Notice on Confidentiality, Intellectual Property Rights and Disclaimers (“Notice”)

Confidentiality. This document and any information, data, representations, materials, recommendations, exhibits, appendices or glossaries contained herein or attached hereto (collectively, the “Material”) is proprietary and confidential to Visa. The Material is furnished to you solely in your capacity as a client and/or potential client of Visa and/or a participant in the Visa payments system. You agree to keep the Material confidential and not to use or disclose the Material for any purpose other than in such capacity. By accepting the Material, you agree that the Material is intended for use by you solely subject to the confidentiality restrictions in (i) the Visa Charter Documents (as applicable), (ii) the Visa Core Rules and Visa Product and Service Rules, the Visa Payment System Operating Regulations – Russia, Visa International Travelers Cheque Operating Regulations, V PAY Core Rules and V PAY Product and Service Rules and Visa Supplemental Requirements (collectively, the “Visa Rules”) (as applicable), (iii) for VisaNet Processors, an executed and valid VisaNet Letter of Agreement on file with Visa, and (iv) for other third parties, a current participation agreement that includes applicable confidentiality provisions, other non-disclosure agreement with Visa that covers disclosure and use of the Material, and/or other confidentiality agreements that limit your use and disclosure of the Material. The Material may only be disseminated within your organization on a need-to-know basis to enable your participation in the product, service and/or program described herein and/or in the Visa payments system.

Please be advised that the Material may constitute material non-public information under U.S. federal securities laws and that purchasing or selling securities of Visa Inc. while being aware of material non-public information would constitute a violation of applicable U.S. federal securities laws.

Intellectual Property Rights. The Material is protected by copyright. The Material and/or any part of the Material must not be duplicated, reproduced, published, distributed or disclosed, in whole or in part, in any form by any means without Visa’s prior written authorization, including to any third party. Visa owns the trademarks, logos, trade names and service marks, whether registered or unregistered, contained in the Material. Third-party trademarks not attributed to Visa are the property of their respective owners, are used for identification purposes only, and do not necessarily imply product endorsement or affiliation with Visa.

Disclaimers. THE MATERIAL HEREIN IS PROVIDED ON AN “AS IS,” “WHERE IS,” BASIS, “WITH ALL FAULTS” KNOWN AND UNKNOWN. THE MATERIAL HEREIN IS INTENDED FOR INFORMATIONAL PURPOSES ONLY AND SHOULD NOT BE RELIED UPON FOR OPERATIONAL, MARKETING, LEGAL, REGULATORY, TECHNICAL, TAX, FINANCIAL OR OTHER ADVICE. TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, VISA EXPLICITLY DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, REGARDING THE MATERIAL HEREIN, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT (INCLUDING, BUT NOT LIMITED TO, NON-INFRINGEMENT OF THIRD-PARTY INTELLECTUAL PROPERTY RIGHTS). VISA DOES NOT MAKE ANY WARRANTIES, REPRESENTATIONS, GUARANTEES OR INDEMNITIES AS TO THE COMPLETENESS, ACCURACY AUTHENTICITY, USEFULNESS, TIMELINESS, RELIABILITY OR APPROPRIATENESS OF THE MATERIAL HEREIN OR OF THE INFORMATION OR MATERIALS REFERENCED HEREIN. VISA IS NOT LIABLE OR RESPONSIBLE FOR YOUR USE OR DISCLOSURE OF OR RELIANCE ON THE MATERIAL HEREIN, INCLUDING ERRORS OF ANY KIND, CONTAINED IN THE MATERIAL. NOTHING IN THIS NOTICE OR THE MATERIAL HEREIN SHALL BE DEEMED TO EXCLUDE OR LIMIT LIABILITY THAT CANNOT BE EXCLUDED OR LIMITED AS A MATTER OF LAW.

USE OF THE MATERIAL HEREIN IS AT YOUR OWN RISK. THE MATERIAL HEREIN SHOULD BE INDEPENDENTLY EVALUATED IN LIGHT OF YOUR SPECIFIC BUSINESS NEEDS AND ANY APPLICABLE LAWS AND REGULATIONS. THE

MATERIAL HEREIN IS NOT INTENDED AS INVESTMENT OR LEGAL ADVICE, AND READERS AND RECIPIENTS OF THE MATERIAL ARE ENCOURAGED TO SEEK THE ADVICE OF A COMPETENT PROFESSIONAL WHERE SUCH ADVICE IS REQUIRED.

THE MATERIAL HEREIN MAY CONTAIN DEPICTIONS AND DESCRIPTIONS OF A PRODUCT, SERVICE AND/OR PROGRAM CURRENTLY IN THE PROCESS OF DEVELOPMENT AND DEPLOYMENT, AND SHOULD BE UNDERSTOOD AS A REPRESENTATION OF THE POTENTIAL FEATURES OF THE FULLY-DEPLOYED PRODUCT, SERVICE AND/OR PROGRAM. ANY FINAL VERSION OF SUCH PRODUCT, SERVICE AND/OR PROGRAM MAY NOT CONTAIN ALL OF THE FEATURES DESCRIBED IN THE MATERIAL. WHERE POTENTIAL FUTURE FUNCTIONALITY IS HIGHLIGHTED, VISA DOES NOT PROVIDE ANY WARRANTY ON WHETHER SUCH FUNCTIONALITY WILL BE AVAILABLE OR IF IT WILL BE DELIVERED IN ANY PARTICULAR MANNER OR MARKET. PARTICIPATION IN PRODUCTS, SERVICES AND/OR PROGRAMS, IF AND WHEN OFFERED, MAY BE SUBJECT TO VISA'S TERMS AND CONDITIONS.

THE MATERIAL HEREIN COULD INCLUDE TECHNICAL INACCURACIES OR TYPOGRAPHICAL ERRORS. CHANGES MAY BE PERIODICALLY MADE TO THE MATERIAL. SUCH CHANGES WILL BE INCORPORATED IN NEW EDITIONS OF THE MATERIAL. VISA MAY MAKE IMPROVEMENTS AND/OR CHANGES IN OR TO THE PRODUCT(S), SERVICE(S) AND/OR PROGRAM(S) DESCRIBED IN THE MATERIAL HEREIN AT ANY TIME AT VISA'S SOLE DISCRETION. VISA MAY MODIFY, REPLACE OR RECALL THE MATERIAL HEREIN AT ANY TIME WITHOUT NOTICE TO ANY PARTY AND AT VISA'S SOLE DISCRETION.

Forward-Looking Statements. The Material contains forward-looking statements within the meaning of the U.S. Private Securities Litigation Reform Act of 1995 that relate to, among other things, Visa's future operations, prospects, developments, strategies, business growth and financial outlook. Forward-looking statements generally are identified by words such as "believes," "estimates," "expects," "intends," "may," "projects," "could," "should," "will," "continue" and other similar expressions. All statements other than statements of historical fact could be forward-looking statements, which speak only as of the date they are made, are not guarantees of future performance and are subject to certain risks, uncertainties and other factors, many of which are beyond our control and are difficult to predict. Visa describes risks and uncertainties that could cause actual results to differ materially from those expressed in, or implied by, any of these forward-looking statements in Visa's filings with the SEC. Except as required by law, Visa does not intend to update or revise any forward-looking statements as a result of new information, future events or otherwise.

Reservation of Rights. Any Visa features, functionality(ies), implementation(s), and/or branding, may be amended, updated or canceled at Visa's discretion. The timing of availability of programs and functionality described herein is subject to a number of factors outside Visa's control, including but not limited to overall levels of anticipated participation and deployment of necessary infrastructure by issuers, acquirers, and other system participants. Participation in programs and services, if and when offered, will be subject to Visa's terms and conditions.

Additional disclaimers and/or notifications may be found in the "Additional Notices" section of this document and/or in the Material herein.

Relationship to the Visa Rules. The Material is not part of the Visa Rules. In the event of any conflict between the Material, any document referenced herein or any communications concerning the Material, and any content in the Visa Rules, the Visa Rules shall govern and control.

Definitions. Capitalized terms not otherwise defined herein have the meanings given to them in the Visa Core Rules and Visa Product and Service Rules.

As used in this Notice, the terms "you" or "your" refer to (i) the person using the Material in any way, (ii) your organization and/or (iii) your or your organization's Sponsor.

"Visa" refers to the relevant Visa entity that has entered into an agreement with you governing the subject matter of the Material, being only *one* of the following Visa entities, and any of its current and former affiliates, employees, successors or assigns:

- Visa Canada Corporation;
- Visa do Brasil Empreendimentos Ltda.;
- Visa Europe Limited;
- Visa International Service Association;
- Visa International Servicios de Pagos Espana, S.R.L.U.;
- Visa U.S.A. Inc.;
- Visa Worldwide Pte Limited; OR
- Another Visa entity that is an affiliate of any of the foregoing entities.

Glossary

Chapter 1

Original Credit Transactions Overview

This section provides an overview of Original Credit Transactions and some of the restrictions pertaining to them.

The Original Credit Transaction (OCT) is a VisaNet transaction used to send funds to an eligible Visa card. OCTs alone cannot be used for the purchase of goods or services (not applicable to Request to Pay Consumer-to-Small-Business (C2B) use-cases). OCTs are not allowed for merchandise return credit/refunds except by exception or in alignment with the Visa rule #0008771.

Note: Clients should differentiate OCT processing from merchandise credit refund processing that, in some cases, has other consequences, including reversal of reward points, and so on.

Examples of Visa Direct services that use the OCT include:

- **Money Transfer** – A service that uses the OCT to enable consumers to send funds to their Visa account or to another consumer's Visa account.
- **Funds Disbursement** – A service that uses the OCT to enable merchants, government entities, or corporations to send funds to a Visa account. Examples include insurance claims, corporate and manufacturing rebates, affiliate and contractor payouts, expense reimbursements, government disbursements (such as value-added tax refunds), and online gambling and lottery payouts.

Note: Where permitted by law, current Visa policy, and the Visa Rules.

- **Merchant Settlement** – Acquirers or third-party-agent service providers using the OCT to speed up settlement payments between acquirers or payment facilitators and their merchants.
- **Digital Wallets** – A digital or electronic wallet service enables faster payments to move funds out of a digital wallet and delivered to a cardholder's Visa account. This is considered a Money Transfer transaction for risk-control purposes in the Visa processing network. A Staged Digital Wallet functions as a brand acceptance mark.

Note: Contact your Visa representative for additional information and requirements on digital wallets. For further information on the requirements that apply to digital wallet transactions, visit the Staged Digital Wallet Operators (SDWO) section at Visa Access.

- **Real-Time Deposit/Check Deposit** – A service that enables conversion of a check into a digital payment delivered to a cardholder's Visa account.
- **Loyalty and Offers** – A service that pays a loyalty reward or merchant offer onto a card using the OCT as part of a loyalty program.
- **Prepaid Load** – A service that uses the OCT to enable consumers to add value to an eligible Visa reloadable prepaid card.

Note: The U.S. market currently supports a separate prepaid load service called Visa ReadyLink. For more information on Visa ReadyLink, contact your Visa representative.

- **Credit Card Bill Payment** – A service that uses the OCT to enable consumers to pay a credit card bill.

Note: Visa clients may not use data provided to them by Visa (including, but not limited to, transaction, reporting, and the Visa Direct Account Lookup (ACNL) file) in support of a Visa Direct program for any purpose other than is necessary to operate the Visa program).

About This Guide

The Original Credit Transaction (OCT) is a VisaNet transaction used to send funds to an eligible Visa account.

Visa acquirers, service providers, and merchants can use the OCT to enable Visa Direct services, such as Money Transfers, funds disbursement, prepaid loads, and credit card bill payments.

This document provides:

- An overview of the OCT
- OCT implementation requirements and considerations for acquirers, service providers, merchants, and issuers
- OCT implementation requirements and considerations for recipient issuers
- Data element requirements for each type of OCT

Note: “Visa Direct” is the brand name for the funds transfer services enabled by the OCT described in this guide. Any and all references to “Visa Direct” in this and other documents and materials refer to the OCT transactions described in this guide. Additionally, to make this distinction clear, the name of the document has been changed to "Visa Direct Original Credit Transaction (OCT): Global Implementation Guide" from "Visa Original Credit Transaction (OCT): Global Implementation Guide."

Note: Country regulations supersede Visa rules.

Summary of Changes

This version of the Visa Direct Original Credit Transaction (OCT) – Global Implementation Guide contains updates for these topics. Changes also include minor edits and modifications for clarity and accuracy of rules. Principal changes are highlighted in the guide with change bars.

Table 1: Version 2.17 Summary of Changes (1 of 3)

Chapter	Description
2 – Origination Requirements and Considerations	Requirements for Submitting a Program Information Form • Merchant orientation program – A note has been added for PIF bulk submission for Liquid Assets (where cryptocurrency is not supported).
2	Push Payments Tokenization • Visa now supports Payment Card Industry (PCI) Tokens for OCTs.
2	Use Cases – Merchant and Third-Party Providers Processing – Sales Tax Reclaim • The scenarios under which sales tax rebate is converted to merchandise return transaction has been clarified.
2	Sanctions Screening for Acquirers, Merchants, and Service Providers • Visa requires clients to screen against the OFAC list. Government or Bank-Specific Lists • Visa requires clients to screen against the OFAC list.
3 – Recipient Issuer Requirements and Considerations	Receiving and Processing OCTs • U.S. – The effective date for issuers and issuer processors of non-Visa-branded cards to accept OCTs with Fast Funds has been added.
3	Optional Issuer Fee to Visa Issuer FX Calculator The term "Optional Issuer Fee" has been renamed to "Visa Issuer FX Calculator."
3	Fast Funds Enablement and Mandates • U.S. – The effective date for Fast Funds participation for proprietary cards and proprietary ATM cards on the Plus Network has been added.

Table 1: Version 2.17 Summary of Changes (2 of 3)

Chapter	Description
6 – Visa Direct Risk Management Framework	Key Controls • Visa Direct Key Controls Overview – The image has been updated.
Appendix A – OCT Field Data Elements	Table – OCT Field Data Elements Updated these fields: • Field 56, DSID 03, Tag 9F22 – Values have been added to the Date of Birth format. • Field 56, DSID 05, Tags C0, 80, 83, 84, 85, 86, 87, 88, 89, 8A, 8B, and 8E – The Note has been updated to indicate these tags are optional for domestic transactions in Ukraine. • Field 60.4 – The position for entering the value for cryptocurrency has been added. • Field 62.7 – The position 1 value has been corrected. • Field 63.6, Position 7 – The Note has been updated. • Field 104, DSID 57, Tag 82 – The effective date for this field has been added for Saudi Arabia. • Field 104, DSID 5F, Tag 03 – – A note has been added to use Field 56, DSID 05, if additional space is required to enter data. – The effective date has been added for VisaNet transaction declines if the tag is not sent for cross-border non-money transfer OCTs. • Field 104, DSID 5F, Tag 04, 05, 07 – The effective date has been added for VisaNet transaction declines if the specified tags are not sent for cross-border non-money transfer OCTs. • Field 104, DSID 5F, Tag 08 – The effective date has been added for VisaNet transaction decline if this tag is not sent for OCTs. • Field 104, DSID 5F, Tag 0A – – A note has been added that this field is optional for domestic and cross-border transactions under Non-Money Transfer – A note has been added to use Field 56, DSID 05, if additional space is required to enter data.
Appendix A	Table – OCT Field Data Elements A new field and the associated tags have been added: • Field 104, DSID 6E, Usage 2, Tags 01, 02, and 03.
Appendix B – CEMEA - Specific Requirements for Money Transfer	Specific Requirements for Money Transfer • The effective dates have been updated. Pilot Restrictions • Effective dates have been updated. • The effective date for Georgia to support incoming consumer-to-consumer R2P service inquiries has been added.

Table 1: Version 2.17 Summary of Changes (3 of 3)

Chapter	Description
Appendix C – Visa Alias Directory Service	Table ADS Mandate - Countries and Effective Dates These new countries have been added: • Serbia • Armenia, Azerbaijan, and Georgia • Uganda
Appendix F – API Formats	Table – Mapping ISO Fields to API Tags – OCT Request Field 59 – The position in the ISO Field column has been corrected.
Appendix G – Visa Direct Account Lookup File	Visa Direct Account Lookup File • The ACNL delivery time has been added. • A sample ACNL file has been added.
Appendix K – Acronyms	Table – Acronyms • The MI – Merchant Initiated Faster Refund acronym has been added.
Appendix L – Visa Core Rules and Visa Product and Service Rules – Reference	Table – Visa Rules • The Rule ID 0031126 has been added.

Audience

This document is to be used by Visa financial institutions and financial institution partners involved with establishing a Visa Direct program.

In this document, entities requesting the initiation of OCTs are now referred to as acquirers, merchants, or service providers, as applicable, while Visa financial institutions receiving OCTs are referred to as recipient issuers.

Scope

This section provides information on the scope of this document.

Acquirers, Merchants, and Service Providers

This document provides acquirers, merchants, and service providers with implementation requirements, guidelines, and considerations related to OCT origination programs, along with the data element requirements for OCTs.

Recipient Issuers

This document provides Visa recipient issuers with implementation guidelines to support the receipt of OCTs. Issuer requirements are gathered in this document giving issuers a single document for OCT information.

What is an OCT?

The Original Credit Transaction (OCT) is a VisaNet financial transaction that delivers funds directly to a recipient's eligible Visa account.

Unlike a purchase transaction, which debits a cardholder's Visa account, the OCT credits the cardholder's Visa account as outlined in these examples.

Table 2: Visa Card Types for OCT (1 of 2)

OCT to Visa Card Types	Description	Example
Visa Credit	An OCT to a Visa credit card serves as a payment to the account.	If the amount owed on the card is \$800.00 and an OCT for \$100.00 is received to the card, a payment of \$100.00 will be posted to the account. The new outstanding balance is \$700.00.
Visa Debit	An OCT to a Visa debit card serves to add value to the underlying bank account associated with the Visa debit card.	If the card balance is \$800.00 and the OCT received is for \$100.00, the new account balance is \$900.00.
Visa Reloadable Prepaid	An OCT to an eligible Visa prepaid card serves to add value to the prepaid card balance.	If the prepaid card balance is \$25.00 and the OCT received is for \$100.00, the new prepaid balance is \$125.00.

Table 2: Visa Card Types for OCT (2 of 2)

OCT to Visa Card Types	Description	Example
Visa Deferred Debit	Deferred Debit cards have a line of credit and an underlying bank account. An OCT to a Visa Deferred Debit card serves as a deposit to the underlying account when both the line of credit and underlying account are with the same bank. If the Deferred Debit card underlying account is with a different bank than the line of credit, it is appropriate to post the funds to the card account.	If the underlying account has a balance on \$800.00 and an OCT for \$100.00 is received to the card, the new account balance is \$900.00. The credit balance owed on the card is not impacted by the receipt of the OCT. The card has a balance owed for \$200.00 and an OCT for \$100.00 is received the payment of \$100.00 will be posted to the credit account. The new outstanding balance would be \$100.00.
Visa Combo Card (Brazil)	Combo cards give cardholders the option to use credit or debit functionality during a transaction. An OCT to a Visa Combo card and processed as debit serves to add value to the underlying deposit account linked to the card. The credit balance owed on the card is not impacted by the receipt of the OCT; funds will only be applied to the debit balance in the deposit account. The OCT for combo cards should not be presented as credit using the proper values specified in Field 3 described in OCT Field Data Elements.	If the deposit account linked to the card has a balance of \$800.00, and an OCT for \$100.00 is received to the account, the new account balance is \$900.00.

The OCT is used for a variety of services. For each OCT service type, this table details the types of Visa cards eligible to receive that OCT type, and whether that OCT type is domestic only or domestic and cross-border.

Table 3: OCT Services

OCT Services	Destination Visa Account Types	Destination Visa Account Types	Destination Visa Account Types	Geographic Scope	Geographic Scope
	Visa Credit	Visa Debit	Visa Prepaid	Domestic	Cross-Border
Money Transfer (includes digital wallet and instant deposits)	X	X	X	X	X
Funds Disbursement (includes merchant settlement and Loyalty and Offers)	X	X	X	X	X
Prepaid Load			X	X	
Credit Card Bill Payment	X			X	

Note:

- **Visa Prepaid:** OCTs are mandated for all reloadable prepaid card accounts, but are not permitted on nonreloadable prepaid or prepaid card accounts where cardholder data is not on file or where the source of loads may be restricted (for example, commercial, government, healthcare, and insurance programs). Large and middle-market commercial card products may prohibit OCTs for products such as corporate, fleet, purchasing, and travel and entertainment (T&E) cards.
- **Prepaid Load:** Not available in the U.S. Region. The U.S. market currently supports a separate prepaid load service called Visa ReadyLink. For more information on ReadyLink, contact your Visa representative.

Identifying Domestic and Cross-Border OCT Transactions

Visa defines a transaction as a domestic transaction when the merchant, acquirer, and recipient issuer are all in the same country. If the recipient issuer is in a different country from the merchant, acquirer, or both, the transaction is treated as a cross-border transaction.

In the European Economic Area (EEA), for the purposes of Visa's internal risk management of Original Credit Transactions (OCTs), Visa's definition of domestic and cross-border transactions differs from countries outside EEA. Therefore, the definitions in the Domestic vs. Cross-Border Definition table should not be interpreted as legal advice from Visa. Acquirers and recipient issuers are required to take their own legal advice on their legal and regulatory obligations in the EEA.

The EEA domestic vs. cross-border definitions apply to:

- Visa's default velocity limits and recipient issuer's custom velocity limits
- Data requirements to process an OCT (for details see [Appendix A – Original Credit Transaction Data Elements and Processing Rules](#)).
- Use case restrictions (prepaid load and credit card bill payment)

The Domestic vs. Cross-Border Definition table defines domestic and cross-border OCT transactions within the European Economic Area (EEA) Regions, UK (and Gibraltar, where relevant), and outside EEA.

Table 4: Domestic vs. Cross-Border Definition

Geographic Scope	European Economic Area (EEA), UK, and Gibraltar (where relevant) Money Transfer	European Economic Area (EEA), UK, and Gibraltar (where relevant) Funds Disbursement/Non-Money Transfer	Outside EEA
Domestic	• Sender country (as provided by the originating merchant/acquirer) and recipient account range within the same EEA country and UK (and Gibraltar, where relevant), AND • Acquirer and recipient issuers within the EEA and UK (and Gibraltar, where relevant) Example: Person-to-person Money Transfer between two persons in Germany	• Merchant country and recipient account range within the same EEA country and UK (and Gibraltar, where relevant), AND • Acquirer and recipient issuers within the EEA and UK (and Gibraltar, where relevant) Example: Funds Disbursement between merchant and person in Germany	Merchant, acquirer, and recipient issuer are in the same country.
Cross-border	Anything that does not meet Domestic Money Transfer definition would be considered cross-border Example: Person-to-person Money Transfer between a sender in Spain and a recipient in France	Anything that does not meet Domestic Funds Disbursement/Non-Money Transfer definition would be considered cross-border Example: Funds Disbursement from merchant in Spain to a recipient in Malta	Recipient issuer is in a different country than the merchant/acquirer.

Note: OCTs sent from/sent to U.S. embassies from the U.S., or between other U.S. embassies, are treated as domestic OCT transactions.

Data Requirements in the EEA

- The data requirements set out in Appendix A – Original Credit Transaction Data Elements and Processing Rules are based on the definitions in the Domestic vs. Cross-Border Definition table.
- **Visa strongly recommends that acquirers originating OCTs include the data required in cross-border OCTs in all OCTs within the EEA when the acquirer and recipient issuer are in different EEA countries.** This is because EEA regulations differ or are interpreted differently by the countries in the EEA. As a result, many EEA recipient issuers treat a transaction as cross-border if the acquirer is in a different country and decline OCTs if data required for cross-border risk management is not present.
- In the European Economic Area (EEA) and UK (and Gibraltar, where relevant), merchant service providers approved by Visa for a domestic Money Transfer program must ensure that the source of funds used for the Money Transfer is in the same EEA country or UK (or Gibraltar, where relevant) as the recipient cardholder. In the EEA and UK (and Gibraltar, where relevant), merchant service providers approved by Visa for a cross-border Money Transfer program must ensure that the source of funds used for the Money Transfer is within the EEA or UK (or Gibraltar, where relevant).

OCT Message Format

This section gives the details and data elements of the Original Credit Transaction message format.

Single Message Service (SMS) Full Financial 0200 OCT

A single message service (SMS) full financial 0200 OCT is an Original Credit Transaction, where the authorization/clearing and settlement messages are combined in a single real-time message.

All OCT programs must be implemented with the SMS 0200 OCT. V.I.P clients have two alternative methods for sending SMS 0200 OCTs:

- Via ISO 8583: Set up a single-message endpoint connected to the V.I.P. system.
- Via Visa Direct APIs: Connect to Visa Direct APIs on the Visa Developer Center, which originates OCTs into V.I.P. For details, refer to the Visa Direct page at the Visa Developer Center.

Important: This document focuses on the SMS 0200 OCTs, unless otherwise specified. Throughout this document, SMS 0200 OCTs may also be referred to as:

- OCT
- 0200 OCT
- 0200

Message Format Details and Data Elements

For details of the enhanced 0200 OCT message formats, including data elements, refer to Original Credit Transaction (OCT) Data Elements and Processing Rules. For a list of Business Application Identifiers (BAIs), refer to Business Application Identifier (BAI), Merchant Category Code (MCC), and Use Cases.

For information on Visa Direct APIs, refer to:

- Application Programmer Interfaces (APIs)
- Visa Developer Center/Platform <https://developer.visa.com/> and the Visa Direct Resources page https://developer.visa.com/capabilities/visa_direct

Fast Funds

The speed of the transfer, time to receive funds, and ability for cardholders to use those funds are important determinants in the customer experience. Visa has incorporated these capabilities in the Original Credit Transaction (OCT) message set using the Fast Funds enhancement.

An issuer that participates in Fast Funds must make funds available to the recipient in 30 minutes or less of approving the authorization or full financial OCT message. In other words, the issuer must increment the cardholder's open-to-buy or operating limit with the OCT payment amount in 30 minutes or less of approving the OCT.

U.S. Domestic Only: To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.

Note: For detailed information on posting funds for different card types, refer to What is an OCT?

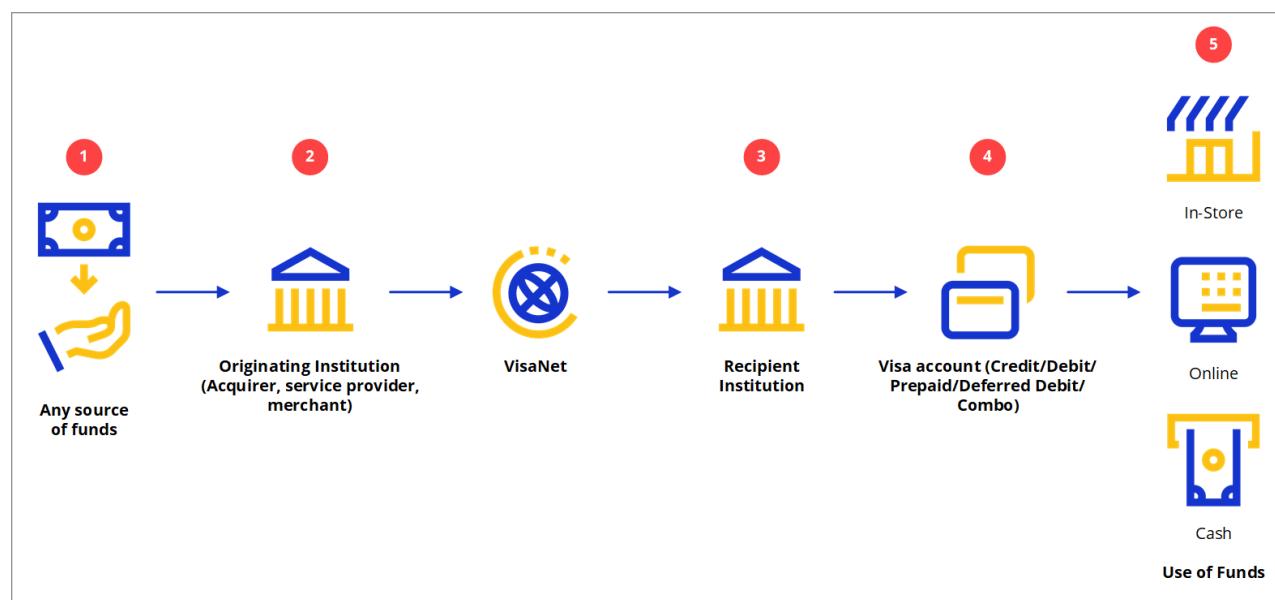

The Fast Funds option gives recipients faster access to their funds and greatly improves the experience for both senders and recipients. Fast Funds issuers may also benefit from interchange incentives on their OCTs.

For detailed information on Fast Funds, refer to Recipient Issuer – Funds Availability.

How it Works

Visa Direct services enable payments to be sent to any eligible Visa card, through any channel using any source of funds, using the Original Credit Transaction (OCT), as shown in this diagram.

Visa Direct Process Flow

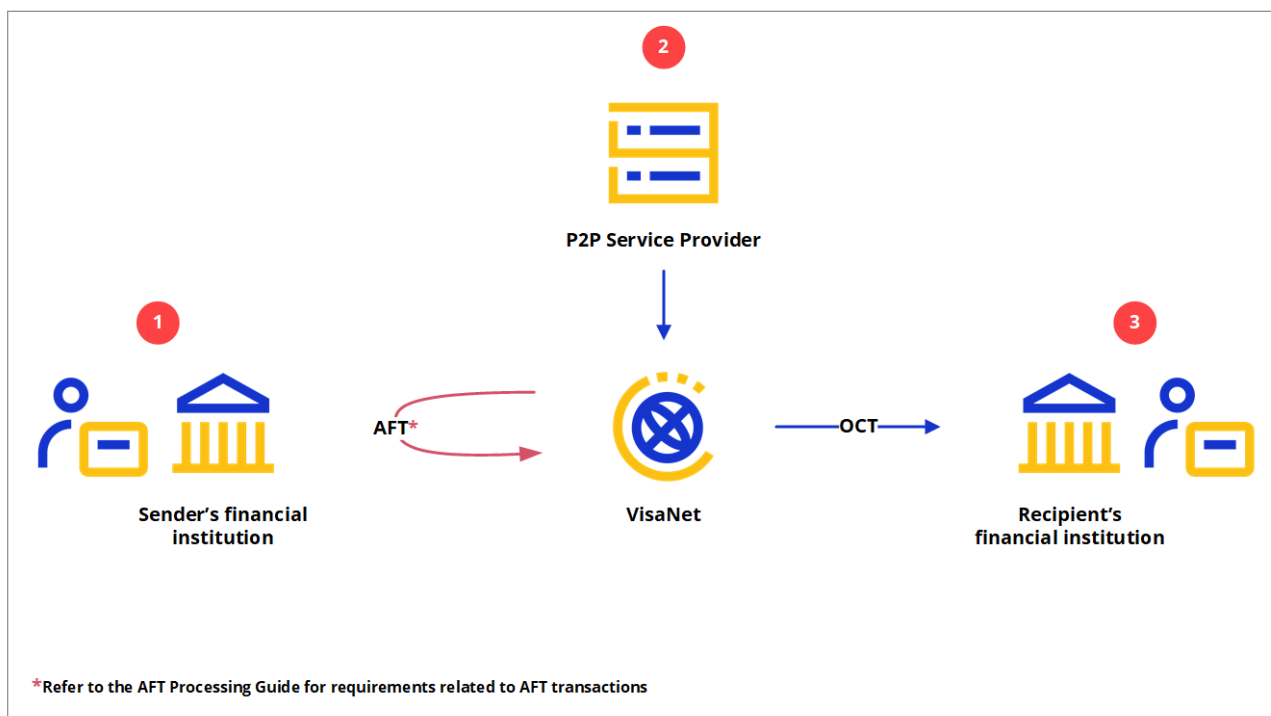

Note: If a Visa account is used to fund the OCT, the acquirers, service providers, and/or merchants must process the transaction as an AFT. For additional details, refer to the *Visa Account Funding Transaction (AFT) Processing Guide*.

- 1. Sender initiates payment**
- 2. Create and submit OCT transaction**
- 3. Transaction is routed to recipient institution**
- 4. Receiving institution credits account and notifies recipient**
- 5. Recipient can access funds at POS or ATM**

There are two potential flows for OCT-based services.

- Money Transfer (Example: Money Transfer, including digital wallet and instant deposits).
- Funds Disbursement/Non-Money Transfer (Examples: Funds Disbursement (including Merchant settlement, and Loyalty and Offers), Prepaid Load, and Credit Card Bill Pay).

Example Card-to-Card P2P Money Transfer Process Flow

1. **Transaction Initiation** – The service provider "pulls" money from the sender's Visa account via AFT. The Money Transfer service provider generates the AFT, followed by an OCT, as they are two separate transactions.

Note: The example provided assumes that a Visa card is used to fund the OCT; in which case, there is a Visa AFT, followed by a Visa OCT. The funding source for an OCT in a P2P scenario could be from other sources, not just a Visa card.

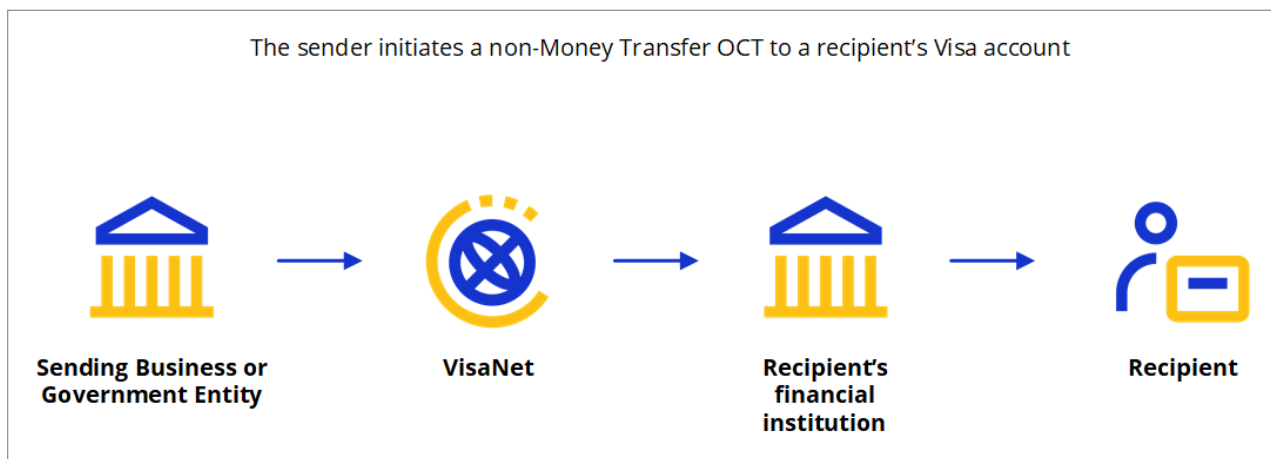

2. **OCT** – The service provider, merchant, or financial institution receives the transfer/payment instructions and uses this information to create an OCT. The service provider, merchant, or their financial institution sends the OCT to the issuer through VisaNet.
3. **Funds Availability** – Funds are pushed to recipient's bank via OCT. The recipient issuer receives the OCT and uses it to make funds available to the recipient's Visa account. There are two time frames for funds availability:

- **Conventional Funds Availability** – Recipient issuer makes funds available to the recipient's account as soon as possible, but no later than two business days after receiving the SMS 0200 OCT. In the Europe Region, the requirement is to make funds available to recipient on the same business day as the receipt of clearing and settlement message.
- **Fast Funds Availability** – Recipient issuer makes funds available to the recipient's account in 30 minutes or less of approving the SMS 0200 OCT (for single-message issuers) or the 0100 OCT authorization (for dual-message issuers).

Note: U.S. Domestic Only: To enhance the cardholder experience **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.

For more information on funds availability, issuers should refer to [Recipient Issuer - Funds Availability](#).

Example of Funds Disbursement/Non-Money Transfer Process Flow

In a Funds Disbursement/non-Money Transfer OCT, the sender or merchant is the business or government entity disbursing funds to a Visa card account holder. A business or government entity can:

- Submit transactions directly into VisaNet via the Visa Direct APIs (requires the business or government entity to have an acquirer sponsor).
- Work through an acquirer processor to send Funds Disbursement OCTs (may require the business or government entity to have an acquirer sponsor).
- Work with a third-party service provider to submit Funds Disbursement instructions. In this scenario, the acquirer is responsible for both the merchant and the provider. Acquirers must have a merchant agreement or contract with all merchants even if onboarded by the service provider.

Settlement of the funds used for the disbursement transactions between the business or government entity and the acquirer is managed outside of Visa.

Important: An acquirer and payment facilitator must accept transactions only from an entity with a valid merchant agreement.

OCTs have multiple benefits, including:

- **One Transaction/Many Uses** – The OCT is a powerful Visa transaction. This single transaction is used to enable a wide range of services, including Money Transfers, Funds Disbursements, merchant settlement, Digital Wallet transfers, instant deposits, prepaid loads, and Credit Card bill payments.
- **Trust** – A Visa acquirer (or Visa-sponsored/registered third-party agents/payment facilitators) submits every OCT and funds are only sent to Visa accounts that have been issued following appropriate Know Your Customer (KYC) procedures.

- **Reliability** – For over 50 years, Visa has operated a transaction processing and clearing payment system with an established daily funds settlement process on behalf of its financial institution clients all over the world. Visa has an established system for processing transactions, handling exceptions, addressing fraud situations, and providing value-added capabilities that meet a financial institution's needs.
- **Global Reach** – The OCT uses the existing VisaNet infrastructure to reach financial institutions and Visa cardholders around the world.
- **Security** – To ensure transactions are secure, Visa provides its clients with risk control tools and straight-through electronic processing capabilities.
- **Convenience** – The OCT enables a consumer to receive funds directly into their Visa account. Consumers then access these funds at ATMs and merchants that accept Visa cards.
- **Speed** – With Fast Funds, consumers should receive access to the funds in their account in 30 minutes or less of issuer approval of the transaction, giving them virtually instant access to their funds.

Note: U.S. Domestic Only To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.

- **Ease of Use** – Consumers do not have the burden of maintaining an additional account to get access to their funds. With the OCT, funds are sent directly to an existing Visa account of their choice, giving them greater flexibility in managing their funds.
- **Currency Handling** – VisaNet provides currency conversion and transaction settlement over multiple currencies.

Note: Visa issuers/issuer processors are required to receive and process all types of OCTs.

Chapter 2

Origination Requirements and Considerations

This chapter provides details of requirements and considerations for Visa Direct origination programs.

This chapter also provides recipient issuers with an understanding of the roles and responsibilities of acquirers, service providers, and merchants.

General Origination Program Considerations

This section outlines general program considerations for acquirers, service providers, and merchants:

- **Acquirer** – In the context of Visa Direct, an acquirer can be a Visa financial institution or a nonfinancial institution approved by Visa to originate Visa Direct transactions (AFTs, OCTs, or both) or signs merchants or service providers to originate Visa Direct transactions.

Note: In the U.S. and Canada, acquirers cannot be nonfinancial institutions.

The acquiring identifier used for Visa Direct transactions is licensed to the acquirer. The acquirer is liable for activities conducted with their acquiring identifier. These responsibilities include:

- Activities conducted with their acquiring identifiers
- Programs they operate or sponsor
- Activities of any sponsored merchants and service providers, including ensuring they comply with Visa rules and requirements

In addition, acquirers are required to comply with the *Visa Core Rules and Visa Product and Service Rules*, as well as the *Visa Global Acquirer Risk Standards* (available on Visa Access, and are required to ensure that participants in Visa Direct programs comply with applicable laws, regulations, and Visa rules. Acquirers must perform due diligence and monitoring with their Visa Direct programs. Refer to [Acquiring Models](#) for more information.

- **Merchant** – An entity that originates OCTs only for themselves and their clients. Merchants can be sponsored directly by an acquirer or onboarded through an acquirer-sponsored service provider.
- **Service Provider** – An acquirer-sponsored, third-party agent that enables OCT-based services on behalf of an acquirer or offers OCT-based services to merchants, aggregating the merchants.

- **Payment Facilitator** – A payment facilitator is a type of third-party service provider that has a contractual relationship with an acquirer, sponsored by an acquirer to provide services to merchants, and can (1) sign a merchant agreement on behalf of an acquirer, and (2) send or receive settlement funds from an acquirer on behalf of a sponsored merchant.

The payment facilitator that enables OCT-based services on behalf of the acquirer can offer OCT services directly to merchants. Payment facilitators must undergo review and approval through Visa's Third Party Agent registration process. They must comply with all Third Party Agent and Payment Facilitator requirements in the *Visa Core Rules and Visa Product and Service Rules*, the *Third Party Agent Due Diligence Risk Standards*, *Global Acquirer Risk Standards*, as well as any other applicable Visa requirements.

The Payment Facilitator provides payment services, including settlement, through their acquirer sponsorship, maintaining a merchant agreement with each merchant. The acquirer and service provider must be in the same country as the merchants they sign. Visa Rules for Payment Facilitators describe acquirer equity requirements to ensure coverage for dispute and fraudulent transactions. The acquirer equity requirements must include OCT push payment transactions factored into the transaction volumes. The acquirer must meet Credit Settlement Risk Tier 1 capital or Shareholder equity requirements as well, verified during the PIF process. If the Payment Facilitator supports other Visa transactions, the equity requirements cover all transaction volumes and related liability.

- **Sender** – A client of the merchant or service provider (cardholder or business) with a need to push payments.
- **Fees** – Merchants must provide senders with information and related terms with their OCT-based service. A clear, itemized description of all merchant-assessed fees, including any applicable foreign exchange fees associated with the transaction, must be communicated to senders in accordance with applicable laws and regulations of the merchants area of operation. Senders must be provided the opportunity to agree to the fees or cancel the transaction. Refer to [Forms](#) and [Providing Description of Fees](#).
- **Risk Management and Regulatory Compliance** – Acquirers, service providers, and merchants must comply with the Visa Rules and applicable laws and regulations. Service providers and merchants must have the appropriate license, if required, and must comply with applicable sanctions and Know Your Customer (KYC), anti-money laundering, and anti-terrorist financing laws. If an acquirer uses or sponsors a third-party agent, the acquirer is responsible for the third-party agent's compliance. For detailed information on acquirer, service provider, and merchant risk-management considerations, refer to [Acquirers, Service Providers, and Merchants - Risk Management Considerations](#). For an overview of regulatory requirements and key laws, refer to [Regulatory Compliance and Legal Considerations](#).
- **Terms and Conditions (T&Cs)** – Merchants must provide the T&Cs for their program to the customer. Visa strongly recommends that merchants prompt senders to agree to the T&Cs before sending any transactions and retain evidence of such consent. Refer to [Acquirers, Service Providers, and Merchants: Customer Considerations](#) for details.

- **OCT Permitted Uses** – Examples of OCT use cases to enable payments to Visa cards include Money Transfers, funds disbursements, merchant settlement, digital wallet transfers and instant deposits, prepaid loads, select gambling and gaming winnings, and credit card bill payments. All Visa Direct and OCT-based programs require Visa approval before program launch. Each OCT must only involve one sender and one recipient. Refer to [Gambling and Gaming Program Overview](#) for information on gambling and gaming winnings.
- **OCT Funding Options** – Service providers and merchants determine how senders of Money Transfers can fund OCTs (e.g., cash, bank account, digital wallet, or Visa account) and are responsible for ensuring that sufficient funds are available.

If the OCT is funded using a bank account or digital wallet, the service provider or merchant may use a proprietary message to debit the sender's account for the Money Transfer amount.

For Visa-approved Money Transfer programs, merchant service providers are responsible for ensuring the source of funds pulled from a Visa card used for the Money Transfer is domestic. They must carry out this validation before initiating the OCT. Refer to [Transaction Screening](#) for more details.

In the European Economic Area (EEA) and UK (and Gibraltar, where relevant), merchant service providers approved by Visa for a domestic Money Transfer program must ensure the source of funds used for the Money Transfer is in the same EEA country or UK (or Gibraltar, where relevant) as the recipient cardholder. In the EEA and UK (and Gibraltar, where relevant), merchant service providers approved by Visa for a cross-border Money Transfer program must ensure the source of funds used for the Money Transfer is within the EEA or UK (or Gibraltar, where relevant).

Important: If a Visa account is used to fund the OCT, merchants must process the transaction as an AFT, and a BAI must be used to identify the use of the AFT transaction. **Any AFT submitted without a valid BAI is rejected by Visa.**

For details on the Account Funding Transaction (AFT), refer to the *Visa Account Funding Transaction (AFT) Processing Guide*.

For additional details on funding sources, refer to [Source of Funds \(Field 104, Dataset ID 5F, Tag 08\)](#).

- **Speed of Funds Delivery** – Issuers must post funds to the recipient account as soon as possible upon receiving and authorizing an OCT, but not to exceed two business days after receiving the OCT message. However, many issuers around the world support **Fast Funds and must make funds available in the recipient account in 30 minutes or less of approving the OCT authorization message.**

Note:

- In **Europe**, the requirement is to make funds available to the recipient on the same business day as the receipt of clearing and settlement message.
- **U.S. Domestic Only:** To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.

These are the updated, regional Fast Fund mandates:

- **Fast Funds Japan** – All debit issuers are required to support domestic Original Credit Transactions and Fast Funds processing.
- **Fast Funds Canada** – Fast Funds participation is required for all debit and prepaid issuers.

The Fast Funds mandate applies to all proprietary ATM and debit cards that carry the Plus Alliance ATM mark.

- **Fast Funds Europe Region** – Issuers of Direct Debit Cards, Deferred Debit, Vpay Cards, and Prepaid Cards are required to support Fast Funds processing. In Romania, this is also required for credit cards.
- **Fast Funds Latin America Region** – Debit and prepaid issuers are required to support Fast Funds processing.

For additional information, refer to [Recipient Issuer – Funds Availability](#).

- **General Systems Changes** – Acquirers, service providers, and merchants must make general systems changes related to access channels, system interfaces, transaction screening, and currency conversion. They must also consider making system changes to support notifications, recipient registries, and recurring transactions. Refer to [Acquirers, Service Providers, and Merchants: General Systems Changes](#).
- **Disputes and Reversals** – Reversals and disputes are allowed under limited circumstances. Refer to [Exception Processing](#) for exception processing requirements.

- **Visa Brand Requirements** – Acquirers, service providers, and merchants are required to comply with the *Visa Direct: User Experience Brand Requirements* for the usage of the Visa brand into the user experience for online and mobile applications supporting push payment services. The requirements are available on Visa Access.
- **U.S. Inbound Cross-Border Transactions** – To ensure the network integrity, and preserve trust across the ecosystem, Visa works hard to ensure its products and services meet the expectations of all stakeholders (including clients and regulators). Due to the specific regulatory environment in the United States, Visa Direct does not presently support U.S. (all 50 states) inbound cross-border payments, including:
 - OCTs originating outside of the 50 U.S. states and destined for a recipient account within all 50 U.S. states
 - Funding of accounts within the 50 U.S. states through cross-border AFTs.

Note: Transactions inbound to the U.S. from U.S. territories are classified as cross-border transactions.

Program Approval, Licensing, Registration, and Forms

This section covers the Visa Direct program approval, requirements for submitting a Program Information Form (PIF), licensing and registration, Third Party Agent registration, and forms.

Visa Direct Program Approval

All Visa Direct programs must be approved by Visa prior to program launch.

Financial institutions must obtain approval by completing the Visa Direct Program Information Form (PIF). The PIF details the scope of the proposed origination program and related controls, including information on program participants, program details, third-party agents, and regulatory compliance and risk controls (for example, regulatory licenses/registrations required for specific programs, program controls including anti-money laundering, anti-terrorist financing, suspicious activity monitoring, and reporting, and so on).

Refer to [*Visa Direct Program Approval Process*](#) on Visa Access for more information on the program approval process.

Requirements for Submitting a Program Information Form

A new Program Information Form (PIF) must be submitted in these situations:

- For new OCT programs (Visa Direct for Card). For programs with both AFT and OCT transactions, an OCT PIF is required.
- Initiating a new Visa Direct program type or BAIs not indicated in a prior PIF.

Note:

- A program is defined as a product or service being offered by an acquirer, service provider, or merchant (an acquirer-sponsored service provider/merchant). Visa-defined use cases are listed in the table "BAI and MCC Usage".
- A single PIF submission may only request BAIs within one BAI category (that is, Money Transfer or Funds Disbursement (Non-Money Transfer) if a proposed program requires BAIs from both categories, two PIFs must be submitted.
- Any updates or changes to existing Visa Direct programs that were previously approved, including adding or changing acquiring identifiers, program types or use cases, addition of cross-border countries, or changing value or velocity limits, and the addition or changing of a Third Party Agent.
- For Funds Disbursement/Non-Money Transfer services, an acquirer, service provider, or merchant offering multiple Visa Direct program types is not required to submit a separate PIF for each new merchant onboarded to the service if all other information in the PIF is consistent between service offerings. However, if there are new merchants onboarded, the original PIF must be periodically updated at least quarterly or twice a year.
- Every high integrity risk merchant must be registered with the Visa Integrity Risk Program (VIRP).

- High-risk programs, such as gambling programs (including gambling payouts (GP), online gambling (OG), and cryptocurrency programs (LA)), a PIF is required for every merchant origination program, except for the scenario outlined here:
 - If the gambling merchant supports the purchase, they must already be registered by the acquirer with the Visa Integrity Risk Program (VIRP) and, therefore, a separate PIF is not required. This exception is not applicable to the U.S. or Canada.
 - For Money Transfer programs, such as Account-to-Account (AA), Person-to-Person (PP), Funds Transfer (FT), and Wallet Transfer (WT), a new PIF is required for every new merchant origination program.

Note: For Liquid Assets (LA), where cryptocurrency is not supported, a bulk submission can be performed with a list of merchants appended to the PIF.

- For Cash Deposit (CD) programs, the PIF must include these specific details in the program description:
 - Acquirers must understand their regulatory requirements for their markets and must confirm regulatory approval for this use case prior to program launch.
 - Acquirers must communicate their detailed process for cardholder verification at the point of sale and controls to validate the recipient for these programs.

Only approved programs are permitted to submit OCTs. VisaNet prevents OCTs originating from acquirers that have not submitted a Visa Direct PIF approved by Visa.

Acquirers are required to submit PIFs, and PIFs must be signed by an officer of the acquiring financial institution. In certain markets and/or for higher risk programs, a compliance officer of the acquiring financial institution may also be required to sign the PIF. For regional-specific requirements, contact the regional Visa Direct Product team.

Note: For bank-initiated P2P programs, acquirers are required to submit a list of all banks participating in the bank P2P platform. All participating banks must be reviewed and approved by Visa prior to initiating OCT-based services. Participating banks can be submitted with the initial PIF or following the initial PIF approval. For more information on bank-initiated programs, refer to [Bank-Initiated Money Transfer](#).

Contact your Visa account representative for additional information regarding the PIF and process for submission.

Licensing and Registration

Acquirers and their agents must obtain all appropriate licenses, registrations, notifications, authorizations, and approvals necessary to engage in Visa Direct services, including, but not limited to, those required to engage in high integrity risk programs, foreign exchange, and cross-border transactions.

For Visa Direct programs, the Visa acquirer or their agent must have a valid license with rights to acquire OCTs (Original Credit Transactions) and AFTs (Account Funding Transactions). The licensed acquirer is liable for all Visa Direct programs operated using their licensed Visa acquirer identifier.

Each Region should be aware of the requirements in their markets related to Visa acquiring rights.

Processes, timelines, and fees associated with licensing applications vary by market. Visa licensing information can be obtained from Visa Access or by contacting your Visa account representative.

Third Party Agent Registration

Third Party Agents (TPA) offer a wide range of services to both acquirers and recipient issuers, including onboarding of merchants for Visa Direct for Card services, developing and managing customer-facing touch points, such as computer/mobile phone user interfaces, internet banking portals, and/or kiosks.

Acquirers partnering with a Third Party Agent to offer or support OCT-based services must register the third party as an agent with Visa, as outlined in the *Visa Core Rules and Visa Product and Service Rules*, prior to any Visa Direct program launch if they perform any of these activities:

- Stores, processes, or transmits cardholder information
- Manages or has access to funds related to the OCT-based services
- Solicits other entities (example, merchants, corporate clients, government entities, other businesses, etc.) for push-payment programs or services.

The client must register and designate the TPA activities they have been authorized to perform on the client's behalf. Before registering a TPA, the acquirer must perform a due diligence review on the TPA to ensure that they understand the agent's business model, financial condition, background, and Payment Card Industry Data Security Standards (PCI DSS) compliance status (if required). If PCI DSS compliance is required, compliance must be validated prior to the launch of a Visa Direct program.

Note: Acquirers that contract with TPAs are liable for all activities associated with the Visa Direct programs.

Review the Third Party Agent Registration Program page on www.visa.com to better understand the TPA program.

Forms

Acquirers must complete required forms to participate in a Visa Direct program. Acquirers should contact their Visa account representative for information on obtaining any necessary forms.

Table 5: Forms (1 of 2)

Form	Requirements
Visa Direct Program Information Form (PIF)	Mandatory All acquirers must complete this form and receive approval prior to launching a Visa Direct program.
BIN License Agreement	Conditional The BIN License Agreement is used to request a new acquiring identifier or change the designated status of a currently licensed acquiring identifier. A unique acquiring identifier is required if the acquirer, service provider, or merchant is using any of the APIs except the Funds Transfer Attribute Inquiry (FTAI) API and/or FX Lookup Foreign Exchange Rate APIs (if the acquirer, service provider, or merchant is using these APIs exclusively, a new acquiring identifier is not required).
Client Information Questionnaire (CIQ) (or geographical equivalent)	Conditional If a new acquiring identifier is requested, a CIQ must be completed to configure and install the acquiring identifier at Visa.
Visa License Agreement	Conditional This form is required if the acquirer, service provider, or merchant is using a new acquiring identifier for Visa Direct transactions. Each region needs to be aware of the requirements in their markets related to Visa Acquiring rights. The Licensing team can assist with Visa licensing requests. Timelines and fees associated with licensing applications vary by market. Information on licensing requirements and processes can be found on Visa Access. For specific information on Visa Direct licensing requirements in CEMEA, refer to CEMEA - Specific Requirements for Money Transfer .
Visa Direct API – Client Onboarding Form	Conditional Required if the acquirer, service provider, or merchant is using any of the APIs. It registers which Visa Direct APIs the acquirer, service provider, or merchants will use to provide the Visa Direct services. This is required when the client is ready to be certified for Visa Developer Center. This is automated for new clients.
Third-Party Agent Registration	Conditional Required if the acquirer is using a third-party agent to manage any aspect of their Visa Direct origination program.

Table 5: Forms (2 of 2)

Form	Requirements
Funds Transfer Paperwork	Optional Acquirers may want to set up a new Funds Transfer Settlement Reporting Entity (FTSRE) for their OCT-based programs to separate OCT transactions from other acquired transactions. For new FTSREs, the acquirer or acquirer processor must complete funds transfer paperwork. Contact your regional Visa account representative for assistance.
High Brand Risk Acquirers Registration	Conditional This is an online form accessible through Visa Access. See <i>Global Brand Protection Program Guide for Acquirers</i> .
Visa Direct Program Implementation Questionnaire	Conditional This is available on Visa Developer Center. This is required when acquirers, service providers, and merchants are prepared to move projects and programs into production. This helps assess if the client can integrate the Visa Direct program.

Acquirers, Service Providers, and Merchants – OCT Transaction Processing and Message Formats

This section outlines the transaction processing and OCT message format requirements for acquirers, service providers, and merchants.

Additionally, it provides information on:

- Acquiring Identifier requirements and best practices
- Network routing options
- Business Application Identifier (BAI) Merchant Category Code (MCC) usage
- Performing recipient account checks
- Methods to determine an issuer's Fast Funds status
- High-level information on disputes and reversals
- Settlement
- VisaNet host testing

Transaction Coding Must Comply with Visa Rules

An originating entity must submit AFT and OCT transaction data from the merchant originating country to its acquirer to be processed in accordance with the Visa Rule *Assignment of Merchant Outlet Location* (Rule ID: 0029455).

Data in the authorization and clearing messages must be consistent according to *Complete and Valid Transaction Data* (Rule ID: 0008752) and *Assignment of Merchant Outlet Location* (Rule ID: 0029455).

For example:

If the OCT transaction is initiated and funded in country A and directed to a PAN issued in country B, the transaction must retain the originating country information throughout the transaction lifecycle, and no transaction information should be added or deleted during the routing. Acquirers must route international/cross border transactions in compliance with *Authorization, Clearing, and Settlement of Transactions* through VisaNet (Rule ID: 0007788) and must not route such transactions through other networks or treat them as on-us transactions.

Transaction Processing and Message Format

This section gives requirements and more information on message format and key OCT data elements.

All new OCT origination programs must use the SMS 0200 OCT message format or use the Visa Direct APIs. In order for recipient issuers to be able to post OCTs as Fast Funds in real-time, the acquirers, service providers, and merchants must send SMS 0200 OCTs.

Note:

- The 0200 format is documented in Original Credit Transaction (OCT) Data Elements and Processing Rules.
- For more information on **Fast Funds**, refer to Recipient Issuer - Funds Availability.
- For **transaction flows**, refer to Transaction Flows.
- For information on **Visa Direct APIs**, refer to:
 - Application Programming Interfaces (APIs)
 - Visa Developer Center/Platform (<https://developer.visa.com> and the Visa Direct Resources page https://developer.visa.com/capabilities/visa_direct)

All OCT data elements are critical to effective OCT processing . However, there are some fields and data elements that are critical to:

- Anti-Money Laundering (AML) and sanctions screening requirements.
- Ensuring positive cardholder experience and authorizations.
- Facilitating back-end reporting and exception management.

Refer to appendix *Original Credit Transaction (OCT) Data Elements and Processing Rules*, and the *Full Service POS Online Messages – Technical Specifications* for a more comprehensive list of field and data requirements.

Acquiring Identifier Requirements and Best Practices

This section outlines requirements and best practices related to acquiring identifiers.

Acquirers must:

- Use a new or existing SMS acquiring identifier to initiate OCTs as 0200 full financial messages.
- Use a unique acquiring identifier if using the Visa Direct API to submit OCTs. A unique acquiring identifier is not required if only using the Funds Transfer Attributes Inquiry, Payment Account Validation, or Foreign Exchange Rate APIs.

Though not required, acquirers may prefer using a unique acquiring identifier for their OCT programs. A separate acquiring identifier allows acquirers to support:

- Separate reporting for OCT transaction processing, exception management, and dispute resolution.
- Separate financial reconciliation for their OCT processing (for settlement and treasury reconciliation purposes).

Push Payments Tokenization

A Payment Token is an “alternate identifier” that can be used in place of a Primary Account Number (PAN) to initiate a payment transaction.

Push payments tokenization enables Visa Direct service providers that submit Account Funding Transactions (AFTs) and Original Credit Transactions (OCTs) with PANs to process with tokens. Acquirers interested in using tokenized transactions must sign up for implementation with Visa Token Service.

Visa supports Visa Token Service for AFTs and OCTs for all available token types.

- AFTs and OCTs submitted for token processing must comply with all the existing processing rules for AFTs and OCTs.
- Token requestors or entities acting on behalf of the token requestors must adhere to the tokenization rules for push payments token transactions. AFT and OCT token transactions only work with tokens assigned to token requestors who are enabled for Visa Direct. Contact your tokenization service provider for details.
- Acquirers, service providers, and merchants who integrate with the token requestors and submit an AFT and OCT token transaction must follow the tokenization specifications. Contact your tokenization service provider for details.
- Acquirers, service providers, and merchants that submit AFTs and OCTs for token processing may only send these transactions to recipient issuers that support AFTs, OCTs, and Visa Token Service.
- In the U.S. Region, OCTs with a token are eligible to be sent and received on Network 0002 (Visa), Network 0003 (Interlink), and Network 0004 (PLUS).

For more information on the impacted token types for AFTs and OCTs, contact your Regional Client Support Representative.

For more information on Tokens, refer to *Visa Token Service*.

Visa also supports Payment Card Industry (PCI) tokens for OCTs and AFTs. PCI tokens created from the Token Management Service provide a robust solution for safeguarding sensitive payment information. This ensures compliance with the Payment Card Industry Data Security Standard (PCI DSS) without compromising efficiency. For more information on PCI tokens, refer to *Visa Token Management Service*.

Real Time Visa Account Updater

This section provides an overview of the Real Time Visa Account Updater (VAU) service that integrates the VAU updates into the VisaNet authorization process.

VAU supports payment continuity in recurring billing (RB) and credential-on-file (COF) segments. Real Time VAU is a feature that integrates the VAU updates into the VisaNet authorization process for merchant-initiated transactions and enables real-time updates. Real Time VAU eliminates the multi-step process to update account information.

Acquirers, merchants, and service providers that participate in Real Time VAU have the option to request account information replacement when originating AFTs and OCTs.

Note: Acquirers, merchants, and service providers that request account information replacement in AFTs and OCTs must support Field 127 – PAN File Maintenance.

For API mapping of this field, refer to [API Formats](#).

Account Verification and Related Services

Account Verification, Address Verification, and CVV2 Verification are existing services merchants use through their acquirers and acquirer processors to verify a card account at the time of cardholder onboarding and before sending a Visa Direct Account Funding Transaction (AFT) or Original Credit Transaction (OCT) transaction. This can help merchants ensure that the account is in good standing, help mitigate fraud, and improve authorization approval rates.

In April 2022, Visa introduced the Account Name Inquiry (ANI) functionality for card-not-present merchants and cash payout originators to validate the identity of a client before initiating a financial transaction. To perform ANI, the merchant collects the full legal name of the cardholder and sends it in a zero-amount account verification message. The merchant receives an ANI result code indicating whether the cardholder name matched, partially matched, or did not match the cardholder's legal name associated with the payment account in the issuer's systems. If an issuer does not participate in the ANI, the merchant receives a result code indicating the cardholder name is not verified.

All acquirers and acquirer processors must support ANI services, effective:

Table 6: ANI Requirement Date

Region/Country	ANI Requirement Date
U.S.	14 October 2023 (Visa Rules ID #: 0030973)
Canada	14 October 2023 (Visa Rules ID #: 0030973)
CEMEA	Optional
Europe – U.K.	14 October 2023 (Visa Rules ID #: 0030973)
Europe – Gibraltar, France, Belgium, Luxembourg, Monaco, Denmark, Estonia, Finland, Iceland, Latvia, Lithuania, Norway, Sweden, Austria, Germany, Liechtenstein, Netherlands, Switzerland, Israel, Portugal, Spain, and Turkey	18 October 2024
Europe – Ireland, Bulgaria, Croatia, Czech Republic, Hungary, Poland, Romania, Slovakia, Slovenia, Andorra, Cyprus, Greece, Italy, Malta, San Marino, and Vatican City State	11 April 2025
LAC	Optional

In the U.S., Canada, and UK, an acquirer or acquirer processor that processes Visa Direct transactions must:

- Ensure their merchants use account verification to validate a cardholder account when storing a card credential, or when accepting a new card for the first time, before initiating an AFT or OCT transaction.
- Be able to correctly process, send, and receive fields and values for Card Verification Value 2 (CVV2) and Address Verification Service (AVS) when provided by their merchants.

In the U.S., Canada, and UK, Visa Direct acquirers must be able to send and receive ANI fields and values for their merchants that choose to use ANI.

Acquirers who support ANI through 0100 Account Verification messages must:

- Be able to send cardholder name data1 in the 0100 message (Field 56, Dataset ID 05).
- Be able to receive the name verification result in the 0110 response message (Field 34, Dataset ID 04).
- Establish participation through their Visa representative.

Acquirers who support ANI through Visa's payment account validation (PAV) or Visa payments processing (VPP) APIs must be able to send and receive ANI fields. For more information on these and other APIs, refer to the Visa Developer Center.

Acquirers are able to test and activate ANI through ISO or API.

For more information on testing and activating an ANI, refer to [Visa Access](#) for:

- Account Name Inquiry
- Account Verification

Deferred Delivery Original Credit Transactions

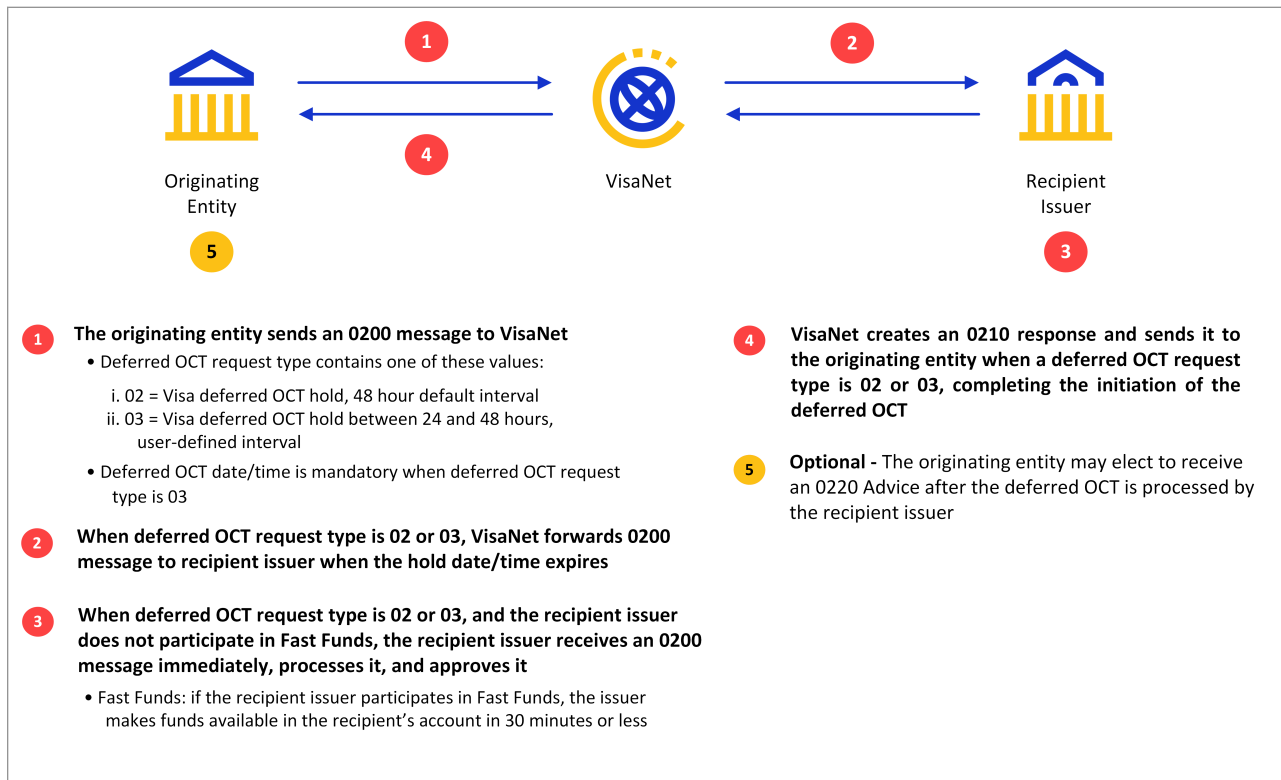

Visa introduced a new way to process OCTs called Deferred Delivery OCTs to provide flexible and convenient payout options for Visa clients and customers.

Visa Direct OCTs are a fast and convenient way to send money to Visa accounts. However, in some cases, users may be comfortable with receiving funds after a period of time, rather than in real time, while still enjoying the convenience of using their debit card to receive payments. With Deferred Delivery OCTs, clients can now send real-time OCTs or deferred payments (payouts that are delayed for a defined period of time) using a single card credential.

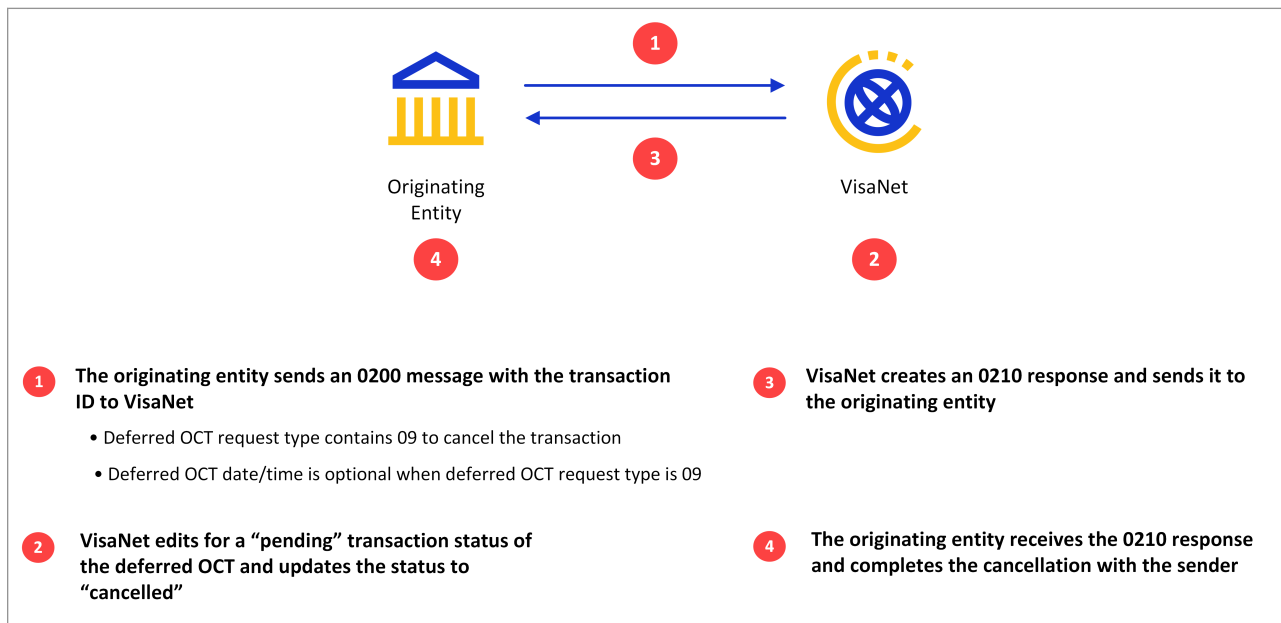

This is an optional service for acquirers. Acquirers that choose to participate in Deferred Delivery OCT processing should contact their Visa representative for details.

Note: Acquirers that choose to participate in deferred OCT processing must submit a Program Information Form (PIF) and receive approval from Visa for each new program.

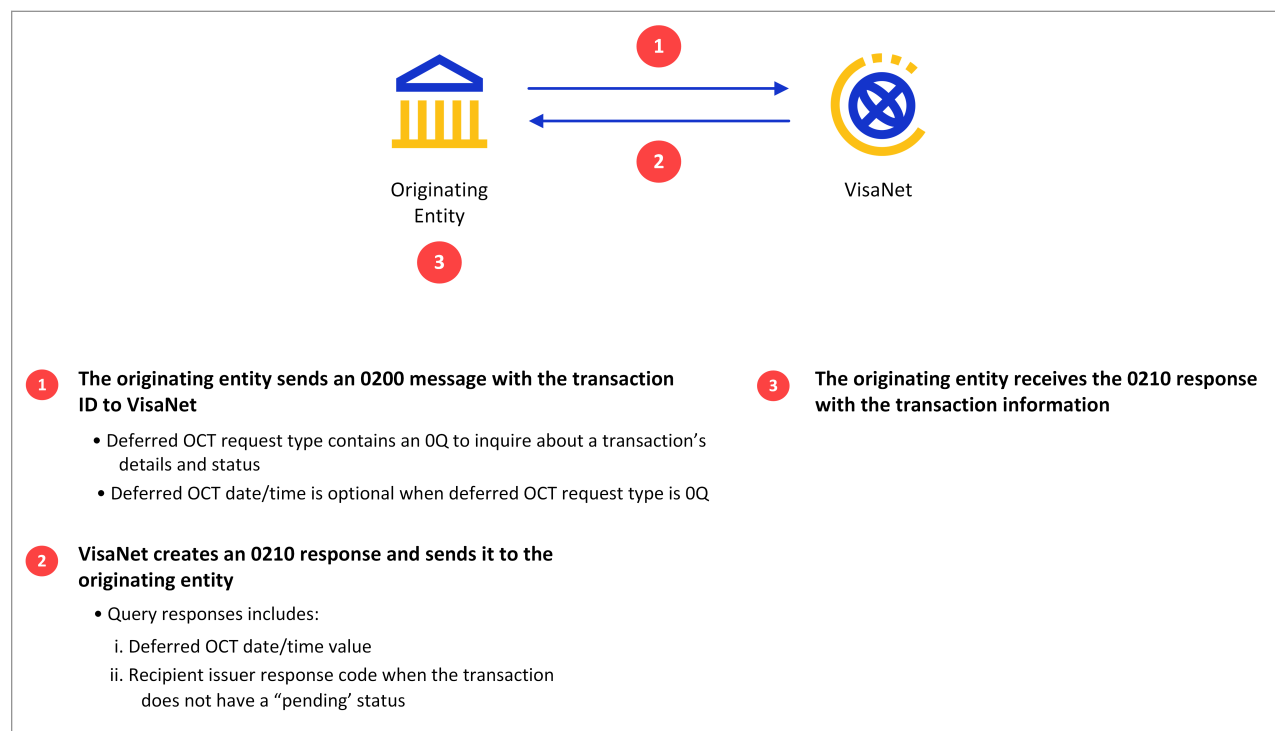

Initiate Deferred OCT

Cancel Deferred OCT

Query Deferred OCT

Network Routing Options

Acquirers, service providers, and merchants have multiple options for connecting to VisaNet to route their OCTs, including traditional VisaNet connectivity, using ISO messaging or using the Visa Direct APIs.

These sections outline the available routing configurations available to issuers.

VisaNet Connectivity Using ISO Messaging

Visa provides flexible, reliable, and secure access to Visa's payment systems using one of two single-pipe connections.

- Visa Direct Exchange (DEX) is a closed, private, TCP/IP-based connection to VisaNet. DEX provides secure access to VisaNet core processing, as well as the ability to receive reports through file exchange.
- The Extended Access Server (EAS), available outside the U.S., provides secure connectivity to VisaNet and performs authorization routing, file staging, and delivery services. It incorporates open standards with powerful IP technologies.

For more information, refer to the *Visa Processing Services* section on Visa Access or contact your Visa representative.

Application Programming Interfaces

Visa offers a series of Application Programming Interfaces (APIs) to acquirers, service providers, and merchants to initiate transactions and support value-added services related to OCTs and Visa Direct.

Some acquirers, service providers, and merchants may find using APIs simpler to implement than traditional ISO-8583 based V.I.P. messaging. Acquirers, service providers, and merchants may choose to use all APIs or a subset of them.

Important: Visa Direct programs require the acquirer, service provider, or merchant to ensure all stages of transaction processing, including transaction submission, financial settlement, dispute management, and reporting are in place and effectively managed before launching a Visa Direct program using the APIs. The APIs available on the Visa Developer Center help to manage certain stages of the transaction, specifically those related to financial transaction submission. The acquirer, service provider, or merchant needs to be aware and ensure that necessary capabilities are in place to support the complete transaction cycle. Only acquirers, service providers, or merchants who can account for every aspect of the payment stack will be allowed to move API projects into production.

Refer to [Visa Developer Center](#) for more information on moving an API from sandbox into production.

Visa Developer Center APIs

- CreatePushFundsTransactions POST
- ReadPushFundsTransactions GET
- CreateMultiPushFundsTransactions POST
- ReadMultiPushFundsTransactions GET
- Foreign Exchange Rates API
- Fund Transfer Attributes Inquiry (FTAI) API
- Payment Account Validation API
- Query API

For more information on the Visa Direct APIs and their availability in your region or country, contact your regional Visa representative.

API Terms of Use

The acquirer must comply, and be responsible for, all third parties' compliance with such terms in connection with its program.

If acquirers or their VisaNet processor(s), service provider(s), Third Party Agent(s), or any other third parties involved in the acquirer's program, access any APIs through the Visa Developer Center in connection with the program, the Visa Developer Terms of Use (<https://developer.visa.com/terms>) and the Visa Developer Security Terms (<https://developer.visa.com/pages/security-terms>) apply.

Push Payment Gateway Service

The Visa Push Payment Gateway Service (PPGS) enables acquirers, service providers, and merchants to send their OCTs and AFTs to Visa for routing to multiple debit networks. The service provides authorization, clearing, settlement, reporting, and exception processing support for Maestro, NYCE, Pulse, and STAR networks.

Acquirers, service providers, and merchants can use PPGS to send OCTs and AFTs to VisaNet using the Visa Direct APIs or Visa's standard V.I.P. ISO message format. VisaNet translates and reformats the message into the correct network format, rather than an acquirer, service provider, or merchant having to develop and maintain transaction formats for each debit network.

Additional information on the PPGS can be found in the *Push Payment Gateway Client Implementation Guide* available on Visa Access or by contacting your Visa account representative.

Network Routing Alternative (U.S. Only)

U.S. Only. Due to Visa Direct requirements that all OCTs be submitted to Visa as a full financial 0200 message, originating acquirers that operate in a dual processing environment on Network 2 may find it easier to implement OCT origination on Network 3, which is an SMS-only network.

OCT origination on Network 3 is currently available for U.S. domestic and cross-border OCTs. Refer to [U.S. OCT Switch Service](#).

Proprietary ATM Card – PLUS Symbol/Network 4

Acquirers may optionally support OCTs for Visa-branded products processed on Network 4 (also known as PLUS network).

In Canada, Network 4 (PLUS-network) was enabled to support domestic OCTs. Additionally, issuers of PLUS branded products are required to support incoming OCTs and enable Fast Funds.

Business Application Identifier, Merchant Category Code, and Use Cases

Acquirers, service providers, and merchants must use an appropriate Business Application Identifier (BAI) and a Merchant Category Code (MCC) in the Original Credit Transaction (OCT) authorization request message and clearing and settlement message to correctly identify the type of OCT and merchant or business entity originating the transaction.

Both the BAI and the MCC enable the issuer to recognize the underlying business use of the OCT. The MCC should represent the merchant, acquirer, or service provider/payment facilitator of the OCT transaction. Acquirers are instructed at the time of program approval which BAI they are required to use for their OCTs. The BAI and MCC Usage – Money Transfer table lists the available BAIs and provides examples of relevant use cases that would be used. For additional details, refer to Original Credit Transaction (OCT) Data Elements and Processing Rules, Field 104, Dataset ID 57.

Certain industries are highly regulated by federal, provincial, and local laws (for example, healthcare, insurance, payroll, gambling, and so on). Acquirers, merchants, and service providers are, at all times, solely responsible for ensuring that their Visa Direct program complies with all applicable law (including ensuring that any and all required disclosures are made, and consents are obtained, as applicable, and that OCTs are not sent from/destined for countries where gambling is illegal).

Note: The MCCs in the table are listed based on the use case. This is not a complete and exhaustive list of all the MCCs used with the OCT. Refer to the *Visa Merchant Data Standards Manual* on Visa Access for a complete list of MCCs that can be used in an OCT.

Note: Effective 16 April 2023, Visa will require the merchant name field in a stand-alone tipping transaction, which must contain the word, "tip" as a requirement for tipping use-cases.

Table 7: BAI and MCC Usage – Money Transfer (1 of 3)

BAI	Use Case	MCC	Examples of Use
AA	Account-to-Account Remote Deposit Check (RDC) capture Consumer funding of their own account	4829 Non-Financial Institution Wire Transfer Money Orders (WTMOs) (Not applicable to the U.S. with BAI AA) 6012 Financial Institutions – Merchandise and Services 6211 Security Brokers/Dealers	For OCT, this is a sender moving money from their own account to their card account. Me-to-Me Money Transfer.
BI	Bank-Initiated Money Transfer Important: BAI BI is used for very specific scenarios and is enabled only in limited markets. Contact your Visa representative for information on: • The availability of BAI BI in your market, and • Applicability of BAI BI to your program.	6012 Financial Institutions – Merchandise and Services Note: BAI BI should only be used in combination with MCC 6012.	Money transfer is initiated from an online banking system, making it a bank-initiated transaction. Usage of this BAI applies to Money Transfer offered in a closed-loop solution.
CD	Cash Deposit	6012 or Retail Merchant MCC	Deposit of cash using an OCT to add funds to a debit account at a bank branch or retail location.
FT	Funds Transfer	6540 Non-Financial Institutions – Stored Value Card Purchase/ Load 4829 Non-Financial Institution Wire Transfer Money Orders (WTMOs) 6012 Financial Institutions – Merchandise and Services	Cashing out a Stored Value Digital Wallet (SVDW) account. Liquid and cryptocurrency asset as a general purpose wallet, proceeds from a sale or cash out, are paid out with an OCT with BAI FT. Cryptocurrency transactions must include the Special Condition Indicator (Field 60.4) = 7 . Note: Wallet providers must use BAI LA instead of FT/WT for cashing out funds if it is a general-purpose wallet, and 50% or more of their annual sales volume comes from Liquid or Cryptocurrency assets.

Table 7: BAI and MCC Usage – Money Transfer (2 of 3)

BAI	Use Case	MCC	Examples of Use
LA Effective 19 October 2024	Liquid Assets A new BAI for Visa Direct transactions involving wallet prefunding or the direct purchase of liquid and cryptocurrency assets. Note: In Canada and the U.S. the new BAI value will not be applicable for origination of domestic OCTs. Issuers and issuer processors must be ready to receive new BAI value of LA for cross-border OCTs originating outside of Canada and the U.S.	Any originating entity identified as a foreign currency exchange or cryptocurrency merchant, broker, or platform. 6012 – Financial Institutions—Merchandise, Services, and Debt Repayment 6051 – Non-Financial Institutions – Foreign Currency, Liquid and Cryptocurrency Assets (for example: Cryptocurrency), Money Orders (Not Money Transfer), Account Funding (not Stored Value Load), Travelers Cheques, and Debt Repayment—must identify Visa Direct transactions under the BAI value of LA. 6211 – Security Brokers/Dealers Brokerage (if greater than 50% of client annual sales volume, measured in the client's local fiat currency comes from noncryptocurrency (for example, stocks, bonds, and so on).	Liquid and cryptocurrency asset, proceeds from a sale or cash out, are paid out with an OCT with BAI LA. Cryptocurrency transactions must include the Special Condition Indicator (Field 60.4) = 7 Wallet providers must use BAI LA instead of FT/WT for cashing out funds if it is a general-purpose wallet, and 50% or more of their annual sales volume comes from Liquid or Cryptocurrency assets.

Table 7: BAI and MCC Usage – Money Transfer (3 of 3)

BAI	Use Case	MCC	Examples of Use
PP	P2P Money Transfer	4829 Non-Financial Institution Wire Transfer Money Orders (WTMOs) 6012 Financial Institutions - Merchandise and Services Note: Based on the type of services, combine MCC 6012 with a valid BAI. Bank-initiated P2P programs must use a BAI of BI and MCC 6012 or a BAI of PP and MCC 6012. Nonbank-offered services must use a combination of PP and 4829.	For OCT, this is a sender sending money to someone else's account.
WT	Wallet Transfer-Staged Digital Wallet (SDW) Transfer	6051 non-Financial Institutions – Foreign Currency, Liquid and Cryptocurrency Assets (for example: Cryptocurrency), Money Orders (Not Money Transfer), Account Funding (not Stored Value Load), Travelers Checks, and Debt Repayment 4829 non-Financial Institution Wire Transfer Money Orders (WTMOs) 6012 Financial Institutions – Merchandise and Services	For OCT this is the withdrawal or cash out of funds from a staged digital wallet to a card account. Wallet providers must use BAI LA instead of FT/WT for cashing out funds if it is a general-purpose wallet, and 50% or more of their annual sales volume comes from Liquid or Cryptocurrency assets. If the wallet supports cryptocurrency, this must be communicated by setting the Special Condition indicator (Field 60.4) = 7. Note: Acquirers and originators in Europe, India, and Brazil are not required to submit a business application identifier of WT for staged digital wallet transactions.

Table 8: BAI and MCC Usage – Funds Disbursement/Non-Money Transfer (1 of 5)

BAI	Use Case	MCC	Example of Use
BB (Not applicable to the U.S.)	Business-to-business Supplier Payments	Any MCC associated to the merchant, acquirer, or service provider business (example: 5812 = restaurant, 5311 = department store)	Business-to-business payments for business-related supplies.
BP	Non-Card Bill Pay	MCC associated to the recipient business	For non-card bill payment.
CP	Credit Card Bill Pay	4829 non-Financial Institution Wire Transfer Money Orders (WTMOs) 6012 Financial Institutions – Merchandise and Services	Pushing funds to a credit card account as a payment.

Table 8: BAI and MCC Usage – Funds Disbursement/Non-Money Transfer (2 of 5)

BAI	Use Case	MCC	Example of Use
FD Note: If requesting to use FD for a subuse case not listed, it must be described in detail in the PIF for approval.	General Funds Disbursement – used for all other Funds Disbursements not listed. Examples: • Commission Payments • Digital Goods – Games • Insurance Payments • Loan Disbursements • Alternative/Online Lending or Peer-to-Peer Lending • Shared Economy • Tax refund services – non-Government initiated (for example, tax preparation businesses) • VAT Tax Reclamation • Earned Wage Access • GIG worker payouts • Marketplace payouts • Contractor payouts • Tip payouts • Corporate expense reimbursements • “Bad customer experience” payouts (for example, airline payment to disgruntled passenger) • Rebates • Education disbursements • Security deposit refunds • Reimbursement of over payments to billers (for example, Business owes me \$50 after I cancel service mid-month)	Any MCC associated to the merchant, acquirer, or service provider business (example: 5812 = restaurant, 5311 = department store)	Funds Disbursements not covered by other BAI use cases listed above. If the program supports cryptocurrency, this must be communicated by setting the Special Condition indicator (Field 60.4) = 7 .

Table 8: BAI and MCC Usage – Funds Disbursement/Non-Money Transfer (3 of 5)

BAI	Use Case	MCC	Example of Use
GD	Government Disbursements and Government Initiated Tax Refunds	9399 Government Services (Not Elsewhere Classified) 9402 Postal Services – Government Only 9405 U.S. Federal Government Agencies or Departments 9222 Fines; government administered 9211 Court Costs, Including Alimony and Child Support 9311 Tax Payments	Government payments, including social security payments, unemployment, disability, jury duty, and disaster relief/emergency.
GP	Gambling/Gaming Payouts (other than online gambling)	7800 Government owned lottery (U.S. only) 7801 Government-Licensed Casinos (U.S. only) 7802 Government-Licensed Horse/Dog Racing (U.S. only). Note: 7800, 7801, and 7802 are U.S. only MCCs that also require the use of a valid Merchant Verification Value (MVV). Merchants must register with Visa to obtain an MVV. 7995 Betting, including Lottery Tickets, Casino Gaming Chips, Off-Track Betting, and Wagers at Racetracks 9406 Government-owned lottery (Non-U.S. only)	Casino payouts at gaming floor counter and sports books. Advanced deposit wagering. Gambling that is not considered online gambling.
LO	Loyalty Payments	Any MCC associated to the merchant, acquirer, or service provider business Examples: • 5812 = restaurant • 5311 = department store	Payment for a canceled loyalty program/service, deposit refunds, employee rewards, and purchase rebate payments.

Table 8: BAI and MCC Usage – Funds Disbursement/Non-Money Transfer (4 of 5)

BAI	Use Case	MCC	Example of Use
MD	Merchant Settlement	6012 Acquirers sending settlement payments to merchants 4829 Payment Facilitator (includes sponsored processors, and ISOs) sending settlement payments to merchants	Merchant payments for purchase transaction processing where the processor sends settlement payments to a Visa card account using OCT.
MI Effective January 2024	Faster Refunds	Any MCC associated with the merchant, acquirer, or service provider business.	Refund purchases of goods and services made on a Visa Card using OCT.
OG	Online Gambling Payouts	7800 Government-owned lottery (U.S. only) 7801 Government-licensed Casinos (U.S. only) 7802 Government-licensed horse/dog racing (U.S. only) 7995 Betting, including lottery tickets, casino gaming chips, off-track betting, and wagers at racetracks 9406 Government-owned lottery (non-U.S. only)	Payout of winnings from online gambling merchants, including casinos, horse/dog racing wagers, lottery, digital, and social gaming payouts.
PD	Payroll and Pensions Disbursements	8931 Accounting, Auditing, and Bookkeeping Services	Independent contractor works for temporary staffing agency or directly with an employer, submits time sheet or completes project, and is paid to bank account by using a debit card.

Table 8: BAI and MCC Usage – Funds Disbursement/Non-Money Transfer (5 of 5)

BAI	Use Case	MCC	Example of Use
RP	Request-to-Pay Service	Refer to <i>Visa Direct Request to Pay Implementation Guide</i> for information on eligible MCC.	Visa's Request-to-Pay (R2P) service is a secure messaging framework built on APIs that enable client to request payment and communicate about a payment obligation, enabling bill splitting, and funds collection functionality for mobile banking applications. Note: Limited geographic scope to Ukraine and Kazakhstan.
TU	Prepaid Card Load	6012 Financial Institutions – Merchandise and Services 6540 Non-Financial Institutions – stored-value card Purchase/Load	Loads, reloads, and top-ups to prepaid card accounts. Note: Restricts use to Prepaid card only. VisaNet edit declines the transaction if the card product is not prepaid and BAI is TU. Note: Money Transfer velocity limits apply.

Person-to-Person Digital Payment Platforms Framework

Person-to-Person (P2P) Digital Payment Platforms (DPP) are digital payment solutions that facilitate movement of funds between the sender's accounts, or from the sender to another individual's account.

To clearly distinguish Money Transfer from P2P, accurate BAI coding is critical. This helps ensure:

- Implementing the right economics.
- Managing risks: arbitrage, fraud, money laundering, and so on.
- Maintaining compliance and transparency across all parties in the payments chain.
- Considering a variety of emerging and evolving digital payment platform business models.

The BAI and MCC Usage for P2P Digital Wallet Programs – Digital Payment Platform Model table maps out the different P2P digital payment business models and provides guidance to acquirers and merchants on the proper use of transaction type, MCC, and BAI coding to facilitate the movement of funds.

Table 9: BAI and MCC Usage for P2P Digital Wallet Programs – Digital Payment Platform Model (1 of 2)

Use Cases	Straight-through P2P	Financial Institution	Stored-value wallet	Staged wallet
Me-to-Me funding Adding cash	N/A MCCs • 4829 • 6012 (if bank-offered)	AFT (AA) MCCs • 6012 • 6211 • 6051	AFT (FT) MCCs • 6540 • 6012 (if bank-offered)	AFT (WT) MCCs • 4829 • 6051 • 6012 (if bank-offered) • Merchant's MCC, if back-to-back
Me-to-Me withdrawal Cash out	N/A MCCs • 4829 • 6012 (if bank-offered)	OCT (AA) MCCs • 6012 • 6211 • 6051	OCT (FT) MCCs • 6540 • 6012 (if bank-offered)	OCT (WT) MCCs • 4829 • 6051 • 6012 (if bank-offered) • Merchant's MCC, if back-to-back
Send funds to someone else OCT not enabled	AFT (FT) MCCs • 4829 • 6012 (if bank-offered)	AFT (FT) MCCs • 6012 • 6211 • 6051	AFT (FT) MCCs • 4829 • 6012 (if bank-offered)	AFT (WT) MCCs • 4829 • 6051 • 6012 (if bank-offered) • Merchant's MCC, if back-to-back

Table 9: BAI and MCC Usage for P2P Digital Wallet Programs – Digital Payment Platform Model (2 of 2)

Use Cases	Straight-through P2P	Financial Institution	Stored-value wallet	Staged wallet
Send funds to someone else OCT enabled	AFT (PP or BI) MCCs • 4829 • 6012 (if bank-offered)	AFT (PP or BI) MCCs • 6012 • 6211 • 6051	AFT (PP or BI) MCCs • 4829 • 6012 (if bank-offered)	AFT (PP or BI) MCCs • 4829 • 6051 • 6012 (if bank-offered) • Merchant's MCC, if back-to-back
Receive funds from someone else OCT enabled	OCT (PP or BI) MCCs • 4829 • 6012 (if bank-offered)	OCT (PP or BI) MCCs • 6012 • 6211 • 6051	OCT (PP or BI) MCCs • 4829 • 6012 (if bank-offered)	OCT (PP or BI) MCCs • 4829 • 6051 • 6012 (if bank-offered) • Merchant's MCC, if back-to-back

Note: AFTs and OCTs with BAI = WT must be used by a registered Staged Digital Wallet Operator (SDWO).

Table 10: Digital Wallets Comparison (1 of 2)

	Stored Value Digital Wallet (SVDW)	Staged Digital Wallet (SDW)
Definition	Stored Value Digital Wallets (SVDWs) are offered with P2P or merchant payment capability. The user can add and store funds in the digital account (wallet) that will be used to send funds to others or cash out to an unaffiliated account. SVDW must limit usage to the available balance in the wallet and must not facilitate Back-to-Back Funding. SVDW may have a prepaid card/account associated with it. It is not typically used to pay a merchant.	A Staged Digital wallet is provided by a Staged Digital Wallet Operator (SDWO). The SDWO assigns a separate account to the customer, which the customer uses to initiate “back-to-back funding” - also known as a “live-load” or “real-time load” – permitting the customer to complete transactions with sellers on the digital wallet’s platform, when there may not be sufficient funds in the digital wallet-assigned account (which may include a “zero balance”). SDWs are not permitted to assign a Visa or other general-purpose payment network product (for example, a prepaid credential) to the “front” of the digital wallet account to make purchases, cash withdrawals or P2P transfers by using the back-to-back (live load) functionality.
Add/Store funds	Yes	Yes
Usage of funds in the wallet	• To send funds to other users • To cash out to an unaffiliated account • Send payments at multiple merchants under the operator's brand mark • Send payments at multiple merchants under the general-purpose payment network's brand mark • Can support cryptocurrency	• To send to other wallet users on the platform (P2P) • Send payments at multiple merchants under the operator's brand mark • To cash out to an unaffiliated account • Can support cryptocurrency

Table 10: Digital Wallets Comparison (2 of 2)

	Stored Value Digital Wallet (SVDW)	Staged Digital Wallet (SDW)
Stored funds to pay merchants	Stored funds may be used to pay merchants. Payments to merchants include: • Face-to-face SVDW-brand or general-purpose payment network acceptance mark at a physical POS, a proprietary payment outside the Visa network. • E-commerce SVDW-brand or general-purpose payment network acceptance mark, a proprietary payment outside the Visa network. Note: A wallet evolving to support a Back-to-Back funding for real-time purchases (that is, where the funding transaction occurs simultaneous with the purchase) will be classified as a Staged Digital Wallet. The wallet may no longer have a general-purpose payment network card/account at the "front" of the wallet using back-to-back funding, which means it is now a Staged Digital Wallet.	Payments to merchants include: • Face-to-face SDW brand acceptance mark at a physical POS • E-commerce SDW brand acceptance mark • Merchant wallets where users instruct buyers to send money to a merchant's digital wallet • Back-to-back Funding purchase transaction
Digital Wallet as a prepaid account	Stored Value Digital Wallet may be structured as a prepaid account or offer a general-purpose payment network prepaid card as a physical access tool to the funds in the digital wallet. This scenario does not alter the transaction or BAI coding.	The Staged Digital Wallet may be structured as a prepaid account but must not offer or attach a general-purpose payment network card as a physical access tool to the funds in the digital wallet using a back-to-back transaction. This scenario does not alter the transaction or BAI coding.

Formatting Transactions from Marketplaces, and Payment Facilitators

Visa Direct programs may be offered by acquirers through Marketplaces, or Payment Facilitators.

These entities are types of Third Party Agents (TPA) who have a contractual relationship with merchants to support them with various types of transactions. In a Visa Direct program, they may facilitate funds disbursements to customers of the businesses they support and/or provide merchant settlement transactions to merchants for whom they facilitated purchase transactions with their customers.

There are different merchant name formatting requirements for different use cases and different acquiring entities. These are some of the requirements and best practices for card acceptor name fields. Refer to Non-Money transfer/Business-funded use cases and Money transfer/Consumer-funded use cases for more examples of best practices.

Disbursements to Merchants by Marketplaces and Payment Facilitators

When a cardholder makes a purchase at a marketplace or via a payment facilitator, the card acceptor name will contain the payment facilitator and merchant name (PF*Alex's Shoes) in Field 43. For API mapping of this field, refer to API Formats.

When the payment facilitator processes the merchant settlement, they disburse funds to their merchant using an OCT with the acquirer's name and payment facilitator name (ACQ*Payfac) in Field 43. The payment facilitator would also be identified by their payment facilitator BID and Sponsored merchant name (12345678Alexs Shoes) in Field 104 Dataset 56.

Disbursements by a Payment Facilitator on Behalf of a Merchant

When a Third Party Agent disburses funds on behalf of a merchant, they are effectively a payment facilitator. For example, a payment facilitator disburses funds on behalf of Alex's Shoes to a contractor in India. In that case, Field 43 would say PF*Alex's Shoes.

Person-to-Person Money Transfers (not using a Payment Facilitator)

In a Money Transfer OCT, we require that Field 43 contains merchant name abbreviation (4-char)* sender name (MTMS*Alex Miller) for customer convenience. Field 104 sender name field must contain the name of the individual sender for AML reasons.

Use Cases

These sections describe rules specific to use cases that have unique requirements.

Faster Refunds

Effective 20 January 2024, Faster Refunds will be supported using Visa Direct OCTs to refund purchases of goods and services made on a Visa Card. This use case does not eliminate merchandise credit returns; the merchant and their acquiring sponsor must also have established Merchandise Return Authorizations. Faster Refunds are an additional refund option available to a merchant. Faster Refunds for cross-border transactions do not apply.

Data requirements for Faster Refunds:

- BAI = MI Faster Refunds
- The Merchant Category Code (MCC) must represent the merchant's business
- The MI OCT must include the Transaction ID from the original purchase
- If a Transaction ID is not provided in the original MI OCT, VisaNet rejects the transaction with Reject Code 483
- Merchant must use the ACNL file to identify eligibility for OCT acceptance
- Merchant must ensure that the Retrieval Reference Number (RRN) in the MI OCT must be different than the RRN in the original purchase and any subsequent returns. If the RRNs are the same, VIP will decline the transaction

A unique Visa assigned Visa Merchant Identifier (VMID) will be provided during onboarding.

Merchants are allowed to use an OCT for refunds to reimburse cardholders for purchases made with non-Visa methods (that is, cash, check, or non-Visa general-purpose cards, etc.) as long as their refund policies allow for this. In these cases, there will not be a Transaction ID, so the merchant should use BAI FD rather than BAI MI for Faster Refunds since the original purchase is not to a Visa credential.

Table 11: Faster Refunds by Country/Region (1 of 2)

Country/Region	OCT Transaction Type	Effective Date
AP	Domestic	• 12 April 2025 – Australia, Hong-Kong, Malaysia, New Zealand, Singapore, and Thailand • 20 January 2024 – India
Canada	Domestic	Not available
CEMEA	Domestic	12 April 2025 – Ukraine

Table 11: Faster Refunds by Country/Region (2 of 2)

Country/Region	OCT Transaction Type	Effective Date
EU	Domestic Note: Faster Refund OCTs in the Europe region will only apply for intraregional transactions between EEA countries, Gibraltar, and the U.K., or domestic transactions in the EEA, Gibraltar, and the U.K.	20 January 2024 European Economic Area (Austria, Belgium, Bulgaria, Croatia, Republic of Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, and Sweden), Gibraltar, and the U.K.
LAC	Domestic	12 April 2025 – Argentina, Brazil, and Chile
U.S.	Domestic	Not available

For more information on the Visa Direct Faster Refunds availability in your region or country, contact your regional Visa representative.

Bank-Initiated Money Transfer

Bank-initiated Money Transfers are treated as transfers, such as an interbank P2P program or programs that offer transfers inside a bank's mobile banking platform. These programs must use BAI of BI or PP in accordance with local laws.

In the U.S., to improve customer service and support the Federal Reserve's Faster Payments initiative, banks are developing easy-to-use, real-time interbank Money Transfer payment services.

Note: "Bank," as defined by the U.S. Code of Federal Regulations to include credit unions.

To enable banks to leverage the benefits of the Visa Direct platform in the U.S., Visa enabled a unique pricing fee schedule for bank-initiated Money Transfer programs. Programs defined under this category must meet these requirements:

- The bank initiating the OCT must comply with the Fast Funds mandate for receiving OCTs on all eligible Visa debit and reloadable prepaid card accounts.
- OCTs must be submitted with a business application identifier (BAI) of “BI.”
- OCTs with a BAI of BI may be used for domestic P2P and Me-to-Me payments offered by banks through bank channels. Direct-to-consumer services provided by third-party service providers (including client-sponsored third parties) are not eligible.

Important: BAI BI is used for very specific scenarios and is enabled only in limited markets. Contact your Visa Representative for information on:

- The availability of BAI BI in your market.
- The applicability of BAI BI to your program.

Service providers that enable bank-initiated Money Transfer platforms on behalf of banks must ensure Fast Funds compliance of all sending banks participating in their service prior to enabling bank Money Transfer services on behalf of the bank and its customers. The process for ensuring the participating bank is compliant with the Fast Funds requirement, as well as the status of all participating banks, must be made available to Visa upon request.

Acquirers are required to have participating banks in a bank platform or service reviewed and approved by Visa prior to initiating any OCT-based services. Acquirers can submit a list of participating banks as part of the PIF process or following an initial PIF approval.

These programs may use the BAI of BI or PP based on local requirements. Contact your Visa account representative for more details on bank-initiated Money Transfer programs.

Merchant and Third-Party Providers Processing – Sales Tax Reclaim

A Sales Tax Reclaim rule rebates the tax paid on a purchase incurred during international travel.

The Sales Tax Reclaim rule allows rebate of the value-added tax (VAT), goods and services tax (GST), or other general consumption tax to the Cardholder. If the entity who rebates any of the sales tax are:

- Not the original seller of the goods or services, the sales tax rebate must be processed as an OCT.
- The original seller of the goods or services, the sales tax rebate may be processed as either a TC06 merchandise return or as an OCT.

If processed as an OCT, this will be a Funds Disbursement (BAI = FD) with a Message Reason Code (Field 63.3) value of 5120 for OCTs specific to sales tax rebate.

Note: For issuers that do not accept OCTs or when OCTs are restricted due to government regulations, the OCT for sales tax rebates is converted to a merchandise return transaction.

For the sales tax rebates only, a debit adjustment is performed when there is a regulatory requirement to take back OCT funds. The debit adjustment must include the transaction identifier, BAI, and authorization response code from the OCT of the sales tax rebate to help

with reconciliation. The adjustment time frame and amount may vary due to local laws and regulations applicable to the VAT service providers.

- The refunding entity (the VAT rebate service provider) must be named as the merchant in the Visa transaction.
- The purchase and the rebate transactions must be acquired by the same acquirer.
- A Visa card was used for the initial OCT.

An entity that offers Dynamic Currency Conversion (DCC) for a sales tax rebate completed as a merchandise return must comply with all DCC requirements, including processing the rebate in the correct cardholder billing currency.

Alternative or Online Lending

Visa Direct can be used to support small-dollar credit products:

1. Small-Dollar Credit Loans – new guidelines (U.S. only):
 - Only unsecured loans.
 - The lender does not have automatic recourse in the event the loan is not repaid or as a condition of making the loan (example, does not require an authorization to automatically debit the borrower's account or require a post-dated check or electronic check).
 - Repayment terms are in substantially equal installments.
 - There is no automatic rollover or renewal.

Earned Wage Access (U.S. and Peru Only)

Visa Direct OCT transactions can be used for Earned Wage Access (EWA) programs (i.e., Wage Advance Programs and No Cost Advances) when these guidelines are met:

1. Wage Advance Programs

- The advance is made only against accrued wages.
- The advance is offered by the employer or the employer's business partner.
- The program is either a no fee advance or charges only a fee for participating in the program.
- Participating service providers have no legal or contractual claim or remedy against the consumer based on the consumer's failure to repay.
- Participating service providers will not engage in debt collection activities or report to a consumer reporting agency.

2. No Cost Advances

- The consumer is not required to pay any charge or fee to receive the advance (this does not preclude voluntary tips-based advance programs).
- Service providers have no legal or contractual claim or remedy against the consumer based on the consumer's failure to repay.
- Service providers will not engage in debt collection activities or report to a consumer reporting agency.

Merchants, acquirers, processors, service providers, and issuers in the Visa Direct ecosystem will continue to abide by the requirements detailed in the *Visa Core Rules and Visa Product and Services Rules* in addition to this OCT Implementation Guide.

Note: EWA programs should use MCCs 4829, 6051.

Gambling and Gaming Program Overview

Gambling merchants require careful review of their transaction coding and business practices.

To support continued compliance with applicable laws, regulations, and Visa Rules, acquirers must carefully review their gambling merchants' transaction coding and business practices for:

- Merchant Category Code (MCC)
Note: Effective **28 February 2025**, gambling OCTs will be processed based on MCC (7800, 7801, 7802, 7995, and 9406) and BAI (Online Gambling (OG) and Gambling Payout (GP)) values.
- POS condition codes (Field 25, Values: 00, 01, 05, 08, 59) – for online gambling (U.S. only)
- Processing code
- Business Application Identifier (BAI)
Note: BAI GP and BAI OG (effective **28 Feb 2025**).
- Fraud and AML controls

In the U.S, for face-to-face casino transactions, the OCT must be coded as:

- Processing Code = 26
- MCC = 7995 (betting, including lottery tickets, casino gaming chips, off-track betting, wagers at race tracks, and games of chance to win prizes of monetary value)
- BAI = GP
- POS Condition Code = 05 (cardholder present, card not present)
POS Condition Code of 05 (cardholder present, card not present) on OCTs with MCC 7995 in the US must be treated as “card present” transaction.
- POS Entry Mode = 01 (Manual, key entry)

Acquirers must also perform enhanced due diligence reviews during onboarding and monitor gambling merchants to prevent the introduction of unlawful internet gambling transactions into the payments system.

Acquirers must have processes to validate the legality of all gambling and gaming merchants. The Gambling Merchants Onboarding Requirements table describes the registration requirements and process for each MCC.

Effective 15 April 2023, Visa implemented changes to include card-present data fields sent to issuers in the U.S. and Europe Regions in OCTs initiated for gambling payouts use cases. For more information on implementation and testing, contact your Visa regional representative.

Table 12: Gambling Merchants Onboarding Requirements

MCCs	Requirement	Process
7800 (Government-Owned Lotteries) (U.S. Only) 7801 (Government-Licensed Casinos) (U.S. Only) 7802 (Government-Licensed Horse/Dog Racing) (U.S. Only)	In the U.S, gambling merchants must pass an enhanced due diligence review to validate compliance with applicable laws and the Visa Rules.	- Register with Visa to obtain a unique Merchant Verification Value (MVV). Submit registrations through the High Integrity Risk Registration (HIRR) module in Program Request Management (PRM) tool on Visa Access. - Contact your Visa representative for more details on this required registration process. Note: Visa blocks merchants that do not have a valid MVV.
7995	Gambling merchants intending to use MCC 7995 must submit a Program Information Form (PIF) for Visa approval prior to production transactions. In the U.S, Visa introduced MCC 7995 use case in a controlled, phased approach for face-to-face casino transactions. Participants must be approved by Visa. In the U.S., POS Condition Code of 05 (cardholder present, card not present) on OCTs with BAI = GP, and MCC 7995 will be considered “card present.” Issuers and issuer processors in the U.S. must treat gambling OCTs with BAI = GP, MCC 7995, POS condition code = 05, POS entry mode code = 01 as “Card-Present.”	- Follow the standard program review process through the Visa Direct PIF Program Request Management (PRM) tool on Visa Access. - Contact your Visa representative for more details on this required registration process. Note: In the U.S., online merchants that have opted out of registration under MCCs 7800, 7801 and/or 7802 (U.S. only) may operate under MCC 7995 (betting, including lottery tickets, casino gaming chips, off-track betting, and wagers at race tracks).
9406 (Government-Owned Lottery) (non-U.S. Only)	To be eligible for MCC 9406, a merchant must be state or government-owned or have been granted a license to operate a lottery on behalf of the state or government.	There is no registration process for acquirers and merchants to participate in the new MCC. However, Visa will be monitoring volumes and, if non-eligible merchants use the MCC, the acquirer and merchant will be subject to non-compliance assessments. Note: - If a non-U.S. lottery merchant does not meet the criteria for MCC 9406, the transaction must continue to be classified under MCC 7995. - Non-U.S. lottery merchants should not use MCC 7800 under any circumstance.

Cash Deposit

Cash, as a funding source for the OCT Money Transfer transaction, is used today in some regions/countries for certain use cases in which the consumer wants to deposit cash to a card at an ATM/Kiosk, at a POS in a bank branch, or at a merchant POS.

Cash Deposit is offered by originating entities as a service to add cash to cards through appropriate channels; for example: banks, retailers, post offices, ATM providers, merchants, etc.

To help financial institutions seeking to reduce their footprint and requiring alternate mechanisms to support cash deposits, Visa has introduced a new BAI, Cash Deposit (CD), to uniquely identify programs that enable depositing money to accounts using cash as a source of funds.

Programs using Cash Deposit are subject to:

- OCTs must be submitted with a BAI value of CD.
- Originating entities are responsible for complying with Visa requirements and rules related to cash funded OCTS.
- Originating entities and issuers must comply with applicable laws and regulations.
- Use of the CD BAI must be limited to domestic use only globally.
- Cash Deposit transactions must be me-to-me only.
- Acquirers and originating entities using the Cash Deposit program must complete a new or updated Visa Direct PIF. The PIF must contain details confirming regulatory approval in required markets and cardholder verification process details. Refer to [Requirements for Submitting a PIF](#).
- OCTs with BAI CD will have new Velocity Limits and Maximum Transaction Amount.

Effective 15 April 2023, Visa implemented changes to include card-present data fields sent to issuers in the U.S. and Europe Regions in OCTs initiated for Cash Deposit (CD) use cases. For more information on implementation and testing, contact your local representatives.

Table 13: Velocity Limits – Maximum Transaction Amount for OCTs with BAI CD

Product	Transaction Time Period	Transaction Time Period	Transaction Time Period	Per Transaction Maximum
	One-Day Max	Seven-Day Max	Thirty-Day Max	
Visa Consumer	15 Transactions or U.S. \$600	25 Transactions or U.S. \$1,000	75 Transactions or U.S. \$3,000	U.S. \$600
Visa Commercial	15 Transactions or U.S. \$5,000	25 Transactions or U.S. \$15,000	75 Transactions or U.S. \$50,000	U.S. \$5,000

Liquid and Cryptocurrency Assets

Effective 20 January 2024: Visa has implemented a new rule requiring the use of an Account Funding Transaction (AFT) for the acquisition of Liquid and Cryptocurrency Assets in a card not present environment. However, quasi-cash and purchase transactions will continue to be an option in a card-present environment. Issuers and acquirers are required to comply with the new AFT rule.

Effective 20 January 2024 – Canada, CEMEA, and U.S. Regions and effective 20 January 2025 – AP, Europe, and LAC Regions: Merchants must be set up to support AFTs for the purchase of Liquid and Cryptocurrency Assets in a card-not-present environment and use Special Condition Code 7, to identify cryptocurrency.

A Stored Value Digital Wallet or Staged Digital Wallet for liquid assets (stocks, shares, foreign currency, and cryptocurrency) a cryptocurrency merchant must be funded using an AFT. Visa Direct Original Credit Transactions (OCTs) facilitate the movement of converted fiat currency back to client financial institution accounts.

A general-purpose Stored Value Digital Wallet's Merchant Category Code (MCC) is 6540. However, when the Stored Value Digital Wallet is used for cryptocurrency the MCC to be used is 6051.

Data requirements for Liquid and cryptocurrency assets-related OCTs:

- **Except U.S. and Canada:** FD is used for brokerages/exchanges; FT is used for digital wallets.

Note: For U.S. only: FT must be used for brokerages/wallets and AA for transfers of converted fiat from FI-licensed entity (financial institution, credit union, or wallet) or FINRA-licensed (brokerage) to a financial institution account via PAN.

- **Effective 19 October 2024,** BAI LA (Liquid Assets) must be used for cashing out funds from a brokerage account (including cryptocurrency capable brokerages/exchanges), or from a digital wallet primarily used for liquid or cryptocurrency assets.

Note: In Canada and the U.S., the new BAI value will not apply to originating domestic AFTs. Issuers and issuer processors must be prepared to receive the new BAI value of LA for cross-border AFTs originating outside of Canada and the U.S.

- General-purpose wallets can continue to use BAI FT or WT if liquid or cryptocurrency assets are not the main source of business or revenue, this means that 50% or less of the client's annual sales revenue comes from liquid or cryptocurrency assets.

- Applicable MCCs include:
 - **6012:** Financial Institutions – Merchandise, Services, and Debt Repayment
 - **6051:** Non-Financial Institutions – Foreign Currency Liquid and Cryptocurrency Assets (for example: Cryptocurrency), Money Orders (not Money Transfer), Account Funding (not Stored Value Load), Travelers Cheques, and Debt Repayment
 - **6211:** Security Brokers/Dealers
Brokerage (if greater than 50% of client annual sales volume, measured in the client's local fiat currency comes from non-cryptocurrency (for example, stocks, bonds, and so on.)
- Special Condition Indicator (Field 60.4) must be **7** and is mandatory for all cryptocurrency programs.

All acquirers and cryptocurrency merchants must follow the High-Integrity Risk registration process and obtain PIF approval before launching any new programs.

Note: Visa does not process cryptocurrencies at any time.

Card Acceptor Identification Code

Acquirers, service providers, and merchants must use a unique Card Acceptor Identification Code (CAID) in the OCT authorization request message to identify the merchant that is disbursing funds to Visa account holders.

The unique CAID from the original transaction message is required in any subsequent messages, including reversals, disputes, and dispute responses.

For bank-initiated programs where a processor or service provider offers OCT-based services for other financial institutions, Visa recommends that the CAID be populated with an ABA, other bank routing number, or unique merchant (bank) identifier that uniquely identifies each financial institution acting as the merchant of push payments.

For additional information on the CAID, see to [Original Credit Transaction \(OCT\) Data Elements and Processing Rules](#), Field 42.

Note: For API mapping of this field, refer to [API Formats](#).

Formatting Conventions for CAID and Card Acceptor Name Fields

Recommended formatting conventions for CAID and Card Acceptor Name fields are presented below. These recommendations are focused on Non-Money Transfer/business-funded and Money Transfer/consumer-funded use cases.

For strategic or large merchants, you should inform Visa at least 10 days before onboarding a merchant with the assigned CAID and Card Acceptor Name. This will help with authorization and performance tracking purposes.

Table 14: Non-Money transfer/Business-Funded Use Cases (1 of 1)

Use case	Merchant/ Payment Facilitator	CAID	Card Acceptor Name	Example
Earned Wage Access (Employer- based)	EWA Provider	CAID represents the EWA Provider	EWA Provider Name*Employer Name	Provider name*MerchantA
Earned Wage Access (Direct to Consumer)	EWA Company	CAID represents the EWA Provider	EWA Company Name	ABC Inc.
Insurance Payouts	Insurance Company	CAID represents the Insurance company	Insurance Company Name	XYZ Insurance
Merchant Settlement	Acquirer or payment facilitator (or service provider)	CAID represents the acquirer or payment facilitator	• Acquirer name, or • Acquirer name*payment facilitator name • Optionally, can use payment facilitator name when identified by a unique CAID value for each payment facilitator	• LMN, or • LMN*PAYFAC, or • PAYFAC (If payment facilitator has a unique CAID value to distinguish from other payment facilitator or service provider).
Gambling Payouts	Casino	CAID represents the gambling company or casino	Casino Name or Payout Facilitator*Casino Name	ABC Casino, or PAYFAC*ABC
Marketplace Payouts	Marketplace company	CAID represents the marketplace	Marketplace Name	MKT Inc.

Table 15: Money Transfer/Consumer-Funded Use Cases (1 of 2)

Use case	Merchant/ Payment Facilitator	CAID	Card Acceptor Name	Example
P2P	P2P Service Provider (non-FI)	CAID represents the P2P service provider	P2P Brandname*Sender Name	Alex Miller sending money to Stacey Taylor via Money Transfer service (MTM) Stacey sees on her statement OCT: MTMS*Alex Miller Alex sees on his statement AFT: MTMS*Stacey Taylor
P2P (FI- initiated)	P2P Service Provider (FI-based)	CAID represents an ABA, routing number, or unique merchant (bank) identifier	P2P Brandname*Sender Name	Alex Miller sending money to Stacey Taylor via ABC Bank OCT: ABCB*Alex Miller AFT: ABCB*Stacey Taylor
P2P Processing platforms	P2P Service Provider (Processor-based)	CAID represents the P2P service provider	P2P Brandname*Sender Name	Alex Miller sending money to Stacey Taylor via LMN bank Stacey sees on her statement OCT: LMNB*Alex Miller Alex sees on his statement AFT: LMNB*Stacey Taylor White labeled: Alex Miller sending money to Stacey Taylor via LMN bank offered through AA Credit Union Stacey sees on her statement OCT: AACU*Alex Miller Alex sees on his statement AFT: AACU*Stacey Taylor

Table 15: Money Transfer/Consumer-Funded Use Cases (2 of 2)

Use case	Merchant/ Payment Facilitator	CAID	Card Acceptor Name	Example
Account-to-Account (non-FI, excluding brokerages)	A2A Service Provider (non-FI)	CAID represents the A2A service provider	A2A Service Provider *Account Owner Name	OCT: A2AS*Alex Miller AFT: A2AS*Alex Miller
Account-to-Account (FI-initiated, including brokerages)	A2A Service Provider (FI-based)	CAID represents the FI A2A service provider	FI A2A Service Provider *Account Owner Name	OCT: ABCB*Alex Miller AFT: ABCB*Alex Miller
Account-to-Account (Neo Banks)	Neo bank A2A Service Provider	CAID represents the Neo bank A2A service provider	Merchant Name/ Brand Name * Account Owner Name	OCT: XYZB*Alex Miller AFT: XYZB*Alex Miller
Account-to-Account (Cash deposit)	Cash deposit merchant	CAID represents the Cash Deposit Merchant	Merchant Name *Account Owner Name For non-cash instrument, Merchant Name/Non-cash instrument brand * Account Owner Name	Alex Miller wants to deposit \$50 cash to his debit card at XYZ store OCT: XYZS*Alex Miller Alex Miller purchases a non-cash instrument brand from a local store to deposit into his prepaid card via AAAA brand online portal/phone OCT: AAAA*Alex Miller
Account-to-Account (Check deposit)	Recipient bank's agent	CAID represents the Check Deposit Service Provider	Merchant Name *Cardholder Name	Alex Miller deposits check using LMN service to his debit card OCT: LMNS*Alex Miller
Account-to-Account (Check deposit)	Processor	CAID represents the Check Deposit Merchant	Merchant Name *Cardholder Name	Alex Miller deposits check at XYZ location to his debit card. OCT: XYZL*Alex Miller

For additional information on the Card Acceptor Name field, refer to [Original Credit Transaction \(OCT\) Data Elements and Processing Rules](#), Field 43.

Perform Recipient Account Checks Including Fast Funds Status

Before submitting an OCT to VisaNet, Visa recommends that the acquirer, service provider, or merchant perform checks on the destination Visa account to determine eligibility to receive OCTs and Fast Funds posting capabilities.

There are several ways that acquirers, service providers, and merchants can obtain details about the receiving acquiring identifier and card account.

- **Fund Transfer Attributes Inquiry (FTAI) API** – Contains information on issuer country code and billing currency, account type, Fast Funds participation status, and whether the recipient issuer can receive OCTs. Refer to the Visa Developer Center at <https://developer.visa.com/products/paai> for additional information on this API. Available to all regions.
- **Account Look-up File (ACNL)** – Contains information on issuer country code, billing currency, account type, Fast Funds participation status, and the recipient issuer's ability to receive OCTs. Merchants and service providers can receive the file from their acquirer, VisaNet processor, or through a Visa File Exchange Service (VFES) connection. Refer to [Visa Direct Account Lookup File](#) for details.

Reversals and Disputes

Reversals and disputes are allowed under limited circumstances.

See *Exception Processing* for exception processing requirements.

Settlement

Although not required, acquirers may want to set up a new Funds Transfer Settlement Reporting Entity (FTSRE) for OCT-based programs to separate OCT transaction volume from other acquired transactions.

For new FTSREs, the acquirer or acquirer processor must complete funds transfer paperwork. Contact your regional Visa representative for information on processes and fees.

VisaNet Host Testing

Before an acquirer can begin submitting OCTs to VisaNet, host system testing with Visa is required on both ISO and API implementation.

Testing with Visa is also required if the acquirer is migrating from submitting OCTs as TC06s only to submitting them as 0200 full financial messages in the enhanced format.

For information on Visa Direct and API testing, contact your regional Visa representative, refer to the Visa Developer Center (for API: https://developer.visa.com/products/visa_direct) or to these documents:

- *VCMS Testing - V.I.P. Client Version*
- *VisaNet Test Service - V.I.P. User's Guide*
- *VisaNet Test Service - V.I.P. Quick Start*

Acquirers Service Providers and Merchants – General Systems Changes

Acquirers, service providers, and merchants must make general systems changes related to:

Table 16: General Systems Changes (1 of 1)

Customer Access Channels	Clear and simple user interface for the customer.
Consumer Data Collection and Sender Authentication	Ensure systems and processes are in place to collect and verify sender information and to ensure the collection and verification of sender information complies with Visa Rules, as well as applicable laws and regulations.
Systems Interfaces	Ensure systems interfaces are in place to connect the user interface to other merchant systems, as required.
Transaction Screening	Screen the transactions to help mitigate risk and minimize processing errors.
Confirmation of Funds Transfer	Provide senders with a way to confirm the funds transfer.
Transaction Receipt and Notifications	Ensure processes are in place to provide transaction receipts and notifications in compliance with Visa Rules and applicable laws and regulations.
Currency Conversion	Determine and implement approach for currency conversion.
Recipient Registry and Recurring Transactions	Consider setting up recipient registries and processes to support senders who routinely send to the same recipient.

Customer Access Channels

Acquirers, service providers, and merchants must develop and manage user interfaces for each of the funds transfer customer access channels they plan to support, such as internet/online banking, bank branches, ATMs/unattended kiosks, and phone and/or mobile banking.

Acquirers, service providers, and merchants should implement a customer experience that is simple, straightforward, and streamlined, especially important for ATMs, internet, and mobile channels. Acquirers, service providers, and merchants should minimize the number of steps and screens presented to the user and track the access channel used. This information may be valuable for customer service and during disputes.

Customer user interfaces should address authentication and branding, obtain information (e.g., sender, recipient, and Money Transfer amount), and provide transaction confirmation, receipt information, disclosures, and customer service details.

Consumer Data Collection and Sender Authentication

Acquirers are responsible for ensuring all OCT-based programs are collecting and verifying sender data in accordance with applicable AML laws and regulations.

Acquirers, service providers, and merchants must collect sender and recipient data. They are responsible for verifying the sender, regardless of the payment method or access channel, for the purpose of risk, sanctions enforcement, anti-money laundering/anti-terrorist financing control.

Acquirers, service providers, and merchants should consider how they collect sender and recipient data and verify sender data in each customer segment supported. The sender authentication method should be appropriate to the access channel and follow regulatory and industry standards and best practices. Examples are government-issued photo identification, ATM PIN, Internet banking identification and password, and telephone banking PIN/password.

When enabling channels like ATMs and mobile devices, acquirers, service providers, and merchants may want to consider requiring senders to register, either online or at a bank branch, prior to the use of these channels.

When collecting card account data, acquirers, service providers, and merchants should consider performing a Modulus-10 Check to ensure the sender's and recipient's payment credentials have been entered correctly.

Note: Acquirers, service providers, and merchants must ensure the collection of sender and recipient data and the processes implemented to enable sender authentication are compliant with the *Payment Card Industry Data Security Standard* and applicable laws.

Acquirers', service providers', and merchants' risk and compliance teams should review sender data collection and authentication methods to ensure they follow internal requirements, applicable Know Your Customer (KYC) procedures, and applicable local laws and regulations.

For Funds Disbursement OCT-based programs where the sender is a business or government entity, the acquirer is responsible for ensuring due diligence is conducted for each new customer that uses the OCT-based services. The acquirer is responsible for due diligence, regardless of whether the acquirer itself or a third-party onboards the business or government entity.

Note: Card expiration date or CVV2 are not required to be collected to initiate OCTs. Issuers must not decline OCTs solely due to the absence of expiration date or CVV2. If the expiration date is included, it must be accurate and not expired. For details, refer to the table [Terms and Conditions Considerations](#).

Refer to [Acquirers, Service Providers, and Merchants - Risk Management Considerations](#) for additional information.

For required sender and recipient data elements specific to each program, refer to [Original Credit Transaction \(OCT\) Data Elements and Processing Rules](#).

Transaction Screening

Acquirers are required to implement transaction screening procedures to flag high-risk transactions for review prior to submission.

These should include limits (such as count, amount, and rolling limits) and other checks to determine whether the sender, recipient, or both, are on any applicable government or client-specific block lists.

Refer to [Acquirers, Service Providers, and Merchants - Risk Management Considerations](#) for additional details.

Note: Merchant/service providers and their acquirers approved by Visa to offer domestic Money Transfer programs via OCTs must also ensure that both of these entities fall within the same country:

- The sender's source of funds for the Money Transfer.
- The recipient's account.

Merchant/service providers offering these programs are required to carry out this validation prior to initiating the OCT as part of the conditions of their program approval. Merchant/service providers must have appropriate controls to satisfy this requirement.

Confirmation of Funds Transfer

Depending on the type of payment (for example, P2P Money Transfer, Funds Disbursement, prepaid card load, Credit Card bill pay, and so on), acquirers, service providers, and merchants may need to provide senders or customers with a method to confirm payment. This should include the amount, currency conversion rates, and recipient details prior to executing the payment.

This is an important step as it allows the sender or customer to confirm all details are correct. It also helps reduce customer service issues and disputes.

All fees, currency-conversion rates, and any foreign exchange markup must be disclosed to the sender or customer in accordance with applicable laws and regulations. Refer to [Acquirers, Service Providers, and Merchants - Customer Considerations](#).

Transaction Receipt and Notifications

Merchant transaction receipts must comply with *Visa Core Rules and Product and Service Rules* and applicable local laws and regulations.

Merchants may want to consider including this information in either the actual receipt or a separate transaction record:

- Sender name
- Recipient name
- Sender's payment credential (masked, truncated, or both)
- Date and time of transfer
- Amount of transfer in the sender's currency and/or recipient's currency
- Total amount paid (in other words, amount of transfer plus any fees)
- Fees associated with the transaction
- Foreign currency conversion rates for cross-border transactions
- Sender Reference Number
- Description (for example, Money Transfer)

Acquirers, service providers, and merchants should consider providing senders and recipients with notifications related to funds transfer transactions. Notifications are defined as emails and/or SMS/text messages to senders and recipients to provide them with the status of the transfer. They are particularly important for web and mobile channels. Within the transfer process, acquirers, service providers, and merchants should ask senders if they want a notification provided to them or the recipient and capture sender and recipient email addresses and mobile phone numbers (if available):

- For sender notifications, acquirers, service providers, and merchants should consider providing date and time, amount, recipient name, transfer status, and other related information.
- For recipient notifications, acquirers, service providers, and merchants should consider providing date and time, amount, sender name, and other related information.

For CEMEA transaction receipt requirements, refer to [CEMEA-Specific Requirements for Money Transfer](#).

Currency Conversion

Currency conversion takes place on transactions where the sender's transaction currency is different from the billing currency of the recipient's Visa account.

To support currency conversion, acquirers, service providers, and merchants can use Visa's currency-conversion service. For eligible transactions, Persistent FX is an enhancement that will honor the exchange rate applicable at the time of authorization for clearing and settlement instead of applying different currency conversion rates at authorization and at clearing.

Acquirers, service providers, and merchants can use the Visa Direct APIs, the Foreign Exchange Rates API, or the Visa Currency Conversion Rate Update File (TC56 file) to look up the foreign exchange rate of a currency pair. The Visa Direct APIs also provide the acquirers, service providers, and merchant with a calculation of the destination amount (a conversion of the amount in the sender's currency to the amount in the recipient's currency).

Note: The Foreign Exchange Rates API can also be used to look up the recipient's billing currency.

Alternatively, acquirers, service providers, and merchants can perform their own currency conversion for the Money Transfer amount using these options:

- Sender specifies amount in sender currency, using the API or ACNL look up to provide an estimate of recipient currency amount.
- Sender specifies amount in recipient currency, merchant applies their own currency conversion to quote sender currency amount.

Note: Acquirers, service providers, and merchants should be aware that there may be situations where they send a Money Transfer in a sender's transaction currency that they believe is below the billing currency of the recipient issuer limit. However, the foreign exchange rate that Visa applies to the transaction amount, results in the limit being exceeded and the transaction being declined.

Note: The requirements related to the Dynamic Currency Conversion (DCC) indicator, as outlined in the VisaNet Technical Specifications, are not applicable to Money Transfer-related OCTs and AFTs.

Real-Time Foreign Exchange Rates for Currency Conversion

To support competitive currency conversion, originators can use Visa's settlement hub service that offers real-time foreign exchange rates by connecting to Currencycloud APIs to look up the live foreign exchange rate of a currency pair. The Currencycloud APIs enable originators to book currency trades at competitive rates.

OCT originators perform these activities when using the real-time foreign exchange and settlement hub option:

Note: Real-time is the frequency with which updated FX rates are available and varies depending on product, market, day of the week, holidays, or other factors. Please contact your Visa representative for more information about this program.

- Connect to Get Detailed Rate API to request an indicative, real-time foreign exchange rate for a currency pair
- Connect to Visa Direct APIs to send cross-border card payment instructions in the destination currency
- Connect to Create Conversion API to book currency (buy/sell) trades at a competitive rate for individual transactions or at the aggregate
- Designate Currencycloud as their settlement agent and set up their settlement account(s) in the approved settlement currencies
- Fund their settlement account with Currencycloud based on the cross-currency volumes processed through Visa Direct where real-time foreign exchange rates were applied
- Settle with Visa from their account with Currencycloud for the applicable like-for-like transactions where Visa will draw down settlement funds

Note: To participate in this service, originators must be approved for Visa's Multi-Currency Settlement service. The approved multicurrency settlement acquiring BIN can only support the transaction flows and settlement currencies approved for this Currencycloud real-time FX service. Existing Visa acquirer BIN changes may be required to support originators implementing this service.

Recipient Registry and Recurring Transactions

A sender may send funds to the same recipient on a regular basis. This can be set up as a recurring transaction. To facilitate recurring transactions, acquirers, service providers, and merchants should consider these points to enable the sender to quickly and easily send funds to one of their frequent recipients:

- Set up a recipient registry with the recipient's name and payment credential
- Provide easy access to the registry to look up the recipient
- Specify the funding account
- Define the interval for sending funds.

Acquirers, Service Providers, and Merchants – Customer Considerations

Information provided in this section is intended to identify key considerations (some of which are mandatory) for acquirers, service providers, and merchants in developing their terms and conditions. This should not be taken as legal advice. Acquirers, service providers, and merchants should seek their own legal advice when implementing an OCT-based service.

Providing Description of Fees (Mandatory)

Depending on the type of payment (for example, P2P Money Transfer, Funds Disbursement, prepaid card load, Credit Card bill pay, and so on), acquirers, service providers, and merchants must provide senders or customers with information related to fees and other material terms in connection with their OCT-based service.

A clear, itemized description of all acquirer, service provider, and merchant-assessed fees (including foreign exchange fees, if applicable) associated with the transaction must be communicated to senders or customers. Senders or customers must be provided with the opportunity to agree to the fees and proceed with or cancel the transaction.

When different sender and recipient currencies are involved, acquirers, service providers, and merchants should provide senders or customers with the currency-conversion rate, if known, or an indicative rate. All fees, currency conversion rates, and any foreign exchange markup must be disclosed to the senders or customers. Acquirers, service providers, and merchants should consider notifying senders of the:

- Base exchange rate
- Currency-conversion markup fixed by the acquirers, service providers, or merchant
- Final currency rate offered to the sender or customer
- Foreign currency fees that were incurred by the sender or customer in the transaction

Developing Terms and Conditions

Acquirers, service providers, and merchants must provide the Terms and Conditions (T&Cs) for their service.

This service must not be represented as being provided by Visa. Visa strongly recommends that acquirers, service providers, and merchants prompt senders to accept the T&Cs prior to sending any transactions and retain evidence of such consent.

The T&Cs provided to customers should include, but not be limited to, the topics described in this table.

Table 17: Terms and Conditions Considerations (1 of 2)

Topic	Considerations
Product/Service Description	Acquirers, service providers, and merchants should provide clear description and details of product/service functionality and features.
Security of PINs and Passwords	- Customers should protect PINs and passwords. - Acquirers, service providers, and merchants should provide customers with customer service contacts should the security of PINs/passwords be compromised.
Limits	- Right of the acquirers, service providers, and merchants to apply maximum transaction and/or volume limits - Details of limits
Fees/Charges	- Sender agrees to pay fees (set out in transaction fee schedules) - Fees may include service fees, cancellation fees, fees for returns and refunds, and foreign exchange fees - Sender should be aware that the issuer may charge fees to the recipient, in accordance with the cardholder agreements.
Use	- Who can participate - Whether the service is domestic, cross-border, or both and, where applicable, which currencies are supported on cross-border transactions - How the transaction may be funded (e.g., cash, bank account, Visa account) - What channels are supported (e.g., Internet, kiosk, ATM, mobile), including any restrictions/terms of service - Right of refusal (e.g., the acquirers, service providers, or merchant may refuse to accept the funding source without reason or explanation) - How the sender will be informed if a funds transfer is not possible and what this means to the sender's account - P2P Money Transfers are not to be used by merchants as a replacement for purchase transactions.¹
Sending Funds	- The sender will not send funds for illegal, unlawful, or fraudulent activity. - The sender is wholly responsible for providing the correct payment credential of the recipient as well as the correct Money Transfer amount.

Table 17: Terms and Conditions Considerations (2 of 2)

Topic	Considerations
Use of Sender's and Recipient's Personal Information	- Personal information collected from a Visa cardholder as part of a Visa Direct service must only be used for activities related to the Visa Direct service. - This information can be requested from senders using a Visa card to fund a Visa Direct transaction for use in card and cardholder verification – cardholder address (for account verification check) - Acquirers, service providers, and merchants are prohibited from storing the CVV2 information following authorization of a Visa transaction. If card payment credential and expiration date are stored, data must be stored in accordance with the PCI DSS. - Recipient card account holder address, card expiration date, or CVV2 are not required to be collected to initiate OCTs. Refer to Acquirers, Service Providers, and Merchants - Risk Management Considerations for more information on risk management and requirements related to cardholder data and verification.
Compliance	The acquirer, service provider, and merchant reserve the right to block or reject transactions that would or may infringe on legal or regulatory requirements in either the sender's or the recipient's country.
Liability	- Merchant and sender liability associated with the transaction - Merchant policies in the case of sender error (i.e., sender initiated the transaction to the wrong payment credential or sent the wrong amount)
Dispute Policies and Procedures	Clear dispute policies and procedures including information to the sender in case of a dispute, such as a customer service telephone number or an email address Refer to Exception Processing for additional information.
Funds Availability	- Any delays in availability of funds - Sender should contact the acquirers, service providers, or merchants if the recipient has not received funds within the specified time frame. - Recipient should contact the issuer. If non-delivery of funds is due to cardholder limits, the cardholder can ask the issuer to adjust.
Contact Information	Acquirers, service providers, and merchants should provide relevant customer service information, such as phone numbers, website URLs, and/or an email address to the sender.

1 P2P should be used only to pay known recipients.

Acquirers, Service Providers, and Merchants – Risk Management Considerations

Acquirers, service providers, and merchants must comply with the Visa Rules and applicable laws and regulations, including applicable sanctions and Know Your Customer (KYC), anti-money laundering, and anti-terrorist financing laws.

If an acquirer uses a service provider to support any aspect of their Visa Direct OCT program (e.g., risk management, customer service, etc.), the acquirer is responsible for the service provider's and merchant's compliance.

Before implementing any program, acquirers, service providers, and merchants should complete a comprehensive risk assessment of their business policies and practices, fraud prevention and detection techniques, anti-money laundering program and other risk controls. In addition to the recommended fraud prevention tools, acquirers, service providers, and merchants should ensure adequate practices are in place to minimize fraud losses and excessive customer service inquiries.

For specific legal and regulatory compliance considerations, refer to [Regulatory Compliance and Legal Considerations](#).

Fraud Detection and Prevention

Fraud prevention should occur on both the funding transaction (for example, AFT or on-us proprietary message) for Money Transfer programs, as well as on the OCT for all types of programs.

The acquirer, service provider, and merchant have little recourse with the issuer if the funding transaction proves fraudulent. Risk management tools for the funding transaction should be built into processing systems to detect and prevent fraud, errors, sanctions, violations, and money laundering and terrorist financing.

Such tools include government-issued photo identification, ATM PIN, Internet, or telephone banking identification and password, CVV2 verification in the AFT, Visa Secure, Address Verification Service (AVS), negative files and screening, and systems control tools to identify processing errors and suspicious activity.

Note: AVS is available in the U.S., Canada, UK, and Ireland. Check with your regional Visa representative for availability of verification tools.

While fraud reporting on an OCT has historically been low, acquirers, service providers, and merchants must have processes in place for monitoring OCTs to recipient accounts to identify suspicious activity, potential fraud, and misuse of OCT programs. Fraud identified on OCTs must be reported to Visa. For detailed fraud reporting requirements, refer to the *Fraud*

Reporting System User's Guide. Refer to Transaction Monitoring and Controls for requirements and recommended best practices on OCT monitoring.

For more information and best practices on managing risk related to Account Funding Transactions (AFTs), refer to the *Visa Account Funding Transaction (AFT) Processing Guide*.

Note: CVV2 and/or AVS checking associated with the AFT can be accomplished using the Visa Direct APIs. “Visa Secure” applies only to AFTs (that is, sender verification) and not to OCTs.

Data Security – PCI Compliance

Acquirers, service providers, and merchants must ensure that data contained in OCTs, as well as other sender or recipient data collected during the transaction, is handled in compliance with the Payment Card Industry Data Security Standard (PCI DSS) and applicable law.

Sound data security practices reduce fraud risk and also foster customer confidence in the secure handling of personal information.

Acquirers, service providers, and merchants should:

- Implement procedures to control employee access to customer account data and ensure that customer service screens and customer receipts do not display full payment credentials.
- For customers involved in funds transfers, most countries have legislation that require personal and financial information be collected and stored by the service provider according to a set standards and accountability.

For specific legal and regulatory compliance considerations, refer to Regulatory Compliance and Legal Considerations.

Transaction Identification and Tracking

A Transaction Identifier is generated by Visa for all transactions.

Acquirers, service providers, and merchants should use this Transaction Identifier (Field 62.2) to identify, reconcile, and track an AFT transaction that precedes an OCT.

The ability to identify and track customer transactions is a key element to quick, inexpensive resolution of customer inquiries and disputes.

If the acquirers, service providers, and merchants do not populate the Transaction ID field, Visa will generate a different Transaction Identifier in the OCT response message. In Canada, it is mandatory to include the Transaction Identifier from the AFT in the subsequent OCT.

For more information on AFTs, refer to the *Visa Account Funding Transaction (AFT) Processing Guide*.

User Interface Controls

Implementing appropriate controls within the customer interface can greatly reduce customer inquiries and back-office processing costs. Acquirers, service providers, and merchants may choose to:

- Ensure the recipient's account is not blocked from receiving OCTs.
- Notify senders of potential delays.
- Perform an exact calculation of service fees at the time of the transaction.
- Display a "transaction being processed" message during wait time.
- Confirm accurate information is included in transactions, including valid information for required fields.

Transaction Limits

Acquirers, service providers, and merchants must adhere to transaction limits for each funds transfer type, as identified by Business Application Identifier (BAI).

Limits vary by jurisdiction, country, and program basis.

Acquirers, service providers, and merchants should confirm that the funds transfer amount is equal to, or less than, the Visa limits.

For specific country and program limits, refer to [Original Credit Transaction \(OCT\) Data Elements and Processing Rules](#), Field 4 Amount Transaction.

Note: For API mapping of Field 4, refer to [API Formats](#).

Transaction limits are outlined here for reference:

New maximum transaction limits apply for domestic and cross-border transactions for AP, CEMEA, and the EU Regions.

Table 18: New Maximum Transaction Amount

Domestic MT OCT	USD 25,000 Except: U.S., Canada, and EU USD 50,000
Cross-Border MT OCT	USD 25,000
Domestic Non-Money Transfer OCT	USD 125,000
Cross-Border Non-Money Transfer OCT	USD 50,000

Effective April 2023: The new Maximum Transaction Limits above will apply for domestic and cross-border transactions for U.S., Canada, and LAC Regions.

Velocity Limits

Acquirers should also be aware that VisaNet implements maximum velocity limits for OCTs by count and amount. These are the maximum number or dollar amounts of OCTs that a single recipient can receive in any 1, 7, or 30-day period. Any OCTs in excess of these amounts will be declined by VisaNet. Acquirers, service providers, and merchants should ensure that they are not allowing senders to send OCTs to single recipient accounts in excess of the VisaNet limits. Limits are outlined in this table.

Note: In the U.S., inbound cross-border OCTs are blocked by VisaNet. These blocks may be removed upon request and approval by Visa on a case-by-case basis only.

New maximum velocity limits for OCTs in the AP, Canada, CEMEA, EU, LAC, and U.S. Regions:

Table 19: New – Maximum Velocity Limits

OCT Transaction Type	Transaction Category	Time Period One Day	Time Period Seven Day	Time Period Thirty Day
Domestic	Money Transfer OCT	150 Transactions or USD 50,000	250 Transactions or USD 100,000	750 Transactions or USD 200,000
Domestic (U.S. and Canada)	Money Transfer OCT	150 Transactions or USD 100,000	250 Transactions or USD 250,000	750 Transactions or USD 500,000
Domestic (Global, including intra-EEA)	Non-Money Transfer OCT	150 Transactions or USD 250,000	250 Transactions or USD 600,000	750 Transactions or USD 1,250,000
Cross Border	Money Transfer OCT	30 Transactions or USD 50,000	50 Transactions or USD 100,000	150 Transactions or USD 200,000
Cross-Border	Non-Money Transfer OCT	30 Transactions or USD 100,000	50 Transactions or USD 250,000	150 Transactions or USD 500,000

Transaction Monitoring, Reporting, and Controls

Acquirers, service providers, and merchants must establish controls and monitor transaction activity for signs of misuse of the OCT for the payment of goods and services.

Controls and monitoring for fraud, money laundering, and terrorist financing must include:

- Transaction controls and velocity limits based on transaction risk (for example, by use case - P2P Money Transfer vs. Funds Disbursement, domestic vs. cross-border transactions, and so on)
- Suspicious activity monitoring, for example:
 - A significantly large number of transactions initiated by a single sender to multiple recipients within a specified time period.
 - A large number of transactions from multiple senders to the same recipient account within a specified time period.
 - A high number of OCTs, followed by disputes, especially involving the same sender and/or recipient.
- Consumer education and tips on scam fraud prevention, for example:
 - Alerting consumers to the fact that scams exist.
 - Recommending consumers only send funds to known individuals or entities.
 - Warning consumers to keep personal details secure and be cautious with unsolicited emails, promises of easy money, and unusual payment requests to anyone the consumer does not know or trust.
- Fraud must be reported according to requirements specified in the *Fraud Reporting System User's Guide*.

To mitigate the risk of misuse of the OCT, acquirers, service providers, and merchants must establish and enforce maximum transaction amount limits and cumulative velocity limits for OCTs. Clients place limits to mitigate the risk of misuse. Limits may include, but are not limited to:

- Transaction count and amount limits by day, week, and month.
- Set limits on the number of P2P Money Transfers that can be initiated and sent from/to any single account in any given day, week, or month.

Acquirer Velocity Controls

Acquirer Velocity Control service is an online tool to add transaction velocity controls for domestic and cross-border OCTs.

Acquirers¹ who support service providers and merchants using Visa Direct APIs have the ability to:

- Establish limits by count and amount at the acquiring identifier or merchant level to manage fraud loss and settlement risk.
- Set limits for multi-currency transactions – to facilitate cross-border funds transfer.
- Set per transaction limit based on BAI categories (consumer funded Money Transfer BAI or business funded funds transfer BAI) – to manage risk in near real-time.
- Receive notifications when any established thresholds have been breached – enabling them to stop transactions until further due-diligence has been performed.

Access to set acquirer controls is managed via Visa Access.

Note: Acquirers must have an existing Visa Access ID to be eligible to use Acquirer Velocity Controls service. Acquirers with no access to Visa Access must self-enroll using the “ENROLL” button at [Visa Access](#).

For information on how to obtain access to, or manage, acquirer velocity controls, contact your regional Visa Account Manager or use the Feedback/Contact Us link on Visa Access homepage.

OCT Fraud Reporting Requirements

Fraud identified on OCTs must be reported to Visa through standard reporting mechanisms (VROL; TC40, TCR2; 9620 fraud reporting advice messages).

The *Fraud Reporting System User's Guide* provides updated guidelines and processes for reporting fraud on OCTs. Acquirers should refer to the guide to ensure adherence to the latest fraud reporting requirements.

Acquirer Response to Good Faith Collaboration

Issuers may use Good Faith Collaboration in the Visa Resolve Online (VROL) tool to request additional information on Visa Direct OCTs required for compliance purposes.

Acquirers are responsible for monitoring the VROL Good Faith Collaboration requests on a regular basis and providing responses within an appropriate time frame. Regulatory requirements may state that an acquirer or service provider must respond to requests for additional information pertaining to the OCT. The issuer may ask for additional information on the OCT to complete the transaction. A response is required within five business days or

¹ Acquirer velocity control functionality is now available to all regions.

applicable regulatory requirements, whichever is less. No response may result in a dispute or cancellation of the OCT and may be viewed as a violation of applicable regulations.

Sanctions Screening for Acquirers, Merchants, and Service Providers

Acquirers, service providers, and merchants must screen senders and recipients against relevant lists per applicable laws and regulations, such as government or client-specific block lists. Visa requires clients to screen against the Office of Foreign Assets Control (OFAC) list.

Acquirers, service providers, and merchants should check whether the issuer can receive OCTs. To comply with local regulations, specific issuers, countries, or products may be blocked from receiving OCTs in VisaNet.

At their discretion, acquirers, service providers, and merchants can define the countries to which they will allow OCTs (that is, corridor definitions).

Corridor definition for payments and sanctions screening:

- Define the countries to which OCTs will be allowed to be sent.
- Screen senders and recipients against relevant lists per applicable laws and regulations.
- Specific issuers, countries, or products may be blocked from receiving OCTs in VisaNet.
- Ensure that the sender and the recipient are not on any applicable government or bank-specific blocked lists (for example, Office of Foreign Asset Control (OFAC) list or United Nations list).
- Include sender and recipient data, as required in the Money Transfer regulations.

For a complete list of the blocked countries at the time of this publication, refer to [BINs Blocked by Country](#).

Note: Visa applies all current restrictions regarding cross-border purchase transactions to OCTs. For example, due to U.S. government restrictions, U.S. banks may not send or receive OCTs from sanctioned countries including Cuba, Iran, Syria, North Korea, regions of Crimea, Donetsk People's Republic, and Luhansk People's Republic. For a list of the blocked countries, refer to [Bank Identification Number \(BIN\) Blocking](#).

International and Country-Specific Regulatory Restrictions

On cross-border transactions, acquirers, service providers, and merchants should check to ensure the country the recipient resides in is part of the acquirer's, service provider's, and merchant's program (as defined in the acquirer submitted PIF).

Note: Visa applies current restrictions regarding cross-border purchase transactions to OCTs. For example, due to U.S. government restrictions, U.S. banks may not send or receive OCTs to sanctioned countries.

Government or Bank-Specific Lists

Acquirers, service providers, and merchants should ensure (per applicable law or regulation) that the sender and recipient are not on any applicable government or client-specific blocked lists (for example, Office of Foreign Asset Control (OFAC) list). Visa requires clients to screen against the Office of Foreign Assets Control (OFAC) list.

If the sender is already a customer of the acquirer, service provider, or merchant, they may have already been screened as part of the acquirer's, service provider's, or merchant's ongoing customer due diligence program and may not need to be screened again.

Acquirers and Merchants – SMS Reconciliation

SMS acquirers and merchants may apply their existing reconciliation practices to Original Credit Transactions (OCTs).

General considerations may include:

- **Step 1:** Match the end-of-day SMS reports from Visa with the SMS raw data from the acquirer or merchant's switch log.
Note: The acquirer's or merchant's switch log should have more transactions than SMS raw data since the SMS raw data only contains settled transactions.
- **Step 2:** Identify these scenarios:
 - **Scenario 1:** Transaction appears successful in SMS reports/SMS raw data, but appears unsuccessful/with an error on the switch log or vice versa.
 - **Scenario 2:** Transaction appears on SMS reports, but does not appear on the switch log.
 - **Scenario 3:** Transaction appears on switch log, but not on SMS reports (this situation could be a result of transactions that have not yet settled).
- **Step 3:** Place transactions associated with Scenario 1 and Scenario 2 into an exception queue for manual intervention and analysis.
Note: Acquirers or merchants will need to match time-zones across their switch log, SMS reports, and SMS raw data to facilitate transaction matching.

In addition to using SMS raw data, acquirers should consider using the Visa-generated Visa Settlement Service (VSS) reports for an overview of settled transactions and applicable interchange.

Contact your Visa account representative for information on subscribing to receive the Visa VSS and SMS reports.

Note: Only Visa acquirers and acquirer processors can receive Visa-generated VSS reports.

Refer to [Sample Reports](#) for examples of reports.

Acquirer – Reports

OCTs are incorporated into existing VisaNet reports.

For samples of Visa Settlement Service (VSS) and Single Message System (SMS) reports, refer to [Sample Reports](#).

Note: VSS reports are only available to Visa acquirers

Acquirers should refer to the VisaNet Settlement Service (VSS) reports for information on OCTs. For information on OCT-related interchange, refer to the VSS-120, VSS-130, VSS-130-M, and VSS-135 reimbursement fees reports, where OCTs are identified through the fee descriptor.

In Europe, Canada, CEMEA, and AP, acquirers are no longer required to submit Visa Direct transactions manually. A new Global Operating Certificate (GOC) tool was introduced and each client is required to submit Visa Direct volumes via the Visa Access platform. Each reporting client has access to GOC under “My services” in Visa Access.

Note: The new GOC is available to LAC in April 2021, and U.S. in October 2021.

In addition to the settlement reports available from VSS, merchants and acquirers can use the applicable SMS reports. For information about settlement, refer to the *Visa Settlement Funds Transfer Guide*.

The sender reference number is provided in SMS Raw Data, positions 106-121; the Business Application Identifier (BAI) is provided in positions 22-23; and, the Source of Funds is provided in position 24.

Refer to the *VSS User's Guide, Volume 2, Reports* for details.

Note: Due to data security reasons, all other sender data is removed and not present in SMS Raw Data.

Note: The simplified version of VSS-110 and VSS-120 reports are available for originating entities via the VFES channel. These are easy-to-understand, lighter versions of the existing VSS-110 and VSS-120 reports. These simplified reports provide the essential information needed for reconciliation and settlement by originating entities while taking away the complexity of the existing VSS set of reports. Refer to [Simplified VSS-110 and VSS-120 Reports](#) for additional information.

Report Delivery Mechanisms

Visa offers acquirers, service providers, and merchants options for receiving reports in addition to the more traditional means of receiving via an acquiring VisaNet processor (for example, SMS and BASE I/BASE II client connections).

There are additional options for report delivery.

Acquirers, service providers, and merchants should contact their Visa representative to discuss delivery options available in their markets.

Acquirer Reports via Visa Access

Visa Direct uses Visa Access to deliver content, applications, and collaboration tools.

In addition to implementation guides, onboarding material, risk framework, and best practices, acquirers can obtain access to reports via Visa Access to support their Visa Direct programs.

Acquirer reports available include:

- Visa Direct Transaction Reconciliation Report – This report provides end-of-day transaction and exception data at the acquiring identifier level to support reconciliation. Other data elements such as, the Card Acceptor ID (CAID), are also provided to facilitate easy reconciliation. Refer to [Visa Direct Transaction Reconciliation Report](#).
- VSS Reports – Acquirers who do not use services of an acquirer processor will be provided access to VSS reports. Currently, these reports are available at the Settlement Reporting Entity (SRE) level within a BID.
 - VSS 110 – Settlement Summary Report (mandatory)
 - VSS 110-M – Monthly Settlement Summary Report (mandatory)
 - VSS 115 – SRE Settlement Recap Report
 - VSS 115-M – Monthly SRE Settlement Recap Report
 - VSS 120 – Interchange Value Report
 - VSS 130 – Reimbursement Fees Report
 - VSS 130-M – Monthly Reimbursement Fees Report
 - VSS 140 – Visa Charges Report
 - VSS 300 – SRE Financial Recap Report
 - VSS 900 – Reconciliation Report

Additional VSS reports may be made available in future releases. For information on how to obtain access to Visa Direct reports on Visa Access, contact your regional Visa account manager.

Visa File Exchange Service

Visa File Exchange Service (VFES) is Visa's public, internet-based, file-transfer offering that routes non-clearing and settlement files (less than 2 GB).

VFES enables endpoints to securely send and receive smaller files over the public Internet directly to and from Visa, respectively. VFES is an encrypted FTP Session (over SSL or SSH) using strong authentication, client digital credentials, and IP allowlisting to provide robust security. It enables Visa clients to receive Visa report files, such as, the ACNL file, VSS, and SMS raw data reports needed to effectively manage Visa Direct programs.

Note: Visa clients may not use data provided to them by Visa (including, but not limited to, transaction, reporting, and the ACNL file), in support of a Visa Direct program for any purpose other than as necessary to operate the Visa Direct program.

Visa requires a 6 – 10 week lead-time to set up and test new file types for existing VFES endpoints, and a 10 – 12 week lead-time to set up and test new VFES endpoints.

For more information on VFES, or to initiate a VFES implementation project, refer to the *Visa File Exchange Service (VFES) Implementation Guide* or contact your Visa representative.

Visa Direct Transaction Reconciliation Report

In this section, the Visa Direct Transaction Reconciliation Report (TRR) provides a subset of information available in a full SMS raw data report.

The Visa Direct TRR is available to acquirers using:

- Visa Direct API
- Visa Access

Note: Available to acquirers on Visa Access in all Regions except Europe

This report provides key data elements that may be needed to reconcile Visa Direct transactions. A sample of the report can be found in [Sample Reports](#). The TRR is delivered in a machine-readable CSV format and includes these data elements:

- Processing Date
- Acquirer BIN
- Visa Transaction ID
- Transaction State
- Reason Code
- Card Acceptor ID
- Card Acceptor Name
- System Trace Audit number
- Account Number
- Transaction Date, Time, Amount, and Currency
- Authorization Code
- Retrieval Reference Number (RRN)
- Fee Program Indicator (FPI) and Description
- Settlement Date and Time

For more information on the Visa Direct APIs and their availability in your Region or country, contact your regional Visa representative. In addition, refer to the Visa Developer Center at: https://developer.visa.com/products/visa_direct.

Visa Direct Simplified Transaction Reconciliation Report

The Visa Direct Simplified Transaction Reconciliation Report (Simplified TRR) is available to originating entities on VFES.

This is an enhanced and simplified version of the Visa Direct Transaction Reconciliation Report (TRR). The Visa Direct Simplified TRR provides a subset of information available in full SMS raw data report. This report provides the key data elements that may be needed by originating entities to reconcile their Visa Direct transactions. The Visa Direct Simplified TRR is currently delivered via VFES and, in the future, will be delivered through API and Visa Access. The existing TRR will be phased out gradually and the Simplified TRR will be the only report used.

The Simplified TRR has been made available on VFES.

- This report has a more enriched dataset than the TRR and provides information on AFT and OCT transactions.
- This report will contain certain data fields applicable only to acquirers and, therefore, do not appear on the report for the originating entities, which does not perform actual settlement activity with Visa.

For more information on VFES, or to initiate a VFES implementation project, refer to the *Visa File Exchange Service (VFES) Implementation Guide* or contact your Visa representative.

Acquirers, Service Providers, and Merchants – Training and Customer Service

Acquirers, service providers, and merchants should ensure all customer service and customer-facing staff and agents are trained on the Visa Direct product.

Customer service staff should be able to assist consumers with queries relating to:

- Product information
- Transaction processing status
- Unsuccessful transactions
- Disputes

In the event of an unsuccessful delivery of funds to a recipient, acquirers, service providers, and merchants should have the appropriate procedures in place to refund the sent amount to the sender. To support this, acquirers, service providers, and merchants should obtain sender contact details that will enable them to notify and return the transaction to the sender. Local legal and regulatory requirements may apply with regard to returning funds to a sender.

Chapter 3

Recipient Issuer Requirements and Considerations

This chapter provides details of requirements and considerations for Visa Direct recipient issuer programs.

Recipient Issuers – General Program Considerations

This section provides recipient issuers with general program considerations related to OCTs.

General Visa Compliance

Recipient issuers must comply with the *Visa Core Rules and Visa Product and Service Rules*, which include these requirements:

- All Visa credit, debit, and prepaid issuers must accept an incoming Original Credit Transaction (OCT), unless prohibited by applicable laws or regulations. If prohibited by applicable laws or regulations, the issuer must submit a written request to Visa to block incoming OCTs.

Note:

- OCTs are mandated for all reloadable prepaid card accounts, but are not permitted on non-reloadable prepaid or prepaid card accounts where cardholder data is not on file or where the source of loads may be restricted (for example: government, healthcare, and insurance programs).
- Large and middle-market commercial card products may prohibit OCTs for products, such as corporate, fleet, purchasing, and travel and entertainment (T&E) cards.
- OCTs can only be received into a valid and eligible Visa account.
Note: In Canada, this will also include proprietary accounts with PLUS network capability.
- Issuers are prohibited from allowing any OCT to a card that does not have Know Your Customer (KYC) information on file (such as non-reloadable prepaid cards), and any account that is prohibited from receiving OCTs, per government regulations or other restrictions.

- Issuers must make funds available to recipient cardholders within two business days of receiving the OCT message, unless otherwise mandated, to meet the Visa Fast Funds rules where funds must be made available to cardholders in 30 minutes or less of approving an OCT. Refer to [Recipient Issuer-Funds Availability](#).

Note:

- In Europe, the requirement is to make funds available to the recipient on the same business day as the receipt of clearing and settlement message.
- **U.S. Domestic Only:** To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.
- Issuers must decline an OCT authorization or dispute-specific transactions when the funds cannot be posted into the recipient account. Refer to [Exception Processing](#).
- Issuers must inform Visa of any prohibitions with respect to their receiving OCTs on all or part of their Visa account base. These accounts will then be blocked from receiving OCTs in VisaNet. Refer to [Bank Identification Number \(BIN\) Blocking](#).

Table 20: Recipient Issuer Forms

Form	Requirements
Client Information Questionnaire (CIQ) (or geographical equivalent)	Conditional Issuers who can process OCTs under the Fast Funds rules are required to submit a CIQ to Visa so that their issuer BINs can be configured for Fast Funds in Visa systems. This will: • Provide critical information to acquirers, service providers, and merchants to help them understand the speed for which OCTs will be made available to cardholder's accounts • Insert a Fast Funds indicator in the TC06 clearing message for Fast Funds enabled dual message issuer BINs • Have an impact on interchange.
Third Party Agent Registration	Conditional Required if the issuer is using a Third Party Agent in the management of any aspect of their Visa issuing program.

Working with Third-Party Agents

Recipient issuers may choose to work with Third Party Agents (TPAs) to support the receipt of OCTs or their card issuing programs.

TPAs are not connected to VisaNet for authorization, clearing, and settlement. Recipient issuers must ensure that all TPAs are registered with Visa, as outlined in the *Visa Core Rules and Visa Product and Service Rules* and are compliant with PCI DSS.

Note: Recipient issuers that contract with TPAs are fully responsible for all cards issued by them and solicited, sold, marketed, or processed by the companies or organizations with which they contract.

Review the *Third Party Agent Registration Program* page at www.visa.com to better understand the TPA program or contact your regional Visa representative.

Recipient Issuers – Requirements for Receiving and Processing OCTs

This section covers the requirements for receiving and processing Original Credit Transactions (OCTs).

All Visa issuers are required to receive and process all types of OCTs (regardless of Business Application Identifier (BAI)) to eligible Visa accounts.

Note: Eligible Visa accounts include all credit, debit, and (unless prohibited by local law) reloadable prepaid card accounts.

This section outlines:

- Changes issuers must make to their host systems to support incoming OCTs
- Processing requirements for non-U.S. and U.S. issuers.

Acquirers and issuers globally may optionally support SMS 0200 OCTs for Visa- branded products on Network 4 (PLUS network).

For regional requirements related to support of OCTs and Fast Funds, refer to [Fast Funds for Recipient Issuers](#).

Receiving and Processing OCTs

This section covers receiving and processing Original Credit Transactions (OCTs) for various regions of the world.

Europe Region

In the Europe Region, Visa requires issuers to process all Money Transfer 0100 or 0200 messages for OCTs online; that is, no Stand-in Processing (STIP), whether they support Fast Funds or not.

If the recipient issuer supports Fast Funds, it must process the OCT as either a 0100 message followed by a TC06, or as a 0200 message. For Fast Funds requirements in Europe, refer to [General Visa Compliance](#).

U.S.

U.S. issuers are required to receive and process OCTs as a 0200 full financial message or a 0100 message, followed by a TC06 (they will not receive them as a TC06 only).

U.S. issuers may enable OCT and Fast Funds posting capabilities on Network 2 (Visa network), Network 3 (Interlink network), or on Network 4 (PLUS network) and must enable OCT and Fast Funds capabilities on at least one of these networks, but not all. Based on issuer direction via the Client Information Questionnaire (CIQ), Visa will be able to route an incoming OCT to the issuer's network of choice.

Note: Visa requires all Interlink-participating issuers and issuer processors to accept OCTs with Fast Funds on their Interlink-enabled cards.

Note: Effective 17 October 2025 — Visa requires issuers and issuer processors of non-Visa-branded cards that issue proprietary cards and proprietary ATM cards on the Plus Network in the U.S. to accept OCTs with Fast Funds.

Refer to [U.S. OCT Switch Service](#) for additional information.

For gaming and gambling OCTs, MCC 7995 must be reserved for face-to-face casino transactions only.

U.S. issuers must expect to receive and process such OCTs with these characteristics:

- Processing Code 26
- MCC = 7995 (betting, including lottery tickets, casino gaming chips, off-track betting, wagers at racetracks, and games of chance to win prizes of monetary value)
- BAI GP
- POS Condition Code = 05 (cardholder present, card not present)
- POS Entry Mode = 01 (manual, key entry)

POS Condition Code of 05 (cardholder present, card not present) on OCTs with MCC 7995 in the U.S. must be treated as a “card present” transaction.

Note: U.S. acquiring identifiers will continue to be blocked for all incoming cross-border OCTs and gambling OCTs initiated from MCC 7995.

Canada

Canadian issuers are required to receive and process OCTs as an SMS 0200 message for debit and reloadable prepaid products. The same requirement applies to proprietary products with PLUS network capability.

All Other Markets

If the recipient issuer supports Fast Funds, it must process the OCT as either a 0100 message, followed by a TC06, or as a 0200 message.

Recipient Issuers – Account Verification and Related Services

Account Verification, Address Verification, and CVV2 Verification are existing services merchants use through their acquirers and acquirer processors to verify a card account at the time of cardholder onboarding and before sending a Visa Direct AFT or OCT transaction. This can help merchants to ensure that the account is in good standing, help mitigate fraud, and improve authorization approval rates.

Address Verification Service

All issuers and issuer processors must support Address Verification Service (AVS), effective:

Table 21: AVS Requirement Date

Region/Country	AVS Requirement Date
U.S.	Mandatory (Visa Rules ID #: 0004679)
Canada	18 October 2024
CEMEA	Optional
Europe – U.K.	Mandatory (Visa Rules ID #: 0004679)
Europe – Gibraltar, France, Belgium, Luxembourg, Monaco, Denmark, Estonia, Finland, Iceland, Latvia, Lithuania, Norway, Sweden, Austria, Germany, Liechtenstein, Netherlands, Switzerland, Israel, Portugal, Spain, and Turkey	18 October 2024
Europe - Ireland, Bulgaria, Croatia, Czech Republic, Hungary, Poland, Romania, Slovakia, Slovenia, Andorra, Cyprus, Greece, Italy, Malta, San Marino, and Vatican City State	18 October 2024
LAC	Optional

AVS – Issuer and Issuer Processor Requirements

Under the existing processing rules, issuers and their processors can choose from these options:

Table 22: AVS Options

AVS Option	Description	Required Field 0100/0200 Request	Required Field 0110/0210 Response
Issuer verifies (default option)	The issuer/issuer processor receives address data, performs address verification and returns the AVS result.	Field 123, Tag Length Value (TLV) Format - Address Data	Field 44.2 - AVS Result
Visa verifies	The issuer/issuer processor provisions cardholder address data in Visa's Address Verification File (AVF). This enables Visa to perform AVS on the issuer's behalf. Note: Issuers must open a project with Visa if they choose Visa to perform the AVS on their behalf. Contact your Visa representative for additional information.	- Field 44.2 - AVS Result - Field 123, TLV Format - Address Data Visa forwards the AVS result to the issuer and optionally sends address data.	Field 44.2 - AVS Result

Note: For additional information, refer to the *V.I.P. System Services* and the *VisaNet Authorization-Only Online Messages Technical Specifications* manuals.

Account Name Inquiry

Visa's Account Name Inquiry (ANI) functionality enables cardholder name checks to be carried out as part of a zero-amount account verification, accessed through either ISO 0100 or API messaging.

ANI can be carried out as part of card onboarding or periodically in advance of a purchase transaction, Original Credit Transaction (OCT) or Account Funding Transaction (AFT). This extra check can help reduce fraud and scams that might occur in subsequent transactions, particularly push and pull transactions in the form of OCTs and AFTs, and can help address both market demand and increasing concern from governments and regulators.

All issuers and issuer processors must support ANI, effective:

Table 23: ANI Requirement Date

Region/Country	ANI Requirement Date
U.S.	14 October 2023 (Visa Rules ID #: 0030972)
Canada	14 October 2023 (Visa Rules ID #: 0030972)
Europe – U.K.	14 October 2023 (Visa Rules ID #: 0030972)
Europe – Gibraltar, France, Belgium, Luxembourg, Monaco, Denmark, Estonia, Finland, Iceland, Latvia, Lithuania, Norway, Sweden, Austria, Germany, Liechtenstein, Netherlands, Switzerland, Israel, Portugal, Spain, and Turkey	18 October 2024
Europe - Ireland, Bulgaria, Croatia, Czech Republic, Hungary, Poland, Romania, Slovakia, Slovenia, Andorra, Cyprus, Greece, Italy, Malta, San Marino, and Vatican City State	11 April 2025
LAC	11 April 2025

ANI – Issuer Processing Requirements

To support ANI, a Processor Control Record (PCR) must be activated to send or receive Tag Length Value (TLV) Field 34 and TLV Field 56 based on the selected participation option.

Table 24: ANI Options

ANI Options	Description	Required Field 0100 Request	Required Field 0110 Response
Issuer verifies	Perform the name match themselves and responding with a name match decision for the full name and the separate first, middle, and last name fields provided in the request message.	Field 56, Dataset 05	Field 34, Dataset 04
Visa verifies	Elect Visa to perform the name match on their behalf by sending the legal name associated with the card account in response to an ANI request.	Field 34, Dataset 03	Field 56, Dataset 05
Visa verifies and sends an 0620 advice	Elect Visa to perform the name match and receive an 0620 ANI issuer confirmation advice message with information about the account name outcome. Note: Issuers that choose to receive the new 0620 advice should use their existing advice retrieval processes to retrieve the advice.		

Issuers must establish their participation option through their Visa representative.

Note: For additional information, refer to the *Full Service POS Online Messages - Technical Specifications* manuals, technical letter articles and VBNS, which are listed in the [Related Publications and URLs](#) section of this guide.

Visa Issuer FX Calculator

Visa Issuer FX Calculator (formerly known as Optional Issuer Fee) is suppressed for all 0200 OCTs.

Recipient Issuers – Applying OCTs to Visa Account Types

Recipient issuers can apply an incoming OCT to any of these Visa account types.

Table 25: Visa Account Types (1 of 2)

Visa Account Types	Description
Visa Credit Accounts	An OCT to a Visa credit account serves as a payment to the account. Recipient issuers must apply an incoming OCT to a Visa credit account as a payment to the line of credit.
Visa Debit Accounts	An OCT to a Visa debit account serves to add value to the underlying bank account associated with the Visa debit account.
Visa Reloadable Prepaid Accounts	An OCT to an eligible Visa prepaid account serves to add value to the prepaid account balance.
Visa Deferred Debit	Deferred Debit cards have a line of credit and an underlying bank account. An OCT to a Visa Deferred Debit account serves as a deposit to the underlying account when both the line of credit and underlying account are with the same bank. If the Deferred Debit card underlying account is with a different bank than the line of credit, it is appropriate to post the funds to the card account.

Table 25: Visa Account Types (2 of 2)

Visa Account Types	Description
Visa Combo Card (Brazil)	Combo cards give cardholders the option to use credit or debit functionality during a transaction. An OCT to a Visa Combo card account and processed as debit serves to add value to the underlying deposit account linked to the card. The credit balance owed on the card is not impacted by the receipt of the OCT; funds will only be applied to the debit balance in the deposit account. The OCT for combo cards should not be presented as credit using the proper values specified in Field 3 described in Original Credit Transaction (OCT) Data Elements and Processing Rules.
Deposit-only Account Numbers	An issuer may establish a payment credential as a deposit-only account used exclusively to receive OCTs (and related exception items) on behalf of one of its customers. These accounts must follow the Visa Rules for Deposit-only Account Numbers. Contact your regional Visa representative for details.

Special Considerations for Credit Cards

There may be situations where the OCT results in a positive credit balance to the Visa credit account and, as a consequence, changes the status of the credit card account.

This may require issuers to take specific steps to comply with specific legal and/or regulatory requirements. Customer service, customer expectations, and the standing of an account should be considered when developing a policy for applying OCT funds to a Visa credit account.

In addition, issuers should consider the impact on :

- Re-ageing of a credit account not in good standing.
- The application of service fees, over-limit fees, overdraft fees, cash advance fees, and late payment fees to credit accounts.
- Credit line increases triggered by funds sent to a credit account balance.
- OCTs funded by credit accounts that are sent to other credit accounts. Issuers can identify OCTs funded by credit accounts through the Source of Funds field (Field 104, Dataset ID 5F, Tag 08) (if present).

Note: Issuers may wish to apply different policies for increasing credit lines when the cause of the improved credit account status was from one or more OCTs, rather than standard payments by the Visa cardholder.

Recipient Issuer OCT Authorization Decisions – Declining OCTs

While issuers should always attempt to approve OCTs, they may decline OCTs in these situations:

- Recipient's account is closed.
- Recipient's account is not in good standing.
- Recipient's account is being monitored or has been flagged for suspicious activity, fraud, or money laundering.
- Value or velocity limit defined in VisaNet has been exceeded. Refer to [Using Visa Velocity Limit Checking to Mitigate Risk](#).
- The transaction amount or transaction activity is high or unusual.
- Recipient's account is a credit account and the issuer's policies are being violated.
- Recipient's account is a prepaid account and the amount results in the prepaid amount on the account being above the maximum amount limit.
- Recipient's account is not allowed to accept OCTs. Issuers must ensure that these accounts are blocked in VisaNet from receiving OCTs. For more information, refer to [Bank Identification Number \(BIN\) Blocking](#).
- Recipient's account is an account that is not permitted to receive funds from other sources (for example, government-issued prepaid accounts that can only be loaded by the government). Issuers must ensure that these accounts are blocked in VisaNet for OCTs. For more information, refer to [Bank Identification Number \(BIN\) Blocking](#).
- Sanctions screening score of sender exceeds the threshold established by issuer or sender fails AML/AFT screening by the issuer.
- OCTs should be approved or declined.
- Recipient issuers must look at the Sender Country field (Field 104, Tag 07) to determine the regulatory framework that should apply to the transaction screening.

Note: Recipient issuers should be aware that most OCTs will appear as Card Not Present transactions. Some issuers request that Visa decline online Card Not Present purchase transactions on their behalf, but this will not apply to OCTs.

Recipient Issuer OCT Authorization Decisions – Approving OCTs

This section provides an overview of restricting cross-border OCTs.

Issuer Option for Receiving/Approving Inbound Cross-Border Original Credit Transactions

Recipient issuers have the option to restrict receipt of POS authorizations to domestic only.

Issuers that restrict their card programs to domestic use only can choose to receive cross-border 0200 or 0100 OCTs. This option will apply to all types of OCTs initiated as 0200s and allows issuers in countries with high volumes of inbound remittances to accept cross-border OCTs, while continuing to maintain their domestic use only card programs.

Note: There is no similar option for issuers to restrict BASE II POS transactions to domestic only.

To participate, contact your regional Visa representative.

Minimum Issuer Monthly Approval Rates

Effective 1 May 2025, an issuer must maintain the minimum approval rates for Original Credit Transactions as specified in the Visa Rules.

See *Visa Business News (VBN) A114278* for additional details.

Recipient Issuers – VisaNet Stand-In Processing

When issuers set up to receive and process 0100 or 0200 OCTs online are not available at the time of the transaction, VisaNet will decline the OCTs on their behalf (VisaNet never approves the OCT on the issuer's behalf). Stand-in processing (STIP) approvals are not allowed on OCTs. Issuers and Issuer Processors must be configured to STIP decline an OCT request with the response code 91.

In Europe, when issuers are not set up to receive and process the 0100 or 0200 OCTs online, issuers must request Visa to process the OCT on their behalf. This is not applicable to Fast Funds transactions.

Recipient Issuer Host System Testing

VisaNet host testing using the VisaNet Certification Management Service (VCMS) is required for:

- Recipient issuers that are getting enabled to receive OCTs for the first time.
- Recipient issuers that support receipt of the TC06 only and want to upgrade to receive 0100 OCTs.

For information on testing, contact your regional Visa representative.

Recipient Issuers – Best Practices for Effective OCT Processing

To ensure a positive cardholder experience, recipient issuers should review their OCT handling processes by:

- Reviewing and modifying velocity limits so that OCT transactions are not declined because of low transaction counts and dollar amounts.
Note: As push-payment services grow, cardholders may begin receiving OCTs that represent more than just P2P. OCTs may also include Funds Disbursements, such as funds obtained for tickets sold through a ticket broker, disbursements from an insurance company for a claims payment, etc. Issuers should ensure that their velocity limits can accommodate a variety of use cases for push payments.
- Ensuring that OCT approval rates are consistent and better than other Visa transactions.
- Implementing clear and accurate messaging on cardholder statements to reflect an OCT.
- Ensuring the payment on the cardholder statement is clearly labeled as an original credit transaction and not labeled as any kind of refund.
- Ensuring that unnecessary or inappropriate fees are not being applied. The recipient issuer must not charge additional service fees or funds transfer fees to the cardholder's account for receiving funds related to OCTs. Other charges may be applied by the bank in accordance with the Cardholder agreements.
- Not applying additional funds transfer fees for consumer cards.
- Ensuring they have applied appropriate regulatory and AML/ATF controls as required by issuer policies.

Recipient Issuers – Funds Availability

Making funds available to cardholders is defined as the posting and increasing of the cardholders' open-to-buy or operating limit on their Visa card account.

Simple memo posting where the cardholder cannot have access to the funds is not considered compliant with funds availability requirements.

Refer to [Account Types for OCT](#) for the different Visa account types for OCT.

This section provides recipient issuers with information on both Conventional and Fast Funds availability.

Funds Availability Overview

There are two time frames for funds availability:

- **Conventional Funds Availability** – Recipient issuer makes funds available to the recipient's account as soon as possible, but no later than two business days after receiving the full financial or clearing message associated with the OCT (or same business day for Europe).
- **Fast Funds Availability** – Recipient issuer makes funds available to the recipient's account in 30 minutes or less of approving the OCT authorization or full financial request.

Note: U.S. Domestic Only: To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.

Fast Funds vs. Conventional Funds

This table provides an overview of Fast Funds vs. Conventional Funds:

- The types of OCTs acquirers, service providers, and merchants can send 0200 message.
- The types of OCTs issuers can receive. This depends on whether the issuer supports Fast Funds and whether the issuer is an Authorization-Only/BASE II/Dual Message (DMS) or Single Message System (SMS).

Note: Non-U.S. Authorization-Only/BASE II issuers can only receive the 0100 OCT message if they participate in Fast Funds. Not applicable in Europe.

Note: Effective October 2024, issuers in Mainland China can receive 0100 OCT messages if they support Fast Funds (participation in Fast Funds is optional for issuers).

- Whether the transaction will be processed as Fast Funds or Conventional Funds.

Note: There is no Fast Funds indicator in 0100 or SMS 0200 OCTs sent to issuers. Issuers that are Fast Funds-enabled must support Fast Funds on all OCTs. Only the TC06 clearing record may contain a Fast Funds indicator for dual message.

Table 26: Fast Funds vs. Conventional Funds

Acquirer, Service Provider, Merchant	Recipient Issuer BIN Supports Fast Funds Authorization-Only/ BASE II/Dual Message Issuer	Recipient Issuer BIN Supports Fast Funds SMS Issuer	Recipient Issuer BIN Does Not Support Fast Funds Authorization-Only/ BASE II/Dual Message Issuer	Recipient Issuer BIN Does Not Support Fast Funds SMS Issuer
Sends 0200	Receives: 0100 followed by TC06, TC06 contains Fast Funds indicator in TCR3, position 16. Fast Funds	Receives: 0200 Fast Funds	Non-U.S. issuer: Receives TC06 ¹ U.S. issuers receive 0100 followed by TC06. No Fast Funds indicator in TC06. Europe issuers may receive 0100 followed by TC06. No Fast Funds indicator in TC06. Conventional Funds	Receives: 0200 Conventional Funds

¹ Outside Europe Region, if the non-U.S. Authorization-Only/BASE II recipient issuer does not participate in Fast Funds, they cannot receive the 0100 OCT (they will receive the TC06 only and VisaNet will approve the 0100 on their behalf assuming there is no reason for a decline). In Europe systems, all recipient issuers must process the 0100 for Money Transfer OCTs (i.e., they are not stand-in processed).

For additional information, refer to [Transaction Flows](#).

Conventional Funds Availability

Except where Fast Funds capabilities have been mandated, *Visa Core Rules and Visa Product and Service Rules* state that a recipient issuer must make funds available from an incoming OCT into the recipient's account within a maximum of two business days:

- For SMS issuers, the OCT funds must be posted/increment the cardholder's open-to-buy or operating limit within two business days (or same business day in Europe) of approving the SMS 0200 OCT or obtaining the 0220 OCT.
- For Authorization-Only/BASE II/Dual Message issuers, the OCT must be posted/increment the cardholder's open-to-buy or operating limit within two business days of receiving and approving the 0100 (or same business day in Europe).
- Issuers must dispute the transaction if funds cannot be posted within two business days (or same business day in Europe).

Recipient issuers should be aware that the two business days do not include the day the OCT is received by the issuer. In addition, nonworking days (Sundays) and local holidays are not considered part of the two business days. For example, a two-day posting requires that an OCT received Friday must be posted by end-of-day Monday (excludes Sunday). For information about settlement, refer to the *Visa Settlement Funds Transfer Guide*.

Note: If recipient issuers have any requirements or policies that prevent them from making OCT funds available to recipients within two business days, such as local regulatory requirements that require issuers to hold funds for a specified period before releasing them into the cardholder's account, they should contact their regional Visa representative.

Posting Cross-Border OCT Transactions

When a transaction amount is sent by the originating entity in the currency in which the cardholder receives their bill or account, the recipient issuer must credit the cardholder that exact amount, even if the recipient issuer settles with Visa in a different currency.

This requirement ensures the amount received by the cardholder matches what is sent by the originating entity and can help enable the originating entity to comply with regulatory requirements and enable greater transparency by disclosing to the sender the amount the recipient will receive and provide a good customer experience.

For example, when this scenario applies:

- receiving issuer bills the cardholder in the local currency
- receiving issuer settles with Visa in a non-local currency
- originating entity sends an OCT with the amount designated in the local currency
- the receiving issuer posts the amount sent in local currency to the cardholder's account

Fast Funds for Recipient Issuers

These sections contain information about fast funds for recipient issuers.

Fast Funds Enablement and Mandates

For Fast Funds to be possible, this must take place:

- Acquirer, service provider, or merchant must initiate the transaction as an SMS 0200 OCT message.
- Recipient issuer must make the system changes to receive the 0100 or SMS 0200 OCT message.
- Recipient issuer must make the system changes to make funds available to the recipient's account in 30 minutes or less of approving the 0100 or SMS 0200 OCT message.

Note: U.S. Domestic Only: To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.

- Submit to Visa an updated Customer Information Questionnaire (CIQ) to enable the Fast Funds indicator on the issuing identifier's configuration.

Note: If the recipient issuer is not set up to receive the 0100 or 0200 OCT, they must make system changes to begin processing the 0100 or 0200 message set, including all associated financial and non-financial messages such as advices, reversals, disputes, and dispute responses.

Recipient issuer participation in Fast Funds is governed by rules.

General issuer requirements: Once an issuer participates in Fast Funds, they must support Fast Funds on all incoming 0100 or 0200 OCTs.

OCTs and Fast Funds are linked together. Issuers that support the 0100 or SMS 0200 OCT must support Fast Funds, per country or region's mandate. If a non-U.S. Authorization-Only/BASE II/ Dual Message issuer is not set up for Fast Funds, Visa will approve the 0100 on the issuer's behalf (assuming there is no reason for a decline) and send the issuer the TC06 only.

Issuers migrating from the TC06 only to receipt of the 0100 and TC06 must support OCTs and Fast Funds processing.

The setting of STIP parameters should not be allowed where Fast Funds mandate is in effect. In locations where Fast Funds mandate are not yet in effect, issuers that are not Fast funds enabled are allowed STIP approval.

Rules specific to each country/region are listed in the table.

Table 27: Country/Region-Specific Rules (1 of 1)

Country/Region	Rules
Europe	All issuers, including issuers that do not support Fast Funds, are mandated to process the 0100 and Money Transfer OCTs online. STIP is allowed for non-Fast Funds enabled issuers for non-Money Transfer OCTs only. STIP will not be applied for Fast Funds enabled issuers. Issuers must support Fast Funds processing for Direct Debit Cards, Deferred Debit Cards (with 16-digit primary account number and Card Verification Value 2), and Prepaid cards. They must also support Fast Funds for all approved OCTs by making funds available to the cardholder in 30 minutes or less of approving an OCT.
AP and CEMEA	Visa requires issuers in most AP and CEMEA countries to support Fast Funds (which requires support for the 0100 or 0200 OCT). Refer to Mandated Fast Funds Locations for details.
Canada	Fast Funds participation is required for all Visa debit, proprietary ATM, and debit cards that carry the Plus Alliance ATM mark and prepaid issuers.
Mainland China	Effective October 2024, all issuers are mandated to process OCTs as online for all product types (debit, prepaid, and credit). STIP will not be applied if the issuer is not available. The funds must be made available to the cardholder within two business days of approving an OCT if fast fund processing is not supported Effective October 2024, issuers in Mainland China can receive 0100 OCT messages if they support Fast Funds (participation in Fast Funds is optional for issuers).
Latin America and Caribbean (LAC)	Any participating issuer that wants to benefit from the prepaid reload network (enabled via the OCT using the TU BAI) must accept the OCT message (0100 or 0200) and make funds available immediately after receiving the OCT. This rule applies to all OCTs. Fast Funds participation is required for all debit and prepaid issuers.
U.S.	U.S. issuers must support the 0100 or 0200 OCT. Fast Funds participation is required for all U.S. debit and prepaid issuers. Note: Effective 17 October 2025, Fast Funds participation is required for proprietary cards and proprietary ATM cards on Plus network. To enhance the cardholder experience, effective 12 April 2025, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.

Fast Funds are mandated in these countries and regions:

Table 28: Mandated Fast Funds Locations

Country/Region	Products
AP Note: Excludes Mainland China, Guam, Hong Kong, Korea, Macau, and Taiwan.	Debit and prepaid issuers Note: For Australia – Debit and prepaid issuers (domestic only) Note: For India – Debit and prepaid issuers (both domestic and cross-border), credit issuers (domestic only)
Central Europe, Middle East, and Africa (CEMEA) CEMEA: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Tajikistan, Ukraine, and Uzbekistan	Debit and prepaid issuers Credit, debit, and prepaid issuers
Japan	Debit issuers, domestic only
Canada	Debit, prepaid, proprietary, and proprietary ATM cards that carry the Plus Alliance ATM mark
Europe Region	Direct Debit Card, Deferred Debit Cards with CVV2 and PAN on the card, and Prepaid cards
LAC	All debit and prepaid issuers
U.S.	Debit, credit, and prepaid issuers Note: Effective 17 October 2025 — Proprietary cards and proprietary ATM cards on Plus network.

Fast Funds Reconciliation – Authorization-Only/BASE II/Dual Message (Recipient Issuers)

Authorization-Only/BASE II/Dual Message issuers participating in Fast Funds are required to make Original Credit Transaction (OCT) funds available to the recipient in 30 minutes or less of approving an OCT.

U.S. Domestic Only: To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.

Assuming the recipient issuer will make funds available to the recipient as part of the 0100 OCT processing, issuers should take steps to ensure that they are not also posting funds to the cardholder's account with the processing of the TC06 (in other words, double posting).

As part of their reconciliation efforts, the recipient issuer can match each TC06 they receive to its associated 0100 OCT. To do so, they can use the Transaction ID, which is located in these fields:

- 0100: Field 62.2
- TC06: TCR 5, positions 5 – 19

A Fast Fund indicator is also present in the TCR3, position 16. This indicator will be populated for all transactions qualifying for Fast Funds and can be used by the issuer to help in reconciliation.

Additional Guidance to Achieving Fast Funds Processing Capabilities (Recipient Issuers)

Enablement of Fast Funds availability will better position Visa issuers to meet competitive market demands for faster payments, driven by consumer expectations and competition from central banking systems and government agencies, such as efforts by the U.S. Federal Reserve and National Automated Clearing House to increase the speed of payments.

The speed and process by which a recipient issuer makes OCT funds available to the recipient cardholder is controlled by each issuer and often varies in each issuer-processing environment. Due to the variety of issuer, processing scenarios related to funds availability/incrementing the open-to-buy or operating limit in Visa accounts, it is not always possible for Visa to provide specific direction on how to manage this process. However, Visa can provide guidance on information available in the OCT messages that should help recipient issuers manage and reconcile OCT funds.

Considerations

Making OCT funds available depends on the systems and controls for incrementing funds in a Visa account (for example, systems used to manage incrementing the funds available, open-to-buy, or operating limit and who owns those systems). The recipient issuer processor, issuer internal operations, or another third-party provider under contract with the issuer, could manage these systems. Whoever manages these systems and controls will need to evaluate the triggers that increment funds added to the account and ensure they comply with the requirements for funds availability on an OCT.

Important: All OCTs are considered good funds the minute the transaction is submitted to Visa. As OCTs are not allowed to be reversed by the acquirer, service provider, or merchant, the funds are considered “good funds” for the recipient issuer. The issuer can be confident that these funds will be settled during normal settlement processes with Visa. For more information on reversals, refer to [Exception Processing](#).

Since an OCT is a credit to the cardholder’s account, OCT transactions operate under the same rules as other deposits in terms of when the funds are posted and made available to cardholders. For example:

- What are the rules and triggers to make the funds associated to other types of credits or deposits available?
- Can those be adjusted for an OCT to ensure funds are made available/added to the open-to-buy or operating limit upon receiving and approving the OCT?

When evaluating solutions for Fast Funds capabilities, recipient issuers may consider these questions:

- Who manages funds availability?
 - Recipient issuer
 - Processor
 - Third-party host system provider
- What triggers the posting and funds availability/incrementing the open-to-buy or operating limit on the account?
- Do you receive OCTs today through the Visa Network?
 - How quickly are funds made available/added to the open-to-buy or operating limit?
 - If funds are made available in 30 minutes or less, have you set the Fast Funds Indicators at Visa? A Client Information Questionnaire (CIQ) should be submitted to update the Fast Funds Indicators.
- What do you do with other credit transactions received on the Visa network in terms of funds availability (for example, a merchandise return credit)?
 - How quickly are funds made available/open-to-buy or operating limit incremented as the result of receiving these credits?
 - If they are done quickly, can the same process of making funds available be followed for OCTs?
- Are your cards Interlink enabled (U.S. only)?
 - If so, would you be able to accept OCT transactions on Network 3 (Interlink network)?
 - Are funds made available quickly for Interlink transactions and would this be an option for OCTs on Network 3 and for reaching the Fast Funds requirement?
- Are your processing systems single message or dual message?

Single Message Issuers (SMS)

- Single message processing issuers may find it easier to make funds available quickly and to meet Fast Funds requirements because the authorization and clearing/funds are combined in just one message.
- Issuers should post funds to the cardholders account upon receipt of the 0200 message.

Dual Message Issuers (Authorization-Only/BASE II)

- If an OCT originates as a single message (full financial transaction (0200)) and the receiving issuer processor is dual-processing, VisaNet converts the 0200 into two messages (a 0100 authorization, followed by a TC06 clearing message).
- In many cases, these two messages are treated and processed independently, with the TC06 held and batch processed only once a day. Funds availability may be triggered by the 0100 message only for Fast Funds.
 - All Europe Region OCT programs must be processed as SMS 0200 OCT messages through V.I.P. All batch-only TC06 Funds Disbursement OCT submissions must cease.
- If there are concerns that making funds available based on the approval of the 0100 for an OCT may lead to double posting (posting based on the authorization, as well as the TC06 clearing message), the transaction ID is a way to isolate or identify a TC06 that is linked to an OCT 0100.
 - TCQ (Transaction Code Qualifier; Position 3) will have a value of **2** that identifies the TC06 as being associated to an OCT.
 - TCR 3, Position 16 “Fast Funds Indicator” will have a value of **Y** if the recipient BIN is configured for Fast Funds.

Note:

- Issuers must look for the TCQ position 3 value of **2** AND the TCR 3, position 16 value of **Y** to verify the TC06 was the clearing message of an OCT 0100. If either of these values exists without the other, it may not be indicative of an OCT 0100.
- TCR 3, position 16 will **only** have a value of **Y** if the issuer's BIN has been set up and configured to include the Fast Funds indicator **and** the 0100 OCT was approved by the issuer. If the issuer's BIN has not been configured with the Fast Funds indicator, this field will include a space.

VisaNet Set Up for Fast Funds – Client Information Questionnaire

All recipient issuers capable of meeting the Fast Funds requirements, whether required by Visa mandate or not, must submit a Client Information Questionnaire (CIQ) to Visa so they can be set up in VisaNet with the appropriate Fast Funds indicator.

This indicator is critical to OCT origination programs, enabling acquirers, service providers, and merchants to properly relay funds availability information to Visa cardholders, improving cardholder experiences using push payment services enabled by Visa Direct.

Fast Funds Testing Requirements

VisaNet testing using the VisaNet Certification Management Service (VCMS) is required for recipient issuers that do not yet support OCTs and Fast Funds processing.

If the issuer has already tested their systems for OCTs, they are not required to re-test to support Fast Funds.

Fast Funds Modifying Fraud Monitoring Systems

Recipient issuers may need to modify fraud models and policies to account for Fast Funds availability and, for Authorization-Only/BASE II issuers, the availability of funds based on authorization messages.

Fast Funds Interchange Rates

For a list of Fast Funds Fee Program Indicators (FPIs), refer to the *BASE II Clearing Data Codes* manual. For Interchange Fees, refer to Interchange Fee page in Visa Access.

Fast Funds Customer Service and Exception Management

Recipient issuers must modify procedures to handle customer inquiries and exceptions around Fast Funds availability. Refer to Exception Processing for details.

Recipient Issuers – Back Office Activities

Reversals and disputes are allowed under limited circumstances. See *Exception Processing* for exception processing requirements.

Recipient Issuers – Risk Management

This section provides a summary of the various risk controls available to recipient issuers participating in an OCT-based program. Issuers should review all sections to gain a comprehensive view of the risk controls related to OCTs.

For specific legal and regulatory compliance considerations, refer to Regulatory Compliance and Legal Considerations.

Risk Controls

These are recipient issuer-related risk controls:

- Recipient issuers must be Visa clients. Visa clients are regulated entities that have undergone financial and regulatory compliance due diligence by Visa.
- Visa enables issuers to block acceptance of OCTs at the Issuing ISO BIN level within VisaNet when transactions are prohibited by law. For an overview of key laws, refer to [Regulatory Compliance and Legal Considerations](#).
- Recipient issuers can dispute OCT transactions (in a timely manner) when delivered to non-eligible accounts. Refer to [Exception Processing](#).
- Visa allows issuers to dispute transactions that do not comply with local regulatory requirements or that the recipient refuses to accept. Refer to [Exception Processing](#).
- On cross-border Money Transfer transactions and domestic Money Transfer transactions in countries without National Net Settlement service, Visa screens the sender against sanctions lists (such as the U.S. Office of Foreign Assets Control (OFAC) Specially Designated Nationals (SDN) List) for Visa's internal compliance purposes. Issuers may choose to receive a score indicating how closely the sender matches an entry on the watchlists.
- All recipient issuers must implement and maintain an anti-money laundering/anti-terrorist financing program and support Visa in its efforts to protect the Visa system.
- Recipient issuers can set velocity limits on OCTs that VisaNet can use to decline the transaction on the issuer's behalf or forward the OCT to the issuer with information about the exceeded limit. Issuers can also choose to set their own velocity limits outside of the VisaNet structure. Refer to [Velocity Limits Exceeded - Processing Options](#).
- Recipient issuers can use their own authorization tools to make decisions on each OCT.
- Recipient issuers must look at the Sender Country field (Field 104, Tag 07) to determine the regulatory framework that should apply to the transaction screening.

Data Elements in Identifying OCTs

OCTs are identified by a set of data elements that can be used to aid recipient issuers in managing risks that may be unique to OCTs, including:

- A unique OCT Processing Code (26)
- A unique Business Application Identifier (BAI) to identify each type of OCT (Field 104, Dataset value 57)
- The presence of sender data (Field 104, Dataset value 5F)

Refer to [Original Credit transaction \(OCT\) Data Elements and Processing Rules](#) for details on these fields.

Using Visa Velocity Limit Checking to Mitigate Risk

Recipient issuers that support OCTs can use OCT velocity limit-checking in VisaNet.

Issuers can establish velocity limits to either of these:

- Default maximum limits for all OCTs, or
- Custom velocity limits, which is lower than the default maximum and more than the minimum limit.

During the authorization step, VisaNet will validate that none of the OCTs it processes exceed any velocity limits established by the issuer. If a limit is exceeded, VisaNet can either decline on the issuer's behalf or forward the OCT to the issuer with information about the exceeded limit.

Note: Velocity limit checking is not available for OCTs originated as TC06 clearing record only.

The recipient issuer's velocity limits are set at the Issuing ISO BIN level, but applied at the account level. For example, if the domestic one-day count limit for an Issuing ISO BIN is set to a maximum of 50 transactions, every card issued with that Issuing ISO BIN is allowed to receive up to 50 OCTs per day. Visa increments the count and amount limits only on approved OCTs sent to issuers that support OCTs.

Refer to [VisaNet Maximum Velocity Limits](#) for updated changes and updated velocity limits.

Recipient issuers should consider reviewing and modifying velocity limits periodically so that OCT transactions are not declined due to low transaction counts and dollar amounts, as well as to ensure the limits can accommodate a variety of use cases for push payments. OCTs may represent P2P money transfers and Funds Disbursements (e.g., payouts related to insurance claims, shared economy payments, government disbursements, merchant loyalty rebates, transfers of funds from digital wallets, etc.). Overly conservative limits will affect Visa cardholder experiences with push payment services enabled by Visa Direct.

Note: Per Issuer Requirement to Evaluate Each Transaction (IREET) rule, issuers must not systematically decline all transactions based solely on transaction amount, and instead approve or decline transactions on multiple factors. Issuers can still choose to decline an OCT irrespective of the transaction amount if it does not meet the issuer's approval criteria.

Recipient issuers can communicate their velocity limit options to Visa via the Client Information Questionnaire (CIQ). Contact your regional Visa representative for details.

Note: Recipient issuers are not required to set their own customized velocity limits in VisaNet. In the U.S., Visa requires issuers and issuer processors that establish internal limits to have separate sets of limits for Me-to-Me, consumer-funded money transfers (BAI = AA) and for business-funded funds disbursement use cases. The limits must be raised to a minimum of \$25,000. Disbursement use cases are identified with this set of Business Application Identifiers (BAI) - BP, CP, FD, GD, GP, LO, MD, OG, PD, and TU.

Any issuer who does not set their own limits in VisaNet will have the VisaNet maximum velocity limits applied to their OCTs. Refer to [VisaNet Maximum Velocity Limits](#).

It should also be noted that custom and default are not applicable in countries where domestic processing exists.

VisaNet Maximum Velocity Limits

This table describes the maximum number and dollar amount that a Visa account holder can receive in a given time period.

The limits in this table are the maximum number and dollar amount that a single Visa account holder can receive in a 1, 7, or 30-day period. The time period is a rolling time frame and is based on the first transaction sent to a recipient account. If limits are exceeded on count or amount, VisaNet declines any subsequent transactions. Unless an issuer has established their own customized OCT velocity limits, these limits will be applied to all OCTs.

Note: All limits are based on GMT, with tracking starting from the beginning of a GMT day and resetting at the end of/beginning of the next GMT day. The limits reset at 00:00 GMT.

New maximum velocity limits for OCTs in the AP, Canada, CEMEA, EU, LAC, and U.S. Regions:

Table 29: New – Maximum Velocity Limits

OCT Transaction Type	Transaction Category	Time Period One Day	Time Period Seven Day	Time Period Thirty Day
Domestic	Money Transfer OCT	150 Transactions or USD 50,000	250 Transactions or USD 100,000	750 Transactions or USD 200,000
Domestic (U.S. and Canada)	Money Transfer OCT	150 Transactions or USD 100,000	250 Transactions or USD 250,000	750 Transactions or USD 500,000
Domestic (Global, including intra-EEA)	Non-Money Transfer OCT	150 Transactions or USD 250,000	250 Transactions or USD 600,000	750 Transactions or USD 1,250,000
Cross Border	Money Transfer OCT	30 Transactions or USD 50,000	50 Transactions or USD 100,000	150 Transactions or USD 200,000
Cross Border	Non-Money Transfer OCT	30 Transactions or USD 100,000	50 Transactions or USD 250,000	150 Transactions or USD 500,000

Cash Deposit Limits

Cash as a funding source for the OCT Money Transfer transaction is used today in some regions/countries for certain use cases where the consumer wants to deposit cash to a card at an ATM/Kiosk, at a POS in a bank branch, or at a merchant POS.

Cash deposits have their own limits that are separate from velocity limits.

This table represents the maximum limits that can be set for transaction amounts and velocity limits.

Table 30: Velocity Limits for OCTs with BAI CD

Product	Transaction Time Period	Transaction Time Period	Transaction Time Period	Per Transaction Maximum
	One Day Max	Seven Day Max	Thirty Day Max	
Visa Consumer	15 Transactions or U.S. \$600	25 Transactions or U.S. \$1,000	75 Transactions or U.S. \$3,000	U.S. \$600
Visa Commercial	15 Transactions or U.S. \$5,000	25 Transactions or U.S. \$15,000	75 Transactions or U.S. \$50,000	U.S. \$5,000

VisaNet Minimum Velocity Limits

For U.S., Canada, and EU – Issuers who use the velocity limit service must set their limits at or above required minimum values in VisaNet.

The settings can be differentiated between Money Transfer OCT and funds disbursement/non-Money Transfer OCT.

Table 31: VisaNet Minimum Velocity Limits

OCT Transaction Type	Transaction Category	Time Period One-Day	Time Period Seven-Day	Time Period Thirty-Day
Domestic	Money Transfer ¹ OCT	25 transactions or USD 50,000	100 transactions or USD 125,000	200 transactions or USD 250,000
Domestic	Non-Money Transfer ² OCT	40 transactions or USD 125,000	100 transactions or USD 300,000	200 transactions or USD 500,000

1 Money Transfer/person-to-person (PP), Bank-Initiated Money Transfer (BI), account-to-account (AA), funds transfer (FT), or wallet transfers (WT).

2 Funds disbursement, insurance settlement, payroll, government disbursement, etc. Incoming cross-border OCTs to the U.S. are not permitted and are blocked by VisaNet. Minimum velocity limits cannot be set for cross-border transactions.

Table 32: VisaNet Minimum Velocity Limits – Europe

OCT Transaction Type	Transaction Category	Time Period One-Day	Time Period Seven-Day	Time Period Thirty-Day
Domestic	Money Transfer ¹ OCT	25 transactions or USD 50,000	100 transactions or USD 75,000	200 transactions or USD 150,000
Domestic	Non-Money Transfer ² OCT	40 transactions or USD 125,000	100 transactions or USD 300,000	200 transactions or USD 500,000

1 Money Transfer/person-to-person (PP), Bank-Initiated Money Transfer (BI), account-to-account (AA), funds transfer (FT), or wallet transfers (WT).

2 Funds disbursement, insurance settlement, payroll, government disbursement, etc. Incoming cross-border OCTs to the U.S. are not permitted and are blocked by VisaNet. Minimum velocity limits cannot be set for cross-border transactions.

Velocity Limits Exceeded – Processing Options

For issuers who set custom velocity limits in VisaNet, limits are only checked on SMS 0200 OCTs, where the recipient issuer is available to respond to the OCT authorization request.

If the issuer is not available, VisaNet automatically declines the transaction and velocity limit checking does not apply.

When the limit is exceeded and the recipient issuer is available, the issuer has two options:

- VisaNet forwards the OCT to the recipient issuer with information related to the exceeded velocity limit. The issuer sends the approve or decline message. If the amount exceeds the Visa default maximum, the issuer must decline the transaction.
- VisaNet can decline the OCT on the recipient issuer's behalf and, optionally, send the issuer a Stand-in Advice with information related to the exceeded velocity limit.

Note: These options ONLY apply when an issuer establishes customized limits.

Option 1: VisaNet Forwards OCT to Recipient Issuer with Information About Exceeded Velocity Limit

When recipient issuers have opted for VisaNet to forward them the OCT when a velocity limit has been exceeded, they must be prepared to receive the OCT with Field 48, Usage 37, position 11, and provide the appropriate approval or decline. When the velocity limit exceeds the VisaNet Maximum Velocity Limits it must be decline.

This field contains velocity-limit-related information that issuers can use in making authorization decisions, including:

- **1** = 1-day count or amount exceeded
- **2** = 7-day count or amount exceeded
- **3** = 30-day count or amount exceeded

Note: V.I.P. will populate this field with the priority order of 1, 2, and 3.

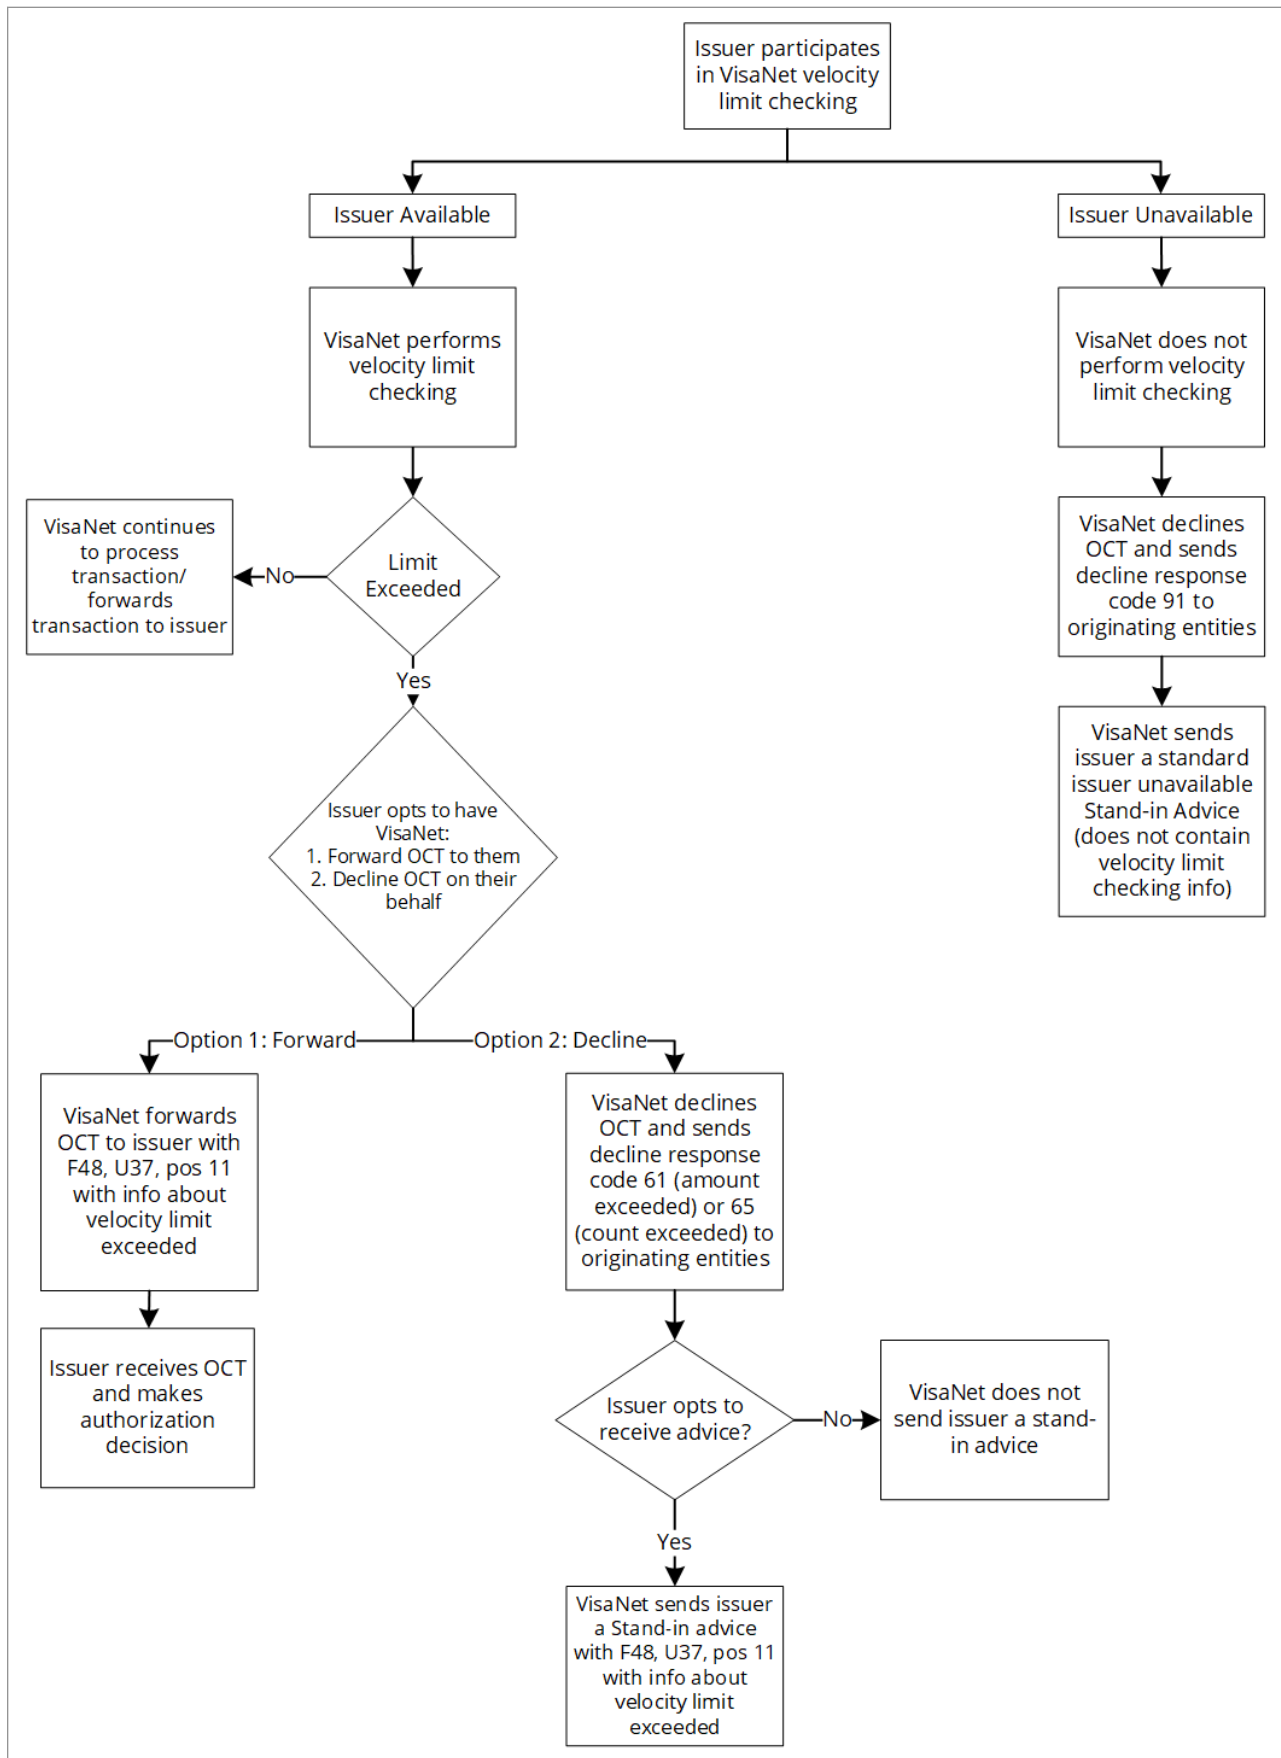

Option 2: VisaNet Declines OCT and Optionally Sends Stand-in Advice with Information About Exceeded Velocity Limit

With this option, VisaNet will decline the OCT when a velocity limit has been exceeded.

The recipient issuers can opt to receive Stand-in Advices from Visa for these situations. The Stand-in Advices will contain Field 48, Usage 37, position 11 with velocity limit values of 1, 2, or 3, as outlined in the bullets.

This figure provides a summary of the processing flows associated with velocity limit exceeded scenarios. In addition, refer to [Transaction Flows](#).

Velocity Limit Exceeded Processing Flow

Transaction Monitoring

Recipient issuers should monitor OCT transaction activity for any signs of fraud or misuse, including money laundering and terrorist financing.

Issuers should consult their appropriate fraud, risk, and compliance teams to ensure their program meets their institution's monitoring requirements, the *Visa Core Rules and Product and Service Rules*, and applicable law and regulations.

Suspicious activity may include:

- High volumes of OCTs in short periods of time to new or existing accounts.
- High volumes of OCTs in short periods of time to new or existing accounts, followed by cash withdrawals.
- A high number of new accounts opened up that receive OCTs and from which funds are withdrawn as cash.
- Disruption in the usual pattern of OCTs in either transaction count or amount of transfers.
- Movement of money between credit accounts, held by the same person, to avoid falling into a bad standing or to take advantage of reward points.

Recipient Issuers – Customer Considerations

This section describes the customer service considerations that recipient issuers need to consider and address.

- **Disclosures** – Issuers are responsible for making all necessary disclosures required by applicable law with respect to fees, costs, rewards, and other material terms in connection with OCTs.
- **Rewards Programs** – Issuers should consider the impact of OCTs on account programs that receive rewards, such as purchase points, merchant discounts, or travel miles (for example, unlike policies related to reducing rewards points upon receipt of a merchandise return, issuers may want to consider not reducing rewards point balances based on the receipt of OCT funds).
- **Account Protection** – Issuers should be aware that the OCT only requires the recipient's Primary Account Number (PAN); it does not require the CVV2 or expiration date. Issuers must not decline OCTs solely due to the absence of expiration date or CVV2. If the expiration date is included, it must be accurate and not expired. Therefore, to protect accounts against fraud, issuers may want to advise their cardholders not to provide information other than the PAN to senders.

Customer Service Inquiries and Exceptions

Recipient issuers need to handle customer service inquiries and disputes.

This may include training customer service staff and upgrading customer service screens to include transaction details for OCTs. Customers may have questions about expected transactions that have not yet posted to their account. Customer service staff need to be prepared to answer these questions.

Refer to [Exception Processing](#).

Customer Statements – Identifying Transactions

This section covers rules for identifying transactions on client statements.

Issuers

Recipient issuers must not refer to, describe, label, or treat the Original Credit Transaction (OCT) as a refund on cardholder-facing material or communications, including cardholder statements. Additionally, the recipient issuer must not charge additional service fees or funds transfer fees to the cardholder's account for receiving funds related to OCTs. Other charges may be applied in accordance with the cardholder agreements.

Merchants

To help reduce client inquiries, the merchant name field must contain information about the OCT that identifies the source of the transactions. For a Money Transfer OCT, the merchant name portion of the statement must include the sender name, while the city portion contains the city name of the merchant location. From a recipient issuer perspective, the issuer that receives the OCT should be using the data in the Merchant Name field to populate the cardholder statement to provide clarity on the purpose of the transaction.

Refer to [Original Credit Transaction \(OCT\) Data Elements and Processing Rule](#) (Field 43) for details.

Customer Statements – Funds Availability

Recipient issuers should update online and/or paper statements to reflect funds availability to the recipient.

Customer Notifications

With the appropriate platform, recipient issuers should provide notifications (e.g., mobile phone alerts or email messages) to recipients to indicate when OCT funds have been made available to their Visa account.

Recipient Issuers – Reports

Recipient issuers should refer to the VisaNet Settlement Service (VSS) reports for information on OCTs.

For information on OCT-related interchange, refer to the VSS-120, VSS-130, VSS-130-M, and VSS-135 reimbursement fees reports where OCTs are identified through the fee descriptor. Contact your regional Visa representative for the fee descriptors in your territory.

Issuers can also use the applicable SMS reports. Samples of the VSS and SMS reports related to OCTs are provided in *Sample Reports*. For information about settlement, refer to the *Visa Settlement Funds Transfer Guide*.

The Sender Reference Number is provided in SMS Raw Data, positions 106 - 121; the Business Application Identifier (BAI) is provided in positions 22 - 23; and the Source of Funds is provided in position 24.

Note: Due to data security reasons, all other sender data is removed and not present in SMS Raw Data.

Refer to the *VSS User's Guide, Volume 2, Reports* for details.

Issuers may use the Consolidated Transaction Data Report to gather information on OCTs sent to the issuer. More information on this report is available in *Sample Reports*.

Chapter 4

Bank Identification Number Blocking

This chapter provides recipient issuers and acquirers, service providers, and merchants with information related to Bank Identification Number (BIN) blocking.

This table provides information on countries where all BINs are blocked from receiving OCTs.

Blocking by Country

This chapter covers Bank Identification Blocking for Visa Direct systems.

International and Country-Specific Regulatory Restrictions

For cross-border transactions, acquirers, service providers, and merchants should ensure the recipient's country of residence is part of the acquirer's, service provider's, and merchant's program (as defined in the acquirer submitted PIF).

Note: Visa applies all current restrictions regarding cross-border purchase transactions to OCTs. For example, due to U.S. government restrictions, U.S. banks may not send or receive OCTs to Cuba, Iran, Syria, North Korea, regions of Crimea, Donetsk People's Republic, and Luhansk People's Republic.

BINs Blocked by Country

This table provides information on BINs blocked in the VisaNet system by country/region.

Table 33: BIN Blocking by Country/Region (1 of 3)

Country/Region	All BINs Blocked for All OCTs	All BINs Blocked for Online Gambling OCTs	Special Blocking
Algeria		X	
Bahrain		X	
Bangladesh		X	
Crimea	X		Blocked for all transactions, including OCTs (both origination and receipt).
Cuba	X		Blocked for all transactions, including OCTs (both origination and receipt).
Hong Kong		X	
India		X	Credit card BINs blocked for cross-border OCTs.
Indonesia		X	

Table 33: BIN Blocking by Country/Region (2 of 3)

Country/Region	All BINs Blocked for All OCTs	All BINs Blocked for Online Gambling OCTs	Special Blocking
Iran	X		Blocked for all transactions, including OCTs (both origination and receipt).
Japan		X	Blocked for gambling OCTs and cross-border Money Transfer OCTs due to regulatory limitations. Regulatory limitations block the use of cards by non-bank members for OCTs.
Jordan		X	
Kuwait		X	
Malaysia		X	
Nepal		X	
North Korea	X		Blocked for all transactions, including OCTs (both origination and receipt).
Oman		X	
Pakistan		X	
Qatar		X	
Russia	X	X	Blocked for all transactions into and out of Russia.
Saudi Arabia		X	
Singapore		X	
South Korea			All card products issued by non-bank members are blocked for OCTs due to regulatory restrictions.
Syria	X		Blocked for all transactions, including OCTs (both origination and receipt).
Turkey		X	Blocked for all gambling payouts to banks in Turkey.

Table 33: BIN Blocking by Country/Region (3 of 3)

Country/Region	All BINs Blocked for All OCTs	All BINs Blocked for Online Gambling OCTs	Special Blocking
United Arab Emirates (UAE)		X	
U.S.		Note: Gambling OCTs from 7800 (government-owned lotteries), 7801 (government-licensed casinos), and 7802 (government-licensed horse/dog racing) are allowed/NOT blocked.	Inbound cross-border OCTs are blocked by VisaNet. These blocks may be removed, on a case-by-case basis, upon request.
Venezuela	X		Blocked for all transactions, including OCTs (both origination and receipt) due to regulatory restrictions.
Vietnam		X	

Note:

- When an issuer is blocked from receiving OCTs, VisaNet declines the transaction with Reason Code **93** (transaction cannot be completed – violation of law), except for embargoed countries (Cuba, Iran, Syria, North Korea, regions of Crimea, Donetsk People’s Republic, and Luhansk People’s Republic), where Reason Code **62** (Restricted card – card invalid in this region or country) is used.
- When “All BINs Blocked for OCTs” or “All BINs Blocked for Online Gambling OCTs” is selected, OCTs initiated as both 0200s and TC06s are blocked.

Additional Restrictions

This section covers other restrictions related to BIN blocking in the Visa Direct program.

Issuer Blocking and Regulatory Compliance

Recipient issuers must only allow OCT funds to be received into a Visa account to which the issuer has applied its Know Your Customer (KYC)/Customer Identification Program (CIP).

Issuers must identify the BINs associated with accounts that do not have KYC/CIP so that Visa can block them from receiving OCTs.

The VisaNet system is able to block these OCTs at the BIN level:

- Block all OCTs
- Block online gambling OCTs
- Block Money Transfer OCTs

Prepaid Restrictions

OCTs are **not** permitted for certain types of prepaid accounts where cardholder data is not on file, where the source of loads may be restricted, or where prohibited by law.

Recipient issuers must identify the prepaid BINs or account ranges associated with these account types to Visa so that Visa can block them from receiving OCTs.

Non-U.S. recipient issuers need to ensure that the identified BINs or account ranges are blocked in both V.I.P. and BASE II to avoid receiving OCTs initiated as 0200s and as TC06s.

Visa will proactively block all OCTs to these prepaid product types:

- Non-reloadable prepaid cards
- Government disbursement cards
- Insurance reloadable cards, including all healthcare card products

For the previously listed programs, recipient issuers may opt-in if the program construct allows it.

In the U.S., all other prepaid card programs will be set up to allow the receipt of an OCT. Recipient issuers in these programs must accept OCTs. Issuers may contact their regional Visa representative to request a block on receipt of OCTs if the program meets any of these criteria:

- Program does not include the collection and verification of cardholder information.
- Loads are restricted to a single source (such as a corporation, government agency, or university) and do not allow for consumer loads.
- OCTs are prohibited by local law or regulation.

Contact your regional Visa representative for additional details.

Chapter 5

Exception Processing

This chapter provides acquirers, service providers, merchants, and recipient issuers with information on reversals, adjustments, and disputes.

Acquirers, Service Providers, and Merchants: Reversals and Adjustments

Acquirers, service providers, and merchants are responsible for sender or acquirer, service provider, or merchant system errors.

Acquirers, service providers, and merchants must ensure that they follow appropriate measures to eliminate sender errors (double entry, confirmation screens, etc.) and perform extensive testing to prevent system errors.

Reversals

This section covers rules and restrictions for initiating and sending reversals.

Acquirers, service providers, and merchants are not permitted to initiate reversals of SMS 0200 OCTs to resolve processing errors or disputes. However, there may be VisaNet system-generated reversals for timeout scenarios, but these typically happen within seconds of the initial OCT. For Fast Funds issuers, review the section *Exception Scenarios for Fast Funds Issuers*. In the event of a VisaNet system-generated reversal, the recipient issuer will not receive funds associated with the OCT during settlement. If the issuer has already made funds available before receiving a timeout reversal, the issuer should attempt to retrieve the credit to the recipient's account.

Note: If a connection disruption occurred between Visa and the originating entities (acquirers, service providers, and/or merchants) that prevents Visa from delivering an OCT response message, the originating entities may not know that an OCT completed delivery to an issuer. The connection was lost after the OCT was sent, but before a response message could be sent to the originating entities. In this scenario, the originating entities **must not** send a reversal if it did not receive an OCT response message, but should resubmit the OCT.

If the OCT was completed with the original submission, the repeat submission of the same OCT may result in one of these two scenarios:

- If the original transaction was approved by the recipient issuer and the response sent to the acquirer, a response code **94** in Field 39 would be sent by Visa indicating a duplicate transaction.
- If the original transaction was approved by the recipient issuer, but the response could not be delivered to the acquirer, Visa would have sent a reversal to the recipient issuer. The resubmitted OCT will be rejected by Visa with the reject code **602**. The acquirer should submit the transaction again with a different Retrieval Reference Number in Field 37.

Good Faith Adjustment Management

If an exception scenario arises, acquirers, service providers, and merchants may use Visa Resolve Online (VROL) to address disputes and correct errors.

If funds are sent to an incorrect recipient or an incorrect amount was sent, the acquirer initiates a good faith collaboration request on behalf of the originating entity. The issuer must respond with one of these options by the date specified in the "Respond by" field:

- Accept Full
- Accept Partial
- Decline
- Need More Information

If issuer does not respond by the “Respond by” date or responds with Decline as the option, the acquirer cannot initiate the adjustment.

Note: Acquirers, service providers, and merchants may only send an adjustment to the issuer to recover funds if agreed to as a result of good faith negotiations. If a recipient issuer receives an adjustment that is not part of a good faith agreement, which results in a loss, they should contact Visa or consider filing a compliance issue to address the situation.

Adjustment Considerations

To make an adjustment, when a cardholder attempts to send funds to a recipient, an AFT pull is performed on those funds. The OCT to send the funds is rejected, declined, or expires.

The service provider must ensure funds are returned to the original cardholder.

During an adjustment, if the service provider attempting to process a standalone TC06 is missing the Tran ID, this may result in issuers being unable to match the transaction to the original AFT. This can result in a bad cardholder experience as they wait for the funds to be deposited to their card. The Tran ID field is optional; however, it is key information that helps the issuers connect the two transactions.

Note: Adjustments associated with OCTs must contain a Processing code 02 in Field 3.1 with a Message Reason Code (Field 63.3) value of **2150**.

If VROL is used for OCT adjustments associated with sales tax rebates (refer to Merchant and Third-Party Providers Processing – Sales Tax Reclaim) a Message Reason Code (Field 63.3) value of **5120** must be used.

Specific types of reversals are permitted on domestic prepaid load OCTs in the LAC Region. Issuers in this Region must be prepared to receive reversals for these scenarios. Refer to Prepaid Load OCT Reversals – LAC Region.

Note: Reversals contain Field 104, Dataset IDs 57, and 5F.

Request for Proof of Posting

If an exception scenario arises where the sender relays to the service provider/merchant that the recipient did not receive the funds, the acquirer submits a Request Proof of Posting (RPP) on VROL.

In such scenarios, the issuer must respond to the RPP within five calendar days. In the absence of a response or if issuer responds with a nonposting, the acquirer can send a debit adjustment to the issuer or pull funds back from the issuer. These adjustments must be processed within 30 calendar days of the original transaction.

Prepaid Load OCT Reversals – LAC Region

This section covers rules and restrictions related to prepaid load OCT reversals for the LAC Region.

Load partners and merchants are not allowed to initiate reversals to correct errors or address disputes,¹ but system-generated reversals are permitted on domestic transactions in the LAC Region as long as they take place within seconds of sending the OCT. These outline the types of system-generated reversals that are permitted:

- **Response Stopped at VisaNet:** If VisaNet receives the issuer's authorization response, but is unable to forward it to the merchant, VisaNet will automatically generate a reversal and send it to the issuer.
- **Response Stopped at Merchant:** Similarly, if the merchant is unable to forward the issuer's authorization response to the load partner's system, the merchant may automatically generate a reversal and send it to the load partner and VisaNet.
- **Load Partner Never Receives Response:** If the load partner's device does not receive an authorization response from the merchant and, therefore, times out, the load partner's device may automatically generate a message to notify the merchant that the transaction was not completed at the point of service, resulting in a reversal.

Note: Reversals must contain Field 104, Dataset IDs 57, and 5F.

Exception Scenarios for Fast Funds Issuers

To support Fast Funds, acquirer, service provider, and merchant reversals are not allowed for OCTs initiated as 0200s.

VisaNet, however, may send the issuer one of these messages:

- Reversal advice (when acquirer, service provider, or merchant system becomes unavailable)
- Timeout advice (when issuer response is delayed)
- When a recipient issuer receives a VisaNet reversal or timeout advice, they must act on the advice and should attempt to retrieve the funds from the recipient's account, if the issuer had already posted funds to the recipient account. The scenarios associated with these advices are not common. Issuers will receive advices within seconds of the 0100 or 0200 message. These scenarios are outlined in this table.

¹ Load partners and originating entities may use good faith adjustments to correct errors and address disputes.

Table 34: Fast Funds Exception Scenarios

#	Exception Scenarios	Description	Notes
1.	Acquirer, service provider, or merchant System Becomes Unavailable	Acquirer, service provider, or merchant sends the OCT to the issuer. The recipient makes the OCT funds available in the recipient's account and provides their authorization response to VisaNet. When VisaNet attempts to forward the issuer's authorization response to the acquirer, service provider, or merchant, the acquirer, service provider, or merchant's system is unavailable. VisaNet sends: • Reversal advice to an SMS issuer, or • Reversal request to an Authorization-Only/BASE II issuer	Acquirer, service provider, or merchant must notify the sender that the transaction was not successful. Refer to Transaction Flows for an example of this scenario.
2.	Recipient issuer Response Delay	Acquirer, service provider, or merchant sends the OCT to the issuer. The issuer makes the OCT funds available to the recipient and provides their authorization response to VisaNet but the issuer's response is received outside the response window. VisaNet sends: • Timeout advice to the issuer • Decline to the acquirer, service provider, or merchant (issuer unavailable)	Acquirer, service provider, or merchant must notify the sender that the transaction was not successful. Recipient issuer must act on the timeout advice¹ and attempt to retrieve the funds from the recipient's account. Refer to Transaction Flows for an example of this scenario.

¹ SMS issuers may also receive a reject for this situation.

Issuers – Disputes

The Dispute Resolution rules and processes are outlined in the *Visa Core Rules and Visa Product and Service Rules*.

Refer to the Dispute Resolution section of the *Visa Core Rules and Visa Product and Service Rules* to efficiently correct errors and resolve disputed transactions.

Issuers must be prepared to send OCT dispute and dispute reversals (as applicable), as well as receive OCT dispute responses and dispute response reversals. If a dispute reversal is to be sent, the issuer should send it within one business day of the initial dispute.

Table 35: Examples of Dispute Conditions

Dispute Condition Code	Dispute Situations
12.4 – Incorrect Account Number	This dispute may be used when the transaction or OCT was processed using an incorrect account for either of these situations: • Recipient's account is closed • Recipient's account is not on file
12.6 – Duplicate Processing	A duplicate OCT was submitted
13.8 – Original Credit Transaction Not Accepted	An OCT was not accepted because either: • The recipient refused the OCT • OCTs are prohibited by applicable laws or regulations

Acquirers, Service Providers, Merchants, and Issuers – Dispute Considerations

This section outlines a number of possible dispute scenarios and options for addressing them. Acquirers, service providers, merchants, and recipient issuers should review this information and use it to develop their dispute policies and associated procedures.

Table 36: Dispute Scenario Examples (1 of 4)

#	Dispute Origination	Scenario	Scenario Description	Proposed Liability as Per Visa Rules ¹	Best Practices for Financial Institutions to Mitigate Liability or Handle Error
1	Acquirer, service provider, merchant or receiving issuer	Sender or recipient enters incorrect card information.	At the time of enrollment or while adding card details, the sender or recipient enters incorrect card information.	Acquirer, service provider, merchant	- At the time of enrollment and transaction initiation, validate that the payment credential is accurate by using mechanisms such as Mod-10 verification, AVS, etc. - Match the sender or recipient name with cardholder name and consider including, additional verification steps in case of mismatch.
2	Acquirer, service provider, merchant	Sender error	The sender realizes that they sent the incorrect amount to the recipient, sent the funds to the incorrect recipient (selects incorrect contact/email address), or sends a duplicate fund request	Acquirer, service provider, merchant ²	- Before authorizing the transaction, add a confirmation screen that allows the sender to confirm/verify the details of the transaction before submission. - Disclose sender liability for transaction error as a precondition for submission/authorization of transaction. Where the sender disputes the transaction, in some

Table 36: Dispute Scenario Examples (2 of 4)

#	Dispute Origination	Scenario	Scenario Description	Proposed Liability as Per Visa Rules ¹	Best Practices for Financial Institutions to Mitigate Liability or Handle Error
					cases, the dispute can be resolved based on good faith negotiations and support from the recipient issuer. There are two options: Option 1: Acquirer, service provider, merchant may contact recipient issuer to determine if an adjustment can be made. If recipient issuer agrees to a good faith adjustment, merchant may send adjustment. Option 2: Sender may contact the recipient and then the recipient may contact the recipient issuer to resolve. The recipient issuer could dispute an OCT transaction.
3	Acquirer, service provider, merchant	Acquirer, service provider, merchant processing error (Sender bank/third-party provider).	Acquirer, service provider, merchant realizes that it sent the wrong amount to the recipient or sent the funds to the wrong recipient (wrong payment credential).	Acquirer, service provider, merchant	- Establish good faith adjustment procedures to contact a recipient issuer in the event of an error. - Upon approval by the recipient issuer, submit transactions for dispute resolution using Visa Resolve Online. - Acquirer, service provider, merchant is liable, recipient issuer would receive a good faith adjustment from the acquirer, service provider, merchant related to obtaining the OCT funds.

Table 36: Dispute Scenario Examples (3 of 4)

#	Dispute Origination	Scenario	Scenario Description	Proposed Liability as Per Visa Rules ¹	Best Practices for Financial Institutions to Mitigate Liability or Handle Error
4	Receiving issuer	Recipient does not receive funds due to non/late posting.	Sender or recipient relays that recipient has not received the funds.	Recipient issuer	Where Fast Funds is required, recipient issuer is required to make the funds available in 30 minutes or less. If the recipient does not post the funds in 30 minutes or less, or delays the posting, acquirers, service providers, merchants can follow the Non/Late Posting Process. The process allows acquirer, service provider, and merchant to pull funds back from the recipient issuer. U.S. Domestic Only: To enhance the cardholder experience, effective 12 April 2025, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.
5	Receiving issuer	Recipient issuer system error.	Sender or recipient relays that recipient has not received the funds or received the wrong amount.	Recipient issuer	Acquirers, service providers, merchants can follow the Non/Late Posting Process. The process allows the acquirer, service provider, merchant to pull funds back from the recipient issuer.

Table 36: Dispute Scenario Examples (4 of 4)

#	Dispute Origination	Scenario	Scenario Description	Proposed Liability as Per Visa Rules ¹	Best Practices for Financial Institutions to Mitigate Liability or Handle Error
6	Receiving issuer	Recipient (customer) refuses receipt.	Recipient contacts the recipient issuer and relays that he or she does not want to accept the funds.	Recipient issuer	Recipient issuer is required to dispute the OCT (as credit is not processed, recipient refuses credit) to the acquirer, service provider, and merchant.
8	Receiving issuer	Recipient account does not exist or is closed.	The funds leave the sender's account and the recipient issuer approves the transaction, however, recipient issuer cannot post the funds as the recipient account is closed or does not exist.	Recipient issuer	The recipient issuer is required to dispute the OCT to the acquirer, service provider, and merchant.

1 Liability is based on Visa's operating rules and does not constitute any regulatory or legal advice.

2 Acquirer, service provider, or merchant may decide to pass on the liability to the sender

Non/Late Posting Process

For OCT-based services, the recipient issuer is required to make funds available to the recipient's account either:

- In 30 minutes or less of approving the 0100 or 0200 OCT when the issuer participates in Fast Funds.

U.S. Domestic Only: To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.

- Within two business days of receiving the 0200 message or TC06 when the issuer does not participate in Fast Funds.

Process for Complaints Related to Non-Posting of Funds

This section outlines the process that acquirers, service providers, and merchants must follow to address a complaint for the non-receipt of funds (for example, the recipient either did not receive the funds or did not receive the funds within the required time frame):

- The acquirer, service provider, or merchant receives a complaint from a sender that the recipient either did not receive funds or received funds late.
- The acquirer, service provider, or merchant may submit a request over Visa Resolve Online (VROL) to the recipient issuer for proof of posting. This request will be of non-financial nature and is intended for compliance.
- The recipient issuer should respond within five calendar days.
- If the recipient issuer does not respond within five calendar days, the acquirer, service provider, or merchant can send an OCT adjustment message to the issuer through VROL or through their existing process. This request will be of a financial nature and serves to pull the OCT funds back from the issuer to the acquirer, service provider or merchant. This does not require good faith collaboration. This adjustment must be processed and settled within 30 calendar days.

Note:

If the recipient issuer confirms the status of the OCT by responding to the Request for Proof of Posting within five calendar days, but the originating entity needs to request an adjustment, the adjustment can only be processed through the good faith collaboration process if both parties agree to it.

The adjustment must contain a Message Reason Code (Field 63.3) with a value of **2150** and must be in the same amount and currency as the original OCT. If the acquirer, service provider, or merchant sends an adjustment, the acquirer, service provider, or merchant must return the funds to the sender once the adjustment has been processed.

Note: The processing code needs to be the debit adjustment processing code, as opposed to the OCT processing code.

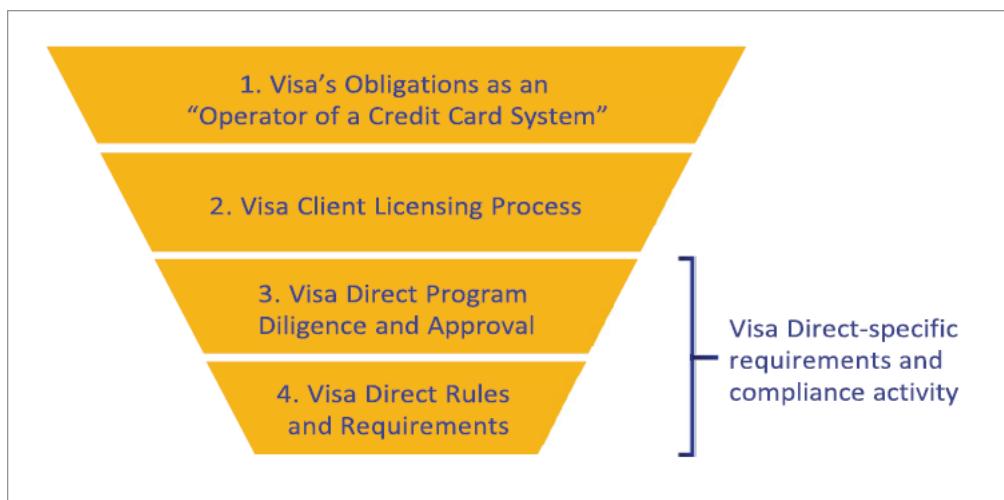

Chapter 6

Visa Direct Risk Management Framework

Visa Direct was built with speed, security, and flexibility in mind, with a focus on controls to help minimize the risks associated with push payments and OCTs.

Visa's multi-layer risk approach is intended to give participants confidence in the Visa Direct platform.

There are four layers of the risk management framework:

Visa's Obligations as an "Operator of a Credit Card System"

In the U.S., Visa must comply with the provisions of the Bank Secrecy Act (BSA) and USA Patriot Act that are applicable to an "operator of a credit card system."

As such, Visa is required to have in place:

- AML/ATF Policy, Procedures, and Internal Controls
- Independent Testing
- A designated AML/ATF and Sanctions Officer
- Employee Training

Visa Client Licensing Process

Visa has a rigorous process for evaluating issuers and acquirers (clients) before granting licenses to participate directly in the Visa payment system, including completing:

- Financial and regulatory compliance diligence on each prospective Visa client.
- Evaluation of key country risk factors based on guidance from OFAC, FinCEN, IMF, Transparency International CPI, FATF Mutual Evaluations, Presidential Major Drug Transit/Producing List.
- Screening for and prohibiting business dealings with FIs located or domiciled in sanctioned countries (currently, Cuba, Iran, Syria, North Korea, regions of Crimea, Donetsk People's Republic, and Luhansk People's Republic) or are owned by those sanctioned countries' governments.
- Screening of clients and their owners/directors against OFAC SDN list, both at the time of registration and on a periodic, ongoing basis.

Visa clients are bound by Visa Rules, including, but not limited to, requiring clients to assist Visa in guarding against card issuance and merchant acquiring in circumstances that could facilitate money laundering or terrorist financing.

Visa Direct Program Diligence and Approval

New Visa Direct programs must be registered, vetted, and approved by Visa in order for acquirers or merchants to start using OCTs. Acquirers must submit a Program Information Form (PIF) that includes information on:

- Program details and geographic scope, including funding sources, domestic or cross-border, and target destination countries.
- Compliance measures: licensing details, Know Your Customer (KYC) practices, screening practices, and AML Policies.
- Risk controls: transaction limits, velocity controls, volume estimates for credit settlement risk assessment.

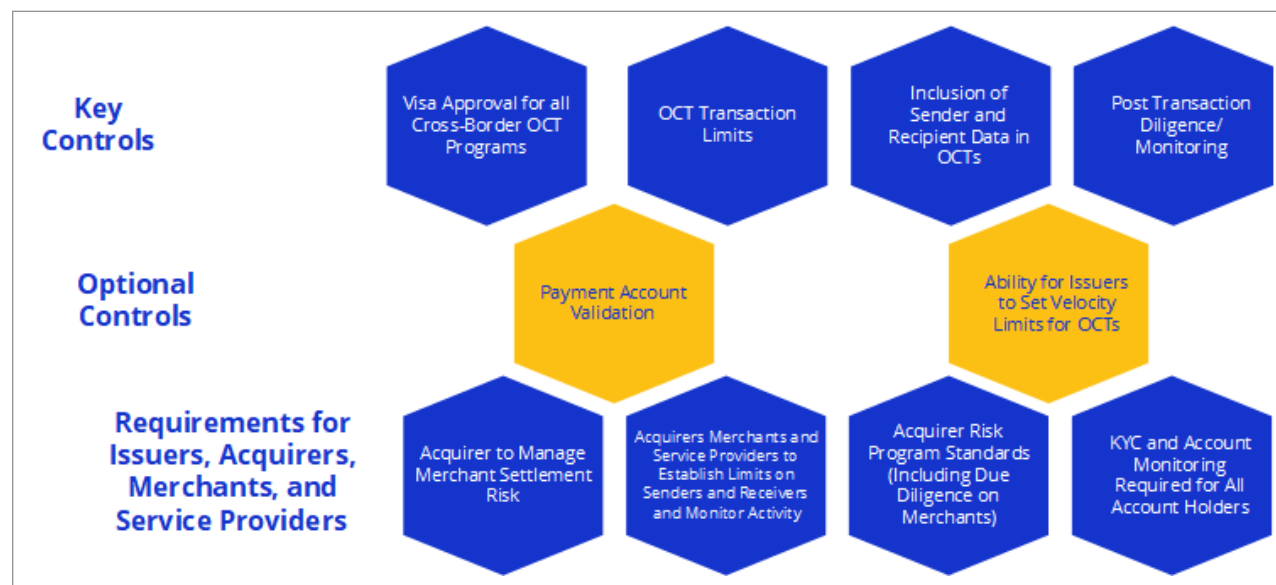

Key Controls

Comprehensive risk management is a layered approach where all participants play a role in applying key controls. Examples of the Visa Direct key controls are in this table and figure.

Table 37: Key Controls for Managing Risk

Due Diligence	Acquirers are required to conduct due diligence of their merchants and service providers. Visa Direct programs must comply with applicable law and non-financial institutions that offer Money Transfer services must have appropriate money transmitter licenses as required under local law.
Know Your Customer (KYC)	Acquirers must require merchants and service providers to complete KYC on their customers as required under applicable local law. Issuers are required to complete KYC on their cardholders as required under applicable local law.
Anti-Money Laundering	Programs must comply with applicable laws and regulations and AML/ATF, fraud monitoring, sanctions screening, suspicious activity monitoring requirements. Acquirers are required to implement an AML/ATF program consistent with domestic and international requirements (for example, EU and U.S.).
Transaction Controls and Monitoring	Acquirers must require merchants and service providers who originate OCTs to establish controls and monitor transaction activity for signs of fraud and money laundering, as well as misuse of the OCT for the payment of goods and services.
Compliance and Risk Management	Visa Direct uses a multi-layer compliance and risk management approach, requiring key stakeholders (merchants, service providers, acquirers, and issuers) to perform critical activities that help minimize risks associated with these transactions.

Visa Direct Key Controls Overview

Sanctions Screening

On cross-border Money Transfer transactions and domestic Money Transfer transactions for countries without National Net Settlement service (NNSS), Visa sanctions screens the sender and recipient for its own compliance purposes.

Chapter 7

Regulatory Compliance and Legal Considerations

This chapter provides regulatory and legal requirements, and considerations for the OCT-based programs.

Information provided here does not constitute or replace legal advice and should be considered informational only. It is intended to be a starting point for legal reviews of a funds transfer program and is not comprehensive. By offering a funds transfer program, Visa does not imply regulatory approval of the acquirer, service provider, merchant's, or issuer's funds transfer services. Acquirers, service providers, merchants, and issuers should seek their own legal advice when implementing a funds transfer program.

Regulatory Compliance

Acquirers, service providers, merchants, and recipient issuers must satisfy the relevant legal and regulatory requirements in their jurisdiction of operation for the origination and receipt of OCTs.

This includes compliance with applicable sanctions and Know Your Customer (KYC), anti-money laundering, and anti-terrorist financing laws.

If an acquirer or recipient issuer uses a Third Party Agent (TPA), the TPA must follow Visa Rules related to working with such agents.

Many jurisdictions may require that acquirers, service providers, merchants, and issuers report suspicious activity, examples of which might include, but are not limited to, excessive payment to an account, transfers above a defined maximum amount, or payments made to or from particular geographical areas. Acquirers, service providers, merchants, and issuers should be aware of reporting requirements and other mechanisms required to adhere to local anti-money laundering and anti-terrorist financing laws.

Key Standards and Legislation

This section provides acquirers, service providers, merchants, and issuers with an overview of select international standards and U.S. laws that they need to be familiar with, including, but not limited to, those related to Payment Card Industry Data Security Standards (PCI DSS), anti-money laundering (AML), and anti-terrorist financing (ATF):

- **International Money Laundering Information Network Website** – Details of relevant standards and legislation can be found at the International Money Laundering Information Network website: <https://www.imolin.org/>

Originating entities and issuers will need to comply with applicable money laundering regulations to counter the risk that the Visa Direct service is misused for the purposes of money laundering and terrorist financing. The obligations typically include monitoring transactions, identifying and reporting suspicious transactions, and ensuring there is compliance with applicable domestic and international sanctions laws.

- **Financial Action Task Force (FATF)** – FATF publishes recommendations designed to prevent the financial system from being used for money laundering and terrorist financing. The recommendations are being incorporated into national and regional laws in different ways, to accommodate for the variety of constitutional structures and national circumstances. Refer to <https://www.fatf-gafi.org>
- **Payment Card Industry Data Security Standard (PCI DSS)** – This is a worldwide information security standard assembled by the Payment Card Industry Security Standards Council (PCI SSC). The standard applies to all organizations that hold, process, or pass cardholder information from any card branded with the logo of one of the card brands. Refer to: <https://www.pcisecuritystandards.org/>
- **Bank Secrecy Act** – The U.S. Bank Secrecy Act of 1970 (or BSA, or otherwise known as the Currency and Foreign Transactions Reporting Act) requires U.S financial institutions to assist U.S. government agencies to detect and prevent money laundering. Specifically, the act requires financial institutions to keep records of cash purchases of negotiable instruments, file reports of cash transactions exceeding US\$10,000.00 (daily aggregate amount), and to report suspicious activity that might signify money laundering, tax evasion, or other criminal activities.

- **USA PATRIOT Act** – The purpose of the USA PATRIOT Act, which amended the Bank Secrecy Act, is to deter and punish terrorist acts in the U.S. and around the world, to enhance law enforcement investigatory tools, and other purposes, some of which include:
 - To strengthen U.S. measures to prevent, detect, and prosecute international money laundering and financing of terrorism.
 - To require all appropriate elements of the financial services industry to report potential money laundering.
- **Office of Foreign Assets Controls (OFAC)** – Under the U.S. Department of the Treasury, OFAC administers and enforces economic and trade sanctions based on U.S. foreign policy and national security goals against targeted foreign countries and regimes, terrorists, international narcotics traffickers, those engaged in activities related to the proliferation of weapons of mass destruction, and other threats to the national security, foreign policy or economy of the United States.

Acquirers, service providers, merchants, and issuers may need to block transfers received from and sent to specified countries and persons. Acquirers, service providers, and merchants must be prepared to provide recourse for exception items resulting from transactions rejected due to a recipient institution's inability to perform the necessary checks to comply with these programs.

URL: <http://www.treasury.gov/about/organizational-structure/offices/Pages/Office-of-Foreign-Assets-Control.aspx>

- **Data Privacy and Protection** – Acquirers, service providers, merchants, and issuers must comply with applicable data privacy legislation, such as the Gramm-Leach-Bliley Act, which may place certain limitations on financial institutions to protect the confidentiality, security, and integrity of consumer information. Originating entities and issuers will be subject to any applicable obligations under the European Union's General Data Protection Regulation.
- **Electronic Funds Transfer (EFT) Act/Regulation E** – This U.S. statute and regulation establishes the rights and liabilities of consumers as well as the responsibilities of all participants in EFT activities. It outlines the steps that consumers and financial institutions need to take if the consumer recognizes an error related to an EFT on their statement, as well as consumer and financial institution liability related to stolen or lost cards.
- **Truth in Lending Act/Regulation Z/Card Act** – This U.S. statute and regulations govern certain aspects of the granting of credit by financial institutions to consumers. Certain provisions of Truth in Lending Act and Regulation Z apply to credit cards and may be applicable to OCTs sent to Visa credit accounts.

- **Fair Credit Reporting Act** – This U.S. act governs the assemblage, evaluation, maintenance, and dissemination of information on consumers that has been collected for the purpose of evaluating their eligibility for credit, insurance, employment, or certain other transactions initiated by such consumers. Compliance with this act is required when a consumer report is used to determine the eligibility of a Visa cardholder to send or receive Money Transfers or otherwise participate in a Money Transfer program.
- **Cross-Border Payments** – Under the EU’s cross-border payments and Single Euro Payments Area (SEPA) legislation, originating entities and issuers are prohibited from charging more for cross-border payments in certain currencies than for a corresponding domestic payment in the same currency. In addition, payment service providers are subject to rules on credit transfer and direct debit transactions in Euro.
- **Conduct** – The Payment Services Directive contains various conduct requirements including contractual disclosure and operational requirements. Applicability of these provisions to originating entities and issuers will depend on the types of payment services it will carry on and its contractual arrangements with its clients (in particular, whether the payment service provider will have direct contact with payment services users).

Appendix A

Original Credit Transaction Data Elements and Processing Rules

This appendix provides the Original Credit Transaction (OCT) data elements and processing rules for OCTs initiated as 0200 full financial messages.

Field 43 and 104 may contain relevant data as required by the wire transfer regulations. This is particularly relevant for all EEA countries and the UK (and Gibraltar, where relevant). These tables are presented in this appendix.

Note: For API mapping of V.I.P. fields, refer to [API Formats](#).

Note: Regulation (EU) 2015/847 of the European Parliament and of the Council of 20 May 2015 on information accompanying transfers of funds.

- **OCT Data Elements** – Provides the OCT data element requirements for each type of OCT (Money Transfer, funds disbursements, prepaid load, and credit card bill payment), along with the associated VisaNet edits. This appendix focuses on the data elements that have unique requirements for OCTs. For the latest information on these fields, refer to the V.I.P. and BASE II system manuals.
- **Source of Funds** – Outlines the values for Field 104, Dataset ID 5F, Tag 08. This tag provides issuers with the source of funds used to fund the OCT (for example, Visa Credit, Visa Debit, Visa prepaid, or cash). Issuers can use this information to assist them with their authorization decision.
- **OCT Processing Rules** – Provides the OCT data element processing rules for each type of OCT.
- **V.I.P., BASE II, and Edit Package Decline Response and Reject Reason Codes** – Provides an overview of the decline response and reject reason codes. For a complete listing of Response Codes, refer to the *Full Service POS Online Messages – Technical Specifications*.

Note: RC 85 is no longer a valid response code on OCTs.

- **Other BASE II Return Reason Codes and Edit Package Reject Reason Codes**

Note: This appendix outlines the VisaNet OCT data elements and processing rules. Acquirers, service providers, and merchants using the Visa Direct APIs should refer to the *Visa Developer Center*. <https://developer.visa.com/> https://developer.visa.com/capabilities/visa_direct.

This appendix **does not include all the data elements required in the OCT**; it only highlights those data elements that have unique data. For all other data elements and for more detailed information on existing VisaNet data elements, refer to the *Full Service POS Online Messages – Technical Specifications*.

OCT Data Elements

Field Format can be:

- A (Alpha, EBCDIC)
- AN (Alphanumeric, EBCDIC)
- ANS (Alphanumeric/Special Characters, EBCDIC)
- B (Binary Value)
- BCD (Binary-Coded Decimal Notation, 4-bit = Unsigned Packet)
- Bit String
- N (Numeric, 1-byte per Character)
- UN (Unpacked Numeric, 1-byte per Character)

Table 38: OCT Field Data Elements (1 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 2 Primary Account Number Length: Variable 1-byte binary and up to 19 N, 4-bit BCD (unsigned packed); maximum 11 bytes	TCR 0 Account Number Position: 5 - 20 Length: 16 Format: UN	Recipient's payment credential.	Recipient's payment credential.	
Field 3 (Row 1 of 2) Processing Code Length: Fixed 6 N, 4-bit BCD (unsigned packed); 3 bytes	Not Applicable	Must contain a value of 26 (positions 1 - 2). Brazil: Position 3 - 4 contains a default value of 20 for a combo card. Positions 5 - 6 contain 00. Note: Positions 3 - 6 contain 0000 for all countries but Brazil.	Must contain a value of 26 (positions 1 - 2). For Funds Disbursement and Prepaid Load Brazil: Position 3 - 4 contains a default value of 20 for a combo card. Positions 5 - 6 contain 00. Note: Positions 3 - 6 contain 0000.	V.I.P. Edit: If an acquirer, service provider, merchant sends an OCT to a recipient issuing identifier that is blocked from receiving them, V.I.P. will decline the transaction with the response code value of 93 (Transaction could not be completed - Violation of law) (unless it is being sent to an embargoed country; in this case, a response code value of 62 is used). V.I.P. Edit (Money Transfer OCTs): For SMS issuers, if the PCR cannot accept a Processing Code of 26, V.I.P. will decline the OCT with Response Code 57.

Table 38: OCT Field Data Elements (2 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 3 (Row 2 of 2) Processing Code Length: Fixed 6 N, 4-bit BCD (unsigned packed); 3 bytes	Not Applicable	To support the expanded Visa Prepaid Healthcare Product in Belgium, Brazil, Luxembourg, and Portugal : Positions 3 -4, implement the value 70 (Employee benefit), Account Type (From).	For Funds Disbursement: To support the expanded Visa Prepaid Healthcare Product in Belgium, Brazil, Luxembourg, and Portugal : Positions 3 -4, implement the value 70 (Employee benefit), Account Type (From).	V.I.P. Edit (Non-Money Transfer OCTs): For SMS issuers, if the PCR cannot accept a Processing Code of 26, V.I.P. changes the Processing Code of 26 to 20. Brazil: Some issuers in Brazil Issue "Combo Cards" that have both a checking/prepaid account, as well as a credit line linked to the same card. For such cards, it is important to send "20" in position 3 - 4, so that the OCT deposits funds into the checking/prepaid account. If the acquirer does not send the value of 20, the system will default position 3 - 4 to 20 if the card range is identified as a Combo Card. Note: V.I.P will decline OCTs with account type credit on Combo cards issued in Brazil, if the issuer has chosen to decline these transactions.

Table 38: OCT Field Data Elements (3 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 4 (Row 1 of 2) Amount, Transaction Length: Fixed 12 N, 4-bit BCD (unsigned packed); 6 bytes	TCR 0 Source Amount Positions: 77 - 88 Length: 12 Format: UN	Domestic and Cross-Border Limit: Must be less than or equal to USD \$25,000. Except domestic U.S., Canada, and EU: U.S. \$50,000.	For Funds Disbursement BAIs and Credit Card Bill Payment: - Domestic must be less than or equal to USD \$125,000. - Cross-Border must be less than or equal to USD \$50,000. For Prepaid Load: Same as Money Transfer. Note: Although USD \$50,000.00 is the VisaNet limit, individual country programs may impose lower limits for prepaid load OCTs.	All OCTs except Money Transfer: Unless otherwise noted, the VisaNet system limit per transaction is USD \$50,000.00. VisaNet Edits (Non-Money Transfer): 0200 messages that exceed the described limits are declined with response code 13 (invalid amount). TC06 transactions exceeding the limit are returned with response code D3 (the U.S. dollar value of a transaction exceeds the maximum amount allowable). This edit will be applied based on the limits listed. V.I.P. Edit (Money Transfer): On Money Transfer OCTs (Processing Code 26 and BAI, AA, or PP), if the amount is greater than USD \$25,000, V.I.P. will decline the transaction with the response code value of 61 (Exceeds amount limit) (This edit will be applied based on the limits listed).

Table 38: OCT Field Data Elements (4 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 4 (Row 2 of 2) Amount, Transaction Length: Fixed 12 N, 4-bit BCD (unsigned packed); 6 bytes	TCR 0 Source Amount Positions: 77 - 88 Length: 12 Format: UN			V.I.P. Edit (OCT) - Velocity Limits: On OCTs, if transaction exceeds an issuer-defined velocity limit (1-day, 7-day, or 30-day amount or count limit) and issuer option is to decline when a limit is exceeded, V.I.P. will decline the transaction with the response code value of 61 (exceeds amount limit) or 65 (exceeds count limit). Note: Response Code 61 is used if both an amount and count limit are exceeded.
Field 14 Date, Expiration Length: Fixed 4 N, 4-bit BCD (unsigned packed); 2 bytes Format: yymm	Not Applicable			The expiration date is an optional field for acquirers, service providers, and merchants; issuers must not decline OCTs if expiration date is not included. If it is present in the OCT, the information must be accurate and not expired; the transaction will be forwarded to the issuer with the expiration date. Issuers need to be prepared to receive OCTs with or without the expiration date.

Table 38: OCT Field Data Elements (5 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 18 Merchant Type Length: Fixed 4 N, 4-bit BCD (unsigned packed); 2 bytes	TCR 0 Positions: 133 - 136 Merchant Category Code Length: 4 Format: UN	AA or PP: 4829 or 6012. LA: 6012, 6211, 6051 WT: 4829 U.S. Domestic: If an OCT is initiated by a nonbank, 4829 is used. If an OCT is initiated by a bank, 6012 is used.	BB , BP, FD, LO, MI MD: The MCC associated to the merchant, acquirer, or service provider. Refer to the <i>Merchant Data Standards Manual</i> for information on MCCs. (For BAI MD - Merchants settlements: MCC should be 6012 for acquirers who are sending settlement payments to merchants and 4829 - for payment facilitator sending settlement payments to merchants.) GD: 9399, 9402, 9405, 9222, 9211, 9311 GP: 7800, 7802 (U.S. only), 7995, 9406 (non-U.S. only) PD: 8931 OG: 7800, 7801, 7802 (U.S. only), 7995, 9406 (non-U.S. only) TU: 6012 or 6540 CP: 4829 or 6012	Refer to <u>Business Application Identifier (BAI)</u> , <u>Merchant Category Code (MCC)</u> , and <u>Use Cases</u> for a full list of BAI and MCC usage. V.I.P. Edit: OCTs may be initiated at ATMs, but a Merchant Category Code of 6011 must not be used. If an MCC of 6011 is used on an OCT, it is declined with Response Code 57. BASE II returns TC06 OCTs with MCC 4829 or 6012 with Reason Code 02 (The transaction type of the source acquiring identifier or center is invalid). U.S. Domestic: Based on the type of services, combine MCC 6012 with a valid BAI. - Bank-initiated P2P services can use a combination of BI or PP and 6012. - Nonbank offered P2P services must use a combination of PP and 4829.

Table 38: OCT Field Data Elements (6 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 22 Point-of-Service Entry Code Length: Fixed 4 N, 4-bit BCD (unsigned packed); 2 bytes	TCR 0 POS Entry Mode Positions: 162-163 Length: 2 Format AN			Valid values include: • 01 Manual (key entry) • 02 Magnetic stripe read • 05 Integrated chip card read Note: For Field 22, value 05 should be used only in countries in CEMEA. • 10 Credential on file: Merchant initiates transaction for cardholder using credentials stored on file or for consumer-initiated transactions using credentials stored on file. • 90 Magnetic stripe read For all valid values and for complete details on these fields, refer to the <i>Full Service POS Online Messages – Technical Specifications</i>. Note: Acquirers must select the appropriate value for card present or card not present transactions. If the transaction data is not accurate, Visa will charge Data Integrity Fees on the acquirer.

Table 38: OCT Field Data Elements (7 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 23 Card Sequence Number Length: Fixed 3 N, 4-bit BCD (unsigned packed); 2 bytes	TCR 7 Chip Card Transaction Data Card Sequence Number Positions: 7 - 9 Card Length: 3 Format: UN			Acquirers, service providers, and merchants in South. Africa, Kenya, and Nigeria may send in domestic OCTs. Issuers in those countries must be prepared to receive this field in domestic OCTs. Recipient issuers in the Europe and U.S. Regions, with domestic OCTs containing BAI values of CD or GP (other than online gambling), receive this field if it is present in the OCT sent by the acquirer. The field is also sent, if it is present in the OCT sent by the acquirer, in cross-border OCTs containing a BAI value of GP to recipient issuers in the Europe Region that support cross-border OCTs.

Table 38: OCT Field Data Elements (8 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 25 Point-of-Service Condition Code Length: Fixed 2 N, 4-bit BCD (unsigned packed); 1 byte	Not Applicable	Contains the POS Condition Code applicable to the access channel.	Contains the POS Condition Code applicable to the access channel.	Valid values include: 59 indicates an e-commerce transaction. 01 indicates a cardholder not present transaction 05 indicates a cardholder present, card not present transaction. Note: The value 05 should not be used for online merchants, including online gambling. For all valid values and for complete details on these field, refer to the <i>Full Service POS Online Messages – Technical Specifications</i> . Note: Acquirers must select the appropriate value for card-present or card-not-present transactions. If the transaction data is not accurate, Visa will charge Data Integrity Fees on the acquirer.

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 38 Authorization Identification Response Length: Fixed 6 AN, EBCDIC; 6 bytes	TCR 0 Authorization Code Positions: 152 - 157 Length: 6 Format: AN			This existing field contains the authorization identification response from the original account verification request.
Field 39 Response Code Length: Fixed 2 AN EBCDIC; 2 bytes	TCR 5- Payment Service Data Authorization Response Code Positions: 35 - 36 Length: 2 Format: AN			V.I.P. Edits (All OCTs): Refer to V.I.P. Decline Response Codes

Table 38: OCT Field Data Elements (27 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 42 Card Acceptor Identification Code Fixed Length 15 ANS, EBCDIC, 15 bytes	Not Applicable	Must contain a unique identifier for the merchant.	For Funds Disbursement: Must contain a unique identifier for the merchant or government entity that is disbursing funds to a Visa account holder. For Prepaid Load and Credit Card Bill Payment: Must contain a unique identifier for the merchant.	The unique CAID from the original transaction message is required in any subsequent messages, including reversals, disputes, and dispute responses. This value does not appear on the cardholder statement, but used by Visa internally for processing and tracking purposes. V.I.P. Edits: This field must contain a nonzero value. If this value is missing, contain all spaces or all zeros, Visa rejects the transaction message. For more information on formatting conventions, refer to Formatting Conventions for CAID and Card Acceptor Name fields .

Table 38: OCT Field Data Elements (28 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 43 (Row 1 of 3) Card Acceptor Name/ Location Positions: 1 - 25 Merchant Name Length: Fixed 40 ANS, EBCDIC; 40 bytes	TCR 0 Merchant Name Positions: 92 - 116 Length: 25 Format: AN	All Cross-Border: Must contain the sender name in the format: Merchant name abbreviation *Sender name U.S, Europe Domestic, and Cross-Border: Must contain Merchant name and Sender name in the format: Merchant name abbreviation *Sender name Other Domestic: It is recommended that it contains the sender's name; additionally, may also include the name of the Money Transfer provider, the name of the merchant, or a generic identifier such as "Money Transfer."	For Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MI, OG, PD, and RP): Contains the name of the merchant or government entity sending the Funds Disbursement. For BAI - MD/merchant settlement: this needs to contain the name of the acquirer or payment facilitator that is sending settlement payments to the merchant MCCs: 6012 - Acquirers sending settlement payments to merchants 4829 - Payment facilitator sending settlement payments to merchants.	This information will appear on the cardholder's statement and helps the cardholder identify the transaction and avoids unnecessary calls by the cardholder to their issuer to help identify the transaction. V.I.P Edit: This is a required field and if the value is missing or has invalid values (only spaces), Visa rejects the transaction message. Money Transfer Field Format (required for U.S. and Europe; strongly recommend for all other countries): The Card Acceptor Name field must contain the "Doing Business As" (DBA) name or abbreviation of the merchant (1 - 4 characters, abbreviate when longer than 4 characters) and be the name most recognizable to the cardholder in addition to the sender's name. The Merchant Name field must conform to this format:

Table 38: OCT Field Data Elements (29 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 43 (Row 2 of 3) Card Acceptor Name/ Location Positions: 1 - 25 Merchant Name Length: Fixed 40 ANS, EBCDIC; 40 bytes	TCR 0 Merchant Name Positions: 92 - 116 Length: 25 Format: AN	Note: Sender's name must be populated using the Latin (i.e., English) character set.	• Prepaid Load, contains one of these: Name of the load partner providing the reload service, or bank-designated service name, if offered over bank channels. • Credit Card Bill Payment, contains one of these: Name of the entity providing the credit card bill payment service, or bank-designated service name, if offered over bank channels.	Format Field Position Data Pos. 1 - 4: Merchant Name or abbreviation Pos. 5: Asterisk (*) Pos. 6 - 25: Sender Name Example: XYZB*Jane Doe For bank-initiated P2P Money Transfer programs facilitated via a service provider or processor, Visa recommends that an abbreviation of the sender bank's name be used. Recommendations for abbreviations include: • If a bank is publicly traded, the ticker symbol should be used as the abbreviation. • If the bank is not publicly traded, either the first four letters of the institution name or the first letter of each word in the institution name can be used; for example, – Bank of America (publicly traded) would be abbreviated as BOA – First National Bank might be abbreviated as FNB

Table 38: OCT Field Data Elements (30 of 149)

Field 43 Card Acceptor Name/ Location Positions: 39 - 40 Country Code Length: Fixed 40 ANS, EBCDIC; 40 bytes	TCR 0 Merchant Country Code Positions: 130 - 132 Length: 3 Format: AN	Contains the 2-character alpha country code of the merchant's location.	Contains the 2-character alpha country code of the merchant's location.	Refer to the <i>Full Service POS Online Messages – Technical Specifications</i> for the details of this field. This is an existing field that contains the two-character country code of the merchant.
Field 44.1 Response Source/ Reason Code Length: Fixed 1 ANS, EBCDIC; 1 byte	TCR 1 - Additional Data Authorization Source Code Position: 128 Length: 1 Format: AN	Contains the response source/ reason code that identifies the source of the Field 39 response decision (example, whether the issuer responded or Visa responded on the issuer's behalf).	Contains the response source/ reason code that identifies the source of the Field 39 response decision (example, whether the issuer responded or Visa responded on the issuer's behalf).	Visa provides the response source/ reason code in this field. Refer to the <i>Full Service POS Online Messages – Technical Specifications</i> for details.

Table 38: OCT Field Data Elements (34 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 44.3 Additional Token Response Information Length: Fixed 1 AN, EBCDIC; 1 byte	TCR 1 - Additional Data Additional Token Response Information Position 122 Length: 1 Format AN			This field will contain a value used to identify transactions eligible for token services. Valid values: • Space (Not applicable) • 1 (Token program) Effective with the April 2022 release, acquirers must support receiving the token program value in V.I.P. messages and sending it in clearing transactions. Note: Visa recommends that endpoints not send Field 44.3 in request and response messages. It should only be sent in acquirer advices used for the clearing of an authorized transaction.

Table 38: OCT Field Data Elements (35 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 45 Track 1 Data Length: Variable 1 byte, binary + Format: 76 ANS, EBCDIC; maximum 77 bytes	Not Applicable			For details on this field, refer to <i>Full Service POS Online Messages - Technical Specifications</i> . Note: This is an optional field used when the conditions are met. Note: Recipient issuers in the Europe and U.S. Regions, with domestic OCTs containing BAI values of CD or GP (other than online gambling), receive this field if it is present in the OCT sent by the acquirer. The field is also sent, if it is present in the OCT sent by the acquirer, in cross-border OCTs containing a BAI value of GP to recipient issuers in the Europe Region that support cross-border OCTs.

Table 38: OCT Field Data Elements (36 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 48 Usage 37 Original Credit Transaction (OCT) Length: Variable 1 byte, binary + 18 ANS, EBCDIC; maximum 19 bytes	Not Applicable	Issuers supporting OCTs must support this field.	Issuers supporting OCTs must support this field.	This subfield will contain a value of binary 11 when the OCT Activity Check Result field is present. This field will contain a value of binary 10 when the OCT Activity Check Result is not present, but a sanctions screening score is present.
Field 48 Usage 37 Position: 1 - 3 Original Credit Transaction (Field Identifier) Length: 3 Format: AN Byte: 2 - 4	Not Applicable	Issuers supporting OCTs must support this field.	Issuers supporting OCTs must support this field.	This subfield will contain a value of OCT .

Table 38: OCT Field Data Elements (37 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 48 Usage 37 Position: 4 - 7 Reserved, Set to Spaces Length: 4 Format: AN Byte: 5 - 8	Not Applicable	Issuers supporting OCTs must support this field.	Issuers supporting OCTs must support this field.	When subsequent positions in this field are present, positions 4 - 7 are present and filled with spaces.
Field 48 Usage 37, Position: 8 - 10 Sanctions Screening Scoring Results Code Length: 3 Format: AN Byte: 9 - 11	Not Applicable	Issuers supporting OCTs must support this field. This field is populated by Visa for Canada and U.S. issuers		This field contains the Sanctions Screening score on cross-border transactions when sanctions screening scoring is required for the recipient issuer's country. This subfield will contain a code from 000 through 100 that indicates the results of sanctions screening scoring when it has been successfully completed. Issuers can use this information in their authori- zation decision. Note: Effective 31 July 2025 , Visa will not populate this field.

Table 38: OCT Field Data Elements (38 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 48 Usage 37, Position: 11 OCT Activity Check Result Length: 1 Format: AN Byte: 12	Not Applicable	Issuers supporting OCTs must support this field. This is populated by Visa if the issuer is participating in activity limit checks.	Issuers supporting OCTs must support this field. This is populated by Visa if the issuer is participating in activity limit checks.	This subfield will contain OCT activity check results for issuers that have elected to <i>not</i> have Visa decline a transaction on their behalf when a count or amount limit has been exceeded. Valid values are: 1 = 1-day count or amount exceeded 2 = 7-day count or amount exceeded 3 = 30-day count or amount exceeded Note: • V.I.P. will populate this field with the priority order of 1, 2, and then 3. • If sanctions screening scoring does not apply to the transaction, but velocity checking does, Field 48, Usage 37, positions 4 - 10 will contain spaces and position 11 will contain the OCT Activity Check Result.

Table 38: OCT Field Data Elements (39 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 48 Usage 37 Position: 12 - 19 Sender Date of Birth Length: 8 Format UN Format: mmddyyyy Byte: 13 - 20	Not Applicable			Acquirers, service providers, and merchants may send Field 48, Usage 37 in a 0200 OCT when they choose to include the sender's date of birth. Issuers that do not participate in sanctions screening scoring or velocity limits must be prepared to receive Field 48, Usage 37. This field is strongly recommended globally for issuer compliance purposes. Not including this field may results in poor acceptance rates. Refer to the <i>Full Service POS Online Messages – Technical Specifications</i> for complete details on this field.

Table 38: OCT Field Data Elements (40 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 52 Personal Identifi- cation Number (PIN) Data Length: Fixed 64 N, bit string; 8 bytes	Not Applicable			Contains a PIN or password, encrypted and formatted as a block 16 hexadecimal digits. Acquirers, service providers, and merchants may send in domestic OCTs and issuers must be prepared to receive this field in domestic OCTs. Refer to the <i>Full Service POS Online Messages – Technical Specifications</i> for the details of this field. Note: This field is available only in South Africa, Kenya, Nigeria, Kazakhstan, and Ukraine. Recipient issuers in the Europe and U.S. Regions, with domestic OCTs containing BAI values of CD or GP (other than online gambling), receive this field if it is present in the OCT sent by the acquirer. The field is also sent, if it is present in the OCT sent by the acquirer, in cross-border OCTs containing a BAI value of GP to recipient issuers in the Europe Region that support cross-border OCTs.

Table 38: OCT Field Data Elements (41 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 53 Security-Related Control Information Length: Fixed 16 N, 4-bit BCD (unsigned packed); 8 bytes	Not Applicable			Provides data needed by the issuer or the VisaNet Security Module to process PINs entered at the point of service. Acquirers, service providers, and merchants may send in domestic OCTs and issuers must be prepared to receive this field in domestic OCTs. Refer to the <i>Full Service POS Online Messages – Technical Specifications</i> for the details of this field. Note: This field is available only in South Africa, Kenya, Nigeria, Kazakhstan, and Ukraine. Recipient issuers in the Europe and U.S. Regions, with domestic OCTs containing BAI values of CD or GP (other than online gambling), receive this field if it is present in the OCT sent by the acquirer. The field is also sent, if it is present in the OCT sent by the acquirer, in cross-border OCTs containing a BAI value of GP to recipient issuers in the Europe Region that support cross-border OCTs.

Table 38: OCT Field Data Elements (42 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 54 (Row 1 of 3) Additional Amounts Length: Variable 1 byte, binary + 20 ANS, EBCDIC; 21 bytes total or 40 ANS, EBCDIC; 41 bytes total or 60 ANS, EBCDIC; 61 bytes total or 80 ANS, EBCDIC; 81 bytes total or 100 ANS, EBCDIC; 101 bytes total or 120 ANS, EBCDIC; 121 bytes total maximum: 121 bytes		India cross-border: Required for cross-border Money Transfer transactions into India.	Funds Disbursements: India cross-border: Required for cross-border Non-Money Transfer transactions into India. Prepaid Load: LAC Domestic: Issuers are required to provide prepaid account balance information in this field in response messages. Merchants must be prepared to receive the prepaid account balance in this field and must display it to the customer.	This field may contain the prepaid account balance after a prepaid load. Contact your regional Visa representative for the requirements in your country. VisaNet Edit: This field may be present in a prepaid load OCT response message (BAI of TU). If it is present in any other type of OCT, the field will be dropped from the response before forwarding the message to the merchant. Field Layout: Byte 1: Length Byte 2 - 3 (positions 1 - 2): Account Type - This 2-digit code identifies the account type. A value of 28 (prepaid load transaction) must be used. A value of 00 (nonspecified type) must be used for Source Amount (before currency conversion) and Source Currency.

Table 38: OCT Field Data Elements (43 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 54 (Row 2 of 3) Additional Amounts Length: Variable 1 byte, binary + 20 ANS, EBCDIC; 21 bytes total or 40 ANS, EBCDIC; 41 bytes total or 60 ANS, EBCDIC; 61 bytes total or 80 ANS, EBCDIC; 81 bytes total or 100 ANS, EBCDIC; 101 bytes total or 120 ANS, EBCDIC; 121 bytes total maximum: 121 bytes	TCR D Original Credit Additional Data Pre-Currency Conversion Currency Code Positions 61-63 Length: 3 Format: AN		Prepaid Load: Other Regions: For issuers in other Visa Regions, this field is optional in responses. Merchants must be prepared to receive the prepaid account balance in this field and they may be required to provide this information to the load partner for displaying to the customer.	Byte 4 - 5 (positions 3 - 4): Amount Type – This 2-digit code describes the use of the amount. A value of 00 must be used. A value of 00 must be used for Prepaid load. A value of 45 must be used for Source Amount (before currency conversion). To support the expanded Visa Prepaid Healthcare Product in Belgium, Brazil, Luxembourg, and Portugal: Define and allow new benefit element value(s) Amount Type. Byte 6 - 8 (positions 5 - 7): Currency Code – This 3 - digit code defines the currency used in the amount (positions 9 - 20). Byte 9 (position 8): Amount Sign – This 1-digit code (Field 54.4) defines the value of the amount as either positive (value of C) or negative (value of D). A value of C must be used. This field will contain the currency code of the original amount sent by the sender before currency conversion.

Table 38: OCT Field Data Elements (44 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 54 (Row 3 of 3) Additional Amounts Length: Variable 1 byte, binary + 20 ANS, EBCDIC; 21 bytes total or 40 ANS, EBCDIC; 41 bytes total or 60 ANS, EBCDIC; 61 bytes total or 80 ANS, EBCDIC; 81 bytes total or 100 ANS, EBCDIC; 101 bytes total or 120 ANS, EBCDIC; 121 bytes total maximum: 121 bytes				Byte 10 - 21 (positions 9 - 20): Amount – This 12-character amount (Field 54.5) is right-justified and contains leading zeros. This is the amount specified by Amount Type. The amount also includes an implied decimal relative to the currency code specified in positions 5 - 7. To support the expanded Visa Prepaid Healthcare Product in Belgium, Brazil, Luxembourg, and Portugal: Define and allow new benefit element containing the amount of the benefit requested. Refer to the V.I.P. <i>.Full Service POS Online Messages – Technical Specifications</i> for complete details on this field. This field is mandatory only for issuers in India. It is optional for other Regions or countries. Note: Effective 2 September 2023, this field is required for OCTs sent to and received in Chile, Colombia, and Mexico.

Table 38: OCT Field Data Elements (45 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 56 (Row 1 of 3) Customer Related Data Length: Variable 1 byte, binary + 255 ANS, EBCDIC; maximum: 256 bytes or 2 byte, binary + 1535 bytes, variable by usage, maximum 1537 bytes Note: ISO definition supports 9999 bytes in two-byte format.				Dataset ID 02, Contact Information: Tag 83, Tag 87, and Tag C0 Dataset ID 03, Customer Identifi- cation Data: Acquirers that originate OCTs on network 0003 may optionally include these tags: Tag 9F1F, Tag 9F20, Tag 9F21, Tag 9F22. Tag 9F24. Note: If these tags are received in one-byte format for an OCT transaction, V.I.P. drops dataset ID 03. Dataset ID 05, Customer Related Data: Tag C0, Tag 80, Tag 83, Tag 84, Tag 85, Tag 86, Tag 87, Tag 88, Tag 89, Tag 8A, Tag 8B, Tag 8C, Tag 8D, and Tag 8E Acquirers and issuers who choose to send and receive Sender Name and Recipient Name data for OCTs in three (3) separate fields - first name, middle name, and last name must be able to support the new dataset and tags in this field.

Table 38: OCT Field Data Elements (46 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 56 (Row 2 of 3) Customer Related Data Length: Variable 1 byte, binary + 255 ANS, EBCDIC; maximum: 256 bytes or 2 byte, binary + 1535 bytes, variable by usage, maximum 1537 bytes Note: ISO definition supports 9999 bytes in two-byte format.				Dataset ID 05, Customer Related Data (Contd.):V.I.P Edits: Note: The tags are mandatory in certain markets and the instructions provided for each tag should be followed. For markets where tags are not listed as mandatory, it is optional. • In Canada, cross-border OCTs into and out of Canada must include the beneficiary address of the entity receiving the OCT. • Required for cross-border Money Transfer and Non-Money Transfer transactions into South Africa. • V.I.P. will reject the transaction with reject code 0494 (Field or data missing or invalid) if the field contains value that exceeds the maximum length. • V.I.P. will decline the transaction with response code 64 (Transaction does not fulfill AML requirements) if the field contains incomplete or invalid values.

Table 38: OCT Field Data Elements (47 of 149)

Field 62.2 Transaction Identifier Length: Fixed 15 N, 4-bit BCD (unsigned packed); 8 bytes	TCR 5 Payment Service Data Transaction ID Position: 5 - 19 Length: 15 Format: UN	Acquirers, service providers, merchants, and issuers are required to receive it on all OCTs.	Acquirers, service providers, merchants, and issuers are required to receive it on all OCTs.	The Transaction ID tracks the transaction through its entire lifecycle. It is available for reconcili- ation, transaction research, and disputes. Note: If an AFT precedes the OCT, acquirers, service providers, and merchants are required to take the Transaction ID from the AFT and populate it into the OCT. In Canada, it is mandatory to include the Transaction Identifier from the AFT in the subsequent OCT. Acquirers, service providers, and merchants must not populate Field 62.2 with a value other than the Transaction ID from the preceding AFT. This requirement applies to straight -through Money Transfers such as AA and PP payments. Note: Visa will not override the Transaction ID if sent by acquirers, service providers, and merchants in an 0200 OCT.

Table 38: OCT Field Data Elements (87 of 149)

Field 104 (Row 3 of 3) Usage 2 Dataset Value Hex 57 Business Application Identifier (BAI) Tag: 01 Length: 2 Format: AN		U.S. Domestic: In the U.S., PP is for use by nonbanks only. BI (Bank-Initiated) person-to- person must be used if the transaction is initiated by a bank and is sent to another entities account.		Edit Package will continue to reject the transactions with the existing reject code value of V1161 (Business application ID of AA and PP is not valid for the specific transaction). U.S. Domestic: Based on the type of services, combine MCC 6012 with a valid BAI. • Bank-initiated P2P services can use a combination of BI or PP and 6012. • Non-bank-offered P2P services must use a combination of PP and 4829. U.S. and Europe: Card Present transactions are allowed when BAI = CD and GP .

Table 38: OCT Field Data Elements (100 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 1 of 2) Usage 2 Dataset ID 57 Service Processing Type Tag 80 Length: 2 Format: AN	Not Applicable			This tag contains values that identify the service type under which the transaction should be processed. Contains service processing types: • 00 = Normal transaction • 01 = Originator hold • 02 = Visa deferred OCT hold, default interval • 03 = Visa deferred OCT hold, user-defined interval • 09 = Cancel pending deferred OCT request • 0I = Visa Direct custom program • 0Q = Query the status of the deferred OCT • 0R = Recycling Payout (Effective 11 April 2025) • A0 = Alias Directory

Table 38: OCT Field Data Elements (101 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 2 of 2) Usage 2 Dataset ID 57 Service Processing Type Tag 80 Length: 2 Format: AN	Not Applicable			V.I.P. changes any incoming value (other than a deferred OCT request) to 00 (normal transaction) if the value is unverified. The value A0 only applies for domestic OCTs in Moldova or Uzbekistan that use Visa Alias Directory Service. Any cross-border OCTs using Visa Alias Directory Service will be processed as a standard OCT. Note: A0 is the Alias Directory Service: OCT transaction where the Alias Directory is used to derive the PAN. A0 is not required in requests. Effective 11 April 2025, Visa will implement changes in V.I.P. to allow acquirers to send a new value of 0R (Recycling payout) to identify recycling payout transactions for domestic OCTs in the Europe region.

Table 38: OCT Field Data Elements (102 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 Usage 2 Dataset 57 Deferred OCT Date/ Time Tag 81 Length: 6 Format: BCD	Not Applicable			This tag contains the date and time value that indicates when the deferred OCT is scheduled to be sent to the recipient issuer. The tag will be sent in the response message to the originating acquirer when the deferred OCT request contains the value of 02 , 03 , or 0Q in Field 104, Usage 2, Dataset ID 57, Tag 80.
Field 104 (Row 1 of 5) Dataset 57 Purpose of Payment Tag 82 Max Length: 12 Format: AN				Contains a code that describes the purpose of payment to classify and report the nature and purpose of the transaction. Payment code can be entered per the regulatory requirements of the sending or receiving market. The acquirer is responsible to ensure that the correct code is entered. The only valid values for this field include regulatory published/recognized codes or a code from the Visa Standardized list of purpose of payment, refer to <u>Purpose of Payment Standardized Codes List</u> .

Table 38: OCT Field Data Elements (103 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 2 of 5) Dataset 57 Purpose of Payment Tag 82 Max Length: 12 Format: AN				Note: - This field must contain a code reflecting the purpose of payment to classify and report the nature and purpose of the Transaction. The acquirer must submit the correct purpose of payment code for the recipient issuer's jurisdiction and restrict clients to a predetermined list of purpose of payment codes. Note: This field is mandatory for outbound transactions sent to Argentina, Chile, Bangladesh, Colombia, Egypt, India, and Mexico. V.I.P. Edit: Effective 12 April 2024: If a cross-border 0200 OCT is sent to Argentina, Bangladesh, Chile, Colombia, Egypt, or India, and Purpose of Payment is not present or contains all spaces, V.I.P. will reject the message with the reject code 0494. Effective January 2026: This field is mandatory for outbound transactions sent to Saudi Arabia.

Table 38: OCT Field Data Elements (104 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 3 of 5) Dataset 57 Purpose of Payment Tag 82 Max Length: 12 Format: AN	TCR D Original Credit Additional Data			BASE II issuers that choose to receive the existing TCR D—Original Credit Additional Data record in the Draft Data, TC 06—Original Credit must modify their systems to support the new fields for purpose of payment and pre-currency conversion.
Field 104 (Row 4 of 5) Dataset 57 Purpose of Payment Tag 82 Max Length: 12 Format: AN	TCR D Purpose of Payment Positions 37-48 Length: 12 Format: AN			This field will contain the purpose of payment code from the originating acquirer and must be left-justified and space filled. Note: Recipient issuers in countries that require the purpose of payment code in cross-border OCTs destined to their country must be aware of the new purpose of payment code fields in the TCR D—Original Credit Additional Data record.

Table 38: OCT Field Data Elements (105 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 5 of 5) Dataset 57 Purpose of Payment Tag 82 Max Length: 12 Format: AN	TCR D Original Credit Additional Data Pre-Currency Conversion Amount Positions 49-60 Length: 12 Format: UN			This field will contain the original amount sent by the sender before currency conversion and must be left-justified and space-filled. Note: Recipient issuers in India that require the amount in the sender's currency in cross-border OCTs destined to India must be aware of the new pre-currency conversion fields in the TCR D—Original Credit Additional Data record.
Field 104 Usage 2 Dataset ID 58 Benefit Administrator ID Tag: 01 Length: 9 Format: N		Applicable to Belgium, Brazil, Luxembourg, Portugal, and U.S.	Funds Disbursement: Applicable to Belgium, Brazil, Luxembourg, Portugal, and U.S.	This sub-element is 9 numeric positions containing the medical license number of the provider. This will be a numeric value and will contain the employer benefit provider identifier or healthcare provider ID.

Table 38: OCT Field Data Elements (106 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 1 of 6) Usage 2 Dataset Value Hex 5F Sender Data	TCR3 Business Application Data Industry-Specific Data - Original Credit Position: 24 - 168	Dataset 5F must be present in OCT requests.	Dataset 5F must be present in OCT requests.	Note: This field is Tag-Length-Value (TLV). Field 104, Dataset ID 5F is a Tag- Length-Value (TLV) encoded field that is currently defined with eight different tags (Tag 01 - Tag 08.)

Table 38: OCT Field Data Elements (107 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 2 of 6) Usage 2 Dataset Value Hex 5F Sender Data	TCR 3 Business Application Data Industry-Specific Data - Original Credit Position: 24 - 168	Dataset 5F must be present in OCT requests.	Dataset 5F must be present in OCT requests.	Note: This field is Tag-Length-Value (TLV). Important: • Tag 01 or Tag 02 must be present (or both may be present). • All the other tags are conditional or optional based on the specific type of OCT (that is, BAI) and the transaction specifics (example, domestic vs. cross-border). Following basic TLV coding principles, issuer systems need to be flexible enough to accommodate these variations and flexible enough to accommodate new tags in this field as they are introduced. If you are not familiar with how to code your system to support TLV fields, contact your regional Visa representative for support. • Acquirers, service providers, and merchants must not format tags as right-justified with leading spaces. • Acquirers, service providers, and merchants should not pad tags to their maximum length with spaces or binary zeros.

Table 38: OCT Field Data Elements (108 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 3 of 6) Usage 2 Dataset Value Hex 5F Sender Data	TCR 3 Business Application Data Industry-Specific Data - Original Credit Position: 24 - 168	Dataset 5F must be present in OCT requests.	Dataset 5F must be present in OCT requests.	Note: This field is Tag-Length-Value (TLV). V.I.P. Edit: This field should not be present in responses (authorization or full financial) and if present, it will be dropped from the message by V.I.P. If the acquirer, service provider, or merchant does not provide a given tag in this dataset, the tag must be omitted from the message. If any of Tags 01 to 07 are included and filled with all spaces or all zeros, V.I.P. will decline the transaction with the response code value of 64 (Transaction does not fulfill AML requirements). V.I.P. Edit (Money Transfers): On Money Transfer transactions (Processing Code 26 and BAI of AA/PP, FT, WT, or BI), if the issuer PCR is not set up in the VisaNet system to support Field 104 in TLV format, V.I.P. will decline the transaction with the response code value of 57 (Transaction not permitted to cardholder).

Table 38: OCT Field Data Elements (109 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 4 of 6) Usage 2 Dataset Value Hex 5F Sender Data Note: This field is Tag-Length-Value (TLV).	TCR 3 Business Application Data Industry-Specific Data - Original Credit Position: 24 - 168	Dataset 5F must be present in OCT requests.	Dataset 5F must be present in OCT requests.	On Money Transfer OCTs (Processing Code 26 and BAI, AA/PP, or PP), Field 104, Dataset ID 5F must be present. If this dataset is not present, V.I.P. will reject the transaction with the reject code value of 0494 (Field or data missing). For all other OCTs, this data element must be present but will not be enforced with VisaNet edits.

Table 38: OCT Field Data Elements (110 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 5 of 6) Usage 2 Dataset Value Hex 5F Sender Data Note: This field is Tag-Length-Value (TLV).	TCR 3 Business Application Data Industry-Specific Data - Original Credit Position: 24 - 168	Dataset 5F must be present in OCT requests.	Dataset 5F must be present in OCT requests.	V.I.P. Edit (All OCTs Other Than Money Transfer): If the issuer PCR is not set up in the VisaNet system to support Field 104 in TLV format and this field is present in the message, Visa drops Field 104 from the message and forwards the transaction to the issuer. V.I.P. Edit (All OCTs): VIP rejects OCTs with the existing reject code 0494 (Field or data missing or invalid) for which any of the following tags in Field 104 Dataset ID 5F exceeds its maximum length: Tags 01 - 07 and 0A. V.I.P. Edit for Tags 03 (Sender Name), 05 (Sender City), and 07 (Sender Country): For transactions originated outside of the U.S. or a country that does not have a national net settlement service (NNSS), V.I.P. declines domestic OCTs with a BAI of AA or PP with RC 64 (Transaction does not fulfill AML requirements) if they do not include Sender Name (03), Sender City (05), and Sender Country (07) in Field 104 Dataset ID 5F.

Table 38: OCT Field Data Elements (111 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 6 of 6) Usage 2 Dataset Value Hex 5F Sender Data	TCR 3 Business Application Data Industry-Specific Data - Original Credit Position: 24 - 168	Dataset 5F must be present in OCT requests.	Dataset 5F must be present in OCT requests.	Note: This field is Tag-Length-Value (TLV). V.I.P. Edit: V.I.P. rejects domestic 0200 OCTs with a BAI of AA or PP with reject code 0494 (Field or data missing) if they do not contain Field 104 Dataset IDs 5F.
Field 104 Usage 2 Dataset Value Hex 5F Sender Reference Number Tag: 01 Length: 16 Format: ANS	Sender Reference Number Position: 24 - 39 Length: 16 Format: AN	This tag is conditional; if the sender's account number (Tag 02) is not available or not applicable to the transaction, this tag must be present and contain a reference number for the sender.	Funds Disbursement: Must be present. May contain a number used by the acquirer, service provider, or merchant to track the Funds Disbursement (i.e., invoice number or other type of tracking number). Or, if not applicable, it must contain a value of 123 . Prepaid Load and Credit Card Bill Payment: Same as Money Transfer.	A transaction reference number provided by the originating entity that can be used to uniquely identify the sender. Tag 01 or Tag 02 must be present; both may be present. V.I.P. Edit (Money Transfer): On all cross-border and U.S. domestic Money Transfer OCTs (Processing Code 26 and BAI , AA , or PP), if this tag and/or Tag 02 (Sender Account Number) are not present, V.I.P. will decline the transaction with the response code value of 64 (Transaction does not fulfill AML requirements).

Table 38: OCT Field Data Elements (112 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 Usage 2 Dataset Value Hex 5F Sender Account Number Tag: 02 Length: 34 Format: ANS	Sender Account Number Position: 40 - 73 Length: 34 Format: AN	This tag is conditional; it is required when an account was used to fund the Money Transfer (Example: sender used a credit, debit, or other account (including a digital wallet account) to fund the Money Transfer).	Funds Disbursement: Optional. Note: For Funds Disbursement OCTs routed to Mastercard network: - This field is mandatory. - Must contain Numeric values only. Prepaid Load: This tag is conditional; it is required when an account was used to fund the prepaid load (Example: sender used a credit, debit, or other account (including a digital wallet account) to fund the prepaid load). Credit Card Bill Payment: This tag is conditional; it is required when an account was used to fund the credit card bill payment (Example: sender used a bank account (including a digital wallet account) to pay his/her credit card bill).	The sender's account number. Tag 01 or Tag 02 must be present; both may be present. V.I.P. Edit (Money Transfer): On all cross-border and U.S domestic Money Transfer OCTs (Processing Code 26 and BAI, AA, or PP), if this tag and/or Tag 01 (Sender Reference Number) are not present, V.I.P. will decline the transaction with the response code value of 64 (Transaction does not fulfill AML requirements).

Table 38: OCT Field Data Elements (113 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 1 of 5) Usage 2 Dataset Value Hex 5F Sender Name Tag: 03 Length: 30 Format: ANS	Sender Name Position: 74 - 103 Length: 30 Format: AN	Cross-Border: Must contain sender's name. U.S., Canada, UAE and Europe Domestic: Must contain sender's name. AP Domestic: This field is strongly recommended for issuer compliance purposes.	Funds Disbursement: Cross-Border: Must contain merchant/ government entity's name sending funds. U.S., Canada, and Europe Domestic: Must contain merchant/government entity's name. AP Domestic: This field is strongly recommended for issuer compliance purposes. Prepaid Load & Credit Card Bill Payment: Cross-Border: Not Applicable. U.S. and Canada Domestic: Must contain senders name. AP Domestic: This field is strongly recommended for issuer compliance. Note: For Credit Card Bill Payment, not including this field may result in poor acceptance rates.	This field contains the name of the person or entity funding the OCT transaction. Note: For South Africa, see Field 56 to submit first, middle, and last names as separate subfields. V.I.P. Edit (Money Transfer): On all cross-border and U.S domestic Money Transfer OCTs (Processing Code 26 and all Money Transfer BAIs), if this field is not present, V.I.P. will decline the transaction with the response code.

Table 38: OCT Field Data Elements (114 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 2 of 5) Usage 2 Dataset Value Hex 5F Sender Name Tag: 03 Length: 30 Format: ANS	Sender Name Position: 74 - 103 Length: 30 Format: AN	Not including this field may result in poor acceptance rates. LAC Domestic: LAC Sender Name is a mandatory requirement for domestic Money Transfers. Other Domestic: May contain sender's name; if not applicable, do not include the tag. Note: Sender's name must be populated using the Latin (i.e., English) character set and be an actual person's name. Use of a phone number, email address or alias is not permitted.	Funds Disbursement: Not including this field may result in poor acceptance rates. Other Domestic: May contain merchant/government entity's name; if not applicable, do not include this tag. Prepaid Load and Credit Card Bill Payment: Other Domestic: May contain sender's name; if not applicable, do not include this tag.	Value of 64 (Transaction does not fulfill AML requirements). Sender Name Example: The Sender Name can be up to 30-characters long and must be the sender's legal name. If the sender's name is greater than thirty (30) characters, use only the first 30 characters of the name. The required format for the Sender Name field is: • Last Name/Family Surname 1 plus space • Last Name/Family Surname 2 (optional) plus space • First Name plus space • Middle Initial or Middle Name (optional) plus space Note: - This field must not contain ? (Question mark) or any special characters - Only a valid and legal sender name must be populated in this field. <i>Examples:</i> • Doe Jane A. • Vellaichary Jabachardinat Savi

Table 38: OCT Field Data Elements (115 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 3 of 5) Usage 2 Dataset Value Hex 5F Sender Name Tag: 03 Length: 30 Format: ANS	Sender Name Position: 74 - 103 Length: 30 Format: AN			V.I.P. Edit for Tag 03 (and 05 and 07): For transactions originated in non-U.S. or a country that does not have a national net settlement service (NNSS), V.I.P. declines domestic OCTs with Money Transfer BAIs of AA/PP with RC 64 (Transaction does not fulfill AML requirements) if they do not include Sender Name (03) (and Sender City (05) and Sender Country (07)).

Table 38: OCT Field Data Elements (116 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 4 of 5) Usage 2 Dataset Value Hex 5F Sender Name Tag: 03 Length: 30 Format: ANS	Sender Name Position: 74 - 103 103 Length: 30 Format: AN		Funds Disbursement: Note: Merchant/government entity's name must be populated using the Latin (i.e., English) character set. Prepaid Load and Credit Card Bill Payment: Note: Sender's name must be populated using the Latin (i.e., English) character set and be an actual person's name. Use of a phone number, email address or alias is not permitted.	V.I.P. Edit for Tags 03 (or 0A): V.I.P. declines 0200 OCTs with Money Transfer BAIs of AA/PP with RC 64 (Transaction does not fulfill AML requirements) if the Sender Name (03) (or Recipient Name (0A)) contains: • ? (Question mark) and any special characters • All numeric • Only one character • Fictitious name or nicknames • Incomplete names (missing first name or last name) Note: For additional space to enter relevant data, use appropriate tags in Field 56, Dataset ID 05.

Table 38: OCT Field Data Elements (117 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 5 of 5) Usage 2 Dataset Value Hex 5F Sender Name Tag: 03 Length: 30 Format: ANS	Sender Name Position: 74 - 103 103 Length: 30 Format: AN		Note: Effective 17 October 2025 , transactions will be declined by VisaNet if the sender name is not populated in cross-border Non-Money Transfer OCTs.	For BAI MD – Merchant Settlements; Sender Name needs to contain the name of the acquirer or payment facilitator that is sending settlement payments to the merchant. MD MCCs: 6012 - Acquirers sending settlement payments to merchants 4829 - Payment facilitator sending settlement payments to merchants

Table 38: OCT Field Data Elements (118 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 Usage 2 Dataset Value Hex 5F Sender Address Tag: 04 Length: 35 Format: ANS	Sender Address Position: 104 - 138 Length: 35 Format: AN	Cross-Border: Must contain sender's primary residential address. U.S. and Canada Domestic: Must contain sender's primary residential address. Other Domestic: May contain sender's address; if not required, do not include this tag.	Funds Disbursement: Cross-Border: Must contain merchant/ government entity's address. U.S. and Canada Domestic: Must contain merchant/ government entity's address. Other Domestic: May contain merchant/government entity's address; if not required, do not include this tag. Prepaid Load and Credit Card Bill Payment: Cross-Border:Not applicable. U.S. and Canada Domestic: Must contain sender's primary residential address. Other Domestic: May contain sender's address; if not required, do not include this tag.	For Money Transfer, prepaid load, and credit card bill payment, this should be the sender's primary residential address. For Funds Disbursement, this should be the merchant or government entity's primary business address in the country where the transaction was initiated. V.I.P. Edit (Money Transfer): On all cross-border and U.S. domestic Money Transfer OCTs (Processing Code 26 and BAI, AA, or PP), if this field is not present, V.I.P. will decline the transaction with the response code value of 64 (Transaction does not fulfill AML requirements). Note: P.O. boxes cannot be used in the address field. Note: Effective 17 October 2025, transactions will be declined by VisaNet if the sender address is not populated in cross-border Non-Money Transfer OCTs.

Table 38: OCT Field Data Elements (119 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 Usage 2 Dataset Value Hex 5F Sender City Tag: 05 Length: 25 Format: ANS	Sender City Position: 139 - 163 Length: 25 Format: AN	Cross-Border: Must contain sender's city as part of sender's primary residential address. U.S. and Canada Domestic: Must contain sender's city as part of sender's primary residential address. Other Domestic: May contain sender's city; if not required, do not include this tag.	Funds Disbursement: Cross-Border: Must contain merchant/government entity's city. U.S. and Canada Domestic: Must contain merchant/government entity's city. Other Domestic: May contain merchant/government entity's city; if not required, do not include this tag. Prepaid Load and Credit Card Bill Payment: Cross-Border: Not applicable. U.S. and Canada Domestic: Must contain sender's city as part of sender's primary residential address. Other Domestic: May contain sender's city; if not required, do not include this tag.	V.I.P. Edit (Money Transfer): On all cross-border and U.S. domestic Money Transfer OCTs - (Processing Code 26 and BAI, AA, or PP) if this field is not present, V.I.P. will decline the transaction with the response code value of 64 (Transaction does not fulfill AML requirements). V.I.P. Edit for Tags 05 (Sender City), 03 (Sender Name), and 07 (Sender Country): For transactions originated in non-U.S. or country that does not have a national net settlement service (NNSS), V.I.P. declines domestic OCTs with Money Transfer BAIs of AA/PP with RC 64 (transaction does not fulfill AML requirements) if they do not include Sender City (05), (Sender Name (03), and Sender Country (07)) in Field 104 Dataset ID 5F, Tags 03, 05, and 07. Note: Effective 17 October 2025, transactions will be declined by VisaNet if the sender city is not populated in cross-border Non-Money Transfer OCTs.

Table 38: OCT Field Data Elements (120 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 1 of 2) Usage 2 Dataset Value Hex 5F Sender State Tag: 06 Length: 2 Format: AN	Sender State Position: 164 - 165 Length: 2 Format: AN	Domestic and Cross-Border from U.S. or Canada: Must contain sender's state/province in this field on cross-border transactions when Sender Country (Tag 07) contains the value of 840 (U.S.) or 124 (Canada).	Funds Disbursement: Domestic and Cross-Border from U.S. or Canada: Must contain merchant/ government entity's state/province in this field on cross-border transactions when Sender Country (Tag 07) contains the value of 840 (U.S.) or 124 (Canada). Prepaid Load and Credit Card Bill Payment: Cross-Border:Not applicable. U.S. and Canada Domestic: Must contain sender's state/ province.	The geographical state or province associated with the sender's primary residential address. V.I.P. Edit (Money Transfer): On all cross-border and U.S. domestic Money Transfer OCTs (Processing Code 26 and BAI, AA , or PP), if this field is not present and Sender Country (Tag 07) contains the value of 840 (U.S.) or 124 (Canada), V.I.P. will decline the transaction with the response code value of 64 (Transaction does not fulfill AML requirements).

Note: - This is the 3-digit ISO numeric country code. - Sender country must be the sender's place of residence.	Funds Disbursement: Other Domestic: May contain merchant/government entity's country; if not required, do not include this tag. Note: This is the 3-digit ISO numeric country code. Prepaid Load and Credit Card Bill Payment: Other Domestic: May contain sender's country; if not required, do not include this tag. Note: - This is the 3-digit ISO numeric country code. - Sender country must be the sender's place of residence.	V.I.P. Edit for Tags 07 (Sender Country) (and 03 (Sender Name) and 05 (Sender City) : For transactions originated in non-U.S. or a country that does not have a national net settlement service (NNSS), V.I.P. declines domestic OCTs with Money Transfer BAIs of AA/PP with RC 64 (Transaction does not fulfill AML requirements) if they do not include Sender Name (03) , Sender City (05) , and Sender Country (07) in Field 104 Dataset ID 5F, Tags 03 , 05 , and 07 .

Table 38: OCT Field Data Elements (126 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 1 of 2) Usage 2 Dataset Value Hex 5F Source of Funds Tag: 08 Length: 2 Format: AN	Note: While there is a BASE II Source of Funds field in the TCR 3 (position 21), Tag 08 does not map to this field. Tag 08 does not have a corresponding BASE II field location.	Cross-Border to U.S.: Must contain Source of Funds. Cross-Border to non-U.S. (New programs): Recommended that Source of Funds is provided. U.S. Domestic: Must contain Source of Funds. Other Domestic (New Programs): Recommended that Source of Funds is provided.	Funds Disbursement: Same as Money Transfer Note: For Funds Disbursement, the most likely value will be 05 to identify that the merchant or government entity used a deposit account to fund the disbursement.	Identifies how the OCT was funded (cash, Visa card, non-Visa debit account, or non-Visa credit account). The tag is required in all domestic and cross-border Money Transfer OCTs. Note: Source of Funds: Acquirers, service providers, and merchants may also use the Visa Direct APIs or the Account Lookup (ACNL) File to determine the Source of Funds when the card is a Visa card. Effective 11 April 2025, VisaNet will decline transactions if the Source of Funds field is not populated in OCTs.

Table 38: OCT Field Data Elements (127 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 2 of 2) Usage 2 Dataset Value Hex 5F Source of Funds Tag: 08 Length: 2 Format: AN	Note: While there is a BASE II Source of Funds field in the TCR 3 (position 21), Tag 08 does not map to this field. Tag 08 does not have a corresponding BASE II field location.		Prepaid Load: • Cross-Border: Not applicable • U.S. Domestic: Recommended that the Source of Funds is provided. • Other Domestic (New Programs): Recommended that the Source of Funds is provided. Credit Card Bill Payment: Same as Prepaid Load. Note: Visa Rules do not allow cardholders to pay their credit debt with a credit instrument. Therefore, this field must not contain a value of 01 or 06 .	Valid values in this field are: • Visa Credit = 01 • Visa Debit = 02 • Visa Prepaid = 03 • Cash = 04 • Debit/deposit access accounts other than those linked to a Visa card (includes checking/savings accounts, proprietary debit/ATM cards, and digital wallet accounts) = 05. • Credit accounts other than those linked to a Visa card (includes credit cards and proprietary credit lines) = 06. V.I.P. Edit (Money Transfer): On Money Transfer OCTs destined to a U.S. recipient issuer, if this field is not present, V.I.P. will decline the transaction with the response code value of 64 (transaction does not fulfill AML requirements).

Table 38: OCT Field Data Elements (128 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 1 of 3) Usage 2 Dataset Value Hex 5F Recipient Name Tag: 0A Length: 30 Format: AN	TCR D Original Credit Additional Data Recipient Name Positions: 7 - 36 Length: 30 Format AN Populated with recipient name if issuer is configured to receive.	All Cross-Border, U.S. and Europe Domestic: Recipient Name is mandatory. Optional to send for other domestic AP Domestic: This field is strongly recommended for issuer compliance purposes. Not including this field may result in poor acceptance rates.	Optional to send for domestic and cross-border. • Funds Disbursement: Recipient name is optional; may be present in domestic and cross-border Funds Disbursements. • Note: Europe: Recipient name is required for all Funds Disbursements entering the European Economic Area (EEA) from countries outside the EEA, or vice versa. • Prepaid Load: Recipient name may be present in, domestic, and cross-border prepaid loads/re-loads. • Credit Card Bill Payment: Recipient name may be present in domestic card bill payment. AP Domestic: This field is strongly recommended for issuer compliance purposes. Not including this field may result in poor acceptance rates.	This field contains the name of the person or entity receiving the funds. Recipient name is an optional data element in Field 104 Dataset ID 5F, Tag 0A, in an OCT initiated as an 0200 for domestic and mandatory for cross-border Money Transfer OCTs. Issuers must be prepared to receive Tag 0A/Recipient Name in any OCT. The maximum length of the recipient name is 30 characters.

Table 38: OCT Field Data Elements (129 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 104 (Row 2 of 3) Usage 2 Dataset Value Hex 5F Recipient Name Tag: 0A Length: 30 Format: AN	TCR D Original Credit Additional Data Recipient Name Positions: 7 - 36 Length: 30 Format AN Populated with recipient name if issuer is configured to receive.			Recipient Name Example: The Recipient Name can be up to 30 characters long and must be the recipient's legal name. If the recipient's name is greater than 30 characters, use only the first 30 characters of the name. The suggested format for the Recipient Name field is: • Last Name/Family Surname 1 plus space • Last Name/Family Surname 2 (optional) plus space • First Name plus space • Middle Initial or Middle Name (optional) plus space Note: – This field must not contain a ? (Question mark) or any special characters – Only a valid and legal recipient name must be populated in this field. <i>Examples:</i> • Doe Jane A. • Vellaichary Jabachardinat Savi

Table 38: OCT Field Data Elements (130 of 149)

Field 108 Dataset ID 01 Account Owner Name, Given, in Local Language Tag 85 Character Length: Max. 35 characters Length: 1 – 140 Binary	Not Applicable			This tag will contain the given name in the local language.
Field 108 Dataset ID 01 Account Owner Name, Middle, in Local Language Tag 86 Character Length: Maximum 35 characters Length: 1 – 140 Binary	Not Applicable			This tag will contain the middle name in the local language.

Table 38: OCT Field Data Elements (140 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 108 Dataset ID 01 Account Owner Name, Last, in Local Language Tag 87 Character Length: Max 35 characters Length: 1 – 140 Binary	Not Applicable			This tag will contain the last name in the local language.
Field 108 Dataset ID 01 Account Owner Alias Name, in Local Language Tag 88 Character Length: Maximum 70 characters Length: 1 – 280 Binary	Not Applicable			This tag will contain the alias name in the local language

Table 38: OCT Field Data Elements (141 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 119, Usage 5 Argentina Domestic Data Variable Length 1 byte, binary + 139 ANS, EBCDIC maximum 140 bytes	Not Applicable			LAC Only: For domestic transactions in Argentina, acquirers and issuers can submit and settle OCTs in the Argentina NNSS. This field contains settlement information unique to the processing of Visa transactions by participants in a given country. Note: This field is forwarded from the acquirer to the issuer only if the transaction qualifies for the NNSS. If the transaction does not qualify for the NNSS, Visa removes the field from the message. V.I.P Edit: V.I.P. rejects the transactions with reject code 0132 (Invalid Country Code) if Positions 1 - 3, Country Code does not contain a value of 032 (Argentina).

Table 38: OCT Field Data Elements (142 of 149)

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Field 123 Usage 2 Verification & Token Data (TLV Format) Variable Length 1 byte, binary + TLV Format: 255 binary and ANS, EBCDIC; maximum 256 bytes	Not Applicable			Recipient issuers that support this field in TLV format must be able to receive dataset IDs and tags defined for this field in any order, including those they do not recognize or expect. Recipient issuers can receive multiple datasets in this field. Endpoints must ignore dataset IDs or tags they do not recognize and continue to process the field. Recipient issuers in the Europe and U.S. Regions, with domestic OCTs containing BAI values of CD or GP (other than online gambling), receive this field if it is present in the OCT sent by the acquirer. The field is also sent, if it is present in the OCT sent by the acquirer, in cross-border OCTs containing a BAI value of GP to recipient issuers in the Europe Region that support cross-border OCTs.

V.I.P. (0100/0200) Field Name	BASE II (TC06) Field Name	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, WT)	Non-Money Transfer Funds Disbursement (BAI = BB, BP, FD, GD, GP, LO, MD, MI, OG, PD, RP) Prepaid Load (BAI = TU) Credit Card Bill Payment (BAI = CP)	Notes/VisaNet Edits
Not Applicable	TCR 3 Business Application Data Position: 16 Fast Funds Indicator Length: 1 Format: AN	BASE II will set the value of this field to one of these values in the TC06: Y (OCT is eligible for Fast Funds) Space (OCT is not eligible for Fast Funds)	BASE II will set the value of this field to one of these values in the TC06: • Y (OCT is eligible for Fast Funds) • Space (OCT is not eligible for Fast Funds)	Issuers participating in Fast Funds can use this field as described: • If the indicator is set to Y, it means that the issuer already received the associated 0100 message. Assuming that the issuer made funds available upon receipt of the 0100 message, issuer does not need to post the TC06. • If the indicator is set to a space, it means that the issuer did not receive the associated 0100 message and, therefore, the issuer should use the TC06 to post the funds into the recipient's account.
Not Applicable	TCR 3 Business Application Data Position 17 - 18 Business Format Code Length: 2 Format: AN	Value = CR	Value = CR	

Source of Funds (Field 104, Dataset ID 5F, Tag 08)

This tag provides issuers with the source of funds used to fund the OCT (e.g., Visa Credit, Visa Debit, Visa Prepaid, or cash).

Issuers can use this information to assist them with their authorization decision. This tag must be present on transactions destined to U.S. issuers (domestic and cross-border); it is recommended on all other transactions.

Acquirers, service providers, and merchants can use the Visa Direct Account Look-up API (refer to the *Visa Developer Center*), (<https://developer.visa.com/>), (https://developer.visa.com/capabilities/visa_direct) or obtain the Visa Direct Account Look-up File ([Visa Direct Account Lookup File](#)) to determine the type of account (Visa Credit, Visa Debit, or Visa Prepaid) to populate as the source of funds.

Note: Visa recommends that Visa Direct clients use the latest ACNL File and FTAI APIs as account lookup options. ACNL file version 7 contains both real PAN and token ranges. Version 8 contains only real PAN ranges.

The values for Field 104, Dataset ID 5F, Tag 08 are outlined in the **Source of Funds** table:

Table 39: Source of Funds (1 of 2)

Source of Funds	Value in Field 104, Dataset ID 5F, Tag 08
Visa Credit	01
Visa Debit	02
Visa Prepaid	03
Cash	04
Note: Acquirers, service providers, and merchants are responsible for identifying the source of funds for non-Visa products and correctly populating the Source of Funds field.	

Table 39: Source of Funds (2 of 2)

Source of Funds	Value in Field 104, Dataset ID 5F, Tag 08
Debit/deposit access accounts other than those linked to a Visa card (includes checking/savings accounts and proprietary debit/ATM cards, Mastercard, and digital wallet accounts) Note: Acquirers, service providers, and merchants are responsible for identifying the source of funds for non-Visa products and correctly populating the Source of Funds field.	05
Credit accounts other than those linked to a Visa card (includes credit cards and proprietary credit lines, Mastercard) Note: Acquirers, service providers, and merchants are responsible for identifying the source of funds for non-Visa products and correctly populating the Source of Funds field.	06

High-Level Summary – OCT Processing Rules by Business Application Identifier

This section provides a high-level summary of the processing rules for OCTs by Business Application Identifier (BAI).

Table 40: High-Level Summary – OCT Processing Rules by BAI (1 of 5)

Processing Rule	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, or WT)	Funds Disbursement (BAI = FD, GD, GP LO MD, or OG)	Prepaid Load (BAI = TU)	Credit Card Bill Payment (BAI = CP)	Notes
General Processing	Issuers must apply OCTs as a payment to a Visa credit account.	Same as Money Transfer.	Not Applicable	Same as Money Transfer.	
General Processing	Issuers must not accept OCTs to an account, which does not have Know Your Customer (KYC) information on file.	Same as Money Transfer.	Same as Money Transfer.	Same as Money Transfer.	

Table 40: High-Level Summary – OCT Processing Rules by BAI (2 of 5)

Processing Rule	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, or WT)	Funds Disbursement (BAI = FD, GD, GP LO MD, or OG)	Prepaid Load (BAI = TU)	Credit Card Bill Payment (BAI = CP)	Notes
Account Types	Can be sent to Visa credit, debit, and prepaid accounts.	Same as Money Transfer.	Can be sent to Visa prepaid accounts only.	Can be sent to Visa credit accounts only.	
Geographic Scope	Domestic or Cross-border	Domestic or Cross-border	Domestic only	Domestic only	

Table 40: High-Level Summary – OCT Processing Rules by BAI (3 of 5)

Processing Rule	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, or WT)	Funds Disbursement (BAI = FD, GD, GP LO MD, or OG)	Prepaid Load (BAI = TU)	Credit Card Bill Payment (BAI = CP)	Notes
Fast Funds Refer to <u>Fast Funds Enablement and Mandates</u> for a complete list of Fast Funds enablement and mandates in various geographies.	In specific AP and CEMEA countries, Issuers are required to support Fast Funds. U.S. Issuers are required to support Fast Funds. (Prepaid and Debit) Note: U.S. Domestic Only: To enhance the cardholder experience, effective 12 April 2025, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs. Canada: Issuers in Canada are required to support Fast Funds (Prepaid and Debit) Europe Region: Issuers must support Fast Funds processing for Direct Debit Card, Deferred Debit Cards (with 16-digit primary account number and Card Verification Value 2), and Prepaid cards and support Fast Funds for all approved OCTs by processing OCT authorization in 30 minutes or less of approving an OCT.	Same as Money Transfer.	General: Same as Money Transfer. LAC: Participating Issuers must support Fast Funds on all OCTs.	Same as Money Transfer	Participation in Fast Funds requires Issuers to support the OCT (either 0100 messages followed by a TC06 or 0200 messages.)

Table 40: High-Level Summary – OCT Processing Rules by BAI (4 of 5)

Processing Rule	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, or WT)	Funds Disbursement (BAI = FD, GD, GP LO MD, or OG)	Prepaid Load (BAI = TU)	Credit Card Bill Payment (BAI = CP)	Notes
Transaction Types	Acquirers, service providers, and merchants must initiate OCTs as 0200 messages or use the Visa Direct APIs. Issuers supporting Fast Funds must receive OCTs as 0100 messages followed by a TC06 or as 0200 messages. In the Europe Region, Issuers must process all 0100 or 0200 Money Transfer messages online, regardless of whether Fast Funds is supported or not.	General: Same as Money Transfer	General: Same as Money Transfer LAC Domestic: Participating Issuers must support OCTs (either 0100 messages followed by a TC06 or 0200 messages).	Same as Money Transfer	

Table 40: High-Level Summary – OCT Processing Rules by BAI (5 of 5)

Processing Rule	Money Transfer (BAI = AA, BI, CD, FT, LA, PP, or WT)	Funds Disbursement (BAI = FD, GD, GP LO MD, or OG)	Prepaid Load (BAI = TU)	Credit Card Bill Payment (BAI = CP)	Notes
Reversals and Adjustments	Acquirers, service providers, and merchants sending 0200 OCTs are not permitted to initiate OCT reversals. Good faith adjustments may be used. Issuers must continue to be prepared to receive reversals for timeout scenarios.	General: Same as Money Transfer	General: Same as Money Transfer LAC Domestic: Load partner and merchant reversals are allowed in specific situations. <i>See Prepaid Load OCT Reversals — LAC Region for details.</i>	Same as Money Transfer	OCT reversals contain Field 104, Dataset IDs 57, 5F, and 71. OCT adjustments contain a Message Reason Code (Field 63.3) value of 2150 . Note: The processing code must be the debit adjustment processing code, not the OCT processing code.
Disputes	Only dispute reason codes 12.4, 12.6, and 13.8 may be used. OCT dispute reversals are only allowed within one business day of the dispute.	Same as Money Transfer	Same as Money Transfer	Same as Money Transfer	Disputes do not contain Field 104. If Field 104 is present in a dispute, it will be dropped by V.I.P. before forwarding the transaction to the acquirers, service providers, or merchant.

V.I.P., BASE II, and Edit Package Decline Response and Reject Reason Codes

This table outlines V.I.P. decline response codes related to OCTs.

For a complete listing of Response Codes, refer to the *Full Service POS Online Messages - Technical Specifications*.

Table 41: V.I.P. Decline Response Codes (1 of 7)

Value	OCT Edits
12 (Invalid transaction)	If the recipient issuer has received a waiver related to the receipt of OCTs, the recipient issuer should decline an OCT with Response Code 12. If an acquirer, service provider, or merchant sends an OCT to an issuer as a 0100 authorization request, V.I.P. will decline it with Response Code 12.
13 (Invalid amount)	For Funds Disbursement/non-Money Transfer OCTs, if the amount exceeds the US \$50,000.00 limit, V.I.P. will decline it with Response Code 13. For OCTs sent to credit cards, when a recipient issuer receives an OCT with an amount greater than the cardholder's outstanding credit card balance, the recipient issuer may choose to decline the OCT and should use Response Code 13.

Table 41: V.I.P. Decline Response Codes (2 of 7)

Value	OCT Edits
57 (Transaction not permitted to cardholder) <i>(Row 1 of 2)</i>	If the issuer PCR is not set up in VisaNet to support Field 104 in TLV format, V.I.P. will decline the transaction with Response Code 57. For Money Transfer OCTs destined to an issuer PCR that cannot accept Processing Code 26, V.I.P. will decline the transaction with Response Code 57. OCTs <i>may</i> be initiated at ATMs, but an MCC of 6011 must not be used. If an MCC of 6011 is used on an OCT, Visa will decline with Response Code 57. If an acquirer, service provider, or merchant sends a 0200 prepaid load OCT with a BAI of TU to a non-prepaid Visa account, V.I.P. will decline the transaction with Response Code 57. If an acquirer, service provider, or merchant sends a 0200 credit card bill pay OCT with a BAI of CP to a non-credit Visa account, V.I.P. will decline the transaction with Response Code 57. Processing Rules for Request-to-Pay OCTs V.I.P. will decline the transaction with a value of 57 (Transaction not permitted to cardholder) in Field 39 – Response Code. • The request contains a value of RP in TLV Field 104, Usage 2, Dataset ID 57, Tag 01 – Business Application Identifier. • One or more of these: – The account funding source is not C (Credit) or D (Debit). – Field 62.7 – Purchase Identifier, position 1 does not contain a value of 6 or the field is not present in the message. • The Product ID is not valid for the transaction. V.I.P. will decline the transaction with a value of 57 (Transaction not permitted to cardholder) in Field 39 – Response Code. • The request contains a value of 6 in Field 62.7 – Purchase Identifier, position 1. • One or more of these: – The request does not contain a value of PP or RP in TLV Field 104, Usage 2, Dataset ID 57, Tag 01 – Business Application Identifier. – The Product ID is not valid for the transaction (see Product Types table for BAI value of RP). – The BAI value is RP and the account funding source is not C (Credit) or D (Debit).

Table 41: V.I.P. Decline Response Codes (3 of 7)

Value	OCT Edits
Field 57 (Transaction not permitted to cardholder) (Row 2 of 2)	Processing Rules for Consumer-to-Business OCTs V.I.P. will decline the transaction with a value of 57 (Transaction not permitted to cardholder) in Field 39 – Response Code. - The request contains a value of BP in TLV Field 104, Usage 2, Dataset ID 57, Tag 01 – Business Application Identifier - One or more of these: - The Product ID is not valid for the transaction. - The account funding source is not C (Credit) or D (Debit).
61 (Exceeds approved amount limit)	On OCTs, if transaction exceeds an issuer-defined 1-day, 7-day, or 30-day amount limit and the issuer option is to decline when a limit is exceeded, V.I.P. will decline the transaction with Response Code 61. On OCTs, if a transaction surpasses both an issuer-defined amount limit and an issuer-defined count limit, and the issuer option is to decline when a limit is exceeded, V.I.P. will decline the transaction with Response Code 61.
62 (Restricted card – card invalid in this region or country)	If an OCT is sent to an embargoed country (Cuba, Iran, Syria, North Korea, regions of Crimea, Donetsk People's Republic, and Luhansk People's Republic), V.I.P. will decline the transaction with Response Code 62.

Table 41: V.I.P. Decline Response Codes (4 of 7)

Value	OCT Edits
64 (Transaction does not fulfill AML requirements)	On Money Transfer OCTs, if either the Sender Reference Number (Tag 01) or the Sender Account Number (Tag 02) in Field 104, Usage 2, Dataset Value 5F is not present, V.I.P. will decline the transaction with Response Code 64. For all domestic U.S. and cross-border Money Transfer OCTs, if Sender Name (Tag 03), Sender Address (Tag 04),¹ Sender City (Tag 05),² Sender State (Tag 06) (if Field 43, pos. 39 –40 is US or CA), and Sender Country (Tag 07) in Field 104, Usage 2, Dataset Value 5F are not present, V.I.P. will decline the transaction with Response Code 64. On Money Transfer OCTs, if Source of Funds (Tag 08) in Field 104, Usage 2, Dataset ID 5F is not present on transactions destined for the U.S. V.I.P. will decline the transaction with Response Code 64. V.I.P. Processing Rule for the Recipient/Name On cross-border Money Transfer OCTs, if the Recipient Name (Tag 0A) in Field 104, Usage 2, Dataset ID 5F is not present or contains all spaces or zeros, V.I.P. will decline with Response Code 64. V.I.P. Processing Rule for Sender Name (Tag 03), Sender City (Tag 05), and Sender Country (Tag 07) in Field 104 Dataset ID 5F For transactions originating in a country that does not have a national net settlement service (NNSS), V.I.P. declines domestic OCTs with a BAI of AA or PP with Response Code 64 if they do not include Sender Name (Tag 03), Sender City (Tag 05), and Sender Country (Tag 07) in Field 104 Dataset ID 5F, Tags 03, 05, and 07. V.I.P. Processing Rule for Sender Name (Tag 03) and Recipient Name (Tag 0A) in Field 104 Dataset ID 5F V.I.P. declines 0200 OCTs with a BAI of AA/PP with Response Code 64 if the Sender Name (Tag 03) or Recipient Name (Tag 0A) in Field 104 Dataset ID 5F, Tag 03 or 0A, contains: • ? (Question mark) or any special characters • All numeric • Only one character • Invalid or inappropriate name

¹ Sender's address may not be required on domestic OCTs. If not required under local AML/ATF laws, tag may be populated with "not applicable". For U.S. Sender Address and Sender City will not be required on domestic Money Transfer transactions with amounts <\$3,000.

² The processing code needs to be the debit or credit adjustment processing code, as opposed to the OCT processing code.

Table 41: V.I.P. Decline Response Codes (5 of 7)

Value	OCT Edits
65 (Exceeds approved count limit)	On OCTs, if transaction exceeds an issuer-defined 1-day, 7-day, or 30-day count limit and the issuer option is to decline when a limit is exceeded, V.I.P. will decline the transaction with Response Code 65 .
91 (Issuer unavailable)	If the issuer is unavailable for an OCT, V.I.P. will decline the transaction with Response Code 91 .

Table 41: V.I.P. Decline Response Codes (6 of 7)

Value	OCT Edits
93 (Transaction cannot be completed – violation of law)	If an acquirer, service provider, or merchant sends an OCT to a recipient issuing identifier that is blocked from receiving it, V.I.P. will decline the transaction with Response Code 93. If an acquirer, service provider, or merchant sends a 0200 prepaid load OCT with a BAI of TU on a cross-border transaction, V.I.P. will decline the transaction with Response Code 93. If an acquirer, service provider, or merchant sends a 0200 credit card bill pay OCT with a BAI of CP on a cross-border transaction, V.I.P. will decline the transaction with Response Code 93. When a U.S. acquirer, service provider, or merchant send OCTs with an MCC value of 4829 or 6012, the OCT must contain a BAI of AA or PP. If not, V.I.P. will decline the transaction with Response Code 93. On U.S., Canada, and Europe domestic and all cross-border Money Transfer OCTs, if Field 104, Dataset ID 5F, Tag 07 (Sender Country) does not contain a 3-digit ISO numeric country code, V.I.P. will decline the transaction with Response Code 93. If a recipient issuer is blocked from receiving the OCT, VisaNet will decline the transaction with Response Code 93 except for embargoed countries (Cuba, Iran, Syria, North Korea, regions of Crimea, Donetsk People's Republic, and Luhansk People's Republic), where the Response Code is 62 (Restricted Card – card invalid in this region or country). On domestic Money Transfer OCTs, if the amount is greater than US \$25,000 or the specific country limit, V.I.P. will decline the transaction with Response Code 93. On cross-border Money Transfer OCTs, if the amount is greater than US \$25,000, V.I.P. will decline the transaction with Response Code 93. V.I.P. Processing Rule for the Sender's Country On OCTs, if Sender Country (Tag 07) in Field 104, Usage 2, Dataset ID 5F is for a country on the list of U.S. OFAC sanctioned countries that currently consists of Cuba, Iran, Syria, North Korea, regions of Crimea, Donetsk People's Republic, and Luhansk People's Republic, V.I.P. will decline the transaction with Response Code 93. Note: Visa currently blocks transactions when the acquirer, service provider, or merchant's and/or issuer's country is on the list of U.S. OFAC sanctioned countries. V.I.P. will decline online gambling 0200 OCTs with RC 93 (Transaction cannot be completed – violation of law) when sent to an issuer in Singapore. V.I.P. calls out to Sanction Screening to perform Sanction Screening Scoring and Sanction Screening returns a status that indicates whether the transaction can be approved or declined on the basis of the transaction score. For the transaction in question, Sanction Screening returned the status as "declined", which resulted in V.I.P. declining the transaction with RC93.

Table 41: V.I.P. Decline Response Codes (7 of 7)

Value	OCT Edits
94 (Duplicate transmission)	If a duplicate transaction is received, V.I.P. will decline it with Response Code 94 .
96 (System malfunction)	On cross-border Money Transfer OCTs where the recipient issuer's country requires sanctions screening scoring and the scoring could not be performed (e.g., there was an error), V.I.P. will decline the transaction with Response Code 96 .
0494 (Field or data missing or invalid)	V.I.P. Processing Rule V.I.P. rejects 0200 OCTs with reject code 0494 if they do not contain the Business Application Identifier (BAI) in Field 104 Dataset ID 57. Domestic and cross-border Money Transfer OCTs, V.I.P rejects 0200 OCTs with reject code 0494 if they do not contain Field 104 Dataset ID 5F. V.I.P. rejects OCTs with the existing reject code 0494 (Field or data missing or invalid) for which any of these tags in Field 104 Dataset IDs 5F exceeds its maximum length: Tags 01 – 07 and 0A.

This table outlines BASE II and Edit Package Reject Reason Codes related to OCTs.

Table 42: Other Base II Return Reason Codes and Edit Package Reject Reason Codes (1 of 2)

Value	Description
BASE II: Return Reason Code 1N Edit Package: Reject Reason Code V1161	If an OCT, originated as a BASE II message, is sent to a U.S. issuer, BASE II will return it with Return Reason Code 1N. Edit Package will reject it with Reject Reason Code V1161. Acquirer, service provider, or merchant of OCTs must be SMS-connected. If an acquirer, service provider, or merchant sends an OCT as a BASE II message, BASE II will return it with the return reason code of 1N. Edit Package will reject it with reject reason code V1161.
BASE II: Return Reason Code 02	BASE II returns domestic TC06 OCTs with MCC 4829 or 6012 with reason code 02 (The transaction type of the source acquiring identifier or center is invalid).

Table 42: Other Base II Return Reason Codes and Edit Package Reject Reason Codes (2 of 2)

Value	Description
BASE II Return Reason Code GQ	BASE II returns online gambling TC06 OCTs with reason code GQ (Transaction could not be completed – violation of law) when sent to an issuer in Singapore.
Edit Package: Reject Reason Code V1131	Edit Package rejects online gambling TC06 OCTs with reject code V1131 (Account number is invalid for online gambling OCTs) when sent to an issuer in Singapore.
BASE II Return Reason Code P6	Base II returns OCT or OCT reversal transactions with existing return reason code P6 (Business application ID (BAI) is invalid) if BAI value is missing or invalid.
Edit Package Reject Reason Code V0082	Edit Package rejects OCT transactions with existing reason code V0082 (Business application ID is invalid) if BAI value is missing or invalid.

Appendix B

CEMEA – Specific Requirements for Money Transfer

This appendix provides CEMEA-specific requirements for Money Transfer transactions processed within CEMEA countries.

This appendix does not apply to Money Transfer transactions initiated outside of CEMEA destined to CEMEA countries. For these types of transactions, merchants and recipient issuers must follow the OCT global requirements included in this Global Implementation Guide.

Note: This appendix was previously included in the *VPP Money Transfer Global Implementation Guide*, which is now retired.

CEMEA Merchant Requirements

This section provides information on merchant requirements.

Fast Funds

For information on Fast Funds, refer to [Recipient Issuers - Funds Availability](#).

Payment Methods and Access Channels

The originating banks may choose which payment method and access channels to offer to customers.

Funding options include cash, bank account, and Visa card. Access channels include branch-based POS terminals, Internet-banking, mobile-banking, ATMs (cash or card accepting), and kiosk terminals. A merchant's decision regarding the payment methods and access channels to use will be determined by a number of factors, including:

- Whether a bank wishes to extend the service to only their own Visa cardholders or Visa cardholders of other issuing banks.
- To what extent a bank wishes to offer Money Transfer OCTs using the existing infrastructure or develop new channels.
- How a bank intends to comply with Know Your Customer (KYC) and anti-money laundering (AML) regulations.

This outlines specific requirements for each channel:

- In Branch POS: The merchant must use Visa Single Message System (SMS) only to submit OCT transactions. AFTs could be submitted over either the Dual Message System (V.I.P./ Authorization-Only and BASE II) or SMS.
- Internet Banking, Mobile-Banking: The merchant must use SMS for OCTs and offer Visa Direct Money Transfer OCTs through Internet banking or mobile banking only to their own customers.
- ATM/Kiosk Terminals: The merchant must use the SMS system to offer the Visa Direct Money Transfer OCT service.

For loyalty payouts use cases, acquirers and service providers should use an OCT with **BAI = LO**. Any exception and usage of other types of transactions must be approved prior to coding. For more information, contact your regional Visa representative.

CEMEA Money Transfer OCT Service Options

These four service options are available to Visa merchants in CEMEA wishing to implement the Visa Direct Money Transfer OCT service:

Table 43: CEMEA Money Transfer OCT Service Options

Service Option	Originating Mechanism	Originating Channel	Service Type	Recipient Mechanism
Card-to-Card	Visa Card Cash Sender's bank account	ATM In-branch POS Internet banking Mobile banking	Domestic International	Visa Card
Cash-to-Card	Cash Sender's bank account	In-branch POS POS Merchant location	Domestic International	Visa Card
Cash-to-Card at ATM	Cash	ATM/Kiosk	Domestic only	Visa Card
AFT-based Card-to-Card	Visa Card	ATM In-branch POS Internet banking Mobile banking	Domestic only	Visa Card issued by the merchant

CEMEA Implementation Requirements

This section provides merchants with implementation requirements.

CEMEA Money Transfer Implementation Requirements

Merchants implementing a Visa Direct Money Transfer OCT service must comply with these requirements.

Card-to-Card Money Transfer OCT Requirements (AFT and OCTs)

This section provides an overview of card-to-card Money Transfer OCT service.

This service is based on both AFTs and OCTs.

Table 44: CEMEA Card-to-Card Money Transfer OCT Requirements (AFT and OCT)

Money Transfer OCT Service	Channel (Customer Interface)	Visa System	Transaction
Card-to-Card	In-branch POS	SMS	AFT and OCT
Card-to-Card	Internet banking	SMS	AFT and OCT
Card-to-Card	Mobile banking	SMS	AFT and OCT
Card-to-Card	ATM	SMS	AFT and OCT

Domestically, this service is restricted to transfers in local currency, unless the use of foreign currency is permitted by local regulations and the program has been approved by Visa. This information must be provided on the ATM screen or in branch at the point of transfer and be included in the merchant's Terms and Conditions.

When international Money Transfers are offered at ATMs to Visa cardholders who are customers of another bank (that is, not on-us transfers), a customer registration process must be implemented to identify and capture the sender's name and address to be included in the OCT message. For the bank's own customers, sender data must be captured, either through a registration process or track data.

A standard Visa Account Funding Transaction (AFT) must be used as a funding transaction to collect the transfer funds from the sender's Visa card to be sent on to a receiving Visa card. An

AFT must be used to fund a Visa card when the AFT is reserved for use along with OCT for P2P-type services. Processing requirements for this transaction are MCC 6012, TC05, TCQ1, or VisaNet Integrated Payment System (V.I.P.) 0100/0200 request with a value of “10” in the processing code (Field 3).

For domestic OCTs, the Merchant Name field in the OCT message must contain the name of the merchant and must not be filled with blanks. If blank, the OCT will be rejected. Merchants may choose to include the sender name, Client’s name, name of the third-party agent (if involved), or a generic identifier, such as “Money Transfer.”

The service fee must be clearly disclosed to the sender or customer at the point of transfer (displayed on the screen) and printed on the transaction receipt. The customer must be given an opportunity to cancel the transaction without incurring additional charges. This information must be provided in the customer’s Terms and Conditions and on the ATM screen.

Visa cards from which funds are sent must be subject to sending limits. The merchant must define and implement sending limits and advise customers on this information.

Cash-to-Card Money Transfer OCT Requirements (OCT Only)

This service is based on OCTs only.

Table 45: CEMEA Cash-to-Card Money Transfer OCT Requirements (OCT Only)

Money Transfer OCT Service	Channel (Customer Interface)	Visa System	Transaction
Cash-to-Card	In-branch POS	SMS	OCT

Domestically, this service is restricted to transfers in local currency, unless permitted by the local regulation and the program has been approved by Visa.

Over-the-counter transfers (funded by cash or from a bank account) can be provided at in-branch POS.

Merchants providing cash-funded or bank account-funded transfers at their branches using POS terminals must comply with all the requirements listed above for the card-to-card Money Transfer OCT service. Merchants must also comply with the OCT sender data requirements.

Cash-to-Card at ATM/Kiosk Money Transfer (OCT Only)

This service is based on the OCT only. Visa acquirers can offer cash-funded transfers at cash-accepting ATM terminals.

Table 46: CEMEA Cash-to-Card at ATM/Kiosk Money Transfer (OCT Only)

Money Transfer OCT Service	Channel (Customer Interface)	Visa System	Transaction
Cash-to-Card at ATM	ATM/Kiosk	SMS	OCT

Transfer Process

These describe the transfer process for Cash-to-Card at an ATM.

The basic steps are:

1. Sender selects "transfer to Visa" service option and keys in the transfer amount and recipient Visa card number.
2. The transfer details and service fee displayed on the ATM/kiosk screen for sender to confirm.
3. Sender deposits cash into the ATM/kiosk terminal.
4. The merchant builds an OCT 0200 message, including the sender's reference number into the "sender data" field, and submits it to VisaNet. The sender's reference number is a randomly-generated number connected to the time of the transfer and terminal where the transfer occurred.
5. If the recipient issuer can accept the OCT 0100 authorization message, they respond with the 0110. If the recipient issuer cannot accept the OCT 0100 authorization message, the VisaNet Stand-in responds on the issuer's behalf with a 0210, checking the recipient card against the list of blocked acquiring identifiers.
6. ATM/kiosk terminal displays and prints out the transfer receipt with the transfer details.
7. The OCT is cleared within normal SMS clearing cycle.

Spending Limits

The merchant must ensure that the transaction amount for the cash-to-card ATM/kiosk Money Transfer does not exceed limits per local regulations.

The merchant must define and implement velocity limits (transaction limit, daily limit, weekly limit, monthly limit). The customer must be informed about the sending limits at the point of transfer.

Service Requirements

The service must be restricted to domestic transfers and must be offered in local currency only, unless permitted by local regulation and the program has been approved by Visa.

This information must be provided on the ATM screen at the point of transfer and the service fee must be clearly displayed on the screen and printed on the transaction receipt. The customer must be given an opportunity to cancel the transaction without incurring additional charges. This information must be provided in the customer's Terms and Conditions and on the ATM/kiosk screen.

OCT Coding

In cases where the transfer funds are sent to a Visa card used to identify the sender, the OCT 0200 message must be coded as PIN-based, as:

Field 22 = 9010 or 0510 (90 = mag. stripe; 05 = chip), Field 25 = 02, Field 35 = track 2 data and Fields 52/53 = PIN data.

Note: The value "05" for Field 22 should be used only in countries in CEMEA.

Cash-to-Card at ATM Money Transfer OCT Requirements for Third-Party

Merchants have the option to provide the cash-to-card Visa Direct Money Transfer OCT via an ATM's funds transfer service through a third-party's terminals.

In addition to the Cash-to-Card Money Transfer OCT requirements, merchants providing the ATM service through the third-party must comply with these requirements:

- Only Visa acquirers can offer a cash-to-card Visa Direct Money Transfer OCT at third-party ATM terminals.
- Visa acquirers wishing to implement this service must register each of the third-party's programs with Visa separately.
- The Visa acquirers must register each of the third parties with Visa.
- The Visa acquirers must ensure the third-party is compliant with all service requirements and with local regulations.

- Merchants and third parties must comply with the Payment Card Industry Data Security Standard. For more details, refer to the *Payment Card Industry Data Security Standard*, *Payment Card Industry PIN Entry Device*, and the *Payment Card Industry PIN Security Standard*.
- The Visa acquirer is responsible for the third party's compliance with customer service requirements. As part of the registration process, Visa acquirers must demonstrate they have a well-established dispute resolution system, such as a call center that can handle customer inquiries. Visa acquirers must clearly communicate customer service contact details to the sender.

AFT-Based Card-to-Card Money Transfer OCT Implementation Requirements

This section provides information on AFT-based, card-to-card implementation requirements for the Visa Direct Money Transfer OCT.

Note: For more information, refer to the *Visa Account Funding Transaction (AFT) Processing Guide*.

AFT-Based Card-to-Card Money Transfer OCT Requirements

This service is based on AFTs only.

This service is for Visa card-funded transfers only and can be provided at bank branch-based POS terminals, internet or mobile banking, or at ATMs.

Table 47: AFT-Based Card-to-Card Money Transfer OCT Requirements

Money Transfer OCT Service	Channel (Customer Interface)	Visa System	Transaction
Card-to-Card/Account	In-branch POS	V.I.P. Authorization-Only/ BASE II	AFT
Card-to-Card/Account	Internet banking	V.I.P. Authorization-Only/ BASE II/SMS	AFT
Card-to-Card/Account	Mobile banking	V.I.P. Authorization-Only/ BASE II/SMS	AFT
Card-to-Card/Account	ATM	SMS	AFT

Merchants implementing the service must comply with these requirements:

- The service is restricted to domestic funding.
- The service is restricted to transfers to the recipient's accounts within the merchant. This information must be included in the merchant's terms and conditions.

- The sender must be prompted to authorize a specific service fee prior to completing the transaction. The service fee must be clearly disclosed to the sender or customer (displayed on the screen) at the point of transfer and printed on the transaction receipt. The customer must be given an opportunity to cancel the transaction without incurring additional charges. This information must be provided in the Terms and Conditions and on the ATM screen.
- Visa cards to which funds are credited must be subject to sending limits. The merchant must advise the customer of this information.
- Processing requirements for the AFT transaction are: TC05, MCC 6012, TCQ1, or V.I.P. 0100/0200 request with a value of "10" in the Processing Code (Field 3).

Transaction Coding and Testing at SMS Host

The implementation model uses a 0200 AFT (PIN-based) to debit the sender's account and a 0200 OCT (key entered) to credit the recipient's account.

ECS VAP

VTs/3 in VisaNet loop-back functionality is not available for ECS VAP connections. In this case, transaction testing must be done with a direct connection between the Visa client's test host and a PC loaded with VTs/3.

Priority Routing

OCTs submitted from SMS-connected acquiring identifiers must include network 0002 or network 0000 in the original request messages and their associated reversals.

SMS-connected acquirers that currently use priority routing and submit transactions with network 0000 (Priority Routing) in Field 63.1–Network ID Codes can use this network ID when submitting original credit request messages and their associated reversals. V.I.P. will change the Network ID in these transaction types from 0000 to 0002.

Transaction Coding

These transaction coding must be applied to the ATM acquirers connected to SMS.

Account Funding Transaction

- PIN-based 0200 full financial request. The sending cardholder will be at the terminal and will enter a PIN for their card to be debited for the transfer amount. This transaction is technically considered as PIN at POS.
- In case of an EMV ATM terminal, the authorization amount of funding transaction could be different from the cryptogram amount. Refer to the *Visa Smart Debit/Credit System Technical Manual*.

Original Credit Transaction

- In most cases, the OCT is coded as a key-entered transaction. The recipient card is not present in the transaction, but the sending cardholder is. Since an OCT is a “push” (that is, credit) message, the recipient account must be included in Field 4.
- V.I.P. Field 3, positions 1 – 2 = 26; Field 18 = 6012; Field 22, positions 1 – 2 = 01; Field 25 = 05 "cardholder present, but card not present"; Field 60 = 32.
- Field 43. The sender's name, in positions 1 – 25 of this field, must be present in international transactions. The sender's name is required for domestic and cross border transactions, Field 43 must be present and not filled with blanks.
- Field 104 in TLV format. Refer to [Original Credit Transaction \(OCT\) Data Elements and Processing Rules](#) for details.

BIN Blocking

When an SMS merchant sends an OCT, this is checked against the list of recipient BINs blocked in VisaNet to receive OCTs. If they are blocked, a response of 93 is given. In this case, it is important the merchant reverse the AFT if the OCT has been rejected.

Reporting and Reconciliation

Issuers and acquirers must report Visa Direct Money Transfer OCT and AFT volumes in the Quarterly Operating Certificate. Collection Only reporting is mandatory for transactions that use Visa credentials processed outside of VisaNet (that is, closed-loop solution, domestic switch).

When primary account number (PAN) of a Visa card is used as verification and/or identification of the client/receiving credential, during a send transaction by card number or any other credential identified thru PAN, the transaction is a subject to the reporting requirements.

Reconciliation

The AFT and OCT messages are reported in standard SMS and VSS reports.

- SMS601R contains original financials for both the AFT and OCT 0200 messages reported there with the appropriate fee descriptors.
- AFT and OCTs will also appear in VSS reports (VSS-120/VSS-130) and the appropriate counts and amounts shown for these message types (including the fee descriptors in VSS-130). The fee descriptors for AFTs are: "AFT NATL" and "AFT INT SETL." The fee descriptors for OCTs are: "OCTRANFR NATL" and "OCTRANFR INT." For the AFT, the merchant must request such a fee by applying the relevant transaction edits in the clearing message: MCC 6012, TCQ1 or 0100/0200 V.I.P. authorizations with a value of "10" in the Processing Code (Field 3).

Table 48: Other BASE II Return Reason Codes and Edit Package Reject Reason Codes

Value	Description
BASE II: Return Reason Code 02	Authorization-Only/BASE II endpoints cannot send OCTs to U.S. issuers. An OCT destined to a U.S. issuer must originate as an SMS transaction.
Edit Package: Reject Reason Code V1161	If an OCT originates as a BASE II message to a U.S. issuer: BASE II will return it with the return reason code of 02. Edit Package will reject it with reject reason code V1161. Merchants of OCTs must be SMS-connected. If a merchant sends an OCT as a BASE II message, BASE II will return it with the return reason code of 02. Edit Package will reject it with reject reason code V1161.

Specific Requirements for Money Transfer

Effective 30 November 2024 Visa debit and prepaid card issuers in the Democratic Republic of the Congo and **effective 31 October 2024**, Visa debit card issuers in Albania, Bosnia and Herzegovina, Kosovo, Lebanon, Montenegro, North Macedonia, and UAE are required to implement Visa Direct to support domestic money transfers via primary account number (PAN) and alias (that is, mobile phone number) for Original Credit Transactions (OCTs).

Domestic OCT Origination Mandate

To comply with the requirements, issuers must take these actions:

- Complete a Program Information Form (PIF) to implement Visa Direct, available on the Visa Direct Program Approval Process page at Visa Access. Issuers must submit a PIF for approval to become an originator/acquirer for Visa Direct OCT and Alias Directory Service transactions.
- Complete an Alias Directory Service: Program Registration Form to request participation in the Visa Alias Directory Service, available on the Visa Direct Resources page at Visa Access.
- Implement the Visa Direct OCT and Visa Alias Directory Service APIs by opening an implementation project with Visa.

Effective 31 January 2026, Visa acquirers in South Africa will be required to implement Visa Direct to support domestic money transfers via OCTs.

To comply with the requirements, acquirers must take these actions:

- Complete a Program Information Form (PIF) to implement Visa Direct, available on the Visa Direct Program Approval Process page at Visa Access
- Implement the Visa Direct OCT by opening an implementation project with Visa
- Support the initiation of money transfers in their interfaces (mobile app or, if mobile app is not available for consumers, web banking) via OCTs

Visa recommends that clients take action and prepare their system infrastructure as soon as possible. The average timeline to complete implementation activities ranges from three to six months.

Cardholder Benefits

The use of an alias or PAN for domestic money transfers benefits cardholders because it is intuitive, easy to share, and makes it possible to receive transfers in near real-time. Embedding this capability into mobile banking can significantly improve the user experience for person-to-person money movement, addressing growing consumer expectations.

Implementation Requirement for Visa Alias Directory Service

For information on the Visa Alias Directory Service, refer to [Visa Alias Directory Service](#).

Visa Direct Request to Pay Service

Visa's Request to Pay (R2P) service is a secure messaging framework built on APIs that enable consumers to request payment and communicate about a payment obligation, enabling bill splitting and funds collection functionalities for mobile banking applications.

Consumer-to-consumer (C2C) Use Case

Effective 14 April 2023, Visa launched the R2P service for the consumer-to-consumer (C2C) use case, for all Visa Direct originators (acquirers) and recipients (issuers) within Kazakhstan and within Ukraine.

Effective 01 August 2023, Visa launched the R2P service for the consumer-to-consumer (C2C) use case for Visa Direct originators (acquirers) and recipients (issuers) within CISSEE. For more information on the Visa Direct Request to Pay availability in your country, contact your regional Visa representative.

Through the R2P service, a consumer (payee) can generate requests for payment to be sent to another chosen consumer (payer). When the request is accepted by the payer, the payer's

financial institution (FI) will originate a Visa Direct Original Credit Transaction (OCT) with a BAI of PP (P2P Money Transfer) to the payee FI. At this time, the service will be limited to domestic transactions only.

Service Requirements

To participate in the program, issuers and acquirers must sign a program registration form with Visa.

Programs using Request to Pay must adhere to these requirements:

- OCTs must be submitted with a BAI value of PP.
- Financial institutions (acquirers and issuers) must send and receive Request ID value in Field 62.7– Purchase Identifier in Domestic OCTs (Request ID value is returned as part of the request to pay API message. For details, refer to *Request to Pay API* on Visa Developer Center).
 - After a successful OCT transaction, acquirer must return to the issuer the RRN within the R2P API. This will enhance the reconciliation procedures on the issuers side.
- Financial institutions (acquirers and issuers) are responsible for complying with Visa requirements and rules related to Money Transfer Person to Person OCTs.
- Financial institutions (acquirers and issuers) must comply with applicable laws and regulations.
- Use of the Request to Pay must be limited to domestic use only.
- Financial institutions (acquirers and issuers) must complete Visa Direct PIF process to enable the send OCT. Refer to Requirements for Submitting a PIF section. There is no additional PIF requirement for existing BAI PP OCT acquirers/enablers in case PP BAI is used.
- The same velocity limits rules, regulatory compliance, and legal consideration are applied for the P2P use case (BAI of PP).

To process OCTs for the C2C use case, issuers and acquirers must support the BAI of PP and have access to Visa Developer Center. Refer to the *Request to Pay (R2P) Service Description and Implementation Guide* or contact your Visa representative.

For information on the availability of the Request to Pay program in your market or on the registration/onboarding process for this program, contact your Visa representative.

Consumer-to-Small-Business (C2b) Use Case

Effective 14 April 2023, Visa launched a limited pilot of the R2P service for the consumer-to-small-business (C2b) use case, for Visa Direct originators (acquirers) and recipients (issuers) within Kazakhstan and Ukraine.

Through the R2P service, a small business (payee) can generate requests for payment from their business banking application to be sent to chosen consumer (payer). When the request is

accepted by the payer, the payer's financial institution (FI) will originate a Visa Direct original credit transaction (OCT) with a BAI of RP (Business Request to Pay Transfer).

Additionally, originators will be able to initiate an OCT not generated by a preceding request by using BAI of BP (Non-Card Bill Payment Money Transfer).

Pilot Scope

To participate in the pilot, issuers and acquirers must sign a pilot program registration form with Visa. The exact scope of the pilot will be agreed upon, between Visa and pilot participants, in writing before the initiation of the pilot.

Additionally, to service requirements for C2C use case and to process OCTs for the C2b use case, issuers and acquirers must support the BAIs of RP and BP and must complete Visa Direct PIF process for these BAIs.

These commercial products are in scope for these BAIs.

Note: This is the full list of product types that can be used for BAI RP or BP. Not all these product types may be available in all markets. Please contact your Visa representative for further information.

Table 49: Products in Pilot Scope

Product Type	Product ID	Account Ending Source
Visa Business	G^	C (Credit) D (Debit)
Visa Signature Business	G1	C (Credit) D (Debit)
Visa Business Enhanced	G3	C (Credit) D (Debit)
Visa Infinite Business	G4	C (Credit) D (Debit)
Visa Business Rewards	G5	C (Credit) D (Debit)
Visa Corporate T&E	K^	C (Credit) D (Debit)
Visa Purchasing	S^	C (Credit) D (Debit)
Visa Purchasing with Fleet	S1	C (Credit) D (Debit)

Pilot participants should refer to the registration form and Request to Pay (R2P) Service Description and Implementation Guide for full terms and conditions.

Pilot Restrictions

Various restrictions are in place during the term of the pilot program. Requests can only be sent from business banking interfaces (web/mobile). Additionally, velocity and frequency limits will apply and the pilot will be limited to a restricted list of Merchant Category Codes (MCCs).

Full details of all risk controls can be found in the Request to Pay (R2P) Service Description and Implementation Guide. Visa reserves the right to amend the terms of the pilot program at any time, including change of limits and eligible MCCs.

Effective 01 October 2025, Visa Direct acquirers in Kazakhstan and effective **01 February 2026** Visa Direct acquirers in Ukraine will be required to integrate Visa's R2P APIs into their current technology to support incoming and outgoing informational requests followed by OCTs.

Effective 31 March 2026, Visa Direct acquirers in Georgia must support incoming consumer-to-consumer Request to Pay Service inquiries that may be followed by OCTs.

The mobile phone number input selected by the payee and received within the R2P service should be used to identify a Visa cardholder - the recipient of the request (payer) and notify the payer regarding the incoming request. Visa recommends using deep links within push notifications and/or messaging options inside mobile applications.

Acquirers must provide customers with this mobile banking option:

- The ability to confirm and reject requests from both private individuals and businesses, and to block and unblock requestors (both private individuals and businesses).

Acquirers that originate money transfer OCTs as a result of R2P requests must:

- Fill out Field 62.7 (Purchase Identifier) with the data received within an R2P request from an issuer for reconciliation purposes on the issuers side.
Fill out Field 43 (Card Acceptor Name/Location), position 26-38 (City Name) with the reference value when it is received in the original R2P API inquiry from the payee.
- Return the retrieval reference number (RRN) to the issuer within the R2P API upon a successful OCT transaction to strengthen reconciliation procedures on the issuers side.

Note: To comply with the above requirements, Visa Direct acquirers will need to implement Request to Pay service APIs by opening an implementation project with Visa.

Appendix C

Visa Alias Directory Service

The Visa Alias Directory Service (ADS) provides clients with the ability to resolve an identifier (that is, an alias), such as a mobile phone number, to a Visa or non-Visa card account through APIs. The use of an alias for Money Transfer payments may be a benefit for cardholders since it is intuitive, easy to share, and avoids exposing sensitive information, such as the primary account number (PAN).

Visa Direct acquirers and issuers in selected countries are required to implement Visa Alias Directory Service to support Money Transfers via alias for OCTs.

The **ADS Mandate – Countries and Effective Dates** table provides the scope and effective dates of the mandates.

Table 50: ADS Mandate – Countries and Effective Dates (1 of 2)

Countries	Visa Clients	Effective date of the mandate
Belarus, Kazakhstan, Ukraine	Visa Direct acquirers and issuers	30 September 2021
Moldova	Visa Direct acquirers and issuers	1 July 2022
Uzbekistan	Visa Direct acquirers and issuers	1 January 2023
Albania, Bosnia and Herzegovina, Kosovo, Montenegro, North Macedonia, and the UAE	Visa Debit card issuers	31 October 2024
Lebanon	Visa Debit card issuers	31 October 2024

Table 50: ADS Mandate – Countries and Effective Dates (2 of 2)

Countries	Visa Clients	Effective date of the mandate
Bahrain, Kuwait, Oman, Qatar, Saudi Arabia	Visa Debit and Prepaid card issuers	31 October 2024
Democratic Republic of the Congo	Visa Debit and Prepaid card issuers	30 November 2024
South Africa	Visa Debit and Prepaid Card issuers	31 January 2026
Kyrgyzstan, Tajikistan	Visa Direct acquirers and issuers	28 February 2025
Bulgaria, Croatia, Cyprus, the Czech Republic, Greece, Hungary, Italy, Malta, Poland, Romania, Slovakia, and Slovenia.	Issuers	19 October 2024
Andorra, Austria, Belgium, Estonia, France, Germany, Iceland, Israel, Latvia, Lithuania, Luxembourg, Netherlands, Portugal, Spain, Switzerland, and Turkey	Issuers	12 April 2025
Anguilla, Antigua & Barbuda, Dominica, Dominican Republic, El Salvador, Grenada, Honduras, Jamaica, Nicaragua, Saint Kitts & Nevis, Saint Lucia, Saint Vincent & the Grenadines, Uruguay, and Trinidad & Tobago	Visa Debit and Prepaid Card issuers	31 October 2025
Serbia	Issuers	31 March 2026
Armenia, Azerbaijan, Georgia	Visa Direct acquirers and issuers	31 March 2026
Uganda	Visa Debit and Prepaid Card issuers	30 September 2025

In Belarus, Kazakhstan, Ukraine, Moldova, Uzbekistan, Kyrgyzstan, Tajikistan, Armenia, Azerbaijan, and Georgia Visa implements these measures:

- Visa Direct acquirers and issuers are required to use an alias (that is, mobile phone number) for Money Transfer OCTs as an additional option for recipient credentials.
- Issuers that originate and receive Money Transfer OCTs are required to provide their customers with the option to create, update, and modify the link between their PAN and alias at their remote banking service channels (internet banking, mobile banking).

In Albania, Bosnia and Herzegovina, Democratic Republic of Congo (DRC), Kosovo, Lebanon, Montenegro, North Macedonia, Serbia, Uganda, and the UAE, Visa debit card issuers will be required to:

- Support the initiation of money transfers in their interfaces (mobile app or, if mobile app is not available for consumers, web banking) via PAN and alias (that is, mobile phone number) for Original Credit Transactions (OCTs)
- Provide their customers with the option to create, update, and modify the link between their PAN and alias in the Alias Directory

In Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, and South Africa Visa debit and prepaid issuers will be required to:

- provide their customers with the option to create, update, and modify the link between their PAN and alias in the Alias Directory

To comply with these requirements, issuers and acquirers must open an implementation project with Visa to implement Visa Alias Directory Service APIs. Refer to the *Visa Alias Directory Service* page at the Visa Developer Center.

Note: Issuer clients must only submit Alias information for PANs issued by issuer.

Acquirer Responsibilities

The acquirer is liable for activities conducted with their acquiring identifier including origination of Alias-based OCTs. Their responsibilities extends to:

- Programs that they operate or sponsor
- Activities of any sponsored merchants and service providers, including ensuring they comply with Visa rules and requirements

Issuer Responsibilities

Issuer is solely responsible for ensuring the accuracy of all data provided to Visa. This includes:

- Verifying the validity of the PAN
- Confirming the PAN belongs to the enrolled recipient
- Ensuring the Alias is correctly matched with the PAN
- Updating the status of the link in the Alias directory if the card is reissued, blocked, or closed

Visa Direct acquirers and issuers must comply with *Visa Alias Directory Service Implementation Guide*, *Visa Alias Directory Service Mobile App User Experience Guide* and are required to obtain cardholders' consent for cross-border transfers of personal information.

Appendix D

U.S. OCT Switch Service

The Visa Direct OCT Switch Service launched with the October 2015 Business Enhancement Release (BER). Included in the OCT Switch Service is:

- Enabling the OCT message on Network 3. Issuers may enable OCT and Fast Funds posting capabilities on Network 2 (Visa network), Network 3 (Interlink network), or Network 4 (PLUS network). However, issuers must support incoming OCTs and Fast Funds posting capabilities on Network 2, Network 3, or Network 4.
- Routing capabilities to direct an OCT to an issuer's network of choice (Network 2, Network 3, Network 4).

With these changes, Visa and its clients will:

- Meet consumer and commercial demands for faster payments
- Ensure a solution for commercial opportunities for Funds Disbursement
- Support new push payment use cases
- Provide flexible options for senders and receivers to connect to Visa for push payment services
- Build consumer confidence in push payments to Visa card accounts
- Offer a robust platform to replace cash and checks payments

Purpose of Payment Standardized Codes List

This table lists the current purpose of payment standardized codes.

Table 51: Purpose of Payment Standardized Codes List (1 of 4)

Code Description	Code to be Used
Account management	ISACCT
Transaction is the payment of allowance	ISALLW
Settlement of annuity	ISANNI
Unemployment disability benefit	ISBENE
Business expenses	ISBEXP
Bonus payment	ISBONU
Bus transport related business	ISBUSB
Cash management transfer	ISCASH
Payment of cable TV bill	ISCBTV
Government institute issued related to cash compensation, helplessness, and disability	ISCCHD
Credit card payment	ISCCRD

Table 51: Purpose of Payment Standardized Codes List (2 of 4)

Code Description	Code to be Used
Payment of credit card bill	ISCDBL
Payment for charity reasons	ISCHAR
Collection payment	ISCOLL
Commercial payment	ISCOMC
Commission	ISCOMM
Compensation relating to interest loss/value date adjustment and can include fees	ISCOMP
Payment of copyright	ISCPYR
Related to a debit card payment	ISDCRD
Payment of a deposit	ISDEPT
Payment of dividend	ISDIVD
Payment of study/tuition fees	ISEDUC
Payment of electricity bill	ISELEC
Energies	ISENRG
General fees	ISFEES
Payment for ferry related business	ISFERB
Foreign exchange	ISFREX
Payment of gas bill	ISGASB
Compensation to unemployed persons during insolvency procedures	ISGFRP
Government payment	ISGOVT
Health insurance	ISHLTI
Reimbursement of credit card payment	ISICCP
Reimbursement of debit card payment	ISIDCP
Payment of car insurance premium	ISINPC
Transaction is related to the payment of an insurance claim	ISINSC
Installment	ISINSM
Insurance premium	ISINSU
Payment of mutual funds, investment products and shares	ISINVS
Intra company payment	ISINTC
Interest	ISINTE
Income tax	ISINTX

Table 51: Purpose of Payment Standardized Codes List (3 of 4)

Code Description	Code to be Used
Investment	ISINVS
Labor insurance	ISLBRI
License fee	ISLICF
Life insurance	ISLIFI
Loan	ISLOAN
Medical services	ISMDCS
Mobile P2B payment	ISMP2B
Mobile P2P payment	ISMP2P
Mobile top up	ISMTUP
Not otherwise specified	ISNOWS
Other	ISOTHR
Transaction is related to a payment of other telecom related bill	ISOTLC
Payroll	ISPAYR
Contribution to pension fund	ISPEFC
Pension payment	ISPENS
Payment of telephone bill	ISPHON
Property insurance	ISPPTI
Transaction is for general rental/lease	ISRELG
The payment of rent	ISRENT
Payment for railway transport related business	ISRLWY
Royalties	ISROYA
Salary payment	ISSALA
Payment to savings/retirement account	ISSAVG
Securities	ISSECU
Social security benefit	ISSSBE
Study	ISSTDY
Subscription	ISSUBS
Supplier payment	ISSUPP
Refund of a tax payment or obligation	ISTAXR
Tax payment	ISTAXS
Transaction is related to a payment of telecommunications related bill	ISTBIL

Table 51: Purpose of Payment Standardized Codes List (4 of 4)

Code Description	Code to be Used
Trade services operation	ISTRAD
Treasury payment	ISTREA
Payment for travel	ISTRPT
Utility bill payment	ISUBIL
Value added tax payment	ISVATX
Withholding	ISWHLD
Payment of water bill	ISWTER

Appendix F

API Formats

This section lists the ISO field and its corresponding API field name. Acquirers, service providers, and merchants can use this table to interpret the API information in the Visa Developer Center. This is not an exhaustive list. Please refer to the Visa Developer Center for the latest data content.

Table 52: Mapping ISO Fields to API Tags – OCT Request (1 of 5)

ISO Field	API
Field 2 – Primary Account Number	recipientPrimaryAccountNumber

Appendix G

Visa Direct Account Lookup File

The Visa Direct Account Lookup (ACNL) File provides acquirers, service providers, and merchants with information about Visa accounts, including issuer country code and billing currency, account type, Fast Funds participation status, and whether the issuer can receive OCTs. This file is available to all acquirers, service providers, and merchants.

Acquirers, service providers, and merchants can receive this file from the Visa File Exchange Service (VFES), Open File Delivery (OFD), or Visa File Gateway (VFG) connection.

Note: Clients using OFD are required to migrate to VFG. See *Visa Business News (VBN) A112092*.

Note: The information provided in this file can be obtained by sending the Visa Direct Account Lookup API to Visa.

Acquirers, service providers, and merchants should contact their Visa representative to request receipt of the account lookup file and discuss available delivery methods and frequency.

Accessing the data directly from a flat file results in poor performance. Visa recommends that the acquirer, service provider, or merchant transfer the data from the Visa Direct Account Lookup File into a database.

These elements provide information about the Visa Direct Account Lookup File.

- **File Name:** Unique name for each ACNL file versions
 - **Record Length:** 746 for versions V7 and V8
- Note:** ACNL file version 7 contains both real PAN and token ranges. Version 8 contains only real PAN ranges.
- **File Type:** Visa Direct
 - **File Format:** Comma-Separated Value (CSV)
 - **Delivery:** The account lookup file can be delivered daily between 09.00 and 10.00 GMT. Additional information on delivery options can be found in Section [Report Delivery Mechanisms](#).

Visa Direct Account Lookup File Data Elements

The data elements are presented in the **Visa Direct Account Lookup File Data Elements** table.

Sample ACNL File

Sample

[illegible]

Table 54: Visa Direct Account Lookup File Data Elements (1 of 5)

Flag #	Data Element	Description	Data Type/Format/Example
1	Account Range Min	The lower boundary of the payment credential range.	Length: 21; Format: CHAR, contains numeric Example: 4XXXXXXXXX000000000000 Note: Replace X with a real payment credential.
2	Account Range Max	The upper boundary of the payment credential range. Note: OCT and Fast Funds enablement may differ between account ranges under a single Issuing ISO BIN. Therefore, it is critical that acquirers, service providers, or merchants (entity initiating OCTs) look at the account range min and max to determine OCT and Fast Funds eligibility and NOT just at the Issuing ISO BIN level.	Length: 21; Format: CHAR, contains numeric Example: 4XXXXXXXXX999999999999 Note: Replace X with a real payment credential.
3	Country Code	Numeric ISO country code of the recipient issuer's country.	Length: 3; Format: Numeric Example: 608
4	Country Name	Name of the recipient issuer's country.	Length: 25; Format: CHAR Example: Philippines
5	Issuer Name	Name of the recipient issuer.	Length: 120; Format: CHAR
6	Issuer Billing Currency Code	Recipient issuer's billing currency code. Note: If the billing currency is all zeros, it indicates that the account range is not active; the information for this account can be ignored.	Length: 3; Format: Numeric Example: 840
7	Account Billing Currency Code	It will only have a valid value if it is different from the issuer billing currency. If the billing currency is all zeros, it indicates one of these: - The account range is not active; the information for this account can be ignored - The issuer has not provided the account billing currency to Visa	Length: 3; Format: Numeric Example: 840

Table 54: Visa Direct Account Lookup File Data Elements (2 of 5)

Flag #	Data Element	Description	Data Type/Format/Example
8	Card Product Type Code	Specifies the type of the card:	Length: 1; Format: CHAR; Valid values are: • C = Credit • D = Debit • H = Charge • P = Prepaid • R = Deferred Debit
9	Card Platform Code	This data element is a two-character alphabetic code that defines the card platform.	Length: 2; Format: CHAR; Valid values are: • BZ (Business) • CN (Consumer) • CO (Commercial) • GV (Government)
10	Prepaid Funding Code	This data element is a single-digit alphabetic code that defines the type of a prepaid card.	Length: 1; Format: CHAR; Valid values are: • R (Reloadable) • N (Nonreloadable) • Space (Not prepaid)
11	Token Range	This data element indicates whether the account range is a token account range.	Length: 1; Format: CHAR; Valid values are: • Y (The account range are for tokens) • N (The account ranges are PANs)
12	LAC Combo Card Range	This data element indicates the type of combo card.	Length: 1; Format: CHAR; Valid values are: • 0 (Not a combo card) • 2 (Combo card)
13	Non-Money Transfer OCTs Domestic	This data element indicates if domestic non-Money Transfer OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts Domestic non-Money Transfer OCTs) • N (Does not accept Domestic non-Money Transfer OCTs)

Table 54: Visa Direct Account Lookup File Data Elements (3 of 5)

Flag #	Data Element	Description	Data Type/Format/Example
14	Non-Money Transfer OCTs Cross-Border	This data element indicates if cross-border non-Money Transfer OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts cross-border non-Money Transfer OCTs) • N (Does not accept cross-border non-Money Transfer OCTs)
15	Online Gambling OCTs Domestic	This data element indicates if domestic online gambling OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts domestic online gambling OCTs) • N (Does not accept domestic online gambling OCTs)
16	Online Gambling OCTs Cross-Border	This data element indicates if cross-border online gambling OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts cross-border online gambling OCTs) • N (Does not accept cross-border online gambling OCTs)
17	Money Transfer OCTs Domestic	This data element indicates if domestic Money Transfer OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts domestic Money Transfer OCTs) • N (Does not accept domestic Money Transfer OCTs)
18	Money Transfer OCTs Cross-Border	This data element indicates if cross-border Money Transfer OCTs are supported.	Length: 1; Format: CHAR; Valid values are: • Y (Accepts cross-border Money Transfer OCTs) • N (Does not accept cross-border Money Transfer OCTs)
19	Fast Funds Domestic Money Transfer	This data element indicates if Fast Funds are supported for domestic Money Transfer OCTs.	Length: 1; Format: CHAR; Valid values are: • Y (Fast Funds supported for domestic Money Transfer OCTs) • N (Fast Funds not supported for domestic Money Transfer OCTs)

Table 54: Visa Direct Account Lookup File Data Elements (4 of 5)

Flag #	Data Element	Description	Data Type/Format/Example
20	Fast Funds Domestic Non-Money Transfer	This data element indicates if Fast Funds are supported for domestic non-Money Transfer OCTs.	Length: 1; Format: CHAR; Valid values are: • Y (Fast Funds supported for domestic non-Money Transfer OCTs) • N (Fast Funds not supported for domestic non-Money Transfer OCTs)
21	Fast Funds Domestic Gambling	This data element indicates if Fast Funds are supported for domestic gambling OCTs.	Length: 1; Format: CHAR; Valid values are: • Y (Fast Funds supported for domestic gambling OCTs) • N (Fast Funds not supported for domestic gambling OCTs)
22	Fast Funds Cross-Border Money Transfer	This data element indicates if Fast Funds are supported for cross-border Money Transfer OCTs.	Length: 1; Format: CHAR; Valid values are: • Y (Fast Funds supported for cross-border Money Transfer OCTs) • N (Fast Funds not supported for cross-border Money Transfer OCTs)
23	Fast Funds Cross-Border Non-Money Transfer	This data element indicates if Fast Funds are supported for cross-border non-Money Transfer OCTs.	Length: 1; Format: CHAR; Valid values are: • Y (Fast Funds supported for cross-border non-Money Transfer OCTs) • N (Fast Funds not supported for cross-border non-Money Transfer OCTs)
24	Fast Funds Cross-Border Gambling	This data element indicates if Fast Funds are supported for cross-border gambling OCTs.	Length: 1; Format: CHAR; Valid values are: • Y (Fast Funds supported for cross-border gambling OCTs) • N (Fast Funds not supported for cross-border gambling OCTs)
25	Pull Funds Cross-Border	Indicates whether cross-border pull funds are enabled.	Length: 1; Format: CHAR; Valid values are: • Y Cross-Border Pull Funds AFTs are enabled. • N Cross-Border Pull Funds AFTs are disabled.

Table 54: Visa Direct Account Lookup File Data Elements (5 of 5)

Flag #	Data Element	Description	Data Type/Format/Example
26	Pull Funds Domestic	Indicates whether domestic pull funds are enabled.	Length: 1; Format: CHAR; Valid values are: • Y Domestic Pull Funds AFTs are enabled. • N Domestic Pull Funds AFTs are disabled.
27	Cross-Border OCT Auth Approval Rate Indicator	Indicator that represents cross-border OCT auth approval rate of the issuer account range. This is based on an average taken using all XB OCTs attempted over three months for the account range. The indicator is updated once a month.	Length: 1 Format: Numeric Valid values are: • 0 – No Data • 1 – Optimized • 2 – Being Optimized • 3 – Not Optimized

Appendix H

Sample Reports

Like other VisaNet transactions, OCTs appear on existing VisaNet reports.

This appendix provides samples of select VisaNet Settlement Service (VSS) and SMS reports containing OCT transactions, Simplified VSS-110 and VSS-120 reports, Visa Direct Transaction Reconciliation Report (TRR), Visa Direct Transaction Detail Report, as well as a Consolidated Transaction Data Report.

Acquirers and issuers can contact their regional Visa Direct Client Service representative to receive sample VSS and SMS reports through email.

Note: The fee descriptor for OCTs is ORIGINAL CREDIT.

VSS Sample Reports

This section contains acquirer and issuer sample VSS reports:

- VSS-110 Sample Report
- VSS-120 Sample Report (Acquirer)
- VSS-130 Sample Report (Acquirer)
- VSS-135 Sample Report (Acquirer)

- VSS-300 Sample Report (Acquirer)
- VSS-120 Sample Report (Issuer)
- VSS-130 Sample Report (Issuer)
- VSS-135 Sample Report (Issuer)

For each report, the section containing information on OCTs is highlighted.

Simplified VSS-110 and VSS-120 Reports

The simplified VSS reports are lighter, easy-to-understand versions of the VSS-110 and VSS-120 reports that provide the essential settlement information needed by clients, while removing the complexity of the detailed information available across the larger set of VSS reports.

Currently, Visa Direct clients rely on VSS reports for reconciliation and settlement with VisaNet. These reports are available in legacy formats and some clients may find them difficult to interpret and consume. Also, the existing VSS reports are available via channels that need specific integrations with VisaNet.

The simplified VSS reports are available to originating entities in the VFES channel in .dat format. This report includes information about the client's Net Settlement Position with Visa along with the amount break up details. The reports are generated on a daily basis, seven days a week, and made available in the client's configured VFES location for download for up to 30 days. Clients are required to download and retrieve the report file during this time.

Here are some of the fields that are included on the simplified VSS-110 and VSS-120 reports:

- Settlement Date
- SRE/FTSRE
- Settlement Service
- Settlement Currency
- Total Interchange Count
- Total Interchange Amount
- Total Visa Charges
- Total Reimbursement Fee
- Total Net Amount
- Total Clearing Amount
- Total Settlement Amount

For the complete list of data fields in the report, contact your Visa representative.

Visa Direct Transaction Reconciliation Report

The Visa Direct Transaction Reconciliation Report (TRR) is available to acquirers using:

- Visa Direct API
- Visa Access

Note: Available to acquirers on Visa Access in all regions except Europe

The Visa Direct TRR provides a subset of information available in a full SMS raw data report. This report provides the key data elements that may be needed to reconcile Visa Direct transactions. The TRR is delivered in a machine-readable CSV format and includes these data elements:

- Processing Date
- Acquirer BIN

- Visa Transaction ID
- Transaction State
- Reason Code
- Card Acceptor ID
- Card Acceptor Name
- System Trace Audit number
- Account Number
- Transaction date, time, amount, and currency
- Authorization Code
- Retrieval Reference Number (RRN)
- Fee Program Indicator (FPI) and description
- Settlement date and time

Visa Direct Simplified Transaction Reconciliation Report

The Visa Direct Simplified Transaction Reconciliation Report is an enhanced and simplified version of the existing Visa Direct Transaction Reconciliation Report (TRR).

This report provides a subset of information available in a full SMS raw data report, including the key data elements that may be needed by originating entities to reconcile their Visa Direct transactions. Visa recommends Visa Direct clients to use this report in the long term. The existing TRR will be phased out gradually once the simplified TRR is offered on API and Visa Access in addition to VFES.

The Simplified TRR is available to originating entities via the VFES in .dat format. This report is generated on a daily basis, seven days a week, and made available in the originating entities' configured VFES location for download for up to 30 days.

Originating entities are required to download and retrieve the report file during this time.

- This report has more enriched dataset than the TRR and gives information on AFT and OCT transactions.
- This report contains certain data fields applicable only for acquirers and, therefore is not included in the report for the originating entities that do not perform actual settlement activity with Visa.

These key fields are included on the report:

- Processing Date
- Transaction Date/Time
- Transaction Amount & Currency
- Authorization Code
- Fee Program Indicator
- Settlement Date/Time
- Acquirer Settlement Amount & Currency
- Business Application Identifier
- Processing Code
- Chargeback Details

For a complete list of report fields and a test report, contact your Visa representative.

Originating entities who choose to access this report need to be subscribed and onboarded for accessing the report. Reach out to your Visa representative for assistance with onboarding and subscription processing.

```

Table 55: File Data Elements (1 of 7)

Flag #	Data Element	Description	Data Type	Data Format/Length	ISO Mapping
1	Processing Date	The effective date of the conversion rate used to convert the transaction amount to the settlement amount.	DATE	YYYY-MM-DD	F16 Conversion Date
2	Acquiring BIN	The Bank Identification Number (BIN) that is used to clear and settle the transaction within Visa and the country in which it is licensed for use.	NUMERIC	6	F32 Acquirer Institution ID
3	Transaction Identifier	A right-justified, Visa-generated Transaction Identifier (TID) that is unique for each original authorization and financial request. The identifier links original messages to subsequent messages, such as those for exception item processing and clearing records.	NUMERIC	15	F62.2 – Transaction Identifier
4	Message Reason Code	An explanation describing the reason for the message. Possible reasons: • An acquirer-generated advice, reversal, cancellation, adjustment • Dispute financial, dispute financial reversal, dispute response financial, dispute response financial reversal and their corresponding status advises	VARCHAR2	60	F63.3 – Message Reason Code
5	Card Acceptor Id	An acquirer-assigned, alphanumeric code that identifies the card acceptor for the transactions. Depending on the acquirer/merchant billing and reporting requirements, the code can represent a merchant, a merchant location, or a merchant location terminal.	VARCHAR2	15	F42 – Card Acceptor Identification Code
6	Card Acceptor Name	Name of the merchant that is associated with the card acceptor ID.	VARCHAR2	25	F43 – Card Acceptor Name/Location

Table 55: File Data Elements (2 of 7)

Flag #	Data Element	Description	Data Type	Data Format/Length	ISO Mapping
7	System Trace Audit Number	A number assigned by the message initiator that uniquely identifies a cardholder transaction and all related message types.	VARCHAR2	6	F11 – System Trace Audit Number
8	Recipient Account Number	For Push to Card transactions - The first 6 digits of the PAN are masked. For Push to Account transactions - No data is available. Note: This field would remain empty for a Returned Payout.	VARCHAR2	28	F44.15 – Primary Account Number, Last Four Digits for Receipt
9	Transmission Date Time	The date and time the request or advice was submitted to VisaNet by the acquirer.	DATE and TIME	YYYY-MM-DDTHH:MM:SSZ	F7 – Transmission Date and Time
10	Transaction Amount	Transaction amount in the currency specified by the currency code.	NUMERIC	(14,2)	F4 – Amount, Transaction
11	Transaction Currency	Currency code associated with the transaction amount.	NUMERIC	(14,2)	F49 – ISO Transaction Currency Code
12	Authorization Code	The authorization code provided by the issuer when a transaction is approved or a “no reason to decline” code is provided for successful verifications.	CHAR	6	F38 – Authorization Identification Response
13	Retrieval Reference Number	The Retrieval Reference Number is used with other key data elements to identify and track all messages related to a given cardholder transaction. It is usually assigned by the acquirer, but it may be assigned by a merchant or by an individual electronic terminal. Note: Once assigned, this remains consistent throughout the transaction life cycle across the acquirer, VisaNet, and issuer.	NUMERIC	12	F37 – Retrieval Reference Number
14	Fee Program Indicator	An interchange reimbursement fee program indicator (FPI), which is used when assessing the fee amount.	VARCHAR2	3	F63.19 – Fee Program Indicator

Table 55: File Data Elements (3 of 7)

Flag #	Data Element	Description	Data Type	Data Format/Length	ISO Mapping
15	Settlement Date Time	The date and time for which this message becomes part of a transaction's SMS settlement between the acquirer and issuer.	DATE and TIME	YYYY-MM-DDTHH:MM:SSZ	F15 – Settlement Date
16	Acquirer Settlement Amount Note: Field availability depends on originating entity setup and configuration for Visa Direct program.	The net settlement position of the acquirer reported on VSS reports for funds transfer purposes.	NUMERIC	(14,2)	F97 – Amount, Net Settlement
17	Acquirer Settlement Currency Note: Field availability depends on originating entity setup and configuration for Visa Direct program.	Currency code associated with the acquirer settlement amount.	VARCHAR2	3	Not applicable
18	Interchange Reimbursement Fee Note: Field availability depends on originating entity setup and configuration for Visa Direct program.	Interchange Reimbursement Fees (IRFs) are noninterchange amounts paid by one member to another member.	NUMERIC	(16,6)	F119 – Settlement Service Data (Usage 1: Member-Calculated IRF)
19	Interchange Reimbursement Fee Settlement Currency Note: Field availability depends on originating entity setup and configuration for Visa Direct program.	The acquirer interchange reimbursement fee in the settlement currency amount.	NUMERIC	(16,6)	Not applicable

Table 55: File Data Elements (4 of 7)

Flag #	Data Element	Description	Data Type	Data Format/Length	ISO Mapping
20	Business Application Identifier	A two-character code identifying the intended use of a push or pull payment. It determines the data carried in the message, the limits and economics applicable to the transaction, and used by the sending and/or receiving issuer to make an authorization decision.	VARCHAR	2	F104, Usage 2 – Transaction-Specific Data; Dataset Value Hex 57
21	Message Type Indicator	A code used to indicate the transaction type. Possible values: • 0200 Original Financial (AFT/ OCT) • 0210 VIP Reject • 0220 STIP Decline Advice • 0220 Representment • 0220 Adjustment • 0400/0420 Reversal • 0422 Chargeback	VARCHAR2	4	Not applicable
22	Sender Reference Number	A transaction reference number provided by the originator or acquirer and used to uniquely identify the entity funding the transaction.	VARCHAR2	16	F104, Usage 2 – Transaction-Specific Data; Dataset Value Hex 5F
23	DCC Indicator	Dynamic Currency Conversion (DCC) is an optional non-Visa service offered by merchants at the point-of-sale and by ATM acquirers at their ATM terminals. The service involves offering the cardholder the option to pay for goods or services and withdraw cash in their own billing currency or in the merchant's own local currency. DCC occurs when a merchant or ATM acquirer performs currency conversion locally and submits the transaction in the cardholder's billing currency.	VARCHAR2	1	F126.19 – Dynamic Currency Conversion Indicator

Table 55: File Data Elements (5 of 7)

Flag #	Data Element	Description	Data Type	Data Format/Length	ISO Mapping
24	Transaction Integrity Fee	The transaction integrity fee (TIF) is different from the Acquirer Interchange Fee. TIF is part of the "VisaNet Acquirer Services Processing Charges" and is a fee applied to the Acquirer for transactions that do not meet the qualification standards of US Custom Payment Service. Additional information: 1. TIF is only charged on U.S. domestic transactions failing to qualify for US Custom Payment Service. This includes AFTs, but OCTs are excluded 2. TIF is calculated in USD, not in the settlement currency or SSBC (Settlement Service Balance Currency) 3. TIF will always be a debit to the Acquirer; hence the, Dr/Cr indicator tag/field would be Dr	NUMERIC	(18,6)	F28 – Amount, Transaction Fee
25	Processing Code	A code that identifies the customer transaction type and customer account types affected by the transaction. Possible values: • AFT = 10 • OCT = 26 • Return = 29	VARCHAR2	2	F3 – Processing Codes
26	Chargeback Reference Number	This is a 6-digit control number assigned by issuers to disputes in compliance with the Visa Rules. If present, the acquirer must include it in all subsequent dispute response financials for the disputed transaction (plus corresponding dispute financial from the issuer), and on mailed documentation. If this subfield is not applicable, it must be zero-filled.	NUMERIC	6	F48 – Dispute Documentation Indicators; Positions 4 – 9

Table 55: File Data Elements (6 of 7)

Flag #	Data Element	Description	Data Type	Data Format/Length	ISO Mapping
27	Chargeback Message Type	A code used to indicate the chargeback type.	VARCHAR2	4	F90 – Original Message Type
28	Chargeback Trace Number	A number assigned by Visa that uniquely identifies a chargeback instance.	NUMERIC	10	F90 – Original Trace Number
29	Chargeback Transmission Date Time	The date and time the chargeback message was submitted to VisaNet by the acquirer or issuer.	DATE and TIME	YYYY-MM-DDTHH:MM:SSZ	F90 – Original Transmission Date and Time
30	Chargeback Usage Code	A code used for chargeback processing purposes. Possible value: 9 = Dispute financial	VARCHAR2	1	F48 – Usage Code
31	Acquirer Funds Transfer SRE Note: Field availability depends on originating entity setup and configuration for Visa Direct program.	The Settlement Reporting Entity (SRE) at which Funds Transfer (FT) takes place.	NUMERIC	10	Not applicable
32	Settlement Service Indicator	The type of settlement service associated with the Settlement Reporting Entity (SRE) - international, national net, or area net.	VARCHAR	4	Not applicable
33	Additional Token Response Info	An indicator used for Secure Credential Framework (SCF) purposes. Possible value: 1 = Token program	VARCHAR2	1	Not applicable
34	Service Processing Type	The Service Processing Type (SPT) identifies the type of service for transaction processing. Possible values: 00 = Normal transaction 01 = Originator hold 02 = Visa deferred OCT hold, default interval 03 = Visa deferred OCT hold, user-defined interval	VARCHAR2	2	F104, Usage 2 – Dataset ID 57, Tags 80 and 81

Table 55: File Data Elements (7 of 7)

Flag #	Data Element	Description	Data Type	Data Format/Length	ISO Mapping
35	Payment Credential Reference Type	The Payment Credential Reference Types identifies the type of payment instrument that is an alternative to PAN or network token (e.g., PCI Token Reference ID).	STRING	36	Not applicable
36	Payment Credential Reference ID	Value of the payment credential reference	STRING	75	Not applicable

Consolidated Transaction Data Report

The Consolidated Transaction Data Report (CTDR) is a report that is designed to facilitate the collection of various elements of transaction data.

Effective June 2024, Visa implemented changes to the CTDR CSV format to include new fields. The report in the CSV format captures acquirer details and includes money-transfer and non-money transfer BAIs (Business Application IDs) for domestic and cross-border Original Credit Transactions (OCTs) and Account Funding Transactions (AFTs). This report will only contain transaction details of approved authorizations.

- Issuers that choose to receive the CTDR in CSV format should contact their regional client support representatives to subscribe.
- This report must not be used for reconciliation or settlement.

Issuers may receive the Consolidated Transaction Data Report (CTDR) in CSV format as generic files delivered to the Extended Access Server (EAS). See *Extended Access Server – Distributed (EAS-D) Endpoint Guide* and the *Visa Extended Access Server – Centralized (EAS-C), Client Implementation Guide* for information on EA Server, Extended Access File Services (EFS) application, Generic File processing through the EFS application.

Issuers can generate this report daily, weekly, twice a month, or monthly.

Note: For more information, see *Consolidated Transaction Data Report – CSV Format*.

To issuers who have subscribed to the CTDR – TC33 format, the files will be delivered using the options listed here:

- Direct Exchange Visa Open File Delivery (Visa OFD) – New subscribers will require Direct Exchange implementation and must use Direct Exchange Questionnaire to request the delivery options.

Important: Clients using OFD are required to migrate to Visa File Gateway (VFG). See *Visa Business News (VBN) A112092*.

- Extended Access Server (EAS) – New subscribers will require EAS implementation and must use the Client Information Questionnaire (CIQ) to request the delivery options.

Note: A file-type value of RD identifies files containing TC33 transactions.

Appendix I

Acquiring Models

Acquirers support the transactions on the send side of Money Transfer or funds disbursements in Visa Direct.

Acquiring transactions requires a licensed Visa acquirer and may also include additional participants. This section will describe the function of the acquirer and demonstrate the approved combinations of participants.

Acquirer Function

An acquirer is licensed and approved by Visa to originate Visa Direct transactions (Account Funding Transactions and Original Credit Transactions).

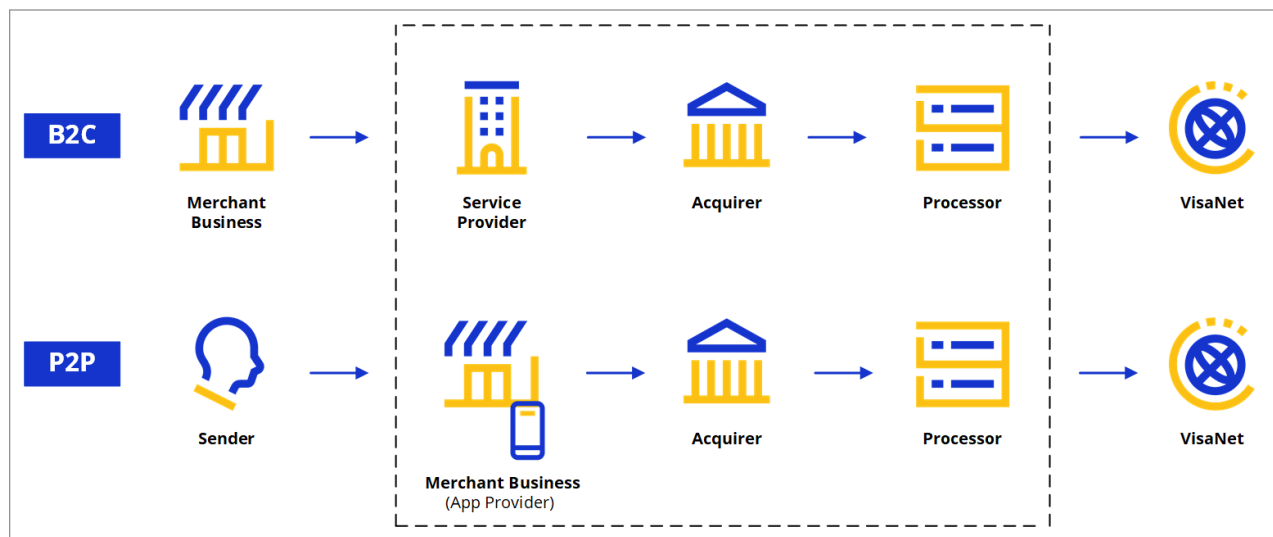

The acquirer is usually a financial institution, but in some regions, a non-financial institution that is licensed and approved can also act as an acquirer. As the sponsor of a Visa Direct program, the acquirer has specific responsibilities, including:

- Signing merchants or service providers to originate Visa Direct transactions
- Holding the acquiring BIN used for Visa Direct transactions and is responsible for all activities conducted with their BIN. These responsibilities include:
 - All activities conducted with their BIN(s)
 - All programs that they operate or sponsor using their BIN(s)
 - All activities of any sponsored merchants and service providers including ensuring they comply with Visa Rules and Requirements.
- Required to comply with the *Visa Core Rules and Visa Product and Service Rules*
- Required to comply with the Visa's Global Acquirer Risk Standards
- Required to ensure that participants in all Visa Direct programs comply with applicable laws, regulations, and Visa Rules
- Must perform due-diligence and monitoring in connection with its Visa Direct programs

A program can be offered by the acquirer to the merchant, executed directly by the merchant, or the service provider/payment facilitator could offer one or more programs to the merchants they sign. Each program must have an approved PIF in place.

Participants in the Acquiring Models

Several different entities may be participants in an acquiring model.

Acquirer: Institution licensed by Visa and sponsoring the Visa Direct Program, and whose Acquiring ID (BIN) is used to submit transactions into VisaNet.

Service Provider: An acquirer-sponsored, third-party entity that offers OCT-based services to merchants. They may be a merchant servicer where the acquirer manages the settlement or a payment facilitator providing the settlement services.

Merchant: An entity that originates OCTs only for themselves and their customers.

Processor: A registered third-party servicer to the acquirer that provides many payment/processing-related services, including processing, data center management, back-office ops, fraud management and other value-added services. The processing services do not include movement of funds.

Third Party Agent (TPA): An entity that provides payment-related services, directly or indirectly, to a Visa client and/or stores, transmits, or processes cardholder data. A TPA must be registered by all Visa clients using their services, directly or indirectly (processors and service providers described above are types of TPAs).

Acquiring Models by Program Types

Types of programs used for acquiring models.

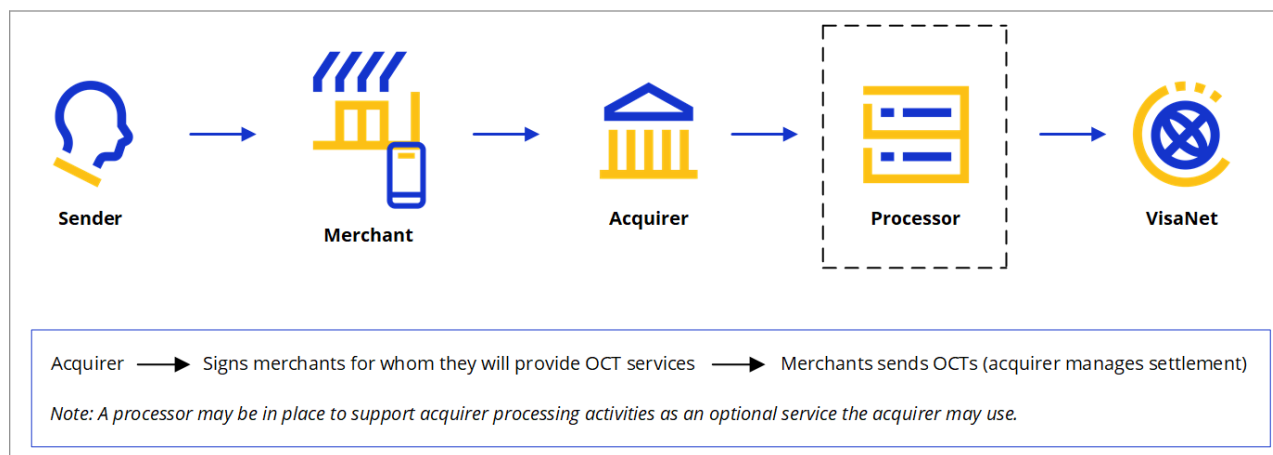

Money Transfer

A sender initiates a P2P Money Transfer to a recipient account (OCT) typically through a Money Transfer service provider, merchant, or their financial institution.

Every merchant must have a Money Transfer operating license to support person-to-person or account-to-account Money Transfers, and an approved Program Information Form (PIF) is required per merchant.

Applicable for Visa Direct for Card and push-to- Account (P2A) programs.

Person-to-Person Money Transfer

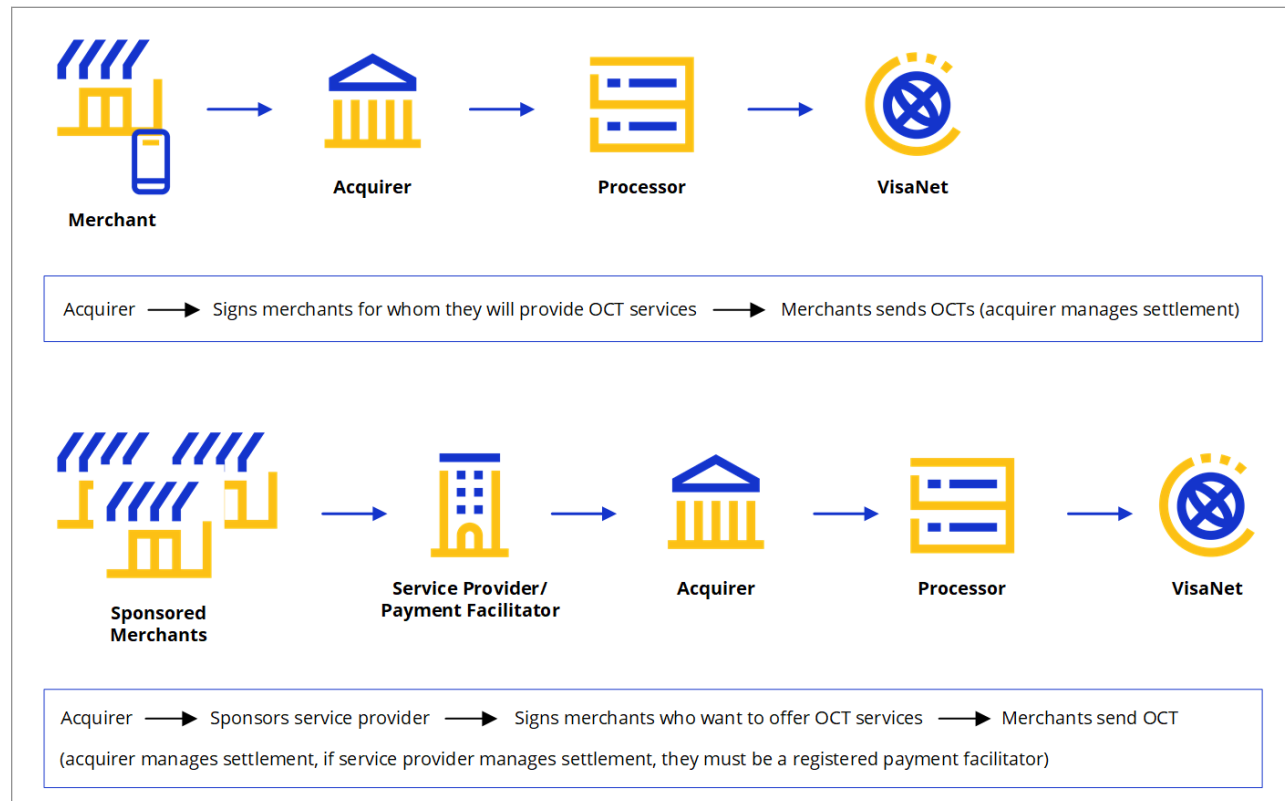

Business to Consumer

An OCT-based program that provides the ability for a business, merchant, or government entity to send funds to a recipient.

These are business-funded transactions, applicable for pushing-to-card (P2C) or Account (P2A).

The acquirer may sign these merchants or a service provider/payment facilitator signs merchant in the aggregator model.

Business to Consumer

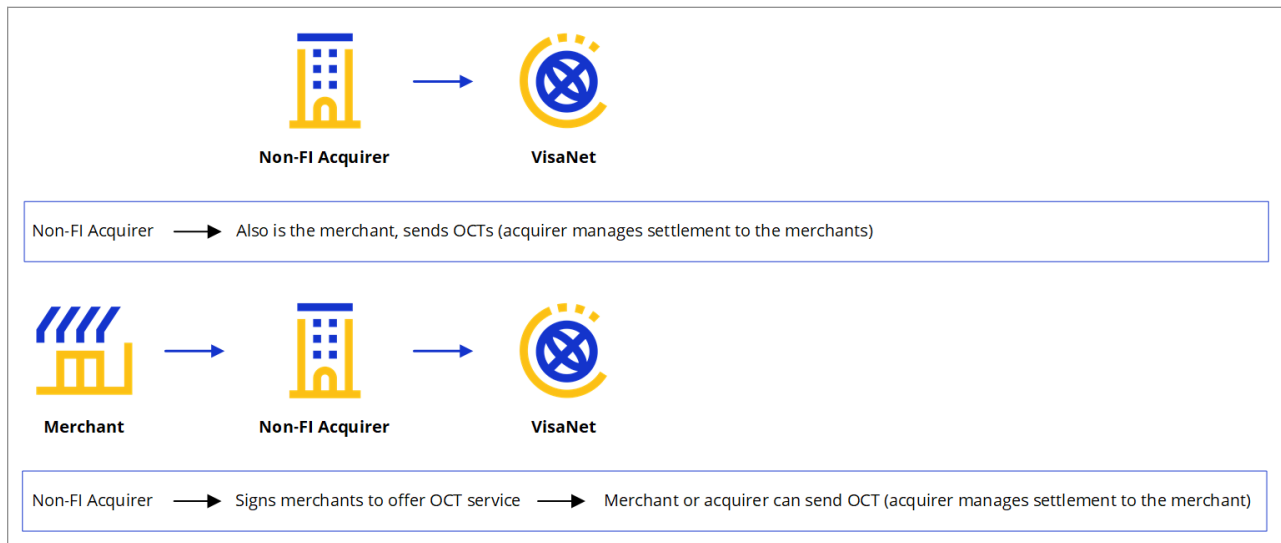

Non-Financial Institution Acquiring Model

A Non-Financial Institution Acquirer model (also referred to as the Self-Acquiring Model) is where the non-financial institution is issued an acquiring license.

The acquiring license includes varying degrees of permissions under the acquiring license that limit the type of entities they can acquire. Non-Financial Institutions can sponsor merchants as their acquirer,¹ but they cannot sponsor a service provider or payment facilitator. The Non-Financial Institution Acquirer model is available for Visa Direct for Card and push-to-account (P2A).

¹ In the U.S., acquirers cannot be non-financial institutions.

Non-Financial Institutions

Appendix J

Transaction Flows

This appendix provides OCT-related transaction flows, as outlined in the table.

In the diagrams, Originating Entity can be a merchant, acquirer, or service provider.

Note: These flows are provided for informational purposes only; check the Full Service POS Online Messages – Technical Specifications for the most recent requirements.

Table 56: Transaction Flows (1 of 2)

Originating Entity	Recipient Issuer	Transaction Scenario
SMS Originating Entity	SMS Recipient Issuer	Approval
SMS Originating Entity	Authorization-Only/BASE II Recipient Issuer	Approval
SMS Originating Entity	SMS Recipient Issuer	Decline
SMS Originating Entity	Authorization-Only/BASE II Recipient Issuer	Decline
SMS Originating Entity	SMS Recipient Issuer	Originating Entity Unavailable
SMS Originating Entity	Authorization-Only/BASE II Recipient Issuer	Originating Entity Unavailable
SMS Originating Entity	SMS Recipient Issuer	Recipient Issuer Unavailable

Table 56: Transaction Flows (2 of 2)

Originating Entity	Recipient Issuer	Transaction Scenario
SMS Originating Entity	Authorization-Only/BASE II Recipient Issuer	Recipient Issuer Unavailable
SMS Originating Entity	SMS or Authorization-Only/BASE II Recipient Issuer	Velocity Limits Exceeded and Recipient Issuer Opts for VisaNet to Decline OCT on their Behalf
SMS Originating Entity	SMS Recipient Issuer	Recipient Issuer Response Delay
SMS Originating Entity	Authorization-Only/BASE II Recipient Issuer	Recipient Issuer Response Delay
Any Originating Entity	Any Recipient Issuer	Recipient Issuer Charges Back OCT
SMS Originating Entity	BASE II (TC06 Only) Recipient Issuer	Approval

SMS Originating Entity to SMS Recipient Issuer – Approval

This image details the transaction flow for SMS Originating Entity to SMS Recipient Issuer – Approval.

SMS Originating Entity to SMS Recipient Issuer – Approval

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet forwards 0200 message to recipient issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline).

3. Recipient issuer receives 0200 message, processes it, and approves it:
 - **Fast Funds:** If the recipient issuer participates in Fast Funds, the issuer makes funds available in the recipient's account in 30 minutes or less.

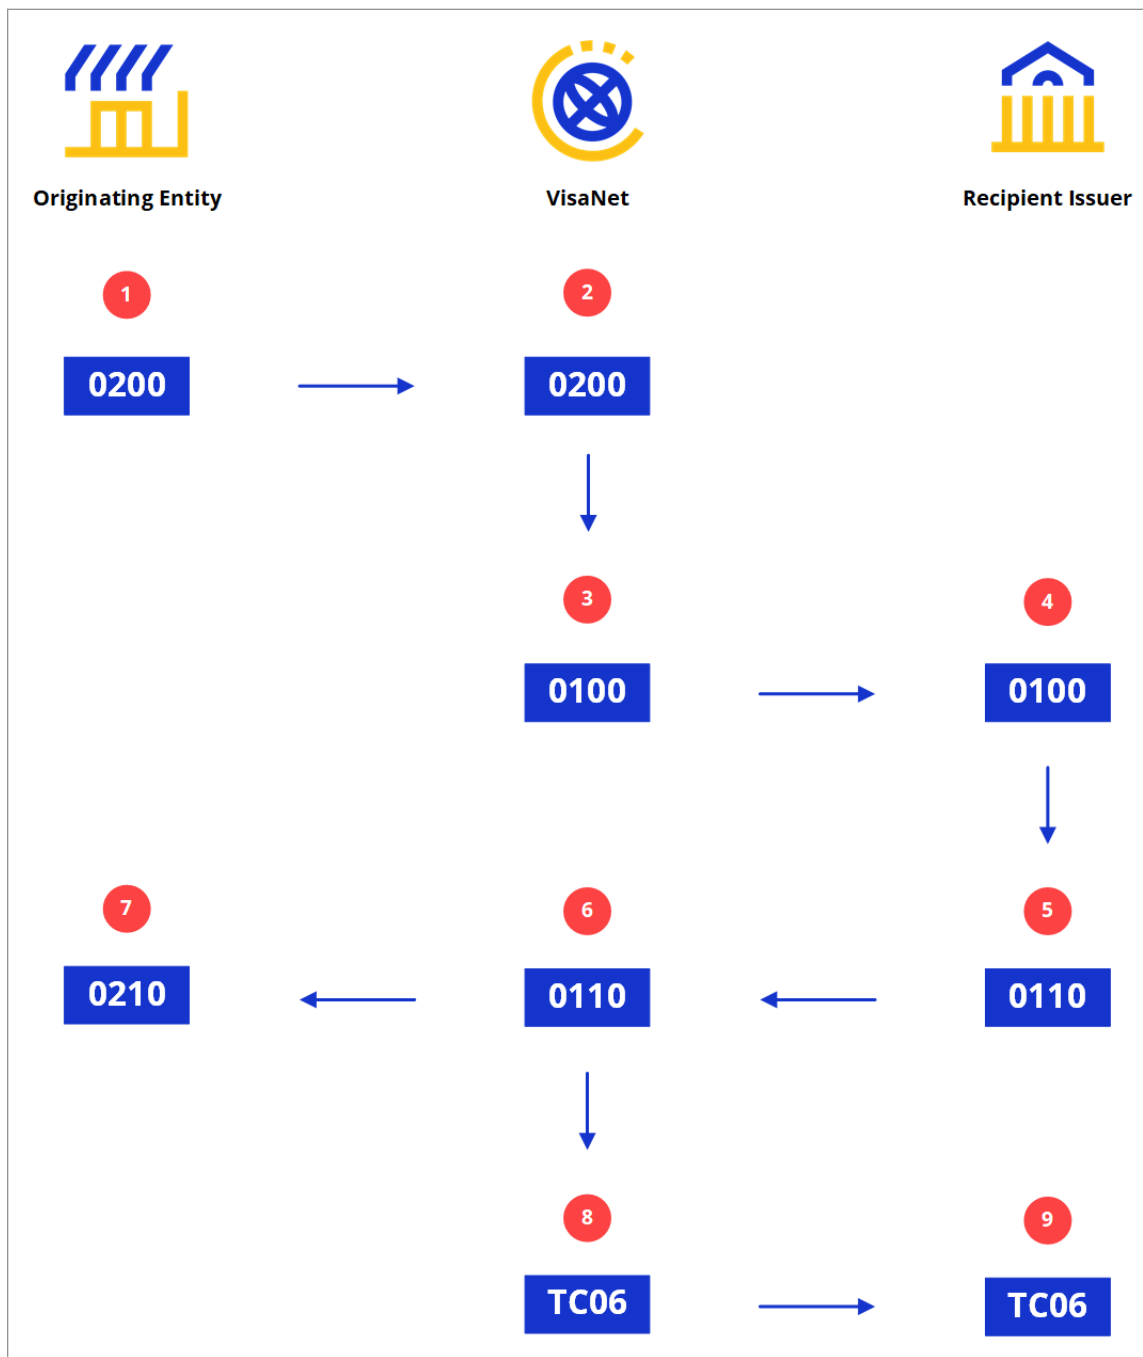

U.S. Domestic Only: To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.
 - **Conventional Funds:** If the recipient issuer does not participate in Fast Funds, the issuer makes funds available into the recipient's account within two business days.

Note: In the Europe Region, for an intraregional transaction, the funds must be made available on the same business day.
4. Recipient issuer creates 0210 response and sends it to VisaNet.
5. VisaNet forwards 0210 response to the originating entity.
6. The originating entity receives 0210 response and completes transaction with the sender.

SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Approval

This image details the transaction flow for SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Approval.

SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Approval

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet receives 0200 message from originating entity.
3. VisaNet converts 0200 message into a 0100 message and sends it to recipient issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline).

4. Recipient issuer receives 0100 message, processes it, and approves it. **Fast Funds:** If the issuer participates in Fast Funds, the issuer makes funds available into the recipient's account in 30 minutes or less.

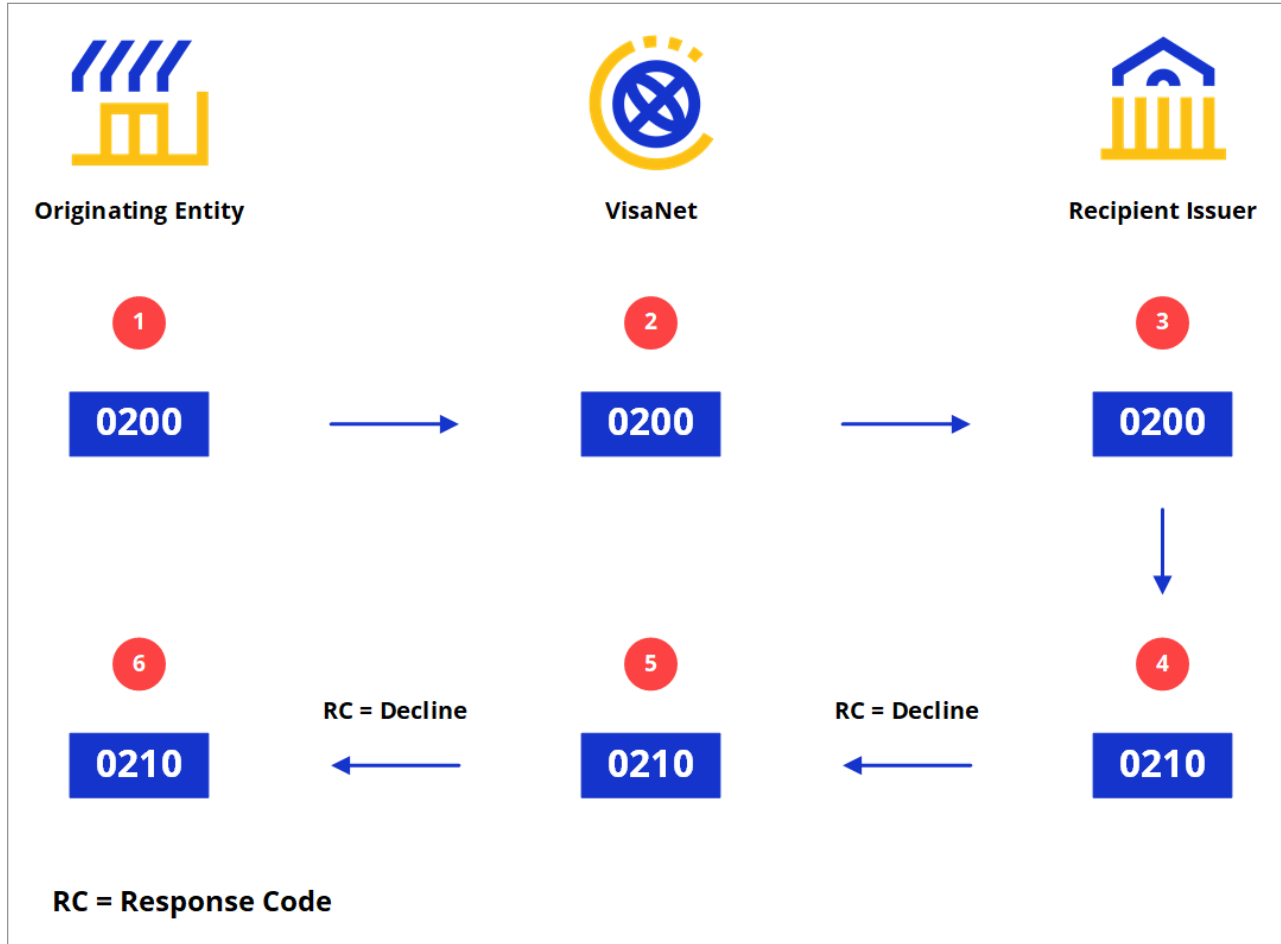

Note:

- **U.S. Domestic Only:** To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.
 - If a non-U.S. issuer does not participate in Fast Funds, VisaNet approves the 0100 on the issuer's behalf (assuming there is no reason to decline it) and sends the TC06 only to the issuer.
5. Recipient issuer sends 0110 response to VisaNet.
 6. VisaNet receives 0110 response, converts it to a 0210 response, and forwards it to the originating entity.
 7. The originating entity receives 0210 response, and completes transaction with sender.
 8. VisaNet creates a TC06 message and sends it to the recipient issuer.
 9. The recipient issuer receives the TC06:
 - **Fast Funds:** If the recipient issuer participates in Fast Funds, the issuer must not make funds available using the TC06 into the recipient's account because the funds were already made available as part of the processing of the 0100 message. Refer to Step 4 for details.
 - **Conventional Funds:** If the recipient issuer does not participate in Fast Funds, the issuer uses the TC06 to make funds available into the recipient's account within two business days or the same business day in the Europe Region.

SMS Originating Entity to SMS Recipient Issuer – Decline

This image details the transaction flow for SMS Originating Entity to SMS Recipient Issuer – Decline.

SMS Originating Entity to SMS Recipient Issuer – Decline

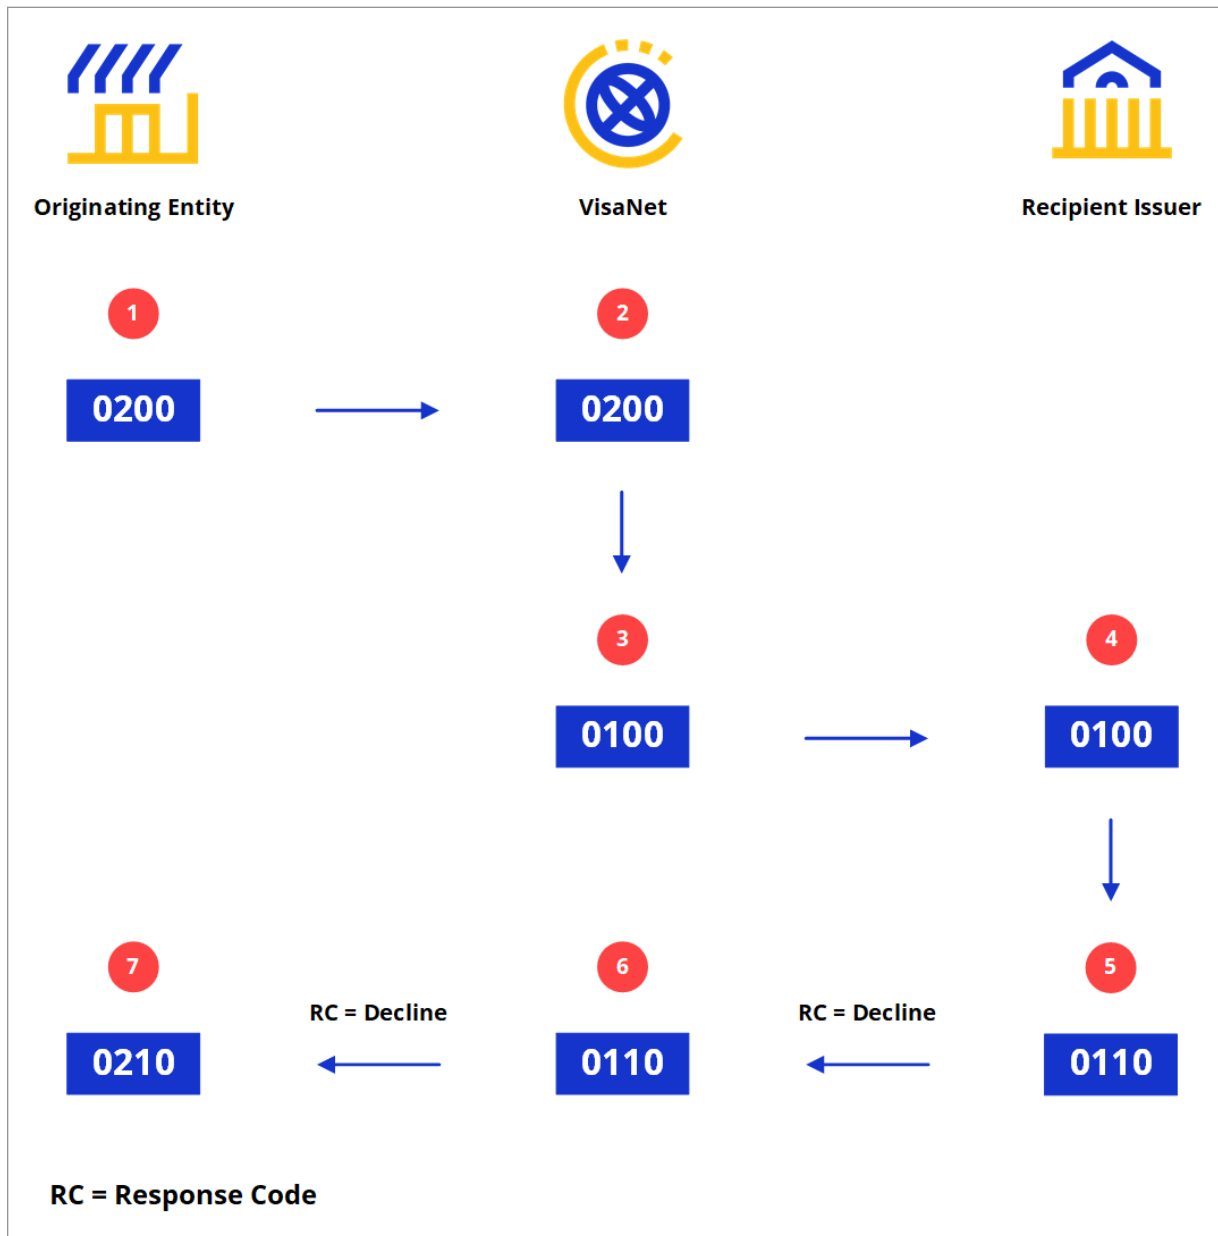

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet forwards 0200 message to recipient issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline).
3. Recipient issuer receives 0200 message, processes it, and declines it.
4. Recipient issuer sends 0210 response to VisaNet.
5. VisaNet forwards 0210 response to the originating entity.
6. The originating entity receives 0210 response and notifies the sender that the transaction **cannot** be successfully completed.

SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Decline

This image details the transaction flow for SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Decline.

SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Decline

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet receives 0200 message from originating entity.
3. If the recipient issuer participates in Fast Funds, VisaNet converts 0200 message into a 0100 message and sends it to issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline).

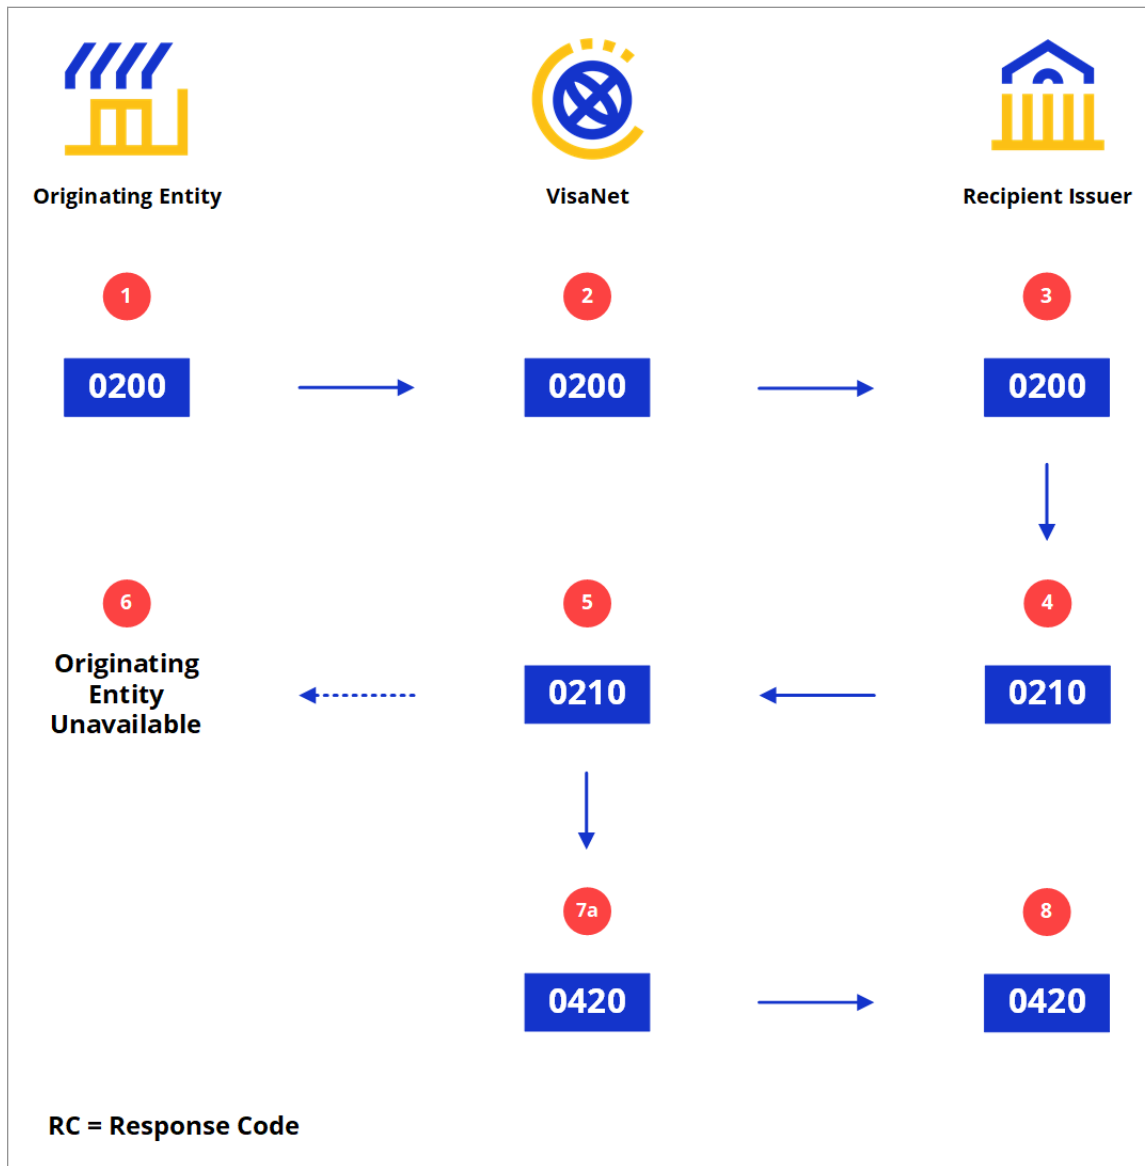

Note: If a non-U.S. recipient issuer does not participate in Fast Funds, VisaNet approves the 0100 message on the issuer's behalf (unless there is a reason to decline it, such as card is on exception file or issuer is blocked from receiving OCTs) and sends the TC06 only to the issuer.

4. Recipient issuer receives 0100 message, processes it, and declines it.
5. Recipient issuer creates 0110 response and sends it to VisaNet.
6. VisaNet receives 0110 response, converts it to a 0210 response, and forwards it to the originating entity.
7. The originating entity receives 0210 response. The merchant notifies the sender that the transaction **cannot** be successfully completed.

SMS Originating Entity to SMS Recipient Issuer – Originating Entity Becomes Unavailable

This image details the transaction flow for SMS Originating Entity to SMS Recipient Issuer – Originating Entity Becomes Unavailable.

SMS Originating Entity to SMS Recipient Issuer – Originating Entity Becomes Unavailable

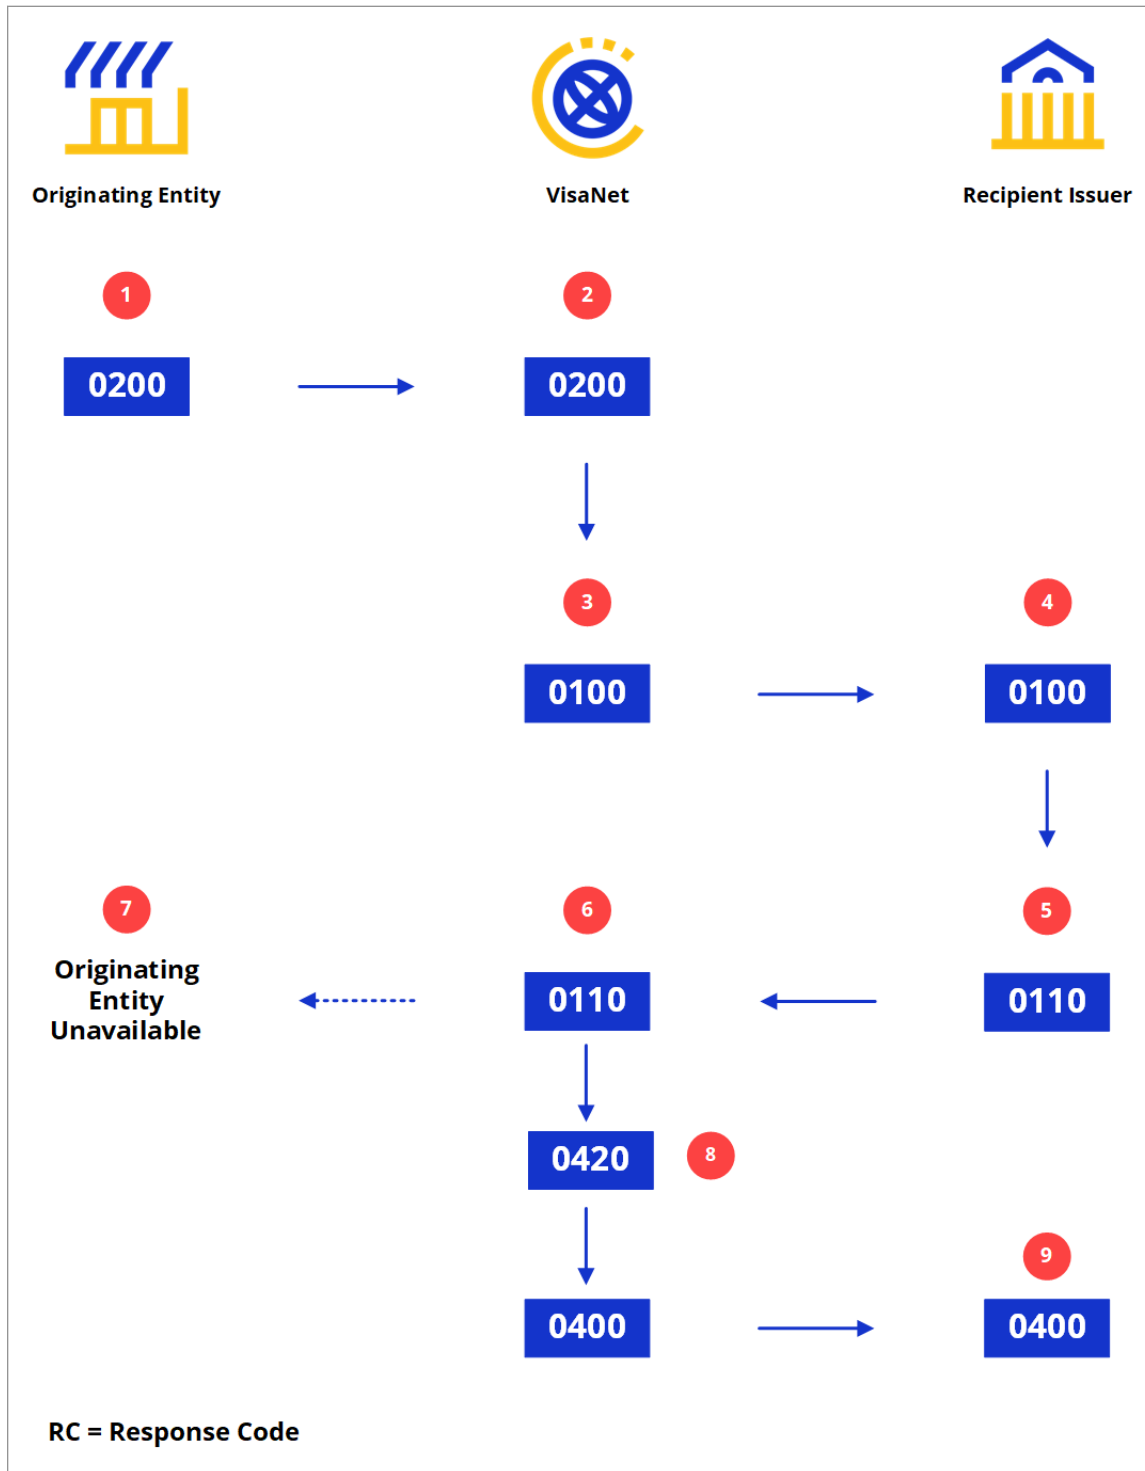

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet forwards 0200 message to recipient issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline).

3. Recipient issuer receives 0200 message, processes it, and approves it:
 - **Fast Funds:** If the recipient issuer participates in Fast Funds, the issuer makes funds available into the recipient's account in 30 minutes or less.
U.S. Domestic Only: To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.
 - **Conventional Funds:** If the recipient issuer does not participate in Fast Funds, the issuer makes funds available into the recipient's account within two business days (or same business day in Europe for an Intraregional Transaction).
4. Recipient issuer creates 0210 response and sends it to VisaNet.
5. VisaNet receives 0210 response from the issuer.
6. VisaNet attempts to send 0210 response, but the originating entity is not available.
7. VisaNet creates and sends a 0420 reversal message to the recipient issuer.
8. Recipient issuer receives and processes 0420 reversal:
Fast Funds: Upon receipt of the 0420 reversal, the recipient issuer needs to obtain the funds from the recipient's account.

SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Merchant Unavailable

This image details the transaction flow for SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Merchant Unavailable.

SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Merchant Unavailable

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet receives 0200 message from the originating entity.

3. VisaNet converts 0200 messages into a 0100 message and sends it to recipient issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline).
4. Recipient issuer receives 0100 message, processes it, and approves it:

Fast Funds: Recipient issuers participating in Fast Funds makes funds available into the recipient's account in 30 minutes or less.

Note:

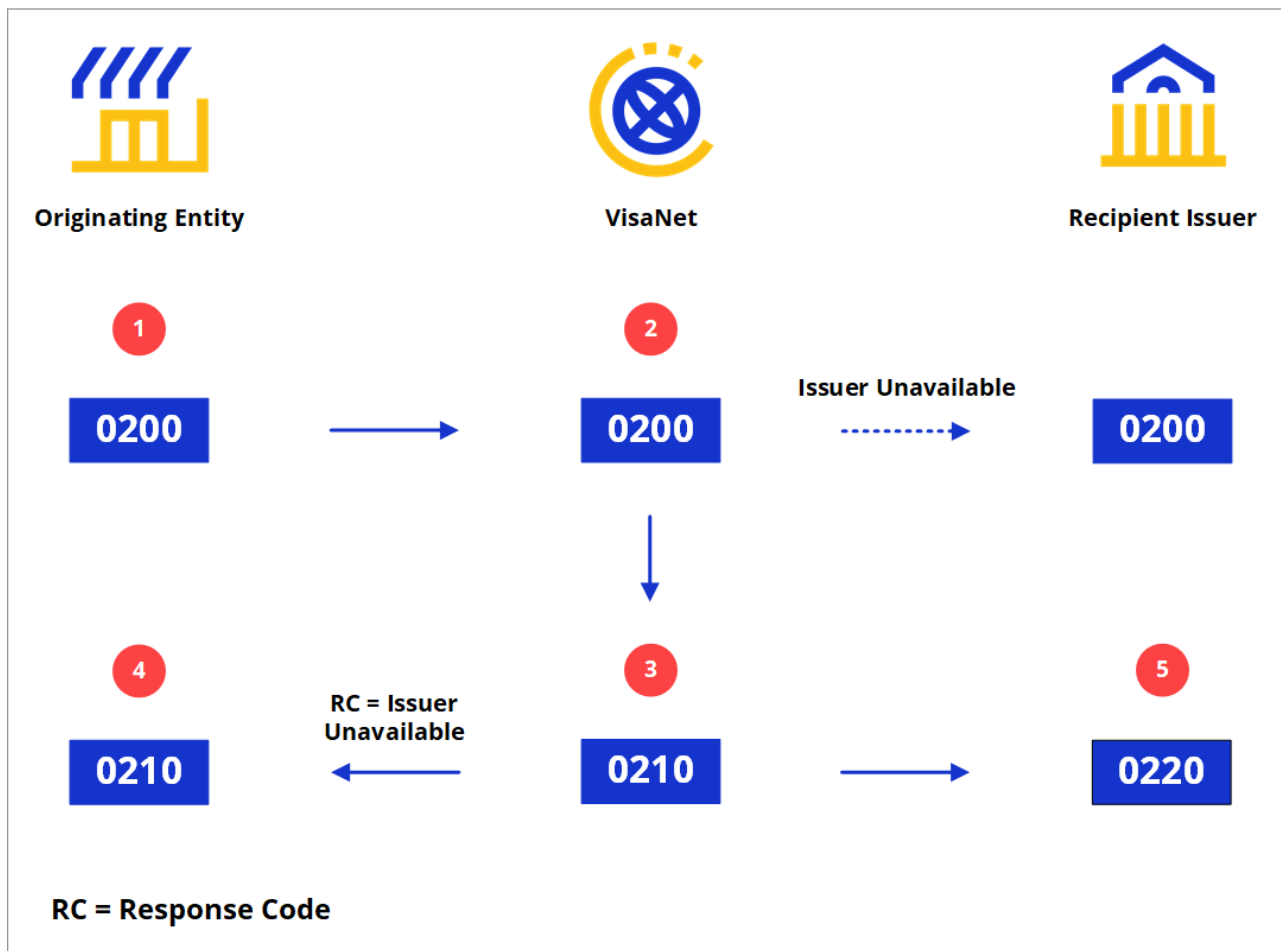

- **U.S. Domestic Only:** To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.
 - If a non-U.S. recipient issuer does not participate in Fast Funds, VisaNet approves the 0100 message on the recipient issuer's behalf (assuming there is no reason to decline it) and sends the TC06 to the recipient issuer.
5. Recipient issuer creates 0110 response and sends it to VisaNet.
 6. VisaNet receives 0110 response, converts it to a 0210 response, and attempts to send it to the originating entity.
 7. The originating entity is not available.
 8. VisaNet creates a 0420 reversal advice, converts it to 0400 reversal request, and sends it to the recipient issuer.
 9. Recipient issuer receives and processes 0400 reversal:

Fast Funds: Upon receipt of the 0400 reversal, the recipient issuer needs to obtain the funds from the recipient's account.

SMS Originating Entity to SMS Issuer – Recipient Issuer Unavailable

This image details the transaction flow for SMS Originating Entity to SMS Issuer – Recipient Issuer Unavailable.

SMS Originating Entity to SMS Issuer – Recipient Issuer Unavailable

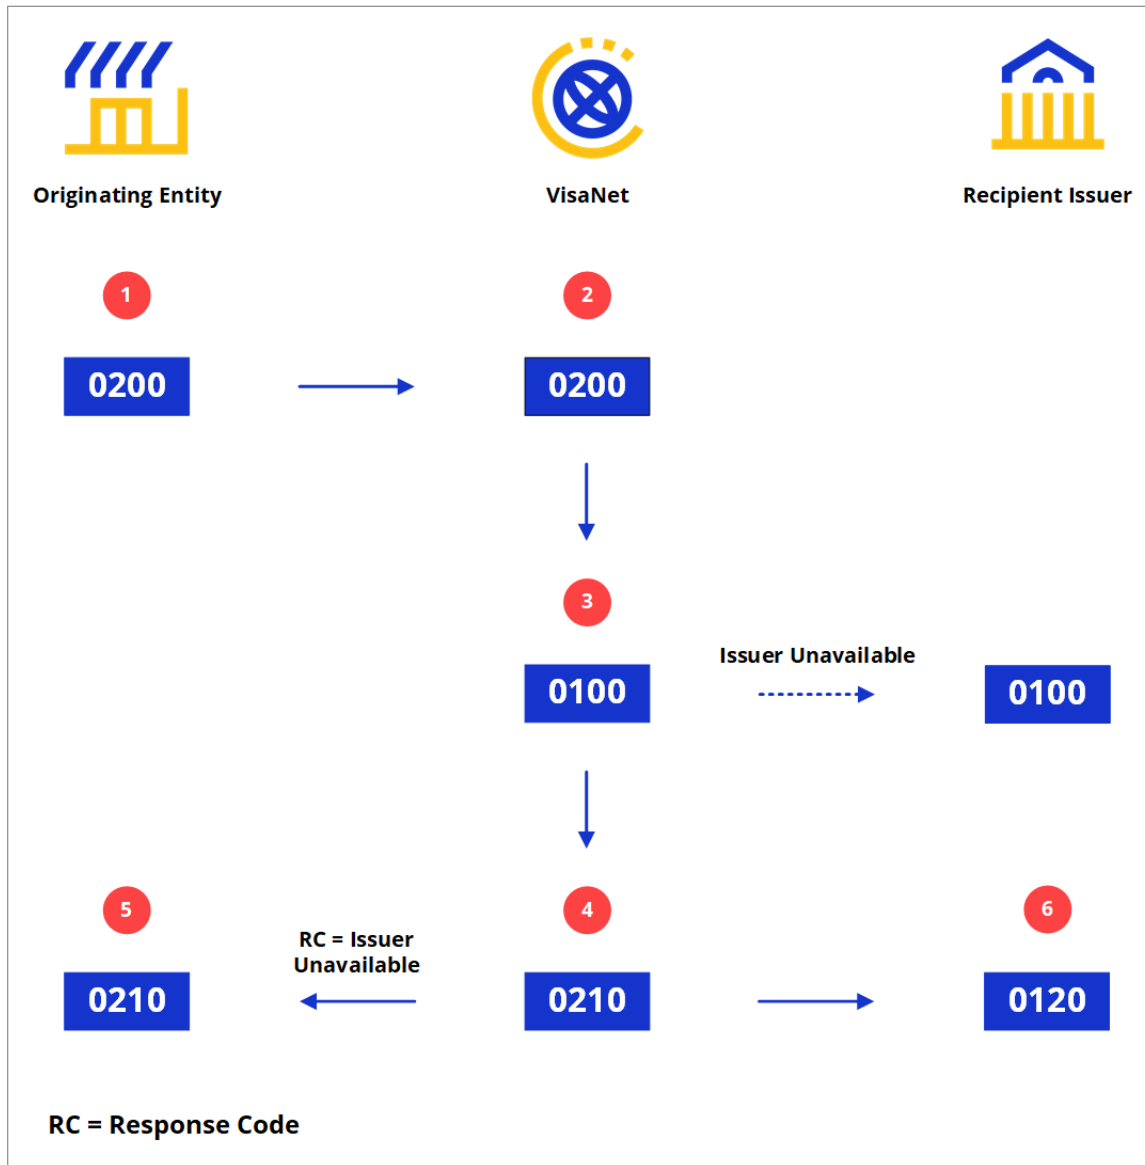

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet receives 0200 message from merchant. VisaNet sends 0200 message into a 0100 message and attempts to send it to the recipient issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline), but the issuer is unavailable.
3. VisaNet creates 0210 response and sends it to the originating entity with a response code value that indicates that the issuer is unavailable (response code **91**).

4. The originating entity receives 0210 response and notifies the sender that the transaction **cannot** be successfully completed.
5. VisaNet sends the issuer and 0220 advice, indicating that it was declined because the recipient issuer was unavailable.

SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Recipient Issuer Unavailable

This image details the transaction flow for SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Recipient Issuer Unavailable.

SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Recipient Issuer Unavailable

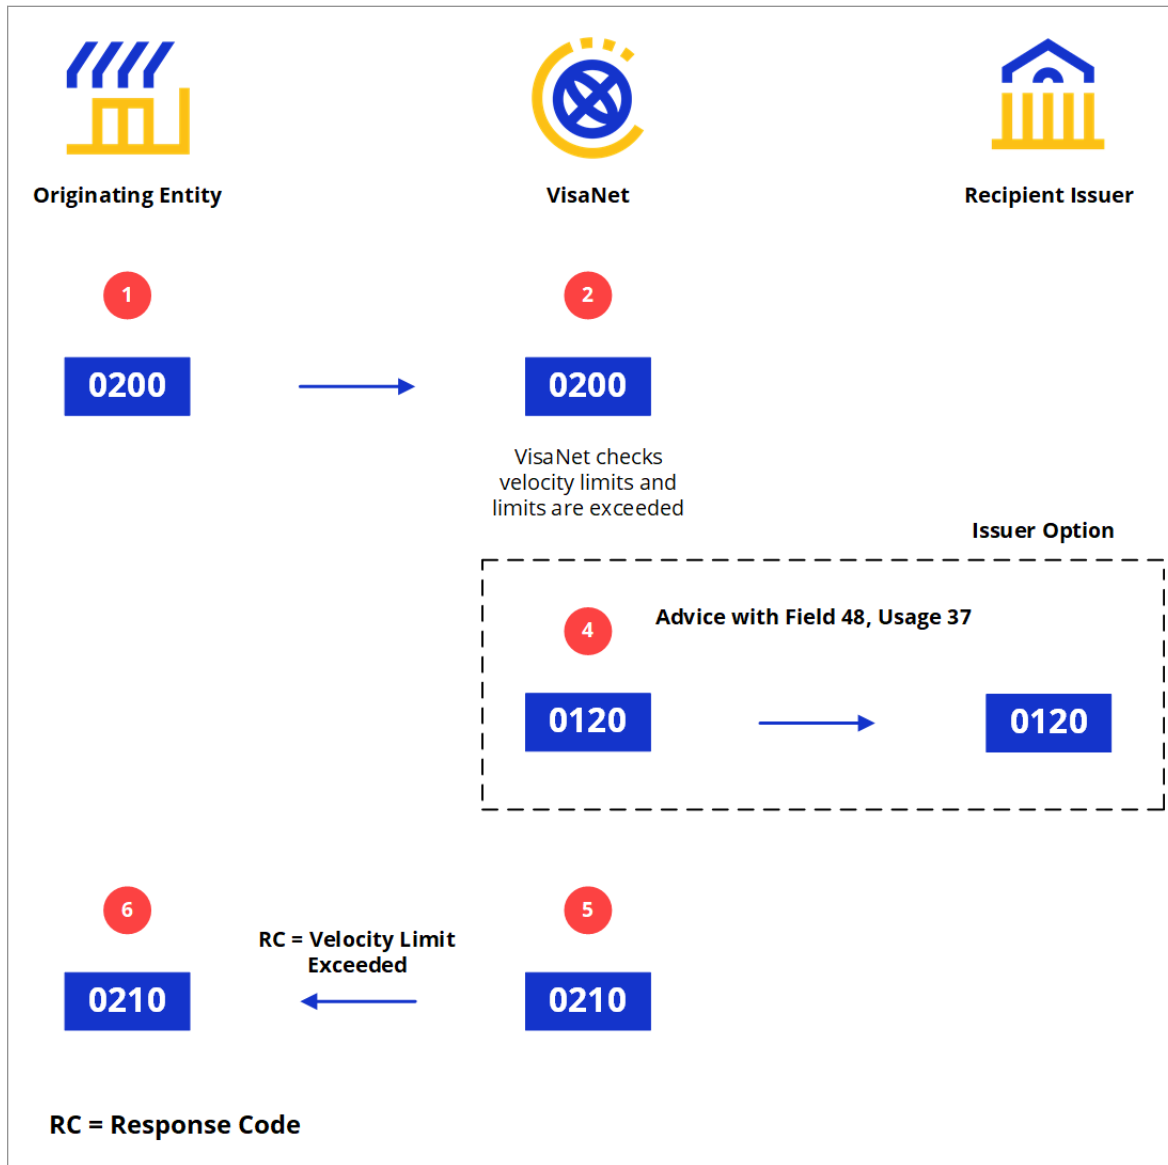

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet receives 0200 message from the originating entity.
3. VisaNet converts 0200 message into a 0100 message and attempts to send it to the recipient issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline), but the issuer is unavailable.
4. VisaNet creates 0210 response and sends it to the originating entity with a response code value that indicates that the issuer is unavailable (response code 91).

5. The originating entity receives 0210 response and notifies the sender that the transaction **cannot** be successfully completed.
6. VisaNet sends the recipient issuer and 0120 advice, indicating that it was declined because the issuer was unavailable.

SMS Originating Entity to SMS or Authorization-Only/BASE II Recipient Issuer – Velocity Limits Exceeded and Issuer Opts for VisaNet to Decline OCT on Their Behalf

This image details the transaction flow for SMS Originating Entity to SMS or Authorization-Only/BASE II Recipient Issuer – Velocity Limits Exceeded and Issuer Opts for VisaNet to Decline OCT on Their Behalf.

SMS Originating Entity to SMS or Authorization-Only/BASE II Recipient Issuer – Velocity Limits Exceeded and Issuer Opts for VisaNet to Decline OCT on Their Behalf

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet receives 0200 message from the originating entity.
3. VisaNet determines that recipient issuer is available. VisaNet checks amount against velocity limits and determines that velocity limits are exceeded. Issuer's velocity limit preferences indicate that VisaNet should decline the OCT on the issuer's behalf when a velocity limit is exceeded.
4. If the recipient issuer opts to receive an advice, VisaNet creates a Stand-in Advice and sends it to the issuer with Field 48, Usage 37, position 11 containing information about the exceeded velocity limit. If not, no advice is created.

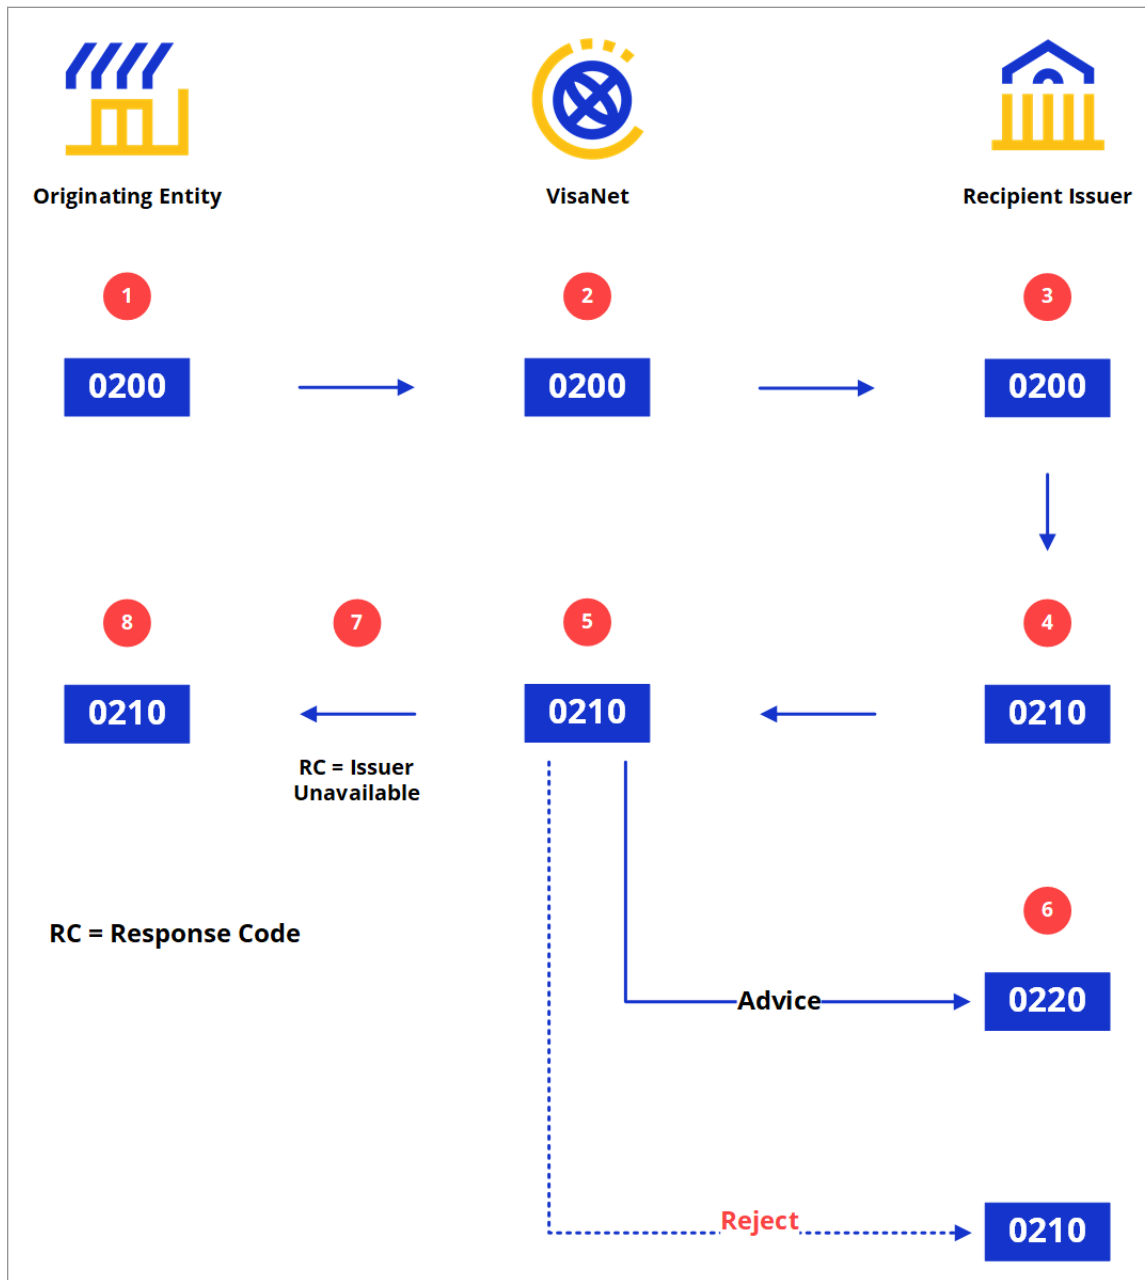

5. VisaNet responds to the originating entity with Response Code (RC) 61 or 65 indicating that velocity limits were exceeded.
6. The originating entity receives 0210 response with Response Code 61 or 65.

For additional information, refer to [Velocity Limits Exceeded - Processing Options](#).

SMS Originating Entity to SMS Recipient Issuer – Issuer Response Delay

This image details the transaction flow for SMS Originating Entity to SMS Recipient Issuer – Issuer Response Delay.

SMS Originating Entity to SMS Recipient Issuer – Issuer Response Delay

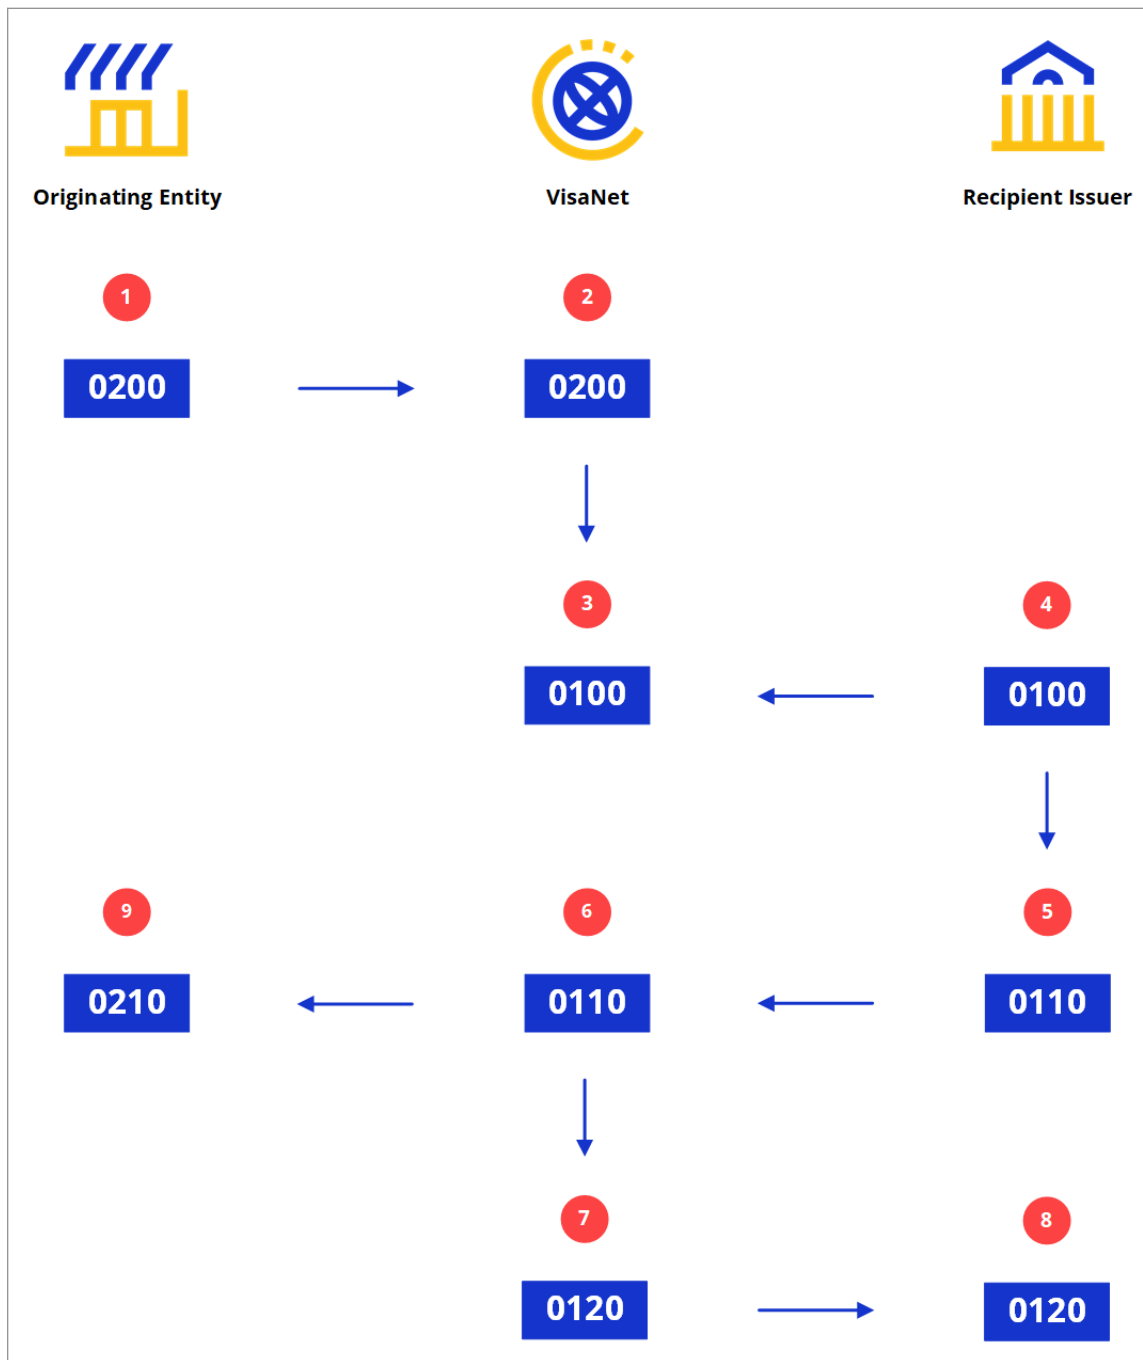

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet forwards 0200 message to recipient issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline).

3. Recipient issuer receives 0200 message, processes it, and approves it:
 - **Fast Funds:** If the recipient issuer participates in Fast Funds, the issuer makes funds available into the recipient's account in 30 minutes or less.
U.S. Domestic Only: To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.
 - **Conventional Funds:** If the recipient issuer does not participate in Fast Funds, the issuer makes funds available into the recipient's account within two business days (or same business day in Europe for an Intraregional Transaction).
4. Recipient issuer creates 0210 response and sends it to VisaNet.
5. VisaNet receives 0210 response from issuer, but the response took too long. VisaNet sends the issuer a timeout advice and may also send the issuer a reject if the issuer has opted to receive rejects for this situation.
6. Recipient issuer receives advice (and reject if supported by issuer):
 - **Fast Funds:** Issuers participating in Fast Funds need to retrieve the funds from the recipient's account.
 - **Conventional Funds:** The issuer must not make funds available into the recipient's account.
7. VisaNet sends a 0210 response to the originating entity with a response code value that indicates that the recipient issuer is unavailable (response code of **91**).
8. The originating entity receives 0210 response and notifies the sender that the transaction **cannot** be successfully completed.

SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Recipient Issuer Response Delay

This image details the transaction flow for SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Recipient Issuer Response Delay.

SMS Originating Entity to Authorization-Only/BASE II Recipient Issuer – Recipient Issuer Response Delay

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet receives 0200 message from originating entity.
3. VisaNet converts 0200 messages into a 0100 message and sends it to recipient issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline).

4. Recipient issuer receives 0100 message, processes it, and approves it:

Fast Funds: Recipient issuers participating in Fast Funds makes funds available into the recipient's account in 30 minutes or less.

Note:

- **U.S. Domestic Only:** To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.
- If a non-U.S. recipient issuer does not participate in Fast Funds, VisaNet approves the 0100 message on the issuer's behalf (unless there is a reason to decline it) and sends the TC06 to the issuer.

5. Recipient issuer creates 0110 response and sends it to VisaNet.
6. VisaNet receives 0110 response from issuer, but the response took too long.
7. VisaNet sends the recipient issuer a 0120 timeout advice indicating that the response was received outside of the response window.
8. Recipient issuer receives the advice:

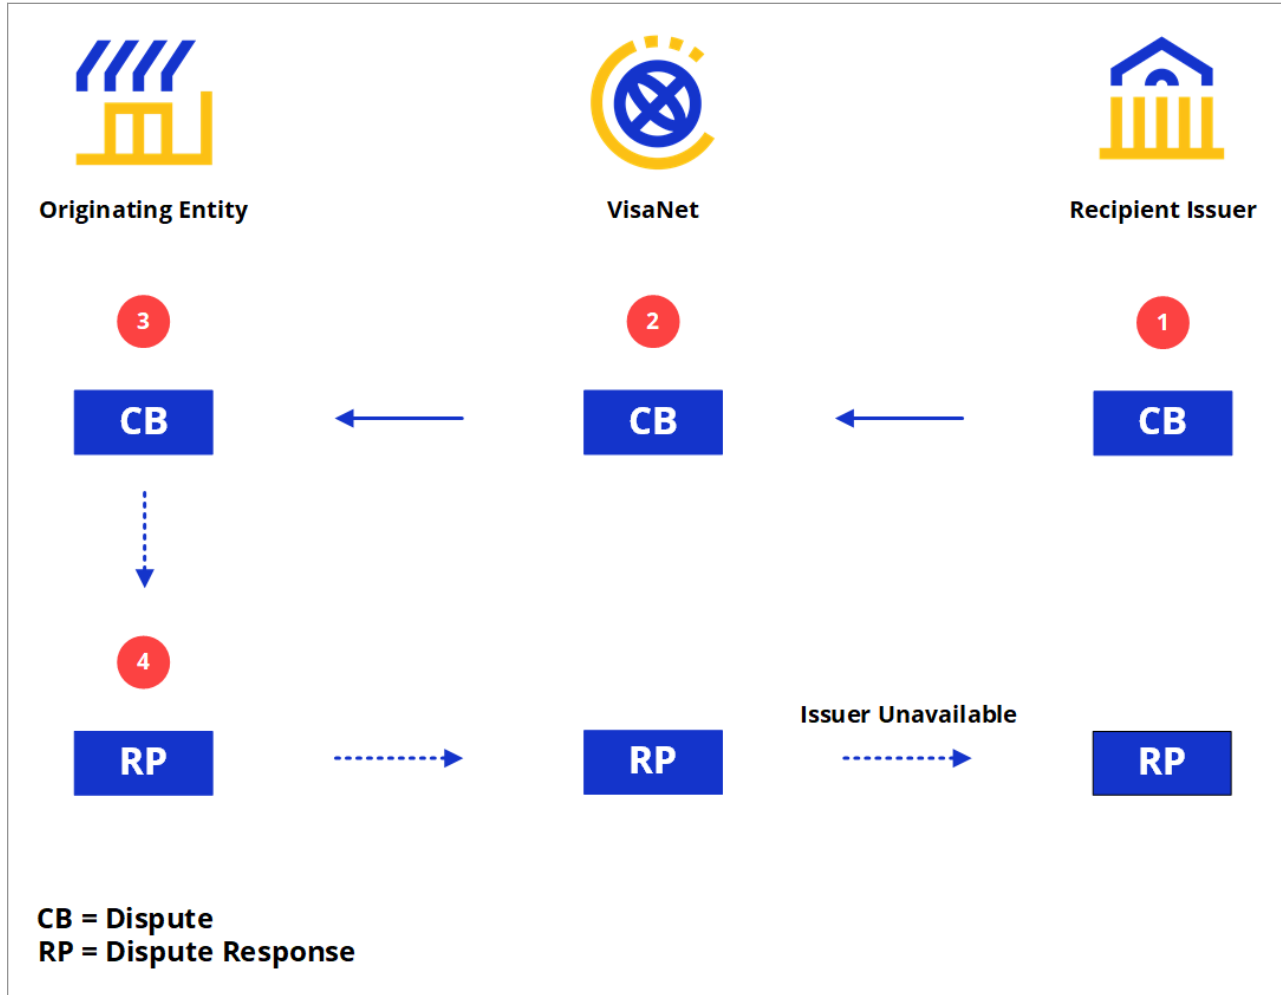

Fast Funds: Issuers participating in Fast Funds need to retrieve the funds from the recipient's account.

9. VisaNet creates 0210 response, includes a response code that indicates that the recipient issuer is unavailable (response code of **91**), and forwards it to the originating entity. The originating entity receives 0210 response and notifies the sender that the transaction **cannot** be successfully completed.

SMS/Dual Message Recipient Issuer Charges Back OCT

This image details the transaction flow for SMS/Dual Message Recipient Issuer Charges Back OCT.

SMS/Dual Message Recipient Issuer Charges Back OCT

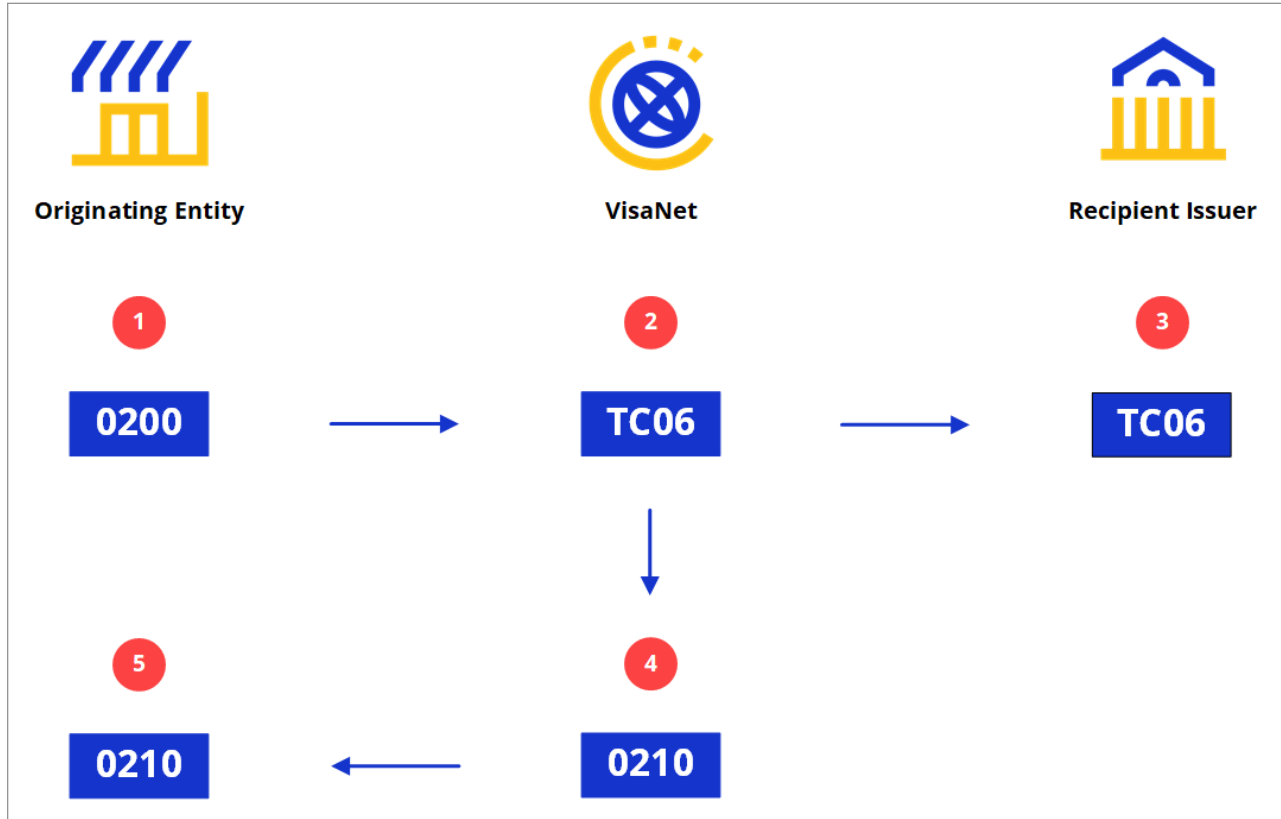

1. Recipient issuer sends OCT dispute to VisaNet using dispute condition code 12 or 13. Disputes can be originated from VROL or sent as a transaction. SMS transactions use a 0422 message; Dual Message use a 0422 with TC16.
2. VisaNet forwards OCT dispute to the merchant.
3. The originating entity processes dispute and returns the funds to the sender, or
4. If the originating entity has dispute response rights, they can represent the dispute.

SMS Originating Entity to BASE II Recipient Issuer (TC06 Only)

This image details the transaction flow for SMS Originating Entity to BASE II Recipient Issuer (TC06 Only).

SMS Originating Entity to BASE II Recipient Issuer (TC06 Only)

1. The originating entity sends 0200 message to VisaNet.
2. VisaNet converts 0200 message into TC06 and forwards it to the recipient issuer (assuming issuer can accept OCTs and there is no other reason for VisaNet to decline).

Note: This is applicable only for issuers that are enabled for STIP approval.

3. Recipient issuer receives TC06 message and makes funds available into recipient's account within two business days (or same business day in Europe for an intraregional transaction).

Note: Fast Funds is not applicable to issuers that support the TC06 only. Issuers need to receive a 0100 or 0200 message in order to enable Fast Funds.

4. VisaNet creates 0210 response.
5. VisaNet provides 0210 response to the originating entity.

Appendix K

Acronyms

This table defines the acronyms either used in this document or relevant to other documents referred to within this document.

Table 57: Acronyms (1 of 2)

Acronyms	Meaning
AA	Account-to-Account (Money Transfer BAI)
ACNL	Account Lookup
AFT	Account Funding Transaction
AML	Anti-Money Laundering
API	Application Programming Interface
ATF	Anti-Terrorist Financing
ATM	Automated Teller Machine
BAI	Business Application Identifier
BB	Supplier Payments (Funds Disbursement/Non-Money Transfer BAI)
BI	Bank-Initiated P2P (Money Transfer BAI)
BIN	Bank Identification Number
CD	Cash Deposit

Table 57: Acronyms (2 of 2)

Acronyms	Meaning
CIQ	Client (Customer) Information Questionnaire
CP	Credit Card Bill Payment
EVV	Enabler Verification Value
FD	Funds Disbursement
FT	Funds Transfer (Stored Value Digital Wallet)
GD	Government Disbursement (Funds Disbursement/Non-Money Transfer BAI)
GP	Gambling Payout (non-online gambling) (Funds Disbursement/Non-Money Transfer BAI)
LO	Loyalty Credits and Rebates (Funds Disbursement/Non-Money Transfer BAI)
MCC	Merchant Category Code
MD	Merchant Settlement (Funds Disbursement/Non-Money Transfer BAI)
MI	Merchant-Initiated Faster Refund
MVV	Merchant Verification Value
OCT	Original Credit Transaction
OFAC	Office of Foreign Assets Control
OG	Online Gambling Payout (Funds Disbursement/Non-Money Transfer BAI)
PAN	Primary Account Number
PD	Payroll and Pension Disbursement (Funds Disbursement/Non-Money Transfer BAI)
PIF	Program Information Form
POS	Point of Sale
PP	Person-to-Person or Peer-to-Peer (Money Transfer BAI)
SMS	Single Message System (part of VisaNet V.I.P.)
SPT	Service Processing Type
TCR	Transaction Component Record
TU	Top Up (Prepaid Load) (Funds Disbursement/Non-Money Transfer BAI)
V.I.P. System	VisaNet Integrated Payment System
VIRP	Visa Integrity Risk Program
VMT	Visa Money Transfer
VSS	VisaNet Settlement Service
WT	Wallet Transfer (Money Transfer BAI)

Appendix L

Visa Core Rules and Visa Product and Service Rules – Reference

This appendix provides a reference table of Visa Rules and Requirements that apply to the Original Credit Transaction (OCT) types. Use the table as a quick reference to understand the various Visa Rules and Requirements referenced or implied in this guide that apply to AFT and OCT transaction types. This is not a complete list of the rules. For access to the full rule set, refer to the Visa Rules, *Visa Core Rules and Visa Product and Service Rules*.

Important: In the event of any conflict between the material (this appendix), any referenced document, or any communications concerning the material, and any content in the Visa Rules, the **Visa Rules shall govern and control**. Visa may amend, modify, delete, or otherwise change the Visa Rules at its sole discretion at any time. Changes will be reflected in the next edition of this appendix.

Note: The section or table headings that are referred to in this appendix are as they appear in the last published version of the Visa Rules document or any other cited reference document. If any changes are made to the section and table headings in the Visa Rules or the reference document, the changes will be reflected in the next edition of this appendix. See *Visa Core Rules and Visa Product and Service Rules* on Visa Access.

Table 58: Visa Rules (1 of 12)

Rule ID#	Rule
0031126	Compliance with Sanctions Screening In addition to the requirements set out in Section Compliance with Laws and Regulations, each Member must screen each of its Cardholders and Merchants that access or utilize the Visa network, or use Visa products and services, against the OFAC Specially Designated Nationals and Blocked Persons List (SDN List), as well as all other applicable sanctions lists. Each Member must perform sanctions screening at the time of onboarding, issuance or contracting, and on a regular, ongoing basis thereafter. Upon identification of a true match against the OFAC SDN List or other applicable sanctions list, a Member must do all of the following: • Take appropriate and timely measures to disable the Cardholder's or Merchant's use of the Visa network and access to Visa's products and services • Notify Visa in a timely manner of all such matches against the OFAC SDN List • Provide to Visa the detailed remediation measures taken by the Member against each Cardholder or Merchant following the identification of such matches A Member must not issue, acquire, or conduct any activity involving the use of the Visa network or Visa's products or services in any geography in which its government is subject to applicable comprehensive sanctions, including those identified by OFAC, nor must a Member issue to or acquire from entities that are owned or controlled by a government that has been targeted as part of the OFAC SDN List.
0004062	A Member must accept an incoming Original Credit Transaction^{1,2} unless prohibited by applicable laws or regulations. If prohibited by applicable laws or regulations, the Member must submit a written request to Visa to block incoming Original Credit Transactions. ¹ Excluding all Non-Reloadable Prepaid Cards and Reloadable Prepaid Cards where Cardholder data is not on file or where the source of loads may be restricted (for example: government, healthcare, or insurance programs). ² This does not apply to Visa Commercial Cards.
0027274	An Originating Member must use an Online Financial Transaction to initiate an online Original Credit Transaction.
0027273	A Recipient Issuer must process as Fast Funds an incoming Original Credit Transaction, if the following conditions are met: See Table: Fast Funds Processing Requirements

Table 58: Visa Rules (2 of 12)

Rule ID#	Rule
0004064	A Recipient Issuer must do all of the following: • Post an Original Credit Transaction (OCT) to the Payment Credential within 2 business days¹ of receipt, or dispute the OCT to the Originating Acquirer • If participating in Fast Funds, make funds available to the Cardholder within 30 minutes of approving an OCT² • For an OCT sent to a Cardholder's Credit Card account, post the funds as a payment • For a Dispute processed for an OCT, only initiate a Dispute Reversal within one calendar day of the Dispute Processing Date • Clearly describe the payment on the Cardholder statement and not label the payment as a refund • Not apply additional funds transfer fees for consumer Cards ¹ In the Europe Region: For an Intraregional Transaction, on the same business day. The funds must be made available on the same business day. ² Effective 12 April 2025 In the US Region: Within 60 seconds of approving a domestic OCT.
0027329	To request confirmation or proof from a Recipient Issuer that funds have been posted to a recipient Cardholder's account, an Originating Acquirer must submit its inquiry through Visa Resolve Online. The Recipient Issuer must respond to the Originating Acquirer's confirmation request through Visa Resolve Online within 5 calendar days from the date of inquiry. This does not apply to a push-to-account Original Credit Transaction. Requirements for exception processing for a push-to-account Original Credit Transaction are specified in the <i>Visa Direct Payouts – Push to Account Program Guide</i>.
0005328	An Originating Acquirer, either itself, or through its Merchants or service providers that originate an Original Credit Transaction, must: • Validate sender data and comply with applicable anti-money laundering laws and regulations and anti-terrorist financing standards • Provide proper disclosure to the sender regarding the collection of sender data The Originating Acquirer must notify Visa before it or its Merchant or service provider start to process any Original Credit Transactions.

Table 58: Visa Rules (3 of 12)

Rule ID#	Rule
0026074	An Originating Acquirer, a Merchant, or a service provider must not reverse an Original Credit Transaction initiated as an Online Financial Transaction. A Reversal of an Original Credit Transaction must be processed within one business day of the Processing Date of the Original Credit Transaction and only for the following reasons: • Incorrect Payment Credential • Incorrect Transaction amount • Duplicate processing • Incorrect Transaction code This does not apply to a push-to-account Original Credit Transaction. Requirements for a push-to account Original Credit Transaction Reversal are specified in the <i>Visa Direct Payouts – Push to Account Program Guide</i>.
0030883 (Row 1 of 2)	Effective through 11 April 2025 For a Transaction involving cryptocurrency, an Acquirer must include the following in the Authorization Request and Clearing Record: • For the purchase of cryptocurrency in a Card-Absent Environment with an Account Funding Transaction: MCC 4829, 6012, 6540, or 6051 (as applicable), and special condition indicator 7 in the Authorization Request and Clearing Record • For the purchase of cryptocurrency in a Card-Present Environment use the Quasi-Cash purchase indicator and with the appropriate MCC and the special condition indicator 7 in the Authorization Request and Clearing Record • For the purchase of goods or services that involves a conversion from fiat currency to cryptocurrency accepted by the Merchant or retailer (including via Back-to-Back Funding): the MCC that describes the primary business of the Merchant/retailer and special condition indicator 7 • For an Original Credit Transaction used to disburse funds from a Staged Digital Wallet or Stored Value Digital Wallet after the sale or conversion of cryptocurrency: MCC 4829, special condition indicator 7, and the applicable business application identifier (BAI)

Table 58: Visa Rules (4 of 12)

Rule ID#	Rule
0030883 (Row 2 of 2)	Effective 20 January 2024 through 11 April 2025 – For a Transaction involving cryptocurrency, an Acquirer must include the following in the Authorization Request and Clearing Record: • For the purchase of cryptocurrency in a Card-Absent Environment with an Account Funding Transaction: MCC 4829, 6012, 6540, or 6051 (as applicable), and special condition indicator 7 in the Authorization Request and Clearing Record • For the purchase of cryptocurrency in a Card-Present Environment use the Quasi-Cash purchase indicator and with the appropriate MCC and the special condition indicator 7 in the Authorization Request and Clearing Record • For the purchase of goods or services that involves a conversion from fiat currency to cryptocurrency accepted by the Merchant or retailer (including via Back-to-Back Funding): the MCC that describes the primary business of the Merchant/retailer and special condition indicator 7 • For an Original Credit Transaction used to disburse funds from a Staged Digital Wallet or Stored Value Digital Wallet after the sale or conversion of cryptocurrency: MCC 4829, special condition indicator 7, and the applicable business application identifier (BAI) Effective 12 April 2025 – For a Transaction involving non-fiat currency (for example: cryptocurrency) or non-fungible tokens (NFT), an Acquirer must include the following in the Authorization Request and Clearing Record as specified in Table, Non-Fiat Currency and Non-Fungible Token (NFT) Transaction Coding. Effective 12 April 2025 – For the purpose of the Visa Rules, Visa defines non-fiat currencies (for example: cryptocurrency) as follows: • Central bank digital currency (CBDC): digital currency issued by a central bank, reserve bank or other national monetary authority. • Tokenized deposit: equivalent to existing deposits, held by a licensed depository institution, recorded on a blockchain. • Stablecoin (fiat-backed): digital assets that maintain financial reserves in a fiat currency in the form of cash, government securities, repurchase agreements that are collateralized fully with government securities, and/or other very liquid recognized liabilities of a central bank or reserve bank, held by a licensed financial institution, recorded on a blockchain. • Blockchain native token/coin: a digital currency inherent on a blockchain required for performing on-chain transactions such as for payment of fees, that is neither CBDC, a tokenized deposit or stablecoin (fiat-backed). Effective 12 April 2025 – Any other type of non-fiat currency must be identified with the special condition indicator 7. Effective 12 April 2025 – For the purpose of the Visa Rules, Visa defines a non-fungible token (NFT) as a unique digital identifier that is recorded on a blockchain, and is used to certify ownership and authenticity of an asset. It cannot be copied, substituted, or subdivided. The ownership of an NFT is recorded in the blockchain and can be transferred by the owner, allowing NFTs to be sold and traded.

Table 58: Visa Rules (5 of 12)

Rule ID#	Rule
0030292	An Issuer may initiate a Dispute under Dispute Condition 12.4: Incorrect Account Number for the following reason: See Table Dispute Condition 12.4: Incorrect Account Number – Dispute Reasons
0030302	An Issuer may initiate a Dispute under Dispute Condition 12.6: Duplicate Processing/Paid by Other Means for the following reason: See Table Dispute Condition 12.6: Duplicate Processing/Paid by Other Means – Dispute Reasons
0030355	An Issuer may initiate a Dispute under Dispute Condition 13.8: Original Credit Transaction Not Accepted for the following reason: See Table Dispute Condition 13.8: Original Credit Transaction Not Accepted – Dispute Reasons
0008702	If an Originating Acquirer, a Merchant, or a service provider charges a fee for sending an Original Credit Transaction, it must both: • Clearly display the fee to the sender • Enable the sender to cancel the Transaction subsequent to the fee disclosure without incurring a fee or penalty
0025765	An Original Credit Transaction must involve only a single sender and a single recipient.
0004732	A Money Transfer Original Credit Transaction originated with cash at an ATM: • Must be a Domestic Transaction • Must be performed in local currency • May be processed by a Third Party Agent nominated by a Principal Member

Table 58: Visa Rules (6 of 12)

Rule ID#	Rule
0029326	An Issuer must evaluate each Transaction that has been properly accepted, processed, and submitted in order to make an Authorization, a Token provisioning,¹ or other decision, and must not block, refuse, or decline Authorization Requests, Token provisioning requests,¹ or Transactions in a systematic or wholesale manner,² unless there is an immediate fraud threat or an exception is otherwise specified by applicable laws or regulations or in the Visa Rules.³ In the LAC Region: This does not apply to a Card-Absent Environment Transaction conducted with a Visa Electron Card or an unembossed Debit Card issued in Argentina, Brazil, Chile, Colombia,⁴ Mexico, or Trinidad and Tobago. In the Europe Region (Austria,⁴ Belgium, Bulgaria,⁴ France,⁴ Germany,⁴ Italy,⁴ Luxembourg, Netherlands,⁴ Portugal, Romania,⁴ Spain,⁴ United Kingdom⁴): This does not apply to a Visa Workplace Benefits Card program⁵ operating with a limited network exclusion, as specified in Section, Visa Workplace Benefits Card Issuance Requirements – Europe Region. 1. Applies only to Visa Token Service participants and only to Stored Credential or Electronic Commerce enabler Tokens 2. Including, but not limited to: by BIN, by geography, by payment channel, by payment device, by Transaction type 3. An Issuer must send a Decline Response to an Authorization Request or a Token provisioning request if it has determined that the Transaction is illegal. 4. Effective 19 October 2024 5. This does not permit the blocking of Transactions in a wholesale manner by Transaction type, payment channel, or any authentication method.
0030973	In the Canada Region, Europe Region,^{1, 2} US Region: An Acquirer of a Card-Absent Environment Transaction, an Account Funding Transaction, or an Original Credit Transaction whose Merchant chooses to use Account Name Inquiry (ANI) must do all of the following: • Send and receive ANI fields and values • Process all ANI response codes correctly • Support ANI itself, or use VisaNet APIs • Not refuse a Cardholder based solely on the absence of an ANI result for Card products where ANI is not supported ¹ In the Europe Region (United Kingdom), effective 19 October 2024 Europe Region (Austria, Belgium, Denmark, Estonia, Finland, France, Germany, Iceland, Israel, Latvia, Liechtenstein, Lithuania, Luxembourg, Monaco, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Türkiye), and effective 12 April 2025 Europe Region (Andorra, Bulgaria, Croatia, Cyprus, Czech Republic, Greece, Hungary, Republic of Ireland, Italy, Malta, Poland, Romania, San Marino, Slovakia, Slovenia, Vatican City). ² In the Europe Region (Bear Island, Channel Islands, Faroe Islands, Gibraltar, Greenland, Isle of Man): This does not apply.

Table 58: Visa Rules (7 of 12)

Rule ID#	Rule
0003356	An Acquirer must have a Merchant Agreement with each of its Merchants to accept Visa Cards and, if applicable, Visa Electron Cards. A Payment Facilitator must have a Merchant Agreement with each of its Sponsored Merchants. The Merchant Agreement must include language that requires the Merchant to do all of the following: • Perform its obligations under the Merchant Agreement in compliance with applicable laws and regulations • Comply with the Visa Rules regarding use of the Visa-Owned Marks, Visa acceptance, risk management, Transaction processing, and any Visa products, programs, or services in which the Merchant is required to, or chooses to, participate • Not knowingly submit any Transaction that is illegal or that the Merchant should have known was illegal • Include the right of Visa to limit or terminate the Acquirer's agreement with the Merchant or the Payment Facilitator's agreement with the Sponsored Merchant • Include the provisions specified in Section 3.1.1 of the <i>Visa Integrity Risk Program Guide</i>, if the Merchant is an adult content provider assigned with MCC 5967 (Adult Content and Services) An Acquirer and a Payment Facilitator may accept Transactions only from an entity with which it has a valid Merchant Agreement.
0000385	Each Member must comply with all applicable laws, regulations, and other legal requirements including, but not limited to, laws and regulations regarding banking, financial institutions, payment systems, foreign currency exchange, money transmission, anti-money laundering, anti-terrorist financing, sanctions (such as those administered by the US Department of the Treasury's Office of Foreign Assets Control or the Australian Government's Department of Foreign Affairs and Trade), privacy and security, consumer protection, and trademarks and copyright for each country in which the Member operates. Each Member is also responsible for ensuring that any of its affiliates, subsidiaries, parent companies, third-party agents, Merchants, and any other of its appointed agents participating in Visa's system comply with all applicable laws, regulations, and other legal requirements applicable to each country in which its affiliates, subsidiaries, parent companies, third party agents, Merchants, and other appointed agents operate. Each Member is encouraged to consult with its own legal counsel to ensure that it is in full compliance with all applicable laws, regulations, and other legal requirements in each country in which the Member operates. A Transaction must be legal in both the Cardholder's jurisdiction and the Merchant Outlet's jurisdiction. In the event of any conflict between the Visa Rules and any applicable laws or regulations, the requirements of the laws or regulations govern.

Table 58: Visa Rules (8 of 12)

Rule ID#	Rule
0030025	If an entity that provides a sales tax rebate¹ to a Cardholder is: • Not the original seller of the goods or services, the sales tax rebate must be processed as an Original Credit Transaction (OCT) • The original seller of the goods or services, the sales tax rebate must be processed as either a merchandise return or an OCT ¹ A rebate of only the tax paid on the purchase, including value-added tax (VAT), goods and services tax (GST), or other general consumption tax that is rebated to the Cardholder.

Table 58: Visa Rules (9 of 12)

Rule ID#	Rule
0026435 (Row 1 of 2)	If an Acquirer contracts with a Payment Facilitator, it must comply with all of the following: • Be in good standing in all Visa risk management programs • Be financially sound (as determined by Visa) • Ensure that its registration of its Payment Facilitator, including the attestation of due diligence review, is confirmed by Visa before submitting Transactions on behalf of the Payment Facilitator or its Sponsored Merchant. If the Payment Facilitator is considered to be high-integrity risk, it must be registered as a High-Integrity Risk Payment Facilitator even if that Payment Facilitator has previously been registered with Visa • All of the following: – Obtain from Visa a unique Payment Facilitator identifier¹ that must be assigned by the Acquirer to each Payment Facilitator to use in Transaction processing – Ensure the Payment Facilitator determines and assigns a unique identifier¹ to each Sponsored Merchant – Ensure that every Transaction contains the Payment Facilitator identifier¹ and the Sponsored Merchant identifier, as follows: — In an Authorization record, both the Payment Facilitator identifier and the Sponsored Merchant identifier — In a Clearing Record, only the Payment Facilitator identifier • Effective 20 July 2024 through 31 August 2024 Assign to each Payment Facilitator when processing Card-Absent Environment Transactions, a unique Card acceptor identification (CAID) number, as specified in Section, <i>Acquirer Assignment of Unique Card Acceptor Identification (CAID) Number</i> • If the Acquirer settles the proceeds of Transactions submitted by the Payment Facilitator on behalf of its Sponsored Merchants, pay the proceeds into a bank account that is in the jurisdiction of the Acquirer • Not allow its Payment Facilitator to provide payment services to outbound telemarketers² • Upon Visa request, submit to Visa activity reporting on its Payment Facilitator's Sponsored Merchants that includes all of the following for each Sponsored Merchant: – Sponsored Merchant name as it appears in the Merchant name field – Sponsored Merchant DBA name – Payment Facilitator name – Monthly Transaction count and amount – Monthly Dispute count and amount

Table 58: Visa Rules (10 of 12)

Rule ID#	Rule
0026435 (Row 2 of 2)	• Ensure that its Sponsored Merchants and the Sponsored Merchants of its Payment Facilitators follow all Merchant-related rules • Ensure that its Payment Facilitators provide customer service directly or through its Sponsored Merchants • Ensure that its Payment Facilitators have access to the results of any positive matches on the Visa Merchant Screening Service (VMSS) • In addition, all of the following: – Include in its contract with the Payment Facilitator a clear statement of both the jurisdiction within which the Payment Facilitator may contract with Sponsored Merchants and the category (or categories) of Sponsored Merchants with which it may contract – When a Cardholder can access a Payment Facilitator’s website and/or application directly, ensure that its Payment Facilitator both: — Provides customer service and after-sales support, either directly or via its Sponsored Merchants, in all languages in which services are offered — Clearly display customer service contact information or trading office contact information on its website and/or application – Ensure that its Payment Facilitator reports Sponsored Merchant and Transaction Information to the Acquirer and, upon request, to Visa – Ensure that its Payment Facilitator uses the appropriate MCC for each Sponsored Merchant and other required indicators to identify Merchant or Transaction type • In the CEMEA Region: Ensure and obtain confirmation from Visa that its Payment Facilitator entered into an agreement with Visa and is approved by Visa, as specified in the <i>Payment Facilitator Certification Guide</i> 1 In the LAC Region (Brazil): An Acquirer must either send the tax identification and Merchant legal name or the Payment Facilitator identifier and the Sponsored Merchant identifier. 2 In the LAC Region (Brazil): This does not apply.

Table 58: Visa Rules (11 of 12)

Rule ID#	Rule
0002228	A Member must: • Maintain all materials or records in any form that contains account or Transaction Information in a safe and secure manner with access limited to authorized personnel, as specified in the <i>Payment Card Industry Data Security Standard (PCI DSS)</i> • Ensure that agreements and contracts with agents and Merchants clearly establish their responsibilities to meet Visa standards, the liabilities for failure to meet the standards, and the requirement to allow for inspections by the Member or Visa • Ensure that all agents and Merchants with access to account or Transaction Information comply with the Payment Card Industry Data Security Standard (PCI DSS) • Ensure that all agents and Merchants do not store any of the following subsequent to Authorization: – Full contents of any data taken from the Magnetic Stripe (on a Card, in a Chip, or elsewhere) – Card Verification Value 2 – PIN or the encrypted PIN block – Token Authentication Verification Value (TAVV) – Dynamic Token Verification Value (DTVV) – Visa Secure Cardholder Authentication Verification Value (CAVV) • Comply with, and ensure that all agents and Merchants use Payment Applications that comply with, the <i>Payment Card Industry (PCI) Software Security Framework (SSF) Standards</i> • Upon request, certify to Visa that agents and Merchants are in compliance with the <i>Payment Card Industry Data Security Standard (PCI DSS)</i> • Comply with, and ensure that its Merchants, agents, and other third parties with access to account or Transaction Information comply with, the requirements of the Account Information Security Program. The Member must also ensure that its Merchants both: – Implement and maintain all Account Information Security Program requirements – If using a Third Party Agent, ensure that the Third Party Agent implements and maintains all of the security requirements specified in the Account Information Security Program

Table 58: Visa Rules (12 of 12)

Rule ID#	Rule
0030622	In the Europe Region: A Member must comply with the <i>Visa Delegated Authentication Implementation Guide</i> and the <i>SCA Related Requirements for Electronic Commerce Transactions – European Economic Area, United Kingdom and CEMEA Countries Subject to SCA Requirements</i>. A Member acknowledges that, regardless of any participation in the Delegated Authentication Program, all applicable regulatory obligations relating to the provision of strong customer authentication remain with that Member. In the Europe Region: A Member must ensure that Electronic Commerce Transactions initiated on Cards issued in the European Economic Area (EEA) and United Kingdom are subject to strong customer authentication in line with the Payment Services Directive 2 (EU) 2015/2366.
0008702	If an Originating Acquirer, a Merchant, or a service provider charges a fee for sending an Original Credit Transaction, it must both: - Clearly display the fee to the sender - Enable the sender to cancel the Transaction subsequent to the fee disclosure without incurring a fee or penalty
0029560	Unless otherwise specified in the Visa Rules or agreed in a separate written agreement, Visa has no obligation to provide replacements, updates, upgrades, modifications, or any other support and maintenance for any Visa products or services. In the event any updates are made available to Members or if Visa requires a Member to make system changes, the Member must do all of the following: - Respond to and implement, as specified by Visa, the updates or system changes required by Visa - Ensure that its agreements with Cardholders, Merchants, Visa-approved manufacturers, Third-Party Personalizers, and agents allow for the implementation of updates or system changes required by Visa - Include in its agreements with Cardholders, Merchants, Visa-approved manufacturers, Third-Party Personalizers, and agents the Member's obligation to inform the contracted entity, in a timely manner, of any major updates or system changes implemented by Visa or the Member The updates shall be deemed part of the Visa products or services and subject to the applicable terms and conditions under the Visa Rules.
0024568	A Domestic Transaction is A Transaction where the Issuer of the Card used is located in the Transaction Country.

Table 59: OCT Requirements (1 of 3)

OCT ID#	Requirement
001	Acquirers, service providers, and merchants must use an appropriate Business Application Identifier (BAI) and a Merchant Category Code (MCC) in the OCT authorization request message and clearing and settlement message to correctly identify the type of OCT and merchant or business entity originating the transaction. Both the BAI and the MCC enable the issuer to recognize the underlying business use of the OCT. The MCC should represent the merchant, acquirer, or service provider/payment facilitator of the OCT transaction. Acquirers are instructed at the time of program approval which BAI they are required to use for their OCTs. Note: Effective 16 April 2023, Visa will require the merchant name field in a stand-alone tipping transaction, which must contain the word, "tip" as a requirement for tipping use-cases. See Table BAI and MCC Usage for requirements.
002	Programs using Cash Deposit are subject to: OCTs must be submitted with a BAI value of CD. Originating entities are responsible for complying with Visa requirements and rules related to cash funded OCTS. Originating entities and issuers must comply with applicable laws and regulations. Use of the CD BAI must be limited to domestic use only globally. Cash Deposit transactions must be me-to-me only. Acquirers and originating entities using the Cash Deposit program must complete a new or updated Visa Direct PIF. The PIF must contain details confirming regulatory approval in required markets and cardholder verification process details. Refer to requirements for Submitting a PIF. OCTs with BAI CD will have new Velocity Limits and Maximum Transaction Amount. Effective 15 April 2023, Visa implemented changes to include card-present data fields sent to issuers in the U.S. and Europe Regions in OCTs initiated for Cash Deposit (CD) use cases. For more information on implementation and testing, contact your local representatives. See Table Velocity Limits – Maximum Transaction Amount for OCTs with BAI CD for requirements
003	When a transaction amount is sent by the originating entity in the currency in which the cardholder receives their bill or account, the recipient issuer must credit the cardholder that exact amount, even if the recipient issuer settles with Visa in a different currency. This requirement ensures that the amount received by the cardholder matches what is sent by the originating entity and can help enable the originating entity to comply with regulatory requirements and enable greater transparency, by disclosing to the sender the amount that the recipient will receive and provide a good customer experience.

Table 59: OCT Requirements (2 of 3)

OCT ID#	Requirement
004	Fraud identified on OCTs must be reported to Visa through standard reporting mechanisms (VROL; TC40, TCR2; 9620 fraud reporting advice messages). The Fraud Reporting System User's Guide provides updated guidelines and processes for reporting fraud on OCTs. Acquirers should refer to the guide to ensure adherence to the latest fraud reporting requirements.
005	Acquirers should also be aware that VisaNet implements maximum velocity limits for OCTs by count and amount. These are the maximum number or dollar amounts of OCTs that a single recipient can receive in any 1, 7, or 30-day period. Any OCTs in excess of these amounts will be declined by VisaNet. Acquirers, service providers, and merchants should ensure that they are not allowing senders to send OCTs to single recipient accounts in excess of the VisaNet limits. When recipient issuers have opted for VisaNet to forward them the OCT when a velocity limit has been exceeded, they must be prepared to receive the OCT with Field 48, Usage 37, position 11, and provide the appropriate approval or decline. When the velocity limit exceeds the VisaNet Maximum Velocity Limits it must be decline. This field contains velocity-limit-related information that issuers can use in making authorization decisions, including: • 1 = 1-day count or amount exceeded • 2 = 7-day count or amount exceeded • 3 = 30-day count or amount exceeded
006	The service provider must ensure funds are returned to the original cardholder. Note: Adjustments associated with OCTs must contain a Processing code 02 in Field 3.1 with a Message Reason Code (Field 63.3) value of 2150.
007	Visa Brand Requirements – Acquirers, service providers, and merchants are required to comply with the Visa Direct: User Experience Brand Requirements for the usage of the Visa brand into the user experience for online and mobile applications supporting push payment services. The requirements are available on Visa Access.
008	Effective 31 October 2024, Visa debit card issuers in Albania, Bosnia and Herzegovina, Kosovo, Montenegro, North Macedonia, and UAE are required to implement Visa Direct to support domestic money transfers via primary account number (PAN) and alias (i.e., mobile phone number) for original credit transactions. To comply with the requirements, issuers need to take these actions: • Complete a Program Information Form (PIF) to implement Visa Direct, available on the Visa Direct Program Approval Process page at Visa Access. Issuers must submit a PIF for approval to become an originator/acquirer for Visa Direct OCT and Alias Directory Service transactions. • Complete an Alias Directory Service: Program Registration Form to request participation in the Visa Alias Directory Service, available on the Visa Direct Resources page at Visa Access. • Implement the Visa Direct OCT and Visa Alias Directory Service APIs by opening an implementation project with Visa.

Table 59: OCT Requirements (3 of 3)

OCT ID#	Requirement
009	All Visa Direct programs must be approved by Visa prior to program launch. Financial institutions must obtain approval by completing the Visa Direct Program Information Form (PIF).
010	Acquirers and their agents must obtain all appropriate licenses, registrations, notifications, authorizations, and approvals necessary to engage in Visa Direct services, including, but not limited to, those required to engage in high-risk programs, foreign exchange, and cross-border transactions. For Visa Direct programs, there must be a properly licensed Visa client with RIGHTS TO ACQUIRE. Each Region needs to be aware of the requirements in their markets related to Visa Acquiring rights. Note: For specific information on Visa Direct licensing requirements in CEMEA, refer to CEMEA-Specific requirements for Money Transfer.
011	When issuers set up to receive and process 0100 or 0200 OCTs online are not available at the time of the transaction, VisaNet will decline the OCTs on their behalf (VisaNet never approves the OCT on the issuer's behalf). Stand-in processing (STIP) approvals are not allowed on OCTs. Issuers and Issuer Processors must be configured to STIP decline an OCT request with the response code 91. In Europe, when issuers are not set up to receive and process the 0100 or 0200 OCTs online, issuers must request Visa to process the OCT on their behalf. This is not applicable to Fast Funds transactions.
012	Acquirers are responsible for monitoring the VROL Good Faith Collaboration requests on a regular basis and providing responses within an appropriate time frame. Regulatory requirements may state that an acquirer or service provider must respond to requests for additional information pertaining to the OCT. The issuer may ask for additional information on the OCT to complete the transaction. A response is required within five business days or applicable regulatory requirements, whichever is less. No response may result in a dispute or cancellation of the OCT and may be viewed as a violation of applicable regulations.
013	An originating entity must submit to its acquirer AFT and OCT transaction data from the merchant originating country to be processed in accordance with the Visa Rule Assignment of Merchant Outlet Location (Rule ID: 0029455). Data in the authorization and clearing messages must be consistent according to Complete and Valid Transaction Data (Rule ID: 0008752), and Assignment of Merchant Outlet Location (Rule ID: 0029455). For example: If the OCT transaction is initiated and funded in country A and directed to a PAN issued in country B, the transaction must retain the originating country information throughout the transaction life cycle, and no transaction information should be added or deleted during the routing. Acquirers must route international/cross border transactions in compliance with Authorization, Clearing, and Settlement of Transactions through VisaNet (Rule ID: 0007788) and must not route such transactions through other networks or treat them as on-us transactions.

Glossary

Access Channels	Access channels are the channels that the service provider (i.e., merchant, merchant/government entity, or load partner) defines and sets up to offer their service to recipients. Examples include Internet/online website, merchant location, and/or mobile device.
Account Funding Transaction (AFT)	A type of VisaNet purchase transaction that can be used to pull funds from Visa card accounts for the purpose of funding other non-merchant accounts; the receiving account, for example, • Loading or topping up prepaid card accounts • Moving funds into another financial account such as a CD or IRA • Acting as a funding source for person-to-person (P2P) Money Transfers • Adding value to a digital wallet
Account Lookup File	Contains information on issuer country code and billing currency, account type, Fast Funds participation status, and whether the recipient issuer can receive OCTs. Refer to Visa Direct Account Lookup File for details.
Acquirer	In relation to Visa Direct programs, an acquirer is a Visa financial institution that is approved by Visa to originate Visa Direct transactions (AFTs and/or OCTs) or signs merchants or service providers to originate Visa Direct transactions. Acquirers are liable for all Visa Direct programs that they operate or sponsor.
Agent	An entity, not defined as a VisaNet Processor, that provides payment-related services, directly or indirectly, to a Member (client) and/or stores, transmits, or processes cardholder data. In the context of Visa Direct programs, an agent is any third-party merchant or service provider that manages or facilitates Visa Direct programs (e.g., payment facilitators, load partners, etc.).
Anti-Money Laundering (AML)	A term used to describe those statutorily required controls that must be utilized by financial institutions to prevent their product or services from being used for money laundering activities.

Account Name Inquiry (ANI)	Account Name Inquiry (ANI) is a functionality offered by Visa that enables an account cardholder's name to be checked against the name held by their issuing bank. The check is carried out by Visa or the issuing bank in advance of a transaction at the time of customer onboarding, just before a transaction, periodically, or on an ad hoc basis. Verifying the name provided by a cardholder can help reduce exposure to fraud and scams in many types of payment flows, such as Card-Not-Present transactions, but in particular in push and pull transactions (OCTs/AFTs).
Anti-Terrorist Financing (ATF)	A term used to describe those statutorily required controls that must be utilized by financial institutions to prevent their product or services from being used for terrorist financing activities.
Application Programming Interfaces (API)	Web-services based messages that merchants can use to send value-add and financial messages to Visa. Visa Direct APIs include financial APIs for OCTs and Account Funding Transactions (AFTs) and non-financial APIs such as foreign exchange, account look-up, and account verification.
Account Verification	A message sent by an acquirer to the issuer, using a currency unit of zero, for confirmation that a transaction can be completed using the Card.
Address Verification Service (AVS)	A VisaNet service through which a merchant verifies a cardholder's billing address. This service is available in the U.S., Canada, and Europe regions only.
Business Application Identifier (BAI)	A data element provided in an OCT message that is used to identify the type of OCT (e.g., Money Transfer, Funds Disbursement, prepaid load, or credit card bill payment). Refer to Business Application Identifier (BAI), Merchant Category Code (MCC), and Use Cases for a full list of BAIs.
Card Verification Value 2 (CVV2)	CVV2 is a card verification tool. Issuers imprint a 3-digit security number (the CVV2) on the back of payment cards. Issuers can use the CVV2 number to validate that a genuine payment card is present at the cardholder location during a transaction. It provides a cryptographic check of the information embossed on the card. CVV2 is applicable to AFTs but is not applicable to OCTs.
Conventional Funds	The OCT processing framework that makes funds available to the recipient's account no later than two business days after receiving the full financial or clearing message associated with the OCT. In Europe, the requirement is to make funds available to recipient on the same business day as the receipt of clearing and settlement message.

Conversion Affiliate	An entity for which Visa Payment Services are provided by a Ramp Provider to convert OCT based transactions from a cryptocurrency to a fiat currency. For information on Ramp Provider program requirements, contact your Visa representative.
Credit Card Bill Payment	An OCT-based program that provides the ability for an individual to transfer funds to a Visa credit card account to pay a credit card bill.
0200 OCT	An OCT initiated as a 0200 full financial transaction that contains the following data: • Field 104, Usage 2, Dataset ID 57, Tag 01—Business Application Identifier • Field 104, Usage 2, Dataset ID 5F—Sender Data • Field 104, Usage 2, Dataset ID 71—Additional Sender Data
Money Transfer 0200 OCT	The OCT is characterized by the mandatory presence of a Business Application Identifier (BAI) along with certain sender data fields (e.g., name, address, city, country) in the OCT message.
European Economic Area (EEA)	European Economic Area (EEA) includes the member states of the European Union, and Iceland, Liechtenstein, and Norway. Countries/member states include Austria, Belgium, Bulgaria, Croatia, Republic of Cyprus, Czech Republic, Denmark, Estonia, Finland, France (including Guadeloupe, French Guiana (Guyane), Martinique, Mayotte, Saint Martin (processed under Guadeloupe), Saint-Barthelemy (processed under Guadeloupe), and Réunion), Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, in addition to Iceland, Liechtenstein, and Norway.

Fast Funds

The capability whereby an issuer makes funds available to a Visa cardholder in 30 minutes or less of approving an Original Credit Transaction (OCT).

The OCT processing framework that facilitates the transfer of funds to the recipient's Visa account in 30 minutes or less of approving the authorization or full financial OCT message. This is accomplished through a combination of transaction specifications and operating rules for merchants and recipient issuers. If a recipient issuer participates in Fast Funds, the issuer agrees to accept data or full financial message, and make funds available in the recipient's Visa account in 30 minutes or less of approving the OCT authorization message.

Note: If a recipient issuer does not participate in Fast Funds, they must make funds available to the recipient's account within two business days. In Europe, the requirement is to make funds available to recipient on the same business day as the receipt of clearing and settlement message.

Note:

- **U.S. Domestic Only:** To enhance the cardholder experience, **effective 12 April 2025**, Visa will update the OCT Fast Funds rule. U.S. issuers will be required to make funds available to cardholders within 60 seconds or less of approving domestic OCTs.
- In LAC, all OCT issuers must participate in Fast Funds.

Faster Refunds

A refund of a prior purchase using an OCT associated with the Faster Refunds program approved by Visa.

Financial Institution

A financial institution can be broadly classified into:

- Bank: Entities licensed and regulated as banks.
- Non-Bank financial institutions: All other non-bank entities including Money Services Businesses (MSB), eMoney companies, Payment Institutions, brokerage and investment houses, etc.

Funds Availability

Making funds available to cardholders is defined as the posting and incrementing of the cardholders' open-to-buy or operating limit on their Visa card account. The funds are made available to the cardholder. Simple memo posting where the cardholder cannot access the funds is not considered compliant with funds availability requirements.

Funds Disbursement

The term Funds Disbursement is being phased out and is replaced by business-funded Funds Disbursement. TU, BP, and CP BAIs are in the business-funded category because of the third-party service provider. The funding originates from the cardholder that are pushed by the third-party. TU BAI will be re-categorized to Money transfer because it is consumer funded.

An OCT-based program that provides the ability for a government entity or merchant (such as corporations, insurance companies, and government agencies) to send funds directly to a recipient's Visa account.

Examples include:

- Insurance claims
- Corporate and manufacturing rebates
- Affiliate and contractor payouts
- Expense reimbursements
- Government disbursements (such as value-added tax refunds)
- Online gambling and lottery payouts

Issuer (Recipient Issuer)

In the context of this guide, the Visa client financial institution that has issued the recipient's Visa card. The recipient issuer receives the OCT and credits the recipient's Visa account with the funds. Also referred to as recipient issuer.

Issuers also receive authorization requests for Account Funding Transactions (AFT) that may be used in conjunction with some OCTs (e.g., P2P Money Transfers or prepaid card top ups).

Note: In this guide, issuer and recipient issuer are used interchangeably unless specified otherwise.

Load Partner

The entity (i.e., merchant or agent) that provides load services to consumers. In general, this entity is assumed to be a Visa merchant as defined in the Visa Core Rules and Visa Product and Service Rules. All Load Partners must be registered with Visa.

Liquid and Cryptocurrency Assets

Items purchased in a card-not-present environment that are considered convertible to cash, such as:

- Cryptocurrency
- Foreign currency

Merchant

In the context of Visa Direct, an entity requesting the initiation of OCTs only for themselves and their customers. Merchants must be sponsored directly by an acquirer or onboarded through an acquirer-sponsored service provider.

Merchant Agreement	A contract between a merchant and a merchant/acquirer or between a sponsored merchant and a merchant/payment facilitator, containing their respective rights, duties, and obligations for participation in the Visa Direct program.
Money Transfer	A Visa Direct OCT-based program that provides the ability for an individual to send funds to his/her own Visa account, to another individual's Visa account, or movement of funds from a digital wallet to a Visa card account. While all OCTs represent the transfer of funds, in this guide and Visa Direct documentation, Money Transfer refers to Person-to-Person (P2P) or (PP) Money Transfer services, Account-to-Account (AA) Money Transfer, Bank-Initiated P2P Money Transfer services and the transfer of funds from/to a digital wallet (WT).
Office of Foreign Assets Controls (OFAC)	OFAC is an agency of the United States Department of the Treasury under the auspices of the Under Secretary of the Treasury for Terrorism and Financial Intelligence. OFAC administers and enforces economic and trade sanctions based on U.S. foreign policy and national security goals against targeted foreign states, organizations, and individuals.
Original Credit Transaction (OCT)	The OCT is a type of VisaNet transaction that can be used to send funds to an eligible Visa account. The merchant sends the OCT to the recipient issuer via VisaNet and the recipient issuer uses it to credit the recipient's eligible Visa account with the funds. Visa acquirers can use the OCT to enable services such as Money Transfers, Funds Disbursements, prepaid loads, and credit card bill payments. Effective 20 January 2024, Does not require a prior purchase except when used for a Faster Refund.
Originator	This term is being phased out and is replaced by acquirer, service provider, and merchant – these are the originating entities that initiate Visa Direct, OCT-based programs. Historical Use of Terms/Related Terms – No longer used Originator: Formerly, the entity (e.g., Visa acquirer or third-party agent/facilitator) that offered the OCT-based services to its customers. The originator may or may not also be the Visa acquirer. If the originator is not a Visa acquirer, the originator must be sponsored by a Visa acquirer. Master Originators: (originator that offers Visa Direct services to other originators) are required to submit a list of all sub-originators with the initial PIF and on a monthly basis.) Sub-Originator: An Originator that was on boarded by a Master Originator and whereby the Master Originator submitted OCTs on behalf of the Sub-Originator.

Payment Facilitator	An acquirer-sponsored third-party agent that enables OCT-based services on behalf of an acquirer and/or offers OCT-based services to merchants. In this guide, more commonly referred to as <i>Service Provider</i> .
Prepaid Account (Eligible Prepaid Account)	An account established by an issuer, with previously deposited, authorized, or transferred funds, which is decreased by purchase Transactions, Cash Disbursements, or account fees. In the context of Visa Direct and what types of prepaid accounts are eligible to receive OCTs; unless prohibited by local law, OCTs are mandated for all reloadable prepaid card accounts, but are not permitted on: • Non-reloadable prepaid • Prepaid card accounts where cardholder data is not on file • Prepaid card accounts where the source of loads may be restricted (e.g., government, healthcare, and insurance programs).
Prepaid Load	A Visa Direct OCT-based program that provides the ability for an individual to add value to a Visa reloadable prepaid account.
Program Information Form (PIF)	The method by which Visa Direct Programs are reviewed and approved by Visa. A PIF is required for all new Programs and any changes to an existing Program; for example, change in acquirer, acquiring identifier, Participants, or Program types.
Ramp Provider	An acquirer-sponsored third-party agent that enables OCT-based cryptocurrency conversion services, as in convert from a cryptocurrency to a fiat currency on behalf of an acquirer. For information on Ramp Provider program requirements, contact your Visa representative.
Recipient	The recipient is the Visa cardholder that receives the OCT funds from the sender or merchant.
Sender	A customer of the merchant or service provider with a need to push payments. Sender may be either a consumer or a business.
Sender's Issuer	The sender's issuer is the issuer of the Visa account associated with the sender. The sender's issuer may or may not be the same as the merchant.
Service Provider	An acquirer-sponsored third-party agent that enables OCT-based services on behalf of an acquirer and/or offers OCT-based services to Merchants (Throughout guide, occasionally referred to as payment facilitator).

Sponsored Merchant	In the context of Visa Direct and this guide, an entity that accepts a Visa Card for the purposes of a P2P Money Transfer or Funds Disbursement and submits the resulting Transaction to an acquirer for Interchange, directly or via a payment facilitator.
Third Party Agent	See Agent. Refer to Third-Party Agent Registration for more information. Review the Third Party Agent Registration Program page on www.visa.com to better understand the TPA program.
U.S. Routing Tables	U.S. Routing Tables are available to any Visa client (they are not limited to U.S. clients). They can be used by merchants to determine if a recipient issuer participates in Fast Funds.
Velocity Limits	Limits to the number or total value of OCTs received to a particular Visa account.
Visa Direct	Visa Direct is a product platform that includes the OCT transaction and associated operating rules and guidelines that enable clients to create push payment services (e.g., Money Transfers, Funds Disbursements, etc.).
Visa Direct Account Lookup File	The Visa Direct Account Lookup File provides merchants with information about Visa accounts including issuer country code, billing currency, account type, Fast Funds participation status, and whether the recipient issuer can receive OCTs. Merchants can receive this file via the Visa File Exchange Service (VFES) (<i>Formerly, the Visa Personal Payments (VPP) Account Lookup File</i>).
Visa Direct Application Programming Interfaces (APIs)	See <i>Application Programming Interfaces (APIs)</i> .
VisaNet	The systems and services, including the V.I.P. System, and BASE II, through which Visa delivers online financial processing, authorization, clearing, and settlement services to members (clients).
VisaNet Processor	A client (Member), or Visa-approved non-Member, that is directly connected to VisaNet and that provides Authorization, Clearing, or Settlement services to Merchants and/or other Visa Members.
Visa Integrity Risk Program (VIRP)	A global program that monitors acquirers, merchants, marketplaces, payment facilitators, sponsored merchants, and Digital Wallet Operators to ensure that these entities do not: • Process illegal transactions • Engage in potentially deceptive marketing practices, as specified in the Visa Integrity Risk Program Guide • Process transactions that may adversely affect the goodwill of the Visa system
