Notice on Confidentiality, Intellectual Property Rights and Disclaimers (“Notice”)

Confidentiality. This document and any information, data, representations, materials, recommendations, exhibits, appendices or glossaries contained herein or attached hereto (collectively, the “Material”) is proprietary and confidential to Visa. The Material is furnished to you solely in your capacity as a client and/or potential client of Visa and/or a participant in the Visa payments system. You agree to keep the Material confidential and not to use or disclose the Material for any purpose other than in such capacity. By accepting the Material, you agree that the Material is intended for use by you solely subject to the confidentiality restrictions in (i) the Visa Charter Documents (as applicable), (ii) the Visa Core Rules and Visa Product and Service Rules, the Visa Payment System Operating Regulations – Russia, Visa International Travelers Cheque Operating Regulations, V PAY Core Rules and V PAY Product and Service Rules and Visa Supplemental Requirements (collectively, the “Visa Rules”) (as applicable), (iii) for VisaNet Processors, an executed and valid VisaNet Letter of Agreement on file with Visa, and (iv) for other third parties, a current participation agreement that includes applicable confidentiality provisions, other non-disclosure agreement with Visa that covers disclosure and use of the Material, and/or other confidentiality agreements that limit your use and disclosure of the Material. The Material may only be disseminated within your organization on a need-to-know basis to enable your participation in the product, service and/or program described herein and/or in the Visa payments system.

Please be advised that the Material may constitute material non-public information under U.S. federal securities laws and that purchasing or selling securities of Visa Inc. while being aware of material non-public information would constitute a violation of applicable U.S. federal securities laws.

Intellectual Property Rights. The Material is protected by copyright. The Material and/or any part of the Material must not be duplicated, reproduced, published, distributed or disclosed, in whole or in part, in any form by any means without Visa’s prior written authorization, including to any third party. Visa owns the trademarks, logos, trade names and service marks, whether registered or unregistered, contained in the Material. Third-party trademarks not attributed to Visa are the property of their respective owners, are used for identification purposes only, and do not necessarily imply product endorsement or affiliation with Visa.

Disclaimers. THE MATERIAL HEREIN IS PROVIDED ON AN “AS IS,” “WHERE IS,” BASIS, “WITH ALL FAULTS” KNOWN AND UNKNOWN. THE MATERIAL HEREIN IS INTENDED FOR INFORMATIONAL PURPOSES ONLY AND SHOULD NOT BE RELIED UPON FOR OPERATIONAL, MARKETING, LEGAL, REGULATORY, TECHNICAL, TAX, FINANCIAL OR OTHER ADVICE. TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, VISA EXPLICITLY DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, REGARDING THE MATERIAL HEREIN, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT (INCLUDING, BUT NOT LIMITED TO, NON-INFRINGEMENT OF THIRD-PARTY INTELLECTUAL PROPERTY RIGHTS). VISA DOES NOT MAKE ANY WARRANTIES, REPRESENTATIONS, GUARANTEES OR INDEMNITIES AS TO THE COMPLETENESS, ACCURACY AUTHENTICITY, USEFULNESS, TIMELINESS, RELIABILITY OR APPROPRIATENESS OF THE MATERIAL HEREIN OR OF THE INFORMATION OR MATERIALS REFERENCED HEREIN. VISA IS NOT LIABLE OR RESPONSIBLE FOR YOUR USE OR DISCLOSURE OF OR RELIANCE ON THE MATERIAL HEREIN, INCLUDING ERRORS OF ANY KIND, CONTAINED IN THE MATERIAL. NOTHING IN THIS NOTICE OR THE MATERIAL HEREIN SHALL BE DEEMED TO EXCLUDE OR LIMIT LIABILITY THAT CANNOT BE EXCLUDED OR LIMITED AS A MATTER OF LAW.

USE OF THE MATERIAL HEREIN IS AT YOUR OWN RISK. THE MATERIAL HEREIN SHOULD BE INDEPENDENTLY EVALUATED IN LIGHT OF YOUR SPECIFIC BUSINESS NEEDS AND ANY APPLICABLE LAWS AND REGULATIONS. THE

MATERIAL HEREIN IS NOT INTENDED AS INVESTMENT OR LEGAL ADVICE, AND READERS AND RECIPIENTS OF THE MATERIAL ARE ENCOURAGED TO SEEK THE ADVICE OF A COMPETENT PROFESSIONAL WHERE SUCH ADVICE IS REQUIRED.

THE MATERIAL HEREIN MAY CONTAIN DEPICTIONS AND DESCRIPTIONS OF A PRODUCT, SERVICE AND/OR PROGRAM CURRENTLY IN THE PROCESS OF DEVELOPMENT AND DEPLOYMENT, AND SHOULD BE UNDERSTOOD AS A REPRESENTATION OF THE POTENTIAL FEATURES OF THE FULLY-DEPLOYED PRODUCT, SERVICE AND/OR PROGRAM. ANY FINAL VERSION OF SUCH PRODUCT, SERVICE AND/OR PROGRAM MAY NOT CONTAIN ALL OF THE FEATURES DESCRIBED IN THE MATERIAL. WHERE POTENTIAL FUTURE FUNCTIONALITY IS HIGHLIGHTED, VISA DOES NOT PROVIDE ANY WARRANTY ON WHETHER SUCH FUNCTIONALITY WILL BE AVAILABLE OR IF IT WILL BE DELIVERED IN ANY PARTICULAR MANNER OR MARKET. PARTICIPATION IN PRODUCTS, SERVICES AND/OR PROGRAMS, IF AND WHEN OFFERED, MAY BE SUBJECT TO VISA'S TERMS AND CONDITIONS.

THE MATERIAL HEREIN COULD INCLUDE TECHNICAL INACCURACIES OR TYPOGRAPHICAL ERRORS. CHANGES MAY BE PERIODICALLY MADE TO THE MATERIAL. SUCH CHANGES WILL BE INCORPORATED IN NEW EDITIONS OF THE MATERIAL. VISA MAY MAKE IMPROVEMENTS AND/OR CHANGES IN OR TO THE PRODUCT(S), SERVICE(S) AND/OR PROGRAM(S) DESCRIBED IN THE MATERIAL HEREIN AT ANY TIME AT VISA'S SOLE DISCRETION. VISA MAY MODIFY, REPLACE OR RECALL THE MATERIAL HEREIN AT ANY TIME WITHOUT NOTICE TO ANY PARTY AND AT VISA'S SOLE DISCRETION.

Forward-Looking Statements. The Material contains forward-looking statements within the meaning of the U.S. Private Securities Litigation Reform Act of 1995 that relate to, among other things, Visa's future operations, prospects, developments, strategies, business growth and financial outlook. Forward-looking statements generally are identified by words such as "believes," "estimates," "expects," "intends," "may," "projects," "could," "should," "will," "continue" and other similar expressions. All statements other than statements of historical fact could be forward-looking statements, which speak only as of the date they are made, are not guarantees of future performance and are subject to certain risks, uncertainties and other factors, many of which are beyond our control and are difficult to predict. Visa describes risks and uncertainties that could cause actual results to differ materially from those expressed in, or implied by, any of these forward-looking statements in Visa's filings with the SEC. Except as required by law, Visa does not intend to update or revise any forward-looking statements as a result of new information, future events or otherwise.

Reservation of Rights. Any Visa features, functionality(ies), implementation(s), and/or branding, may be amended, updated or canceled at Visa's discretion. The timing of availability of programs and functionality described herein is subject to a number of factors outside Visa's control, including but not limited to overall levels of anticipated participation and deployment of necessary infrastructure by issuers, acquirers, and other system participants. Participation in programs and services, if and when offered, will be subject to Visa's terms and conditions.

Additional disclaimers and/or notifications may be found in the "Additional Notices" section of this document and/or in the Material herein.

Relationship to the Visa Rules. The Material is a supplement to the Visa Rules. In the event of any conflict between the Material, any document referenced herein or any communications concerning the Material, and any content in the Visa Rules, the Visa Rules shall govern and control.

Definitions. Capitalized terms not otherwise defined herein have the meanings given to them in the Visa Core Rules and Visa Product and Service Rules.

As used in this Notice, the terms "you" or "your" refer to (i) the person using the Material in any way, (ii) your organization and/or (iii) your or your organization's Sponsor.

"Visa" refers to the relevant Visa entity that has entered into an agreement with you governing the subject matter of the Material, being only *one* of the following Visa entities, and any of its current and former affiliates, employees, successors or assigns:

- Visa Canada Corporation;
- Visa do Brasil Empreendimentos Ltda.;
- Visa Europe Limited;
- Visa International Service Association;
- Visa International Servicios de Pagos Espana, S.R.L.U.;
- Visa U.S.A. Inc.;
- Visa Worldwide Pte Limited; OR
- Another Visa entity that is an affiliate of any of the foregoing entities.

Glossary

Chapter 1

VSS Overview

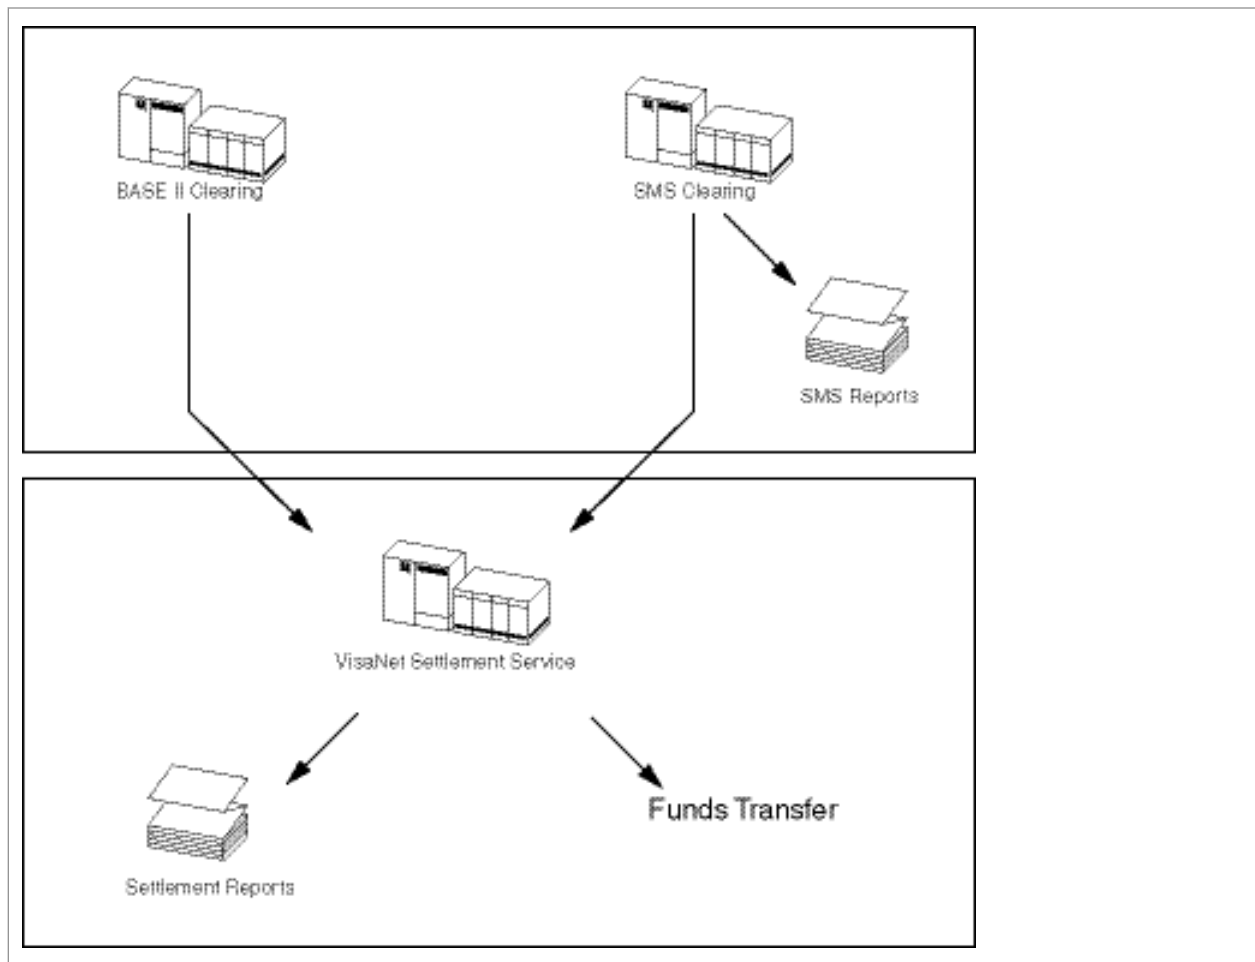

The VisaNet Settlement Service (VSS) provides settlement functions for the BASE II System and Single Message System (SMS), including Interlink. Clients and processors get settlement information in a standardized set of reports using common business-oriented terminology. VSS provides flexibility in defining financial relationships, selecting reports and report destinations, and establishing funds transfer points.

Visa processes interchange transactions for SMS (including Interlink) and BASE II through separate systems. SMS and BASE II perform their own clearing functions and VSS performs the settlement functions for SMS and BASE II.

- **Clearing** is the process of collecting an individual transaction from one client or processor and delivering it to another.
- **Settlement** is the process of calculating and determining the net financial position of each client for all transactions that are cleared.

This figure shows the VSS clearing and settlement process.

VisaNet Settlement Service (VSS) Process

Settlement Services

Visa offers several settlement services options.

- **International Settlement Service** – Used to settle all international transactions and domestic transactions for clients that do not participate in a National Net Settlement Service (NNSS) or Area Net Settlement Service (ANSS).
- **National Net Settlement Service (NNSS)** – Allows clients within a country to settle qualifying domestic transactions through a central settlement agent bank. Qualifying transactions are those in which the merchant, acquirer, and issuer are in the same country. Also, the transaction currency must be the local currency for that country for the transaction to qualify.
- **Area Net Settlement Service (ANSS)** – Allows clients within a defined area to settle qualifying domestic transactions through a central settlement agent bank. Qualifying transactions are those in which the merchant, acquirer, and issuer are in the same defined area. Also, the transaction currency is the local currency for that defined area for the transaction to qualify.

Visa also offers intraday settlement for countries with an NNSS or ANSS. Intraday settlement supports multiple settlement windows and facilitates delivery of settlement reports, interchange clearing files, and funds transfer instructions multiple times a day.

VSS Features

VisaNet Settlement Service (VSS) provides a variety of capabilities to clients.

- **Settlement relationships** – VSS provides flexibility when defining settlement relationships. Clients can define from two to eight levels of settlement relationships. The different levels allow them to build and maintain the most appropriate settlement relationships for their business needs. For example, the settlement relationship levels can be used to reflect the products in a client's organization. As such, clients can easily and efficiently manage settlement functions.
- **Report layouts and formats** – VSS reports provide a common layout for BASE II- and SMS-cleared clients, allowing them to streamline their internal procedures. All VSS reports are available in print-ready and machine-readable formats. VSS reports use business-oriented terminology to better reflect the business needs of clients.
- **Report delivery options** – Clients can have their reports sent to multiple locations, including locations other than their processing centers. Interchange routing does not determine the routing of settlement information.
- **Funds transfer points** – The funds transfer point can be defined at any level in the settlement structure. This flexibility allows clients using third-party processors to be responsible for their own funds transfer.

- **Alternately routed and split-routed transactions** – Clients can use an alternate processor, such as Visa Exceptions, to collect and deliver (switching) selected transactions. This option is called alternate routing for SMS and split routing for BASE II. Clients can also specify how they want to settle their alternately routed or split-routed transactions, electing to settle these transactions with their normally routed transactions or separately.
- **National Settlement cutoff time** – National Net Settlement Service (NNSS) or Area Net Settlement Service (ANSS) clients have the option to settle domestic activity at a time that is appropriate to their business day. The specific settlement time can be different from the International Settlement Service cutoff time. To use this feature, all clients participating in a particular NNSS or ANSS must agree on a common settlement cutoff time.

Chapter 2

VSS Settlement

VisaNet Settlement Service (VSS) provides flexibility to clients through settlement reporting entities (SREs) and settlement hierarchies.

SREs and Settlement Hierarchies Considerations

Clients need to consider certain rules when establishing settlement reporting entities (SREs) and settlement hierarchies.

- Every client must participate in the International Settlement Service. An SRE must be established for every clearing entity in an International Settlement Service settlement hierarchy.
- A lowest-level SRE must be established for each clearing entity (acquiring or issuing identifier or card range in BASE II and affiliate ID in SMS).
- All SREs within a settlement hierarchy must use the same settlement currency.
- Every client has the option to participate in a National Net and Area Net Settlement Service if they are available in the client's region.

- Separate settlement hierarchies with different SRE identifiers must be established for each settlement service.
- Settlement reporting for International Settlement Service transactions and National Net Settlement Service (NNSS) or Area Net Settlement Service (ANSS) transactions cannot be consolidated.
- Every clearing entity must be associated with a funds transfer point. The funds transfer point can be either the lowest-level SRE or a summary-level SRE.
- Each clearing entity can be associated with only one funds transfer point within a single hierarchy.
- An SRE can have only one summary-level SRE at the level above it. A summary-level SRE summarizes settlement information for all SREs linked to it in the settlement hierarchy.

SREs

A Settlement Reporting Entity (SRE) represents any business entity for which Visa performs settlement, provides settlement reporting, or both. Settlement reporting is available for every SRE. An SRE is identified by a unique 10-digit number that is assigned by Visa.

An SRE can represent a processing center, client, or any segment of a client's business. For example:

- Card product
- Issuer or acquirer business type
- Account ranges
- A combination of business entities or a summary of other SREs
- Funds transfer point
- Exception transactions
- Network affiliation, such as Plus or Visa

VisaNet Settlement Service (VSS) maintains this information for every SRE in a hierarchy:

- SRE number
- SRE name
- Reporting options
 - VSS reports selected
 - Report formats
 - Delivery endpoints
- Funds transfer specifications

SRE Types

Settlement Reporting Entity (SRE) types are used to construct a VisaNet Settlement Service (VSS) hierarchy.

- **Lowest-level SRE** – The lowest level at which VSS produces settlement reports. A lowest-level SRE can be associated with a clearing identifier, an account range, or, for SMS, with an affiliate ID plus a network.
- **Summary-level SRE** – A consolidation of lower-level SREs directly linked to a summary-level SRE through the settlement hierarchy.
- **Top SRE** – Mandatory for each hierarchy and includes a set of parameters that applies to the entire hierarchy, such as the settlement currency information.
- **Funds Transfer SRE** – The SRE or SREs where funds transfers (movement of funds) take place.

Lowest-Level SRE

A lowest-level settlement reporting entity (SRE) can be associated with a clearing identifier, an account range, or, for SMS, with an affiliate ID plus a network.

These terms help define a lowest-level SRE:

- **Clearing Entity** – The entity used by the clearing systems to determine processing rules. In BASE II, a clearing entity is a 6-digit, Visa-assigned acquiring or issuing identifier or an International Organization for Standardization (ISO)-assigned card range. In the Single Message System (SMS), a clearing entity is the 6-digit, Visa-assigned acquiring or issuing identifier, which is the first six digits of the affiliate ID. The clearing entity is always included in the definition of a lowest-level SRE.
- **Network** – For Visa and VisaNet, the network is the telecommunications facility used for message switching. For other card program networks (for example, Plus and Interlink), the network dictates the product rules under which a transaction is processed.
- **Settlement Service** – A settlement service directs transactions through either the Visa International Settlement Service (the most commonly used settlement service) or through a National Net Settlement Service (NNSS) or Area Net Settlement Service (ANSS). An NNSS or ANSS is used by participating countries to settle domestic transactions when the issuer, acquirer, and merchant are in the same location. Every client must participate in the International Settlement Service and can also participate in an NNSS or ANSS to which they qualify. The settlement service identifier is always included as part of the definition of a lowest-level SRE. All SREs within a settlement hierarchy must be for the same settlement service.

- **Processor** – A processor is a Visa endpoint that submits transactions to, or receives transactions from, SMS or BASE II. This endpoint is also referred to as a client processing center. The processor is always included in the definition of a lowest-level SRE and is used to differentiate transactions when a client uses multiple processors for processing its transactions. An example is when original transactions are processed through one processor, and exception transactions are processed by Visa Exceptions.
- **Transaction Currency** – When a transaction currency is included to define a lowest-level SRE, clients can settle in different currencies without a new acquiring or issuing identifier. Transactions in currencies that are not specified in an SRE will be settled in the primary settlement currency of the client. Therefore, the client need not define a lowest-level SRE for all transaction currencies. This option applies to the International Settlement Service only.

These examples show how lowest-level SREs are defined in certain situations.

- When an SMS-connected client does not participate in an NNSS, the lowest-level SRE is defined by the affiliate ID (which is a combination of the clearing entity and network), the processor, and the International Settlement Service.
- When a BASE II-connected client does not participate in an NNSS, the lowest-level SRE is defined by the clearing entity, the processor, and the International Settlement Service.
- When a client participates in an NNSS, two lowest-level SREs must be established for each acquiring or issuing identifier. One SRE, for the NNSS, is defined by the clearing entity, the network (SMS only), the processor, and the NNSS. The other SRE, for the International Settlement Service, is defined by the clearing entity, the network (SMS only), the processor, and the International Settlement Service.
- When a client has work processed by two different processors, two lowest-level SREs must be established. Both SREs are defined by the clearing entity, the network (SMS only), the processor, and the settlement service. An example of a client with work processed by two processors is a client that uses a third-party processor to handle its original interchange and its own processing center to handle its back-office transactions.
- An issuing client that wants to report by account type, brand, cardholder type, or by a co-branding relationship must be set up as a lowest-level SRE, with the corresponding card range as the clearing entity. SMS clients must establish a clearing entity ID that corresponds to the card range.

Summary-Level SRE

A summary-level settlement reporting entity (SRE) is used to summarize reporting or funds transfer activity for the subordinate SREs below the summary-level SRE. In a two-level hierarchy, the summary-level SRE is the top SRE.

A summary-level SRE is not associated with a clearing identifier, account range, or SMS affiliate ID plus a network, nor does it contain any parameters that apply to the entire hierarchy.

A summary-level SRE can be established as a funds transfer point for all of the SREs below it. In addition, summary reports can be subscribed to the summary-level SRE that includes summarized activity for all of the SREs below the summary-level SRE.

Top SRE

A top settlement reporting entity (SRE) is a summary-level SRE that includes a set of parameters that apply to the entire hierarchy. For example, the top SRE includes the settlement currency used to settle all transactions that are processed in the hierarchy. There is only one top SRE in a hierarchy. Every hierarchy must have a top SRE.

A top SRE can function as a summary-level SRE and funds transfer point, regardless of the number of levels included in the hierarchy. A top SRE only has SREs below it, not above it.

Funds Transfer SRE

Funds transfer can occur at any level of the hierarchy: lowest level, summary level, or at the top level of the hierarchy. When a Settlement Reporting Entity (SRE) is established as a funds transfer point, the SRE is often called the Funds Transfer SRE (FTSRE).

There is no limit to the number of FTSREs in a hierarchy, which depends on the number of levels in the hierarchy and the business requirements. The structure of funds transfers within a hierarchy must follow one rule: a funds transfer SRE cannot be directly linked to another funds transfer SRE, either above it or below it.

Settlement Hierarchies

Settlement Reporting Entities (SREs) are linked together to form a structure called a settlement hierarchy. A diagram of the hierarchy is created in a vertical pattern to illustrate how one level connects to (rolls up to) the level above or below it. Understanding the connection between levels is important when determining the location of funds transfer SREs and report subscriptions.

A settlement hierarchy is designed by a client to support the client's business needs. Clients have the option to have one or more settlement hierarchies, depending on their business requirements. A basic hierarchy must include at least two of these levels:

- One top SRE
- One or more lowest-level SREs
- At least one funds transfer SRE

Note: The exception to the requirements for a basic hierarchy is a hierarchy for a Copy Request Manager (CRM). These hierarchies are a single level, do not require an FTSRE, and are used for exception item processing.

There are two types of hierarchies: standard and customized.

Standard Settlement Hierarchies

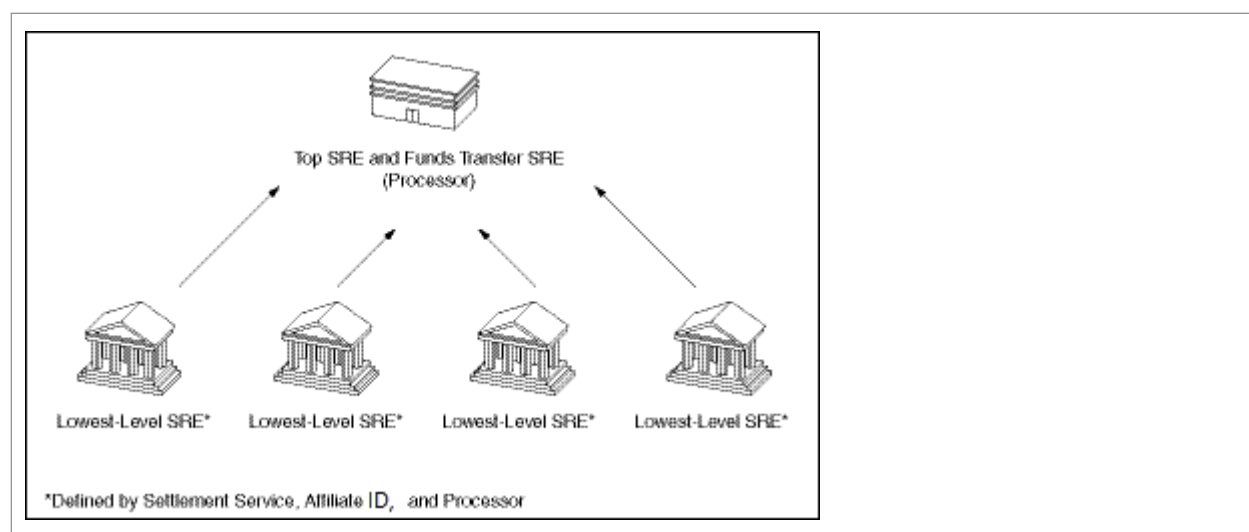

The standard settlement hierarchy is a two-level settlement structure, with the funds transfer point at either the highest or lowest level. SREs are linked together to form a structure called a settlement hierarchy.

Standard settlement hierarchies can be customized at any time after they are established to better support client business.

SMS Standard Hierarchy

The standard hierarchy for Single Message System (SMS)-connected settlement is a two-level settlement hierarchy. The lowest level is defined by settlement service, affiliate ID (the 6-digit, Visa-assigned acquiring or issuing identifier and the 4-digit network identifier), and processor. Lowest-level SREs are consolidated into a summary-level SRE, which represents the processor and funds transfer point.

Standard Settlement Hierarchy – SMS Client

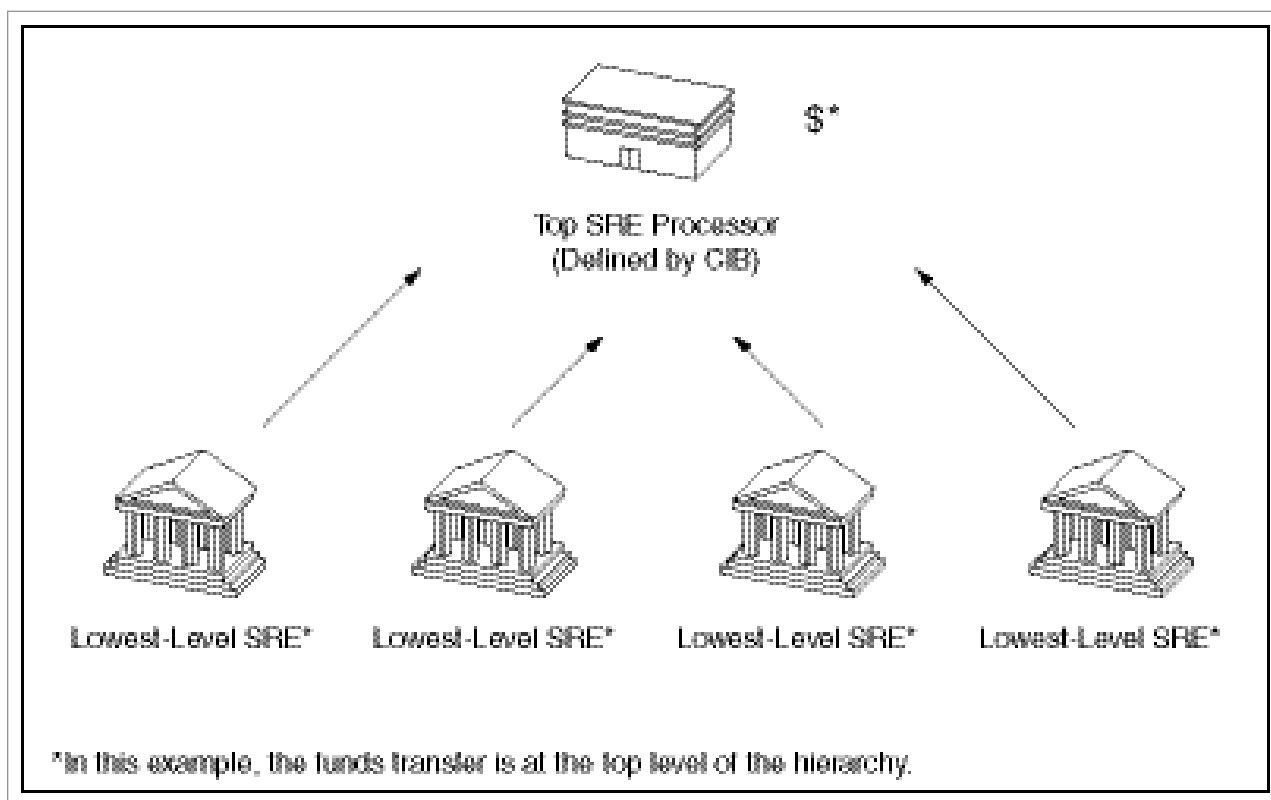

If a client uses SMS routing options, a separate settlement hierarchy is established for each processor, which must include a separate funds transfer for each hierarchy. To consolidate the funds transfers, a custom hierarchy must be used to combine the two hierarchies into one with one funds transfer.

BASE II Standard Hierarchy

The standard hierarchy for BASE II-connected settlement is a two-level settlement hierarchy. The lowest-level SREs are consolidated to a top-level SRE, which represents the processor. Funds transfer occurs at either the top-level SRE or lowest-level SRE.

The figure shows the standard BASE II settlement hierarchy.

Standard Settlement Hierarchy – BASE II Client

Settlement Services Hierarchies

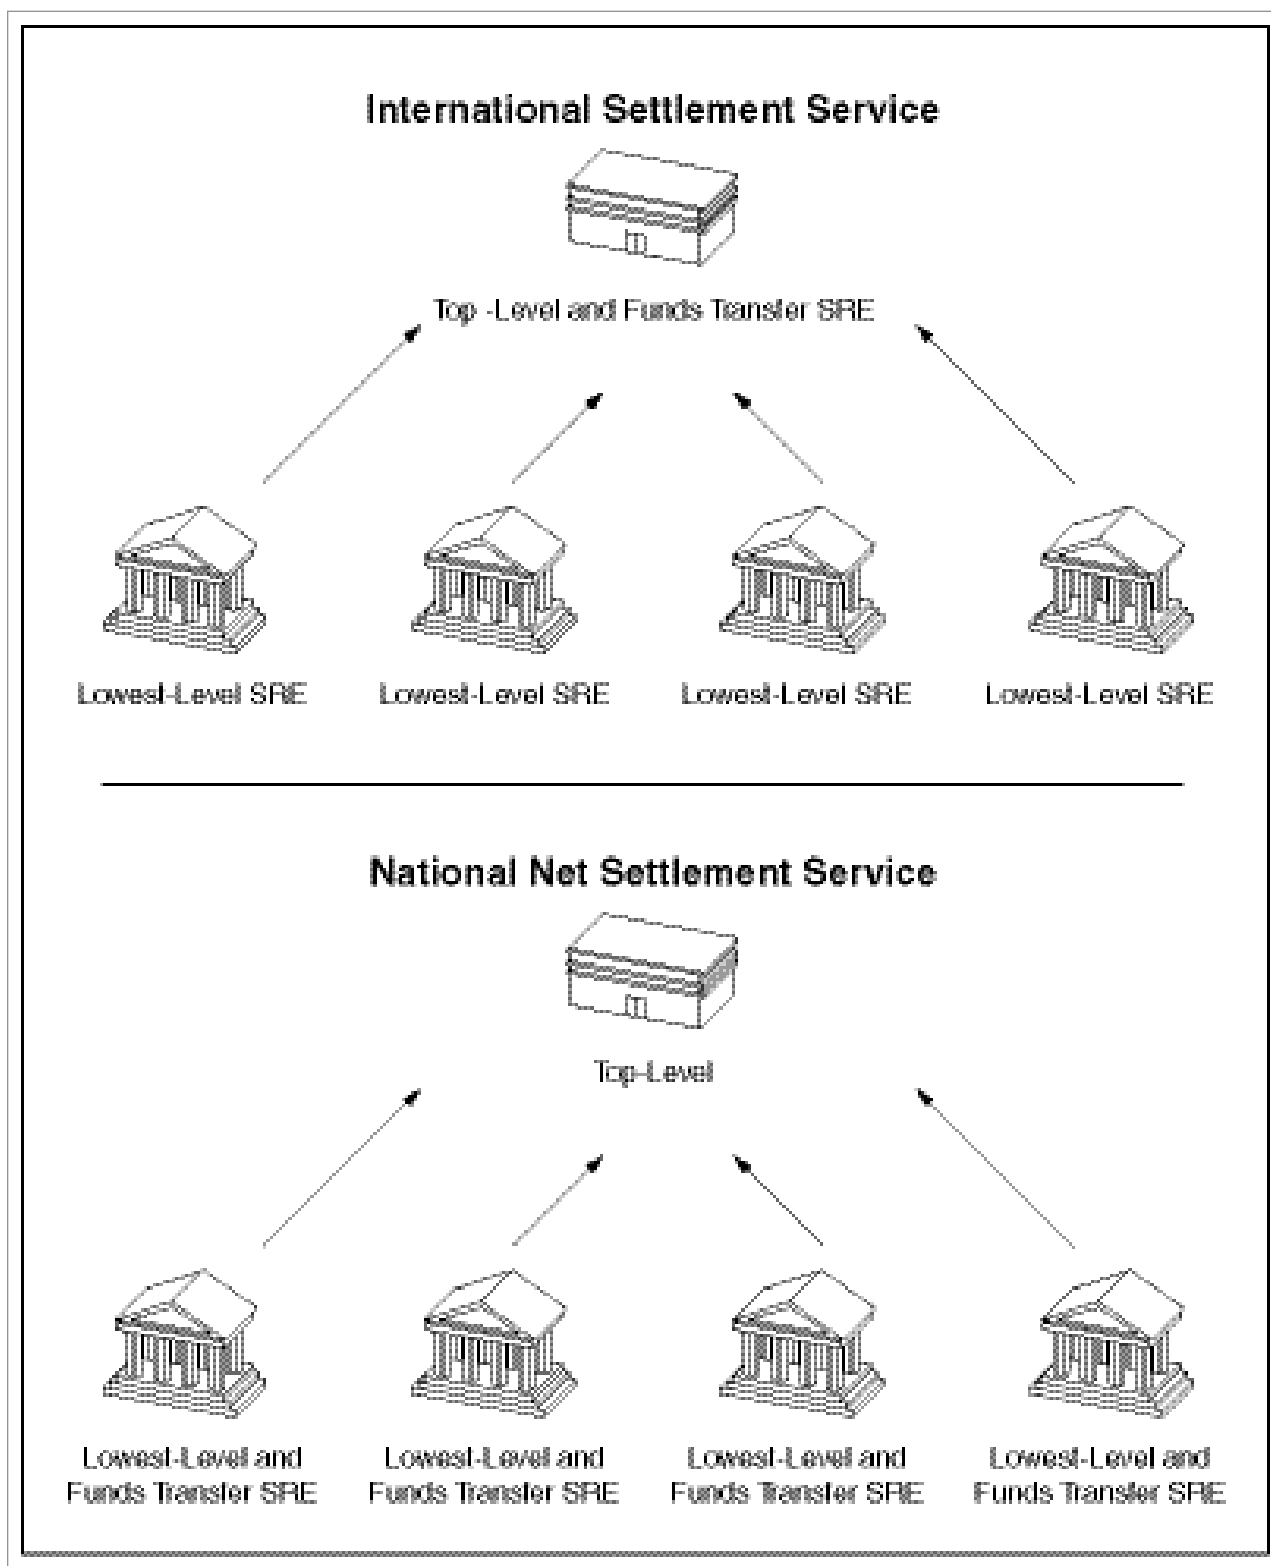

When a client participates in a National Net Settlement Service (NNSS) or an Area Net Settlement Service (ANSS), separate settlement hierarchies are established: one for the International Settlement Service and one for the NNSS or ANSS.

In a standard NNSS hierarchy, the funds transfer point can be either at the top level or at the lowest level.

This example shows the standard hierarchy established for each settlement service.

- The standard settlement hierarchies for the two settlement services are structured the same, but they have two separate sets of settlement reporting entities (SREs).
- The funds transfers for the International Settlement Service and NNSS are reported separately. The funds transfer for the International Settlement Service is at the top level. The funds transfer for the NNSS is at the lowest level.
- In the NNSS, all acquiring or issuing identifiers for this processor settle at the acquiring or issuing identifier level.

Standard Settlement Hierarchy for Each Settlement Service

Note:

In this example, all acquiring or issuing identifiers participate in the NNSS.

Custom Settlement Hierarchies

A custom hierarchy is one that has between three and eight levels. In general, a multilevel hierarchy is used to include summary-level points for reporting and funds transfer, represented by a summary-level settlement reporting entity (SRE). A summary-level SRE can be the designated SRE wherever a client wishes to have reporting or funds transfer for the SREs at levels below the summary-level SRE.

If a client wants to establish a customized settlement hierarchy, these objectives can be met:

- Client settlement across processors—A client using multiple processors consolidates its funds transfer.
- Combined BASE II and SMS settlement activity.
- Additional lower-level reporting.
- Different settlement structures for International Settlement Service and National Net Settlement Service.

Settlement Hierarchy Examples

The different types of hierarchies are designed to provide settlement reporting and funds transfers for specific client requirements.

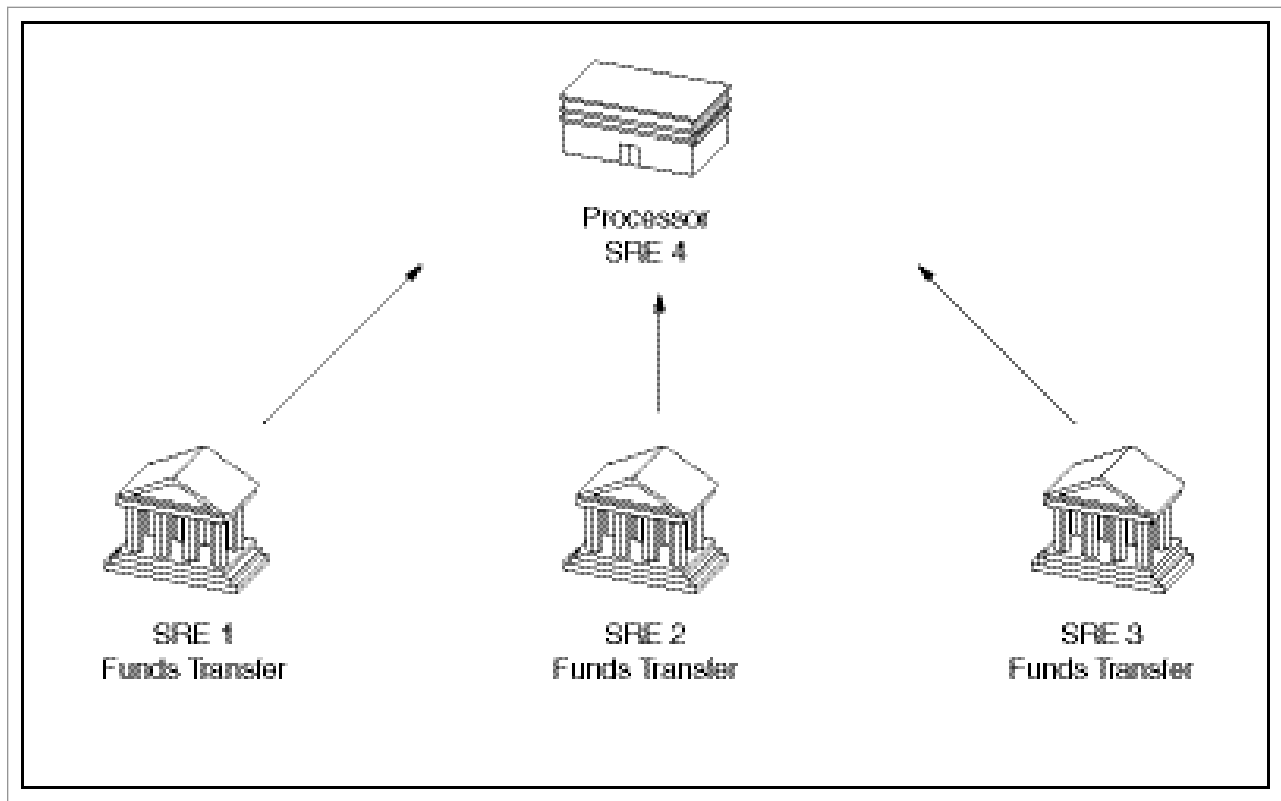

- Standard client-level settlement
- Customized client-level settlement
- Client settlement across processors
- Combined BASE II- and SMS-connected activity
- Additional lower-level reporting
- International and National Net Settlement Services

Standard Client-Level Settlement

VisaNet Settlement Service (VSS) can accommodate clients that use processors but want to handle their own funds transfer. A funds transfer settlement reporting entity (FTSRE) can be defined at any level within a hierarchy.

In this example, the processor is represented by settlement reporting entity (SRE) 4 and the clients behind the processor by SRE 1, 2, and 3. Funds transfers are located at SRE 1, 2, and 3. These SREs subscribe to detail-level reporting. SRE 4 does not need to perform funds transfer, and subscribes to processor-level reporting.

Standard Settlement Hierarchy – Client-Level Settlement

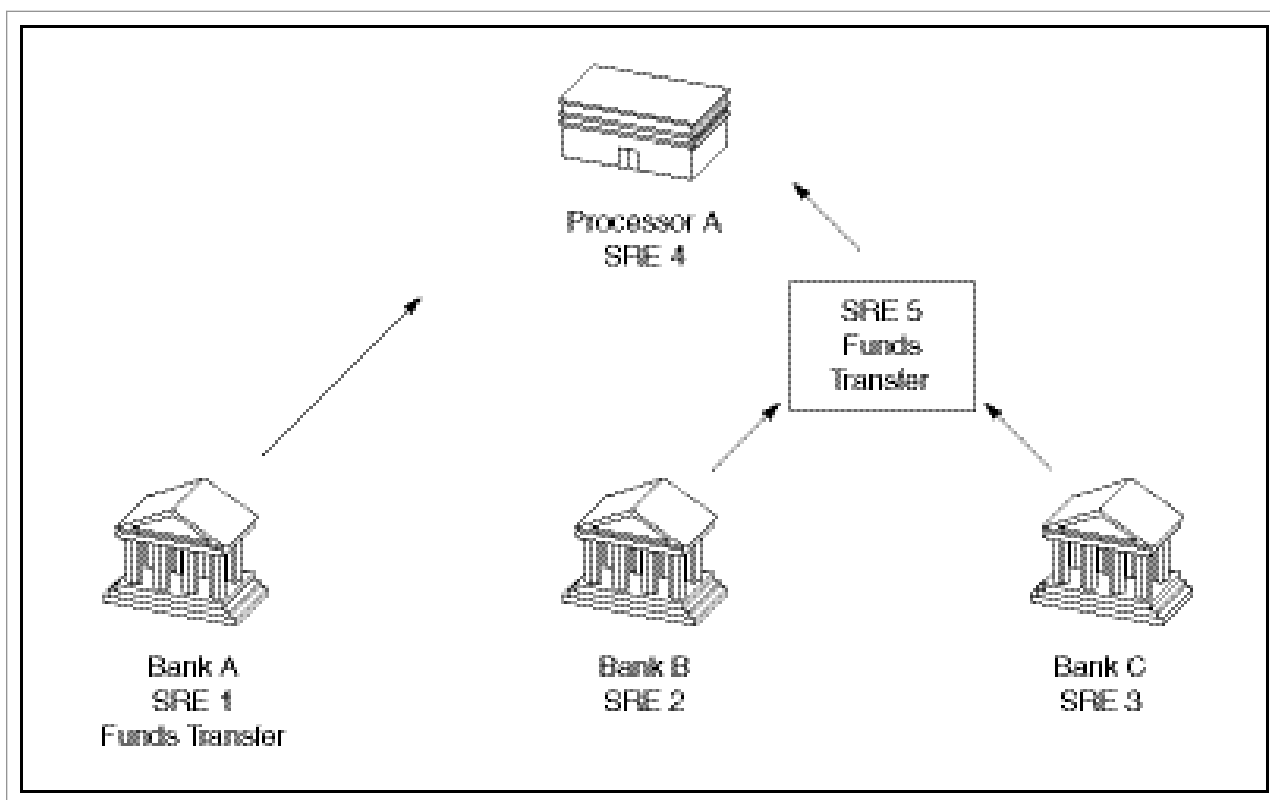

Custom Client-Level Settlement

In some cases, the processor can be the funds transfer point for some of its clients, while other clients act as their own funds transfer points.

This example illustrates the hierarchy.

Customized Settlement Hierarchy – Combining Client and Processor Settlement

Bank A has its own funds transfer, while funds transfer for banks B and C is performed by the processor. A summary-level settlement reporting entity (SRE) (SRE 5) is defined as the funds transfer SRE for banks B and C.

All three banks use Processor A to send and receive transactions to and from VisaNet. To receive settlement reports for all three banks, Processor A is defined with an SRE in the settlement hierarchy.

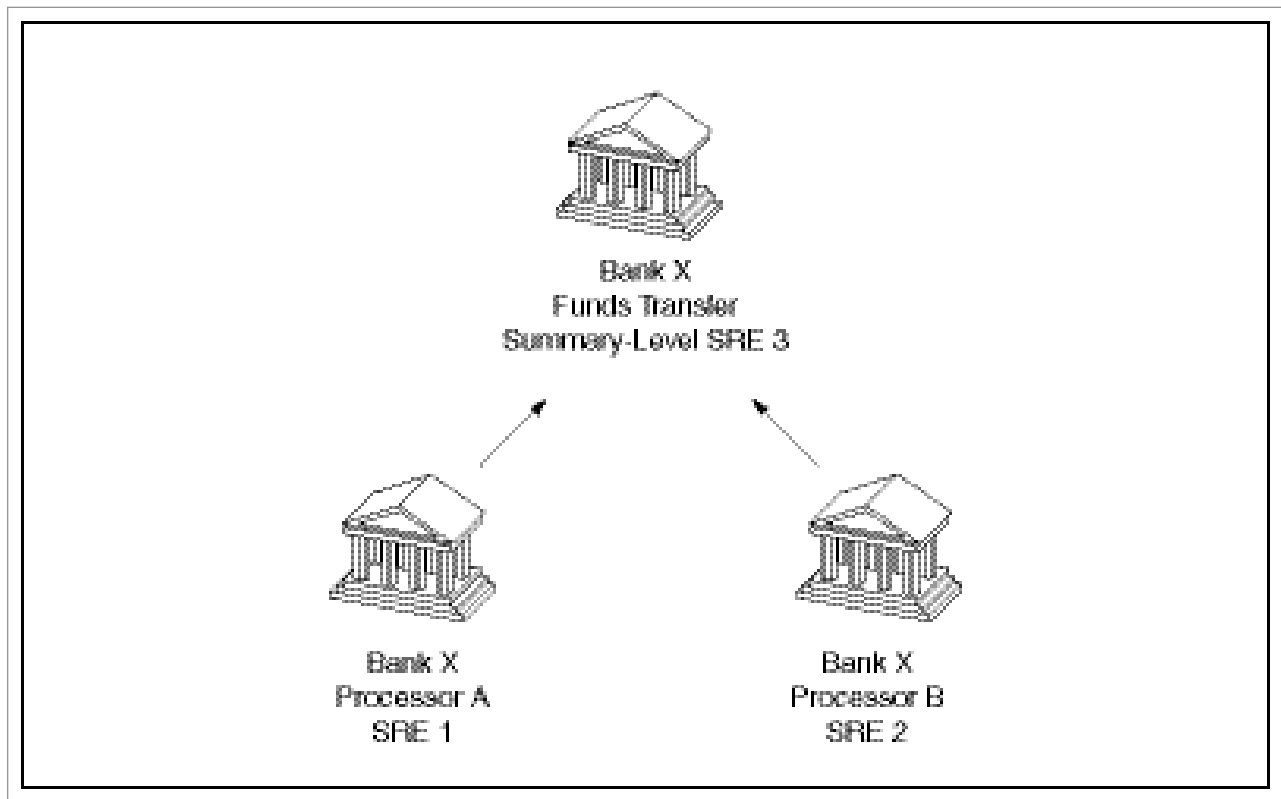

SRE 1 represents the client-level funds transfer for Bank A, and SRE 5 represents the funds transfer for banks B and C.

Client Settlement Across Processors

Through VisaNet Settlement Service (VSS), a bank that uses multiple processors can receive a single funds transfer.

In this example, when a client establishes the standard settlement hierarchy structure the client processors can no longer be included in a settlement hierarchy that represents all of their work.

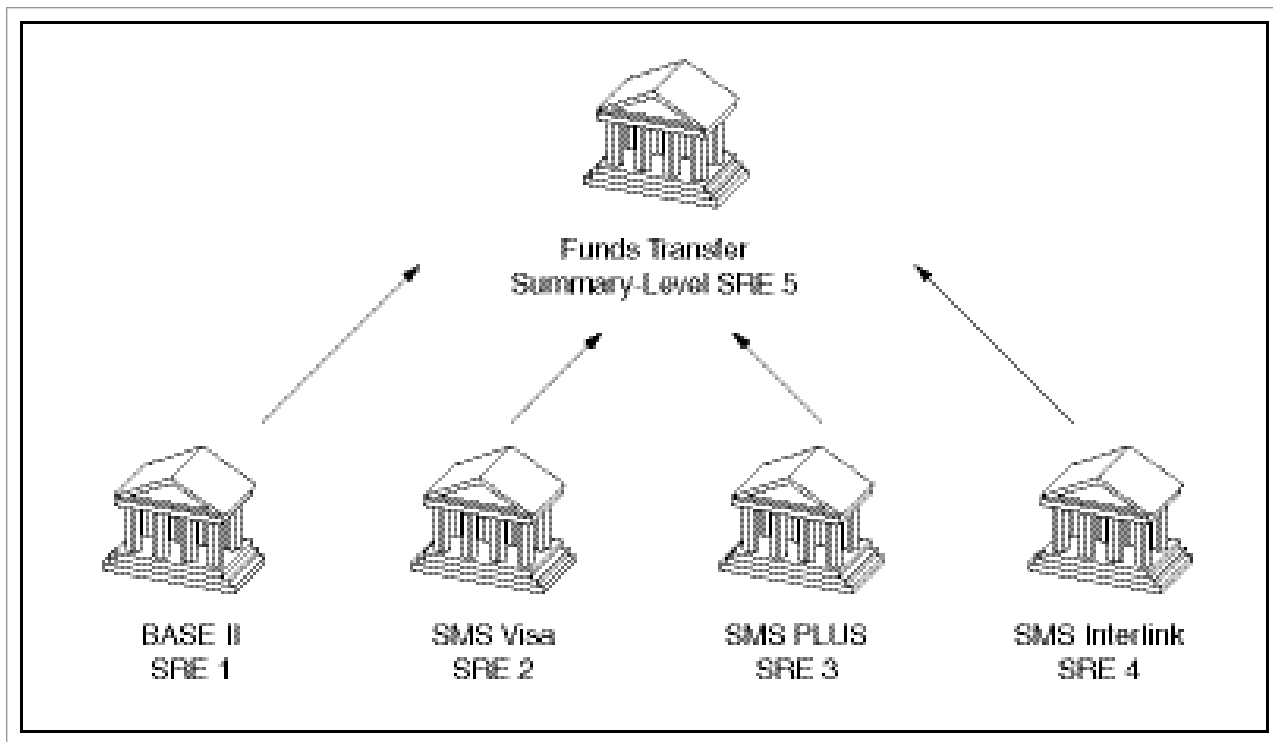

Standard Settlement Hierarchy – Client Settlement Across Processors

BASE II- and SMS-Connected Activity

The flexibility to define funds transfer points and reporting levels within VisaNet Settlement Service (VSS) also allows consolidation of funds transfer activity and settlement reporting for SMS affiliate IDs and clearing identifiers.

Standard Settlement Hierarchy – Combined BASE II- and SMS-Connected Activity

The settlement reports requested for settlement reporting entity (SRE) 5 provide SMS and BASE II consolidated information. Settlement reports requested for SRE 1 provide BASE II-connected settlement information. Settlement reports requested for SREs 2, 3, and 4 provide SMS-connected settlement information for Visa, Plus, and Interlink transactions, respectively. SRE 5 is defined as the funds transfer SRE.

Additional Lower-Level Reporting

In some cases, clients may want to receive settlement reports that include information at a lower level of detail. A multilevel settlement hierarchy enables clients to define multiple tiers of settlement reporting. This allows reporting based on a subset of a processor's or client's activity.

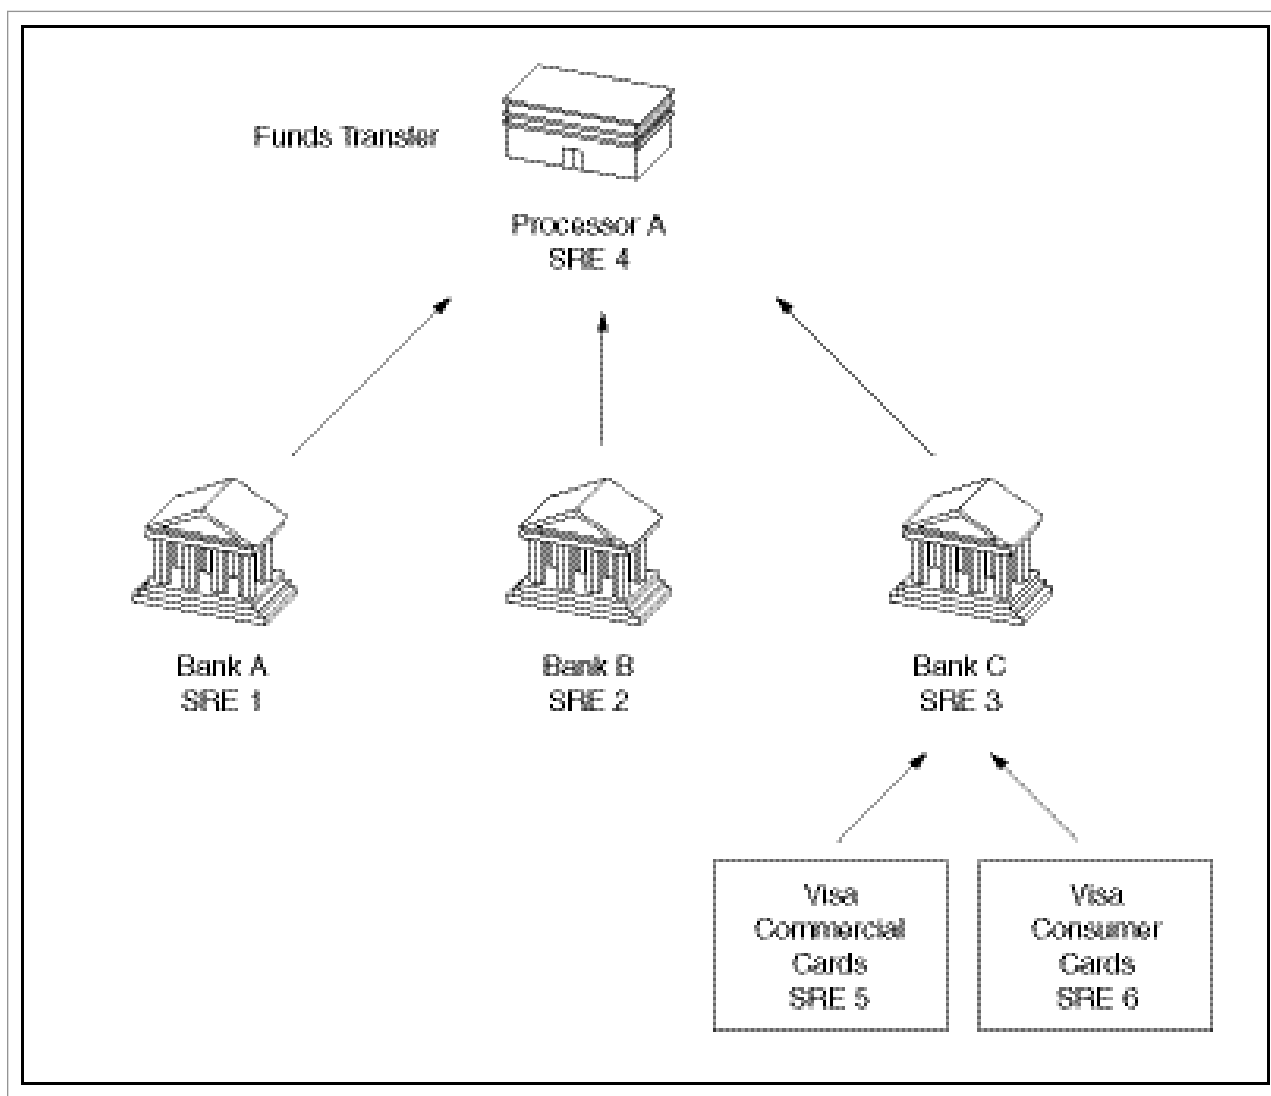

Factors, including settlement reporting, can be defined by:

- Issuer or acquirer business mode
- Processor

- BASE II or SMS Clearing System
- Product

In this example, Bank C wants to receive separate settlement reports for Visa commercial card transactions and Visa consumer card transactions. Two additional, lower-level settlement reporting entities (SREs) must be established under SRE 3 (Bank C), one for each cardholder type.

Customized Settlement Hierarchy – Additional Lower-Level Reporting

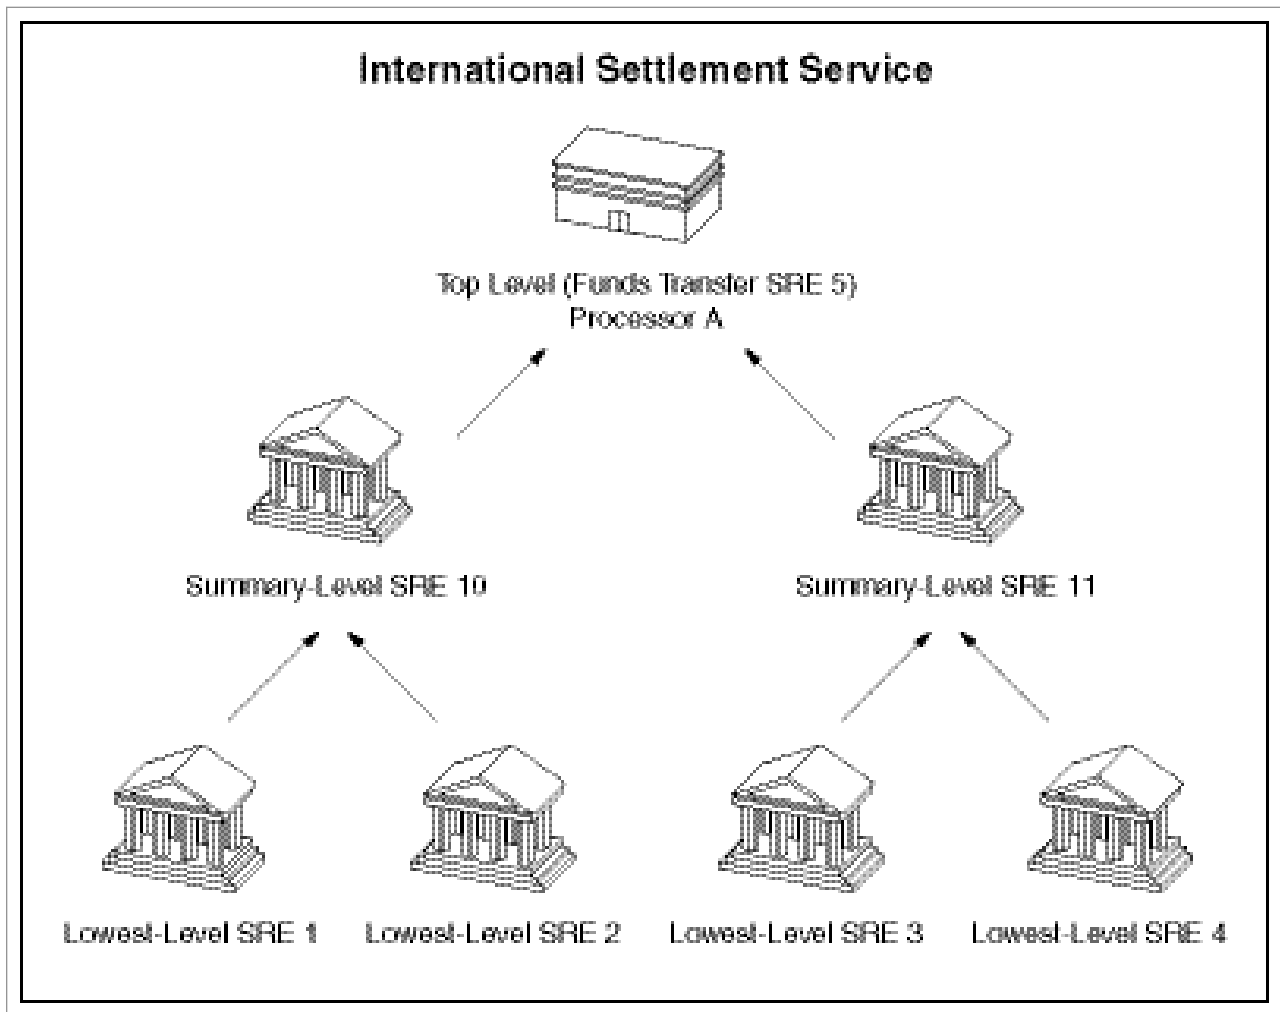

Settlement Services Configurations

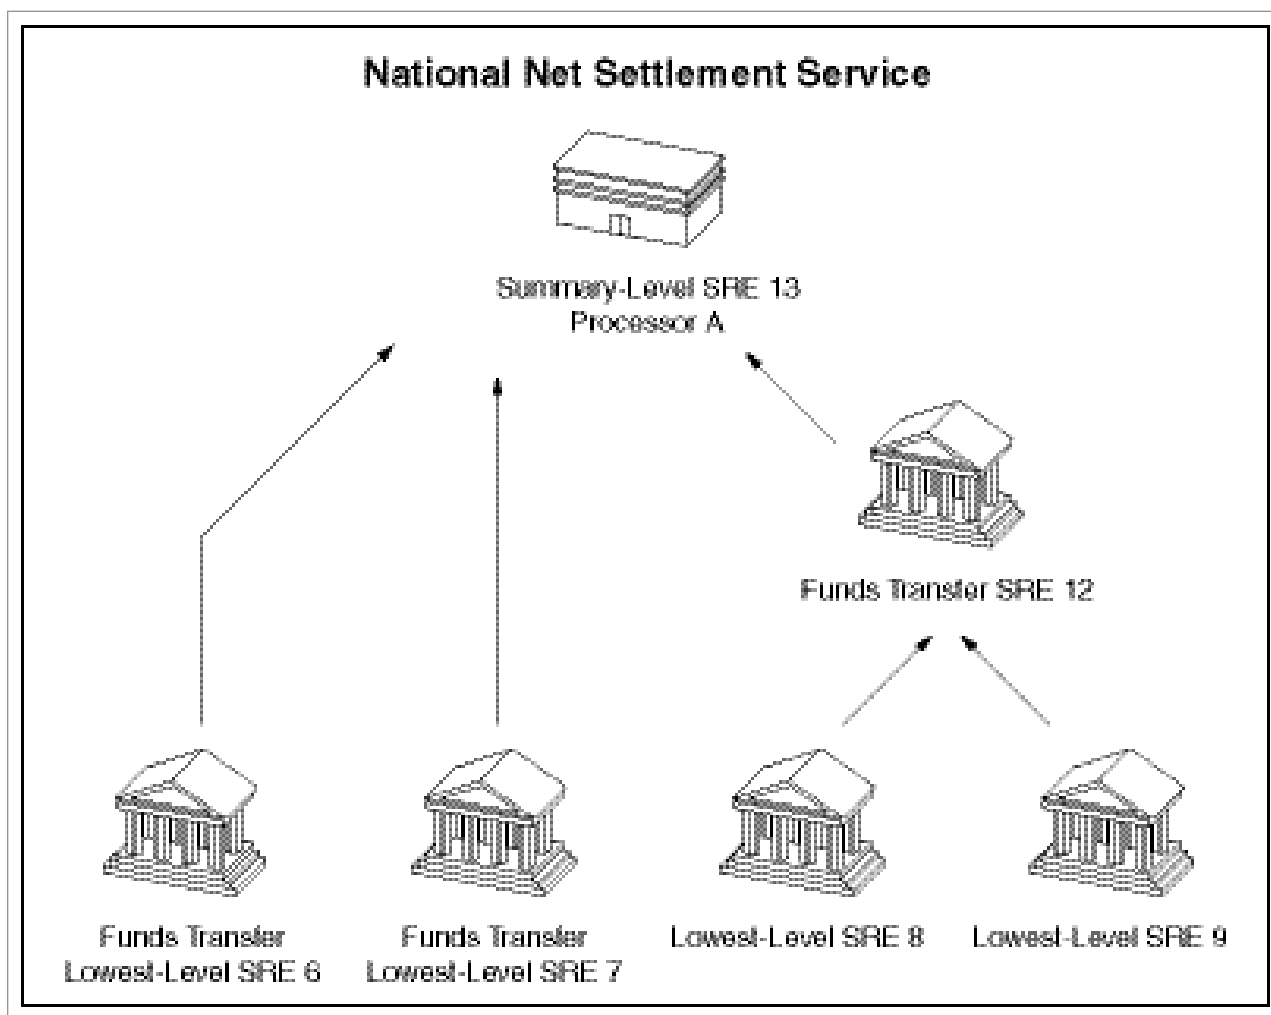

VisaNet Settlement Service (VSS) clients have the option to establish an international hierarchy in one configuration and the National Net Settlement Service (NNSS), or Area Net Settlement Service (ANSS) hierarchy, in a different configuration.

When the processor wants to receive additional levels of reporting within the International Settlement Service and wants to perform funds transfer for some of its acquiring or issuing identifiers in the NNSS or ANSS, the processor can establish the hierarchies.

Customized Settlement Hierarchy – Summary-Level With Funds Transfer at Top Level

Customized NNSS Hierarchy – Summary-Level and Client-Level Settlement

Multicurrency Settlement

The Multicurrency Settlement Service is an optional international service that allows clients that transact in multiple currencies to settle in more than one currency using a single acquiring or issuing identifier. Multicurrency Settlement can be established for acquiring and issuing identifiers and for clearing identifiers and SMS affiliate IDs.

Through the Multicurrency Settlement Service, the same acquiring or issuing identifier used to establish a client's primary hierarchy can be used to establish one or more multicurrency hierarchies. Each multicurrency hierarchy includes a settlement currency that can be different from the settlement currency of the primary hierarchy.

A lowest-level SRE is established in the multicurrency hierarchy with a transaction currency code that matches its settlement currency for either acquirer or issuer transactions. When a transaction originates in a currency that matches the transaction currency of the lowest-level SRE, the transaction is settled through the multicurrency hierarchy and currency conversion is not required.

This diagram of a primary hierarchy has a settlement currency of Euros. All non-Euro transactions processed through the primary hierarchy are converted to Euros and settled in Euros.

In this example, the client wants all transactions that originate in British Pound Sterling (GBP) to settle in GBP. A second hierarchy is established to settle in GBP (SRE).

The same acquiring or issuing identifier is used to create the primary hierarchy and the multicurrency hierarchy. Transactions from the acquiring or issuing identifier that originate in GBP are settled through the multicurrency hierarchy in GBP. Clients have the option to use the same acquiring or issuing identifier to establish a hierarchy for each Visa-authorized settlement currency that supports the client.

VSS Report Reconciliation

To reconcile VisaNet Settlement Service (VSS) reports to clearing system reports, Visa recommends that SMS-connected clients establish a settlement reporting entity (SRE) that represents the affiliate ID (and processor, if more than one processor is used), and that BASE II-connected clients establish an SRE that represents the acquiring or issuing identifier. This SRE can be established at the lowest level or the summary level.

Chapter 3

VSS Settlement Processing Schedule

A settlement processing schedule specifies the key times in the daily settlement process for Single Message System (SMS)- and BASE II-connected clients.

The optional National Settlement Cutoff Time service allows for earlier settlement reporting.

VSS Settlement Cutoff Times

This table shows the cutoff times for transactions processed by VisaNet for SMS- and BASE II-connected clients using the International Settlement Service (ISS) in Greenwich Mean Time (GMT).

Settlement Cutoff Times

GMT Dates	GMT Cutoff Times		
	SMS		BASE II
	Visa, Plus, and Electron	Interlink	
Second Sunday in March to first Sunday in November	1000	1000	1000
First Sunday in November to second Sunday in March	1100	1100	1100

Chapter 4

VSS Reporting and Messages

VisaNet Settlement Service (VSS) supports settlement reporting for Single Message System (SMS)- and BASE II-connected clients by producing reports with standardized layouts.

VSS Reporting Categories

VisaNet Settlement Service (VSS) uses various categories to create reports.

These categories are identified as:

- Business Mode
- Charge Type
- Business Transaction Type
- Business Transaction Cycle
- Jurisdiction

Business Mode

VisaNet Settlement Service (VSS) reports are divided into sections based on business mode.

The business mode designates whether the amounts reported are for:

- Issuer
- Acquirer
- Other

Note: The business mode Other contains all transactions that are not issuer or acquirer. These include fee collection and funds disbursement transactions.

Charge Type

Charge type is a way to classify charges on VisaNet Settlement Service (VSS) reports.

- BASE II processing charges
- International Acquiring Fee
- International Service Assessment (ISA)
- International Service Assessment Allocation
- Special Airline Fees (SAF)
- Returned item charges

See *VisaNet Settlement Service (VSS) User Guide, Volume 2, Reports*.

Business Transaction Type

To support consistent settlement reporting and make the reports more business-oriented, VisaNet Settlement Service (VSS) business transaction types are used to classify transactions by their business purpose.

In the clearing process, BASE II uses transaction codes and SMS uses message types to differentiate transactions. For example, in BASE II, the transaction code TC 05 is used for a purchase transaction, while in SMS, the message type 0200 is used. In VSS, the business transaction type is purchase for both a TC05 and a message type 0200.

On VSS reports, transactions that represent different business transaction types are reported separately, such as purchase and quasi-cash transactions.

See *VisaNet Settlement Service (VSS) User Guide, Volume 2, Reports*.

Business Transaction Cycle

The business transaction cycle further qualifies business transaction types to identify which presentment is being reported.

For example, a purchase transaction presented for the first time by an acquirer has a cycle description of ORIGINAL. If it is sent back by the issuer, the cycle description is DISPUTE FIN for Visa disputes or CHARGEBACK for non-Visa disputes. If resubmitted by the acquirer, the cycle description is DISPUTE RESP FIN for Visa disputes or REPRESENTMENT for non-Visa disputes. Any of these presentments can be reversed. A reversal is indicated on the report by RVRSL next to the business transaction.

Jurisdiction

Jurisdiction identifies the operating regulations governing the reimbursement fees and charges imposed on a transaction. Examples of jurisdiction are Visa International, Visa Canada, Plus System, Inc. U.S.A, and Interlink International.

VSS Report Formats

All VisaNet Settlement Service (VSS) reports are available in machine-readable (TC 46) and print-ready (TC 47) formats. Reports can be delivered in either or both formats. A different format option can be selected for each report for the same settlement reporting entity (SRE).

For example, some reports can be delivered in machine-readable format, some reports can be delivered in print-ready format, and still other reports can be delivered in both formats. The same report can be sent to separate locations in the same or different formats.

Clients can take advantage of the machine-readable reports in a number of ways, including:

- Producing customized settlement reports.
- Providing automated interfaces to internal processing systems. (For example, automated procedures can be developed for general ledger posting of reimbursement fees or Visa charges).
- Automating reconciliation procedures.

VSS Reporting Features

VisaNet Settlement Service (VSS) reporting offers clients a variety of features.

- Reporting is available for every settlement reporting entity (SRE) in the settlement hierarchy.
- Reports showing multicurrency transactions include subtotals by currency and the date of the currency rate table used so clients can reconcile settlement amounts to clearing amounts.
- Settlement amounts are reported in the minor units of currency appropriate to the settlement currency. For example, Japanese yen is reported as 100 and Canadian dollars as 100.00.
- Issuers are able to receive reconciliation information for International Service Assessment (ISA) and for optional issuer ISA fees. Optional issuer ISA is currently supported only by certain regions.
- Interchange amounts, reimbursement fees, and Visa charges settled by VSS are summarized on one report.
- Most settlement reports are available on a monthly basis.
- Fees and charges reports include a jurisdiction name that specifies the operating regulations, such as Visa International or Visa Canada, that govern reimbursement fees and charges for a transaction. Clients can use this information to help with reconciliation.
- All VSS reports are also available in machine-readable (TC 46) formats. This eliminates the need for clients to extract data fields from print-ready (TC 47) reports.
- Clients can have settlement reports sent to multiple locations of their choice.
- All VSS National Net Settlement Service (NNSS) or Area Net Settlement Service (ANSS) reports have the same name and format as their international counterparts. Clients that participate in an NNSS receive two sets of VSS reports: one set that shows transactions, fees, and charges settled through the International Settlement Service, and another that shows transactions, fees, and charges settled through the NNSS. The settlement service identifier appears in the report heading.
- VSS reports are produced and delivered seven days a week.
- Any SRE participating in the International Settlement Service receives null reports when there is no activity during a reporting period. This feature is not available for NNSS reports.

VSS Fees and Charges Reports

Reimbursement fees and Visa charges are reported on VisaNet Settlement Service (VSS) reports.

- Reimbursement fees are amounts paid by one client to another client for transactions entered into interchange.
- Visa charges include all amounts that are assessed by Visa and paid by the client or the client processor to Visa. This category also includes amounts paid by Visa to the client or client processor.

Monthly Fees and Charges Settlement

Monthly fees and charges settlement are supported in VisaNet Settlement Service (VSS). Clients' fees and charges-pending reports are available for subscription, VSS-610 and VSS-640. The monthly fees and charges settlement use the existing defer-settlement process. The clearing system calculates fees and charges daily with a future settlement date (the last calendar date of the month) and settlement warehouses the future-dated fees and charges in a “defer” file until the settlement date.

Fees and Charges Report Categories

Fees and charges are grouped by categories on VisaNet Settlement Service (VSS) reports.

- **Business mode** – Designates whether the amounts reported are for issuer, acquirer, or other.
- **Charge type** – Provides a means of classifying charges on the VSS reports.
- **Business transaction type** – Classifies transactions according to their business purpose.
- **Jurisdiction** – Identifies the Operating Regulations that govern the reimbursement fees and charges imposed on a transaction.
- **Transaction routing** – Describes the source and destination of the transaction. When the transaction is interregional, the routing indicates the source and destination regions. When the routing is intraregional, the reports show the source and destination countries.
- **Fee level** – Indicates the type of fee assessed.

Reimbursement Fees

Interchange Reimbursement Fees (IRFs) are noninterchange amounts paid by one client to another client.

Reimbursement fees are reported on these reports:

- **VSS-130** – Reimbursement Fees Report
- **VSS-130-M** – Monthly Reimbursement Fees Report
- **VSS-135** – Month-to-Date Reimbursement Fees Report

These reports include all fees settled in a given settlement service. Fees are reported by these categories:

- Business mode
- Business transaction type
- Jurisdiction
- Transaction routing
- Fee level

Visa Charges

Visa charges include all amounts assessed by Visa and paid by the client (or client processor) to Visa. This category also includes amounts paid by Visa to the client or client processor.

These charges include:

- BASE II processing charges
- International Acquirer (IA) fees
- International service assessment
- International service assessment allocation
- Special Airline Fees (SAFs)
- Currency conversion fees
- Currency conversion fee allocations
- Returned item charges

Note: Some charges are called fees, but are actually charges based on the definition for Visa charges.

In all regions, SMS processing charges are billed monthly through the Integrated Billing Statement. In some regions, BASE II processing charges are billed monthly using the Integrated

Billing Statement. In these cases, processing charges are not included in VisaNet Settlement Service (VSS) reports.

Visa charges are reported on these reports:

- **VSS-140** – Visa Charges Report
- **VSS-140-M** – Monthly Visa Charges Report
- **VSS-210** – Currency Conversion Fees Report
- **VSS-210-M** – Monthly Currency Conversion Fees Report
- **VSS-215** – International Service Assessment Report
- **VSS-215-M** – Monthly International Service Assessment Report
- **VSS-230** – Visa Charges Reconciliation Report

On the Visa Charges Report (VSS-140), Monthly Visa Charges Report (VSS-140-M), and Visa Charges Reconciliation Report (VSS-230), charges are reported by these categories:

- Business mode
- Charge type
- Business transaction type
- Jurisdiction
- Transaction routing

On the Currency Conversion Fees Report (VSS-210) and its equivalent monthly report (VSS-210-M), currency conversion fees for issuer transactions are reported by these categories:

- Business transaction type
- Jurisdiction

On the International Service Assessment (VSS-215) report and its equivalent monthly report (VSS-215-M), ISA charges are reported by Business Transaction type and Jurisdiction.

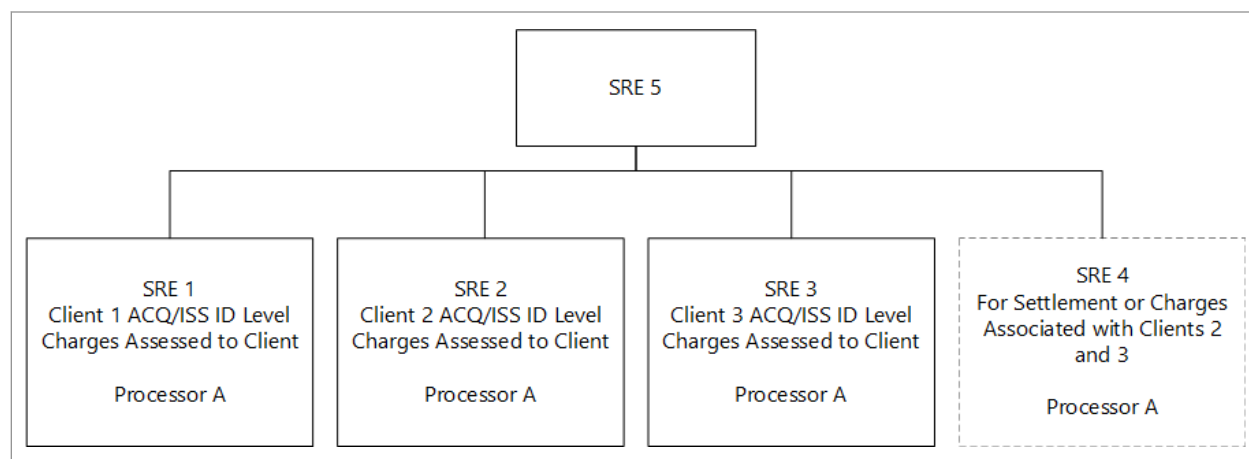

BASE II-Connected Charges in VSS

In regions that bill their BASE II-connected processing charges daily through VisaNet Settlement Service (VSS), charges may be assessed either to the client or to the processor.

When BASE II-connected processing charges are assessed to a processor, a lowest-level settlement reporting entity (SRE) must be created. This SRE reports charges for all client-level SREs in the hierarchy for which charges are to be assessed to the processor.

This example shows a hierarchy with client-level charges reported in a separate SRE.

Settlement Hierarchy with Separate SRE for Client-Level Charges

The SRE can be in any hierarchy specified by the processor as long as the processor (CIB) is in the same hierarchy as the SRE.

These rules govern the placement of this SRE in the settlement hierarchy:

- The SRE must reside in the same hierarchy as those acquiring or issuing identifier-level SREs (SREs 2 and 3) for which charges are to be assessed to the processor.
- The SRE must be a lowest-level SRE.

VSS reports for the processor SRE (SRE 4) should include the Visa Charges Report (VSS-140).

National Settlement Charges

For BASE II-connected clients, charges for transactions that are settled in an Area Net Settlement Service (ANSS) is settled within the ANSS or within the International Settlement Service, depending on the rules of the ANSS.

This table shows that the charges reported for these two scenarios.

Note: Processing charges for SMS clients are billed monthly through the Billing Statement.

Charge Activity Reporting by Settlement Service

Transactions Settled In	Charges Settled In	Charges Reported On
International Settlement Service	International Settlement Service	VSS-140 for International Settlement Service
ANSS	International Settlement Service	VSS-140 for International Settlement Service VSS-230 for ANSS
NNSS	Not applicable	Not applicable

A client that participates in an Area Net Settlement Service, for which the charges are settled within the International Settlement Service, can select two charge reports:

- **Visa Charges Report (VSS-140)** – This report is used for the International Settlement Service, which lists all charges assessed on cross-border transactions settled in the International Settlement Service or charges assessed on cross-border transactions settled in the ANSS.
- **Visa Charges Reconciliation Report (VSS-230)** – This report is used for the Area Net Settlement Service, which lists only charges assessed on cross-border transactions settled in the ANSS.

Note: All cross-border charges are settled in the International Settlement Service.

Currency Conversion Fees

The Currency Conversion Fees Report (VSS-210) and Monthly Currency Conversion Fees Report (VSS-210-M) list currency-conversion information for issuers.

These reports list Visa currency-conversion fees and associated interchange in both the settlement and clearing currency (cardholder billing currency). The Visa Issuer FX Calculator amount is also listed in the clearing currency.

International Service Assessment

The International Service Assessment Report (VSS-215) and Monthly International Service Assessment Report (VSS-215-M) list international service assessment charge information for issuers.

These reports list:

- Visa International service assessment charges.
- Associated interchange amounts in both settlement and clearing currency (cardholder billing currency).
- The optional Visa international service assessment is listed in the clearing currency.

VSS-215 and VSS-215-M provide detailed information for Optional Issuer International Service Assessment for those clients that participate in this service.

Clients should use the Visa Charges Report (VSS-140) as the primary source for information about International Service Assessment in conjunction with the International Service Assessment Report (VSS-215) and Monthly International Service Assessment Report (VSS-215-M).

Other VSS Processing and Nonfinancial Charges – U.S. Only

U.S. clients that do not have their own VisaNet Access Point (VAP) endpoint (that decide to settle for themselves) are billed a monthly charge for funds transfers. The charge is intended to offset the added expense for Visa to send settlement wires to those that want to settle directly with Visa. The monthly charge is billed through the Billing Statement.

There is no charge for the primary VisaNet funds transfer point (usually the VAP-connected processor if the processor is a funds transfer point). Clients that settle for themselves should also expect to receive wire charges from their settlement banks.

All U.S. clients are billed monthly for nonfinancial transaction processing charges, which include a charge for each report generation record and for each item of clients settlement data. These charges also apply to report generation records and each item of client settlement data for any summary-level settlement reporting entities (SREs) that the client establishes.

See *Visa U.S.A. Inc. Operating Regulations, Volume 1—General Rules*

Rate Table ID

The Rate Table ID is the identifier for the currency rate applied to a transaction.

- For a reversal transaction, the Rate Table identifier of the currency conversion rate that was used for the original transaction appears whenever currency conversion has been performed.
- For all other transactions, the Rate Table identifier of the currency conversion rate appears when the clearing currency (transaction or cardholder billing currency) is different from the settlement currency.

For transactions in which both of these conversion situations occur, the Rate Table identifier of the currency rate that was used for the original transaction appears on the report.

VSS Reports

All VisaNet Settlement Service (VSS) reports are optional, with the exception of the VSS-110, which is required for each Funds Transfer SRE. The counts and amounts in the summary-level settlement reporting entity (SRE) reports are totals of the counts and amounts from all the lowest-level SREs below it in the settlement hierarchy. Except for processor reports, VSS-110-C and the VSS-111 report, all VSS reports are available for any SRE.

Daily VSS Settlement Reports

This table lists the daily VSS settlement reports and their descriptions.

Daily VSS Settlement Reports

Report ID	Report Title	Report Description
VSS-110	Settlement Summary Report	Provides summarized totals of the interchange values, reimbursement fees, and Visa charges for a given SRE. Funds transfer information is shown at the top of the report for a funds transfer SRE.
VSS-110-C	Multi-Window Settlement Summary Report	Shows the interchange, fee, and charge totals for each settlement service ID (SSID) from prior and final windows, as well as a totals section that will show totals across all settlement service IDs in that jurisdiction.
VSS-115	SRE Settlement Recap Report	Contains a summary of all transactions grouped: • Original transactions listed by business transaction type. • All reversal transactions. • All chargeback transactions that are not reversals. • All dispute financial transactions that are not reversals • All representment transactions that are not reversals. • All dispute response financials that are not reversals. • All debit and credit-adjustment transactions that are not reversals. All reimbursement fees and Visa charges settled through VSS are summarized in this report.
VSS-116	SRE Settlement Recap Report	Contains a summary of all transactions grouped: • Original transactions listed by business transaction type. • All reversal transactions. • All chargeback transactions that are not reversals. • All dispute financial transactions that are not reversals. • All representment transactions that are not reversals. • All dispute response financials that are not reversals. • All debit and credit-adjustment transactions that are not reversals. All reimbursement fees and Visa charges settled through VSS are summarized in this report.
VSS-120	Interchange Value Report	Provides interchange values in settlement currency and clearing amounts in clearing currency summarized by business transaction type.
VSS-130	Reimbursement Fees Report	Provides reimbursement fees information summarized by business transaction type.

Daily VSS Settlement Reports

Report ID	Report Title	Report Description
VSS-135	Month-to-Date Reimbursement Fees Report	Provides daily and month-to-date reimbursement fees summarized by fee level and business mode.
VSS-140	Visa Charges Report	Provides details of all charges settled through VSS summarized by business transaction type.
VSS-210	Currency Conversion Fees Report	Provides issuers with reconciliation information about currency conversion fees and Visa Issuer FX Calculator amounts.
VSS-215	International Service Assessment Report	Provides reconciliation information to issuers for the international service assessment (ISA) charges and optional ISA fees for incoming transactions.
VSS-230	Visa Charges Reconciliation Report	Provides reconciliation information about charges for National Net Settlement Service transactions for which the charges are settled through the International Settlement Service. Charges are summarized by business transaction type.
VSS-300	SRE Financial Recap Report	Provides summarized totals of the interchange values, reimbursement fees, and Visa charges for each immediately subordinate SRE.
VSS-600	Pending Settlement Report	Provides summarized totals of the interchange values, reimbursement fees, and Visa charges for transactions pending settlement because they have been deferred. Note: Only available in Brazil, Japan, Argentina, and Chile.
VSS-610	Pending Fee Settlement Report	Provides pending reimbursement fee information in settlement currency.
VSS-640	Pending Charges Settlement Report	Provides pending charges paid to Visa by clients.
VSS-950	No Data Report	Provides daily VSS reports to which a client subscribes, but has no data.

VSS Periodic Report

This table describes the VSS periodic report.

VSS Periodic Report

Report ID	Report Title	Report Description
VSS-111	Consolidated Settlement Summary Report	Provides a funds transfer total and summary description of the daily funds transfers that were combined into a single wire. The VSS-111 report can only be subscribed to funds transfer SREs.

VSS Settlement Hierarchy Reports

This table describes the reports that contain VSS settlement reporting hierarchy lists.

VSS Hierarchy Lists

Report ID	Report Title	Report Description
VSS-100-R	Revised Settlement Reporting Hierarchy List	Lists the settlement reporting hierarchy below each given SRE when the VSS hierarchy changes and a client first implements VSS. The report is delivered on Thursdays and Sundays.
VSS-100-W	Weekly Settlement Reporting Hierarchy List	Lists the settlement reporting hierarchy below each given SRE. The report is delivered on Thursdays and Sundays.

Monthly VSS Settlement Reports

This table lists the monthly VSS settlement reports and their descriptions.

Monthly VSS Settlement Reports

Report ID	Report Title	Report Description
VSS-110-M	Monthly Settlement Summary Report	Monthly version of the VSS-110.
VSS-115-M	Monthly SRE Settlement Recap Report	Monthly version of the VSS-115.
VSS-116-M	Monthly SRE Settlement Recap Report	Monthly version of the VSS-116.
VSS-120-M	Monthly Interchange Value Report	Monthly version of the VSS-120.
VSS-130-M	Monthly Reimbursement Fees Report	Monthly version of the VSS-130.
VSS-140-M	Monthly Visa Charges Report	Monthly version of the VSS-140.
VSS-210-M	Monthly Currency Conversion Fees Report	Monthly version of the VSS-210.
VSS-215-M	Monthly International Service Assessment Report	Monthly version of the VSS-215.
VSS-950-M	Monthly No Data Report	Monthly version of the VSS-950.

Daily VSS Reconciliation Reports

This table describes the daily reconciliation reports.

Daily Reconciliation Reports

Report ID	Report Title	Report Description
VSS-900	Reconciliation Report	Provides summarized totals of transaction counts and values by clearing currency, business mode, and business transaction type for an SRE.
VSS-900-S	Summary Reconciliation Report	Provides summaries across business modes and business transaction types by clearing currency.

Monthly VSS Reconciliation Reports

This table describes the monthly reconciliation reports.

Monthly Reconciliation Reports

Report ID	Report Title	Report Description
VSS-900 M	Monthly Reconciliation Report	Monthly version of VSS-900.
VSS-900-SM	Monthly Summary Reconciliation Report	Monthly version of VSS-900-S.

Daily VSS Processor Reports

This table describes the daily VSS processor reports.

Daily VSS Processor Reports

Report ID	Report Title	Report Description
VSS-900-P	Processor Reconciliation Report	Provides summarized totals of transaction counts and values by acquiring or issuing identifier, clearing currency, settlement service, and business transaction type for a processor.
VSS-900-PS	Processor Summary Reconciliation Report	Provides summarized totals of transaction counts and values by acquiring or issuing identifier, clearing currency, and settlement service for a processor.

Monthly VSS Processor Reports

This table describes the monthly VSS processor reports.

Monthly VSS Processor Reports

Report ID	Report Title	Report Description
VSS-900-PM	Monthly Processor Reconciliation Report	Monthly version of VSS-900-P.
VSS-900-XM	Monthly Processor Summary Reconciliation Report	Monthly version of VSS-900-PS.

Mandatory and Recommended VSS Reports

The report selection for one settlement reporting entity (SRE) in a settlement hierarchy can be different from the report selection for another SRE, but must include the mandatory report.

With the exception of processor reports, VisaNet Settlement Service (VSS) reports can be selected for each SRE. The same report can be sent to multiple locations.

Mandatory VSS Report

The Settlement Summary Report (VSS-110) is mandatory for any SRE that is a funds transfer point.

Recommended VSS Reports

Visa recommends that clients elect to receive, at a minimum, the reports listed in this table. The recommended reports are designed to provide clients with sufficient financial and reconciliation information. Other VisaNet Settlement Service (VSS) reports may be recommended for a particular product or service, but are not included in this table.

Recommended VSS Reports

BASE II Client	SMS Client
Revised Settlement Reporting Hierarchy List (VSS-100-R)	Revised Settlement Reporting Hierarchy List (VSS-100-R)
Settlement Summary Report (VSS-110)	Settlement Summary Report (VSS-110)
Consolidated Settlement Summary Report (VSS-111)	Consolidated Settlement Summary Report (VSS-111)

Recommended VSS Reports

BASE II Client	SMS Client
Interchange Value Report (VSS-120)	SRE Settlement Recap Report (VSS-115)
Reimbursement Fees Report (VSS-130)	Monthly Reimbursement Fees Report (VSS-130-M)
Visa Charges Report (VSS-140)	SRE Financial Recap Report (VSS-300)
International Service Assessment Report (VSS-215)	International Service Assessment Report (VSS-215)
Summary Reconciliation Report (VSS-900-S)	Reconciliation Report (VSS-900)

Visa also recommends these reports in specific instances:

- **Consolidated Settlement Summary Report (VSS-111)** – When a client receives combined funds transfers.
- **Visa Charges Reconciliation Report (VSS-230)** – When a client participates in a National Net Settlement Service that settles its charges in the International Settlement Service.

VSS Report Delivery

Clients can have VisaNet Settlement Service (VSS) reports sent to multiple locations, including locations other than their client processing centers. Single Message System (SMS) clients can also receive SMS reports and SMS raw data.

SMS BASE II VAP/DAS Delivery

Single Message System (SMS) clients can receive their VisaNet Settlement Service (VSS) and SMS reports and SMS raw data from a BASE II Visa Access Point (VAP) or through the Direct Access Service (DAS). SMS clients electing to receive their settlement reports in machine-readable formats receive them as TC 46 transactions. Clients electing to receive print-ready reports will receive them as TC 47 transactions. SMS reports are received as TC 45 transactions, while SMS raw data is received as TC 33 transactions.

VSS reports are delivered using these methods:

- Clients using a BASE II Edit Package have their settlement reports printed by the Edit Package.
- Clients using DAS delivery have their settlement reports in the file type SETLR.
- Machine-readable reports are delivered in the file type SETLM.
- SMS reports are delivered in DBRPT and raw data in DBRAW.

VSS and SMS Non-VAP Delivery

Single Message Service (SMS) supports non-Visa Access Point (VAP) report delivery mechanisms for U.S. SMS clients.

If an SMS client using non-VAP delivery elects to receive any of these reports and raw data, it is in a separate transmission:

- VSS print-ready reports
- VSS machine-readable reports
- SMS reports
- SMS raw data

VSS Reports for BASE II-Connected Clients

Reports for BASE II-connected clients must be sent to locations that are Visa Access Point (VAP)-connected.

Acquiring or Issuing Identifier Identification

Processors that want to distribute VisaNet Settlement Service (VSS) reports directly to clients can have the acquiring or issuing identifier identified in their report records. When this option is selected, the acquiring or issuing identifier of the lowest-level SRE is placed in the Destination Identifier field of the machine-readable (TC 46) and print-ready (TC 47) report records. This destination identifier identifies the report records of the client that owns the acquiring or issuing identifier. Reports are grouped under the acquiring or issuing identifier.

The Edit Package strips the header information from reports, which includes the Destination Identifier field on print-ready (TC 47) records. Processors that choose the Destination Identifier field to facilitate report distribution must pull the TC 47 records from the original delivery file (ITF).

If the acquiring or issuing identifier identification option is not used, the processor identifier is placed in the Destination Identifier field. The processor is always in the report records for summary-level SREs.

The acquiring or issuing identifier identification option can be used to affect the sequence that report records are received. If the acquiring or issuing identifier is identified in report records, the records are received in acquiring or issuing identifier sequence.

SMS Funds Transfer Totals (0620) Messages

Single Message System (SMS) clients may receive an 0620 funds transfer totals message after the completion of settlement. These messages can be received for any funds transfer SRE as long as there is an SMS endpoint for delivery.

The funds transfer totals (0620) message contains these totals:

- Acquirer gross interchange
- Acquirer reimbursement fees
- Acquirer Visa charges
- Issuer gross interchange
- Issuer reimbursement fees
- Issuer Visa charges
- Other gross interchange
- Other reimbursement fees
- Other Visa charges
- Net funds transfer amount

See *V.I.P. System Overview*.

Chapter 5

SMS Reports and Raw Data

Single Message System (SMS) reports and raw data are available to SMS clients. SMS reports and raw data can be used to reconcile a client's daily work.

SMS Reports Descriptions

These types of Single Message System (SMS) reports are available.

- Transaction detail reports
- Maintenance reports
- Reconciliation reports
- Error reports

All SMS reports are optional. Data is reported on the SMS detail reports by:

- Funds Transfer settlement reporting entity (SRE)
- Processor
- Affiliate ID
- Lowest-level SRE

The SRE identifier is printed on the SMS reports to facilitate reconciliation with VisaNet Settlement Service (VSS) reports. To accommodate a client's business needs, some SMS reports are available in different sort orders.

One SMS detail report contains data for only one SRE and only one affiliate ID. However, an affiliate ID can also appear on multiple detail reports. This situation occurs when an affiliate ID uses SMS routing options or participates in a NNSS.

Available SMS Reports

This table lists the available SMS reports, their functions, and the sort order.

SMS Reports

Report Number	Report Title and Function	Report Sort Order ¹
SMS600	Issuer Transaction Detail Lists 01xx, 02xx, and 04xx messages processed by VisaNet for the issuer.	A, C, R, T
SMS601	Acquirer Transaction Detail Lists 01xx, 02xx, and 04xx messages processed by VisaNet for the acquirer.	C, I, R, T
SMS608	Fee Collection and Funds Disbursement Detail Lists TC 10s and TC 20s received from BASE II and applied to the issuer or acquirer.	C
SMS609	Transactions Incurring a Fine Lists late adjustment, late deposit adjustment, and nonrepresented chargeback transactions.	C, I, R
SMS610	Issuer Dispfin/Dispfin Reversal Lists issuer-initiated dispute financials/chargebacks.	A, C, R
SMS611	Acquirer Dispfin/Dispfin Reversal Lists acquirer-processed dispute financials/chargebacks.	C, I, R
SMS612	Issuer Dispresp/Dispresp Reversal Lists issuer-processed dispute response financials/representments.	A, C, R
SMS613	Acquirer Dispresp/Dispresp Reversal Lists acquirer-initiated dispute response financials/representments.	C, I, R
SMS614	Issuer Adjustment and Merchandise Credit Detail Lists issuer-processed adjustment transactions.	A, C, R
SMS615	Acquirer Adjustment and Merchandise Credit Detail Lists acquirer-processed adjustment transactions.	C, I, R

SMS Reports

Report Number	Report Title and Function	Report Sort Order ¹
SMS616	Issuer Cancellation and Reversal Detail Lists issuer-initiated- and received cancellations and reversals.	C, R
SMS617	Acquirer Cancellation and Reversal Detail Lists acquirer-initiated- and received cancellations and reversals.	C, R
SMS620	Issuer File Maintenance Daily Summary Lists accepted and rejected Exception File and PIN Verification File updates sent by the issuer.	T
SMS626	Administrative Message Daily Summary Lists issuer- or acquirer-processed 06xx administrative messages.	R
SMS640	Issuer Error Detail Lists messages rejected by VisaNet due to edit errors and late responses.	T
SMS641	Acquirer Error Detail Lists messages rejected by VisaNet due to edit errors and late responses.	T
SMS642	Issuer CRS Returned Exception Detail Shows exception items returned by the Exception Manager due to Chargeback Reduction Service errors.	T
SMS643	Acquirer CRS Returned Exception Detail Shows exception items returned by the Exception Manager due to Chargeback Reduction Service errors.	T
SMS660	No Activity Report Lists all reports to which the recipient is subscribed, for which there was no activity in the current cycle to trigger generation of the report. For example, an issuer subscribed to SMS610 and SMS660 (who has no dispute financials in the current cycle) will see the SMS610 listed on the SMS660 report, indicating no activity.	None

¹Sort Order Key: A = Acquirer ID C = Card Number I = Issuer ID R = Retrieval Reference Number
T = Transmission Date/Time

See *VisaNet Settlement Service (VSS) User Guide, Volume 2, Reports*.

SMS Raw Data Description

As an optional service, Visa provides raw data files that contain detailed information about the settlement day's transactions for a given participant. Raw data is available to all Single Message

System (SMS) issuers and acquirers. Participating clients can use the data delivered in raw data files to create customized reports and to reconcile to data reported by their own systems.

Raw data is different from report data because it is suited for automated processing. The raw data records are produced from the same sources as SMS reports.

V.I.P. Raw Data Release 2.2 is available to SMS clients. Raw data always includes a header record and a trailer record for file control. These types of records are available:

- Header (V22000)
- Settlement information (V22120)
- Financial transaction (V22200–V23210)
- File maintenance (V22300–V22310)
- Administrative message (V22400–V22461)
- Advice notification transaction (V22600–V22610)
- Trailer (V22900)

In addition to Version 2.2, Visa offers SMS Raw Data Version 2.3 that can be used for reconciliation purposes. Version 2.3 Raw Data is a subset of Version 2.2 and is not intended to be a complete record of a transaction.

As with Version 2.2., SMS Raw Data Version 2.3 records are 130 bytes in length and contain Header, Trailer, and V23120 VSS Specific records.

Unlike Version 2.2, the V23120 VSS Specific Record is not optional. If Version 2.3 Raw Data is selected, the V23120 record is produced automatically.

SMS Raw Data Version 2.3 cannot be subscribed to if there is an existing subscription to the V222xx Raw Data series of records.

Chapter 6

VSS Reconciliation

- Single Message System (SMS)- and BASE II-connected clients and processors need to develop reconciliation procedures. Clients and processors must reconcile their internal totals to those provided by VisaNet Settlement Services (VSS). Specifically:
- Match counts and amounts of financial transactions cleared by VisaNet.
 - Match counts of nonfinancial transactions cleared by VisaNet.
 - Match counts and amounts of transactions sent to or received from VisaNet for settlement with clients' and processors' settlement totals.
 - Find specific fields on the VSS reports that are needed for reconciliation.

See *VisaNet Settlement Service (VSS) User Guide, Volume 2, Reports*.

Processors and Settlement Hierarchy

Understanding the relationship between processors and VisaNet Settlement Service (VSS) settlement hierarchies is necessary to establish effective reconciliation procedures.

If a processor is included in the settlement hierarchy, a settlement reporting entity (SRE) is established that represents the total of that processor's work. The relationship of the processor to the settlement hierarchy determines the processor's reconciliation process.

Examples of the relationship of processors to VSS settlement hierarchies include:

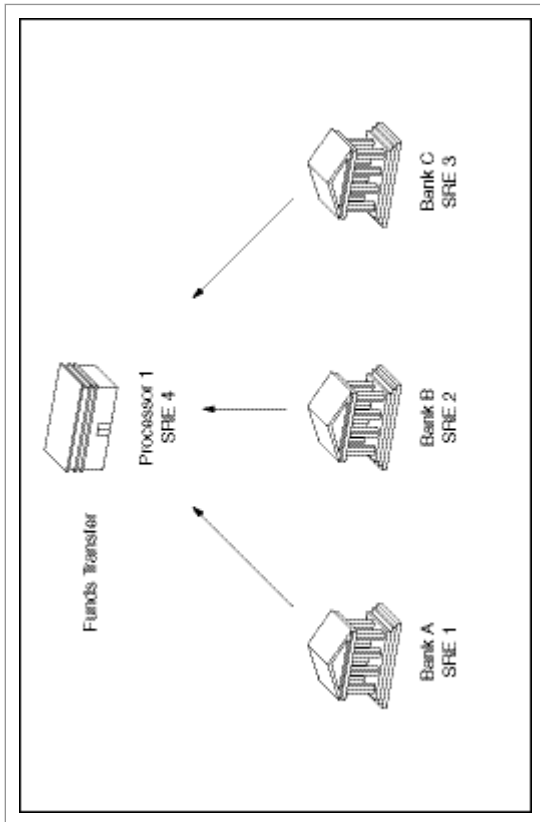

- Processor performing funds transfer for all clients.
- Processor performing funds transfer for some clients and not for others. In this case, the processor may or may not be included in the settlement hierarchy.
- Processor supporting National Net or Area Net Settlement Service transactions.

All Clients Funds Transfer Processing

A processor can perform funds transfer for all of its clients. A processor can be a summary Settlement Reporting Entity (SRE).

In this example, the processor is always part of the settlement hierarchy. Processor 1 (SRE 4) is a summary SRE that represents the funds transfer totals for banks A, B, and C, as well as the total work performed by the processor. Processor 1 (SRE 4) must receive the VSS-110 report because it is the only funds transfer in the hierarchy.

Settlement Hierarchy – Processor Performing Funds Transfer for All Clients

This hierarchy is reported on the Weekly Settlement Reporting Hierarchy List (VSS-100-W).

This is a sample layout of the VSS-100-W report containing information for a processor performing funds transfers for all of its clients.

Field	Settlement Reporting Entity (SRE)	SRE Name
0000000004	SRE 4	Processor 1
0000000001	SRE 1	Bank A
0000000002	SRE 2	Bank B
0000000003	SRE 3	Bank C

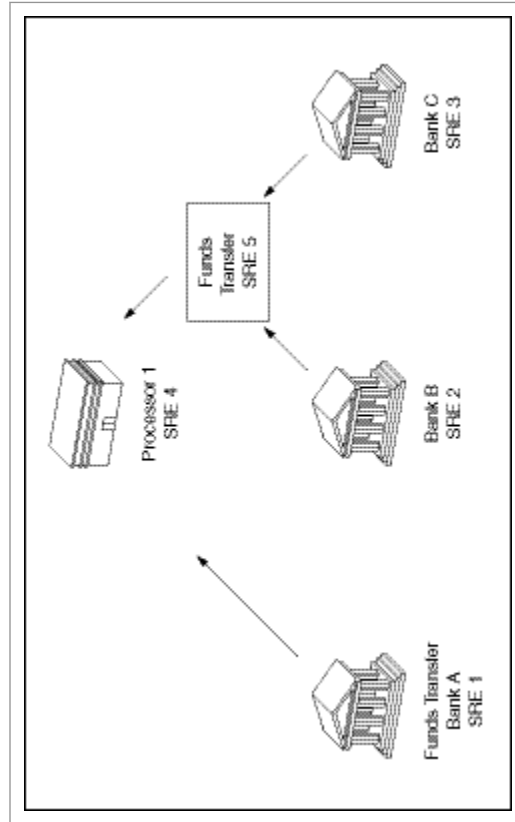

Some Client Funds Transfer Processing

In some cases, processors do not perform funds transfer for all of their clients. The processor may or may not be in the settlement hierarchy, depending on client requirements for funds transfer.

Settlement Hierarchy Processor

In this figure, Processor 1 (SRE 4) performs funds transfer for only some of its clients and is included in the settlement hierarchy. In this case, SRE1 and SRE5 must subscribe to the VSS–110 report and should subscribe to the VSS–111 report.

Processor Included in Settlement Hierarchy

- SRE 4 is a summary SRE that represents the total work performed by Processor 1 for banks A, B, and C.
- Bank A does its own funds transfer through SRE 1.
- SRE 5 is a summary level that performs funds transfer for banks B and C.

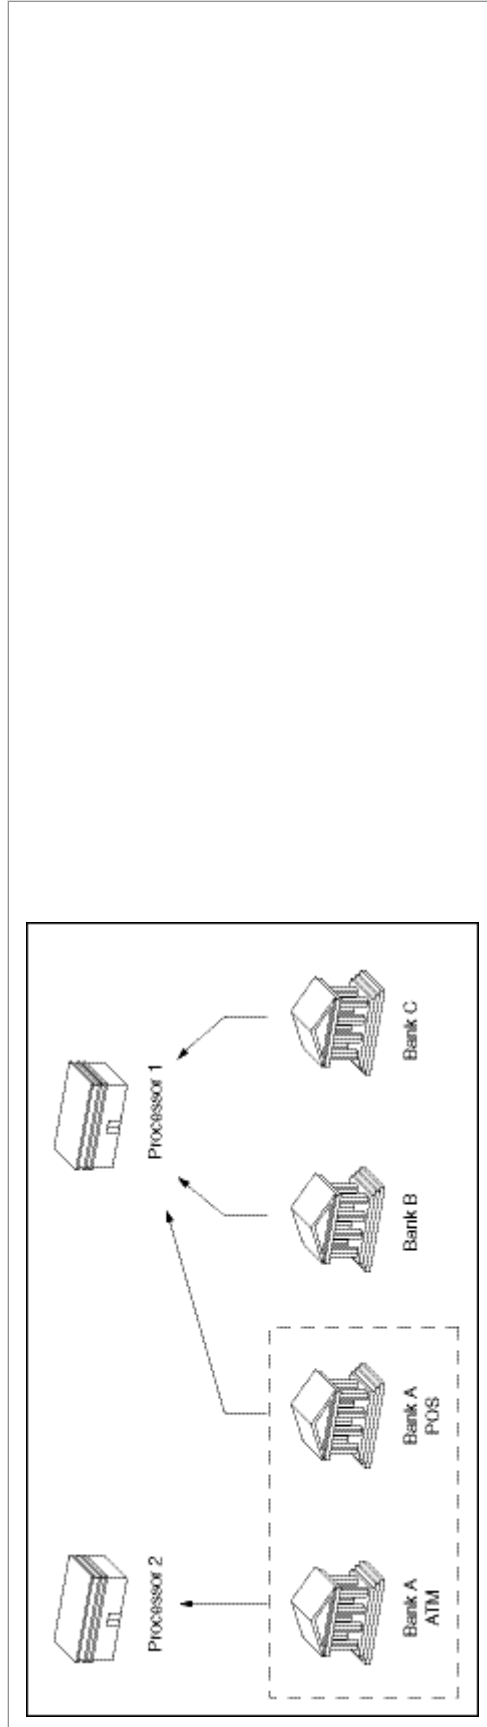

Field	Settlement Reporting Entity (SRE)	SRE Name
0000000005	SRE 5	FT SRE B/C
0000000002	SRE 2	Bank B
0000000003	SRE 3	Bank C

Non-Settlement Hierarchy Processor

While processors are usually part of a settlement hierarchy, there are cases where they are not. One example is a client that uses two processors and wants its funds transfer combined.

This figure illustrates processing work of banks A, B, and C processed by two different processors, 1 and 2. The banks and processors do not represent a hierarchy.

Processing Work by Two Processors

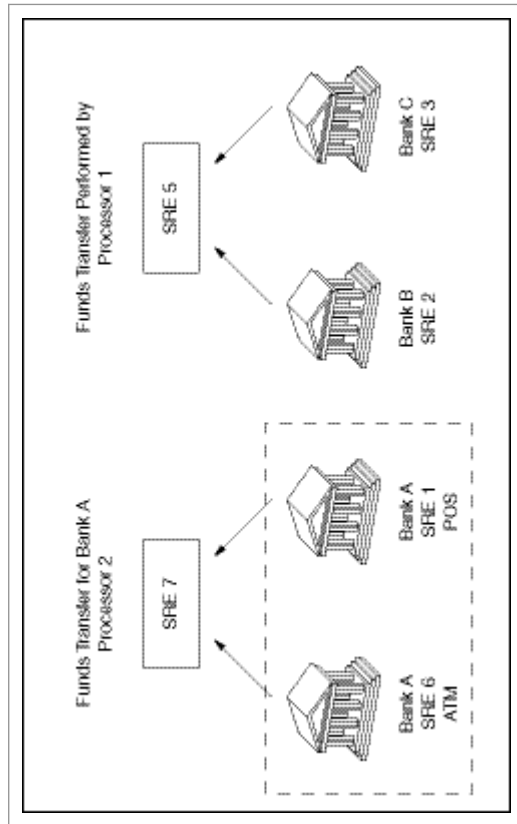

Bank A has some of its work performed by Processor 1 and some by Processor 2. This might occur if a bank uses one processor for its ATM business and another for its POS business. Banks B and C have all of their processing performed by Processor 1.

Bank A wants one funds transfer that includes all the work performed by both processors. Bank B and Bank C have their funds transfers performed by Processor 1.

- SRE 7 provides a combined settlement and funds transfer point for Bank A.
- SRE 5 provides the funds transfer point performed by Processor 1 for banks B and C.

The settlement view is shown in this figure.

Funds Transfer Requirements for Banks A, B, and C

Processor 1 and Processor 2 must be part of two separate hierarchies. The ATM (SRE 6) and POS (SRE 1) funds transfers for Bank A are prioritized at the highest level (SRE 7). Meanwhile, Bank B (SRE 2) and Bank C (SRE 3) are categorized under a different hierarchy, with their funds transfers being handled by SRE 5. SRE 4, which represents Processor 1, no longer exists because the totals for SRE 1 cannot be added to SRE 7 and to SRE 4.

Bank A's hierarchy is reported on the Weekly Settlement Reporting Hierarchy List (VSS-100-W).

This sample layout of the VSS-100-W report shows that Bank A performs its own funds transfer using an SRE that is a sum of the two SREs for the work done by two different processors. The clearing entity ID for Bank A in this case is the same for both SRE 1 and SRE 6. The client can have the report sent to any delivery location.

VSS-100-W Report – One Client With Two Processors

REPORT ID: VSS-100-W	VISANET SETTLEMENT SERVICE				PAGE: 1

00000000005	SRE 5	YES				
00000000002	BANK B			XXXXXX	XXXXXXXXXXXX	ALL
00000000003	BANK C			XXXXXX	XXXXXXXXXXXX	ALL
*** END OF VSS-100-W REPORT ***						

This Data is Fictitious and for Illustration Purposes Only.

This table contains field descriptions for the VSS-100-W Report – Processor With Two Clients sample layout.

Field	Settlement Reporting Entity (SRE)	SRE Name
00000000005	SRE 5	SRE 5
00000000002	SRE 2	BANK B
00000000003	SRE 3	BANK C

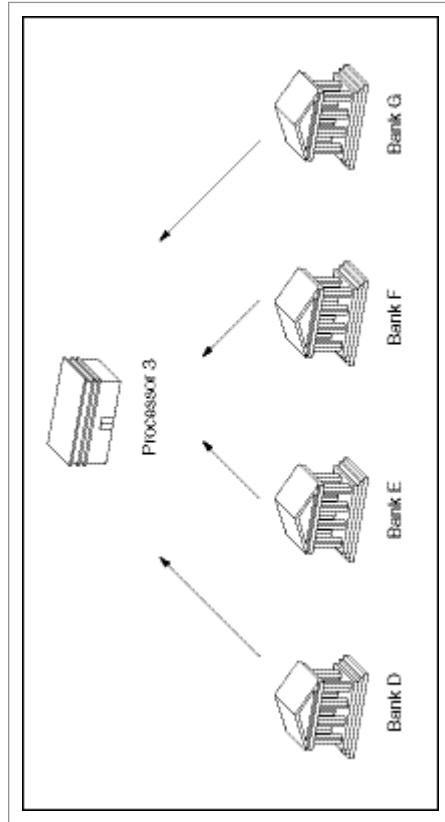

Processors 1 and 2 should subscribe to the Processor Reconciliation Report (VSS-900-P) or Processor Summary Reconciliation Report (VSS-900-PS) so they can reconcile their total work.

NNSS/ANSS Transactions Processor

In VisaNet Settlement Service (VSS), separate settlement hierarchies with different settlement reporting entity (SRE) identifiers must be established for each settlement service. A single SRE cannot be created to represent all the work performed by a processor whose clients participate in both the International Settlement Service and a National Net Settlement Service (NNSS), or Area Net Settlement Service (ANSS). A processor that handles International Settlement Service, NNSS, and ANSS transactions cannot be part of a single settlement hierarchy.

In this example, Processor 3 performs processing for banks D, E, F, and G. All four banks participate in the International Settlement Service and in the same National Net Settlement Service.

Processing View: Multiple Settlement Services

A separate settlement hierarchy must be created for the International Settlement Service and for the National Net Settlement Service.

In this figure, the SRE representing Processor 3 performs funds transfer for the International Settlement Service hierarchy. In the NNSS hierarchy, each bank is responsible for its own funds transfers for NNSS transactions.

Settlement View: Multiple Settlement Services

Even if Processor 3 is responsible for funds transfer for International Settlement Service and for NNS transactions, two settlement hierarchies with different SREs must be established because a separate settlement hierarchy is required for each settlement service. Processor 3 should subscribe to the Processor Summary Reconciliation Report (VSS-900-PS) so it can reconcile its total work. This report sample shows the Weekly Settlement Reporting Hierarchy List (VSS-100-W) for the International Settlement Service, which shows the processor as represented by SRE 8 as the funds transfer point for International Settlement Service transactions.

VSS-100-W Report for International Settlement Service

VSS Reconciliation Reports

Clients and processors can use VSS Reconciliation Reports to reconcile all transactions sent to, and received from, Visa, including nonfinancial transactions.

Types of VisaNet Settlement Service (VSS) reconciliation reports include:

- The VSS-900 series reports that contain transaction counts and amounts by settlement reporting entity (SRE) and includes the Reconciliation Report (VSS-900) and the Summary Reconciliation Report (VSS-900-S).
 - The VSS-900 report provides a detailed breakdown by business transaction type.
 - The VSS-900-S report provides a summary across business transaction types.
- The VSS-900-P series reports that contain transaction counts and amounts by processor and acquiring or issuing identifier and includes the Processor Reconciliation Report (VSS-900-P) and the Processor Summary Reconciliation Report (VSS-900-PS).
 - The VSS-900-P report provides a detailed breakdown by business transaction type.
 - The VSS-900-PS report provides a summary across business transaction types.

Clients must use the VSS-900 series to reconcile their totals. The reconciliation report to be used by processors depends on the relationship between the processor and the VSS settlement hierarchy.

VSS Reports for Processors

This table shows the recommended VisaNet Settlement Service (VSS) reports for processors and alternative reports, if applicable.

VSS Reports for Processors

Processor Relationship in Settlement Hierarchy	Recommended Report	Alternative Report
Processor performing funds transfer for all clients	VSS-900 series	VSS-900-P series
Processor performing funds transfer for some clients and not others (processor included in the settlement hierarchy)	VSS-900 series	VSS-900-P series
Processor performing funds transfer for some clients and not others (processor not included in the settlement hierarchy)	VSS-900-P series	Not applicable
Processor supporting National Net Settlement Service transactions	VSS-900-P series	Not applicable

See *VisaNet Settlement Service (VSS) User Guide, Volume 2, Reports*.

VSS-900 Series

The VisaNet Settlement Service (VSS)-900 series, which includes the Reconciliation Report (VSS-900) and the Summary Reconciliation Report (VSS-900-S), is available for every Settlement Reporting Entity (SRE). Clients can use either report to reconcile their totals. A processor must be part of a settlement hierarchy to use the VSS-900 series to reconcile its totals, because a single report does not represent all the processor's work if the processor is not included in a settlement hierarchy.

These reports provide totals of transaction counts and clearing amounts for each SRE by clearing currency.

Transactions are summarized by business mode (acquirer, issuer, or other) within clearing currency, and counts are then totaled across all clearing currencies, as shown in this example:

Levels on VSS-900-S Report

Clearing Currency: 1
Acquirer
Issuer
Other
Total
Clearing Currency: 2
Acquirer
Issuer
Other
Total
Clearing Currency: NONE
Acquirer
Issuer
Other
Total
Clearing Currency: ALL
Total

Nonfinancial transactions are reported under clearing currency category “NONE.” These reports contain data for only one settlement service because an SRE cannot contain transactions for multiple settlement services. If there are no transactions to report, the business mode is not included for the clearing currency.

The totals by business mode (issuer, acquirer, other) can be used to reconcile to SMS reports. The totals by business mode can also be used by SMS and BASE II clients to reconcile the VSS-900 series of reports to the Interchange Value Report (VSS-120).

VSS-900-P Series

The VSS-900-P series, which includes the Processor Reconciliation Report (VSS-900-P) and the Processor Summary Reconciliation Report (VSS-900-PS), is available only to processors. This series of reports provides totals for all work performed by a processor and contain at least one section for each acquiring or issuing identifier handled by the processor.

The acquiring or issuing identifiers listed on the VSS-900-PS report are either the 10-digit affiliate IDs displayed on SMS reports and contained in SMS raw data records or the 6-digit acquiring or issuing identifiers used by BASE II for routing and by the Edit Package for reporting.

In the acquiring or issuing identifier-related sections, transactions are grouped by the combination of acquiring or issuing identifier and SRE. These sections can be used to reconcile to VSS reports, which are grouped by SRE, such as the Interchange Value Report (VSS-120). In many cases, an acquiring or issuing identifier has only one SRE and, therefore, the acquiring or issuing identifier and SRE sections represent the totals for the acquiring or issuing identifier. In other cases, an acquiring or issuing identifier may have more than one SRE, which would occur if settlement reports at lower levels of detail are required (for example, separate reports by account range) or if an acquiring or issuing identifier participates in a National Net Settlement Service. In these cases, the totals in the acquiring or issuing identifier and SRE sections need to be added together to get totals for the acquiring or issuing identifier.

Within the processor totals, acquiring or issuing identifier, and SRE sections, transactions are summarized by business mode within settlement service and clearing currency, and by settlement service within clearing currency. They are then totaled across all clearing currencies.

This example shows these business mode summaries.

Levels on the VSS-900-PS Report

Clearing Currency: 1 Settlement Service: 1 Acquirer/Issuer/Other/Total
Clearing Currency: 1 Settlement Service: 2 Acquirer/Issuer/Other/Total
Clearing Currency: 1 Settlement Service: ALL Acquirer/Issuer/Other/Total
Clearing Currency: 2 Settlement Service: 1 Acquirer/Issuer/Other/Total
Clearing Currency: 2 Settlement Service: 2 Acquirer/Issuer/Other/Total
Clearing Currency: 2 Settlement Service: ALL Acquirer/Issuer/Other/Total
Clearing Currency: NONE Settlement Service: 1 Acquirer/Issuer/Other/Total
Clearing Currency: NONE Settlement Service: 2 Acquirer/Issuer/Other/Total
Clearing Currency: NONE Settlement Service: ALL Acquirer/Issuer/Other/Total
Clearing Currency: ALL Settlement Service: ALL Acquirer/Issuer/Other/Total

Note: The total Settlement Service pages (Settlement Service: All) are not created when an acquiring or issuing identifier participates in only one settlement service.

The totals by business mode can be used to reconcile to SMS reports. The totals by business mode can also be used by SMS- and BASE II-connected clients and processors to reconcile the Processor Summary Reconciliation Report (VSS-900-PS) to the Interchange Value Report (VSS-120). BASE II clients and processors can use the totals on the VSS-900-P series to reconcile to the Edit Package reports, depending on these criteria:

- Clients that participate in only one settlement service, or select the settlement service before sending transactions to Visa, can use the totals by settlement service within clearing currency.
- Clients that do not select the settlement service before sending transactions to Visa, and process transactions in only one clearing currency, can use the totals by clearing currency.
- Clients that do not select the settlement service before sending transactions to Visa, and process transactions in multiple clearing currencies, can only use the total counts across all settlement services.

VSS Clearing-Only Transactions

For participants that support clearing-only transactions, this service collects and delivers transactions, but does not settle them.

Currently, only specific clients are using this service.

If a reconciliation report has clearing-only transactions, subtotals for these transactions are shown separately on the VSS reconciliation reports under these headings:

- Clearing-Only Financial Transactions
- Clearing-Only Nonfinancial Transactions

A sample overview of the VSS-900-S report, with a hypothetical listing of transactions, is shown in this report sample. Total clearing amounts are not shown in this example because the report is for multiple currencies.

SMS to VSS Reconciliation

Single Message System (SMS)-connected clients and processors can reconcile their daily activity using certain reports and files.

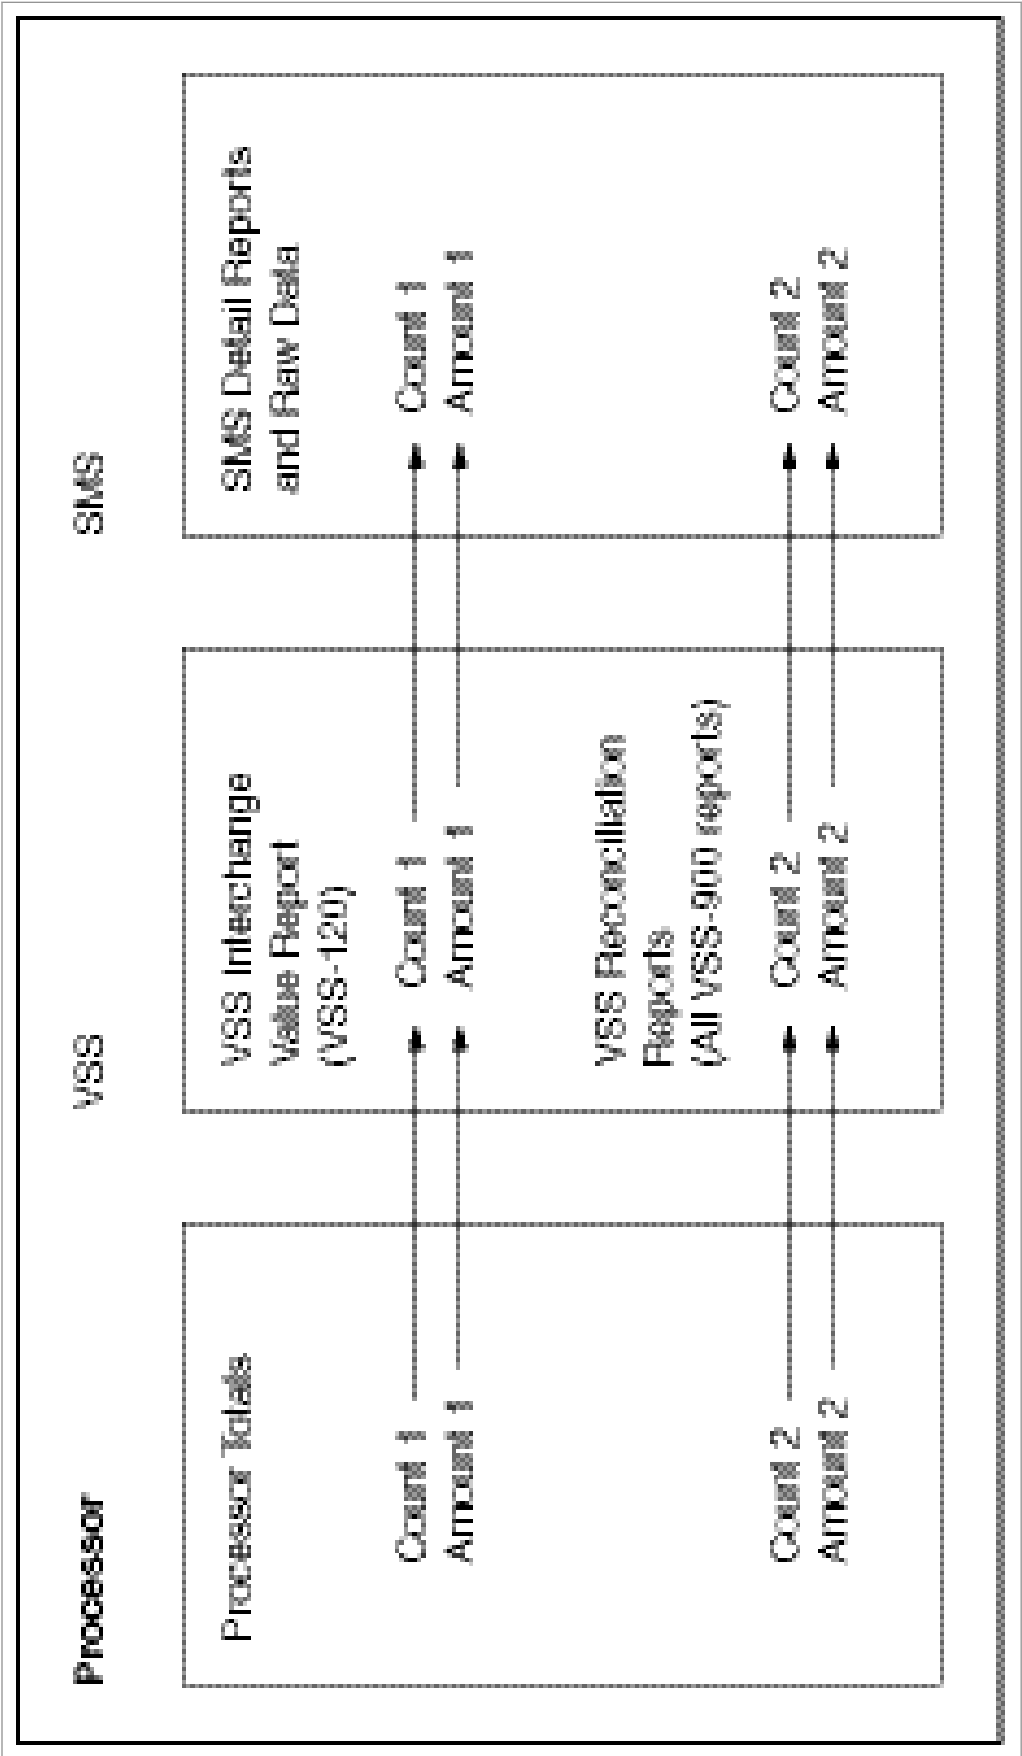

- **VSS reconciliation reports** – Provides totals for all transactions sent to, or received from, VisaNet, including nonfinancial transactions. The reports are:
 - Reconciliation Report (VSS-900)
 - Summary Reconciliation Report (VSS-900-S)
 - Processor Reconciliation Report (VSS-900-P)
 - Processor Summary Reconciliation Report (VSS-900-PS)
- **VSS settlement reports** – Provides interchange, reimbursement fee, and charge totals settled by VSS. The reports are:
 - Settlement Summary Report (VSS-110) (mandatory)
 - Interchange Value Report (VSS-120)
 - Reimbursement Fees Report (VSS-130)
 - Visa Charges Report (VSS-140)
- **SMS transaction detail reports** – Provides an audit trail of all SMS transactions in the day's settlement total. Use these reports to research any differences between totals reported by VisaNet on the VSS reports and those reported by the client's or processor's system.
- **Raw data files** – Contains detailed information about the day's transactions and can be used with VSS machine-readable reports to automate the reconciliation process.

SMS processors can reconcile their online activity using reconciliation (0520) messages.

SMS Transactions to VSS Settlement Reconciliation Reporting

This figure shows the reconciliation of SMS transactions to VSS reports.

Reconciliation of SMS Transactions to VSS Settlement Reporting

Count 1 and Amount 1 represent totals for settled transactions. The settlement flags in online messages indicate whether transactions are settled. The processor's internal totals containing counts and amounts for settled transactions can be reconciled to the Interchange Value Report (VSS-120).

The processor's internal totals, which contain counts and amounts for all transactions sent to and received from VisaNet, reconcile to the VSS reconciliation reports. Count 2 and Amount 2 represent totals for all transactions. The totals on the VSS reports correspond to totals on the SMS detail reports.

Note: Count 1 and Amount 1 represent totals for settled transactions; Count 2 and Amount 2 represent totals for all transactions.

SMS to VSS Reconciliation Reports

Clients and processors can use the VisaNet Settlement Service (VSS) reconciliation reports to reconcile all activity sent to, and received from, VisaNet, including nonfinancial transactions. Reconciliation is slightly different depending on whether the processor is part of the settlement hierarchy.

SMS Settlement Hierarchy Processor Reconciliation

When a processor is included in a settlement hierarchy, a settlement reporting entity (SRE) is established that represents the total of that processor's work. The processor included in the settlement hierarchy can use the Reconciliation Report (VSS-900) or the Summary Reconciliation Report (VSS-900-S) to reconcile activity by SRE. If the processor's totals do not balance to the totals on the reports, use the SMS transaction detail reports to research differences.

The VSS-900 and VSS-900-S reports can be used to reconcile transaction interchange counts and amounts to settlement amounts on the Interchange Value Report (VSS-120). This reconciliation can be done for the processor SRE, funds transfer SREs, or lowest-level SREs.

A processor included in the settlement hierarchy can use the Processor Reconciliation Report (VSS-900-P) or Processor Summary Reconciliation Report (VSS-900-PS) instead of the VSS-900 or VSS-900-S report. The reconciliation process would then be the same as processors not included in the settlement hierarchy.

SMS Non-Settlement Hierarchy Processor Reconciliation

A processor not included in the settlement hierarchy does not receive the VSS-900 series because no settlement reporting entity (SRE) that represents the processor total. These processors can use the Processor Reconciliation Report (VSS-900-P) or Processor Summary Reconciliation Report (VSS-900-PS) instead.

If the processor's totals do not balance to the totals shown on the VSS-900-P or VSS-900-PS report, use the SMS transaction detail reports to research differences.

SMS Reconciliation Field Comparison

For financial transactions, the count and clearing amount for the TOTAL SENT TO SETTLEMENT rows on the VisaNet Settlement Service (VSS) reconciliation reports should match the totals that the processor expected to be settled. The amounts on the reconciliation reports are in clearing currency. SMS clients reconciling SMS detail reports to any of the VSS-900 reports must use the totals expressed in clearing currency on the SMS detail reports rather than settlement currency.

For nonfinancial transactions, counts in the clearing currency "NONE" section of the VSS reconciliation reports should match those totals accumulated by the processor.

The TOTAL SENT TO SETTLEMENT counts and amounts by business mode on the Reconciliation Report (VSS-900) and Summary Reconciliation Report (VSS-900-S) match the COUNT and CLEARING AMOUNT totals for each business mode on the Interchange Value Report (VSS-120) for the same SRE.

Counts and Amounts by Business Mode

Processor	VSS-900 Reports	VSS-120 Report
Settled	Sent to settlement	Count and clearing amount
Nonfinancial	Clearing currency "NONE"	Not applicable

SMS Reconciliation to VSS Settlement Reports

Processors and clients can use the Interchange Value Report (VSS-120) to reconcile settled transactions. VisaNet Settlement Service (VSS) settlement flags in a transaction message header can be used to determine the settlement action taken by VisaNet. By

evaluating settlement flags, processors can update their internal processing totals. Their internal totals for settled transactions should reconcile to those shown on the VSS-120 report.

If differences exist between the processor's totals and those shown on the VSS-120 report, the SMS transaction detail reports can be used to research the differences. Total settlement amounts on the SMS transaction detail reports match the net interchange amounts on the VSS-120 report.

Net settlement amount includes interchange value, reimbursement fees, and charges. The Settlement Summary Report (VSS-110), which provides summary totals for interchange value, reimbursement fees, Visa charges, and the net settlement amount, can be used to understand the calculation of net settlement amount. The Interchange Value Report (VSS-120), Reimbursement Fees Report (VSS-130), and Visa Charges Report (VSS-140) provide supporting detail for the totals shown on the VSS-110 report.

VSS Reports/SMS Reports Relationship

It is essential to understand the relationship between the VisaNet Settlement Service (VSS) reports and Single Message System (SMS) transaction detail reports. The SMS transaction detail reports are used to reconcile differences between totals on the VSS reports and those accumulated by the client's or processor's system.

SMS Dates

The online settlement date (from field 15 in the online message) and the VisaNet Settlement Service (VSS) processing date are shown in the heading of the SMS transaction detail reports. The processing date in the VSS settlement reports is one (1) day later than the online settlement date. The VSS processing date printed on the report can be used to identify the corresponding VSS report. For a day's work, the VSS processing date on SMS transaction detail reports is the same as the processing date (PROC DATE) on the VSS reports.

SMS Report Organization

Transactions on VisaNet Settlement Service (VSS) reports are organized by business mode (issuer, acquirer, and other). Most SMS transaction detail reports contain either issuer or acquirer transactions that reconcile to the issuer and acquirer sections on the VSS reports. Business mode "Other" transactions on VSS reports include fee collection and funds disbursement transactions.

"Other" transactions are reconciled using the Fee Collection and Funds Disbursement Detail (SMS608) Report. This report reconciles to the "Other" section on VSS reports.

SMS Detail Reports

Single Message System (SMS) detail reports are produced at various levels of detail.

- Funds transfer SRE
- Processor ID
- Affiliate ID

The combination of these elements identifies one lowest-level SRE. All elements are shown in the SMS report heading.

SMS Interchange Reimbursement Fees Reconciliation

Single Message System (SMS) clients that want to receive Interchange Reimbursement Fee (IRF) information at the transaction level can subscribe to line 5 on the SMS transaction detail reports. That line contains fee information for each transaction. If a client subscribes to the IRF detail line, total IRFs are reported on the transaction detail report.

The IRF total on the SMS detail report should reconcile to total reimbursement fees on the Reimbursement Fees Report (VSS-130) for the same level of detail.

VSS Reports/SMS Raw Data Relationship

VisaNet provides transaction detail as raw (unformatted) data produced using the same sources as the formatted reports. This optional service is available to all SMS clients and processors. Raw data, together with VisaNet Settlement Service (VSS) machine-readable reports, can be used by processors and clients to automate the reconciliation process.

The version of raw data available to SMS clients is V.I.P. Raw Data, Release 2.2. To facilitate using raw data files, the online settlement date from field 15 and the VSS processing date are included in the raw data header. The settlement information record contains the funds transfer SRE, processor ID, affiliate ID, and lowest-level SRE. This information allows correlation of the SMS and VSS data.

SMS CPS/CRS Transactions Reconciliation

For Single Message System (SMS) clients that participate in the Custom Payment Service (CPS) and the Chargeback Reduction Service (CRS), the disposition of exception transactions is shown separately on the VisaNet Settlement Service (VSS) reconciliation reports (VSS-900, VSS-900-S, VSS-900-P, and VSS-900-PS).

Note: This section applies only to clients in countries using CPS with a processing delay for exception items.

Financial and nonfinancial transactions are reported differently. Financial transactions include chargebacks, chargeback reversals, representments, dispute financials, dispute financial reversals, and dispute response financials. Nonfinancial transactions include requests for copies and for originals.

SMS Financial Transactions

Financial transactions submitted during the processing day and held over for Chargeback Reduction Service (CRS) validation are reported in specific reports.

- **SMS detail reports (SMS600 or SMS601)** – Individual transactions are reported on either the Issuer Transaction Detail report (SMS600) or the Acquirer Transaction Detail report (SMS601), depending on whether the transactions are submitted by the issuer or acquirer. These transactions have zeros in the SETTLEMENT AMOUNT field, with two asterisks to the right of the zeros. Total count and amount of all transactions sent to CRS are shown in the TO CRS field.
- **VSS-900 reports** – Total count and amount are shown under TO CRS on the report for the client that submits the transaction.

Financial transactions held over from a previous day that successfully passed CRS validation are reported in these reports:

- **SMS detail reports (SMS600 and SMS601)** – Individual transactions are reported as batch 100 on the SMS600 and SMS601 reports because the issuer and acquirer need the information. The value of the transactions appears in the SETTLEMENT AMOUNT field and is included under TOTAL SETTLEMENT AMOUNT. A separate total is not reported.
- **VSS-900 reports** – Total count and amount are reported in the FROM CRS ACCEPTED field on the report for the client that submits the transaction. Total count and amount are reported in the RECEIVED FROM VISA field for the client receiving the transaction. The number and value are included under TOTAL SENT TO SETTLEMENT.

Financial transactions held over that failed CRS validation are reported in these reports:

- **SMS detail reports (SMS642 or SMS643)** –The client submitting the transaction can find error information on the Issuer Returned Exception Detail (SMS642) report or the Acquirer Returned Exception Detail (SMS643) report, depending on whether the transaction was submitted by the issuer or acquirer. The total count and amount are shown under TOTAL RETURNED.
- **VSS-900 reports** – Counts and amounts are shown in the FROM CRS RETURNED field on the report for the client that submitted the transaction.

SMS Nonfinancial Transactions

Nonfinancial transactions submitted during the processing day and held over for Chargeback Reduction Service (CRS) validation are reported in several reports.

- **SMS detail report (SMS628)** – Individual transactions for the client submitting the transactions are reported on the Request for Copy Daily Summary (SMS628) report. These transactions have zeros in the SETTLEMENT AMOUNT field, with two asterisks to the right of the zeros. The total count of all transactions sent to CRS is shown under TO CRS.
- **VSS-900 reports** –The total count of transactions sent to CRS is shown under TO CRS in the NON-FINANCIAL TRANSACTIONS sections of the report for the client that submitted the transaction.

Nonfinancial transactions held over from a previous day that successfully passed CRS validation are reported in these reports:

- **SMS detail report (SMS628)** – Individual transactions are reported as batch 100 on the SMS628 report for the client sending the transaction and the client receiving the transaction. These transactions are included in the NONFINANCIAL count at the bottom of the report.
- **VSS-900 reports** –The total count of transactions that successfully passed CRS validation are reported in the FROM CRS ACCEPTED field in the NON-FINANCIAL TRANSACTIONS section of the report for the client sending the transactions. The count is included in the RECEIVED FROM VISA field for the client receiving them.

Nonfinancial transactions held over from a previous day that failed CRS validation are reported as in these reports:

- **SMS detail reports (SMS642 or SMS643)** – Individual transactions are reported on the SMS642 report or SMS643 report, depending on whether the transaction was submitted by the issuer or the acquirer.
- **VSS-900 reports** – Counts are reported in the FROM CRS RETURNED field in the NON-FINANCIAL TRANSACTIONS section of the report for the client that submitted the transaction.

SMS Reconciliation (0500/0520) Messages

Single Message System (SMS) clients can optionally receive SMS reconciliation (0500/0520) messages that contain the current or previous day's gross interchange totals (the financial position exclusive of fees and charges) accumulated online. Each message contains the counts and amounts accumulated by VisaNet for approved, settled transactions.

Online totals are accumulated at the processor level. The processor's totals include the totals of each affiliate. A processor uses these messages to balance its online totals to the totals accumulated by VisaNet.

A 0520 message is generated for each settlement currency. Totals are accumulated separately for International Settlement Service and National Net Settlement Service (NNS) transactions. A processor whose International Settlement Service and NNS transactions are in the same settlement currency has the option of getting reconciliation messages that include a combined total.

BASE II to VSS Reconciliation

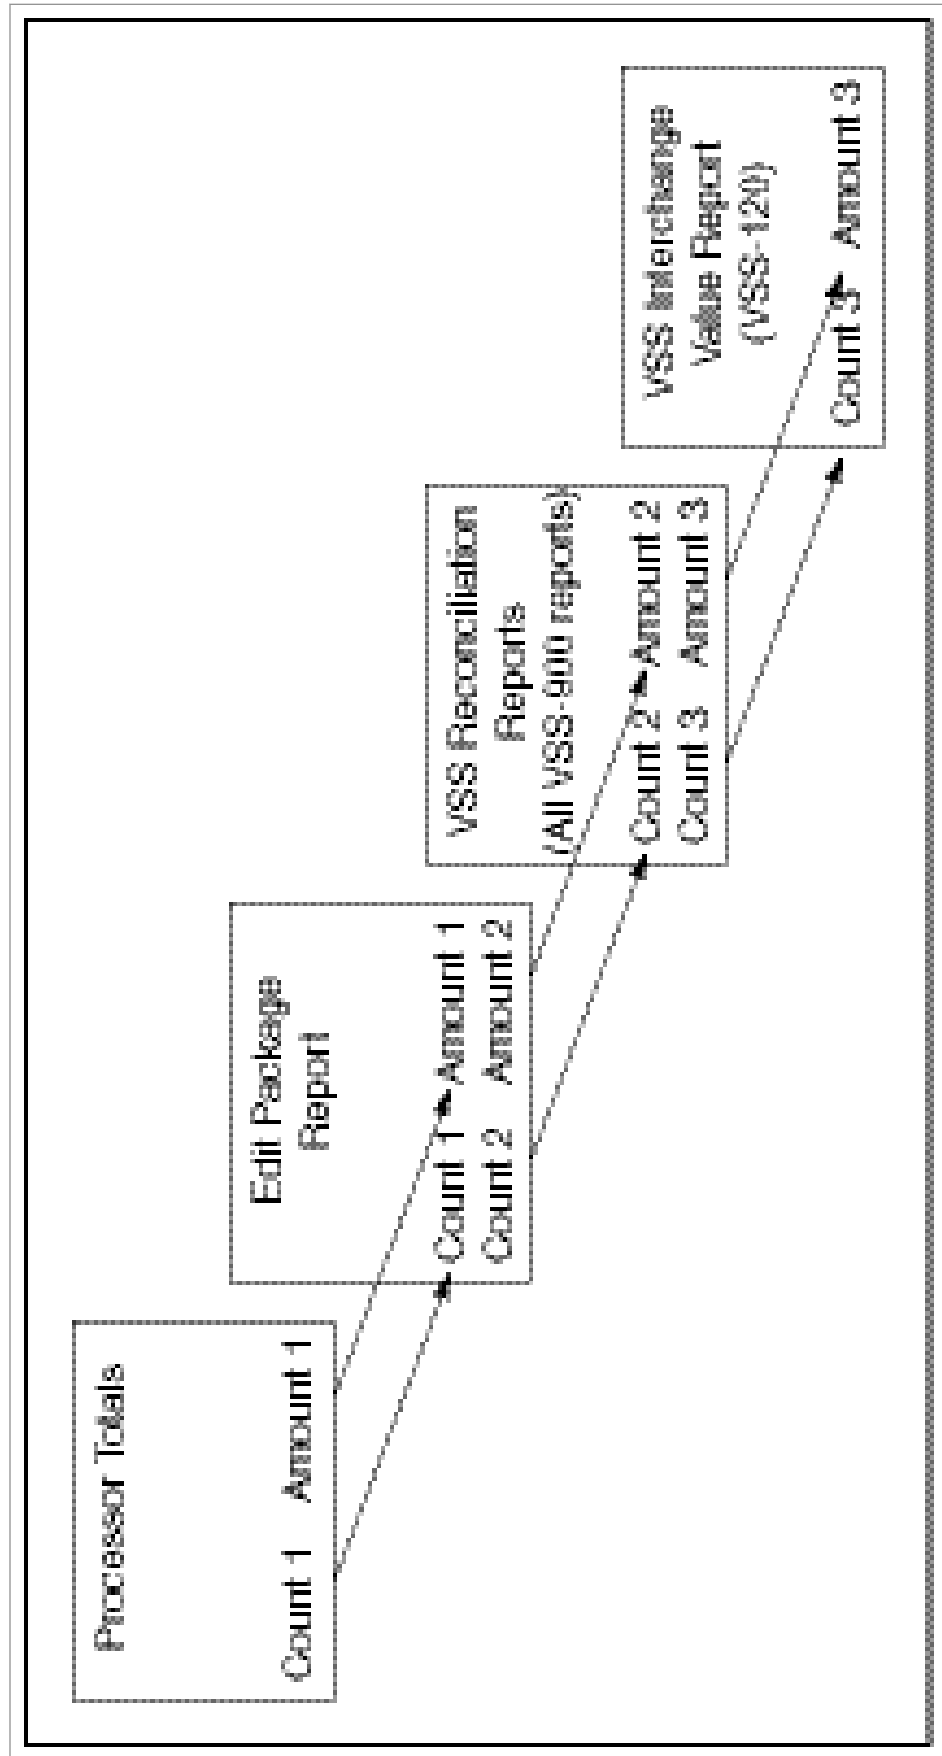

BASE II-connected clients and processors can reconcile their daily activity using various reports.

- Processor internal reports can be reconciled to Edit Package reports.
- Edit Package reports reconcile to the VisaNet Settlement Service (VSS) Reconciliation Report (VSS-900), Summary Reconciliation Report (VSS-900-S), Processor Reconciliation Report (VSS-900-P), and Processor Summary Reconciliation Report (VSS-900-PS). These provide totals for all transactions sent to or received from VisaNet, including nonfinancial transactions.
- The VSS summary reconciliation reports can be reconciled to the Interchange Value Report (VSS-120).

BASE II Cleared Transactions to VSS Settlement Reconciliation Reporting

This figure shows the process of reconciling BASE II-cleared transactions to VisaNet Settlement Service (VSS) settlement reporting.

Reconciliation of BASE II-Cleared Transactions to VSS Settlement Reporting

VSS reconciliation reports reconcile incoming and outgoing totals on Edit Package reports to business mode totals on other VSS reports.

BASE II Edit Package Reports

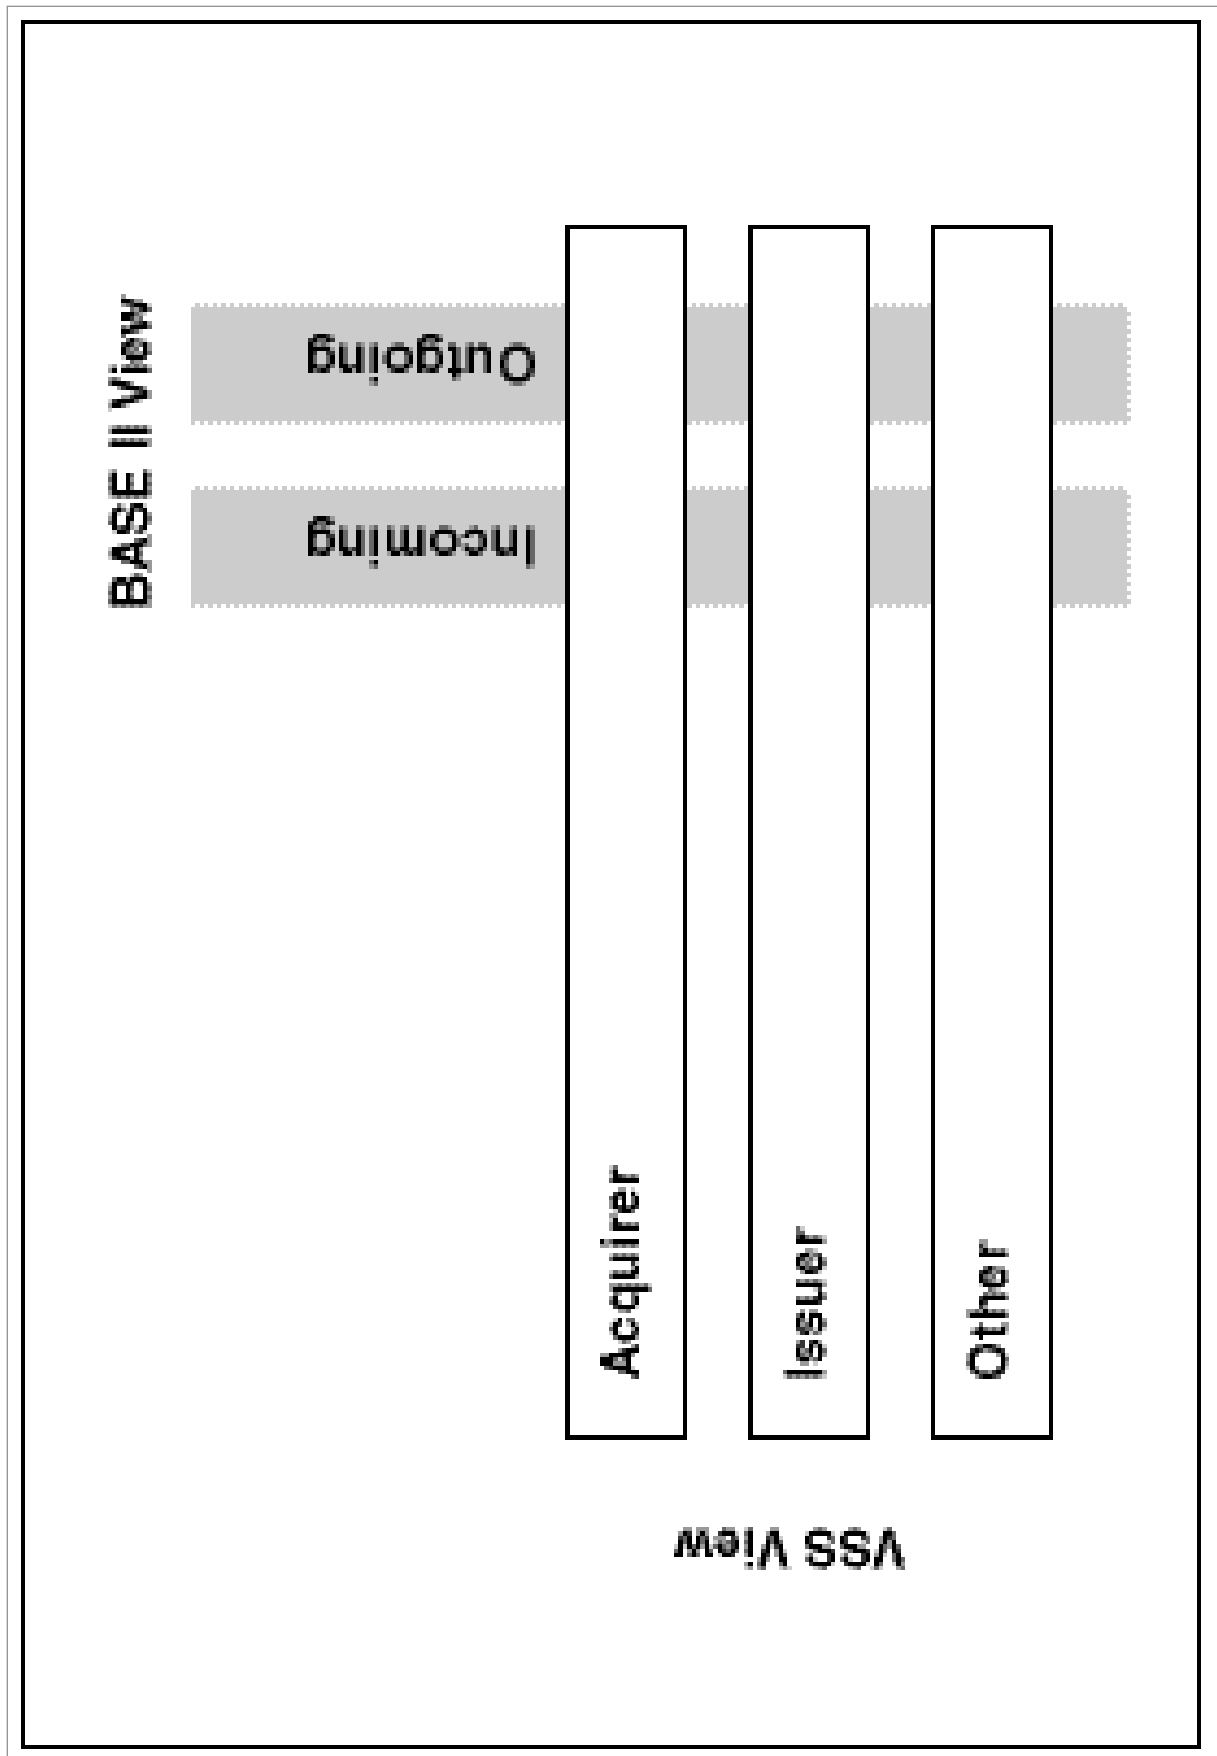

Edit Package reporting is based on the direction of the transaction, whether it is outgoing (from the client to VisaNet) or incoming (from VisaNet to the client). VisaNet Settlement Service (VSS) reports are based on business modes.

Business modes include:

- **Acquirer** – These reports provide data related to the business of acquiring transactions.
- **Issuer** – These reports provide data related to the business of issuing cards.
- **Other** – These reports provide data on fee collections and funds disbursements (TC 10 and TC 20) and their associated return items. Also included are nonfinancial transactions that are not associated with either the issuing or acquiring business.

These views are illustrated in this figure.

BASE II Edit Package and VSS Settlement Reporting Views

BASE II Reconciliation

Clients and processors can use the VisaNet Settlement Service (VSS) reconciliation reports to reconcile all activity sent to, and received from, VisaNet, including nonfinancial transactions. Reconciliation is slightly different depending on whether the processor is included in the settlement hierarchy.

BASE II Settlement Hierarchy Processor Reconciliation

When a processor is included in a settlement hierarchy, a settlement reporting entity (SRE) is established that represents the total of that processor's work. A processor included in the settlement hierarchy can use the Reconciliation Report (VSS-900) or Summary Reconciliation Report (VSS-900-S) for the processor's SRE to reconcile to the Edit Package reports.

The VSS-900 and VSS-900-S reports are also used to reconcile counts and amounts on interchange transactions to settlement amounts on the Interchange Value Report (VSS-120). This reconciliation can be done for the processor SRE, funds transfer SREs, or lowest-level SREs.

A processor included in the settlement hierarchy can use the Processor Reconciliation Report (VSS-900-P) or Processor Summary Reconciliation Report (VSS-900-PS) instead of the VSS-900 or VSS-900-S report for reconciliation to the Edit Package reports. The reconciliation process would then be the same as processors not included in settlement hierarchy.

BASE II Non-Settlement Hierarchy Processor Reconciliation

A processor not included in the settlement hierarchy does not receive the VisaNet Settlement Service (VSS)-900 series because there is no settlement reporting entity (SRE) representing the processor total. These processors can use the Processor Reconciliation Report (VSS-900-P) or Processor Summary Reconciliation Report (VSS-900-PS) instead to reconcile to the Edit Package reports.

BASE II Edit Package/VSS Reports Reconciliation Data

This table shows total count and amount fields on the Edit Package and VisaNet Settlement Service (VSS) reports that can be compared for reconciling financial and nonfinancial data.

Edit Package and VSS Report Comparison

Transaction Type	Edit Package Reports	VSS Reports
Total Outgoing Financial	TOTAL NET—FINANCIAL EP Release 2 (EP-111E)	SENT TO VISA (VSS-900 series and VSS-900-P series)
Total Outgoing Nonfinancial	TOTAL NONFINANCIAL EP Release 2 (EP-110E)	NONFINANCIAL SENT TO VISA (VSS-900 series and VSS-900-P series)
Total Incoming Financial	TOTAL NET—FINANCIAL EP Release 2 (EP-211E)	RECEIVED FROM VISA (VSS-900 series and VSS-900-P series)
Total Incoming Nonfinancial	TOTAL NONFINANCIAL EP Release 2 (EP-210E)	NONFINANCIAL RECEIVED FROM VISA (VSS-900 series and VSS-900-P series)

Note: If the totals on the Outgoing Interchange Report (EP-110E and EP-111E) do not match the totals on the Collected Batch Acknowledgments Report (EP-221B), not all batches processed by the Edit Package were processed by BASE II.

BASE II Edit Package/VSS Settlement Reports Reconciliation

The TOTAL SENT TO SETTLEMENT counts and amounts by business mode on the Reconciliation Report (VisaNet Settlement Service (VSS)-900) and Summary Reconciliation Report (VSS-900-S) match the COUNT and CLEARING AMOUNT totals for each business mode on the Interchange Value Report (VSS-120) for the same settlement reporting entity (SRE).

BASE II/CPS/CRS Transactions Reconciliation

For BASE II-connected clients that participate in the Custom Payment Service (CPS) and Chargeback Reduction Service (CRS), disposition of exception transactions is shown separately on the VisaNet Settlement Service (VSS) reconciliation reports.

Transactions submitted during the processing day and held over for CRS validation are reported on the VSS reconciliation reports:

- Total counts and amounts submitted and held over are under TO CRS.
- Total counts and amounts of financial transactions held over from a previous day and that successfully passed CRS validation are reported. Total counts and amounts are reported under FROM CRS ACCEPTED. The number and value are under TOTAL SENT TO SETTLEMENT.
- Total counts and amounts of financial transactions that are held over and that failed CRS validation are reported. Counts and amounts are shown under FROM CRS RETURNED.
- Total counts and amounts of financial transactions that were sent to CRS in the previous cycle but are not being settled in the current cycle (because currency rates are unavailable) are shown under FROM CRS ACCEPTED TO WAREHOUSE.
- The counts for nonfinancial transactions are shown in the NON-FINANCIAL TRANSACTIONS sections of the VSS reconciliation reports. These counts for transactions sent to and from CRS are totaled under TOTAL SENT TO and RECEIVED FROM VISA. There is a total count under TOTAL NON-FINANCIAL.

This subsection applies only to clients in countries using CPS that have a processing delay for exception items.

BASE II to VSS Business Transactions Types Table

The BASE II to VisaNet Settlement System (VSS) business transactions types table provides a mapping between the Edit Package (outgoing and incoming) view and the VSS (acquirer, issuer, and other) business mode view. The table lists each BASE II transaction with its description, its BASE II transaction code, the VSS equivalent, and its business mode (mapping the view under which the transaction is reported). A cross-reference between BASE II transactions and VSS business transaction types is also provided.

The BASE II transaction code is further qualified by the fields in the BASE II message.

VSS to VSS Reconciliation

Key settlement totals on the VisaNet Settlement Service (VSS) settlement reports and in the 0620 SMS funds transfer totals message (SMS clients only) are used to describe the reconciliation of the VSS monthly reports to the VSS daily reports.

VSS Settlement Counts/Amounts Matrix

The matrix in this table lists key settlement counts and amounts and indicates which reports and messages contain this information. When reports or messages contain common fields, the fields are the same on the reports and messages.

For example, the Total Acquirer Interchange Value can be found on the SMS Funds Transfer Totals (0620) message, the Settlement Summary Report (VSS-110), the SRE Settlement Recap Report (VSS-115), and the Interchange Value Report (VSS-120). The Total Acquirer Interchange Value is the same on the 0620 message and these reports.

The funds transfer totals message (0620) is only sent to SMS-connected clients. However, if a funds transfer SRE includes settlement totals for SMS and for BASE II activity, the 0620 message also includes BASE II activity totals.

Key Settlement Counts and Amounts Cross-Reference

Field	SMS Message	VSS Reports						
		110	115	120	130	135	140	300
Total Acquirer Interchange Value	Yes	Yes	Yes	Yes				
Total Acquirer Interchange Count	Yes	Yes	Yes	Yes				
Total Acquirer Reimbursement Fees	Yes	Yes	Yes		Yes	Yes		
Total Acquirer Visa Charges	Yes	Yes	Yes				Yes	
Net Acquirer Settlement Amount		Yes	Yes					
Total Issuer Interchange Value	Yes	Yes	Yes	Yes				
Total Issuer Interchange Count	Yes	Yes	Yes	Yes				
Total Issuer Reimbursement Fees	Yes	Yes	Yes		Yes	Yes		
Total Issuer Visa Charges	Yes	Yes	Yes				Yes	

Key Settlement Counts and Amounts Cross-Reference

Field	SMS Message	VSS Reports						
		0620	110	115	120	130	135	140 300
Net Issuer Settlement Amount			Yes					
Total Other Interchange Value	Yes		Yes		Yes			
Total Other Interchange Count	Yes		Yes		Yes			
Total Other Reimbursement Fees	Yes		Yes			Yes	Yes	
Total Other Visa Charges	Yes		Yes					Yes
Net Other Settlement Amount			Yes					
Total Interchange Value			Yes					Yes
Total Interchange Count			Yes					Yes
Total Reimbursement Fees			Yes					Yes

Key Settlement Counts and Amounts Cross-Reference

Field	SMS Message	VSS Reports						
		0620	110	115	120	130	135	140 300
Total Visa Charges			Yes					Yes
Net Settlement Amount	Yes	Yes	Yes					Yes

VSS Monthly Reports

VisaNet Settlement Service (VSS) produces these monthly reports to clients.

- VSS-110-M – Settlement Summary Report
- VSS-115-M – SRE Settlement Recap Report
- VSS-116-M – SRE Settlement Recap Report
- VSS-120-M – Interchange Value Report
- VSS-130-M –Reimbursement Fees Report
- VSS-140-M – Visa Charges Report
- VSS-210-M – Currency Conversion Fees Report
- VSS-900-M – Monthly Reconciliation Report
- VSS-900-SM – Monthly Summary Reconciliation Report
- VSS-900-PM – Monthly VSS Processor Report
- VSS-900-XM – Monthly Processor Summary Reconciliation Report

The counts and amounts on the monthly reports can be reconciled to the total of the counts and amounts on the daily reports. As with all VSS reports, the monthly reports are available in both print-ready and machine-readable formats. The machine-readable format can be used to automate the reconciliation of monthly reports to daily reports.

Note: The monthly report heading always specifies the full month, even if the data is only for part of the month. Data is reported for a partial month if settlement structures changed during that month.

VSS Currency Conversion Reporting

VisaNet Settlement Service (VSS) offers currency-conversion reporting. Rate Table IDs are shown on the Interchange Value Report (VSS-120), where relevant, and the Currency Conversion Fee Report (VSS-210) is available to help issuers reconcile their currency conversion fees.

Rate Table IDs

Rate Table IDs are shown on the Interchange Value Report (VSS-120).

- For a reversal transaction, the Rate Table identifier of the currency conversion rate that was used for the original transaction appears whenever currency conversion has been performed.
- For all other transactions, the Rate Table identifier of the currency conversion rate appears when the clearing currency (transaction or cardholder billing currency) is different from the settlement currency.

This table shows the conditions under which the Rate Table identifier of the currency rate is displayed.

Rate Table ID – Transaction Originator

Transaction Type	Condition	Rate Table ID Shown
All Transactions Except Reversals	Clearing currency is equal to Settlement currency	None
	Clearing currency is not equal to Settlement currency	Rate Table identifier of currency conversion rate

Rate Table ID – Transaction Originator

Transaction Type	Condition	Rate Table ID Shown
Reversal Transactions	Source clearing currency is equal to Source settlement currency is equal to Destination settlement currency	None
	Source settlement currency is not equal to Destination settlement currency	Rate Table identifier of currency conversion rate
	Clearing currency is not equal to Settlement currency	Rate Table identifier of currency conversion rate

This table shows the conditions under which the Rate Table identifier of the currency conversion rate is displayed.

Rate Table ID – Transaction Recipient

Transaction Type	Condition	Rate Table ID Shown
All Transactions Except Reversals	Clearing currency is equal to Settlement currency	None
	Clearing currency is not equal to Settlement currency	Rate Table identifier of currency conversion rate
Reversal Transactions	Clearing currency is equal to Settlement currency	None
	Clearing currency is not equal to Settlement currency	Rate Table identifier of currency conversion rate

VSS Currency Conversion Fees Reconciliation

The Currency Conversion Fees Report (VSS-210) helps issuers reconcile currency conversion fees. When currency conversion fees are calculated, they are included in the total amount posted to the cardholder's account. This amount, which is in the clearing currency, is contained in Destination Amount (TCR 0) in BASE II transactions and in Field 6—Amount, Cardholder Billing in SMS messages. SMS clients not participating in the Multicurrency Service have this amount reported in Field 4—Amount, Transaction.

The amount posted to the cardholder's account is a combination of:

- Interchange amount of the transaction.
- Currency conversion fee charged by Visa.
- Visa Issuer FX Calculator amount charged by the issuer. If the Visa Issuer FX Calculator is not defined by the issuer the amount is 0 (zero).

The VSS-210 report shows these amounts in the cardholder billing currency (clearing currency).

The interchange amount and the currency conversion fee charged by Visa are collected in the issuer's settlement currency, so they must also be reported in that settlement currency. This reporting allows balancing between the Visa Charges Report (VSS-140), which includes the currency conversion fee in settlement currency, and the VSS-210 report. The Visa Issuer FX Calculator amount is not included in the settlement amount.

If a client supports multiple cardholder billing currencies for an SRE, the VSS-210 report provides amounts in settlement currency subtotaled by clearing currency. The VSS-140 does not provide settlement subtotaals by clearing currency. The subtotaals in settlement currency on the VSS-210 report should be totaled to get the total currency conversion fees shown on the VSS-140 report. See *VisaNet Settlement Service (VSS) User Guide, Volume 2, Reports*.

VSS Processing Charges Reconciliation

Depending on the rules of the National Net Settlement Service (NNSS), processing charges for transactions may be settled in the International Settlement Service even if the transaction itself is settled by a NNSS. This might occur if a NNSS settles in a currency that is not a Visa settlement currency. Charges would then be settled in the International Settlement Service.

The Charges Reconciliation Report (VisaNet Settlement Service (VSS)-230) is produced for a NNSS. This report lists charges settled through the International Settlement Service for transactions settled in a NNSS. This report is a reconciliation report only. It is not used for settlement. The charges are settled based on the information on the Visa Charges Report (VSS-140) for the International Settlement Service.

VSS Billing Statement Reconciliation

The processing charges for all Single Message System (SMS)-connected clients and for BASE II-connected clients in some regions are billed monthly using the Billing Statement. Those clients that want to reconcile their monthly processing charges to counts on their VisaNet Settlement Service (VSS) reports need to develop procedures to map entries on the Billing Statement to entries on the Monthly Reconciliation Report (VSS-900-M). The descriptions on the client's statement reflect VSS business transaction types and business modes, and the client's settlement reporting entity (SRE) is included in the statement.

These tables show the correspondence between lines on the monthly Billing Statement and lines on the VSS-900-M report. In some cases, the total for the line on the monthly statement equals the sum of the counts on the corresponding line of the VSS-900-M report. In other cases, multiple lines on the monthly statement equal one or more lines on the VSS-900-M report. Some regions do not break down the reporting of multipurpose messages, general delivery reports, and text messages by different types, but report them on one line.

VSS Report Samples

These report samples are examples of how Single Message System (SMS) detail reports and BASE II Edit Package reports cross-reference to VisaNet Settlement Service (VSS) reports. In each example, the numbered fields on the SMS or BASE II report correspond to the numbered fields on the VSS report. Explanations of the numbered fields are at the end of each example.

Type of Cross-Reference Report Examples

Example Number	Cross-Reference Reports
1	Issuer Transaction Detail by Cardholder Number (SMS600C) Report to Summary Reconciliation Report (VSS-900-S).
2	Acquirer Transaction Detail by Cardholder Number (SMS601C) Report to Summary Reconciliation Report (VSS-900-S).
3	Interchange Value Report (VSS-120) to Summary Reconciliation Report (VSS-900-S).
4	Issuer Transaction Detail by Cardholder Number (SMS600C) Report to Processor Summary Reconciliation Report (VSS-900-PS).
5	Issuer Transaction Detail by Cardholder Number (SMS600C) Report to Interchange Value Report (VSS-120).
6	Issuer Transaction Detail by Cardholder Number (SMS600C) Report to Reimbursement Fees Report (VSS-130).
7	Outgoing Interchange Run Summary (EP-111E) Report to Summary Reconciliation Report (VSS-900-S) for financial transactions.
8	Outgoing Interchange Run Summary (EP-110E) Report to Summary Reconciliation Report (VSS-900-S) for nonfinancial transactions.
9	Outgoing Interchange Run Summary (EP-111E) Report to Processor Summary Reconciliation Report (VSS-900-PS) for financial transactions.
10	Outgoing Interchange Run Summary (EP-110E) Report to Processor Summary Reconciliation Report 0000(VSS-900-PS) for nonfinancial transactions.

Example 1: SMS600C Report to VSS-900-S Report Reconciliation

This example shows how fields on the Issuer Transaction Detail by Cardholder Number (SMS600C) Report reconcile to the fields on the Summary Reconciliation Report (VSS-900-S). This example also shows SMS reconciliation when the processor is included in the settlement hierarchy. It shows reconciliation from the issuer perspective and represents transactions settled in the International Settlement Service.

Clients in a National Net or Area Net Settlement Service (ANSS) would use the same reports as those in the International Settlement Service, but they must subscribe to the National Net Settlement Service (NNSS) version of the reports. For VSS, the settlement service is printed in the report headings for all settlement services. For SMS, NATIONAL NET is printed in the heading for

transactions settled in an NNSS. No notation is made in the heading when transactions are settled in the International Settlement Service.

Example 3: VSS-120 Report to VSS-900-S Report Reconciliation

This example shows how fields on the Interchange Value Report (VSS-120) reconcile to the fields on the Summary Reconciliation Report (VSS-900-S). This example also shows reconciliation of settled amounts between these reports. It shows reconciliation from the issuer perspective and represents transactions settled in the International Settlement Service. Acquirers would use the acquirer section of the reports for reconciliation.

Clients in a National Net or Area Net Settlement Service (ANSS) would use the same reports as those in the International Settlement Service, but they must subscribe to the National Net Settlement Service (NNSS) version of the reports. VSS reports have the name of the settlement service printed in the report headings.

The VSS-120 and VSS-900-S reconciliation fields in this example are described in reconciliation fields tables that follow each report sample.

Example 4: SMS600C Report to VSS-900-PS Report Reconciliation

This example shows how fields on the Issuer Transaction Detail (SMS600C) Report reconcile to the fields on the Processor Summary Reconciliation Report (VSS-900-PS). This example also shows SMS reconciliation when the processor is not included in the settlement hierarchy. It shows reconciliation from the issuer perspective and represents transactions settled in the International Settlement Service. Acquirers would use the acquirer section of the VSS-900-PS report and the Acquirer Transaction Detail (SMS601C) report for reconciliation.

Clients in a National Net or Area Net Settlement Service (ANSS) would use the same reports as those in the International Settlement Service, but they must subscribe to the National Net Settlement Service (NNSS) version of the reports. For VSS, the settlement service is printed in the report headings for all settlement services. For SMS, NATIONAL NET is printed in the heading for transactions settled in an NNSS. No notation is made in the heading when transactions are settled in the International Settlement Service.

Example 5: SMS600C Report to VSS-120 Report Reconciliation

This example shows how fields on the Issuer Transaction Detail (SMS600C) Report reconcile to the fields on the Interchange Value Report (VSS-120). These reports can be used to reconcile settlement amounts on SMS detail reports to VSS settled amounts. This example shows reconciliation from the issuer perspective and represents transactions settled in the International Settlement Service. Acquirers would use the acquirer section of the VSS-120 report and the Acquirer Transaction Detail (SMS601C) report for reconciliation.

Clients in a National Net or Area Net Settlement Service (ANSS) would use the same reports as those in the International Settlement Service, but they must subscribe to the National Net Settlement Service (NNSS) version of the reports. For VSS, the settlement service is printed in the report headings for all settlement services. For SMS, NATIONAL NET is printed in the heading for transactions settled in an NNSS. No notation is made in the heading when transactions are settled in the International Settlement Service.

Example 6: SMS600C Report to VSS-130 Report Reconciliation

This example shows how fields on the Issuer Transaction Detail (SMS600C) Report reconcile to the fields on the Reimbursement Fees Report (VSS-130). This example also shows the reconciliation of Interchange Reimbursement Fees between the SMS and VSS reports. Clients wishing to accomplish this reconciliation must subscribe to the fee information line on the SMS detail reports.

This example also shows reconciliation from the issuer perspective and represents transactions settled in the International Settlement Service. Acquirers would use the acquirer section of the VSS-130 report and the Acquirer Transaction Detail (SMS601C) Report for reconciliation.

Clients in a National Net or Area Net Settlement Service (ANSS) would use the same reports as those in the International Settlement Service, but they must subscribe to the National Net Settlement Service (NNSS) version of the reports. For VSS, the settlement service is printed in the report headings for all settlement services. For SMS, NATIONAL NET is printed in the heading for transactions settled in an NNSS. No notation is made in the heading when transactions are settled in the International Settlement Service.

Example 7: EP-111E Report to VSS-900-S Report Reconciliation

This example shows how fields on the VSS-900-S report reconcile to the fields on the EP-111E report. It shows outgoing interchange from the Edit Package and represents transactions settled in the International Settlement Service and cleared in U.S. dollars. To research details from the Edit Package report, you must use the VSS-900 report.

Note: There is a direct correlation between the processor SRE and the BASE II CIB. The correlation must be tracked by the processor. Visa recommends that the processor's clearing identifier be part of the processor name in VSS.

This Data is Fictitious and for Illustration Purposes Only.

This reconciliation fields table contains the EP-111E and VSS-900-S reconciliation fields shown in Example 7: Reconciliation of EP-111E Report to VSS-900-S Report (2 of 2).

Example 7: Reconciliation of EP-111E Report to VSS-900-S Report Reconciliation Fields (2 of 2)

Field Name	Description
Row	
REPORTING FOR	Name of the client. Note: On Edit Package reports, this comes from Run Control Option CENTRNAME. It might not match the value on the VSS report, which comes from VSS.
INTERNATIONAL SETTLEMENT SERVICE	Settlement service.
USD	Clearing currency.
Column	
COUNT	Total number of financial transactions sent to Visa.
CLEARING AMOUNT	Total amount of the financial transactions sent to Visa.

Example 8: EP-110E Report to VSS-900-S Report Reconciliation

This example shows how fields on the VSS-900-S Report reconcile to the fields on the EP-110E Report. It shows outgoing interchange from the Edit Package and represents issuer and total nonfinancial transactions. The clearing currency "NONE" combines all nonfinancial transactions.

Note: The clearing currency NONE combines all nonfinancial transactions.

Chapter 7

VSS Testing

VisaNet Settlement Service (VSS) testing is available for clients that are BASE II- and Single Message System (SMS)-connected through the VisaNet Certification Management System (VCMS). Testing is available for clients preparing for a VSS implementation or modifying their existing VSS hierarchies or report subscriptions. Testing also supports BASE II- and SMS-clearing services.

VCMS can generate VSS reports and files from controlled sets of test data. VCMS can also be used to test and certify SMS messages.

During VSS testing with VisaNet, the client is responsible for validating test results and ensuring that the VSS reports and files can be processed correctly.

Certain products or services may require certification with Visa. Certification covers the evaluation of online message formats, including the 0520 reconciliation message and the 0620 funds transfer totals message, and does not imply that Visa has certified a client's overall system or processes.

During client certification with VisaNet, a Visa representative ensures that Visa conducts checks for selective output results from a specifically defined client test.

VSS Testing Objectives

Testing enables clients to receive files and reports that can be used to test their internal systems and procedures.

VSS testing enables clients to:

- Review the VSS reports and files before implementation or change of settlement hierarchies or reporting options.
- Ensure that internal systems and procedures have been appropriately developed.
- Use the reports and output from internal systems as a basis for staff training.
- Review the impact of the SMS reports and VisaNet Integrated Payment (V.I.P.) System raw data on internal systems, such as space allocation and transmission times (SMS clients only).

Clients can also use the VSS test output to verify software upgrades for these VSS features:

- VSS reports as print-ready (TC 47) format, machine-readable (TC 46) format, or both formats
- SMS raw data (SMS only)
- SMS reports (SMS only)
- Automated reconciliation

Note: Clients can combine VSS testing with any other product or service testing.

VSS Test Report and File Delivery

All test output is delivered using production report delivery methods.

Existing clients are responsible for keeping test output separate from production output.

VSS VAP File Delivery Testing

Clients using BASE II- and SMS-clearing can have all test output delivered to a VisaNet Access Point (VAP). Report and test files are identified by the word TEST in the header record (TC 90). Clients can receive VisaNet Settlement Service (VSS) report data in machine-readable (TC 46) format, print-ready (TC 47) format, or both formats.

SMS detail reports are received in general delivery reports (TC 45) format or raw data multipurpose message (TC 33) format.

VSS Non-VAP Delivery Testing

Clients in the U.S. region using SMS clearing can use a non-VAP delivery method to receive test output. However, a non-VAP delivery of test output requires a manual process. A Visa representative coordinates non-VAP deliveries with Visa Operations and the client.

VSS Test Planning

When developing a test plan, VisaNet Settlement Services (VSS) clients consider various factors by completing certain tasks.

These tasks must be completed before beginning testing:

- Determine the VSS hierarchy and VSS report options.
- Determine the SMS report options and V.I.P. raw data options (SMS only).
- Determine funds transfer point.
- Determine testing schedule with a Visa representative.
- Develop all internal processes (manual and automated) that use settlement reports.
- Develop processes that use V.I.P. raw data (optional, SMS only).
- Develop or modify systems, as required, to accommodate machine-readable (TC 46) formats (optional).
- Develop systems as required to process 0520 reconciliation and 0620 funds transfer totals messages (optional, SMS only).

Note: Clients receiving the 0520 reconciliation message or the 0620 funds transfer totals message for the first time must certify.

- Plan training to familiarize staff with the layouts and terminology used in the settlement reports.
- Plan training so staff can use the VSS and SMS reports for reconciliation and other downstream processes.
- Clients that want to test a customized VSS hierarchy may need additional testing setup lead time. Custom hierarchies can require three (3) weeks to set up. Clients should contact their Visa representative for assistance in determining the exact amount of time required.
- Clients must allow sufficient time to review reports and incorporate the test results as part of their planned reconciliation and training processes.

- Each settlement service (National Net Settlement Service or International) requires a separate settlement hierarchy. Clients can elect to schedule a test for each settlement hierarchy separately.
- Clients must plan for sufficient disk space to receive the test files and reports.

VCMS Testing

Client testing is performed using VisaNet Certification Management Service (VCMS). Clients can submit and receive controlled sets of test data and reports through VCMS. VisaNet Settlement Service (VSS) and Single Message System (SMS) reports and files are generated according to the VSS configuration defined for the test.

VCMS testing is available to new and existing clients. Existing clients can test changes to their settlement hierarchy and reporting options.

VCMS Testing Benefits

VisaNet Certification Management Service (VCMS) testing provides specific benefits to clients.

VCMS enables clients to:

- Conduct tests on a daily basis during the week and, in some regions, also on Saturday.
- Confirm VisaNet Settlement Service (VSS) report balances using controlled test data.
- Develop internal reconciliation procedures using the test output.
- Confirm hierarchies, established by initial setups or changes to existing setups, using controlled test data and selected test account numbers.
- Conduct certification of 0520 reconciliation messages and 0620 funds transfer totals messages.

VCMS Testing Schedule

VisaNet Certification Management Service (VCMS) testing is available 7 days a week, Monday through Sunday, for all regions. One set of VisaNet Settlement Service (VSS) reports per settlement service is generated daily.

A Start and End date must be specified for the test. The VSS test configuration is set up in VCMS for the dates specified. The test configuration is not maintained after the end date specified, unless a request to change the date is submitted. Null VSS reports are generated on days when no test data is submitted. No SMS reports are produced on those days.

Clients preparing to test using the VCMS service must indicate the test start and end date to their Visa representative.

Because of the lead-time required for setup, clients requiring custom hierarchies should contact their Visa representative well in advance of the requested test dates. A test with a custom hierarchy can require up to 3 weeks setup time. Your Visa representative assists in determining the amount of lead time that is required for a test with a custom hierarchy.

Note: Requested changes to the test VSS hierarchy or report delivery options (such as adding an acquiring or issuing identifier or adding a report) are effective on the second Monday after the request.

BASE II Clearing Testing

VisaNet Settlement Service (VSS) clients using BASE II Clearing can perform testing using VisaNet Certification Management Service (VCMS).

BASE II Testing Setup

BASE II clients can submit and receive test transactions and select test account numbers. BASE II-connected acquirers can generate a maximum of 3,000 test transactions per day. BASE II-connected issuers can receive data for any or all of the services that are currently supported in the VisaNet Certification Management Service (VCMS) environment. A Visa representative sets up testing data.

One settlement cycle is run each day. Test output includes interchange files, VSS reports, and Edit Package reports.

Testing is available on central processing dates (CPDs) 7 days a week, Monday through Sunday, for all regions.

Custom implementations, changes to existing hierarchies, and reporting options may require more setup lead-time depending on the complexity of the customization. Clients should contact their Visa representative for assistance in determining lead-time requirements for setting up their test. Clients must request testing three (3) weeks before the Monday of the week they want testing to begin.

Clients must provide their Visa representative the specific information to schedule a VCMS test:

- VSS report selection and choice of formats: machine-readable (TC 46), print-ready (TC 47), or both formats.
- Each processor (CIB) and its corresponding client name.
- The Monday date of the week testing is to start.

Testing is available on the Monday of the start week, but clients can begin testing any day of the week. Clients receive VSS null reports on days when no tests are performed.

- Report and file delivery information.
- The date testing is to end.
- Any hierarchy or reporting option changes to existing VSS hierarchies.

BASE II Report and File Delivery

The VisaNet Settlement Service (VSS) reports are delivered to the Visa Access Point (VAP) as test files between 0330 and 0430 Greenwich mean time (GMT) every day a test is scheduled. The VSS reports and files are delivered to the client's VAP with TEST displayed in the header. Clients can differentiate test reports and files from production reports and files by checking for TEST in the header.

SMS Clearing Testing

VisaNet Settlement Service (VSS) clients using Single Message System (SMS) clearing can test using VisaNet Certification Management Service (VCMS). Testing begins by executing an online test. The test data is used with the test VSS hierarchy to create VSS reports, SMS reports, and raw data. Visa can provide SMS certification scripts to clients for testing. Testing is available 7 days a week, Monday through Sunday, for all regions.

SMS-connected clients run controlled sets of test data and should review the results in the next day's reporting cycle using these outputs: VSS settlement reports, SMS reports, and SMS raw data.

SMS Certification

Single Message System (SMS)-connected clients must certify when first implementing SMS processing. VisaNet Settlement Service (VSS) clients who elect to receive the 0520 reconciliation message or the 0620 funds transfer totals message for the first time must also certify.

SMS Testing Setup

A Visa representative sets up test data for Single Message System (SMS)-connected clients with VisaNet Certification Management Service (VCMS). Clients can submit and receive test transactions and select test account numbers. One settlement cycle is run each day.

Clients can receive data for any or all of the services that are currently supported in the VCMS environment.

Custom implementations and significant changes to existing settlement hierarchies and reporting options may require more setup lead-time depending on the complexity of the customization. Clients should contact their Visa representative for assistance in determining lead-time requirements for setting up their test environment. Clients must request testing a minimum of three (3) weeks before the Monday of the week testing begins.

Clients must provide their Visa representative specific information to schedule a test:

- VSS report selection and choice of VSS report formats: machine-readable (TC 46), print-ready (TC 47), or both formats.
- Identification of hierarchy structure summary levels and funds transfer points.
- SMS report selection, SMS report sort order, and SMS report lines.

- Selection of V.I.P. raw data records.
- Choice of 0520 reconciliation and 0620 funds transfer totals messages.
- Each affiliate ID and processor to be tested.
- The Monday date that the testing is to start.

Testing becomes available on the Monday of the start week, but clients can begin testing any day of the week. Clients receive VSS null reports on days when no tests are performed.

- The date testing is to end.
- Report and file delivery information.

Note: If additional testing time is required after an established end date, clients should contact their Visa representative to ensure successful results.

SMS Report and File Delivery

For VisaNet Settlement Service (VSS) clients using Visa Access Point (VAP) delivery, reports and raw data are delivered to the client's VAP within 24 to 32 hours after a test. The VSS reports and files are delivered to the client's VAP with TEST displayed in the header. Clients can differentiate test reports and files from production reports and files by checking for TEST in the header.

Clients in the U.S. region using a non-VAP delivery method should have their Visa representative coordinate the test output delivery.

Test output can only be generated once each day that a test is scheduled.

VSS Test Output

This list contains suggestions for using the test output and is not a comprehensive list. Clients are responsible for determining which steps are necessary to ensure that their systems and procedures are ready for implementing VisaNet Settlement Service (VSS) or for changing their current setup.

- Use VSS output to familiarize staff with the layouts and terminology used in the settlement reports.
- Test internal procedures.
- Confirm VSS report balances using controlled quantities of selected test data.
- Verify VSS and SMS report selections.
- Confirm acquiring or issuing identifier selection, hierarchy, and other VSS options for reporting and funds transfer.
- Determine whether business objectives were achieved and data is being reported as needed.

The VSS test output can also be used to test clients' internal systems:

- Receipt and use of machine-readable (TC 46) report format (optional).
- Receipt and use of V.I.P. raw data (optional, SMS only).
- Automated reconciliation procedures.
- Receipt of SMS 0520 reconciliation messages. Receipt of these messages is optional. Clients receiving these messages for the first time must certify (SMS only).
- Receipt of SMS 0620 funds transfer totals message. Receipt of this message is optional. SMS clients receiving the 0620 funds transfer totals message for the first time must certify (SMS only).

Chapter 8

VSS Implementation Planning

Prior to implementation, clients and processors must consider various internal factors to determine the requirements for successful VisaNet Settlement Service (VSS) implementation.

Visa provides various worksheets for recording clients' implementation decisions to aid in the planning process.

VSS Implementation Worksheets

Clients use various worksheets to record their VisaNet Settlement Service (VSS) implementation plans. These worksheets are used to communicate client VSS implementation requirements to a Visa representative.

VSS Implementation Worksheets

Worksheet Name	Description
<i>Internal Plans—All Clients Worksheet</i>	Used to record decisions regarding basic internal implementation requirements and the implementation date.
<i>Funds Transfer Worksheet</i>	Used to record implementation decisions regarding funds transfer processing.

VSS Implementation Worksheets

Worksheet Name	Description
<i>Hierarchy Considerations Worksheet</i>	Used to record implementation decisions regarding hierarchy options.
<i>VSS Reporting Options Worksheet</i>	Used to record implementation decisions regarding the VisaNet Settlement Service (VSS) reporting options.
<i>VSS Reports—BASE II-Connected Worksheet</i>	Used to record implementation decisions regarding VSS report options for BASE II-connected clients.
<i>VSS Reports—SMS-Connected Worksheet</i>	Used to record implementation decisions regarding VSS report options for Single Message System (SMS)-connected clients.
<i>SMS Options Worksheet</i>	Used to record implementation decisions regarding SMS options.
<i>SMS-Connected Reports Worksheet</i>	Used to record implementation decisions regarding SMS report options for SMS-connected clients.
<i>Testing Worksheet</i>	Used to record implementation decisions regarding VSS testing.

VSS Implementation Methods

VisaNet Settlement Service (VSS) hierarchy implementation can be done using a standard or a custom method. Clients must determine which implementation strategy to use.

- Standard** – This implementation type creates a two-level hierarchy, with one top settlement reporting entity (SRE) that includes parameters that define the entire hierarchy, such as the settlement currency code. The top SRE also represents a summary of all SREs below the top SRE. In a standard hierarchy, the top SRE represents all activity cleared (processed) by the processor. The lowest-level SREs are either identifiers (acquirers and issuers) or account ranges (issuers). Funds transfer can occur at the top level or at the lowest level (client-level settlement).

Reporting options for a standard hierarchy can be defined by groups of acquiring or issuing identifiers or can apply to all SREs within the hierarchy. Multiple report delivery destinations must be requested as a custom implementation.

- Custom** – Customizing a standard hierarchy may be needed for many reasons including:
 - Using midlevel summary reporting
 - Establishing additional funds transfer points
 - Sending reports to additional endpoints
 - Creating a VSS hierarchy that involves acquiring or issuing identifiers clearing through multiple processors

Record the implementation method information in the Internal Plans – All Clients Worksheet.

Related Information

Internal Plans – All Clients Worksheet

VSS Standard Hierarchies

The VisaNet Settlement Service (VSS) standard settlement hierarchy is determined by identifying every clearing identifier associated with a processor and establishing a two-level hierarchy setup. Standard hierarchies are constructed based on how transactions are cleared in BASE II or SMS.

Lowest-level SREs are defined by:

- Acquiring or issuing identifiers or account ranges for BASE II
- Affiliate IDs in SMS

Reporting and optional funds transfer for the lowest-level settlement reporting entity (SRE) is consolidated, at the processor level, to one top-level SRE.

A standard implementation of clients with only one acquiring or issuing identifier results in a standard hierarchy that consists of two SREs: a highest-level funds transfer SRE and a lowest-level SRE that represents the acquiring or issuing identifier. Totals on the reports for both SREs are the same. To eliminate duplicate reports for the two SREs, reporting can be subscribed at the top level only. However, if client-level funds transfer is supported, each lowest-level SRE must subscribe to the VSS-110 report.

VSS Standard Funds Transfer

In a standard hierarchy, funds transfer can take place at the highest-level settlement reporting entity (SRE) or at the lowest level. The funds transfer point must have a settlement account established at the settlement bank of the client's choice. The settlement account must be open and funded by the implementation date. National Net and Area Net Settlement hierarchies can also have the funds transfer points at the top level or lowest level.

VSS Reporting Options

VisaNet Settlement Service (VSS) clients can choose these VSS reporting options with a standard implementation of VSS. Reporting options can be defined by groups of acquiring or issuing identifiers, or can apply to all settlement reporting entities (SREs) within the hierarchy. (Multiple report delivery destinations must be requested as a custom implementation.)

- VSS settlement report selection
- Report format
- Acquiring or issuing identifier identification in report data records

VSS Standard Settlement Currency

All settlement reporting entities (SREs) in a VisaNet Settlement Service (VSS) hierarchy must have the same settlement currency. Because National Net Settlement Service (NNSS) and Area Net Settlement Service (ANSS) hierarchies are separate from International Settlement hierarchies, an NNSS or ANSS currency may be a different currency from the one used for International Settlement.

VSS Custom Implementation

Clients can customize their settlement structures by defining more than two reporting levels, or choosing different reporting options for each settlement reporting entity (SRE) in the VisaNet Settlement Service (VSS).

VSS Custom Hierarchies

A custom VisaNet Settlement Service (VSS) implementation is required when a standard implementation does not meet the client's settlement or reporting needs.

A custom implementation is necessary to support these business needs:

- Providing additional funds transfer levels.
- Providing business-related settlement hierarchies instead of a processing-defined hierarchy.
- Delivering reports to multiple locations.
- Receiving additional summary reporting levels.

VSS Custom Summary-Level SREs

Clients have the option to include one or more summary-level settlement reporting entities (SREs) in a customized hierarchy. Summary-level SREs can be used in a hierarchy to summarize reporting or funds transfer for the SREs below the summary-level SRE.

When a client creates a new hierarchy or customizes an existing hierarchy, it is suggested that the lowest-level SREs be established first. Once the client understands the function of each lowest-level SRE, it is easier to determine how summary-level SREs can be included to group lower-level SREs for either reporting or funds transfer purposes, or for both reporting and funds transfer.

VSS Custom Funds Transfer

Clients have the option of establishing multiple funds transfer at multiple levels within a single VisaNet Settlement Service (VSS) hierarchy. Multiple funds transfers can be included to support the client business as defined by the hierarchy.

Each funds transfer point must have a funded settlement account established at the settlement bank of the client's choice by the implementation date.

VSS Custom Reporting Options

VisaNet Settlement Service (VSS) clients can customize the way VSS reporting options are implemented. Reporting options can be different for each settlement reporting entity (SRE) or group of SREs in a hierarchy.

These reporting options can be customized:

- VSS settlement report selection
- Report format
- Report delivery to specified processor or client endpoint
- Report delivery to multiple endpoints
- Acquiring or issuing identifier identification in report data records
- BASE II clearing charges assessed at processor level

VSS Internal Environment Planning

Certain areas of a client's environment must be evaluated when planning an implementation of VisaNet Settlement Service (VSS).

These tasks must be completed to determine the impact of VSS on the client's internal processes:

- Identification of all acquiring or issuing identifiers, including identification of acquiring or issuing identifiers participating in a National Net or Area Net Settlement Service, using SMS routing options, or BASE II split routing
- Determine processing requirements to support the delivery of files, including machine-readable format and V.I.P. raw data files
- Determine automated reconciliation processing
- Familiarize staff with the report layouts and terminology used in the VSS settlement reports
- Determine business and financial reporting requirements

Clients must also evaluate their testing needs to ensure that their systems are capable of receiving and processing the reports, report formats, and, when applicable, VisaNet Integrated Payment (V.I.P.) System raw data and SMS online messages.

VSS Implementation Support

Various support areas may need to be included to ensure a smooth implementation of VisaNet Settlement Service (VSS), and to ensure that current business processes are not interrupted.

Although a formal project team may not be dedicated to the implementation tasks, these support areas should be considered:

- Financial reporting
 - Determine how VisaNet activity should be reported considering the VSS options.
 - Create written procedures.
- Reconciliation
 - Create written procedures.
 - Train appropriate staff to use the new procedures.
- Technical/Systems
 - Determine how the VSS and SMS print-ready reports are to be produced and stored and the impacts of implementing machine-readable formats and V.I.P. raw data.
 - Determine the impacts to possible downstream environments.
 - Determine the impacts to automated file processing.
 - Determine capacity requirements for system environments.
- Treasury
 - Evaluate funds transfer requirements.
 - Complete the Treasury-related paperwork as provided by the Visa representative.

Record this support information in the Internal Plans – All Clients Worksheet:

- Internal areas that will support VSS implementation.
- If all internal areas have been contacted.

Related Information

Internal Plans – All Clients Worksheet

VSS Processing Environment Evaluation

The impact of VisaNet Settlement Service (VSS) on a client's internal processes depends on the client's processing environment. The process environments depend upon processing and structural relationships, which can be structured based on business functions. Clients must plan the environmental tasks needed to successfully complete implementation.

VSS Processing Relationships

Generally, clients have a settlement structure based on their processing structure. Under the VisaNet Settlement System (VSS), clients have the option of establishing settlement relationships independent of their processing relationships. This option must be coordinated with their processor.

Consider these questions when evaluating processing relationships:

- Is more than one processor used?
- If more than one processor is used, how is activity split among processors?

VSS Acquiring or Issuing Identifier Identification

At the time a hierarchy is set up in VisaNet Settlement Service (VSS), clients must provide identification of all acquiring or issuing identifiers to their Visa representative.

Acquiring or issuing identifiers include:

- Clearing identifiers
- SMS affiliate IDs, including network IDs.

If SMS affiliate IDs use routing options or Visa Exceptions, clients must identify all acquiring or issuing identifiers separately.

If the acquiring or issuing identifiers are participating in a National Net Settlement Service, clients must identify which acquiring or issuing identifiers will be excluded, if any.

Record this acquiring or issuing identifier information in the Internal Plans – All Clients Worksheet:

- Identify all acquiring or issuing identifiers.
- If more than one processor will be used.
If Yes, determine how activity is split among processors.
- If transactions are cleared through BASE II, SMS, or both.
 - If transactions are to be cleared through BASE II, determine if BASE II exception activity is split to another processor.
 - If transactions are to be cleared through SMS, determine which SMS routing options are used. Determine if this activity is included in the new hierarchy. For example:
Original routing
Alternate routing
Account type routing
ATM/POS routing
PIN/No PIN routing
 - If transactions are to be cleared through SMS, determine if this activity is included in the new hierarchy, for example, if Visa exceptions are used.

Related Information

Internal Plans – All Clients Worksheet

VSS Settlement Arrangements Evaluation

Clients must determine what type of settlement arrangements are required.

Record this settlement information in the Internal Plans – All Clients Worksheet:

- If the processor will serve as the settlement agent or if another business entity will be involved.
- If one or more National Net or Area Net Settlement Services will be used. One VisaNet Settlement System (VSS) hierarchy will be established for each settlement service.
For a National Net or Area Net Settlement Service, if the settlement will occur at the processor or acquiring or issuing identifier level.
- All settlement currencies to be used. All SREs in a VSS hierarchy must use the same settlement currency. If multiple settlement currencies are used, a separate hierarchy is required for each settlement currency.

Related Information

Internal Plans – All Clients Worksheet

VSS Reconciliation Procedure Evaluation

The reconciliation process and the level of automation of reconciliation procedures are two of the most significant planning decisions for implementing the VisaNet Settlement Service (VSS).

Consider using:

- Print-ready (TC 47) VSS settlement reports.
- SMS transaction detail reports.
- Machine-readable (TC 46) VSS settlement information for automated downloading of settlement information and other automated reconciliation procedures.
- SMS raw data by SMS clients to reconcile against transaction data stored in internal log files or download information to history files.

See *VisaNet Settlement Service (VSS) User Guide, Volume 2, Reports*.

Record this reconciliation procedure information in the Internal Plans – All Clients Worksheet:

- The reconciliation procedures you developed.
- Which reconciliation procedures are automated.
- What to do with Visa Reports:
 - Load to an online system
 - Archive
 - Store on microfiche or other report viewing system
- Which internal departments will use Visa reports and the information that is important to each.

Related Information

Internal Plans – All Clients Worksheet

VSS Capacity Evaluation

The size and complexity of the client's hierarchy can contribute to the reporting volume. VisaNet Settlement Service (VSS) reports are created by settlement reporting entity (SRE); therefore, the more SREs in the hierarchy, the more report lines.

Other factors that can influence capacity needs include:

- Size of hierarchy indicated by the number of SREs.
- Number of VSS reporting levels.

- Number of VSS reports selected for each SRE.
- Delivery of VSS reports in both print-ready and machine-readable formats.
- SMS report size depends on volume of activity and numbers of report lines selected for each report or sort option of report.
- Null daily VSS reports are generated and sent for all SREs when there is no activity (International settlement only). When clients do not run the Edit Package on Sunday, the files on Monday might be large because they also include Sunday's reports.
- Receipt of V.I.P. Raw Data Release 2.2. The size of this file depends on the transaction volume and the selected record types.

Record this capacity information in the Internal Plans – All Clients Worksheet:

- The capacity of the processing location.
- The potential impact various options may have on processing.

Related Information

Internal Plans – All Clients Worksheet

VSS Hierarchy Implementation Considerations

Clients must consider various services related to VisaNet Settlement Service (VSS) settlement hierarchies, regardless of the planned implementation type.

Areas for consideration include:

- National Net or Area Net Settlement Service
- Deferred Settlement Service
- Routing Options

Note: Deferred settlement is currently available only in Brazil, Japan, Argentina, and Chile.

NNSS Considerations

Clients implementing a National Net Settlement Service (NNSS) or Area Net Settlement Service (ANSS) need a separate settlement hierarchy for each settlement service. Separate hierarchies

are required to reflect different settlement currencies and regulations that govern funds transfer within a country participating in an NNSS.

If you plan to participate in a NNSS, record this NNSS information in the Hierarchy Considerations Worksheet:

- The particular NNSS.
- Any acquiring or issuing identifiers to be excluded from the NNSS.

Related Information

[Hierarchy Considerations Worksheet](#)

Deferred Settlement Service Considerations

Clients that participate in the Deferred Settlement Service receive VisaNet Settlement Service (VSS) reports for their National Net Settlement Service (NNSS).

VSS reports that support National Net Deferred Settlement can be included as part of the VSS report selection.

Record this Deferred Settlement Service information in the Hierarchy Considerations Worksheet:

- If you will participate in the service.
- If you want the VSS-600 report (Pending Settlement Report).

Note: Deferred settlement is currently available only in Brazil, Japan, Argentina, and Chile.

Related Information

[Hierarchy Considerations Worksheet](#)

VSS Routing Option Considerations

Various routing options are available to BASE II- and SMS-connected clients.

BASE II Routing Considerations

BASE II-connected clients can select split-routing for specific transactions. The specific transactions are processed through an alternate processor. These transactions can be settled either with, or separate from, the activity routed to the original acquiring or issuing identifier.

Review your acquiring or issuing identifier list to identify acquiring or issuing identifiers with activity cleared through two processors, and to identify which are to be settled in the same hierarchy.

Record the clearing identifiers, processor, and routing information in the Hierarchy Considerations Worksheet.

Related Information

[Hierarchy Considerations Worksheet](#)

SMS Routing Considerations

Various types of transaction routing are available to Single Message System (SMS)-connected clients, such as alternate routing of exceptions and account type routing.

In a standard hierarchy, a settlement reporting entity (SRE) is established for each alternate processor. As a result, settlement for transactions that are alternately routed is reported separately. Reporting of these transactions can be consolidated at a summary-level SRE as part of a custom implementation.

SMS-connected clients taking advantage of any of the routing options must be aware of the implications of having a unique SRE assigned:

- Transactions are reported separately on VisaNet Settlement Service (VSS) reports.
- Transactions are grouped separately in SMS Raw Data.
- Transactions are reported separately on SMS transaction detail reports.

Review your acquiring or issuing identifier list to ensure SMS acquiring or issuing identifiers using SMS routing options are uniquely defined.

Record the SMS acquiring or issuing identifiers, alternate processor, and routing information in the Hierarchy Considerations Worksheet.

Related Information

[Hierarchy Considerations Worksheet](#)

VSS Custom Hierarchy Planning

Clients that choose to customize their settlement structure using VisaNet Settlement Service (VSS) recommended steps. Information can be saved in a hierarchy spreadsheet.

Record this custom hierarchy information in the Hierarchy Considerations Worksheet:

- If a hierarchy spreadsheet was created.
- If the Hierarchy checklist was used to evaluate the spreadsheet.

Related Information

[Hierarchy Considerations Worksheet](#)

VSS Customized Hierarchy Checklist

This table contains a list of items that must be completed when creating a customized hierarchy in Visa Settlement Services (VSS).

Customized Hierarchy Checklist

Hierarchy Structure	Complete
A funds transfer settlement reporting entity (SRE) has no other funds transfer SRE under it.	
A funds transfer SRE is associated with every lowest-level SRE.	
Every SRE has a unique identifier for reference.	
Every SRE has a unique 15-character name.	
Clearing information (acquiring or issuing identifier, processor, and if appropriate, SMS network).	
There is only one SRE at the highest level.	
There is only one settlement currency for each hierarchy.	
A specific clearing entity is defined by only one SRE.	

Create a Custom Hierarchy

Use these steps to create a custom hierarchy for implementation in the VisaNet Settlement Service (VSS).

1. Identify the highest level of reporting required and the subordinate reporting levels.
2. Create a name for each SRE to be created. The name must not exceed 15 characters and can include the acquiring or issuing identifier. These examples show one possible way to customize a hierarchy. For easier identification, clients may want to include an acquiring or issuing identifier or SMS acquiring or issuing identifier network number in the SRE name.

Highest-Level Summary

Summary 1 XXXXXX BASE II
Summary 2 XXXXXX SMS

Bank of XYZ

BASE II Activity or Client Summary
SMS Activity or Client Summary

3. Add the next levels until all the clearing identifiers are accounted for. If the acquiring or issuing identifier represents an SMS acquiring or issuing identifier, identify the network. Each SRE requires a name; the name cannot exceed 15 characters.

Bank of XYZ	Acquiring or Issuing Identifier		
	NETWORK		
	BASE II Client Summary	Bank xxx XXXXXX	
		Bank yyy XXXXXX	
	SMS Client Summary	Bank xxx SMS	Bank xxx- NetXXXXXXXXXXXX
			Bank xxx- NetXXXXXXXXXXXX
		Bank yyy SMS	Bank yyy- NetXXXXXXXXXXXX
			Bank yyy- NetXXXXXXXXXXXX
		Bank zzz- SMSXXXXXXXXXXXX	

4. Indicate the processor for each lowest-level SRE.

Bank of XYZ	Acquiring or Issuing Identifier		
	NETWORK		
	PROCESSOR	Bank xxx XXXXXX	
	BASE II Client Summary	XXXXXX	
		Bank yyy XXXXXX	
		XXXXXX	
	SMS Client Summary	Bank xxx SMS	Bank xxx- NetXXXXXXXXXXXX
			Bank xxx- NetXXXXXXXXXXXX
		Bank yyy SMS	Bank yyy- NetXXXXXXXXXXXX
			Bank yyy- NetXXXXXXXXXXXX
		Bank zzz- SMSXXXXXXXXXXXX	

5. Identify all entries that represent funds transfer points by circling the name or adding an FT on the same line. Each SRE under a highest-level SRE can only be associated with one funds transfer point.

Bank of XYZ	Acquiring or Issuing Identifier		
	NETWORK		
	PROCESSOR	Bank xxx XXXXXX	
	BASE II Client Summary	XXXXXX	
		Bank yyy XXXXXX	
		XXXXXX	
	SMS Client Summary	Bank xxx SMS	Bank xxx- NetXXXXXXXXXXXX
			Bank xxx- NetXXXXXXXXXXXX
		Bank yyy SMS	Bank yyy- NetXXXXXXXXXXXX
			Bank yyy- NetXXXXXXXXXXXX
		Bank zzz- SMSXXXXXXXXXXXX	

- Identify affiliates with alternately routed activity. Clients must contact their Visa representative if the processor value is unknown. Ensure that affiliates using Visa Exceptions are identified with a unique SRE.

Bank of XYZ	Acquiring or Issuing Identifier NETWORK PROCESSOR BASE II Client Summary	Bank xxx XXXXXX XXXXXX Bank yyy XXXXXX XXXXXX
	SMS Client Summary	Bank xxx SMS Bank xxx- NetXXXXXXXXXXXXXXXXXXXX Bank xxx- NetXXXXXXXXXXXXXXXXXXXX Bank xxx- NetXXXXXXXXXXXXXXXXXXXXVEX PROCESSOR Bank xxx- NetXXXXXXXXXXXXXXXXXXXXVEX PROCESSOR
		Bank yyy SMS Bank yyy- NetXXXXXXXXXXXXXXXXXXXX Bank yyy- NetXXXXXXXXXXXXXXXXXXXX

- Number each line to uniquely identify each as an SRE.

1	Bank of XYZ	
2		
3	BASE II Client Summary	Bank xxx XXXXXX XXXXXX
4		Bank yyy XXXXXX XXXXXX
5	SMS Client Summary	
6		Bank xxx SMS
7		Bank xxx- NetXXXXXXXXXXXXXXXXXXXX
8		Bank xxx- NetXXXXXXXXXXXXXXXXXXXX
9		Bank yyy SMS
10		Bank yyy- NetXXXXXXXXXXXXXXXXXXXX
11		Bank yyy- NetXXXXXXXXXXXXXXXXXXXX
12		Bank zzz- SMSXXXXXXXXXXXXXXXXXXXX

- Verify the result against the hierarchy checklist.

VSS Funds Transfer Point Identification

All funds transfer points within a VisaNet Settlement Service (VSS) settlement hierarchy must be identified. For each new funds transfer point, the client must complete a set of Settlement Funds Transfer (SFT) forms, which include the necessary authorization letters.

When a client uses another financial institution to perform settlement, the client must ensure that drawdown authority has been granted to Visa, the settlement bank, and the correspondent

bank, if a correspondent bank is being used. The client must provide each with a copy of the authorization letter, and complete any additional paperwork required by the settlement or correspondent bank. The SFT forms include instructions to assist the client in completing the information and the required authorization signatures. The settlement account must be opened and funded before the funds transfer is established.

The SFT forms process can take several weeks to complete. Visa recommends that clients begin this process early so that the settlement account is open and has the required drawdown authority by the implementation date.

Record this funds transfer information in the Funds Transfer Worksheet:

- Where funds transfers will be within the VSS settlement hierarchy.
- If each funds transfer point has a completed SFT form.
- If the completed SFT forms have been given to Visa.

Related Information

Funds Transfer Worksheet

VSS Reporting Option Considerations

BASE II- and SMS-connected clients can choose certain reporting options when implementing VisaNet Settlement Service (VSS).

Report options include:

- VSS settlement report selection
- Report format
- Report delivery (custom implementations only)
- Acquiring or issuing identifier identification in report data records

The type of implementation determines the VSS reporting options that are available.

- For standard implementations, reporting options can be defined by groups of acquiring or issuing identifiers or can apply to all settlement reporting entities (SREs) within the hierarchy. (Multiple report delivery destinations must be requested as a custom implementation.)
- For custom implementations, the choices can differ among the SREs within a hierarchy.

VSS Settlement Report Selection

When VisaNet Settlement Service (VSS) is implemented for a client, the client must select the reports to receive. VSS reports are optional except for the VSS-110 report that is mandatory for Funds Transfer settlement reporting entities (SREs). The VSS-111 report is highly recommended for Funds Transfer SREs. Optional reports are only generated by Visa for an SRE when a client subscribes to that report.

Consolidated File Delivery

Consolidated File Delivery enables clients with Visa Access Point (VAP) delivery to receive a single file that contains all of their VisaNet Settlement Service (VSS) settlement reports, SMS reports, and SMS raw data.

If clients do not choose to have their files consolidated, they will receive two or more VAP files.

Clients cannot choose Consolidated File Delivery and, simultaneously, use the Customized File Delivery.

VSS Customized File Delivery

Customized File Delivery enables Visa Access Point (VAP)-connected clients to receive individual files for selected types of data and VisaNet Settlement Service (VSS) and SMS reports. Each file is delivered to their VAP as soon as the file is available.

This table shows the file types used to select the files.

File Types for Customized File Delivery

Type	TC Number	Format
DBRAW	TC 33	SMS Raw Data
DBRPT	TC 45	SMS Reports
SETLM	TC 46	VSS Reports—Machine-Readable
SETLP	TC 47	VSS Reports—Print-Ready
SETLR	TC 46	VSS Reports—Machine-Readable
	TC 47	VSS Reports—Print-Ready

Note: Clients that request both TC 46 (SETLM) and TC 47 (SETLP) file types for their VSS reports can elect to have either file (or both) set up for Customized File Delivery. The setup depends on a client's processing requirements and time frames. Clients cannot choose Customized File Delivery and Consolidated File Delivery simultaneously.

Record this custom file delivery information in the VSS Reporting Options Worksheet, the VSS Reports—BASE II-Connected Worksheet, and the VSS Reports—SMS-Connected Worksheet for customized hierarchies involving BASE II and SMS clients:

- Which VSS settlement reports are required.
- If Consolidated or Customized File Delivery will be used.

For BASE II-connected clients, record this information in the VSS Reporting Options Worksheet and the VSS Reports—BASE II-Connected Worksheet.

For SMS-connected clients, record this information in the VSS Reporting Options Worksheet and the VSS Reports—SMS-Connected Worksheet.

Related Information

- [Reporting Options Worksheet](#)
- [VSS Reports – BASE II-Connected Worksheet](#)
- [VSS Reports – SMS-Connected Worksheet](#)

VSS Report Format Considerations

After deciding which VisaNet Settlement Service (VSS) reports are needed, clients must decide the report format. All VSS reports are available in machine-readable (TC 46), print-ready (TC 47), or both formats.

Clients must also review the decisions regarding their reconciliation procedures as this may determine if the machine-readable (TC 46) format is required.

If the machine-readable (TC 46) format is to be requested, clients must test the receipt of the data.

Record this report format information in the VSS Reporting Options Worksheet, the VSS Reports—BASE II-Connected Worksheet, and the VSS Reports—SMS-Connected Worksheet:

- The report format needed.
- Report formats for specific reports and specific SREs in the hierarchy for custom implementations.

For BASE II-connected clients, record this information in the VSS Reporting Options Worksheet and the VSS Reports—BASE II-Connected Worksheet.

For SMS-connected clients, record this information in the VSS Reporting Options Worksheet and the VSS Reports—SMS-Connected Worksheet.

Related Information

- [Reporting Options Worksheet](#)

- [VSS Reports – BASE II-Connected Worksheet](#)
- [VSS Reports – SMS-Connected Worksheet](#)

VSS Report Delivery Options

VisaNet Settlement Service (VSS) supports several report delivery options.

Available options include:

- Delivery to the endpoint associated with the acquiring or issuing identifier
- Delivery to any other specified Visa endpoint
- Delivery to multiple Visa endpoints (custom implementation only)

Delivery can be to any client with a BASE II VAP. Non-VAP delivery is available to U.S. SMS clients only.

Record this report delivery information in the VSS Reporting Options Worksheet:

- The delivery endpoint to be used.
- If reports are to be delivered to another location, determine:
 - Where the reports are to be sent.
 - Which SREs in the hierarchy are to be sent to which endpoints. For example:
Send VSS-110 for SREs 7 and 8 to endpoint A.
Send VSS-110 for SRE 7 to endpoint B.
- If reports will be delivered to a VAP (U.S. SMS clients).
 - If Yes, identify the endpoint.
 - If No, work with your Visa representative regarding delivery options.

Related Information

[Reporting Options Worksheet](#)

VSS Report Acquiring or Issuing Identifier Identification Considerations

Processors must determine if they want to distribute VisaNet Settlement Service (VSS) settlement reports directly to clients. To simplify this process, an acquiring or issuing identifier can be placed in the Destination Identifier field of the machine-readable (TC 46) and print-ready (TC 47) report records for the lowest-level SRE. This acquiring or issuing identifier ties the report

records to a client and allows the reports for that client to be grouped together. This option is available if the processor is also responsible for clearing the transactions for clients.

Acquiring or issuing identifier identification can also be used to affect the sequence that report records are received. If the acquiring or issuing identifier is placed in the Destination Identifier field, the report records are received in acquiring or issuing identifier sequence.

Record this acquiring or issuing identifier identification information in the VSS Reporting Options Worksheet:

- If acquiring or issuing identifier will be identified in report data records for lowest-level SREs.
- If Visa has been notified to request this option.

Processors requesting this option must test their processing logic for use of this field.

Related Information

[Reporting Options Worksheet](#)

SMS Implementation Options

All Single Message System (SMS)-connected clients can choose from several SMS options when implementing VisaNet Settlement Service (VSS).

SMS options include:

- SMS report selection
- V.I.P. Raw Data Release 2.2
- SMS online messages
 - 0500/0520 reconciliation messages
 - 0620 funds transfer totals message
- Delivery endpoints

SMS Report Selection

In addition to the VisaNet Settlement Service (VSS) settlement reports, Single Message System (SMS)-connected clients can subscribe to SMS reports that detail a client's transaction activity and support other types of SMS processing.

Clients must ensure that procedures are in place to receive the SMS reports.

SMS-connected clients can select any of the SMS reports. Clients can also subscribe to:

- Specific lines of some transaction detail reports. Line subscription is by processor, not by affiliate ID.
- Multiple sorts of the same report.

Record this SMS report information in the SMS Options Worksheet and the SMS-Connected Reports Worksheet:

- Which SMS reports are needed.
- How each SMS report is to be sorted.
- Which lines of the SMS transaction detail reports are to be received.
- Where reports should be delivered.

Related Information

- [SMS Options Worksheet](#)
- [SMS-Connected Reports Worksheet](#)

V.I.P. Raw Data Release 2.2

Clients can subscribe to VisaNet Integrated Payment (V.I.P.). Raw Data Release 2.2. Clients that subscribe to raw data must chose what record types to receive.

The optional settlement information (V22120) record separates the transaction activity by SRE. Activity for clients using SMS routing options, such as alternate routing to Visa Exceptions, is grouped by corresponding SRE. The settlement information record precedes all the financial records processed under this SRE. It is recommended that clients receive this record to help differentiate the activity among SREs.

Combining SMS Reports and Raw Data Considerations

Single Message System (SMS) clients with Visa Access Point (VAP) delivery can receive their report data (DBRPT) separate from their raw data (DBRAW). However, report and raw data can be combined and distributed through DBRAW.

Record this raw data information in the SMS Options Worksheet:

- If V.I.P. Raw Data Release 2.2 is needed and which records are to be received.
- If VAP delivery options are impacted.

Related Information

[SMS Options Worksheet](#)

SMS Online Messages

Online messages are available to Single Message System (SMS) clients.

Available messages:

- 0500 and 0520 reconciliation messages
- 0620 funds transfer totals message (one for each funds transfer SRE)

SMS Reconciliation (0500/0520) Messages

A Single Message System (SMS)-connected client can receive SMS 0500 and 0520 reconciliation messages that contain interchange totals accumulated online for each VSS processor.

Messages may be provided:

- Upon request by client for previous day's totals or cumulatively for the current day (from start of processing to the time of the request)
- At the end of day

Record this SMS reconciliation information in the SMS Options Worksheet:

- If 0500 and 0520 reconciliation messages are needed (certification is required).
- If Visa Exceptions is used:
 - Whether to use 0500 and 0520 reconciliation messages.
 - If you are prepared to receive these messages on Visa Exceptions.

Related Information

[SMS Options Worksheet](#)

SMS Funds Transfer Totals (0620) Message

Single Message System (SMS)-connected clients can receive an 0620 funds transfer totals message that is delivered to the client on completion of settlement. This message is produced for the funds transfer settlement reporting entity (SRE) and reflects settlement information for all lower-level SREs. The processing endpoint that is to receive this message must be specified.

Record this funds transfer message information in the SMS Options Worksheet:

- If the message is needed and how it will be used (certification is required for first-time recipients only).
- The acquiring or issuing identifier associated with the delivery endpoint for the 0620 funds transfer message.

Related Information

[SMS Options Worksheet](#)

VSS Testing

VisaNet Settlement Service (VSS) testing is available for BASE II- and Single Message System (SMS)-connected clients. VSS testing provides VSS reports and files that enable clients to test their internal systems and procedures. SMS clients also receive SMS reports and, if requested, VisaNet Integrated Payment (V.I.P.) raw data, 0520 messages, and 0620 messages.

Record the determined start and end dates information in the Testing Worksheet. You must provide your regional representative with your test window information to set up testing dates and options.

During your test window, you will:

- Perform tests.
- Prepare reconciliation staff to use new VSS reports.
- Reconcile test reports and files.

Related Information

[Testing Worksheet](#)

VSS Implementation Timelines

Clients must consider the time required to complete implementation tasks and make any changes to the hierarchy structure or report selection when determining an implementation date:

- Make all internal processing changes.
- Train staff to work with the VisaNet Settlement Service (VSS) reports and files.
- Review test results.

Clients can elect a midweek or weekend implementation date. The date selected depends on when clients want to implement VSS.

New processors will receive null VSS reports one day before activity will be processed and settled.

Clients must contact their Visa representative to request a new implementation of VSS or to schedule changes. Clients should contact their Visa representative to verify the advance notice required.

Record your implementation date in the Internal Plans – All Clients Worksheet.

Internal Plans – All Clients Worksheet

VSS Advance Notice Guidelines

This table provides guidelines for advance notice requests.

Advance Notice Guidelines

Client Request	Advance Notice
Original implementation	3 months
New funds transfer	2 months
Changes to reports options	3 weeks
Addition or deletion of acquiring or issuing identifiers or BASE II account ranges in a hierarchy	3 weeks
Customizations of hierarchy	3 weeks ¹

¹Changes involving more than 50 acquiring or issuing identifiers or complex hierarchy setups may take longer.

VSS Hierarchy Changes

After the completion of the original VisaNet Settlement Service (VSS) implementation, additional planning is needed to add acquiring or issuing identifiers to an existing hierarchy.

Hierarchy change planning involves :

- Determining where each new clearing identifier is to be established in the hierarchy.
- Determining if the new clearing identifiers are to be included in International and National Net Settlement Service hierarchies.
- Deciding which reports are to be requested and in what format.
- Deciding where the reports are to be delivered.
- Determining whether there is an impact to any funds transfer points.
- Determining which acquiring or issuing identifiers will use another processor for its activity.

Appendix A

VSS Printable Implementation Worksheets

You can print these VSS implementation worksheets to track your decisions for each set of implementation requirements.

Internal Plans – All Clients Worksheet

Use this worksheet to record decisions regarding basic internal implementation requirements and the implementation date.

Internal Plans – All Clients Worksheet

Page	Internal Plans		✓
1-2	• Determine implementation type.	Standard	☐
		Custom	☐
1-5	• Contact support areas for VSS implementation.		

Internal Plans – All Clients Worksheet

Page	Internal Plans		✓
1-6	• How are transactions cleared?	BASE II SMS Both	☐ ☐ ☐
	• Is BASE II activity split to another processor?	Yes No	☐ ☐
	• What SMS routing options are used?	Original Alternate Acct.Type PIN/No PIN	☐ ☐ ☐ ☐
	• Is Visa Exceptions used?	Yes No	☐ ☐
	1-7	- Identify all acquiring or issuing identifiers to be implemented or attach a list. - Is more than one processor used? If YES, how is the activity split among processors? - For BASE II-connected clients, identify the application processor. _____ - For SMS-connected clients, identify the processor and network. _____	 Y es No
1-8	• Will the processor serve as the settlement agent?	Yes No	☐ ☐
	• Is another business entity involved?	Yes No	☐ ☐
	• Will you participate in International Settlement Service only? If No, list each National Net Settlement Service (NNSS) and settlement currency.	Yes No	☐ ☐
	• For National Net Settlement, will settlement occur at the clearing identifier or processor level?	Clearing Identifier Processor	☐ ☐
	• Which settlement currencies are to be used? International _____ NNSS _____		

Internal Plans – All Clients Worksheet

Page	Internal Plans		✓
1–8	- What effect might the reconciliation procedures have on your implementation requirements? - What procedures will be automated?		
	What will be done with Visa reports?		
	Loaded to an online system.	Yes No	☐ ☐
	Archived.	Yes No	☐ ☐
	Stored on microfiche.	Yes No	☐ ☐
1–9	What internal departments will use the reports? What information is needed by each?		
1–10	What effect might the various options have on capacity planning at your processing center?		
1–23	Determine proposed implementation date: _____		

Funds Transfer Worksheet

Use this worksheet to record implementation decisions regarding funds transfer processing.

Funds Transfer Worksheet

Page	Funds Transfer	✓
1–15	- Determine funds transfer points. - Complete Settlement Funds Transfer (SFT) form - When was the paperwork returned to Visa? _____	

Hierarchy Considerations Worksheet

Use this worksheet to record implementation decisions regarding hierarchy options.

Hierarchy Considerations

Page	Funds Transfer		✓
1-10	• Will you be participating in NNSS?	Y	☐
	• Identify the NNSS? _____	N	☐
	Will any acquiring or issuing identifiers be excluded from participation? If Yes, identify the excluded acquiring or issuing identifiers.	Y	☐
		N	☐
1-11	• Will you participate in Deferred Settlement Service? (Brazil, Japan, Argentina, and Chile only)	Y	☐
		N	☐
1-11	• Review acquiring or issuing identifier list to identify acquiring or issuing identifiers with activity cleared through two processors and to identify which are to be settled in the same hierarchy.		
	• Review acquiring or issuing identifier list to ensure SMS acquiring or issuing identifiers using SMS routing options are defined uniquely.		
1-14	• For a custom implementation, has the hierarchy been planned by creating a hierarchy spreadsheet?	Y	☐
		N	☐
1-14	• Has the checklist been used to evaluate the spreadsheet?	Y	☐
		N	☐

Reporting Options Worksheet

Use this worksheet to record implementation decisions regarding the VisaNet Settlement Service (VSS) reporting options.

VSS Reporting Options Worksheet

Page	VSS Reporting Options	✓
1-17	Do you want the recommended set of reports? If No, check the report format for each report needed in the worksheet in <u>VSS Reports—BASE II-Connected Worksheet</u> (BASE II) or <u>VSS Reports—SMS-Connected Worksheet</u> (SMS). If both BASE II and SMS are included in the hierarchy, use the worksheet in either <u>VSS Reports—BASE II-Connected Worksheet</u> or <u>VSS Reports—SMS-Connected Worksheet</u>.	Y N ☐ ☐
	Will Customized or Consolidated File Delivery be used? If Yes, how?	Y N ☐ ☐
	- If you are using the recommended set of reports, is the format to be the same for all reports? - If Yes, check one of the following: - Machine-readable (TC46) - Print-ready (TC 47) - Both	Y N ☐ ☐ ☐ ☐ ☐
	If No, check the format for each report needed in the worksheet in <u>VSS Reports—BASE II-Connected Worksheet</u> (BASE II) or <u>VSS Reports—SMS-Connected Worksheet</u> (SMS). If both BASE II and SMS are included in the hierarchy, use the worksheet in either <u>VSS Reports—BASE II-Connected Worksheet</u> or <u>VSS Reports—SMS-Connected Worksheet</u>.	
1-18	Identify the endpoint where reports are to be sent. If reports are to be sent to multiple locations, complete additional versions of the worksheets in <u>VSS Reporting Options Worksheet</u> and <u>VSS Reports—BASE II-Connected Worksheet</u>.	
1-19	Is the acquiring or issuing identifier to be identified in VSS report data records?	Y N ☐ ☐

VSS Reports – BASE II-Connected Worksheet

Use this worksheet to record implementation decisions regarding VisaNet Settlement Service (VSS) report options for BASE II-connected clients.

Prepare one checklist if the reports in this table apply to all settlement reporting entities (SREs) in the hierarchy. Check the reports needed and the format by report.

If individual SREs or groups of SREs will have different reports, attach a hierarchy diagram that indicates the acquiring or issuing identifiers, account ranges, and summary levels to which the information is applicable and prepare a separate checklist for each group.

Testing Worksheet

Use this worksheet to record implementation decisions regarding VisaNet Settlement Service (VSS) testing.

Testing Worksheet

Page	Testing	
1–22	Testing should begin on __/__/__ and complete on __/__/__	✓

Glossary

account type	The source of cardholder funds used to pay for transactions, either credit or debit.
account number	An issuer-assigned payment credential that identifies an account in order to post a transaction.
acquirer	A client financial institution that has agreements with merchants to accept Visa card transactions or offers cash disbursement services to account holders, or both. The acquirer is responsible for: • Accepting card transaction data from merchants and its own ATMs and bank branches • Providing authorization decisions to those card-accepting locations • Conveying transaction information to Visa as interchange transactions
acquiring identifier	The acquirer from which a BASE II transaction is sent.
banking details	Banking instructions, such as the settlement bank and account information, that provide Visa with information required to pay to, or collect funds from, a client.
brand	Identifies the organization that establishes the rules about the card as a whole. The services defined by the individual marks on a card may be governed by other organizations.
business mode	Designates whether the amounts on VisaNet Settlement Service (VSS) reports are for issuer, acquirer, or other.
business transaction cycle	Identifies which presentment is being reported. The cycle descriptions used are based on the business transaction type according to their business purpose.
business transaction type	Classifies transactions according to their business purpose.
card	A payment card, digital application, or other device or solution that provides access to a payment credential and that is capable of conducting a transaction, is issued by an issuer, and may bear one of the Visa-owned marks.

cardholder type	Allows clients to distinguish between consumer and commercial usage. Clients may need to make this distinction because different services are often provided to consumer cardholders than to commercial cardholders.
charge type	Classifies charges on VisaNet Settlement Service reports.
clearing	All of the functions required to collect a transaction from an acquirer in the merchant's currency and deliver it to the issuer in the cardholder's currency.
Clearing currency	The currency used in the clearing process (for acquirers, it is the transaction currency; for issuers, it is the cardholder billing currency).
clearing entity	The entity used by the clearing systems to determine processing rules. In BASE II clearing, a clearing entity is a 6-digit, Visa-assigned acquiring or issuing identifier or an ISO-assigned card range. In the Single Message System (SMS), a clearing entity is the 6-digit, Visa-assigned acquiring or issuing identifier contained in the affiliate ID. The clearing entity is always included in the definition of a lowest-level settlement reporting entity (SRE).
client-level settlement	A business practice where a client uses a processor, but handles its own funds transfer.
co-brand relationships/entities	Co-branded cards are those cards issued by financial institutions in partnership with another corporation. These cards feature value-added benefits, such as airline mileage, reduced telephone rates, automobile purchase rebates, or other free or discounted products.
correspondent bank	A bank located in the country of the settlement currency that acts as a settlement bank when the settlement bank is located outside the country of the designated settlement currency.
credit card	A physical or digital card with an account number assigned by an issuer to a cardholder. This card, which has a credit limit, can be used to purchase goods and services and to get cash. The issuing institution bills the cardholder every month for repayment of the credit extended. The cardholder repays the issuer in full every month or on an installment basis, with a minimum amount due.
currency conversion fee allocations	Amount paid by Visa to the clients. The regional Board of Directors may elect to allocate to the clients part of the currency conversion fees received. The fees may be allocated to the issuer, the acquirer, or both.
debit card	A card linked to a demand deposit account, checking account, current account, negotiable order of withdrawal account, or savings account held at a financial institution, or a debit account or equivalent, as defined under applicable laws or regulations.
destination BIN	The BIN to which a BASE II transaction message is sent. DEPRECATED TERM: See <i>destination identifier</i> .

destination identifier	See acquiring identifier and/or issuing identifier.
drawdown (debit) authority	Written authority provided by a client to its settlement bank and Visa. This authorization directs the client's settlement bank to act for the client to accept funds from, and transfer funds to, Visa.
Edit Package	The BASE II software Visa supplies to processors to validate interchange data, produce the file containing interchange data to be sent from the processor to Visa, and process incoming transactions received from Visa. The Edit Package is the interface between a processing center's internal processing systems and its Extended Access Server (EAS).
endpoint	The connection of a client, merchant, or third-party processor to VisaNet. (The term "endpoint" also refers to the institution itself; for example, a particular client may be considered a VisaNet endpoint.)
fee level	Indicates the type of fee assessed.
funds transfer	The payment or collection of funds between Visa and its clients.
funds transfer point	A settlement point designated to handle funds transfer.
Funds Transfer Settlement Reporting Entity	The level at which funds transfer takes place.
Greenwich Mean Time	Mean solar time for the meridian at Greenwich, London. Greenwich Mean Time (GMT) has been replaced by Coordinated Universal Time (UTC) as the basis for calculating time internationally.
interchange	Transaction data sent from one client to another.
Interchange Reimbursement Fee	A fee paid by issuers and acquirers to each other for transactions entered into interchange (and their reversals) to balance the cost of doing business.
Interchange Transaction File	The standard input/output data medium for the BASE II Interchange Control System (ICS). All output from BASE II is delivered to the Visa client on an incoming ITF. All input to BASE II is sent from the member to the ICS on an outgoing ITF.
International Acquiring Fee (IAF)	An optional regional fee paid by the acquirer when a transaction occurs outside the issuer's country. It may be assessed for Sales Draft (TC 05) original and dispute response financial, Cash Disbursement (TC 07) original and dispute response financial, TC 05 and TC 07 reversals and their V.I.P. full financial Visa or Plus Network equivalent transactions.
International Service Assessment (ISA)	The International Service Assessment (ISA) fee applies to international BASE II and V.I.P. full financial clearing transactions in which the issuer country is different from the merchant country.

International Settlement Service	The settlement service used for all international and domestic activity unless a specific national settlement service is named.
issuer	A client financial institution that issues Visa cards. For a given transaction, the issuer is the institution that issued the card used for that transaction to the account holder. The issuer is responsible for maintaining the accounts of its account holders, for providing authorization decisions, for account holder billing, and for settlement of transactions its account holders have with merchants and cash dispensing locations of other clients. Each issuer operates or designates an issuer center to perform the functions related to clearing and settlement of interchange transactions.
issuing identifier	A numeric value used to define issuing processing. Multiple Issuing BINs can be linked to the same Issuing Identifier in Visa's systems.
jurisdiction	Identifies the operating regulations governing the reimbursement fees and charges imposed on a transaction. Examples of jurisdiction are Visa International, Visa Canada, Plus System Inc. U.S.A., and Interlink International.
Lowest-Level Settlement Reporting Entity	The lowest level at which VisaNet Settlement Service (VSS) produces settlement reports and can be a funds transfer SRE .
mark	A word, name, design, symbol, distinctive sign, animation, sound, haptic, other designation, or any combination thereof, that Visa or any entity adopts to identify its goods or services.
National Net Settlement Service	The settlement service for a single country that summarizes domestic transactions for settlement.
net settlement amount	The currency amount representing the difference between a settlement entity's outgoing and incoming interchange for a given day, plus or minus fees and charges. May be a debit or credit.
network	The identifier sent with a transaction or determined by Visa that specifies the rules by which the transaction is accepted and processed. For SMS, network activity is identified by the last four digits of the affiliate ID and is included in the definition of a lowest-level SRE. Network is not used when defining SREs for BASE II-connected clients. (The mark on a Visa card that is associated with a transaction is called the active mark for that transaction. An allowed mark is a network to which a client belongs. Some examples of marks are Visa, Interlink, and Plus. Marks usually appear on the card.)
Operating Regulations	The regulations that govern all activities relating to the operation and use of Visa systems, services, and products. There are regional and international editions of the Operating Regulations.
Optional Issuer Fee	See Visa Issuer FX Calculator

payment credential	A number or other credential that identifies an account of a cardholder for use in a transaction.
prepaid card	A card linked to a reloadable or nonreloadable prefunded account, or a prepaid account or equivalent as defined under applicable laws or regulations.
processing charges	Charges paid by clients to Visa for processing services. These charges vary depending on transaction type and volume.
processor	An endpoint or Visa-approved third-party that provides authorization, clearing, or settlement services for merchants and endpoints.
returned item charge	A charge assessed to the client for a returned item.
routing and transit number	An American Bank Association (ABA) number assigned to U.S. banks by the Federal Reserve System. This number is used to advise of funds movement through the Federal Reserve FEDWIRE system.
Settlement	The actual transfer of funds from the issuing bank to the acquiring bank through a wire transfer to a settlement account, and the total amount owed by one Visa client to another. See also net settlement amount.
settlement bank	A bank located in the country of the settlement currency where a client's funds can be deposited or withdrawn.
settlement currency	The currency used by the BASE II System to calculate a settlement entity's daily net settlement position.
Settlement Funds Transfer (SFT) forms	A set of forms completed by a client that provides Visa with the client's banking details.
settlement hierarchy	A group of related business entities for which Visa performs settlement, provides settlement reporting, or does both, that have financial responsibility for the settlement of a given group of payment transactions. (The financial responsibility of each superior entity in a given hierarchy is the total of the subordinate entities.)
Settlement Reporting Entity	Any business entity for which Visa performs settlement, provides settlement reporting, or does both.
settlement service	A service provided by Visa to report net settlement amounts for clients. (The types of settlement services are international settlement service and national net settlement service.) Settlement service is always included in the definition of a lowest-level SRE.
source BIN	The BIN from which a BASE II transaction message is sent. This is a deprecated term. See current, source identifier.

source identifier	See acquiring identifier and/or issuing identifier.
special airline fee	A fee charged on transactions from International Airlines when the issuer, acquirer, and transaction countries are different entities. This fee is collected instead of the IAF fee, and is paid to the transaction region.
stored credential	Information (including, but not limited to, a payment credential) stored by a merchant or its agent, a payment facilitator, or a staged digital wallet operator to process future transactions.
Summary-Level Settlement Reporting Entity	A consolidation of lowest-level settlement reporting entities. In addition to reporting, a summary-level SRE can be established as a fund transfer point.
SWIFT address	An identification code provided by the Society for Worldwide Interbank Financial Telecommunications (SWIFT). The code is used to advise of funds movement outside the Federal Reserve FEDWIRE system, primarily outside the U.S.A.
token	A type of payment credential issued in accordance with the <i>EMV Payment Tokenization Specification</i> .
Top Settlement Reporting Entity	The highest-level settlement reporting entity that contains the parameters that define the entire hierarchy. A top SRE can function as a summary-level SRE.
transaction	<i>BASE II transaction.</i> The record or records that make up a single financial, administrative, or text message, as required for transmission between a processing center and a VIC. BASE II transactions are identified by transaction codes. <i>Cardholder transaction.</i> The use of a payment credential to make a payment or otherwise exchange value between a cardholder (or an issuer) and a merchant (or an acquirer).
transaction routing	Describes the source and destination of the transaction.
Visa card	A card that bears the Visa brand mark.
Visa charges	Amount assessed by Visa and paid by the client (or client processor) to Visa. Includes amounts paid by Visa to the client or client processor.
Visa Issuer FX Calculator (formerly known as OIF)	Visa calculates an optional issuer-determined amount for multicurrency and/or cross-border transactions if requested by the issuer. This value is calculated based on the percentage rate specified by the issuer and added to the billing amount. The value is informational only and not included in the settlement amount.

VisaNet Access Point (VAP)	An IBM personal computer supplied by Visa, at which the VisaNet network is accessed electronically by a processing center. A VAP is in direct communication with a VIC. BASE II data are generally transmitted or received through a VAP.
VisaNet Certification Management Service	A dedicated, on-demand testing and certification service that allows clients to test with Visa. It provides software tools, licensed by Visa, that allow clients to test communications, data transmissions, software applications, and transaction formats.
