDS 0176 is submitted and the IRD submitted is a U.S.-to-U.S. IRD as outlined in criteria in the *Interchange Manual for the U.S. Region*, the message will be subject to the Mastercard Assigned ID interchange edit.
- Acquirers must be able to retain PDS 0176 and provide it in any subsequent transactions.
- For all acceptors that have been issued a Mastercard Assigned ID, all submitted First Presentment transactions should contain the Mastercard Assigned ID in PDS 0176, including credits and reversals.

### Issuers impact

Issuers should note these items:

- Mastercard® will forward PDS 0176 in First Presentment/1240 messages to the issuers when the acquirer submits it, or when Mastercard has inserted it from the corresponding Authorization message for specific product use cases.
- Issuers continue to receive the tiered interchange IRDs in PDS 0158 (Business Activity), subfield 4 (Interchange Rate Designator) if submitted by the acquirer.
- Issuers must be able to retain PDS 0176 and provide it in any subsequent Chargeback transactions.

## Values

The Mastercard Assigned Merchant ID in this PDS should always be a value assigned by Mastercard®.

## PDS 0177 (Cross-border)

PDS 0177 (Cross-border) identifies for the message receiver whether the transaction is a cross-border transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | a-2; TAGLLL               |
| Tag Field           | 0177                      |
| Data Length         | 3 positions, value = 002  |
| Data Field          | Fixed length, 2 positions |
| Subfields           | 2                         |
| Justification       | See "Subfields"           |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | X   | M   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | X   | M   |
| Second Presentment/1240                               | C   | X   | M   |

The clearing system populates values in PDS 0177. Customer-generated messages should not contain PDS 0177. Transactions processed by the Mastercard® network and then submitted to the clearing system will contain PDS 0177.

## PDS 0177 subfields

This PDS consists of two subfields.

### PDS 0177 subfields

| Number | Positions | Name                   | Attribute | Justification |
|--------|-----------|------------------------|-----------|---------------|
| 1      | 1         | Cross-border Indicator | a-1       | N/A           |
| 2      | 2         | Currency Indicator     | a-1       | N/A           |

### Subfield 1 (Cross-border Indicator)

Subfield 1 (Cross-border Indicator) identifies whether the transaction qualified as a cross-border transaction and could be subject to cross-border transaction pricing guidelines. The values are listed in this table.

#### Subfield 1 (Cross-border Indicator)

| Value | Description                                     |
|-------|-------------------------------------------------|
| Y     | Qualifies as a cross-border transaction.        |
| N     | Does not qualify as a cross-border transaction. |

### Subfield 2 (Currency Indicator)

Subfield 2 (Currency Indicator) identifies whether the transaction was submitted to Mastercard in the local currency of the merchant. The currency indicator is populated only with the values of Y or N if the transaction qualifies as a cross-border transaction. The values are listed in this table.

#### Subfield 2 (Currency Indicator)

| Value | Description                                                      |
|-------|------------------------------------------------------------------|
| Space | Does not qualify as a cross-border transaction.                  |
| Y     | Transaction submitted in the local currency of the merchant.     |
| N     | Transaction not submitted in the local currency of the merchant. |

## PDS 0178 (Alternate Acceptor Description Data 2)

PDS 0178 (Alternate Acceptor Description Data 2) may provide a local language version of the data in DE 43 (Acceptor Name/Location) and PDS 0171 (Alternate Acceptor Description Data) using a non-standard data set.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...201; TAGLLLLVAR            |
| Tag Field           | 0178                             |
| Data Length         | 3 positions, value = 004–201     |
| Data Field          | Variable length, 4–201 positions |
| Subfields           | 2                                |
| Justification       | See "Subfields"                  |

**NOTE: Subfield 2 includes binary data. Converting this data to other formats may cause data loss.**

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| First Presentment/1240                      | O   | .   | C   |
| First Chargeback/1442                       | O   | .   | C   |
| Second Presentment/1240                     | O   | .   | C   |
| Retrieval Request/1644                      | O   | .   | C   |
| Retrieval Request Acknowledgment/1644       | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740 | O   | .   | C   |

This PDS is optional in First Presentment/1240 and subsequent cardholder life cycle transactions.

## Values

If present, PDS 0178 cannot contain all low values or all high values.

## PDS 0178 subfields

This PDS consists of two subfields.

### PDS 0178 subfields

| Number | Positions | Name                        | Attribute | Justification |
|--------|-----------|-----------------------------|-----------|---------------|
| 1      | 1-3       | Character Set Indicator 2   | an-3      | N/A           |
| 2      | 4-201     | Acceptor Description Data 2 | b-198     | Left          |

### Subfield 1 (Character Set Indicator 2)

Subfield 1 (Character Set Indicator 2) identifies the character set in which the enhanced acceptor description is provided. The values are listed in this table.

### Subfield 1 (Character Set Indicator 2)

| Value | Description           |
|-------|-----------------------|
| ARA   | Arabic                |
| CHS   | Chinese (simplified)  |
| CHT   | Chinese (traditional) |
| CYR   | Cyrillic              |
| GRK   | Greek                 |
| HEB   | Hebrew                |
| HIR   | Hiragana              |
| HAN   | Hangul                |
| KAN   | Kanji                 |
| KAT   | Katakana              |
| ROM   | Roman                 |
| THI   | Thai                  |
| VIE   | Vietnamese            |

## Subfield 2 (Acceptor Description Data 2)

**NOTE: Subfield 2 includes binary data. Converting this data to other formats may cause data loss.**

Subfield 2 (Acceptor Description Data 2) consists of free-format text describing the acceptor name or location (or both), provided in the character set as indicated in subfield 1.

This data is variable length, with a maximum length of 198 positions. This subfield is not edited.

## PDS 0179 (Long Running Transaction [LRT] Indicator)

PDS 0179 (Long Running Transaction [LRT] Indicator) provides a means to identify an eligible healthcare transaction as a Long Running Transaction (LRT).

### Attributes

| Attribute            | Description               |
|----------------------|---------------------------|
| Data Representation: | ans-2; TAGLLL             |
| Tag Field:           | 0179                      |
| Length Field:        | 3 positions, value = 002  |
| Data Field:          | Fixed length, 2 positions |
| Subfields:           | None                      |
| Justification:       | N/A                       |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

### Values

If present, PDS 0179 must contain a valid value. The values are shown in this table.

### Values

| Value | Description                               |
|-------|-------------------------------------------|
| 1     | Healthcare Long Running Transaction (LRT) |

## PDS 0180 (Domestic Acceptor Tax ID)

PDS 0180 (Domestic Acceptor Tax ID) contains the tax ID associated with the transaction.

### Attributes

| Attribute            | Description                        |
|----------------------|------------------------------------|
| Data Representation: | ans...020; TAGLLLLVAR              |
| Tag Field:           | 0180                               |
| Length Field:        | 3 positions, value = 001-020       |
| Data Field:          | Variable length, 001-020 positions |
| Subfields:           | None                               |
| Justification:       | Left                               |

### Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

For transactions qualifying for this business service arrangement, PDS 0180 must be present for first presentment non-cash transactions.

### Business service arrangement

| Business Service Type Code<br>(PDS 0158, subfield 2) | Business Service ID (PDS 0158,<br>subfield 3) | Description         |
|------------------------------------------------------|-----------------------------------------------|---------------------|
| 4                                                    | 484001                                        | Mexico Intracountry |

For customers in Croatia, acquirers in Croatia must support PDS 0180 in First Presentment/1240 messages for installment payment transactions. PDS 0180 must be present in the First Presentment/1240 message containing Processing Code (DE 3, subfield 1), value 00 (Purchase [Good and Services]), 09 (Purchase [Goods and Services] with Cash Back), 18 (Unique Transaction [Requires Unique MCC]), 20 (Credit [Purchase Return]), or 28 (Payment Transaction). Collection Only messages are excluded. For customers in Croatia, acquirers in Croatia must support PDS 0180 in First Presentment/1240 messages for installment payment transactions.

### Values

PDS 0180 must be left-justified and cannot contain all low values, all high values, all spaces, or all zeros.

For non-Mexico domestic transactions, if present, PDS 0180 must be a minimum length of 1 and a maximum length of 20.

For this business service arrangement, if present, PDS 0180 must be a minimum length of 13 and maximum length of 14, unless it is Collection Only.

### Business service arrangement

| Business Service Type Code<br>(PDS 0158, subfield 2) | Business Service ID (PDS 0158,<br>subfield 3) | Description         |
|------------------------------------------------------|-----------------------------------------------|---------------------|
| 4                                                    | 484001                                        | Mexico Intracountry |

## PDS 0181 (Installment Payment Data)

PDS 0181 (Installment Payment Data) is required for installment payment transactions in First and Second Presentment/1240 messages and First and Arbitration Chargeback/1442 messages.

### Attributes

| Attribute            | Description                      |
|----------------------|----------------------------------|
| Data Representation: | ans...68; TAGLLLLVAR             |
| Tag Field:           | 0181                             |
| Length Field:        | 3 positions, value = 050-068     |
| Data Length:         | Variable length, 50-68 positions |
| Subfields:           | 10                               |
| Justification:       | See "Subfields"                  |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

All of the amount subfields are based on the cardholder billing currency and exponent values found in DE 51 (Currency Code, Cardholder Billing) and PDS 0148 (Currency Exponents).

## Subfield 1 (Type of Installment)

PDS 0181 (Installment Payment Data), subfield 1 contains the type of financing applicable for the installment.

### Attributes

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 01    |
| Subfield Length     | n-2       | 02    |
| Data Representation | n-2       |       |
| Justification       | Right     |       |

### Values

**NOTE: Values 20, 21, and 22 are valid for all regions. Only value 21 is valid for the Philippines.**

### Values

| Values | Description                  |
|--------|------------------------------|
| 20     | Issuer-financed              |
| 21     | Merchant-financed            |
| 22     | Acquirer-financed            |
| 23     | Co-branded Merchant Financed |
| 24     | Issuer Merchant Co-Financed  |

## Subfield 2 (Number of Installments)

PDS 0181 (Installment Payment Data), subfield 2 (Number of Installments) contains the total number of installments selected by the cardholder.

The valid values are 02–99 for all regions and 02–24 for the Philippines.

### Subfield 2 (Number of Installments)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 02    |
| Subfield Length     | n-2       | 02    |
| Data Representation | n-2       |       |
| Justification       | Right     |       |

### Subfield 3 (Interest Rate)

PDS 0181 (Installment Payment Data), subfield 3 contains the interest rate (XXX.XX%) that the issuer charges the cardholder for the installment payments. For installment payments, the default is all spaces.

### Subfield 3 (Interest Rate)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 03    |
| Subfield Length     | n-2       | 05    |
| Data Representation | ns-5      |       |
| Justification       | Right     |       |

### Subfield 4 (First Installment Amount)

Acquirers can specify the installment amount in PDS 0181 (Installment Payment Data), subfield 4. If this subfield is not used, it must be present with all spaces.

### Subfield 4 (First Installment Amount)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 04    |
| Subfield Length     | n-2       | 12    |
| Data Representation | ns-12     |       |

|               | Attribute | Value |
|---------------|-----------|-------|
| Justification | Right     |       |

## Subfield 5 (Subsequent Installment Amount)

For single clearing transactions, acquirers must fill in a value of zero in PDS 0181 (Installment Payment Data), subfield 5 unless the first installment amount is different from subsequent installment amounts. For multiple clearing transactions, this subfield is not used, and it must be present with all spaces.

### Subfield 5 (Subsequent Installment Amount)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 05    |
| Subfield Length     | n-2       | 12    |
| Data Representation | ns-12     |       |
| Justification       | Right     |       |

## Subfield 6 (Annual Percentage Rate)

PDS 0181 (Installment Payment Data), subfield 6 contains the annual percentage rate (XXX.XX %) an issuer will charge the cardholder for the installment payments. For installment payments, the default is all spaces.

### Subfield 6 (Annual Percentage Rate)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 06    |
| Subfield Length     | n-2       | 05    |
| Data Representation | ns-5      |       |
| Justification       | Right     |       |

## Subfield 7 (Installment Fee)

PDS 0181 (Installment Payment Data), subfield 7 contains the fee amount an issuer will charge the cardholder for the installment payments in cardholder billing currency. The default is all spaces.

### Subfield 7 (Installment Fee)

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 07    |
| Subfield Length     | n-2       | 12    |
| Data Representation | ns-12     |       |
| Justification       | Right     |       |

## Subfield 8 (Commission Rate)

PDS 0181 (Installment Payment Data), subfield 8 contains the commission rate (XXX.XX%) applicable for the installment. The default is all spaces.

### Subfield 8 (Commission Rate)

|                     | Attribute                | Value |
|---------------------|--------------------------|-------|
| Subfield ID         | n-2                      | 08    |
| Subfield Length     | n-2                      | 05    |
| Data Representation | ns-5                     |       |
| Justification       | Right with leading zeros |       |

## Subfield 9 (Commission Sign)

PDS 0181 (Installment Payment Data), subfield 9 contains the commission sign applicable for the installment. The default value is all spaces.

### Attributes

|             | Attribute | Value |
|-------------|-----------|-------|
| Subfield ID | n-2       | 09    |

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield Length     | n-2       | 01    |
| Data Representation | ans-1     |       |
| Justification       | N/A       |       |

## Values

This table lists the valid values.

## Values

| Values | Description                            |
|--------|----------------------------------------|
| C      | Credit to Issuer and Debit to Acquirer |
| D      | Debit to Issuer and Credit to Acquirer |

## Subfield 10 (Commission Amount)

PDS 0181 (Installment Payment Data), subfield 10 contains the commission amount applicable for the installment. The default value is all spaces.

## Subfield 10 (Commission Amount)

|                     | Attribute                | Value |
|---------------------|--------------------------|-------|
| Subfield ID         | n-2                      | 10    |
| Subfield Length     | n-2                      | 12    |
| Data Representation | ns-12                    |       |
| Justification       | Right with leading zeros |       |

## PDS 0182 (Installment Payment Cardholder Statement Data)

PDS 0182 (Installment Payment Cardholder Statement Data) provides information about the installment payment criteria selected by the cardholder.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Data Representation: | ans-87; TAGLLL             |
| Tag Field:           | 0182                       |
| Length Field:        | 3 positions, value = 087   |
| Data Length:         | Fixed length, 87 positions |
| Subfields:           | 11                         |
| Justification:       | See "Subfields"            |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | C   | C   |

All the amount subfields are based on the cardholder billing currency and exponent, as provided in DE 51 (Currency Code, Cardholder Billing) and PDS 0148 (Currency Exponents).

### Subfield 1 (Total Number of Installments)

PDS0182 (Installment Payment Cardholder Statement Data), subfield 1 (Total Number of Installments) describes the total number of installments selected by the cardholder. The valid values are 02-99.

### Attributes

|                     |                           |
|---------------------|---------------------------|
| Data Representation | ns-2                      |
| Data Field          | Contents of positions 1-2 |

|               |       |
|---------------|-------|
| Justification | Right |
|---------------|-------|

## Values

This table lists the valid values.

## Values

| Values | Description                                                  |
|--------|--------------------------------------------------------------|
| 02-99  | The total number of installments selected by the cardholder. |

## Subfield 2 (Current Installment Number)

PDS 0182, subfield 2 (Current Installment Number) contains the current installment number of the installment split transaction. The valid values are 01-99.

## Attributes

|                     |                           |
|---------------------|---------------------------|
| Data Representation | ns-2                      |
| Data Field          | Contents of positions 3-4 |
| Justification       | Right                     |

## Values

This table lists the valid values.

## Values

| Values | Description                                                         |
|--------|---------------------------------------------------------------------|
| 01-99  | The current installment number of the installment split transaction |

### Subfield 3 (Original Cardholder Billing Amount)

PDS 0182, subfield 3 (Original Cardholder Billing Amount) contains the original transaction amount in issuer's designated cardholder billing currency.

#### Attributes

|                     |                            |
|---------------------|----------------------------|
| Data Representation | ns-12                      |
| Data Field          | Contents of positions 5-16 |
| Justification       | Right                      |

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a transaction amount of USD 212.50 is expressed as 000000021250.

### Subfield 4 (Installment Amount)

PDS 0182, subfield 4 (Installment Amount) contains the installment amount of the current installment transaction in cardholder billing currency.

#### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | ns-12                       |
| Data Field          | Contents of positions 17-28 |
| Justification       | Right                       |

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a transaction amount of USD 212.50 is expressed as 000000021250.

### Subfield 5 (Principal Amount)

PDS 0182, subfield 5 (Principal Amount) contains the Principal Amount of the current installment transaction in cardholder billing currency.

#### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | ns-12                       |
| Data Field          | Contents of positions 29-40 |

|               |       |
|---------------|-------|
| Justification | Right |
|---------------|-------|

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a transaction amount of USD 212.50 is expressed as 000000021250.

## Subfield 6 (Interest Amount)

PDS 0182, subfield 6 (Interest Amount) contains the interest amount of the current installment transaction in cardholder billing currency.

### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | ns-12                       |
| Data Field          | Contents of positions 41-52 |
| Justification       | Right                       |

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a transaction amount of USD 212.50 is expressed as 000000021250.

## Subfield 7 (Installment Fee)

PDS 0182, subfield 7 (Installment Fee) contains the fee amount that the issuer charges the cardholder for the installment in cardholder billing currency. The default fee is spaces.

### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | ns-12                       |
| Data Field          | Contents of positions 53-64 |
| Justification       | Right                       |

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a transaction amount of USD 212.50 is expressed as 000000021250.

## Subfield 8 (Interest Rate)

PDS 0182, subfield 8 (Interest rate) contains the interest rate (XXX.XX %) that the issuer charges the cardholder for the installment payments. The default rate is spaces.

### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | ns-5                        |
| Data Field          | Contents of positions 65-69 |
| Justification       | Right                       |

## Subfield 9 (APR)

PDS 0182, subfield 9 (APR) contains the annual percentage rate (XXX.XX %) that the issuer charges the cardholder for the installment payments. The default rate is spaces.

### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | ns-5                        |
| Data Field          | Contents of positions 70-74 |
| Justification       | Right                       |

## Subfield 10 (Total Amount Due)

PDS 0182, subfield 10 (Total Amount Due) contains the total amount due of all installments in cardholder billing currency.

### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | ns-12                       |
| Data Field          | Contents of positions 75-86 |
| Justification       | Right                       |

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. For example, a transaction amount of USD 212.50 is expressed as 000000021250.

## Subfield 11 (Installment Cancellation Indicator)

PDS 0182, subfield 11 (Installment Cancellation Indicator) contains the indicator to identify canceled installment payments.

### Attributes

|                     |                         |
|---------------------|-------------------------|
| Data Representation | ans-1                   |
| Data Field          | Contents of position 87 |
| Justification       | Right                   |

### Values

This table lists the valid values.

### Values

| Values | Description          |
|--------|----------------------|
| Y      | Canceled Installment |
| N      | Ongoing Installment  |

## PDS 0183 (Brazil Post-Dated Transaction Data)

PDS 0183 (Brazil Post-Dated Transaction Data) contains information to support post-dated clearing transactions.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Data Representation: | ans-39; TAGLLL             |
| Tag Field:           | 0183                       |
| Length Field:        | 3 positions, value = 039   |
| Data Length:         | Fixed length, 39 positions |
| Subfields:           | 8                          |
| Justification:       | See "Subfields"            |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

## Subfield 1 (Service Code)

PDS 0183 (Brazil Post-Dated Transaction Data), subfield 1 indicates the type of post-dated transaction.

### Attributes

|                     |                           |
|---------------------|---------------------------|
| Data Representation | n-2                       |
| Data Field          | Contents of positions 1–2 |
| Justification       | N/A                       |

## Values

This table lists the valid values.

### Values

| Values | Description                  |
|--------|------------------------------|
| 30     | Post-Dated with Guarantee    |
| 31     | Post-Dated without Guarantee |

If PDS 0183 is present, subfield 1 (Service Code) must be equal to 30 or 31.

## Subfield 2 (Number of Installments)

PDS 0183 (Brazil Post-Dated Transaction Data), subfield 2 indicates the number of post-dated installments.

### Attributes

|                     |                        |
|---------------------|------------------------|
| Data Representation | n-1                    |
| Data Field          | Contents of position 3 |
| Justification       | N/A                    |

If present, the value of subfield 2 will always be 1.

## Subfield 3 (Guarantee)

PDS 0183 (Brazil Post-Dated Transaction Data), subfield 3 indicates whether or not there is a guarantee to be settled for the post-dated transaction.

### Attributes

|                     |                        |
|---------------------|------------------------|
| Data Representation | a-1                    |
| Data Field          | Contents of position 4 |
| Justification       | N/A                    |

### Values

This table lists the valid values.

### Values

| Values | Description |
|--------|-------------|
| Y      | Yes         |
| N      | No          |

## Subfield 4 (Guarantee Amount)

PDS 0183 (Brazil Post-Dated Transaction Data), subfield 4 contains the amount of a guarantee to be settled for a post-dated transaction and is assumed to be a credit to the issuer.

### Attributes

|                     |                            |
|---------------------|----------------------------|
| Data Representation | n-8                        |
| Data Field          | Contents of positions 5–12 |
| Justification       | N/A                        |

If PDS 0183, subfield 1 contains value 31 (Post-Dated without Guarantee), subfield 4 must equal 00000000.

## Subfield 5 (Post Settlement Date)

PDS 0183 (Brazil Post-Dated Transaction Data), subfield 5 contains the proposed settlement date (the expected date for completion message arrival) in the format: MMDDYY.

### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | n-6                         |
| Data Field          | Contents of positions 13–18 |
| Justification       | N/A                         |

## Subfield 6 (Original Authorization Request Date)

PDS 0183 (Brazil Post-Dated Transaction Data), subfield 6 contains the original authorization date of a post-dated transaction in the format: MMDDYY.

### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | n-6                         |
| Data Field          | Contents of positions 19–24 |
| Justification       | N/A                         |

Subfield 6 will contain all zeros on authorization message.

## Subfield 7 (Original Banknet Reference Number)

PDS 0183 (Brazil Post-Dated Transaction Data), subfield 7 contains the original Banknet reference number assigned by Banknet to the original authorization request.

### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | ans-9                       |
| Data Field          | Contents of positions 25–33 |
| Justification       | N/A                         |

## Subfield 8 (Authorization Code)

PDS 0183 (Brazil Post-Dated Transaction Data), subfield 8 contains the online authorization code provided by the issuer on the original authorization response.

### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data Representation | n-6                         |
| Data Field          | Contents of positions 34–39 |
| Justification       | N/A                         |

## PDS 0184 (Directory Server Transaction ID)

PDS 0184 (Directory Server Transaction ID) is generated by the EMV 3DS Mastercard Directory Server during the authentication transaction and passed back to the merchant with the authentication results.

PDS 0184 (Directory Server Transaction ID) allows the acquirer to pass the Directory Server Transaction ID during clearing in order to link the authentication and clearing transaction.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Data Representation: | ans-36; TAGLLL           |
| Tag Field:           | 0184                     |
| Length Field:        | 3 positions, value = 036 |

| Attribute      | Description                |
|----------------|----------------------------|
| Data Length:   | Fixed length, 36 positions |
| Subfields:     | None                       |
| Justification: | Left Justified             |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

## Values

If PDS 0184 (Directory Server Transaction ID) is present, it should contain values as in this example. The Directory Server Transaction ID is a unique ID.

Example: f38e6948-5388-41a6-bca4-b49723c19437

## Application notes

This is a conditional field and must be provided by the acquirers part of the First Presentment/1240 messages if they are participating and have previously authenticated using the Mastercard® e-commerce/Identity Check program. This field will not be edited to ensure that the Directory Server Transaction ID was provided on the transaction. If provided by the acquirer or processor, it must meet the specifications defined.

## PDS 0185 (Accountholder Authentication Value)

PDS 0185 (Accountholder Authentication Value) is for acquirers to provide the accountholder authentication value in First Presentment/1240 messages.

## Attributes

| Attribute            | Description         |
|----------------------|---------------------|
| Data Representation: | ans...32; TAGLLLVAR |
| Tag Field:           | 0185                |

| Attribute      | Description                      |
|----------------|----------------------------------|
| Length Field:  | 3 positions, value = 001-032     |
| Data Length:   | Variable length, 01–32 positions |
| Subfields:     | None                             |
| Justification: | Left Justified                   |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

## Values

The Accountholder Authentication Value (AAV) is transaction specific. The AAV is unique to each transaction, but will start with a leading indicator as defined in this table.

## Values

| For SLI | Use EMV 3-D Secure (EMV 3DS, SPA2 AAV leading indicator) |
|---------|----------------------------------------------------------|
| 211     | kE, kF, kL, kM                                           |
| 212     | kA, kB, kC, kD, kG, kH, kJ, kK, kQ, kR, kS, kT           |
| 214     | kX, kY, kZ                                               |
| 216     | kN, kU, kV, kW                                           |
| 217     | kO, kP                                                   |

**NOTE:** Values i, l, m, and n are reserved for future use. Refer to *SPA2 AAV for Mastercard® e-commerce/Identity Check* for more details on Accountholder Authentication Value changes.

## Application notes

This is a conditional field and must be provided by the acquirers part of the First Presentment/1240 messages if they are participating and have previously authenticated using the

Mastercard® e-commerce/Identity Check program. This field will not be edited to ensure that the AAV Value was provided on the transaction. If provided by the acquirer or processor, it must meet the specifications defined.

## PDS 0186 (Program Protocol)

PDS 0186 (Program Protocol) allows acquirers to identify which 3-D Secure authentication protocol was used for e-commerce transactions.

### Attributes

| Attribute            | Description              |
|----------------------|--------------------------|
| Data Representation: | an-1; TAGLLL             |
| Tag Field:           | 0186                     |
| Length Field:        | 3 positions, value = 001 |
| Data Length:         | Fixed Length, 1 position |
| Subfields:           | None                     |
| Justification:       | N/A                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

### Values

If PDS 0186 (Program Protocol) is present, customers indicate the correct Program Protocol by sending one of these values:

### Values

| Value | Description                |
|-------|----------------------------|
| 1     | EMV 3-D Secure Version 2.1 |

| Value | Description                |
|-------|----------------------------|
| 2     | EMV 3-D Secure Version 2.2 |
| 3     | EMV 3-D Secure Version 2.3 |
| 4     | EMV 3-D Secure Version 2.4 |
| 5     | EMV 3-D Secure Version 2.5 |
| 6     | EMV 3-D Secure Version 2.6 |
| 7     | EMV 3-D Secure Version 2.7 |
| 8     | EMV 3-D Secure Version 2.8 |
| 9     | EMV 3-D Secure Version 2.9 |

#### Application notes

This is a conditional field and must be provided by the acquirers part of the First Presentment/1240 messages if they are participating and have previously authenticated using the Mastercard® e-commerce/Identity Check program. This field will not be edited to ensure that the Program Protocol was provided on the transaction. If provided by the acquirer or processor, it must meet the specifications defined.

## PDS 0188 (Private Data, Proprietary Service Data)

PDS 0188 (Private Data, Proprietary Service Data) contains information for future service enhancements.

#### Attributes

| Attribute            | Description                    |
|----------------------|--------------------------------|
| Data Representation: | ans-987; TAGLLLVAR             |
| Tag Field:           | 0188                           |
| Length Field:        | 3 positions, value = 007-987   |
| Data Length:         | Variable length, 987 positions |
| Subfields            | 3                              |
| Occurrences          | 1-141                          |
| Justification        | See subfields                  |

## Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                                | Org | Sys | Dst |
|--------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                 | .   | X   | C   |
| Second Presentment/1240                                | .   | X   | C   |
| Fee Collection (Retrieval Fee Billing)/1740            | .   | X   | C   |
| Fee Collection (Other than Retrieval Fee Billing)/1740 | .   | .   | C   |
| Fee Collection (Handling Fees)/1740                    | .   | .   | C   |

### Values

| Number | Positions | Name         | Attribute |
|--------|-----------|--------------|-----------|
| 1      | 1-2       | Service Type | an-2      |
| 2      | 3-4       | Score Name   | an-2      |
| 3      | 5-7       | Score Value  | an-3      |

## PDS 0189 (Point-of-Interaction [POI] Phone Data)

PDS 0189 (Point-of-Interaction [POI] Phone Data) identifies the number dialed in a POI phone call transaction.

### Attributes

| Attribute            | Description                |
|----------------------|----------------------------|
| Data Representation: | ans-41; TAGLLL             |
| Tag Field:           | 0189                       |
| Length Field:        | 3 positions, value = 041   |
| Data Length:         | Fixed length, 41 positions |
| Subfields:           | 2                          |

| Attribute      | Description     |
|----------------|-----------------|
| Justification: | See "Subfields" |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | O   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |
| Retrieval Request/1644                                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |

This PDS is supplemental to the information in DE 43 (Acceptor Name/Location). It provides call detail record reporting for the cardholder.

## Values

If present, PDS 0189 cannot contain all low values or all high values.

## PDS 0189 subfields

This PDS consists of two subfields.

### Subfields

#### PDS 0189 subfields

| Number | Positions | Name          | Attribute | Justification |
|--------|-----------|---------------|-----------|---------------|
| 1      | 1         | Format Number | an-1      | N/A           |
| 2      | 2-41      | Phone Data    | ans-40    | left          |

## Subfield 1 (Format Number)

Subfield 1 (Format Number) identifies the format of the data in subfield 2, Phone Data. The values are listed in this table.

### Subfield 1 (Format Number)

| Value | Description                                                            |
|-------|------------------------------------------------------------------------|
| 1     | Card-activated phone transactions (U.S. and Canada call detail format) |
| 2     | Card-activated phone transactions (non-U.S. and non-Canada format)     |

## Subfield 2 (Phone Data)

Subfield 2 (Phone Data) provides the phone number dialed, the call duration, and other related information. It is formatted to fit in 40 bytes. This enables the issuer to print this subfield's contents directly on the cardholder's statement.

If present, PDS 0189, subfield 2 (Phone Data) cannot contain all zeros or all spaces.

For these original, non-credit transactions acquired in the U.S. or Canada regions, PDS 0189, subfield 2, if present, must contain a 10-position phone number and must be left-justified with trailing spaces. The first three positions must be numeric.

- First Presentment/1240
- Second Presentment/1240
- First Chargeback/1442
- Arbitration Chargebacks/1442
- Retrieval Requests/1644
- Fee Collection (Retrieval Fee Billing)/1740

**NOTE: These formats are guidelines only. The clearing system does not perform edits to ensure that these layouts are followed.**

### Format 1: Card-Activated Phone Transactions (U.S. and Canadian Call Detail Format)

| Number | Positions | Name              | Attribute | Justification |
|--------|-----------|-------------------|-----------|---------------|
| 1      | 1–3       | Abbreviation TEL  | a-3       | N/A           |
| 2      | 4         | Delimiter (space) | a-1       | N/A           |

Data element and private data subelement definitions and details  
Subfield 2 (Phone Data)

| Number | Positions | Name                                               | Attribute | Justification |
|--------|-----------|----------------------------------------------------|-----------|---------------|
| 3      | 5–7       | Area Code (U.S./Canadian area code.)               | n-3       | N/A           |
| 4      | 8         | Delimiter (space)                                  | a-1       | N/A           |
| 5      | 9–11      | Local Exchange (Phone number; first three digits). | n-3       | N/A           |
| 6      | 12        | Delimiter (space)                                  | a-1       | N/A           |
| 7      | 13–16     | Local Number (Phone number; last four digits).     | n-4       | N/A           |
| 8      | 17        | Delimiter (space)                                  | a-1       | N/A           |
| 9      | 18–20     | Abbreviation MIN                                   | a-3       | N/A           |
| 10     | 21–22     | Call Duration in Minutes                           | an-2      | right         |
| 11     | 23        | Delimiter (space)                                  | a-1       | N/A           |
| 12     | 24–36     | Acceptor City                                      | ans-13    | left          |
| 13     | 37        | Delimiter (space)                                  | a-1       | N/A           |
| 14     | 38–40     | Call Origin State/Country Code <sup>13</sup>       | a-3       | left          |

**Format 2: Card-Activated Phone Transactions (Non-U.S. and Non-Canada Format)**

| Number | Positions | Name                                                                                  | Attribute | Justification |
|--------|-----------|---------------------------------------------------------------------------------------|-----------|---------------|
| 1      | 1–2       | Abbreviation TL                                                                       | a-2       | N/A           |
| 2      | 3–17      | Full Phone Number Dialed (Includes country code, city code, and local number dialed.) | ans-15    | right         |
| 3      | 18–19     | Abbreviation MN                                                                       | a-2       | N/A           |
| 4      | 20–22     | Call Duration in Minutes                                                              | an-3      | right         |
| 5      | 23        | Delimiter (spaces)                                                                    | a-1       | N/A           |
| 6      | 24–36     | Acceptor City                                                                         | ans-13    | left          |
| 7      | 37        | Delimiter (spaces)                                                                    | a-1       | N/A           |
| 8      | 38–40     | Call Origin State/Country Code <sup>14</sup>                                          | a-3       | left          |

<sup>13</sup> May be space-filled; otherwise, may be a three-position alphabetic country code from ISO 3166 table or a two-position U.S. state code if merchant is in the U.S. region. See the *Quick Reference Booklet* for valid state and country codes.

## PDS 0190 (Partner ID Code)

PDS 0190 (Partner ID Code) identifies a specific partnership agreement, generally between specific acceptors and issuers.

### Attributes

| Attribute            | Description                    |
|----------------------|--------------------------------|
| Data Representation: | ans...6; TAGLLLVAR             |
| Tag Field:           | 0190                           |
| Length Field:        | 3 positions, value = 001-006   |
| Data Length:         | Variable length, 1-6 positions |
| Subfields:           | None                           |
| Justification:       | Left                           |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | O   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |
| Retrieval Request/1644                                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |

This PDS may be used for transactions on accounts issued under co-branding agreements when one of the co-branding partners originates the transaction. It also may be used when the agreement is between the acceptor and the clearing system, such as in certain promotional discounts.

<sup>14</sup> May be space-filled; otherwise, may be a three-position alphabetic country code from ISO 3166 table or a two-position U.S. state code if merchant is in the U.S. region. Refer to the *Quick Reference Booklet* for valid state and country codes.

## Values

Acceptors and issuers establish Partner ID Codes. If present, PDS 0190 cannot contain all low values, all high values, all zeros, or all spaces.

## PDS 0191 (Originating Message Format)

PDS 0191 (Originating Message Format) provides the message format in which the clearing system received a message.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | n-1; TAGLLL              |

| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740     | O   | X   | M   |

Originators optionally may provide this PDS. If this information is not present, the clearing system provides this PDS in customer-submitted messages. The information assists the receiving customer in anticipating the presence or absence of various IPM data elements and PDSs in an IPM message.

### Values

The PDS 0191 values are listed in this table.

### Values

| Value | Description                                                         |
|-------|---------------------------------------------------------------------|
| 0     | Clearing system received original message in Mexico Domestic Format |
| 2     | Clearing system received message in the IPM format.                 |
| 6     | Clearing system received message in Japan Domestic Format           |

## PDS 0192 (Payment Transaction Initiator)

PDS 0192 (Payment Transaction Initiator) contains a value to indicate that either Mastercard® or a trusted Mastercard® business partner initiated a payment transaction on behalf of a customer.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-3; TAGLLL             |
| Tag Field           | 0192                      |
| Data Length         | 3 positions               |
| Data Field          | Fixed length, 3 positions |
| Subfields           | None                      |
| Justification       | Left                      |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                               | Org | Sys | Dst |
|---------------------------------------|-----|-----|-----|
| First Presentment/1240                | .   | X   | C   |
| Retrieval Request/1644                | C   | .   | C   |
| Retrieval Request Acknowledgment/1644 | C   | .   | C   |

PDS 0192 must be provided under these conditions.

- It was received on the First Presentment/1240 message, with these values present.
- DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type) = 28 (Payment Transactions).
- PDS 0043 (Transaction Type Identifier) = C02 (Rebate).

### Values

The value associated with PDS 0192 is MCW, Mastercard Worldwide.

## PDS 0194 (Remote Payments Program Data)

PDS 0194 (Remote Payments Program Data) identifies the domain in which the service manager (program originator) of the Mobile Remote Payments Program is operating.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans-1; TAGLLL             |
| Tag field           | 0194                      |
| Data Length         | 3 positions, value = 001  |
| Data Field          | Fixed length, 1 position. |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

### Values

The PDS 0194 values are listed in this table.

### Values

| Value | Description     |
|-------|-----------------|
| 1     | Issuer domain   |
| 2     | Acquirer domain |

## PDS 0195 (Installment Data)

PDS 0195 (Installment Data) provides information about the installment payment option selected by the cardholder at the point of interaction.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | an...27; TAGLLLVAR              |
| Tag Field           | 0195                            |
| Data Length         | 3 positions, value = 003–027    |
| Data Field          | Variable length, 3–27 positions |
| Subfields           | 8                               |
| Justification       | See "Subfields"                 |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

This PDS is required for specific business service arrangements.

## Subfield 1 (Total Number of Installments)

PDS 0195 (Installment Data), subfield 1 identifies the number of installment payments.

### Attributes

|                      |                           |
|----------------------|---------------------------|
| Data Representation: | n-3                       |
| Data Field:          | Contents of positions 1–3 |
| Justification:       | Left                      |

PDS 0195 is used for installment payment information for markets where installment programs are supported. Any market-specific requirements are listed below.

When PDS 0195 is present, subfield 1 is required for transactions submitted for Japan Intracountry BSA 4/392001:

- Subfield must be numeric.
- Subfield must contain the three position value that identifies the total number of installments.

When PDS 0195, Subfield 2 (Payment Option Code) contains value 61, subfield 1 must contain the number of installments (a value between 002 and 999). If PDS 0195, subfield 2 contains values other than 31, 34, or 61, subfield 1 should be zero-filled.

If PDS 0195, subfield 2 contains 61 and the number of installments is 2, the transaction will be settled following the Twice Pay method:

- 50 percent of the transaction amount will be settled following normal settlement process.
- 50 percent of the transaction amount will be settled following a delay of 30 days from the clearing date.

The actual settlement date will be adjusted following the settlement calendar of selected settlement service.

## Subfield 2 (Payment Option Code)

PDS 0195 (Installment Data), subfield 2 identifies the payment terms of the transaction.

### Attributes

|                      |                           |
|----------------------|---------------------------|
| Data Representation: | n-2                       |
| Data Field:          | Contents of positions 4–5 |
| Justification:       | Left                      |

When PDS 0195 is present, subfield 2 is required for transactions submitted for Japan Intracountry BSA 4/392001.

### Values

This table lists the valid values.

### Values

| Values | Description                                   |
|--------|-----------------------------------------------|
| 10     | Single Payment                                |
| 21     | Bonus Pay                                     |
| 31     | Installment Payment with Bonus Pay Simplified |
| 34     | Installment Payment with Bonus Pay Detailed   |
| 61     | Installments (Twice Pay/Three or More)        |
| 80     | Revolving                                     |

## Subfield 3 (Installment Number)

PDS 0195 (Installment Data) identifies the current transaction installment number as related to the sequence of total number of installments. This subfield must be numeric.

### Attributes

|                      |                           |
|----------------------|---------------------------|
| Data Representation: | n-3                       |
| Data Field:          | Contents of positions 6–8 |
| Justification:       | Left                      |

This subfield is not applicable for Japan. For transactions submitted for Japan Intracountry BSA 4/392001, subfield 3 should be populated with zeros.

As an example, acquirers submitting multiple installment transactions indicate that this is the first of three installment transactions if subfield 1 (Total Number of Installments) contains the value 003 and subfield 3 contains the value 001.

## Subfield 4 (Bonus Code)

PDS 0195 (Installment Data), subfield 4 indicates the manner in which the installment transaction is settled.

### Attributes

|                      |                        |
|----------------------|------------------------|
| Data Representation: | n-1                    |
| Data Field:          | Contents of position 9 |
| Justification:       | Left                   |

For transactions submitted for Japan Intracountry BSA 4/392001, subfield 4 must be provided when subfield 2 (Payment Option Code) contains value 21 (Bonus Pay). This subfield identifies whether a transaction must be settled utilizing the delayed settlement method.

### Values

This table lists the valid values.

### Values

| Values | Description                                                                                                                                                                                                                       |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0      | Settlement will be delayed.<br><br>If the clearing date is 21 July to 20 December, then the settlement date will be 20 December.<br><br>If the clearing date is 21 December to 20 July, then the settlement date will be 20 July. |
| 1      | No settlement delay                                                                                                                                                                                                               |

### Subfield 5 (Bonus Month Code)

The combination of the value in PDS 0195 (Installment Data), subfield 5 and the value in subfield 6 (Number of Bonus Payments per Year) identifies the bonus payment months.

### Attributes

|                      |                         |
|----------------------|-------------------------|
| Data Representation: | ans-1                   |
| Data Field:          | Contents of position 10 |
| Justification:       | Left                    |

For transactions submitted for Japan Intracountry BSA 4/392001, subfield 5 must be provided when subfield 2 (Payment Option Code) is value 34 (Installment Payment with Bonus Pay Detailed). The combination of a code in subfield 5 and a value in subfield 6 (Number of Bonus Payments Per Year) identifies the bonus payment month(s). For specific combination details, refer to the tables included under subfield 6.

**NOTE: When the value <space> is used, it indicates the amount in subfield 7 (Bonus Amount) can be a zero amount even when subfield 2 is value 34 (Installment Payment with Bonus Pay Detailed). The value <space> does not change the presence rule for other subfields.**

### Values

This table lists the valid values.

### Values

| Values  | Description |
|---------|-------------|
| 1       | January     |
| 2       | February    |
| 3       | March       |
| 4       | April       |
| 5       | May         |
| 6       | June        |
| 7       | July        |
| 8       | August      |
| 9       | September   |
| A       | October     |
| B       | November    |
| C       | December    |
| <space> | Undefined   |

### Subfield 6 (Number of Bonus Payments per Year)

PDS 0195 (Installment Data), subfield 6 indicates the number of bonus payments per year.

### Attributes

|                      |                         |
|----------------------|-------------------------|
| Data Representation: | n-1                     |
| Data Field:          | Contents of position 11 |
| Justification:       | Left                    |

For transactions submitted for Japan Intracountry BSA 4/392001, subfield 6 must be provided when subfield 2 (Payment Option Code) contains value 34 (Installment Payment with Bonus Pay Detailed). The combinations of a code in subfield 5 (Bonus Month Code) and a value in subfield 6 identifies the bonus payment month(s).

### Values

This table lists the valid values.

## Values

| Values | Description                                |
|--------|--------------------------------------------|
| 1      | Number of Bonus Payments is once per year  |
| 2      | Number of Bonus Payments is twice per year |

## Once per Year Bonus

This table indicates the bonus month(s) when once per year bonus payments will be settled.

## Once per Year Bonus

Indicates the bonus month(s) when once per year bonus payments will be settled.

| Bonus Month Code (Subfield 5) | Number of Bonus Payments (Subfield 6) | Bonus Month |
|-------------------------------|---------------------------------------|-------------|
| 1                             | 1                                     | January     |
| 2                             | 1                                     | February    |
| 3                             | 1                                     | March       |
| 4                             | 1                                     | April       |
| 5                             | 1                                     | May         |
| 6                             | 1                                     | June        |
| 7                             | 1                                     | July        |
| 8                             | 1                                     | August      |
| 9                             | 1                                     | September   |
| A                             | 1                                     | October     |
| B                             | 1                                     | November    |
| C                             | 1                                     | December    |
| <space>                       | 1                                     | Undefined   |

## Twice per Year Bonus

This table indicates the bonus month(s) when twice per year bonus payments will be settled.

### Twice per Year Bonus

Indicates the bonus month(s) when twice per year bonus payments will be settled.

| Bonus Month Code (Subfield 5) | Number of Bonus Payments (Subfield 6) | Bonus Month            |
|-------------------------------|---------------------------------------|------------------------|
| 1                             | 2                                     | June and December      |
| 2                             | 2                                     | June and January       |
| 3                             | 2                                     | July and December      |
| 4                             | 2                                     | July and January       |
| 5                             | 2                                     | August and December    |
| 6                             | 2                                     | August and January     |
| 7                             | 2                                     | September and December |
| 8                             | 2                                     | September and January  |
| 9                             | 2                                     | June and February      |
| A                             | 2                                     | July and February      |
| B                             | 2                                     | August and February    |
| C                             | 2                                     | September and February |
| <space>                       | 2                                     | Undefined              |

### Subfield 7 (Bonus Amount)

PDS 0195 (Installment Data), subfield 7 identifies the amount of bonus to be paid in each bonus payment.

### Attributes

|                      |                             |
|----------------------|-----------------------------|
| Data Representation: | n-12                        |
| Data Field:          | Contents of positions 12–23 |
| Justification:       | Right                       |

All currency amounts are expressed in the minor unit of currency without a decimal separator, in accordance with ISO standards for currency notation. For example, a bonus amount of USD 4500.29 is expressed as 000000450029.

For transactions submitted for Japan Intracountry BSA 4/392001, subfield 7 must be provided when subfield 2 (Payment Option Code) is value 34 (Installment Payment with Bonus Pay Detailed). When provided, the amount must be greater than zero except when subfield 5 (Bonus Month Code) contains <space>. For example, a bonus amount of JPY 45000 is expressed as 000000045000.

## Subfield 8 (First Month of Bonus Payment)

If present, PDS 0195 (Installment Data), subfield 8 must be in the format YYMM that identifies the first month of bonus payment.

### Attributes

|                      |                             |
|----------------------|-----------------------------|
| Data Representation: | n-4                         |
| Data Field:          | Contents of positions 24–27 |
| Justification:       | Left                        |

For transactions submitted for Japan Intracountry BSA 4/392001, subfield 8 is a four-digit subfield in the format YYMM that identifies the first month of bonus payment. This subfield must be provided when subfield 2 (Payment Option Code) contains value 34 (Installment Payment with Bonus Pay Detailed).

## PDS 0196 (Mobile Phone Reload Data)

PDS 0196 (Mobile Phone Reload Data) is used in mobile phone reload transactions to provide the customer's mobile phone number and service provider.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | ans...47; TAGLLLLVAR            |
| Tag Field           | 0196                            |
| Data Length         | 3 positions, value = 001-047    |
| Data Field          | Variable length, 1-47 positions |
| Subfields           | 2                               |
| Justification       | See "Subfields"                 |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |

## PDS 0196 subfields

This PDS consists of two subfields.

### PDS 0196 subfields

| Number | Positions | Name                               | Attribute | Justification |
|--------|-----------|------------------------------------|-----------|---------------|
| 1      | 1–17      | Mobile Phone Number                | ans-17    | Left          |
| 2      | 18–47     | Mobile Phone Service Provider Name | ans...30  | Left          |

### Subfield 1 (Mobile Phone Number)

Subfield 1 (Mobile Phone Number) contains the phone number of the wireless phone for which the customer is purchasing extra service. It must be left-justified. For more information on the data that is allowed in this subfield, refer to the *Interchange Manual: Europe Region* or the *Interchange Manual: MEA Region*.

### Subfield 2 (Mobile Phone Service Provider Name)

Subfield 2 (Mobile Phone Service Provider Name) contains the name or other identifier of the mobile phone service provider. If present, it must be left-justified and cannot contain all spaces or all zeros.

## PDS 0197 (National Use Tax Data)

PDS 0197 (National Use Tax Data) provides various tax amounts and percentages applicable to intracountry transactions in various markets.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-53; TAGLLL               |
| Tag Field           | 0197                       |
| Data Length         | 3 positions, value = 053   |
| Data Field          | Fixed length, 53 positions |
| Subfields           | 5                          |
| Justification       | See "Subfields"            |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | O   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |

This PDS can be used to present tax amounts, a tax percentage, and a tax base amount for intracountry transactions in various markets. The subfield names are very general in nature, to allow different usage definitions for different countries.

### Values

If present, each of the subfields 1, 2, 4, and 5 within PDS 0197 must be right-justified with leading zeros.

## PDS 0197 subfields

This PDS consists of five subfields

### PDS 0197 subfields

| Number | Positions | Name            | Attribute | Justification |
|--------|-----------|-----------------|-----------|---------------|
| 1      | 1–12      | Tax Amount 1    | n-12      | Right         |
| 2      | 13–24     | Tax Amount 2    | n-12      | Right         |
| 3      | 25–29     | Tax Percentage  | n-5       | Right         |
| 4      | 30–41     | Tax Base Amount | n-12      | Right         |
| 5      | 42–53     | Tax Amount 3    | n-12      | Right         |

#### Subfield 1 (Tax Amount 1)

Subfield 1 (Tax Amount 1) identifies a tax or Value Added Tax (VAT) on the transaction.

For intracountry transactions in specific Latin America and Caribbean region markets, this is VAT calculated by the acceptor and entered as input at the point-of-sale (POS) device.

#### Subfield 2 (Tax Amount 2)

Subfield 2 (Tax Amount 2) identifies a second tax or VAT on the transaction.

For intracountry transactions in specific Latin America and Caribbean region markets, this is VAT calculated by the acceptor and entered as input at the POS device.

#### Subfield 3 (Tax Percentage)

Subfield 3 (Tax Percentage) identifies a tax percentage. This subfield consists of five numeric positions. The format is always NNN.NN%, which means that the last two positions represent decimal positions of the tax percentage. For example, a value of 00850 is interpreted as 8.5 percent.

For intracountry transactions in specific Latin America and Caribbean region markets, this is RetelVA (Retention of VAT). It is the percentage of the VAT that the acquirer will not pay to the merchant but to the local tax agency. It is entered as input at the POS device.

#### Subfield 4 (Tax Base Amount)

Subfield 4 (Tax Base Amount) identifies the amount on which the tax was calculated.

For intracountry transactions in specific Latin America and Caribbean region markets, this is the IVA Devolution Base, the amount on which the VAT was originally calculated. It is entered as input at the POS device.

### Subfield 5 (Tax Amount 3)

Subfield 5 (Tax Amount 3) identifies a third tax or VAT on the transaction.

For intracountry transactions in specific Latin America and the Caribbean region markets, this is RetelCA (Industry & Commerce Tax Retention). It is a regional tax that applies only in the districts/provinces of Barranquilla, Bogota, and Zipaquirá. It is entered as input at the POS device.

## PDS 0198 (Device Type)

PDS 0198 (Device Type) provides information about the form factor of the cardholder device used to initiate a transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | ans...2; TAGLLL           |
| Tag Field           | 0198                      |
| Data Length         | 3 positions, value = 002  |
| Data Field          | Fixed length, 2 positions |

### Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |

| First Presentment/1240 | O   | .   | C   |

## Values

**NOTE:** As removable secure elements may be moved from a mobile phone to a tablet or e-book by the consumer, values 01, 08, 10, and 12 represent the initial intended use of this secure element by the issuer. There is no requirement to change these four values after initial personalization has taken place.

## Values

| Value | Description                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 00    | Card                                                                                                                                                                                 |
| 01    | Mobile Phone or Smartphone with Mobile Network Operator (MNO) controlled removable secure element (SIM or UICC) personalized for use with a Mobile Phone or Smartphone <sup>15</sup> |
| 02    | Key Fob                                                                                                                                                                              |
| 03    | Watch using a contactless chip or a fixed (non-removable) secure element not controlled by the MNO                                                                                   |
| 04    | Mobile Tag                                                                                                                                                                           |
| 05    | Wristband                                                                                                                                                                            |
| 06    | Mobile Phone Case or Sleeve                                                                                                                                                          |
| 07    | Mobile phone or smartphone with a fixed (non-removable) secure element controlled by the MNO, for example, code division multiple access (CDMA)                                      |
| 08    | Mobile Phone or Smartphone with removable secure element not controlled by the MNO, for example, SD Card personalized for use with a Mobile Phone or Smartphone <sup>16</sup>        |
| 09    | Mobile phone or smartphone with a fixed (non-removable) secure element not controlled by the MNO                                                                                     |
| 10    | Tablet or e-Reader with an MNO-controlled removable secure element (SIM or UICC) personalized for used with a Tablet or Reader <sup>17</sup>                                         |
| 11    | Tablet or e-book with a fixed (non-removable) secure element controlled by the MNO                                                                                                   |
| 12    | Removable secure element not controlled by the MNO, for example, memory card personalized for use with a tablet or e-book                                                            |

<sup>15</sup> As a removable secure element (SE) may be moved from a mobile phone to a tablet or e-book by the consumer this value represents the initial intended use of this SE only.

<sup>16</sup> As a removable secure element (SE) may be moved from a mobile phone to a tablet or e-book by the consumer this value represents the initial intended use of this SE only.

<sup>17</sup> As a removable secure element (SE) may be moved from a mobile phone to a tablet or e-book by the consumer this value represents the initial intended use of this SE only.

| Value | Description                                                                                  |
|-------|----------------------------------------------------------------------------------------------|
| 13    | Tablet or e-book with fixed (non-removable) secure element not controlled by the MNO         |

| 34–99 | Reserved for Future Use                                                                      |

## PDS 0199 (Funding Transaction Information)

PDS 0199 (Funding Transaction Information) contains information provided by an ATM acquirer that can be printed on the cardholder statement.

PDS 0199 (Funding Transaction Information) may include the information provided by the cardholder at the ATM when paying a bill and relevant information provided by the ATM acquirer.

### Attributes

| Attribute           | Description                        |
|---------------------|------------------------------------|
| Data Representation | ans...199; TAGLLLLVAR              |
| Tag Field           | 0199                               |
| Data Length         | 3 positions, value = 001–199       |
| Data Field          | Variable length, 001–199 positions |
| Subfields           | None                               |
| Justification       | Left                               |

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

### Values

If present, PDS 0199 must contain the information that can be included on the cardholder statement as a result of a domestic funding transaction at an ATM initiated by a cardholder to pay a bill. Specific formatting of PDS 0199 can be found in the *Domestic Processing Guide* for the country provided by the Mastercard® regional office. Specific formatting of PDS 0199 is defined for each country where the funding transaction at an ATM is implemented.

## PDS 0200 (Fraud Notification Date)

PDS 0200 (Fraud Notification Date) contains the additional data necessary to provide acquirers with the date of the second fraud-related chargeback and an accurate count of total fraud-related chargebacks for the account.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | n...8; TAGLLL            |
| Tag Field           | 0200                     |
| Data Length         | 3 positions, value = 008 |
| Data Field          | Fixed length 8 positions |
| Subfields           | 2                        |
| Justification       | See "Subfields"          |

PDS 0200 is populated and provided to the acquirer starting with the second fraud-related chargeback for the account, and continues with each successive fraud-related chargeback on the account.

When a first or second chargeback is received from the issuers with the fraud-related chargeback reason codes (4837, 4840, 4849, 4863, 4870, and 4871), Fraud Notification Service (FNS) Blocking is applied on each chargeback that exceeds the FNS criteria (FNS Date and FNS counter) set in the system. Chargeback is blocked if either or both of these condition matches:

- The original transaction settlement date is greater than FNS Date from FNS Service reply (IPM Clearing Format error number error code 2801).
- The FNS Service reply for FNS Count is greater than FNS counter criteria (of 35 counts) in aggregate for the aforementioned qualifying, fraud-related chargeback reason codes (IPM Clearing Format error number error code 2802).

Accepting or rejecting a reversal chargeback depends on the corresponding original chargeback status. If the original chargeback was accepted, then the corresponding reversal chargeback will also be accepted without validating FNS counter and FNS date criteria. If the original chargeback was rejected, then corresponding reversal chargeback will also be rejected without validating FNS counter and FNS date criteria. The FNS date and counter is updated for all transactions regardless of the reject/accept due to the edit.

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Chargeback/1442 and Arbitration Chargeback/1442 | •   | X   | C   |

### Values

If present, PDS 0200, subfield 1 (Fraud Notification Service Date) contains the date of the second fraud chargeback on the account.

If present, PDS 0200, subfield 1 (Fraud Notification Service Date) must contain a valid date in the YYMMDD format.

### PDS 0200 subfields

PDS 200 consists of two subfields.

### PDS 0200 subfields

| Number | Positions | Name                                          | Attributes         | Justification |
|--------|-----------|-----------------------------------------------|--------------------|---------------|
| 1      | 1–6       | Fraud Notification Service Date               | n-6; format YYMMDD | N/A           |
| 2      | 7–8       | Fraud Notification Service Chargeback Counter | n-2                | N/A           |

### Subfield 1 (Fraud Notification Service Date)

Subfield 1 (Fraud Notification Service Date) contains the date of the second fraud-related chargeback on the account.

### Subfield 2 (Fraud Notification Service Chargeback Counter)

Subfield 2 (Fraud Notification Service Chargeback Counter) contains the total number of fraud-related chargebacks processed for the account to date (including the current chargeback).

### Application notes

The FNS reply for Fraud Notification Service Chargeback Counter is greater than the Fraud Notification Service Chargeback Counter limit of 35 in aggregate for the previously mentioned, fraud-related chargeback reason codes will result in error number 2802 (INELIGIBLE CHARGEBACK REJECT REASON CODES 'FNS COUNTER EXCEEDED').

## PDS 0202 (Primary Account Number [PAN] Syntax Error)

PDS 0202 (Primary Account Number [PAN] Syntax Error) contains the syntax error resulting from a transaction that contains non-numeric values in DE 2 (Primary Account Number [PAN]) for Mexico domestic transactions.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | ans...19; TAGLLLLVAR            |
| Tag Field           | 0202                            |
| Data Length         | 3 positions, value = 006–019    |
| Data Field          | Variable length, 6–19 positions |
| Subfields           | None                            |
| Justification       | Left                            |

### Current processing restrictions

The clearing system accepts a PDS 0202 length of up to 19 positions.

The clearing system expects PDS 0202 to contain the appropriate number of positions for the account number without any filler characters to the left or right. For example, if a 16-digit account number is captured for a given transaction, the length of PDS 0202 must be 16, and exactly 16 digits must be provided beginning in position 1 of PDs 0202.

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |
| Retrieval Request/1644                                | C   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | C   | .   | C   |

## Values

PDS 0202 contains the same structure as DE 2 (Primary Account Number [PAN]), but the value can be alphanumeric.

For more information on the usage and values of PDS 0202, see DE 2.

## PDS 0204 (Amount, Syntax Error)

PDS 0204 (Amount, Syntax Error) contains the syntax error resulting from a transaction that contains non-numeric values in DE 4 (Amount, Transaction) for Mexico domestic transactions.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans-12; TAGLLL             |
| Tag Field           | 0204                       |
| Data Length         | 3 positions, value = 012   |
| Data Field          | Fixed length, 12 positions |
| Subfields           | None                       |
| Justification       | None                       |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

## Values

PDS 0204 contains the same structure as DE 4 (Amount, Transaction), but the value can be alphanumeric.

For more information on the usage and values of PDS 0204, see DE 4 (Amount, Transaction).

## PDS 0205 (Syntax Return, Message Error Indicator)

PDS 0205 (Syntax Return, Message Error Indicator) is included by the originator of a soft syntax error return and contains the element that caused the syntax return.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | ans-14; TAGLLL             |
| Tag Field           | 0205                       |
| Data Length         | 3 positions, value = 014   |
| Data Field          | Fixed length, 14 positions |
| Subfields           | 4                          |
| Justification       | See subfields              |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |
| Retrieval Request/1644                                | C   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | C   | .   | C   |

## PDS 0205 subfields

The originator of the syntax error return message identifies the element causing the return using these subfields.

### PDS 0205 subfields

| Number | Positions | Name                | Attribute | Justification |
|--------|-----------|---------------------|-----------|---------------|
| 1      | 1–5       | Data Element ID     | an-5      | left          |
| 2      | 6–7       | Error Severity Code | n-2       | N/A           |
| 3      | 8–11      | Error Message Code  | an-4      | N/A           |
| 4      | 12–14     | Subfield ID         | n-3       | N/A           |

### Subfield 1 (Data Element ID)

Subfield 1 (Data Element ID) identifies the ISO data element or PDS where the error occurred. ISO data elements are identified with the prefix D. This is followed by the data element number right-justified with leading zeros so that the number fills four positions. For example, D0003 indicates DE 3, D0100 indicates DE 100, and so on.

PDSs are identified with the prefix P followed by the four-digit tag ID. For example, P0002 indicates PDS 0002, P0146 indicates PDS 0146, and so on.

This subfield may contain spaces if the error is a general error not related to a specific data element or PDS.

### Subfield 2 (Error Severity Code)

Subfield 2 (Error Severity Code) indicates the local syntax error code of the error the clearing system detects.

The values for this subfield are listed in this table.

### Subfield 2 (Error Severity Code)

| Value | Description                  |
|-------|------------------------------|
| 01–25 | Local domestic reason codes. |

### Subfield 3 (Error Message Code)

Subfield 3 (Error Message Code) is a four-digit value that refers to a specific edit error message that identifies the error condition.

### Subfield 4 (Subfield ID)

Subfield 4 (Subfield ID) holds the three-position subfield ID of the element in error. This subfield contains zeros if the element in error is not defined with subfields.

## PDS 0206 (Late Presentment Indicator)

PDS 0206 (Late Presentment Indicator) is used to indicate that a first presentment was submitted late by the acquirer.

PDS 0206 is only present when the transaction is submitted late according to local processing rules. GCMS determines the late presentment and provides it in the message.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4; TAGLLL               |
| Tag Field           | 0206                      |
| Data Length Field   | 3 positions, value = 004  |
| Data Field          | Fixed length, 4 positions |
| Subfields           | 2                         |
| Justification       | See subfields             |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | .   | X   | C   |

## PDS 0206 subfields

PDS 206 contains two subfields.

### PDS 0206 subfields

| Number | Positions | Name                                      | Attribute | Justification |
|--------|-----------|-------------------------------------------|-----------|---------------|
| 1      | 1-3       | Number of Days Since Transaction Occurred | n-3       | N/A           |
| 2      | 4         | Late Presentment Tier                     | n-1       | N/A           |

### Subfield 1 (Number of Days Since Transaction Occurred)

Subfield 1 (Number of Days Since Transaction Occurred) contains the number of days between the transaction date (DE 12) and the GCMS processing date.

### Subfield 2 (Late Presentment Tier)

Subfield 2 (Late Presentment Tier) contains the tiers (as identified in the local rules). The valid values are 1, 2, or 3.

### Subfield 2 (Late Presentment Tier)

| Clearing Process                       | BAU (Tier 0) | Tier 1   | Tier 2    | Tier 3 |
|----------------------------------------|--------------|----------|-----------|--------|
| Credit (MCC)                           | 1 – 30       | 31 – 120 | 121 – 320 | > 320  |
| Debit (DMC)                            | 1 – 8        | 9 – 30   | 31 – 120  | > 120  |
| Maestro (MSI)                          | 1 – 8        | > 8      | N/A       | N/A    |
| Returns<br>(DE 3 = 20, for all brands) | 1 – 15       | > 15     | N/A       | N/A    |

## PDS 0207 (Wallet Identifier)

PDS 0207 (Wallet Identifier) provides information about transactions initiated through the use of a digital wallet. PDS 0207 must be present in all presentment and chargeback messages for

transactions initiated through the use of a pass-through digital wallet enabled by MasterPass® or any staged digital wallet.

Two basic digital wallet models exist: the Staged Digital Wallet and the Pass-through Digital Wallet.

Pass-through Digital Wallet functionality by which the Pass-through Digital Wallet Operator stores Mastercard® account data provided by the cardholder to the Digital Wallet Operator (DWO) for purposes of effecting a payment initiated by the cardholder to a merchant or sponsored merchant, and upon the performance of a transaction, transfers the Mastercard® account data to the merchant or sponsored merchant or to its acquirer or the acquirer's service provider.

Staged Digital Wallet functionality by which the Staged Digital Wallet Operator effects a two-stage payment to a retailer to complete a purchase initiated by a consumer as shown here:

- Payment stage: In the payment stage, the Staged DWO (Digital Wallet Operator) pays the retailer by one of these two methods:
  - A transaction conducted using a Mastercard® account or other account data assigned to the consumer by the DWO or by an issuer acting on behalf of the DWO (referred to as a consumer-assigned payment account), or
  - A funds transfer to an account designated by the retailer or held by the staged DWO on behalf of the retailer.
- Funding stage: In the funding stage, the staged DWO uses Mastercard® account or other account data provided to the Staged DWO by the consumer (referred to as the funding account) to perform a transaction that funds or reimburses the Staged Digital Wallet.

## Attributes

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-3; TAGLLL              |
| Tag Field           | 0207                      |
| Data Length Field   | 3 positions, value = 003  |
| Data Field          | Fixed length, 3 positions |
| Subfields           | None                      |
| Justification       | N/A                       |

## Usage for MasterPass® transactions

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

### Application notes

For MasterPass®, Mastercard® passes the Wallet Identifier as sent in by the acquirer or issuer.

The submission of PDS 0207 is always required on MasterPass® Wallet transactions or other Staged/Pass-through wallets. This data is received from the MasterPass® Wallet and can vary from transaction to transaction.

### Usage for MDES transactions

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Usage

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                               | .   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442                | .   | X   | C   |
| Second Presentment/1240                                              | .   | X   | C   |
| Retrieval Request Acknowledgment/1644                                | .   | X   | C   |
| Fee Collection (Retrieval Fee Billing)/1740                          | .   | X   | C   |
| Fee Collection (Handling Fees)/1740                                  | .   | X   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | .   | X   | C   |

### Application notes

For MDES, Mastercard® inserts the Wallet Identifier that is in the system, when available.

The submission of PDS 0207 is always required on MasterPass® Wallet transactions or other Staged/Pass-through wallets. This data is received from the MasterPass® Wallet and can vary from transaction to transaction.

### Values for MasterPass® and MDES transactions

While values 101 and 102 were initially introduced, other values may be transmitted by MasterPass® Wallet to the merchant or acquirer. Mastercard® does not publish these values and as such, acquirer and processor systems should pass whatever value is provided by the MasterPass® Wallet unaltered in the transaction record.

#### Values

| Value | Description               |
|-------|---------------------------|
| 101   | Wallet Remote             |
| 102   | Wallet Remote NFC Payment |

PDS 0207 cannot contain all zeros, spaces, or special characters. PDS 0207 has no specific format and may contain any combination of numeric or alphanumeric values.

Mastercard® does not publish the new wallet ID values. The acquirer and processor systems should pass whatever value is provided by MasterPass® Wallet unaltered in the transaction record.

### Values for only MDES transactions

The clearing platform inserts the Wallet Identifier for Mastercard® Digital Enablement Service (MDES) (device and Card on File) transactions when available, which identifies the wallet through which the MDES token was initiated.

These values only apply to MDES transactions.

#### Values

| Value | Description                   |
|-------|-------------------------------|
| 103   | Apple Pay                     |
| 216   | Android Pay                   |
| 217   | Samsung Pay                   |
| 327   | Merchant tokenization program |

PDS 0207 cannot contain all zeros, spaces, or special characters. PDS 0207 has no specific format and may contain any combination of numeric or alphanumeric values.

## PDS 0208 (Additional Merchant Data)

PDS 0208 (Additional Merchant Data) contains the unique ID of the participating payment facilitator in a transaction along with the sponsored merchant ID when applicable.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...26; TAGLLLLVAR             |
| Tag Field           | 0208                             |
| Data Length         | 3 positions, value = 011-026     |
| Data Field          | Variable length, positions 11-26 |
| Subfields           | 2                                |
| Justification       | "See Subfields"                  |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                     | Org | Sys | Dst |
|-----------------------------|-----|-----|-----|
| First Presentment/1240      | C   | .   | C   |
| First Chargeback/1442       | C   | .   | C   |
| Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240     | C   | .   | C   |

### Subfield 1 (Payment Facilitator ID)

Subfield 1 (Payment Facilitator ID) is the company ID that is assigned during the time of registration of a service provider as payment facilitator.

The Payment Facilitator ID should always be a value assigned by Mastercard® and is the same value in both the authorization and clearing platforms.

### Attributes

|                     |                            |
|---------------------|----------------------------|
| Data Representation | n-11 (for example)         |
| Data Field          | Contents of positions 1–11 |
| Justification       | Right, with leading zeros  |

### Application notes

This value should be provided by the acquirer when a registered payment facilitator is involved in a transaction and should be right justified with leading zeros. For example, if the company ID is 123456, PDS 0208, subfield 1 should be 00000123456.

PDS 0208 (Additional Merchant Data), subfield 1 must match DE 48 (Additional Data, Private Use), subelement 37 (Additional Merchant Data), subfield 1 (Payment Facilitator ID) in authorization.

Subfield 1 (Payment Facilitator ID) must be alphanumeric and must not contain all zeros or all spaces.

### Subfield 2 (Sponsored Merchant ID)

PDS 0208, subfield 2 (Sponsored Merchant ID) contains the identifier assigned by the acquirer or the payment facilitator to the sponsored merchant and its location.

### Attributes

|                     |                             |
|---------------------|-----------------------------|
| Data representation | an-15                       |
| Data field          | Contents of positions 12–26 |
| Justification       | Left with trailing spaces   |

### Processing rules

The sponsored merchant ID must be present for all payment facilitator-acquired transactions and must uniquely identify each sponsored merchant and its location.

### Application notes

This value, which is assigned by the payment facilitator or their acquirer, should be provided by the acquirer whenever the payment facilitator ID is provided in PDS 0208 (Additional Merchant Data), subfield 1 (Payment Facilitator ID).

Subfield 2 (Sponsored Merchant ID) must be alphanumeric and must not contain all zeros or all spaces.

## PDS 0209 (Independent Sales Organization ID)

PDS 0209 (Independent Sales Organization ID) contains the company ID that is assigned by Mastercard® during the time of registration of a service provider as an independent sales organization.

This value should be provided by the acquirer when a registered independent sales organization is involved in a transaction and should be right justified with leading zeros. For example, if the company ID is 123456, PDS 0209 should be 00000123456.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-11; TAGLLL               |
| Tag Field           | 0209                       |
| Data Length         | 3 positions, value = 011   |
| Data Field          | Fixed length, 11 positions |
| Subfields           | None                       |
| Justification       | Right, with leading zeros  |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                     | Org | Sys | Dst |
|-----------------------------|-----|-----|-----|
| First Chargeback/1442       | C   | .   | C   |
| Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240     | C   | .   | C   |

### Values

The independent sales organization ID must always be a value assigned by Mastercard® and is the same value in both the authorization and clearing platforms. This ID is the company ID that is assigned during the time of registration via Mastercard Connect® of a service provider as an independent sales organization.

This value must be provided by the acquirer when a registered independent sales organization is involved in a transaction and should be right justified with leading zeros. For example, if the company ID is 123456, PDS 0209 should be 00000123456.

## PDS 0210 (Transit Program)

PDS 0210 (Transit Program) provides data related to the transit transaction type and the transaction mode.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4; TAGLLL               |
| Tag Field           | 0210                      |
| Data Length         | 3 positions, value = 004  |
| Data Field          | Fixed length, 4 positions |
| Subfields           | 2                         |
| Justification       | See "Subfields"           |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |

Acquirers should not populate the subfields in this PDS with values other than those defined by Mastercard®. The values should be populated only on transit activity for transactions that have transit-related MCCs and not on transactions with any other MCC.

**NOTE: The values 03 and 04 defined for subfield 1 (Transit Transaction Type Indicator) must only be populated by acquirers working with Transit agencies and supporting Mastercard aggregated transit transaction models.**

Issuers should not reject or limit processing of these transactions solely because acquirers populate the subfields in this PDS with values that are not defined by Mastercard®.

**NOTE: The value of 07 (Debt Recovery) must not be used where the original transit transaction was 01 (Pre-Funded) or 02 (Real-Time Authorized). The value of 07 should only be used where the original transit transactions was 03 (Post-Authorized Aggregated), or 04 (Authorized Aggregated Split Clearing) or 05 (Other) where the transaction model implements a delayed authorization.**

## PDS 0210 subfields

PDS 0210 (Transit Program) consists of two subfields.

### PDS 0210 subfields

| Number | Positions | Name                               | Attributes | Justification |
|--------|-----------|------------------------------------|------------|---------------|
| 1      | 1–2       | Transit Transaction Type Indicator | n-2        | N/A           |
| 2      | 3–4       | Transportation Mode Indicator      | n-2        | N/A           |

### Subfield 1 (Transit Transaction Type Indicator)

PDS 0210 (Transit Program), subfield 1 (Transit Transaction Type Indicator) contains the transit transaction type to uniquely identify different Mastercard® transit transaction types. The valid values for subfield 1 are listed in this table.

This is a mandatory data element for transit transactions (for more information about transit transactions, please refer to the Global Transit Implementation Guide or any regional or country specific variant).

### Subfield 1 (Transit Transaction Type Indicator)

| Value | Description                          |
|-------|--------------------------------------|
| 01    | Pre-Funded                           |
| 02    | Real-time Authorized                 |
| 03    | Post-Authorized Aggregated           |
| 04    | Authorized Aggregated Split Clearing |
| 05    | Other                                |
| 06    | Post-authorized Aggregated Maestro®  |
| 07    | Debt Recovery                        |

| Value | Description             |
|-------|-------------------------|
| 08    | First Ride Risk Claim   |
| 09–99 | Reserved for Future Use |

## Subfield 2 (Transportation Mode Indicator)

PDS 0210 (Transit Program), subfield 2 (Transportation Mode Indicator) contains the type of transportation mode used by the cardholder for that transaction. The valid values for subfield 2 are listed in this table.

### Subfield 2 (Transportation Mode Indicator)

| Value | Description                                       |
|-------|---------------------------------------------------|
| 00    | Unknown                                           |
| 01    | Urban Bus                                         |
| 02    | Interurban Bus                                    |
| 03    | Light Train Mass Transit (Underground Metro, LTR) |
| 04    | Train                                             |
| 05    | Commuter Train                                    |
| 06    | Water Borne Vehicle                               |
| 07    | Toll                                              |
| 08    | Parking                                           |
| 09    | Taxi                                              |
| 10    | High Speed Train                                  |
| 11    | Rural Bus                                         |
| 12    | Express Commuter Train                            |
| 13    | Para Transit                                      |
| 14    | Self Drive Vehicle                                |
| 15    | Coach                                             |
| 16    | Locomotive                                        |
| 17    | Powered Motor Vehicle                             |
| 18    | Trailer                                           |
| 19    | Regional Train                                    |

| Value | Description             |
|-------|-------------------------|
| 20    | Inter City              |
| 21    | Funicular Train         |
| 22    | Cable Car               |
| 23–99 | Reserved for Future Use |

## PDS 0211 (Terminal Compliant Indicator)

PDS 0211 (Terminal Compliant Indicator) contains two subfields.

These subfields identify whether or not a point-of-sale (POS) terminal from which the transaction originated is Terminal Line Encryption (TLE) and Unique Key Per Terminal (UKPT)/Derived Unique Key Per Terminal (DUKPT) compliant. These fields must be present in all card-present POS transactions acquired in India.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-2; TAGLLL               |
| Tag Field           | 0211                      |
| Data Length         | 3 positions, value = 002  |
| Data Field          | Fixed length, 2 positions |
| Subfields           | 2                         |
| Justification       | See "Subfields"           |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

Acquirers should not populate the subfields in this PDS with values other than those defined by Mastercard®. These values should be populated only on card-present POS transactions acquired in India.

### Subfield 1 (TLE Compliant)

PDS 0211, subfield 1 indicates whether or not the point-of-sale (POS) terminal from which the transaction occurred is certified by Terminal Line Encryption (TLE).

#### Values

| Values | Description   |
|--------|---------------|
| 1      | Not Certified |
| 2      | Certified     |

### Subfield 2 (UKPT/DUKPT Compliant)

PDS 0211, subfield 2 indicates whether or not the point-of-sale (POS) terminal from which the transaction occurred is certified by Unique Key Per Terminal/Derived Unique Key per Terminal (UKPT/DUKPT).

#### Values

| Value | Description   |
|-------|---------------|
| 1     | Not Certified |
| 2     | Certified     |

## PDS 0212 (Merchant Data Services)

PDS 0212 (Merchant Data Services) is populated by Mastercard with a service level indicator which represents the services the issuer has registered for and the response value supplied based on what information was provided in the associated First or Second Presentment/1240 message.

#### Attributes

| Attribute           | Description      |
|---------------------|------------------|
| Data Representation | ans-5; TAGLLLVAR |

| Attribute     | Description     |
|---------------|-----------------|
| Tag Field     | 0212            |
| Data Length   | 005             |
| Data Field    | Fixed length    |
| Subfields     | 2               |
| Justification | See "Subfields" |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | .   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | .   | X   | C   |
| Second Presentment/1240                               | .   | X   | C   |

## PDS 0213 (Merchant Country of Origin)

PDS 0213 (Merchant Country of Origin) contains the ISO numeric country code for the home country of the government that owns or controls the merchant that initiated the transaction.

## Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-3                       |
| Length Field        | 3 positions, value=003    |
| Data Field          | Fixed length, 3 positions |
| Subfields           | None                      |
| Justification       | Right                     |

## Values

If present, PDS 0213 must contain a valid numeric ISO country code. When territories have a defined country code in Chapter 2 of the *Quick Reference Booklet*, that country code must be used.

For example, embassies are physically located in countries that are not their "home country" (that is, the embassy of Mexico may be physically located in Singapore; however, the "home country" is Mexico).

## Requirements

PDS 0213 must contain the location information of the government entity, not the location of the merchant.

When PDS 0213 is provided, this field must contain a valid three byte ISO numeric country code in First Presentment/1240 messages.

The following table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

## Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | O   |

## PDS 0214 (Merchant Data Cleansing Plus)

PDS 0214 (Merchant Data Cleansing Plus) contains Mastercard provided merchant data for customers participating in the Mastercard Merchant Data Cleansing Plus Service.

## Attributes

| Attribute           | Description          |
|---------------------|----------------------|
| Data Representation | ans...354; TAGLLLVAR |
| Tag Field           | 0214                 |
| Data Length         | 354                  |
| Data Field          | Variable length      |
| Subfields           | 5                    |
| Justification       | See "Subfields"      |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | .   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | .   | X   | C   |
| Second Presentment/1240                               | .   | X   | C   |

## PDS 0214 subfields

PDS 0214 (Merchant Data Cleansing Plus) consists of five subfields.

### PDS 0214 subfields

| Number | Positions | Name                             | Attributes | Justification |
|--------|-----------|----------------------------------|------------|---------------|
| 1      | 1–90      | Cleansed Legal Corporate Name    | ans-90     | left          |
| 2      | 91–93     | Sales Channel: Percentage Brick  | n-3        | right         |
| 3      | 94–96     | Sales Channel: Percentage Online | n-3        | right         |
| 4      | 97–99     | Sales Channel: Percentage Other  | n-3        | right         |
| 5      | 100–354   | Cleansed Merchant URL            | ans-255    | left          |

### Subfield 1 (Cleansed Legal Corporate Name)

PDS 0214 (Merchant Data Cleansing Plus), subfield 1 (Cleansed Legal Corporate Name) contains the cleansed legal corporate name.

### Subfield 2 (Sales Channel: Percentage Brick)

PDS 0214, subfield 2 (Sales Channel: Percentage Brick) contains the percentage of sales transactions made at the merchant's brick-and-mortar locations.

### Subfield 3 (Sales Channel: Percentage Online)

PDS 0214, subfield 3 (Sales Channel: Percentage Online) contains the percentage of sales transactions made at the merchant's online locations.

### Subfield 4 (Sales Channel: Percentage Other)

PDS 0214, subfield 4 (Sales Channel: Percentage Other) contains the percentage of sales transactions made at the merchant's other locations (for example telephone sales).

### Subfield 5 (Cleansed Merchant URL)

PDS 0214, subfield 5 (Cleansed Merchant URL) contains the Uniform Resource Locator (URL) of the merchant website, when available.

## PDS 0215 (Mastercard Merchant Data Advance)

PDS 0215 (Mastercard Merchant Data Advance) contains Mastercard provided merchant data for customers participating in the Mastercard Merchant Data Advance Service.

### Attributes

| Attribute           | Description        |
|---------------------|--------------------|
| Data Representation | ans-106; TAGLLLVAR |
| Tag Field           | 0215               |
| Data Length         | 106                |
| Data Field          | Fixed length       |
| Subfields           | 8                  |
| Justification       | See "Subfields"    |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | .   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | .   | X   | C   |
| Second Presentment/1240                               | .   | X   | C   |

## PDS 0215 subfields

PDS 0215 (Mastercard Merchant Data Advance) consists of eight subfields.

### PDS 0215 subfields

| Number | Positions | Name                         | Attributes | Justification |
|--------|-----------|------------------------------|------------|---------------|
| 1      | 1–5       | Aggregate Merchant ID        | n-5        | right         |
| 2      | 6–80      | Aggregate Merchant Name      | ans-75     | left          |
| 3      | 81–83     | Industry Code                | ans-3      | left          |
| 4      | 84–86     | Super Industry Code          | ans-3      | left          |
| 5      | 87–91     | Key Aggregate Merchant ID    | n-5        | right         |
| 6      | 92        | Channel Distribution ID      | ans-1      | left          |
| 7      | 93–98     | NAICS Code                   | ans-6      | left          |
| 8      | 99–106    | Parent Aggregate Merchant ID | n-8        | right         |

### Subfield 1 (Aggregate Merchant ID)

PDS 0215 (Mastercard Merchant Data Advance), subfield 1 (Aggregate Merchant ID) contains the aggregate merchant identifier assigned in the data warehouse in the aggregate merchant table.

### Subfield 2 (Aggregate Merchant Name)

PDS 0215, subfield 2 (Aggregate Merchant Name) contains the merchant chain, typically for multiple merchant locations, sometimes associated with a brand name.

### Subfield 3 (Industry Code)

PDS 0215, subfield 3 (Industry Code) contains the industry code assigned to the merchant. The values are listed in this table.

#### Subfield 3 values

| Value | Description                          |
|-------|--------------------------------------|
| AAC   | Children's Apparel                   |
| AAF   | Family Apparel                       |
| AAM   | Men's Apparel                        |
| AAW   | Women's Apparel                      |
| AAX   | Miscellaneous Apparel                |
| ACC   | Accommodations                       |
| ACS   | Automotive New and Used Car Sales    |
| ADV   | Advertising Services                 |
| AFH   | Agriculture/Forestry/Fishing/Hunting |
| AFS   | Automotive Fuel                      |
| ALS   | Accounting and Legal Services        |
| ARA   | Amusement, Recreation Activities     |
| ART   | Arts and Craft Stores                |
| AUC   | Automotive Used Only Car Sales       |
| AUT   | Automotive Retail                    |
| BKS   | Book Stores                          |
| BMV   | Music and Videos                     |
| BNM   | Newspapers and Magazines             |

| Value | Description                                        |
|-------|----------------------------------------------------|
| BTN   | Bars/Taverns/Nightclubs                            |
| BWL   | Beer/Wine/Liquor Stores                            |

## Subfield 6 (Channel Distribution ID)

PDS 0215, subfield 6 (Channel Distribution ID) contains the code determined by Mastercard and assigned to aggregate merchants. The values are listed in this table.

### Subfield 6 values

| Value | Description       |
|-------|-------------------|
| B     | Brick-and-mortar  |
| O     | Online (Internet) |
| C     | Catalog           |
| N     | Non-store Mixed   |

## Subfield 7 (NAICS Code)

PDS 0215, subfield 7 (NAICS Code) contains the North American Industry Classification System code. A code similar to the Mastercard defined merchant category code.

## Subfield 8 (Parent Aggregate Merchant ID)

PDS 0215, subfield 8 (Parent Aggregate Merchant ID) contains a unique number used to identify the company that owns the merchant.

## PDS 0216 (Additional Acceptor Data)

PDS 0216 (Additional Acceptor Data) contains subfields representing data related to the acceptor and service location.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | ans-69; TAGLLL                  |
| Tag field           | 0216                            |
| Length field        | 3 positions, value = 029-069    |
| Data Length         | Fixed length, 029-069 positions |
| Subfields           | 6 subfields                     |
| Justification       | See subfields                   |

## Values

If present, PDS 0216 must be a fixed length of 029 to 069.

## Usage

### Usage

| Message                                                     | Org | Sys | Dst |
|-------------------------------------------------------------|-----|-----|-----|
| First Presentment/<br>1240                                  | C   | .   | C   |
| First Chargeback/1442<br>and Arbitration<br>Chargeback/1442 | C   | .   | C   |
| Second Presentment/<br>1240                                 | C   | .   | C   |

## Subfield 1 (Service Location City Name)

PDS 0216, subfield 1 (Service Location City Name) contains the name of the city where the cardholder received the services, if it is different from the location identified by the acceptor city name.

### Attributes

|                     | Attribute                 | Value |
|---------------------|---------------------------|-------|
| Subfield ID         | n-2                       | 01    |
| Subfield length     | n-2                       | 13    |
| Data representation | ans-13                    |       |
| Justification       | Left with trailing spaces |       |

## Values

Service Location City Name must contain the name of the city, town, or village as defined by country postal standards.

## Processing rules

Service Location City Name must be present for all transactions when different from the location identified in the Acceptor City Name.

For the U.S. region, this field must match the U.S. Postal Service list of acceptable cities and spellings.

## Subfield 2 (Service Location Country Subdivision Code)

PDS 0216, subfield 2 (Service Location Country Subdivision Code) contains the code of the country subdivision where the cardholder received the services, if it is different from the location identified by the acceptor country subdivision code.

### Attributes

|                     | Attribute                 | Value |
|---------------------|---------------------------|-------|
| Subfield ID         | n-2                       | 02    |
| Subfield length     | n-2                       | 03    |
| Data representation | ans-3                     |       |
| Justification       | Left with trailing spaces |       |

### Values

Service Location Country Subdivision Code must contain a valid code as defined in Chapter 2 of the *Quick Reference Booklet*.

### Processing rules

The Service Location Subdivision Code must be present for all transactions when different from the location identified in the Acceptor Subdivision Code.

## Subfield 3 (Service Location Country Code)

PDS 0216, subfield 3 (Service Location Country Code) contains the code of the country where the cardholder received the services, if it is different from the location identified by the acceptor country code.

### Attributes

|             | Attribute | Value |
|-------------|-----------|-------|
| Subfield ID | n-2       | 03    |

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield length     | n-2       | 03    |
| Data representation | ans-3     |       |
| Justification       | Left      |       |

### Values

Acceptor Country Code must contain a valid three-character alphabetic code as defined in Chapter 2 of the *Quick Reference Booklet*. When territories have a defined country code in the *Quick Reference Booklet*, that country code must be used.

### Processing rules

The Service Location Country Code must be present for all transactions when different from the location identified in the Acceptor Country Code.

## Subfield 4 (Service Location Postal Code)

PDS 0216, subfield 4 (Service Location Postal Code) contains the postal code of the country where the cardholder received the services, if it is different from the location identified by the acceptor postal code.

### Attributes

|                     | Attribute                 | Value |
|---------------------|---------------------------|-------|
| Subfield ID         | n-2                       | 04    |
| Subfield length     | n-2                       | 10    |
| Data representation | ans-10                    |       |
| Justification       | Left with trailing spaces |       |

### Values

Service Location Postal Code must contain a valid code as defined by country postal standards.

### Processing rules

The Service Location Postal Code must be present for all transactions when different from the Acceptor Postal Code and contain a valid code for countries that utilize postal codes. This information must be populated and formatted as defined by country postal standards.

## Subfield 5 (Acceptor Geographic Coordinates)

PDS 0216, subfield 05 (Acceptor Geographic Coordinates) contains the latitude and longitude of the acceptor's location.

### Attributes

|                     | Attribute                 | Value |
|---------------------|---------------------------|-------|
| Subfield ID         | n-2                       | 05    |
| Subfield length     | n-2                       | 20    |
| Data representation | ns-20                     |       |
| Justification       | Left with trailing spaces |       |

### Values

Acceptor geographic coordinates, when present, must contain valid latitude and longitude values, comma-separated, represented in decimal degrees to five decimal places in positions 001 through 020 with these format standards:

- Length of geographic coordinates is a range of 15 - 20 positions
- When the geographic coordinate value is less than 20 positions, subfield 05 must be left justified with trailing spaces up to the fixed length of 20 positions
- Subfield should not contain alpha characters
- The subfield contains up to two '-'
- The subfield contains precisely two '.'
- The subfield contains precisely one ','
- At least one numeric position is found before the first '.'
- Five numeric positions are found between the first '.' and ','
- At least one numeric position is found between ',' and the second '.'
- Five numeric positions are found after the second '.'
- Latitude is greater than or equal to -90.00000 and less than or equal to 90.00000
- Longitude is greater than or equal to -180.00000 and less than or equal to 180.00000
- No space character follows the comma separator
- PDS 0216, subfield 05 may contain all spaces

### Latitude and longitude examples

| Location        | Latitude and longitude                         |
|-----------------|------------------------------------------------|
| Anloga, Ghana   | 5.78381,0.72175 (with five trailing spaces)    |
| Lagos, Portugal | 37.11000,-8.67880 (with three trailing spaces) |

| Location                                    | Latitude and longitude                        |
|---------------------------------------------|-----------------------------------------------|
| Anchorage, AK                               | 61.21630,-149.89500 (with one trailing space) |
| Pago Pago, Eastern District, American Samoa | -14.27451,-170.70616                          |

### Processing rules

Acceptor geographic coordinates can optionally be provided for all transactions and contain valid latitude and longitude values representing the acceptor location.

### Subfield 6 (Service Location Geographic Coordinates)

PDS 0216, subfield 06 (Service Location Geographic Coordinates) contains the latitude and longitude where the cardholder received the services, if it is different from the acceptor location.

### Attributes

|                     | Attribute                 | Value |
|---------------------|---------------------------|-------|
| Subfield ID         | n-2                       | 06    |
| Subfield length     | n-2                       | 20    |
| Data representation | ns-20                     |       |
| Justification       | Left with trailing spaces |       |

### Values

Service location geographic coordinates, when present, must contain valid latitude and longitude values, comma-separated, represented in decimal degrees to five decimal places in positions 001 through 020 with these format standards:

- Length of geographic coordinates is a range of 15 - 20 positions
- When the geographic coordinate value is less than 20 positions, PDS 0216, subfield 06 must be left justified with trailing spaces up to the fixed length of 20 positions
- Subfield should not contain alpha characters
- The subfield contains up to two '-'
- The subfield contains precisely two '.'
- The subfield contains precisely one ','
- At least one numeric position is found before the first '.'
- Five numeric positions are found between the first '.' and ','
- At least one numeric position is found between ',' and the second '.'
- Five numeric positions are found after the second '.'
- Latitude is greater than or equal to -90.00000 and less than or equal to 90.00000
- Longitude is greater than or equal to -180.00000 and less than or equal to 180.00000

- No space character follows the comma separator
- PDS 0216, subfield 06 may contain all spaces

### Latitude and longitude examples

| Location                                    | Latitude and longitude                         |
|---------------------------------------------|------------------------------------------------|
| Anloga, Ghana                               | 5.78381,0.72175 (with five trailing spaces)    |
| Lagos, Portugal                             | 37.11000,-8.67880 (with three trailing spaces) |
| Anchorage, AK                               | 61.21630,-149.89500 (with one trailing space)  |
| Pago Pago, Eastern District, American Samoa | -14.27451,-170.70616                           |

### Processing rules

Service location geographic coordinates can optionally be provided instead of, or in addition to, subfields 01 through 04 (Service Location - City Name, Country Subdivision Code, Country Code, Country Postal Code) when those subfields are required.

## PDS 0217 (Special Acceptance Conditions Data)

PDS 0217 (Special Acceptance Conditions Data) allows an acquirer to provide additional information about the transaction, the acceptor, and other information, not elsewhere provided, that is relevant to the way Mastercard processes the transaction.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data representation | ans...999; TAGLLLVAR             |
| Tag field           | 0217                             |
| Length field        | 3 positions, value = 001-999     |
| Data field          | Variable length, 1-999 positions |
| Subfields           | 1 subfield                       |
| Justification       | See subfields                    |

### Usage

Following is the usage of PDS 0217 (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message Type Identifier | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| First Presentment/1240  | C   | X   | C   |

## PDS 0217 subfields

### PDS 0217 subfields

Mastercard will introduce additional PDS 0217 subfields in the future. The subfields will be positional. For example, in the future if six subfields exist and only subfield 05 is relevant for a given transaction, then an acquirer must provide spaces or zeroes in subfields 01 to 04 and provide the relevant data in subfield 05. There would be no need to populate subfield 06 unless it applies to the transaction.

| Number | Positions | Name                                          | Attributes | Justification |
|--------|-----------|-----------------------------------------------|------------|---------------|
| 1      | 1-1       | Mastercard One Credential Exclusion Indicator | ans-1      | N/A           |

### Subfield 01 (Mastercard One Credential Exclusion Indicator)

PDS 0217 (Special Acceptance Conditions Data), subfield 01 (Mastercard One Credential Exclusion Indicator) allows an acquirer to instruct Mastercard to limit the conditions in which the Mastercard One Credential service should apply to the transaction.

### Values

If present, PDS 0217, subfield 01 (Mastercard One Credential Exclusion Indicator) must contain one of the values listed in the table.

| Value | Description                                                                                                                  |
|-------|------------------------------------------------------------------------------------------------------------------------------|
| C     | Do not assign a Mastercard One Credential funding PAN containing the Mastercard Credit Acceptance Brand for this transaction |
| D     | Do not assign a Mastercard One Credential funding PAN containing the Debit Mastercard Acceptance Brand for this transaction  |

| Value | Description                                                                                                        |
|-------|--------------------------------------------------------------------------------------------------------------------|
| M     | Do not assign a Mastercard One Credential funding PAN containing the Maestro Acceptance Brand for this transaction |

### Application notes

The Dual Message Clearing System will create or overlay PDS 0217, subfield 01 (Mastercard One Credential Exclusion Indicator) with the value from DE 48, subelement 02 (Special Acceptance Conditions Data) subfield 01 (Mastercard One Credential Exclusion Indicator) of the matching Authorization message if the clearing to authorization matching process is successful.

The Dual Message Clearing System will remove PDS 0217, subfield 01 (Mastercard One Credential Exclusion Indicator) from the message if the Issuer does not participate in the Mastercard One Credential service.

## PDS 0218 (Cardholder/Merchant Initiated Transaction Indicator)

PDS 0218 (Cardholder/Merchant Initiated Transaction Indicator) contains details that allow acquirers to identify whether the transaction was initiated by the cardholder or the merchant as well as providing more detail as to the type of stored credential being used for the transaction.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | an-4; TAGLLL              |
| Tag Field           | 0218                      |
| Data Length         | 3 positions, value = 004  |
| Data Field          | Fixed length, 4 positions |
| Subfields           | 2                         |
| Justification       | N/A                       |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Usage

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | O   | X   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |

## Application notes

GCMS will add PDS 0218 to the First Presentment/1240 message and populate it with the value from DE 48, subelement 22, subfield 5 of the associated Authorization Request/0100 message. This will occur when there is an associated Authorization Request/0100 message with DE 48, subelement 22, subfield 5 present.

## PDS 0218 subfields

PDS 0218 consists of two subfields.

## Attributes

| Number | Positions | Name                      | Attribute | Justification |
|--------|-----------|---------------------------|-----------|---------------|
| 1      | 1-2       | CIT/MIT Category          | an-2      | Right         |
| 2      | 3-4       | CIT/MIT Sub-category Code | n-2       | Right         |

## Subfield 1 (CIT/MIT Category)

Subfield 1 (CIT/MIT Category) contains the CIT and MIT categories.

## Values

| Values     | Description            |
|------------|------------------------|
| C1, M1, M2 | CIT and MIT categories |

## Subfield 2 (CIT/MIT Sub-category)

Subfield 2 (CIT/MIT Sub-category) contains the CIT and MIT sub-categories.

### Values

| Values   | Description                |
|----------|----------------------------|
| 00 to 99 | CIT and MIT sub-categories |

## PDS 0220 (Brazil Merchant Tax ID)

PDS 0220 (Brazil Merchant Tax ID) contains the merchant tax ID provided by the acquirers in Brazil. PDS 0220 contains the personal tax IDs or commercial tax IDs of merchants that can be sent by all acquirers in Brazil.

### Attributes

| Attribute           | Description                                   |
|---------------------|-----------------------------------------------|
| Data Representation | an-14; TAGLLLLVAR                             |
| Tag Field           | 0220                                          |
| Data Length         | 3 positions                                   |
| Data Field          | Variable Length, 11 positions or 14 positions |
| Subfields           | None                                          |
| Occurrences         | N/A                                           |
| Justification       | Left                                          |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | .   | C   |

## PDS 0221 (Domestic Merchant Tax ID)

PDS 0221 (Domestic Merchant Tax ID) contains the merchant and submerchant tax ID provided by the acquirers in domestic transactions. PDS 0221 will contain the personal tax IDs or commercial tax IDs of merchants and submerchants that can be sent by all acquirers in domestic transactions. The Dual Message Clearing System will remove PDS 0221 before sending it to the issuers.

This information is included only in the MasterCom image interface data header and MasterCom notification files.

### Attributes

| Attribute            | Description                                     |
|----------------------|-------------------------------------------------|
| Data Representation: | an...020; TAGLLLLVAR                            |
| Tag Field:           | 0221                                            |
| Length Field:        | 3 positions, value = 001–020                    |
| Data Length:         | Variable length, 001–020 positions              |
| Subfields:           | N/A                                             |
| Occurrences:         | N/A                                             |
| Justification:       | Left                                            |
| Base ID:             | n-11(no dots nor dashes),left filled with zeros |
| Check digit:         | an-1                                            |

### Application notes

This field is required when purchase, purchase with cash back, and refund transactions are submitted by acquirers for merchants in Chile and Paraguay.

### Usage

This table shows the usage of this data element (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Usage

| Message                | Org | Sys | Dst |
|------------------------|-----|-----|-----|
| First Presentment/1240 | C   | X   | .   |

For transactions qualifying for the business service arrangement listed in this table, PDS 0221 must be present for first presentment purchase transactions.

PDS 0221 must be present in the First Presentment/1240 message containing DE 3 (Processing Code), subfield 1 (Cardholder Transaction Type Code), with a value of 00 (Purchase [Good and Services]), 09 (Purchase [Goods and Services] with Cash Back), 18 (Unique Transaction [Requires Unique MCC]), 20 (Credit [Purchase Return]).

For cross-border, non-domestic transactions, PDS 0221 must not be present. If present, the GCMS will remove this PDS before sending the message to the issuers.

PDS 0221 must be numeric and right justified and must not contain all spaces.

PDS 0158 (Business Activity) refers to Business Service Arrangements (BSA) 4/604001, where PDS 0221 will have the special use.

#### Special use for BSA 4/604001

| Business Service Type Code<br>(PDS 0158, subfield 2) | Business Service ID (PDS 0158,<br>subfield 3) | Description       |
|------------------------------------------------------|-----------------------------------------------|-------------------|
| 4                                                    | 604001                                        | Peru Intracountry |

If present, PDS 0221 will vary in length from 8, 9, or 11 characters for Peru, based on the ID type.

PDS 0158 (Business Activity) refers to Business Service Arrangements (BSA) 4/170001, where PDS 0221 will have the special use.

#### Special use for BSA 4/170001

| Business Service Type Code<br>(PDS 0158, subfield 2) | Business Service ID (PDS 0158,<br>subfield 3) | Description           |
|------------------------------------------------------|-----------------------------------------------|-----------------------|
| 4                                                    | 170001                                        | Colombia intracountry |

If present, PDS 0221 will vary in length from 6 to 16 characters based on the ID type.

## PDS 0222 (Mexico Domestic Dispute Resolution Documentation Image-Related Data)

PDS 0222 (Mexico Domestic Dispute Resolution Documentation Image-Related Data) contains technical details associated with a dispute-related, supporting documentation image file generated by a participant involved in a Mexico domestic transaction.

This PDS and related subfields are used only in Mexico-domestic Mastercard® processing involving use of the Mastercard® domestic dispute resolution system. The format of the data within this PDS is defined by the Mexico-domestic CATB (Contrato de Aceptación de Tarjeta Bancaria) specifications.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | ans-065; TAGLLL          |
| Tag Field           | 0222                     |
| Data Length         | 3 positions, value = 065 |
| Data Field          | Fixed length             |
| Subfields           | 4                        |

This data is used to associate a clearing message with the corresponding dispute-resolution-related image file that was routed through the Mexico domestic image interchange system and available for review in the Mastercard® domestic dispute resolution system.

## PDS 0222 subfields

Mexico Domestic Dispute Resolution Documentation Image-Related Data consists of four subfields.

### Subfield 1 (Mexico Domestic Data Indicator)

Subfield 1 (Mexico Domestic Data Indicator) contains a value that indicates the PDS content is specifically intended for Mexico-domestic dispute resolution processing.

#### Subfield 1 (Mexico Domestic Data Indicator)

|                      | Attributes                | Value |
|----------------------|---------------------------|-------|
| Subfield ID:         | n-2                       | 01    |
| Subfield Length:     | n-3                       | 004   |
| Data Representation: | ans-4                     |       |
| Data Field:          | Fixed length, 4 positions |       |
| Justification:       | Left                      |       |

A static value of MXDS (Mexico Domestic Switching) in uppercase characters present in this field indicates the PDS content applies specifically to Mexico-domestic dispute resolution processing.

## Subfield 2 (Unique Image Number (Single Issuer Folio Field in CATB Format))

PDS 0222 (Mexico Domestic Dispute Resolution Documentation Image-Related Data), subfield 2 (Unique Image Number [Single Issuer Folio Field in CATB Format]) contains the unique image number assigned to the image by the domestic network participant that created the image file.

### Subfield 2 (Unique Image Number (Single Issuer Folio Field in CATB Format))

|                      | Attributes                 | Value |
|----------------------|----------------------------|-------|
| Subfield ID:         | n-2                        | 02    |
| Subfield Length:     | n-3                        | 013   |
| Data Representation: | ans-013                    |       |
| Data Field:          | Fixed length, 13 positions |       |
| Justification:       | Left                       |       |

This table lists the values.

### Subfield 2 values

| Value    | Description                                                                                               |
|----------|-----------------------------------------------------------------------------------------------------------|
| pos 1-3  | Institution ID number (001 – 999; identifies a specific Mexican network participant)                      |
| pos 4    | Institution Type (A [Acquirer] or E [Issuer])                                                             |
| pos 5-8  | Julian Date (1 position year + Julian day 001-366, for example 17 Jan 2025 = 5017)                        |
| pos 9-13 | Consecutive Sequence Number (00000 – 99999; incremental value that uniquely identifies each image record) |

## Subfield 3 (PDF Image File Name)

Subfield 3 (PDF Image File Name) contains the PDF image file name. This is the actual name of the PDF document file created by the domestic network participant that created final PDF image file.

## Subfield 4 (PDF Image File Hash Value)

PDS 0222 (Mexico Domestic Dispute Resolution Documentation Image-Related Data), subfield 4 (PDF Image File Hash Value) contains the calculated hash value associated with the PDF file containing supporting documentation images.

### Subfield 4 (PDF Image File Hash Value)

|                      | Attributes                 | Value |
|----------------------|----------------------------|-------|
| Subfield ID:         | n-2                        | 04    |
| Subfield Length:     | n-3                        | 032   |
| Data Representation: | ans-32                     |       |
| Data Field:          | Fixed length, 32 positions |       |
| Justification:       | Left                       |       |

The hash value is calculated via 128bit MD5 hashing algorithm which generates a 32-byte character string. For example: "d41d8cd98f00b204e9800998ecf8427e".

## PDS 0225 (Syntax Return, Original Message Reason Code)

PDS 0225 (Syntax Return, Original Message Reason Code) contains the original message reason code value from DE 25 (Message Reason Code) on the transactions that were flagged with a syntax error and are now returned due to a syntax error condition by the receiver.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4; TAGLLL               |
| Tag Field           | 0225                      |
| Data Length         | 3 positions, value = 004  |
| Data Field          | Fixed length, 4 positions |
| Subfields           | None                      |
| Justification       | None                      |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Presentment/1240                                | C   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | .   | C   |
| Second Presentment/1240                               | C   | .   | C   |
| Retrieval Request/1644                                | C   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | C   | .   | C   |

## Values

PDS 0225 contains the same structure as DE 25 (Message Reason Code).

For more information on the usage and values of PDS 0225, see [DE 25 \(Message Reason Code\)](#).

## PDS 0228 (Retrieval Document Code)

PDS 0228 (Retrieval Document Code) indicates the document type requested to be provided in a Retrieval Request/1644 and Retrieval Request Acknowledgment/1644.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | n-1; TAGLLL              |
| Tag Field           | 0228                     |
| Data Length         | 3 positions, value = 001 |
| Data Field          | Fixed length, 1 position |
| Subfields           | None                     |
| Justification       | N/A                      |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Retrieval Request/1644                      | M   | .   | M   |
| Retrieval Request Acknowledgment/1644       | M   | .   | M   |
| Fee Collection (Retrieval Fee Billing)/1740 | O   | .   | C   |

This PDS is used in Retrieval Request/1644, Retrieval Request Acknowledgment/1644, and Retrieval Fulfillment (presented via a Fee Collection) messages to identify the specific type of retrieval document an issuer or processor requests.

### Values

Data values are listed in this table.

### Values

| Value | Description                                                    |
|-------|----------------------------------------------------------------|
| 1     | Hard copy original document                                    |
| 2     | Copy or image (photocopy, microfilm, fax) of original document |
| 4     | Substitute draft                                               |

## PDS 0230 (Fulfillment Document Code)

PDS 0230 (Fulfillment Document Code) indicates the document type the acquirer provided to the issuer in response to a Retrieval Request/1644 and in Retrieval Request Acknowledgment/1644.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | n-1; TAGLLL              |
| Tag Field           | 0230                     |
| Data Length         | 3 positions, value = 001 |
| Data Field          | Fixed length, 1 position |
| Subfields           | None                     |

| Attribute     | Description |
|---------------|-------------|
| Justification | Left        |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Fee Collection (Retrieval Fee Billing)/1740 | M   | .   | M   |

This PDS is used in a retrieval fulfillment, which is presented via Fee Collection message. PDS 0230 identifies the specific type of retrieval document that the acquirer was able to supply in response to a previous Retrieval Request/1644 and in Retrieval Request Acknowledgment/1644.

### Values

Data values are listed in this table.

### Values

| Value | Description                 |
|-------|-----------------------------|
| 1     | Hard copy original document |

## PDS 0235 (Mastercard Assigned Incentive Identifier)

PDS 0235 (Mastercard Assigned Incentive Identifier) contains the incentive identifier value approved by Mastercard.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | n-3; TAGLLL              |
| Tag Field           | 0235                     |
| Data Length         | 3 positions, value = 003 |

| Attribute     | Description               |
|---------------|---------------------------|
| Data Field    | Fixed length, 3 positions |
| Subfields     | None                      |
| Justification | Left                      |

### Usage

Refer to the usage table, which notes if this data element is mandatory, conditional, optional, or system provided in applicable messages.

### Applicable messages

| Message                 | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| First Presentment/1240  | C   | .   | C   |
| First Chargeback/1442   | C   | .   | C   |
| Second Presentment/1240 | C   | .   | C   |

## PDS 0241 (MasterCom Control Number)

PDS 0241 (MasterCom Control Number) contains the MasterCom PC endpoint number used in routing chargeback and retrieval documentation.

### Attributes

| Attribute           | Description                       |
|---------------------|-----------------------------------|
| Data Representation | ans...7; TAGLLLVAR                |
| Tag Field           | 0241                              |
| Data Length         | 3 positions, value = 002 or 007   |
| Data Field          | Variable length, 2 or 7 positions |
| Subfields           | None                              |
| Justification       | Left                              |

### Current processing restrictions

In First Chargeback/1442, Second Presentment/1240, and Arbitration Chargeback/1442 messages, if PDS 0241 is present, it must be a length of 002 and contain a MasterCom endpoint suffix.

In Retrieval Requests/1644 and Fee Collection (Retrieval Fees)/1740 messages, if PDS 0241 is present, it can contain either a MasterCom endpoint suffix or a full MasterCom endpoint. If it contains a MasterCom endpoint suffix, the length must be 002. If it contains a full MasterCom endpoint, the length must be 007.

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |
| Retrieval Request/1644                                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                 | O   | .   | C   |
| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |

This PDS contains the MasterCom PC Endpoint Control Number or Suffix to identify the MasterCom PC associated with a retrieval request or response action, or with CSD. It is used to notify the MasterCom system that a retrieval fulfillment or CSD will be provided from a specific MasterCom PC endpoint.

If the originator does not provide the MasterCom PC Endpoint Control Number or Suffix in the clearing message, this PDS is not present in the receiver's message, and the MasterCom system uses the customer's default endpoint number.

### Values

This PDS must contain a seven-digit MasterCom PC Endpoint Number or a two-digit MasterCom PC Endpoint Suffix.

If present, PDS 0241 (MasterCom Control Number) cannot contain all zeros or all spaces.

## PDS 0243 (MasterCom Retrieval Response Data)

The MasterCom processing system provides retrieval request, response, and MasterCom image review information to the clearing system.

New information is provided each day, seven days per week. The clearing system maintains this information for 120 days from the last update in a retrieval history record for each transaction.

Each transaction is identified in history by DE 2 (Primary Account Number) and DE 31 (Acquirer Reference Data). Whenever possible, the clearing system supplements a chargeback message with information from the retrieval history file related to the issuer's Retrieval Request/1644, the acquirer's response Retrieval Request Acknowledgment/1644, and any subsequent decisions by the issuer, the MasterCom system, or both.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | ans...38; TAGLLLLVAR            |
| Tag Field           | 0243                            |
| Data Length         | 3 positions, value = 006–038    |
| Data Field          | Variable length, 6–38 positions |
| Subfields           | 8                               |
| Justification       | See "Subfields"                 |

**NOTE: If the clearing system cannot locate history for the transaction, or more than one occurrence of history is detected, this information is not provided in the message.**

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Chargeback/1442 and Arbitration Chargeback/1442 | •   | X   | C   |
| Second Presentment/1240                               | •   | X   | C   |

The clearing system provides this PDS using information from the MasterCom system.

## Values

Only those subfields for which the MasterCom system has stored the information are present. PDS 0243 is truncated after the last available subfield. For example, if the issuer received the acquirer's image but has not yet accepted or rejected it, only subfields 1, 2, and 3 of PDS 0243 are present, with a corresponding length of 13.

## Subfield 1 (MasterCom Issuer Retrieval Request Date)

PDS 0243 (MasterCom Retrieval Response Data), subfield 1 is the clearing system processing date of the issuer's Retrieval Request/1644. This is the date that begins the time frame edits related to the validity of a chargeback for non-receipt of requested documentation.

## Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-6; YYMMDD               |
| Data Field          | Contents of positions 1–6 |
| Justification       | N/A                       |

The subfield 1 format is YYMMDD.

## Subfield 2 (MasterCom Acquirer Retrieval Response Code)

PDS 0243 (MasterCom Retrieval Response Data), subfield 2 is the code the acquirer returns in response to the issuer's Retrieval Request/1644.

## Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | ans-1                   |
| Data Field          | Contents of positions 7 |
| Justification       | N/A                     |

## Values

| Values | Description                                                |
|--------|------------------------------------------------------------|
| A      | Retrieval request not fulfilled; invalid reference number. |

| Values | Description                                                                                                                    |
|--------|--------------------------------------------------------------------------------------------------------------------------------|
| B      | Retrieval request not fulfilled; reference number and cardholder account number combination is incompatible.                   |
| C      | Retrieval request not fulfilled; request is for a below qualified limit transaction for which documentation was not available. |
| D      | Retrieval request was fulfilled.                                                                                               |
| E      | Retrieval request was not fulfilled; required or requested documentation is not available.                                     |
| F      | Inventory Information Approval System (IIAS) information cannot be provided because the merchant is exempt from using an IIAS. |
| G      | The retrieval information provided was not complete or was inaccurate.                                                         |
| H      | The retrieval request has been fulfilled.                                                                                      |

### Subfield 3 (MasterCom Acquirer Retrieval Response Sent Date)

PDS 0243 (MasterCom Retrieval Response Data), subfield 3 is the date that the acquirer responded to the issuer's Retrieval Request/1644.

This date determines whether the acquirer responded to the issuer's request in the appropriate time frames; it is also used in retrieval fulfillment fee billing to indicate the number of days that the acquirer took to respond.

#### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-6; YYMMDD                |
| Data Field          | Contents of positions 8–13 |
| Justification       | N/A                        |

The subfield 3 format is YYMMDD.

## Subfield 4 (MasterCom Issuer Response Code)

PDS 0243 (MasterCom Retrieval Response Data), subfield 4 is the code the issuer returns after reviewing the acquirer's response to the Retrieval Request/1644. It indicates whether the issuer accepts or rejects the acquirer's response.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans-2                       |
| Data Field          | Contents of positions 14–15 |
| Justification       | N/A                         |

### Values

This table lists the values.

### Values

| Values | Description                                                                                                                                                                                                           |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 01     | Image accepted.                                                                                                                                                                                                       |
| 02     | Image rejected.                                                                                                                                                                                                       |
| 03     | The acquirer responded with "invalid request" (Acquirer's Response Codes A, B, or C); the issuer accepted this response.                                                                                              |
| 04     | The acquirer responded with "invalid request" (Acquirer's Response Codes A, B, or C); the issuer rejected this response.                                                                                              |
| 05     | The acquirer responded with "documentation not available" (Acquirer's Response Code E); the issuer accepted this response.                                                                                            |
| 06     | The acquirer responded with code A, B, C, or D; the issuer neither accepted nor rejected the response in the appropriate time frame; the MasterCom system automatically accepted the response on the issuer's behalf. |
| 07     | The acquirer responded with code E; the issuer neither accepted nor rejected the response in the appropriate time frame; the MasterCom system automatically rejected the response on the issuer's behalf.             |

## Subfield 5 (MasterCom Issuer Response Date)

PDS 0243 (MasterCom Retrieval Response Data), subfield 5 is the date that the issuer response code was provided and determines whether an issuer responded in the time frame allowed.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-6                         |
| Data Field          | Contents of positions 16–21 |
| Justification       | N/A                         |

The format of subfield 5 is YYMMDD.

## Subfield 6 (MasterCom Issuer Reject Reasons)

PDS 0243 (MasterCom Retrieval Response Data), subfield 6 contains the reasons that the issuer rejected the acquirer's response.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | ans-10                      |
| Data Field          | Contents of positions 22–31 |
| Justification       | Left                        |

Up to 10 one-position reject codes can be provided. A value of Y in a particular position indicates that the issuer rejected the response for the reason associated with that position. For example, a Y in positions 2 and 4 of this subfield indicates that the issuer rejected the document the acquirer provided because of the transaction date and the expiration date.

### Values

This table lists the valid values.

### Values

| Values | Description                  |
|--------|------------------------------|
| 1      | Reject for cardholder number |

| Values | Description                        |
|--------|------------------------------------|
| 2      | Reject for transaction date        |
| 3      | Reject for transaction amount      |
| 4      | Reject for expiration date         |
| 5      | Reject for acceptor name           |
| 6      | Reject for incorrect documentation |
| 7      | Reject for other reason            |
| 8–10   | Reserved for future use            |

## Subfield 7 (MasterCom Image Review Decision)

PDS 0243 (MasterCom Retrieval Response Data), subfield 7 contains the image review decision.

Whenever an issuer rejects an acquirer's response, the case is referred to image review for a ruling. Issuers are permitted to charge back only for Message Reason Code 4802, requested item illegible or missing, if image review has ruled in their favor.

### Attributes

| Attribute           | Description             |
|---------------------|-------------------------|
| Data Representation | a-1                     |
| Data Field          | Contents of position 32 |
| Justification       | N/A                     |

### Values

This table lists the valid values.

### Values

| Values | Description                                  |
|--------|----------------------------------------------|
| A      | Image Review ruled in favor of the acquirer. |
| I      | Image Review ruled in favor of the issuer.   |

## Subfield 8 (MasterCom Image Review Date)

PDS 0243 (MasterCom Retrieval Response Data), subfield 8 contains the date the image review decision was made. The format is YYMMDD.

### Attributes

| Attribute           | Description                 |
|---------------------|-----------------------------|
| Data Representation | n-6                         |
| Data Field          | Contents of positions 33–38 |
| Justification       | N/A                         |

## PDS 0244 (MasterCom Chargeback Support Documentation Dates)

PDS 0244 (MasterCom Chargeback Support Documentation dates) is the electronic imaging system that provides chargeback support documentation (CSD) information to the clearing system.

New information is provided each day, seven days per week. The clearing system maintains this information for 120 days from the last update in a chargeback history record for each transaction.

Each transaction is identified in history by DE 95 (Card Issuer Reference Data) and the first six digits of DE 2 (Primary Account Number). Whenever possible, the clearing system will supplement the chargeback message with the information from the chargeback history file related to the dates that CSD was sent via the MasterCom system.

### Attributes

| Attribute           | Description                     |
|---------------------|---------------------------------|
| Data Representation | ans...12; TAGLLLLVAR            |
| Tag Field           | 0244                            |
| Length Field        | 3 positions, value = 006–012    |
| Data Field          | Variable length, 6–12 positions |
| Subfields           | 2                               |
| Justification       | See "Subfields"                 |

**NOTE: If the clearing system cannot locate history for the transaction, this information is not provided in the message.**

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message Type Identifier                                                                      | Org | Sys | Dst |
|----------------------------------------------------------------------------------------------|-----|-----|-----|
| Arbitration Chargeback/1442                                                                  | .   | X   | C   |
| Second Presentment/1240                                                                      | .   | X   | C   |
| s2 MasterCom Chargeback Support Documentation<br>Sender Processing Date (Second Presentment) | .   | .   | .   |

The clearing system provides this PDS using information from the MasterCom system. If available, PDS 0244 is included in Second Presentment/1240 and Arbitration Chargeback/1442 messages. It indicates whether customers provided CSD via the MasterCom system in the appropriate time frames.

## Values

Only those subfields for which the MasterCom system has stored the information are present. PDS 0244 is truncated after the last available subfield. For example, if PDS 0244 is present in an Arbitration Chargeback/1442 message, and documentation was sent only for the First Chargeback/1442, PDS 0244 contains only subfield 1, with a corresponding length of 6.

## PDS 0244 subfields

This PDS consists of two subfields.

### PDS 0244 subfields

| Number | Positions | Name                                                                                               | Attribute   | Justification |
|--------|-----------|----------------------------------------------------------------------------------------------------|-------------|---------------|
| 1      | 1–6       | MasterCom Chargeback Support<br>Documentation Sender<br>Processing Date (First<br>Chargeback/1442) | n-6; YYMMDD | N/A           |

| Number | Positions | Name                                                                                        | Attribute   | Justification |
|--------|-----------|---------------------------------------------------------------------------------------------|-------------|---------------|
| 2      | 7-12      | MasterCom Chargeback Support Documentation Sender Processing Date (Second Presentment/1240) | n-6; YYMMDD | N/A           |

### Subfield 1 (MasterCom Chargeback Documentation Sender Processing Date [First Chargeback/1442])

Subfield 1 (MasterCom Chargeback Documentation Sender Processing Date [First Chargeback/1442]) is the date that the issuer provided CSD applicable to the First Chargeback/1442. This date determines whether the issuer provided the documentation in the appropriate time frames.

The subfield 1 format is YYMMDD. This subfield may contain zeros when present in Arbitration Chargeback/1442 messages if the First Chargeback/1442 did not have documentation but the Second Presentment/1240 did.

### Subfield 2 (MasterCom Chargeback Documentation Sender Processing Date [Second Presentment/1240])

Subfield 2 (MasterCom Chargeback Documentation Sender Processing Date [Second Presentment/1240]) is the date that the acquirer provided CSD applicable to the Second Presentment/1240. This date that determines whether the acquirer provided the documentation in the appropriate time frames.

The subfield 2 format is YYMMDD.

## PDS 0245 (MasterCom Arbitration Chargeback Sender Processing Date)

PDS 0245 (MasterCom Arbitration Chargeback Sender Processing Date) contains the date on which the issuer submits supporting documentation for an arbitration chargeback.

This information is included only in the MasterCom notification files.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | n-6; TAGLLL              |
| Tag Field           | 0245                     |
| Length Field        | 3 positions, value = 006 |

| Attribute     | Description               |
|---------------|---------------------------|
| Data Field    | Fixed length, 6 positions |
| Subfields     | None                      |
| Justification | N/A                       |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                                         | Org | Sys | Dst |
|-----------------------------------------------------------------|-----|-----|-----|
| Arbitration Chargeback/1442 in the MasterCom notification files | •   | X   | C   |

The MasterCom system provides this PDS in Arbitration Chargeback messages within the MasterCom notification files. It indicates whether customers provided CSD via the MasterCom system in the appropriate time frames.

### Values

This PDS contains a date in the format YYMMDD.

## PDS 0246 (MasterCom Sender Memo)

PDS 0246 (MasterCom Sender Memo) conveys a message from the sender to the receiver.

This information is included only in the MasterCom image interface data header and MasterCom notification files.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...100; TAGLLLLVAR            |
| Tag Field           | 0246                             |
| Length Field        | 3 positions, value = 001–100     |
| Data Field          | Variable length, 1–100 positions |
| Subfields           | None                             |

| Attribute     | Description |
|---------------|-------------|
| Justification | Left        |

### Usage

For First Chargeback/1442 and Arbitration Chargeback/1442 messages, the sender is always the issuer.

For Second Presentment/1240 messages and the fulfillment of Retrieval Request/1644 messages, the sender is always the acquirer.

### Applicable messages

| Message                                                                                                                             | Org | Sys | Dst |
|-------------------------------------------------------------------------------------------------------------------------------------|-----|-----|-----|
| Second Presentment/1240 in the MasterCom Image Interface data header and MasterCom notification files                               | O   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 in the MasterCom Image Interface data header and MasterCom notification files | O   | .   | C   |
| Retrieval Request/1644                                                                                                              | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                                                                                               | O   | .   | C   |
| Retrieval Request/1644 in the MasterCom Image Interface data header and MasterCom notification files                                | O   | .   | C   |

## PDS 0247 (MasterCom Receiver Memo)

PDS 0247 (MasterCom Receiver Memo) conveys a message from the receiver to the sender or relays a message that the receiver originally sent to the sender.

This information is included only in the MasterCom image interface data header and MasterCom notification files.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...100; TAGLLLLVAR            |
| Tag Field           | 0247                             |
| Length Field        | 3 positions, value = 001–100     |
| Data Field          | Variable length, 1–100 positions |

| Attribute     | Description |
|---------------|-------------|
| Subfields     | None        |
| Justification | Left        |

### Usage

For First Chargeback/1442, and Arbitration Chargeback/1442 message, the receiver is always the acquirer.

For Second Presentment/1240 and the fulfillment of Retrieval Request/1644 messages, the receiver is always the issuer.

### Applicable messages

| Message                                                                                                                             | Org | Sys | Dst |
|-------------------------------------------------------------------------------------------------------------------------------------|-----|-----|-----|
| Second Presentment/1240 in the MasterCom Image Interface data header and MasterCom notification files                               | O   | .   | C   |
| First Chargeback/1442 and Arbitration Chargeback/1442 in the MasterCom Image Interface data header and MasterCom notification files | O   | .   | C   |
| Retrieval Request/1644                                                                                                              | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                                                                                               | O   | .   | C   |
| Retrieval Request/1644 in the MasterCom Image Interface data header and MasterCom notification files                                | O   | .   | C   |

## PDS 0248 (MasterCom Image Review Memo)

PDS 0248 (MasterCom Image Review Memo) conveys a message from the image review board to the requester of the review or to all parties.

This information is included only in the MasterCom image interface data header and MasterCom notification files.

### Attributes

| Attribute           | Description                  |
|---------------------|------------------------------|
| Data Representation | ans...100; TAGLLLVAR         |
| Tag Field           | 0248                         |
| Length Field        | 3 positions, value = 001–100 |

| Attribute     | Description                      |
|---------------|----------------------------------|
| Data Field    | Variable length, 1–100 positions |
| Subfields     | None                             |
| Justification | Left                             |

### Usage

PDS 0248 accompanies PDS 0243 (MasterCom Retrieval Response Data), subfield 7 (MasterCom Image Review Decision) and subfield 8 (MasterCom Image Review Date).

### Applicable messages

| Message                                                                                              | Org | Sys | Dst |
|------------------------------------------------------------------------------------------------------|-----|-----|-----|
| Retrieval Request/1644                                                                               | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                                                                | O   | .   | C   |
| Retrieval Request/1644 in the MasterCom Image Interface data header and MasterCom notification files | O   | .   | C   |

## PDS 0249 (MasterCom Record ID)

PDS 0249 (MasterCom Record ID) stores a unique identifier that relates the record described in the IPM message to a specific record in the MasterCom database.

This information is included only in the MasterCom image interface data header and MasterCom notification files.

### Attributes

| Attribute            | Description                    |
|----------------------|--------------------------------|
| Data Representation: | ns...10; TAGLLLVAR             |
| Tag Field:           | 0249                           |
| Length Field:        | 3 positions, value = 001–010   |
| Data Field:          | Variable length 1–10 positions |
| Subfields:           | None                           |
| Justification:       | N/A                            |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                                                                                                             | Org | Sys | Dst |

## PDS 0250 (MasterCom Endpoints)

PDS 0250 (MasterCom Endpoints) contains two subfields that represent the pair of endpoints used in the MasterCom transaction.

This information is included only in the MasterCom image interface data header and MasterCom notification files.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-14; TAGLLL               |
| Tag Field           | 0250                       |
| Data Length         | 3 positions, value = 014   |
| Data Field          | Fixed length, 14 positions |
| Subfields           | 2                          |
| Justification       | N/A                        |

## Current processing restrictions

Both endpoints must appear in their respective subfields; if one is present, the other also must be present.

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                                                                                                                             | Org | Sys | Dst |
|-------------------------------------------------------------------------------------------------------------------------------------|-----|-----|-----|
| First Chargeback/1442 and Arbitration Chargeback/1442 in the MasterCom Image Interface data header and MasterCom notification files | O   | .   | C   |
| Second Presentment/1240 in the MasterCom Image Interface data header and MasterCom notification files                               | O   | .   | C   |
| Retrieval Request/1644                                                                                                              | O   | .   | C   |
| Retrieval Request Acknowledgment/1644                                                                                               | O   | .   | C   |
| Retrieval Request/1644 in the MasterCom Image Interface data header and MasterCom notification files                                | O   | .   | C   |

This PDS contains the MasterCom Endpoints that are associated with a retrieval request fulfillment or response action, or with CSD files. It is used to identify to the MasterCom system that a retrieval or CSD fulfillment will be provided from and to a specific MasterCom endpoint.

This field is present only in notification files generated by MasterCom and in MasterCom Image Interface data headers.

## Values

This PDS must contain two seven-digit MasterCom Endpoints: sender and receiver, respectively.

## PDS 0250 subfields

This PDS consists of two subfields.

## PDS 0250 subfields

| Number | Positions | Name                             | Attribute | Justification |
|--------|-----------|----------------------------------|-----------|---------------|
| 1      | 1–7       | MasterCom Sender Endpoint Number | n-7       | N/A           |

| Number | Positions | Name                               | Attribute | Justification |
|--------|-----------|------------------------------------|-----------|---------------|
| 2      | 8-14      | MasterCom Receiver Endpoint Number | n-7       | N/A           |

Subfield 1 (MasterCom Sender Endpoint Number) is a number that identifies the endpoint that acts as the sender of a MasterCom transaction (for both chargebacks and retrievals).

Subfield 2 (MasterCom Receiver Endpoint Number) identifies the endpoint that acts as the receiver of the same transaction.

## PDS 0251 (MasterCom Fulfillment Document Code)

PDS 0251 (MasterCom Fulfillment Document Code) indicates the retrieval document type supplied by the MasterCom application.

This field is present only in the notification files generated by MasterCom and in MasterCom image interface data headers.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | n-1; TAGLLL              |
| Tag Field           | 0251                     |
| Data Length         | 3 positions, value = 001 |
| Data Field          | Fixed length, 1 position |
| Subfields           | None                     |
| Justification       | N/A                      |

### Usage

This PDS is used in MasterCom ASI/1644 header files to identify the specific type of retrieval document sent by the MasterCom application.

### Values

The values are listed in this table.

### Values

| Value | Description                                   |
|-------|-----------------------------------------------|
| 2     | Image (scanned or faxed) of original document |
| 4     | Substitute draft                              |

## PDS 0252 (MasterCom Image Metadata)

PDS 0252 (MasterCom Image Metadata) provides data specific to an image attached to the same message file.

Currently only one image and one message appear in a single file. This information is included only in the MasterCom image interface fulfillment file.

### Attributes

| Attribute           | Description                       |
|---------------------|-----------------------------------|
| Data Representation | ans...124; TAGLLLVAR              |
| Tag Field           | 0252                              |
| Data Length         | 3 positions, value = 024–124      |
| Data Field          | Variable length, 24–124 positions |
| Subfields           | 4                                 |
| Justification       | See "Subfields"                   |

### Usage

Images used by the MasterCom system are Group 3/Group 4 Tagged Image File Format (TIFF) files, and they may bear multiple pages of images within a single TIFF file. The customers provide this PDS to the MasterCom system when they send an image file with the message. Each of the first three fields is expressed as an eight-position, right-justified hexadecimal number. Leading zeros need to be added where applicable. The fourth field is a variable-length filename.

MasterCom provides this data to the customer within the image interface fulfillment files that are delivered to the customer's imaging system.

### Values

If no image is present, this PDS does appear in the message. If an image is present, all four of these fields are required to have values.

## PDS 0252 subfields

This PDS consists of four subfields.

### PDS 0252 subfields

| Number | Positions | Name                                                        | Attribute  | Justification |
|--------|-----------|-------------------------------------------------------------|------------|---------------|
| 1      | 1–8       | MasterCom TIFF Image Data Length (expressed in hexadecimal) | an-8 (hex) | right         |
| 2      | 9–16      | MasterCom TIFF Image Data Offset (expressed in hexadecimal) | an-8 (hex) | right         |
| 3      | 17–24     | MasterCom TIFF Image CRC-32 (expressed in hexadecimal)      | an-8 (hex) | right         |
| 4      | 25–124    | MasterCom TIFF Image Filename                               | ans-1      | N/A           |

### Subfield 1 (MasterCom TIFF Image Data Length)

Subfield 1 (MasterCom TIFF Image Data Length) contains the four-byte size of the TIFF image file, expressed in hexadecimal and right-justified with leading zeros.

### Subfield 2 (MasterCom TIFF Image Data Offset)

Subfield 2 (MasterCom TIFF Image Data Offset) contains the four-byte value that corresponds to the offset byte within the message file that is the first byte of the TIFF image file. This value is expressed in hexadecimal and is right-justified with leading zeros.

### Subfield 3 (MasterCom TIFF Image CRC32)

Subfield 3 (MasterCom TIFF Image CRC32) contains the 32-bit CRC-32 (cyclic redundancy check) value that verifies the integrity of the transmitted image file. This value is expressed in hexadecimal and is right-justified with leading zeros where necessary.

### Subfield 4 (MasterCom TIFF Image Filename)

Subfield 4 (MasterCom TIFF Image Filename) contains the variable-length filename of the TIFF image. It may have a maximum length of 100 characters, and because it is variable-length, justification is not needed.

## PDS 0253 (MasterCom System Enhanced Data)

PDS 0253 (MasterCom System Enhanced Data) provides proprietary data from the MasterCom system.

This information is included only in the MasterCom image interface files from the Image interface application.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...992; TAGLLLLVAR            |
| Tag Field           | 0253                             |
| Data Length         | 3 positions, value = 001–992     |
| Data Field          | Variable length, 1–992 positions |
| Subfields           | None                             |
| Justification       | N/A                              |

### Usage

**NOTE:** This element is available in MasterCom image interface files, not IPM clearing files.

The Maximum ISO Utility expands this element to 50 positions.

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                               | Org | Sys | Dst |
|---------------------------------------|-----|-----|-----|
| Retrieval Request/1644                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644 | O   | .   | C   |

## PDS 0254 (MasterCom Member Enhanced Data)

PDS 0254 (MasterCom Member Enhanced Data) provides proprietary data from the customer.

This information is included only in the MasterCom image interface files for processing by the MasterCom system.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...992; TAGLLLLVAR            |
| Tag Field           | 0254                             |
| Data Length         | 3 positions, value = 001–992     |
| Data Field          | Variable length, 1–992 positions |
| Subfields           | None                             |
| Justification       | N/A                              |

### Usage

**NOTE:** This element is available in MasterCom image interface files, not IPM Clearing files.

The Maximum ISO Utility expands this element to 50 positions.

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                               | Org | Sys | Dst |
|---------------------------------------|-----|-----|-----|
| Retrieval Request/1644                | O   | .   | C   |
| Retrieval Request Acknowledgment/1644 | O   | .   | C   |

## PDS 0255 (MasterCom Message Type)

PDS 0255 (MasterCom Message Type) identifies records originating from brands other than Mastercard that are processed in the MasterCom system.

This private data subelement is submitted by customers that participate in the program to process, via MasterCom, retrieval and chargeback fulfillments originating from brands other than Mastercard®. MasterCom returns this information only to that customer in its MasterCom image interface data headers and MasterCom notification files. Customers can use this PDS to identify fulfillment record information originating from brands other than Mastercard®. Customers send or receive this information directly to and from the MasterCom system, not within GCMS clearing processing.

## Attributes

| Attribute           | Description                    |
|---------------------|--------------------------------|
| Data Representation | ans...7; TAGLLLLVAR            |
| Tag Field           | 0255                           |
| Data Length         | 3 positions, value = 001–007   |
| Data Field          | Variable length, 1–7 positions |
| Subfields           | None                           |
| Justification       | Left                           |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                                                                                 | Org | Sys | Dst |
|-----------------------------------------------------------------------------------------|-----|-----|-----|
| First Chargeback/1442 and Arbitration Chargeback/1442 (in MasterCom notification files) | O   | •   | C   |
| Second Presentment/1240 (in MasterCom notification files)                               | O   | •   | C   |
| Retrieval Request/1644 (in MasterCom notification files)                                | O   | •   | C   |
| Retrieval Request Acknowledgment/1644                                                   | O   | •   | C   |

## Values

Customers processing retrieval or CSD transactions of brands other than Mastercard® in the MasterCom system can supply their own codes.

## PDS 0260 (Edit Exclusion Indicator)

PDS 0260 (Edit Exclusion Indicator) requests or grants deactivation of transaction life cycle editing functions the clearing system normally performs for chargebacks.

### Attributes

| Attribute           | Description                       |
|---------------------|-----------------------------------|
| Data Representation | ans...4; TAGLLLVAR                |
| Tag Field           | 0260                              |
| Data Length         | 3 positions, value = 002-004      |
| Data Field          | Variable length, 2-4 positions on |
| Subfields           | 3                                 |
| Justification       | See "Subfields"                   |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Chargeback/1442 and Arbitration Chargeback/1442 | C   | X   | C   |
| s1 Exclusion Request Code                             | C   | .   | C   |
| s2 Exclusion Reason Code                              | .   | X   | C   |
| s3 Exclusion Results Code                             | .   | X   | C   |
| Second Presentment/1240                               | C   | X   | C   |
| s1 Exclusion Request Code                             | C   | .   | C   |
| s2 Exclusion Reason Code                              | .   | X   | C   |
| s3 Exclusion Results Code                             | .   | X   | C   |

This PDS may be used in clearing system messages to suspend life cycle editing procedures on First Chargeback/1442, Second Presentment/1240, and Arbitration Chargeback/1442 messages whose life cycle status changed because of an ICA number or BIN transfer or for

other life cycle-related exception conditions that normally cause the clearing system to reject a message.

The transaction originator should present PDS 0260 only if edit exclusion processing is requested for the transaction. The clearing system provides PDS 0260 whenever edit exclusion approval is granted.

### Values

If present, PDS 0260 cannot contain all low values or all high values.

## PDS 0260 subfields

This PDS consists of three subfields.

### PDS 0260 subfields

| Number | Positions | Name                   | Attribute | Justification |
|--------|-----------|------------------------|-----------|---------------|
| 1      | 1–2       | Exclusion Request Code | ans-2     | left          |
| 2      | 3         | Exclusion Reason Code  | an-1      | N/A           |
| 3      | 4         | Exclusion Results Code | an-1      | N/A           |

### Subfield 1 (Exclusion Request Code)

The transaction originator provides the information for subfield 1 (Exclusion Request Code). This subfield identifies the clearing system edits that the originator requests to be bypassed during clearing system processing of the IPM message in which PDS 0260 is present.

Subfield 1 values are listed in this table.

### Subfield 1 (Exclusion Request Code)

| Value | Description                                                                                                                                                                                                                                                                                                                                                                                       |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Y     | Conversion exclusion; exempts all chargeback cycles from timeliness, cycle appropriateness, retrieval, and documentation history edits because a recent ICA number or BIN transfer caused an on-us or intraprocessor transaction to become an intercustomer transaction; conversion is validated against clearing system files; exemptions are permitted for 60 days after the conversion occurs. |

| Value          | Description                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| B0–B9 or BA–BZ | Special conditions exclusion (chargeback and retrieval history); exempts chargebacks from timeliness, cycle appropriateness, retrieval history, and documentation history edits when extenuating circumstances exist; the exclusion request code must match the exemption code Mastercard granted in advance.                                                                                            |
| spaces         | Business service agreement exclusion; exempts chargebacks assigned to a particular business service from timeliness, cycle appropriateness, retrieval history, and documentation history edits; exemption automatically occurs if the exclusion is profiled for the business service.                                                                                                                    |
| spaces         | Hardship variance exclusion; exempts first chargebacks, second presentments, and arbitration chargebacks from time frame edits when an event such as flood or earthquake prevents timely responses; Mastercard must grant hardship variance in advance; this exemption will occur automatically if the hardship variance is in effect.                                                                   |
| spaces         | ATM exclusion; ATM transactions (DE 3 [Processing Code], subfield 1 = 01) are automatically exempted from chargeback timeliness, cycle appropriateness, and documentation history edits.                                                                                                                                                                                                                 |
| spaces         | Bilateral settlement and collection-only exclusion; exempts chargebacks from timeliness, cycle appropriateness, retrieval history, and documentation history edits if subfield 1 of PDS 0165 (Settlement Indicator) contains a B; or if subfield 1 of PDS 0165 (Settlement Indicator) contains a C and a customer has not chosen to have Mastercard perform these edits on collection-only transactions. |

## Subfield 2 (Exclusion Reason Code)

The clearing system provides the information for subfield 2 (Exclusion Reason Code). It contains a code the clearing system assigns to indicate approval of and the reason for the edit exclusion.

Subfield 2 values are listed in this table.

### Subfield 2 (Exclusion Reason Code)

| Value       | Description                                                                                                                                                                                                                                                                                                                                                                          |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| X, Y , or Z | Conversion exclusion; exclusion granted because a recent ICA or BIN transfer caused an On-Us or intraprocessor transaction to become an intercustomer transaction. These are the value descriptions. <ul style="list-style-type: none"> <li>• X = recent issuer conversion</li> <li>• Y = recent acquirer conversion</li> <li>• Z = recent issuer and acquirer conversion</li> </ul> |
| B           | Special conditions exclusion (chargeback and retrieval history); retrieval history and chargeback exclusion granted because of extenuating circumstances.                                                                                                                                                                                                                            |
| A           | Business service agreement exclusion; exclusion requested and granted for chargebacks assigned to the specified business service.                                                                                                                                                                                                                                                    |
| H           | Hardship variance exclusion; exclusion requested and granted because of an event such as flood or earthquake.                                                                                                                                                                                                                                                                        |
| M           | ATM exclusion; ATM transactions (DE 3 [Processing Code], subfield 1 = 01) are automatically exempted from chargeback timeliness, cycle appropriateness, and documentation history edits.                                                                                                                                                                                             |
| S           | Bilateral settlement and collection-only exclusion; exclusion automatically granted if subfield 1 of PDS 0165 (Settlement Indicator) contains a B; or if subfield 1 of PDS 0165 contains a C and a customer has not chosen to have Mastercard® perform these edits on collection-only transactions.                                                                                  |

### Subfield 3 (Exclusion Results Code)

The clearing system provides the information for subfield 3 (Exclusion Results Code). It contains a code the clearing system assigns to indicate the edit sets actually bypassed when this transaction was processed.

Subfield 3 values are listed in this table.

### Subfield 3 (Exclusion Results Code)

| Value | Description                                                                    |
|-------|--------------------------------------------------------------------------------|
| H     | Bypass timeliness edits; allow second presentment for non-receipt chargebacks. |

| Value | Description                                                                            |
|-------|----------------------------------------------------------------------------------------|
| C     | Bypass timeliness edits, cycle appropriateness edits, and documentation history edits. |
| R     | Bypass retrieval history edits.                                                        |

## PDS 0261 (Risk Management Approval Code)

PDS 0261 (Risk Management Approval Code) contains the approval code provided by Mastercard in a rejected First Presentment/1240 message with error code 2202 or error code 2203.

Acquirers must resubmit the First Presentment/1240 message with the approval code once Mastercard® confirms that the approval code has been activated.

### Attributes

| Attribute           | Description                |
|---------------------|----------------------------|
| Data Representation | n-11; TAGLLL               |
| Tag Field           | 0261                       |
| Data Length         | 3 positions, value = 011   |
| Data Field          | Fixed length, 11 positions |
| Subfields           | None                       |
| Justification       | N/A                        |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                                           | Org | Sys | Dst |
|-------------------------------------------------------------------|-----|-----|-----|
| First Presentment/1240, rejected by Mastercard®                   | C   | X   | .   |
| First Presentment/1240, re-submitted by customer after validation | C   | .   | .   |

## Values

If present, PDS 0261 must be numeric and cannot contain all zeros.

If a First Presentment rejects because the risk parameter limits defined by Mastercard have been exceeded, and no matching authorization is on file, the clearing system provides the PDS back to the acquirer in the First Presentment message that accompanies the Message Exception/1644 message.

If the acquirer resubmits the transaction following Mastercard® activation of the risk management approval code, this PDS must be present. This PDS is not forwarded to the issuer.

## PDS 0262 (Documentation Indicator)

PDS 0262 (Documentation Indicator) indicates whether supporting documentation will be provided for the current chargeback or fee collection cycle.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | n-1; TAGLLL              |
| Tag Field           | 0262                     |
| Data Length         | 3 positions, value = 001 |
| Data Field          | Fixed length, 1 position |
| Subfields           | None                     |
| Justification       | N/A                      |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Chargeback/1442 and Arbitration Chargeback/1442 | M   | .   | M   |
| Second Presentment/1240                               | M   | .   | M   |
| Fee Collection (Retrieval Fee Billing)/1740           | O   | .   | C   |
| Fee Collection (Handling Fees)/1740                   | O   | .   | C   |

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

This PDS indicates in First Chargeback/1442, Second Presentment/1240, Arbitration Chargeback/1442, and Fee Collection/1740 messages whether the message originator will provide supporting documentation.

### Values

The data values are listed in this table.

### Values

| Value | Description                               |
|-------|-------------------------------------------|
| 0     | Supporting documentation is not required. |
| 1     | Supporting documentation will follow.     |

## PDS 0264 (Original Retrieval Reason for Request)

PDS 0264 (Original Retrieval Reason for Request) contains the reason for the request from a previous Retrieval Request/1644.

### Attributes

| Attribute           | Description               |
|---------------------|---------------------------|
| Data Representation | n-4; TAGLLL               |
| Tag Field           | 0264                      |
| Data Length         | 3 positions, value = 004  |
| Data Field          | Fixed length, 4 positions |
| Subfields           | None                      |
| Justification       | N/A                       |

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                     | Org | Sys | Dst |
|---------------------------------------------|-----|-----|-----|
| Fee Collection (Retrieval Fee Billing)/1740 | M   | .   | M   |

This PDS provides in Retrieval Fulfillment (presented as a Fee Collection) messages the reason for request in DE 25 (Message Reason Code) of a related Retrieval Request/1644.

### Values

The data values are listed in this table.

### Values

| Value | Description                                                   |
|-------|---------------------------------------------------------------|
| 6305  | Cardholder does not agree with amount billed.                 |
| 6321  | Cardholder does not recognize transaction.                    |
| 6322  | Request transaction certificate for a chip transaction        |
| 6323  | Cardholder needs information for personal records.            |
| 6341  | Fraud investigation                                           |
| 6342  | Potential chargeback or compliance documentation is required. |

## PDS 0265 (Initial Presentment/Fee Collection Data)

PDS 0265 (Initial Presentment/Fee Collection Data) contains dates, reasons, and other information from a First Presentment/1240 or Fee Collection (Customer-generated)/1740.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...110; TAGLLLLVAR            |
| Tag Field           | 0265                             |
| Data Length         | 3 positions, value = 004–110     |
| Data Field          | Variable length, 4–110 positions |
| Subfields           | 3                                |

| Attribute     | Description     |
|---------------|-----------------|
| Justification | See "Subfields" |

### Current processing restrictions

The PDS 0265 maximum length is 110 positions.

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| Fee Collection (Handling Fees)/1740                                  | O   | .   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

This PDS provides information from the First Presentment/1240 or Fee Collection (Customer-generated)/1740.

This PDS optionally may be provided in Fee Collection Return/1740, Fee Collection Resubmission/1740, and Fee Collection Arbitration Return/1740 messages to give information from the Fee Collection (Customer-generated)/1740.

### Values

PDS 0265 may be truncated after the last subfield. For example, if used in a Fee Collection Return/1740, PDS 0265 may contain only subfields 1 and 2, with a corresponding length of 10.

If present, PDS 0265 cannot contain all low values or all high values.

### PDS 0265 subfields

This PDS consists of three subfields.

### PDS 0265 subfields

| Number | Positions | Name                               | Attribute   | Justification |
|--------|-----------|------------------------------------|-------------|---------------|
| 1      | 1-4       | Initial Message Reason Code        | n-4         | N/A           |
| 2      | 5-10      | Date, Initial Presentment Business | n-6; YYMMDD | N/A           |

| Number | Positions | Name                 | Attribute | Justification |
|--------|-----------|----------------------|-----------|---------------|
| 3      | 11-110    | Data Record, Initial | ans...100 | left          |

### Subfield 1 (Initial Message Reason Code)

Subfield 1 (Initial Message Reason Code) contains the initial transaction's Message Reason Code. It is obtained from DE 25 (Message Reason Code) in the First Presentment/1240 or Fee Collection (Customer-generated)/1740.

Subfield 1 is optional in Fee Collection Return/1740, Fee Collection Resubmission/1740, and Fee Collection Arbitration Return/1740 messages. If present, it may contain either zeros or the DE 25 value of the related Fee Collection (Customer-generated)/1740.

Refer to [DE 25 \(Message Reason Code\)](#) for a list of valid message reason codes.

### Subfield 2 (Date, Initial Presentment Business)

Subfield 2 (Date, Initial Presentment Business) contains the initial transaction's business processing date. It is obtained from the Business Date subfield of PDS 0158 (Business Activity) in the First Presentment/1240 or Fee Collection (Customer-generated)/1740.

Subfield 2 is optional in all messages containing PDS 0265. The subfield should be populated with all zeros if the information is not available.

The subfield 2 format is YYMMDD.

### Subfield 3 (Data Record, Initial)

Subfield 3 (Data Record, Initial) contains the message text data of the initial Fee Collection transaction. It is obtained from DE 72 (Data Record) in the Fee Collection (Customer-generated)/1740.

Subfield 3 is optional in Fee Collection Return/1740, Fee Collection Resubmission/1740, and Fee Collection Arbitration Return/1740 messages. It identifies DE 72 of the related Fee Collection (Customer-generated)/1740.

If present, subfield 3 cannot contain all zeros or all spaces.

## PDS 0266 (First Chargeback/Fee Collection Return Data)

PDS 0266 (First Chargeback/Fee Collection Return Data) contains dates, amounts, reasons, and other information from a First Chargeback/1442 or a Fee Collection Return/1740.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...127; TAGLLLLVAR            |
| Tag Field           | 0266                             |
| Data Length         | 3 positions, value = 004–127     |
| Data Field          | Variable length, 4–127 positions |
| Subfields           | 7                                |
| Justification       | See "Subfields"                  |

### Current processing restrictions

The PDS 0266 maximum length must be 127 positions.

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| Arbitration Chargeback/1442                                          | .   | X   | C   |
| Second Presentment/1240                                              | .   | X   | C   |
| Fee Collection (Handling Fees)/1740                                  | O   | .   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

The clearing system provides this PDS in Second Presentment/1240 and Arbitration Chargeback/1442 messages to supply information from the First Chargeback/1442, if the information is available.

The transaction originator optionally may provide this PDS in Fee Collection Resubmission/1740 and Fee Collection Arbitration Return/1740 messages to supply information from the Fee Collection Return/1740.

## Related required PDS

When PDS 0266 is included in a message, and subfield 6, Currency Code, First Return, is present and contains a valid nonzero ISO currency code, PDS 0148 (Currency Exponents) also is required to identify the currency exponent of the First Chargeback/1442 or Fee Collection Return/1740.

## Values

If present, PDS 0266 cannot contain all low values or all high values.

## PDS 0266 subfields

This PDS consists of seven subfields.

### PDS 0266 subfields

| Number | Positions | Name                        | Attribute   | Justification |
|--------|-----------|-----------------------------|-------------|---------------|
| 1      | 1–4       | Message Reason Code         | n-4         | N/A           |
| 2      | 5–10      | Date, First Return Business | n-6; YYMMDD | N/A           |
| 3      | 11        | Edit Exclusion Reason Code  | an-1        | N/A           |
| 4      | 12        | Edit Exclusion Results Code | an-1        | N/A           |
| 5      | 13–24     | Amount, First Return        | n-12        | right         |
| 6      | 25–27     | Currency Code, First Return | n-3         | N/A           |
| 7      | 28–127    | Data Record, First Return   | ans-1       | left          |

## Subfield 1 (Message Reason Code)

Subfield 1 (Message Reason Code) contains the first return transaction's message reason code. It is obtained from DE 25 (Message Reason Code) in the First Chargeback/1442 or the Fee Collection Return/1740.

The clearing system provides subfield 1 in Second Presentment/1240 and Arbitration Chargeback/1442 messages to identify DE 25 of the related First Chargeback/1442.

Subfield 1 optionally may be presented in Fee Collection Resubmission/1740 and Fee Collection Arbitration Return/1740 messages to identify DE 25 of the related Fee Collection Return/1740. If present, it must contain all zeros or a valid message reason code.

Refer to [DE 25 \(Message Reason Code\)](#) for a list of valid message reason codes.

## Subfield 2 (Date, First Return Business)

Subfield 2 (Date, First Return Business) contains the first return transaction's business processing date. It is obtained from the Business Date subfield of PDS 0158 (Business Activity) in the First Chargeback/1442 or Fee Collection Return/1740.

The clearing system provides subfield 2 with a valid date when used in Second Presentment/1240 and Arbitration Chargeback/1442 messages.

The transaction originator optionally may provide subfield 2 in Fee Collection Resubmission/1740 and Fee Collection Arbitration Return/1740 messages.

The subfield 2 format is YYMMDD.

GCMS does not edit this subfield.

## Subfield 3 (Edit Exclusion Reason Code)

Subfield 3 (Edit Exclusion Reason Code) contains the Edit Exclusion Reason Code, if the clearing system supplies it, for the first return transaction. It is obtained from the Edit Exclusion Reason Code subfield of PDS 0260 (Edit Exclusion Indicator) in the First Chargeback/1442 or Fee Collection Return/1740.

The clearing system provides subfield 3 in Second Presentment/1240 and Arbitration Chargeback/1442 messages. It contains a valid Edit Exclusion Reason Code or a space if no exclusion was granted.

Subfield 3 should contain spaces when used in Fee Collection Resubmission/1740 and Fee Collection Arbitration Return/1740 messages if subfields 5, 6, or 7 are present.

GCMS does not edit this subfield.

## Subfield 4 (Edit Exclusion Results Code)

Subfield 4 (Edit Exclusion Results Code) contains the Edit Exclusion Results Code, if the clearing system supplies it, for the first return transaction. It is obtained from the Edit Exclusion Results Code subfield of PDS 0260 in the First Chargeback/1442 or Fee Collection Return/1740.

The clearing system provides subfield 4 in Second Presentment/1240 and Arbitration Chargeback/1442 messages. It contains a valid Edit Exclusion Results Code or a space if no exclusion was granted.

Subfield 4 should contain spaces when used in Fee Collection Resubmission/1740 and Fee Collection Arbitration Return/1740 messages if subfields 5, 6, or 7 are present.

GCMS does not edit this subfield.

### **Subfield 5 (Amount, First Return)**

Subfield 5 (Amount, First Return) contains the first return transaction's submitted amount. It is obtained from DE 4 (Amount, Transaction) in the First Chargeback/1442 or Fee Collection Return/1740.

The clearing system provides subfield 5 in Second Presentment/1240 and Arbitration Chargeback/1442 messages to identify DE 4 of the related First Chargeback/1442.

The transaction originator optionally may provide subfield 5 in Fee Collection Resubmission/1740 and Fee Collection Arbitration Return/1740 messages to identify DE 4 of the related Fee Collection Return/1740.

GCMS does not edit this subfield.

### **Subfield 6 (Currency Code, First Return)**

Subfield 6 (Currency Code, First Return) contains the first return transaction's submitted currency code. It is obtained from DE 49 (Currency Code, Transaction) in the First Chargeback/1442 or Fee Collection Return/1740.

The clearing system provides subfield 6 in Second Presentment/1240 and Arbitration Chargeback/1442 messages to identify DE 49 of the related First Chargeback/1442.

The transaction originator optionally may provide subfield 6 in Fee Collection Resubmission/1740 and Fee Collection Arbitration Return/1740 messages to identify DE 49 of the related Fee Collection Return/1740.

GCMS does not edit this subfield.

### **Subfield 7 (Data Record, First Return)**

Subfield 7 (Data Record, First Return) contains the first return transaction's message text data. It is obtained from DE 72 (Data Record) in the First Chargeback/1442 or the Fee Collection Return/1740.

The clearing system provides subfield 7 in Second Presentment/1240 and Arbitration Chargeback/1442 messages to identify DE 72 of the related First Chargeback/1442.

The transaction originator optionally may provide subfield 7 in Fee Collection Resubmission/1740 and Fee Collection Arbitration Return/1740 messages to identify DE 72 of the related Fee Collection Return/1740. If present, subfield 7 cannot contain all zeros or all spaces.

## PDS 0267 (Second Presentment/Fee Collection Resubmission Data)

PDS 0267 (Second Presentment/Fee Collection Resubmission Data) contains dates, amounts, reasons, and other information from a Second Presentment/1240 or a Fee Collection Resubmission/1740.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...127; TAGLLLLVAR            |
| Tag Field           | 0267                             |
| Data Length         | 3 positions, value = 004–127     |
| Data Field          | Variable length, 4–127 positions |
| Subfields           | 7                                |
| Justification       | See "Subfields"                  |

### Current processing restrictions

The PDS 0267 maximum length is 127 positions.

### Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                                                              | Org | Sys | Dst |
|----------------------------------------------------------------------|-----|-----|-----|
| Arbitration Chargeback/1442                                          | .   | X   | C   |
| Fee Collection (Handling Fees)/1740                                  | O   | .   | C   |
| Fee Collection (Other than Retrieval Fee Billing/Handling Fees)/1740 | O   | .   | C   |

The clearing system provides this PDS in Arbitration Chargeback/1442 messages to supply information from the Second Presentment/1240, if available.

The transaction originator optionally may provide this PDS in Fee Collection Arbitration Return/1740 messages to supply information from the Fee Collection Resubmission/1740.

## Related required PDS

When PDS 0267 is in a message and subfield 6, Currency Code, Second Return, is present and contains a valid nonzero ISO currency code, PDS 0148 (Currency Exponents) is also required to identify the currency exponent of the Second Presentment/1240 or Fee Collection Resubmission/1740.

## Values

If present, PDS 0267 cannot contain all low values or all high values.

## PDS 0267 subfields

This PDS consists of seven subfields.

### PDS 0267 subfields

| Number | Positions | Name                         | Attribute   | Justification |
|--------|-----------|------------------------------|-------------|---------------|
| 1      | 1–4       | Message Reason Code          | n-4         | N/A           |
| 2      | 5–10      | Date, Second Return Business | n-6; YYMMDD | N/A           |
| 3      | 11        | Edit Exclusion Reason Code   | an-1        | N/A           |
| 4      | 12        | Edit Exclusion Results Code  | an-1        | N/A           |
| 5      | 13–24     | Amount, Second Return        | n-12        | right         |
| 6      | 25–27     | Currency Code, Second Return | n-3         | N/A           |
| 7      | 28–127    | Data Record, Second Return   | ans-1100    | left          |

## Subfield 1 (Message Reason Code)

Subfield 1 (Message Reason Code) contains the second return transaction's Message Reason Code. It is obtained from DE 25 (Message Reason Code) in the Second Presentment/1240 or Fee Collection Resubmission/1740.

The clearing system provides subfield 1 in Arbitration Chargeback/1442 messages to identify DE 25 of the related Second Presentment/1240.

The transaction originator optionally may provide subfield 1 in Fee Collection Arbitration Return/1740 messages to identify DE 25 of the related Fee Collection Resubmission/1740. If present, it must contain all zeros or a valid message reason code.

Refer to [DE 25 \(Message Reason Code\)](#) for a list of valid message reason codes.

## Subfield 2 (Date, Second Return Business)

Subfield 2 (Date, Second Return Business) contains the second return transaction's business processing date. It is obtained from the Business Date subfield of PDS 0158 (Business Activity) in the Second Presentment/1240 or Fee Collection Resubmission/1740.

The clearing system provides subfield 2 with a valid date when used in Arbitration Chargeback/1442 messages.

The transaction originator optionally may provide subfield 2 in Fee Collection Arbitration Return/1740 messages.

The subfield 2 format is YYMMDD.

GCMS does not edit this subfield.

## Subfield 3 (Edit Exclusion Reason Code)

Subfield 3 (Edit Exclusion Reason Code) contains the Edit Exclusion Reason Code for the second return transaction. It is obtained from the Edit Exclusion Reason Code subfield of PDS 0260 (Edit Exclusion Indicator) in the Second Presentment/1240 or Fee Collection Resubmission/1740.

The clearing system provides subfield 3 in Arbitration Chargeback/1442 messages. It contains a valid Edit Exclusion Reason Code or a space if no exclusion was granted.

Subfield 3 should contain a space when used in Fee Collection Arbitration Return/1740 messages if subfields 5, 6, or 7 are present. GCMS does not edit this subfield.

## Subfield 4 (Edit Exclusion Results Code)

Subfield 4 (Edit Exclusion Results Code) contains the Edit Exclusion Results Code for the second return transaction. It is obtained from the Edit Exclusion Results Code subfield of PDS 0260 (Edit Exclusion Indicator) in the Second Presentment/1240 or Fee Collection Resubmission/1740.

The clearing system provides subfield 4 in Arbitration Chargeback/1442 messages. It contains a valid Edit Exclusion Results Code or a space if no exclusion was granted.

Subfield 4 must contain a space when used in Fee Collection Arbitration Return/1740 messages if subfields 5, 6, or 7 are present. The clearing system currently does not perform life cycle edits on these transactions. GCMS does not edit this subfield.

## Subfield 5 (Amount, Second Return)

Subfield 5 (Amount, Second Return) contains the second return transaction's submitted amount. It is obtained from DE 4 (Amount, Transaction) in the Second Presentment/1240 or Fee Collection Resubmission/1740.

The clearing system provides subfield 5 in Arbitration Chargeback/1442 messages to identify DE 4 of the related Second Presentment/1240.

The transaction originator optionally may provide subfield 5 in Fee Collection Arbitration Return/1740 messages to identify DE 4 of the related Fee Collection Resubmission/1740.

GCMS does not edit this subfield.

### Subfield 6 (Currency Code, Second Return)

Subfield 6 (Currency Code, Second Return) contains the second return transaction's submitted currency code. It is obtained from DE 49 (Currency Code, Transaction) in the Second Presentment/1240 or Fee Collection Resubmission/1740.

The clearing system provides subfield 6 in Arbitration Chargeback/1442 messages to identify DE 49 of the related Second Presentment/1240.

The transaction originator optionally may provide subfield 6 in Fee Collection Arbitration Return/1740 messages to identify DE 49 of the related Fee Collection Resubmission/1740.

GCMS does not edit this subfield.

### Subfield 7 (Data Record, Second Return)

Subfield 7 (Data Record, Second Return) contains the second return transaction's message text data. It is obtained from DE 72 (Data Record) in the Second Presentment/1240 or Fee Collection Resubmission/1740.

The clearing system provides subfield 7 in Arbitration Chargeback/1442 messages to identify DE 72 of the related Second Presentment/1240.

The transaction originator optionally may provide subfield 7 in Fee Collection Arbitration Return/1740 messages to identify DE 72 of the related Fee Collection Resubmission/1740. If present, subfield 7 cannot contain all zeros or all spaces.

## PDS 0268 (Amount, Partial Transaction)

PDS 0268 (Amount, Partial Transaction) provides the partial transaction amount in the First Presentment/1240 currency.

### Attributes

| Attribute           | Description              |
|---------------------|--------------------------|
| Data Representation | n-15; TAGLLL             |
| Tag Field           | 0268                     |
| Data Length         | 3 positions, value = 015 |

| Attribute     | Description                |
|---------------|----------------------------|
| Data Field    | Fixed length, 15 positions |
| Subfields     | 2                          |
| Justification | See "Subfields"            |

## Usage

This table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

## Applicable messages

| Message                                               | Org | Sys | Dst |
|-------------------------------------------------------|-----|-----|-----|
| First Chargeback/1442 and Arbitration Chargeback/1442 | O   | .   | C   |
| Second Presentment/1240                               | O   | .   | C   |

The transaction originator provides this PDS. It may be provided in partial Chargeback/1442, partial Second Presentment/1240, and partial Arbitration Chargeback/1442 messages to provide the partial amount in the First Presentment/1240 transaction currency. The currency is obtained from DE 49 (Currency Code, Transaction) of the First Presentment/1240.

For example, assume an acquirer submits a First Presentment/1240 for 200 Canadian dollars, which represents two days of lodging at 100 Canadian dollars per day. Assume also that the cardholder disputes one day of lodging and the issuer presents chargebacks in U.S. dollars.

The issuer submits a partial First Chargeback (Partial)/1442 containing a value of 100 Canadian dollars in this PDS and the U.S. dollar equivalent to it in DE 4 (Amount, Transaction).

## Related PDSs

Whenever PDS 0268 is included in a message, PDS 0148 (Currency Exponents) must also be included to identify the currency exponent of subfield 2.

## PDS 0268 subfields

This PDS consists of two subfields

### PDS 0268 subfields

| Number | Positions | Name                        | Attribute | Justification |
|--------|-----------|-----------------------------|-----------|---------------|
| 1      | 1-12      | Amount, Partial Transaction | n-12      | right         |

| Number | Positions | Name                               | Attribute | Justification |
|--------|-----------|------------------------------------|-----------|---------------|
| 2      | 13–15     | Currency Code, Partial Transaction | n-3       | N/A           |

### Subfield 1 (Amount, Partial Transaction)

Subfield 1 (Amount, Partial Transaction) contains the partial transaction amount in the First Presentment/1240 currency.

### Subfield 2 (Currency Code, Partial Transaction)

Subfield 2 (Currency Code, Partial Transaction) contains the currency code associated with subfield 1. It should be the same as the First Presentment/1240 currency code.

## PDS 0270 (Embedded Interchange Data)

PDS 0270 will contain negotiated interchange details. This is applicable for only commercial transactions.

GCMS will populate PDS 0270 from the matching Authorization message and will populate PDS 0270 subfield 1 with an N. For messages which GCMS applies market-specific rates, GCMS will populate PDS 0270 with rates associated to IRD FI and populate PDS 0270 subfield 1 with a D.

Acquirers are not allowed to submit PDS 0270 in First Presentment Transactions. For life cycle transactions, negotiated interchange rates will be submitted by Mastercom.

If a life cycle transaction not originated through Mastercom contains Negotiated Interchange data, GCMS will reject the transaction.

### Attributes

| Attribute           | Description                      |
|---------------------|----------------------------------|
| Data Representation | ans...91; TAGLLLVAR              |
| Tag Field           | 0270                             |
| Data Length         | 3 positions, value = 001–091     |
| Data Field          | Variable length, 32–91 positions |
| Subfields           | 6                                |
| Justification       | See subfield details.            |

## Usage

The following table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages. C (conditional) indicates the field only applies to EFI program transactions.

### Applicable messages

| Message type identifier     | Org | Sys | DST |
|-----------------------------|-----|-----|-----|
| First Presentment/1240      | .   | X   | C   |
| Second Presentment/<br>1240 | C   | X   | C   |
| Chargebacks/1442            | C   | X   | C   |

## PDS 0270 subfields

This PDS consists of six subfields

### Subfield 1 (Negotiate/Default Indicator)

PDS 0270, subfield 1 identifies whether negotiated rates were applied versus market-specific rates to the transaction.

### Attributes

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 01    |
| Subfield length     | n-2       | 01    |
| Data representation | ans-1     |       |
| Justification       | N/A       |       |

### Values

| Value | Description                                      |
|-------|--------------------------------------------------|
| N     | Negotiated rates were applied to the transaction |

| Value | Description                                           |
|-------|-------------------------------------------------------|
| D     | Market-specific rates were applied to the transaction |

## Subfield 2 (Interchange Percentage)

PDS 0270, subfield 2 contains the negotiated or market-specific interchange percentage applied to the transaction.

### Attributes

|                     | Attribute                                        | Value |
|---------------------|--------------------------------------------------|-------|
| Subfield ID         | n-2                                              | 02    |
| Subfield length     | n-2                                              | 06    |
| Data representation | ans-6                                            |       |
| Justification       | Right justified with leading zeros, when numeric |       |

### Values

Interchange Percentage will be populated with spaces when interchange percentage is not provided in the negotiated rates or when market-specific interchange percentage was not applied to the transaction. When an interchange percentage is provided, it will be represented as n(3) v n(3). For example, an Interchange Percentage of 1.234% is represented with PDS 0270 subfield 2 value 001234.

## Subfield 3 (Unit Fee Amount)

PDS 0270, subfield 3 contains the negotiated or market-specific unit fee amount, in transaction currency, applied to the transaction.

### Attributes

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 03    |
| Subfield length     | n-2       | 12    |
| Data representation | ans-12    |       |

|               | Attribute                                           | Value |
|---------------|-----------------------------------------------------|-------|
| Justification | Right justified with leading zeros,<br>when numeric |       |

### Values

Unit fee amount will be populated with spaces when unit fee amount is not provided in the negotiated rates or when market-specific unit fee amount was not applied to the transaction.

### Subfield 4 (Flat Interchange Amount)

PDS 0270, subfield 4 contains the negotiated or market-specific flat interchange amount, in transaction currency, applied to the transaction.

### Attributes

|                     | Attribute                                           | Value |
|---------------------|-----------------------------------------------------|-------|
| Subfield ID         | n-2                                                 | 04    |
| Subfield length     | n-2                                                 | 12    |
| Data representation | ans-12                                              |       |
| Justification       | Right justified with leading zeros,<br>when numeric |       |

### Values

Flat interchange amount will be populated with spaces when flat interchange amount is not provided in the negotiated rates or when market-specific flat interchange amount was not applied to the transaction.

### Subfield 5 (Payment Party)

PDS 0270, subfield 5 contains Payment Party value submitted with the negotiated interchange rate or amount on the Authorization message.

### Attributes

|                 | Attribute | Value |
|-----------------|-----------|-------|
| Subfield ID     | n-2       | 05    |
| Subfield length | n-2       | 01    |

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Data representation | ans-1     |       |
| Justification       | N/A       |       |

#### Values

| Value | Description                                   |
|-------|-----------------------------------------------|
| A     | Acquirer Pays interchange                     |
| I     | Issuer Pays interchange                       |
| Space | Not provided within the Authorization message |

### Subfield 6 (Supplemental Interchange Data)

PDS 0270, subfield 6 is a free-text field which acquirers can use to send proprietary data to issuers as part of Embedded Flexible Interchange program.

#### Attributes

|                     | Attribute | Value |
|---------------------|-----------|-------|
| Subfield ID         | n-2       | 06    |
| Subfield length     | n-2       | 00-59 |
| Data representation | ans-0     |       |
| Justification       | N/A       |       |

#### Values

Supplemental Interchange Data will only be populated when Supplemental Interchange Data is provided with the negotiated rates on the Authorization message.

### PDS 0275 (Account Level Management [ALM] Service Data)

PDS 0275 (Account Level Management Service Data) supports regional ALM processing.

The processing solution uses ALM Service Data that is managed by the Mastercard ALM Platform to instruct the Mastercard Dual Message Authorization System, the Clearing Platform (Global Clearing Management System) and customers (acquirers and issuers) when a PAN is registered and qualifying for any ALM Service.

Acquirers and issuers can leverage the ALM Service Data provided in authorization messages to know when a PAN is actively registered in any ALM Service or ALM Service Combination as well as utilize the data to determine the ALM interchange fee amount using a Product Class Override Rate, the Rate Type Adjustment parameter setup, or both.

Acquirers and issuers will receive ALM Service Data for all qualifying transactions in these messages:

- First Presentment/1240
- First Chargeback/1442
- Second Presentment/1240

Mastercard may introduce new values in any of subfields within PDS 0275 at any time and customers must be able to accept, and recognize any valid values provided within the clearing messages. In the event new valid values are added, refer to the *Account Level Management Manual*.

### Attributes

| Attribute           | Description                  |
|---------------------|------------------------------|
| Data Representation | ans... 038; TAGLLLVAR        |
| Tag Field           | 0275                         |
| Length Field        | 3 positions, value = 015-038 |
| Data Field          | Variable length, 015-038     |
| Subfields           | 8 subfields                  |
| Justification       | See subfields                |

### Usage

The following table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                 | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| First Presentment/1240  | •   | X   | C   |
| First Chargeback/1442   | •   | X   | C   |
| Second Presentment/1240 | •   | X   | C   |

This PDS consists of eight subfields.

## Subfields

| Number | Positions | Name                                                                        | Attribute | Justification |
|--------|-----------|-----------------------------------------------------------------------------|-----------|---------------|
| 1      | 1–5       | ALM Service Code                                                            | an-5      | N/A           |
| 2      | 6–8       | ALM Product Code                                                            | an-3      | N/A           |
| 3      | 9–11      | ALM Product Class                                                           | an-3      | N/A           |
| 4      | 12–14     | ALM Rate Type                                                               | an-3      | N/A           |
| 5      | 15        | ALM Data Source                                                             | n-1       | N/A           |

## Application notes

The following subfields will be populated when applicable to the ALM program and service indicated within Subfield 1 (ALM Service Code). Subfields that are not applicable will be 'XXX' filled. The absence of PDS 0275 for opt-in customers means the PAN account range does not participate in ALM.

- Subfield 2 ALM Product Graduation Plus or Registered Product Code
- Subfield 3 ALM Product Class
- Subfield 4 ALM Rate Type
- Subfield 5 ALM Data Source

The following IPM DE 24 Function Codes apply:

- MTI 1240 Presentment: 200 First Presentment, 205 Second Presentment (Full), 282 Second Presentment (Partial)
- MTI 1442 Chargeback: 450 First Chargeback (Full), and 453 First Chargeback (Partial)

Refer to the *Account Level Management User Manual* for additional information.

## Subfield 1 (ALM Service Code)

PDS 0275, subfield 1 (ALM Service Code) represents the Account Level Management service or combination of ALM services for which the cardholders PAN is actively registered.

When the ALM Service Code is present with one of the following, ALM processing was not applied with Clearing.

- 99726 = ALM Service not processed in Clearing
  - When the Clearing System cannot complete ALM processing for a specific transaction
- 99826 or 99926 = ALM Service Unavailable
  - When the Clearing System can't connect to the Account Level Management Platform for PAN registration validation, the customer will receive an ALM Service Unavailable service code
- 00126 = PAN not registered for ALM, but Issuers Account Range participates, transaction will process business as usual
  - When the Issuers Account Range participates in Account Level Management, identified as having at least one PAN actively registered in ALM for the Account Range of the PAN within the authorization message, but the PAN is not actively registered in ALM

All other values provided will represent an individual ALM Service or ALM Service Combinations based on the PANs active registration

Mastercard reserves the right to add new valid values for ALM Service Code at any time and customers must be able to accept, and process any valid values. In the event new valid values are added, refer to the *Account Level Management Manual*.

## Subfield 2 (ALM Graduated or Registered Product Code)

PDS 0275, subfield 2 (ALM Graduated or Registered Product Code) indicates the graduated or registered Product Code for the applicable ALM service.

Contains the licensed graduated product code or the registered product code for those transactions identified with a PAN registered and qualifying for Product Graduation Plus or Consumer Product Monitoring Service, or a Combination of Account Level Management Services.

If the PAN is not actively registered in ALM Product Graduation Plus or Consumer Product Monitoring Service, the field will be 'XXX' filled.

Mastercard reserves the right to add new valid values for ALM Product Graduation Plus or Consumer Product Monitoring Service (Registered Product Code) at any time customers must be able to accept, and process any valid values. In the event new valid values are added, refer to the *Account Level Management Manual*.

## Values

| Valid Values List | Card Program Description                 | Country of Issuance |         |        |        |         |          |         |    |

**NOTE: \*Brazil Digital Product Codes were introduced for domestic acquiring and issuing only, and are not supported for global acquirer acceptance ALM Product Graduation Plus will be enhanced in a future release to be compatible with Digital Product Codes.**

## Subfield 3 (ALM Product Class)

PDS 0275, subfield 3 (ALM Product Class) indicates the Product Class override for the applicable ALM service.

Product Class provides the ability to vary interchange rates by product grouping, while maintaining common interchange structures. Only PANs actively registered for Product Graduation Plus will have an associated ALM Product Class. Some ALM Services may combine Product Class Overrides with Rate Types (subfield 4).

Mastercard reserves the right add new valid values for ALM Product Class at any time customers must be able to accept, and process any valid values. In the event new valid values are added, refer to the *Account Level Management Manual*.

## Subfield 4 (ALM Rate Type)

PDS 0275, subfield 4 (ALM Rate Type) indicates the Rate Type for the applicable ALM service.

Rate Types provide the ability to vary interchange rates in the event that unique IRDs are not assigned for an applicable business service arrangement. PANs actively registered for ALM Services that do not involve graduated product codes will have an associated ALM Rate Type. Some ALM Services may combine Rate Types with Product Class Overrides (Subfield 3).

Mastercard reserves the right add new valid values for ALM Rate Type at any time customers must be able to accept, and process any valid values. In the event new valid values are added, refer to the *Account Level Management Manual*.

### Values

| RATE TYPE | RATE TYPE DESCRIPTION               |
|-----------|-------------------------------------|
| 801       | Enhanced Value Rate Adjustment      |
| 811       | Core Business to Level 1 Adjustment |
| 812       | Core Business to Level 2 Adjustment |
| 813       | Core Business to Level 3 Adjustment |
| 814       | Core Business to Level 4 Adjustment |
| 815       | Core Business to Level 5 Adjustment |

| XXX       | Rate Type does not apply, or has not been configured for the ALM Service Code provided in PDS 0275 SF1 |

**NOTE: \*Consumer Product Monitoring Service, will process using Rate Types associated with a Registered Product Code in Subfield 2 (ALM Product Code).**

## Subfield 5 (ALM Data Source)

PDS 0275, subfield 5 (ALM Data Source) indicates the source of the data in Subfield 1 (ALM Service Code).

The ALM data used to process a transaction is provided from either the matching authorization or during clearing processing. The processing date associated with that source (Authorization or Clearing), will reflect the PAN registration record used for ALM processing.

Mastercard reserves the right add new valid values for ALM Data Source at any time customers must be able to accept, and process any valid values. In the event new valid values are added, refer to the *Account Level Management Manual*.

### Values

| DATA SOURCE | ALM DATA SOURCE DESCRIPTION                                                                                                                            |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1           | ALM data from authorization (used by clearing when matching authorization data found)                                                                  |
| 2           | ALM data from clearing (used by clearing when no authorization match found or for reversals/life cycle)                                                |
| 3           | ALM data from clearing due to ALM service unavailable in authorization (used by clearing when matching authorization ALM data has a SF1 '00000' error) |

## Subfield 6 (Mastercard One Credential Acceptance Brand)

PDS 0275 (Account Level Management [ALM] Service Data), subfield 6 (Mastercard One Credential Acceptance Brand) contains the acceptance brand of the product code present in PDS 0275, subfield 2 (ALM Graduated or Registered Product Code).

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 06                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-3                   |
| Data Field           | Contents of subfield 6 |
| Justification        | N/A                    |

### Values

| Value | Description      |
|-------|------------------|
| MCC   | Mastercard       |
| DMC   | Debit Mastercard |
| MSI   | Maestro          |

## Subfield 7 (Mastercard One Credential Static/Dynamic Interchange Indicator)

PDS 0275 (Account Level Management [ALM] Service Data), subfield 7 (Mastercard One Credential Static/Dynamic Interchange Indicator) identifies the transaction as being subject to dynamic or static interchange.

### Attributes

| Attribute            | Description            |
|----------------------|------------------------|
| Subfield ID          | 07                     |
| Subfield Data Length | 2 positions            |
| Data Representation  | an-1                   |
| Data Field           | Contents of subfield 7 |
| Justification        | N/A                    |

### Values

| Value | Description                                                                                                                                    |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------|
| D     | Dynamic Interchange: the transaction's interchange will be based on the Mastercard One Credential Funding PAN instead of the DE 2 Primary PAN. |
| S     | Static Interchange: the transaction's interchange will be based on the DE 2 Primary PAN.                                                       |

## Subfield 8 (Mastercard One Credential Issuer Account Range)

PDS 0275 (Account Level Management [ALM] Service Data), subfield 8 (Mastercard One Credential Issuer Account Range) contains the Mastercard One Credential Funding PAN's issuer account range.

### Attributes

| Attribute            | Description |
|----------------------|-------------|
| Subfield ID          | 08          |
| Subfield Data Length | 2 positions |

|---------------|------------------------|
| Data Field    | Contents of subfield 8 |
| Justification | Left                   |

## PDS 0276 (Fee Amounts, Additional)

PDS 0276 (Fee Amounts, Additional) supports regional ALM processing.

Fee Amounts, Additional provides the ALM interchange amounts derived for a Product Class Override and/or Rate Type Adjustment. The base, ALM override, and ALM rate type amounts within PDS 0276 are intended to support reconciliation of the net interchange amount applied to transaction in PDS 0146 (Amounts, Transaction Fee).

PDS 0276 will be present any time that PDS 0275 is present within clearing messages and reports. If a PAN is not registered for ALM, but Issuers Account Range participates, PDS 0276 will only reflect the base interchange amount.

PDS 0276 will be provided to customers that have elected to receive PDS 0275 (Account Level Management Service Data). Customers may elect to receive this optional data through customer self-service within Mastercard Connect.

PDS 0276 (Fee Amounts, Additional) provides all fee amounts associated with transactions that have processed for Account Level Management. This PDS may accommodate 1 to 8 fee amount occurrences.

### Attributes

| Attribute           | Description                                      |
|---------------------|--------------------------------------------------|
| Data Representation | an...384; TAGLLLLVAR                             |
| Tag Field           | 0276                                             |
| Data Length         | 3 positions, value = 048–384 in increments of 48 |
| Data Field          | Variable length, 48–384 positions                |
| Subfields           | 9                                                |
| Occurrences         | 1-8                                              |
| Justification       | See "Subfields"                                  |

### Usage

The following table shows the usage of this PDS (whether it is mandatory, conditional, optional, system-provided, or not required) in applicable messages.

### Applicable messages

| Message                 | Org | Sys | Dst |
|-------------------------|-----|-----|-----|
| First Presentment/1240  | .   | X   | C   |
| First Chargeback/1442   | .   | X   | C   |
| Second Presentment/1240 | .   | X   | C   |

### Related required IPM fields

All PDS 0276 fee amounts will be expressed in the currency of DE 50 Currency Code, Reconciliation. PDS 0148 (Currency Exponents) must be present with PDS 0276 to identify the transaction's exponent. PDS 0275 (ALM Service Data) must be present with PDS 0276 to identify the ALM program that applies.

### Amount values

All currency amounts are expressed in the minor unit of currency without a decimal separator in accordance with ISO standards for currency notation. All amounts support the optional Extended Decimal Precision (EDP) service. For example, a transaction amount of USD 212.55 is expressed as 000000000000021255 and 2 decimal positions without the EDP service (see PDS 0147), and will be expressed as 000000000212550000 and 6 decimal positions with EDP (when PDS 0147 is present).

### Application notes

Fee Amount occurrence examples include: Base amount, Override replacement amount, Base + Rate Type adjustment(s), Override + Rate Type adjustment(s).

ALM-processed transactions where no ALM interchange was applied ('PAN not registered' or ALM service errors) will show a Base amount only. PDS 0276 Fee Amount and Direction subfields are shown from the acquirer/receiver view.

**NOTE: This field will remain unchanged from the original message when processing a reversal of a previous message.**

## PDS 0276 subfields

This PDS may contain 1 to 8 occurrences of fee amounts. Each transaction fee consists of 9 subfields as defined in the following table. Each fee requires 48 positions; the length of this PDS must be a multiple of 48, with a maximum length of 384 positions.

### Subfield attributes and values

| Number | Positions | Name                    | Attribute | Justification |
|--------|-----------|-------------------------|-----------|---------------|
| 1      | 1-3       | Rate Type               | n-3       | N/A           |
| 2      | 4-5       | Override Hierarchy      | n-2       | N/A           |
| 3      | 6         | EDP Indicator           | a-1       | N/A           |
| 4      | 7-24      | Variable Fee Amount     | n-18      | N/A           |
| 5      | 25-26     | Variable Fee Direction  | an-2      | N/A           |
| 6      | 27-44     | Fixed Fee Amount        | n-18      | N/A           |
| 7      | 45-46     | Fixed Fee Direction     | an-2      | N/A           |
| 8      | 47        | Min/Max Limit Indicator | a-1       | N/A           |
| 9      | 48        | Tiered Amount Indicator | a-1       | N/A           |

All subfields are present for each fee occurrence. The values to be used for each fee subfield are described in the following text.

### Subfield 1 (Rate Type)

The rate type value. Customer processing systems must be able to accommodate new fee types that may be added at any time.

Valid values:

- 001 = Interchange Fee
- PDS 0275 subfield 4: ALM Rate Type
- IPM MPE Table IP0053T1: Rate Type subfield values

### Subfield 2 (Override Hierarchy)

Valid values:

- If Rate Type = 001 and Override Hierarchy = 00 amount occurrence represents Base amount;
- If Rate Type = 001 and Override Hierarchy = 01-11 amount occurrence represents Override replacement amount

**NOTE: Refer to Global Clearing Management System edits, fee assignments, and fee calculation for the list of Override criteria descriptions and the hierarchical order of selection.**
